Workpaper: 2US000.000 - Underground Storage

Activity Description:

Storage Operations is responsible for the safe, efficient, and economical operation of the underground natural gas storage facilities for SoCalGas. This work paper covers the supervision, engineering and operational costs associated with the operation of the underground storage fields. Activities associated with these costs include: reservoir engineering studies; well testing and pressure surveys; turning wells on and off; activities associated with maintaining and patrolling storage pipelines, valves, drips, measurement and regulation equipment, wells, wellheads and well cellars; operating and maintaining compressor station equipment; purifying, dehydrating and conditioning natural gas processed through the storage operations; Royalty payments associated with well and field locations; supervisory and engineering expense; compliance to environmental and air quality regulations; ongoing safety and technical training for operations personnel.

Forecast Methodology:

Labor - Base YR Rec

The 2009 base year was chosen as the most reasonable foundation for future forecasting since it reflects the most current actual operating conditions. Incremental adjustments will be applied to this base year foundation.

Non-Labor - 5-YR Average

The five year average cost was used as a basis for projections because storage non-labor O&M costs can fluctuate significantly from year to year. Over the 2005 to 2009 period, non-labor costs varied from a high of \$15.3 million to a low of \$14.1 million. One of the significant cost drivers for storage is the amount of gas throughput for the storage fields. This throughput volume is dependent on the weather and the national gas markets; the Storage Operations department has no control over these two elements. Incremental adjustments are made to this baseline level to reflect the additional funding requirements due to changes to these activities.

NSE - 5-YR Average

There are no Non-Standard Escalation expenses in this work group.

Southern California Gas Company -- Storage Operations -- Witness James D. Mansdorfer Supplemental Workpaper Discussion and Calculations for incremental costs related to GO 95 Compliance

CPUC General Order 95 (G.O. 95): Overhead Electrical Line Construction. This regulation defines safe practices for constructing and maintaining systems of utility poles and overhead wiring. SoCalGas owns over 500 poles and associated wire and transformers that are used only for its own operations. Because these systems do not provide electric service to customers, prior to 2009 they did not fall under regulations for electric utilities. However, changes in regulations that took effect during 2009 now require these systems to be maintained in compliance with General Order 95 "Rules for Overhead Electric Line Construction" regulations. Compliance with these regulations requires enhanced maintenance, testing, and more frequent replacement.

Compliance Inspections: Each year a contractor will be hired to perform a G.O. 95 inspection of our system and document findings for each pole, conductor span, and transformer setting. Deficiencies will be corrected in a timely manner. This work is necessary for the safe and reliable operation of our overhead electrical system and for fire prevention.

Vegetation Management: A vegetation management contractor will conduct an annual vegetation survey and document any areas where vegetation has grown within the required clearances from structures and/or conductors set forth in the codes mentioned above. All required vegetation clearances will be reestablished annually, typically after the spring growing season.

Wood Pole Replacement Intrusive Inspection: All wood power poles at Aliso Canyon will be inspected in accordance with the requirements of G.O. 165 every 10 years. Intrusive inspection includes sounding with a hammer at various locations above ground line and drilling a specified number of holes into the base of the pole above and below the ground line. The inspectors are skilled at examining the wood shavings produced from drilling and listening to the sounds from the hammer strikes to diagnose wood rot in the pole base. After inspection, fumigant will be applied and drilled holes will be plugged. Poles that fail the intrusive inspection will be replaced under a separate replacement project.

Southern California Gas Company

Test Year 2012 GRC - REVISED Non-Shared Service Workpapers

Red Flag Shutdown/ Restoration: Due to the frequency and severity of wildfires in recent years, SoCalGas has adopted new procedures designed to prevent wildfires associated with the electrical distribution system at the storage fields. These new procedures will require the overhead electrical system to be de-energized under certain dry, high wind conditions until the wind event subsides. Prior to re-energizing the electrical system, it must be inspected by a qualified contractor. Furthermore, certain infrastructure is required to maintain constant compliance with AQMD rules and regulations at the facility during the shutdowns, and that infrastructure requires maintenance.

Electrical Engineering Support: Engineering analysis of electrical systems throughout the storage fields is required to ensure compliance with G.O. 95 and the safe and reliable operation of the system. Typical evaluation/analysis includes protective device coordination studies, power factor evaluation, and voltage drop calculations. Examples of other documentation needed are a switching schedule/procedure, as-built circuit maps, and schematic diagrams

Southern California Gas Company -- Storage Operations -- Witness James D. Mansdorfer Supplemental Workpaper Discussion and Calculations for incremental costs related to GO 95 Compliance

Forecasting Methodology:

2009 actual's, used for 2010 forecast. 2011 - 2012 are anticipated to be 50% of 2010 spend level due to program maturing. **Compliance Inspection:**

Forecast based on contractor bid proposals **Vegetaion Management:**

Forecast based on 100 pole inspections per year, at a cost of \$50 per pole inspection. **Wood Pole Inspection:**

Assume (5 events /year, 100 manhours per event, 100/ hr) = 50,000**Red Flag Events:**

\$5,000 per event for program maintenance and miscellaneous incidental expenses. $5 \times $5,000 = $25,000$

Engineering Support: This project was estimated using costs of past engineering studies that are similar in scope and requirements.

> Costs are expected to decline in 2011 and 2012 since the computer models of the electrical system will be developed in 2010. Ongoing costs will remain at the lower level due to this efficiency gain utilizing technological solutions

Southern California Gas Company -- Storage Operations -- Witness James D. Mansdorfer Supplemental Workpaper Discussion and Calculations for incremental costs related to Rule 317 Fees

The South Coast Air Quality Management District (SCAQMD) Rule 317 (2010 passage pending) imposes significant new fees on major combustion facilities, based on a provision of the 1990 Amendments to the Federal Clean Air Act. The 2012 payment under this rule is projected to be approximately \$754,000.

Federal law mandates air districts that fail to meet the federal Clean Air Act's ozone standard by 2010 to levy mitigation fees on NOx and VOC facilities. It is virtually certain that the SCAQMD area will not meet the ozone standard. Major stationary sources with NOx and/or VOC emissions greater than 10 tons per year must demonstrate that its annual emissions, beginning in the year 2011, are below a baseline or threshold level (i.e., 2010 actual emissions or an alternative calculation based on production swings). If a major source produces emissions above 80% of the 2010 baseline level, a mitigation fee will be assessed for each excess ton of NOx/VOC above the 80% threshold. This calculation is performed annually until Clean Air Act standards are met.

SoCalGas has three storage facilities (Aliso Canyon, Honor Rancho, and Playa del Rey) that qualify under both the NOx and VOC provisions of Rule 317. The facilities are projected to exceed 80% of the baseline quantity by 83 tons in 2012. The SCAQMD estimates the fee to be \$9,080 per ton in 2012. The table below summarizes the fee calculation methodology, using 2008 actual NOx and VOC emissions as a proxy for the 2011 forecast emissions and historic averaging, for the 2010 Baseline quantity.

Southern California Gas Company -- Storage Operations -- Witness James D. Mansdorfer Supplemental Workpaper Discussion and Calculations for incremental costs related to GHG Support Personnel

The incremental increase to Storage Operations for GHG regulation support is as follows: one position each for Aliso Canyon and Honor Rancho, with another position supporting both Playa del Rey and La Goleta. These 3 positions will be responsible for the increased requirements for reporting and monitoring GHG emissions under AB32, 40 CFR 98.30 (Subpart C -- General Stationary Fuel Combustion emissions), 40 CFR 98.230 (Subpart W --Petroleum and Natural Gas System fugitive emissions). Specific work will include, but not limited to:

- Oversight and data recording of continuous monitoring activities, for example fuel usage.
- Oversight and data recording of periodic monitoring activities such as station piping leak surveys, compressor seal leak measurement, etc.
- Capturing required operational data for GHG inventory, for example compressor or pipe blow downs.
- · Assure Best Management Practices are being followed and all necessary data or information is recorded.
- Develop new management practices for reducing GHG emissions; evaluate potential projects for reductions.
- Collect data regarding leaks; quantify with field measurements, as required.
- Preparation of emission inventory reports.

The fourth position is planned for the Storage Technical Services department to provide technical oversight for the entire GHG program for Storage. This position would provide oversight and overall program support to the field-located positions. This would ensure consistent administration of program requirements, including the development and implementation of Best Management Practices amongst the fields, and the preparation of consolidated emission inventories, and required reporting. This position would also serve as the expert on the regulations and be the primary liaison to other departments in the company dealing with the GHG regulations.

Southern California Gas Company -- Storage Operations -- Witness James D. Mansdorfer Supplemental Workpaper Discussion and Calculations for incremental costs related to La Goleta Expenses

Increased costs for catalyst and emissions testing to meet compliance requirements of the revised SBCAPCD Rule 333 - Revisions to SBCAPCD Rule 333 resulted in changes to the monitoring/testing requirements for the eight main unit gas compressors at Goleta Station. The Rule now requires that failure of a quarterly test shifts the testing frequency to monthly. To ensure compliance with emissions limits the company plans to change out catalyst more frequently, and also expects an increase from 16 days per year of onsite emissions testing to 30 days per year.

Increased costs for vegetation management to comply with requirements of new annual and programmatic permits for work in the coastal zone and environmentally sensitive habitat areas - Santa Barbara County, California Coastal Commission, California Department of Fish and Game and other agency permits are now being required for routine vegetation management activities that were previously considered exempt. These activities now require environmental review, permitting, and onsite biological/environmental monitoring prior to, during and after performing the work. In addition, special work practices are required to ensure protection of the environment.

Forecasting Methodology and Assumptions:

SBCAPCD Rule 333:

- 7 additional sets of catalyst per year at \$10,000 per catalyst changeout = \$70,000.
 - 15 additional onsite emissions test days at \$2000 per day = \$30,000.

Southern California Gas Company

Non-Shared Service Workpapers

- REVISED

■ Total additional annual cost = \$100,000.

Vegetaion Management:

- Increase in governmental permitting/oversight costs, onsite biological/environmental monitoring costs, permit compliance monitoring costs totaling \$25,000 per year.
- Increase contract vegetation management costs of \$25,000 per year.
- Total additional annual cost = \$50,000.
