Appendix B

CIRCULATION ELEMENT – COMMUNITY INPUT

This appendix summarizes input received from community outreach programs, most notably the Ventura Vision and the Comprehensive Plan Advisory Committee work. It is intended to acknowledge comments received from those work efforts and to document their role in formulating the Circulation Element recommendations.

VENTURA VISION

In 1999 and 2000 a comprehensive outreach program was carried out guided by a broad based Citizens Outreach Committee. That effort culminated in the “Ventura Vision, Seize the Future” document of March 2000. This vision document articulated a shared vision to guide the community in the future, including guiding principles, vision statements, and strategies for pursuing those visions. With respect to circulation, the following statement of high-priority strategies was noted:

***Our Accessible Community.** Develop a balanced transportation system by encouraging land use modifications and “transportation systems management” to reduce traffic congestion; upgrading road maintenance, improving and diversifying local transit systems; promoting a regional rail strategy; enhancing parking through better use of existing structures and new structures at strategic locations; facilitating bicycle and pedestrian access through an interconnected system of bike and walking paths; and exploring ways to improve the community’s access to air transportation.*

As embodied in this statement and as outlined in the section entitled “Our Accessible Community,” the vision identified its central goal as seeking an integrated multi-modal transportation system in which bus, rail, bicycle and pedestrian modes can reduce dependency on the automobile for transportation. The overall goal of the Circulation Element articulates this vision as do specific objectives such as listed in the transit, bicycle and pedestrian components of the Element. In addition, implementing strategies from the Vision document have been directly or indirectly incorporated into the Element in the form of specific programs.

COMPREHENSIVE PLAN ADVISORY COMMITTEE (CPAC)

A special Comprehensive Plan Advisory Committee (CPAC) met over a number of months in early 2002 to provide input to the Comprehensive Plan update process. This committee provided a forum to address Comprehensive Plan issues and to thereby supplement the results of the major community outreach program described above.

The meeting in which Circulation was the main topic was held on March 13, 2002, and numerous comments were received from CPAC members and from public attendees at that meeting. The comments were grouped into four topics, 1) arterial street, 2) public transit, 3) bikeways and 4) pedestrians. The first three of these are addressed here, and the fourth is discussed under separate cover. For each subject area, the comments are listed and the actions taken with respect to those comments noted. In some cases the comments pertain to a specific traffic issue that would not be within the purview of the General Plan, but is nevertheless an important concern with respect to circulation. These have been compiled so that the information can be forwarded to the appropriate department within the City. Most comments provided valuable input to the Circulation Element preparation process and were an important consideration in the development of the Circulation Element. The following sections discuss the three topic areas.

ARTERIAL STREETS

The CPAC and public comments on arterial streets are summarized in Table B-1. Discussion on specific subject areas follows.

Customized Street Classification (Comments S1.1, S1.4, S1.6, S1.12, S1.13, S1.15, S2.6, S2.7, S2.8)

The potential for customizing street classifications in the Circulation Element was presented at the March 13 meeting. The comments received indicate a general interest in adopting this approach and the arterial street component of Circulation Element has been prepared accordingly. The previous chapter of this report discussed design classifications and functional classifications, the latter addressing the customizing of the classification system for arterial streets.

Table B-1
 ARTERIAL STREETS
 CPAC and Public Comments – March 13, 2002

COMMENT	ACTION*
S1 – CPAC COMMENTS	
S1.1 Do not widen Ventura Avenue, custom approach needed	CE
S1.2 Connect Cameron	CE(D)
S1.3 Need traffic signals on the Avenue	N&F
S1.4 Custom approach needed to extend Olive north of Stanley to Sycamore Village	CE
S1.5 Solve the north/south traffic for future development	CE(D)
S1.6 Apply “custom approach” citywide	CE
S1.7 Hwy 101 / Harbor; Northbound Hwy 101 off-ramp / road to Channel Drive/ Borchard	CE
S1.8 Roundabout at Main and Mills	CE(D)
S1.9 Extend Mills south along Arundell Barranca to Harbor Blvd.	CE(D)
S1.10 State Route 126 westbound to Hwy 101 southbound	N&F
S1.11 Poli, from North Pacific to North Victoria, should be 1) reconstruct to 2 lanes 2) Remove side parking 3) slow to 30 mph 4) install bike / pedestrian side lanes 5) calm traffic 6) move traffic to Loma Vista	CE(D)
S1.12 Need custom approach along Main and Thompson	CE
S1.13 Needs to be pedestrian friendly along Main and Thompson and where Main and Thompson meet Telegraph	CE
S1.14 Extend Arundell to Schooner Drive	CE(D)
S1.15 Special treatment to Foothill Road	CE(D)
S1.16 Extend Johnson Drive north to Foothill Road	CE(D)
S1.17 Extend Kimball south across Santa Clara River to Oxnard	CE(D)
S1.18 Extend south Johnson Drive eastbound along Santa Clara River and then north to Bristol Road	CE(D)
S1.19 Provide roadway from Bristol across Santa Clara River into Oxnard	CE(D)
S1.20 Extend Loma Vista at Petit all the way to Amador	CE(D)
S1.21 Extend Balboa at Newport all the way to Wells	CE(D)
S1.22 Extend North Bank Drive northeast to Bristol Road	
S2 – PUBLIC COMMENTS	
S2.1 Stanley to 33 onramp needs to be improved – very dangerous	N&F
S2.2 Extend Olive north to connect with Ventura Avenue north of Stanley.	CE
S2.3 Need traffic calming on Olive esp. near the Boys & Girls Club.	CE
S2.4 Connect the 2 parts of Cameron.	CE(D)

Table B-1 (cont)
 ARTERIAL STREETS
 CPAC and Public Comments – March 13, 2002

COMMENT	ACTION*
S2 – PUBLIC COMMENTS (cont)	
S2.5 Need additional traffic signals on Ventura Avenue especially south of Stanley.	N&F
S2.6 Customize Main though Midtown – similar to Downtown – with wide sidewalks and pedestrian amenities	CE(D)
S2.7 Customize 5 points as Midtown entry	CE(D)
S2.8 As stated in plan, retain “county” character of Foothill Road. Retain 2 lanes, enhance with bike path, and lower speed limit. No additional traffic can be accommodated.	CE(D)
S2.9 Recognize that Foothill carries substantial traffic, which will increase – 4 lanes needed.	CE(D)
S2.10 Foothill Road cannot take additional traffic from Hall Canyon, Barlow Canyon, and Sexton Canyon as proposed by Lloyd Corp. and Mariano Rancho.	CE(D)
S2.11 Traffic calming speed bumps or more stop signs on through streets between Foothill and Loma Vista, esp. Sexton Hall, Dorothy, and Agnus.	CE
S2.12 Callens onto East Main – takes much time to get out driveway onto Main traffic.	N&F
S2.13 Poli Street and Foothill Road cannot be widened. It is an old route to Santa Paula – It can’t take much more traffic	CE
S2.14 Is there a road planned for access to the Lloyd Properties on the other side of the hills, north side, and running east to west?	N&F
S2.15 Anticipate potential future development of agricultural parcels north of Highway 126 – identify future extension of Johnson Drive across freeway north through agricultural parcels.	CE
S2.16 Anticipate potential future development of agricultural parcels in inner city greenbelt – easterly extension of Balboa Street and Loma Vista Road.	CE
S2.17 Anticipate potential future development of inner city greenbelt parcels by identifying future extension of roadways through agricultural properties such as Kimball, Ralston, and any other streets. Identify need for specific plan to establish possible road design standards, location of roads, etc. City needs to investigate economic feasibility of extending Kimball south to Oxnard – identify whether this will occur in general plan time frame.	CE
S2.18 Mills Road should be put through to Foothill	CE
S2.19 Safer intersections downtown	N&F
* Actions taken are as follows:	
N&F	Comment not directly applicable to the Circulation Element but has been noted and forwarded to the appropriate City Department
CE	Comment is being addressed in the Circulation Element Update
CE(D)	Comment is being addressed in the Circulation Element Update and is discussed here in the text

New Roadways (Comments S1.2, S1.9, S1.14, S1.16, S1.17, S1.18, S1.19, S1.20, S1.21, S1.22, S2.15, S2.16, S2.18)

There are a number of new roadways on the current Circulation Element and these are being evaluated as part of preparing the Circulation Element update. Those being indicated in the comments as potentially desirable are as follows:

Southward extension of Mills across US-101

Extension of Arundell to Schooner Drive

Extension of Johnson Drive north to Foothill Road

Extension of Johnson Drive eastward along the Santa Clara River to connect to Bristol

Extension of Loma Vista at Petit to Armador

Extension of Balboa at Newport to Wells

An additional comment (S2.4) suggested connecting the two parts of Cameron. At the present time, Cameron is not on the Circulation Element and hence unless it was to be added to the Element such an extension would be a local subdivision issue rather than a Comp Plan issue. While an extension could help provide north/south capacity parallel to Ventura Avenue, there are issues involved such as bisecting an existing park and residential neighborhood. Without an assessment of feasibility, it is not recommended at this time that Cameron be added to the Circulation Element.

Additional Crossing(s) of the Santa Clara River (Comments S1.19, S2.17)

The question of an additional crossing of the Santa Clara River east of US-101 is currently being addressed in a joint study by the County of Ventura, the City of Ventura and the City of Oxnard. Since the location and sizing of one or more bridges affects all three entities, that cooperative study will evaluate a number of alternatives and the potential impacts/benefits to the communities involved. It is anticipated that this Comprehensive Plan process will have the benefits of the results of that study and thereby be able to incorporate recommendations into the Circulation Element update.

Foothill Road (Comments S2.8, S2.9, S2.10, S2.13)

While one of the public comments (S2.9) appears to contradict the others by suggesting a four-lane road should be built, the general consensus is that Foothill Road has a special character and should

remain at two lanes (as articulated in the Vision Plan). One of the purposes of devising customized functional classifications is to address this special roadway and its needs and limitations. Special functional classifications are aimed at preserving or attaining a desirable character while providing adequate carrying capacity for the forecast traffic volumes. Discussions on this can be found in the traffic forecasting results (Chapter 3.0) and in the development of functional classifications (Chapter 4.0).

Roundabouts (Comment S1.8)

The comment suggests a roundabout at Main and Mills, presumably to address the high traffic volume at this location. Unfortunately, a roundabout to accommodate this volume would require considerable right-of-way and not necessarily be more effective than a signalized intersection. At the same time, the comment introduces the concept of roundabouts as a traffic control device for deployment in the City. Roundabouts have been used in various locations in the United States, including some locations with relatively high traffic volumes. The greater use, however, has been as traffic calming devices and as a means of creating a more local character to a street (compared to traffic signal control at an intersection). The suggestion here is that roundabout intersections be considered as part of the toolbox for the traffic calming measures and if found desirable, could be deployed accordingly.

PUBLIC TRANSIT

The CPAC and public comments on Transit are summarized in Table B-2. The following discussion addresses specific subject areas.

Train Depot/Transit Centers (Comments T1.3, T1.4, T1.5, T1.9, T2.6, T2.10)

These comments reflect an awareness of the role that transit stations/centers can have in promoting transit use. Policies and programs plus the associated discussion in the Circulation Element respond to these, and emphasize its importance. Since the City has a greater degree of control over providing such amenities (compared to train and bus routing and scheduling) it represents an appropriate directive to pursue such facilities through a variety of actions, both public and private.

Table B-2
PUBLIC TRANSIT
CPAC and Public Comments – March 13, 2002

COMMENT	ACTION*
T1 – CPAC COMMENTS	
T1.1 Public transit should focus on transit dependent areas	N&F
T1.2 Smaller buses could be used during off peak hours	N&F
T1.3 The depot should be in the Front Street area between Kalorama and Laurel.	CE(D)
T1.4 The depot should be located at Front Street at Figueroa	CE(D)
T1.5 Put a transit center at Pacific View mall on Telegraph	CE(D)
T1.6 Seniors need a way to get to the center of the mall.	CE(D)
T1.7 Pedestrian access to transit is problematic at Victoria and Telephone	N&F
T1.8 Improve public transit, bus stops, facilities in the Westside	CE
T1.9 Metrolink Station at Los Angeles Avenue and Azahar.	CE(D)
T1.10 Kneeling busses need to be routed to senior apartments and complexes and large senior housing areas	CE
T1.11 Priority should not be given to ADA over seniors.	--
T1.12 Subsidize seniors' taxicab CHITS	N&F
T2 – PUBLIC COMMENTS	
T2.1 Use smaller buses which use non-polluting fuel	N&F
T2.2 North-south connections to SCAT east-west routes	N&F
T2.3 More public transit in small buses that neighborhoods	N&F
T2.4 Slow traffic, narrow roads, use transit	--
T2.5 Mass transit with bike, surfboards, skateboard storage	N&F
T2.6 Bus stops need to be upgraded. Middle class people with transit options don't want to sit on dirty benches in the sun or rain. Bike racks on buses are very good. We need a multi-modal transit center downtown.	CE(D)
T2.7 Trolley transit route from downtown through midtown to mall to Harbor back by beach to downtown runs every 30 minutes.	--
T2.8 Publicly subsidized mass transit	--
T2.9 School only through 6 th	--
T2.10 Transportation (bus service) should be available to the train station	N&F
* Actions taken are as follows:	
N&F	Comment not directly applicable to the Circulation Element but has been noted and forwarded to the appropriate City Department
CE	Comment is being addressed in the Circulation Element Update
CE(D)	Comment is being addressed in the Circulation Element Update and is discussed here in the text

BIKEWAYS

The CPAC and public comments on bikeways are summarized in Table B`-3. Discussion on specific areas of interest or concern follows:

Additions or Modifications to Bikeway System (Comments B1.1, B1.2, B1.3, B1.6, B1.7, B1.8, B2.4, B2.5, B2.6, B2.7, B2.12)

The comments include a number of suggestions for modifying and/or expanding the General Bikeway Plan. Such suggestions need to be considered in the next update process for that plan and included if appropriate.

One of the key roles of the Circulation Element is to ensure compatibility between the bikeway plan and the Functional Classifications of the roadways used by the designated bike routes or trails. All functional classifications have the ability to provide a Class II bike lane provided the right-of-way is in accordance with the design classification. In some cases, the functional classification supports the potential inclusion of a Class I bike path in the standard cross-section (e.g., the Two-Lane Boulevard). The intent is to provide as much flexibility as possible in enhancing and expanding the Citywide bikeway system.

Table B-3
GENERAL BIKEWAY PLAN
CPAC and Public Comments – March 13, 2002

COMMENT	ACTION*
B1 – CPAC COMMENTS	
B1.1 Connection from Vista Del Mar to Thompson	CE(D)
B1.2 Close road (Brakey Road) to traffic and make it pedestrian and bike only	CE(D)
B1.3 Bike path along Olive (Westside)	CE(D)
B1.4 Improved bike and pedestrian path to get from Mills (the mall) to lower Main Street	CE
B1.5 Improved access to existing bike trail along Ventura River from residential areas along Olive and north of Stanley (i.e., Sycamore Village)	CE
B1.6 Bikeway extension from Cedar to Dakota.	CE(D)
B1.7 Harbor to Ondulondo/Clearpoint – pedestrian / bikeway barrancas	CE(D)
B1.8 Extend bike path from Barranca from Bristol to Park	CE(D)
B1.9 Extend bike path in traffic lane all the way through the curve (on Johnson)	N&F
B1.10 More segregated trails	CE
B1.11 Slow down traffic along Foothill so that cars and bikes may coexist.	CE
B1.12 More police funding. Do you want a bike path along your backyard? Just a thought. We need police on all new bike paths. Policing needed for increased crime	--
B1.13 Create and facilitate cross-city bike routes for specific transportation objectives as in Santa Barbara.	CE
B1.14 Make Foothill 2 lanes with bike path adjacent to road on south side (slow Foothill traffic to 30 mph)	CE
B1.15 Policy: All upgrades to arterials shall include a bikeway	CE
B1.16 Coordinate with county and other cities/communities to hire a bike consultant with input on all road projects (someone like Wilson Hubbell)	--
B1.17 Need through traffic bike lanes at intersections – this is a problem throughout the City of Ventura.	N&F
B1.18 Right turn and west from Harbor to Seaward needs improvement from danger of traffic turning on to freeway (similar problems in other areas in town).	N&F
B2 – PUBLIC COMMENTS	
B2.1 Class II bike trail along Ventura Avenue	CE
B2.2 Better access to bike path from the community located north of Stanley and east of Ventura Avenue (i.e. Sycamore Village)	CE
B2.3 Need safer and easier connection between Ventura River Trail and Omer Rains path	CE
B2.4 Seaward should eliminate parking and have bike lanes instead	CE(D)
B2.5 Bikeway extension off Cedar Street (north to Dakota?)	CE(D)
B2.6 Eliminate parking on Poli in favor of bike lanes	CE(D)

Table B-3 (cont)
 GENERAL BIKEWAY PLAN
 CPAC and Public Comments – March 13, 2002

COMMENT ACTION*

B2 – PUBLIC COMMENTS (cont)

B2.7	Need a bike and/or pedestrian link from Marina Park to the Harbor	CE(D)
B2.8	Connections	CE
B2.9	Policy suggestion – All arterials should provide for a bike path whenever a road is re-striped or re-paved.	CE
B2.10	Biketrails on Foothill Road	CE
B2.11	Real bike lanes on Victoria; slow traffic get rid of sidewalk bike lane	CE
B2.12	Bike trails or pedestrian trails along Barrancas	CE(D)
B2.13	More bikeways to get across town not just recreational trails – use bike as transportation mode.	CE
B2.14	We need education to change perception of bicycling – share the road concept – bicycling is viable transportation mode	CE
B2.15	Foothill Road should not be made 4 lanes. It should remain 2 lanes with bike and pedestrian paths and left hand turn bays.	CE
B2.16	Consider bikeways to connect communities where there are no streets – i.e. bikeways out of closed off developments	CE

* Actions taken are as follows:

N&F	Comment not directly applicable to the Circulation Element but has been noted and forwarded to the appropriate City Department

Appendix F

2004 Biennial Water Supply Report

2004 Biennial Water Supply Report

I. Executive Summary

This report is submitted in compliance with the City Council adopted 1994 Comprehensive Water Resources Management Plan (CWRMP). The CWRMP consists of a compilation of water supply policy statements to provide guidance related to the City's future water supply and demand. The intent of the plan is to ensure the City's ability to provide its customers with adequate water that meets regulatory water quality standards.

A water supply monitoring requirement is included in the CWRMP. This requirement calls for an annual review of critical water supply conditions and a biennial report to the Council for certification in the Fall of even numbered years. The purpose of the Biennial Water Supply Report is to certify that the City's existing water supply and planned improvements are sufficient to satisfy our needs for at least the next ten years and provide advance warning if a supplemental water supply is needed. The ten-year planning horizon represents the time needed to develop a supplemental water supply.

This 2004 Biennial Water Supply Report finds that the City's future water supply and planned improvements are sufficient to satisfy the City's water needs beyond this 10-year planning horizon.

The report includes projections of the City's future water supply and demands. The current and projected water supplies used in the report include: (1) production from the Ventura River, (2) supply from Lake Casitas, (3) production from the Mound Groundwater Basin, (4) pumping allocations in the Oxnard Plain Groundwater Basin, (5) pumping allocations in the Santa Paula Groundwater Basin and (6) future Saticoy County Yard Well. The water demand figures used were determined from historical water consumption figures, anticipated water consumption trends and the estimated population growth for the water service area.

The report also summarizes the capital improvement projects planned for the next five years. These planned improvements increase the City's ability to utilize existing water resources. The planned projects will improve the quantity and quality of the City's existing supplies and provide the system flexibility necessary for the City to support demands during a drought period when the need arises.

In addition to a biennial water supply report, staff annually reviews the health of the City's water supplies. Potential impacts to the water supply, which include the condition of our facilities, agreements with other agencies and weather conditions, are tracked. By tracking these effects potential impacts can be identified before they occur. At this time the City's water supplies are healthy. It is concluded that with planned capital improvements there is sufficient water supply to satisfy the City's water demands for at least the next ten years. In two years when the next Biennial Water Supply Report is prepared, conditions will be reassessed and water supply and demand projections updated.

II. Current and Projected Water Supply

There are presently five water sources that provide water to the City water system:

1. Ventura River surface and subsurface water intakes and four shallow wells (Foster Park)
2. Casitas Municipal Water District (Casitas)
3. Mound Groundwater Basin
4. Oxnard Plain Groundwater Basin (Fox Canyon Aquifer)
5. Santa Paula Groundwater Basin

The City has acquired a sixth source, a well located on the Santa Clara River east of Highway 118 (Wells Road). This location is not within either the Santa Paula Groundwater Basin or the Fox Canyon Aquifer. The well is complete and has been tested for production capacity and water quality. Capacity tests indicate the production from this well will be at least 2,500 gallons per minute (gpm). Pumping and control systems will be complete by mid-year 2005 and connecting pipelines to the Saticoy Conditioning Facility will be complete near the beginning of 2006.

The City also holds a State Water Project (SWP) entitlement of 10,000 acre-feet per year (AFY). To date, the City has not received delivery of its allotment, and it is not certain if or when facilities will be constructed to transport SWP water to the City. In 1998 the City became a signatory to the SWP Monterey Amendment. The amendment would allow the City, with other contractors, to sell surplus water back to the state, however litigation has prevented the terms of the amendment from being fully acted upon.

The City manages its water resources conjunctively. Conjunctive use is the practice of first utilizing surface supplies (which are lost to the ocean if not used when they are available), before groundwater supplies (which can be stored for use when the surface supplies are not plentiful). Groundwater is used to provide for seasonal demands and as a source during drought periods. Therefore, the City will generally utilize its water supplies in the following order: Ventura River, Lake Casitas, and groundwater basins.

In addition, the City provides reclaimed water from the Ventura Wastewater Reclamation Facility to two municipal golf courses, the Ventura Marina area and private customers for landscape irrigation.

1. Ventura River

Surface water from the Ventura River is diverted through the City's Foster Park Facilities. The surface diversion, subsurface intake, and four shallow wells within the Ventura River collect water. Production from this source is a function of several factors including production capacity, local hydrology, environmental impacts, and the storage capacity of the Ventura River alluvium and upstream diversions. Currently, our surface diversion is unused due to the natural migration of the active river channel. Foster Park improvements, now in design, will replace production from our surface diversion with

additional wells. Even without production from the surface diversion, the City produced 6,722 AF from Foster Park in 2003, a year of below average rainfall.

The production from the Ventura River in 1992 was 9,874 AF, the highest annual water volume ever produced. The lowest production was 1,463 AF in the 1951 drought year. The Ventura River water source is highly variable and very dependent upon local hydrology. The CWRMP states the yearly yield is between 700 and 11,000 AF per year. For this report the average long-term water production of 6,700 AFY will be used, and is based on the Evaluation of Long Term Alternative Water Sources, James M. Montgomery, June 1993.

2. Casitas Municipal Water District (Casitas)

The western portion of the City is within the Casitas service area. Approximately 32 percent of the City's water accounts are located within the Casitas service area. Use of Casitas water is restricted to the volume of water used within its boundaries. The "safe yield" of Lake Casitas is defined to be the amount of water that can be removed from the lake each year without excessive risk that the lake will become dry. The safe yield of Lake Casitas is currently estimated to be 21,920 AFY, based on the critical historical dry period from 1944 to 1965. Studies by Casitas' engineering department have shown that this period represents the most critical dry spell for the Lake's watershed of all the years for which historical data is available.

To maintain future operation of Lake Casitas at safe yield, Casitas established an allocation program for its customers in 1992. The City's allocation can be as high as the in-district demand for Stage 1 (wet or average year), or reduced to 7,090 AFY for Stage 2 (dry conditions) and further incrementally reduced (Stages 3 and 4) to 4,960 AFY for Stage 5 (extremely dry conditions). Stage 2 is initiated when Lake Casitas storage drops below 95,000 AF and Stage 5 is initiated when levels drop below 65,000 AF. The lower allocation remains in effect until the storage is recovered to 90,000 AF. Total lake storage is approximately 254,000 AF. Lake Casitas storage as of August 2004 was 168,397 AF.

In July 1995 the City signed an agreement with Casitas, which established the City's minimum purchase at 6,000 AFY. The terms of the agreement are subject to the allocation program described above during drought periods. For this report the projected water supply available from Casitas is anticipated to average 8,000 AFY, the projected in-district demand.

3. Mound Basin

Two wells supply water from the Mound Groundwater Basin (Victoria Well No. 2 and Mound Well No. 1). Construction of Mound Well No. 1 was completed in 2003.

In March 1996 the City completed a project that included: 1) constructing Mound Basin

monitoring wells at Camino Real Park and Marina Park; 2) developing a database from historical records, and 3) identifying potential surpluses within the basin. This work was performed in conjunction with the United Water Conservation District. The report compiled as part of that project indicated that historical data supports a basin yield of at least 8,000 AFY during drought conditions as long as pumpage is reduced during wet years to allow water levels to recover. It is anticipated that the basin will be able to sustain a higher yield (at least 10,000 AF during drought periods), provided that future wells are located so as not to adversely impact the existing Mound Basin Wells. Future annual reports will further assess the operational yield of the basin.

For this report the future water supply from the Mound Basin is assumed to be 4,200 AFY based on 75 percent of the current pumping capacity of 5,600 AFY.

4. Oxnard Plain Groundwater Basin

Wells near the Buenaventura Golf Course have drawn from the Oxnard Plain Groundwater Basin since 1961. Additional wells have been constructed over the years with the most recent being completed in 1991. Currently, three wells produce potable water for the City's system. These wells pump from the Fox Canyon aquifer of the Oxnard Plain Groundwater Basin. Average annual yield from the Golf Course Wells over the past 15 years has been about 3,200 AFY.

The Fox Canyon Groundwater Management Agency (GMA) was created by state legislation in 1982 to manage local groundwater resources in a manner to reduce overdraft of the Oxnard Plain and stop seawater intrusion. A major goal of the GMA is to regulate and reduce future extractions of groundwater from the Oxnard aquifers, in order to operate the basin at a safe yield. In August 1990, the GMA passed Ordinance No. 5, which requires existing municipal groundwater users to reduce their extractions by five percent every five years until a 25 percent reduction is reached by the year 2010.

The City's baseline allocation was set by the GMA at 5,459 AFY, which was the average extraction from the Golf Course Wells for the period of 1985 to 1989. Beginning in 1992, baseline extractions set by the GMA were reduced by 5% to 5,186 AFY, in 1995 it was reduced to 4,913 AFY, and further in 2000 to its current allocation of 4,640. This allocation will further be reduced as follows:

<u>Years</u>	<u>Amount (AFY)</u>
2006	4,367
2010	4,094

Following wet weather conditions, water levels in the City's groundwater basins rise significantly. Conjunctive use strategies and customer water conservation have allowed the City to store 33,193 AF in the GMA bank as of the end of calendar year 2003. This storage bank makes it possible for the City to implement operational procedures that will allow the use of its groundwater supplies up to safe yield levels, and to use its

banked groundwater as an additional supply during future drought conditions. If the City were to use its banked water, it is estimated that the City could extract as much as 5,500 AFY based on 75% of the current pumping capacity of 7,300 AFY. However for this report, future supply is conservatively based on GMA restricted extraction limits listed in the preceding paragraph.

5. Santa Paula Groundwater Basin

The Saticoy Water System acquired by the City in 1968 included Saticoy Well No. 1, which draws water from the Santa Paula Basin. Due to casing failure, the well was destroyed and replaced in 1991 with a new well designated as Saticoy Well No. 2 in the same general location. Pumping capacity within the Santa Paula Basin is currently only 2,200 AFY based on 75% of the current pumping capacity of 2,900 AFY. With the addition of Saticoy Well 3 (completion anticipated 2006) to be located east of Highway 118 (Wells Road) we anticipate increasing pumping capacity in the basin to 6,400 AFY.

In March 1996, the City ended a five-year stalemate over the future use of the Santa Paula Basin. Under an agreement with the United Water Conservation District and the Santa Paula Pumpers Association (an association of ranchers and businesses), the City can pump on average 3,000 AFY from the Santa Paula Basin. The City is not limited to this allocation in any single year, but may produce seven times its average annual allocation (21,000 AF) over any running seven-year period. In addition, the City may pump an additional 3,000 AFY in case of an emergency resulting from a long-term drought situation. Therefore, for the purposes of this report, the future annual production from the Santa Paula Basin is estimated to be 3,000 AFY.

6. Saticoy Yard Well

The County of Ventura has relocated their maintenance yard to a site within the Saticoy Community contiguous to the City's water service area. In exchange for extraterritorial water service, the County has provided the City a well to offset their water demand. The well is expected to provide not only production capacity for serving the maintenance yard, but also significant additional system capacity. The Saticoy Yard Well is anticipated to begin production in 2006, with an estimated 75 percent of design production capacity of 2,262 AFY. The water demand for the maintenance yard is estimated to be 20 AFY.

III. Water Supply Summary

The following Table 1 summarizes the historical deliveries from each of the above sources, as well as projected deliveries to the year 2014. Projected figures are based on the water supply available from each source, and do not necessarily represent amounts currently produced.

Table 1: Historic and Projected Water Source Production and Supply Availability (acre-feet)

Year	Surface Water		Ground Water				Total Water Supply (7)
	Ventura River (1)	Lake Casitas (2)	Mound Basin (3)	Oxnard Plain Basin (4)	Santa Paula Basin (5)	Saticoy Yard Well (6)	
Historic Production							
1980	7,276	7,544	0	5,198	2,129		22,147
1985	5,493	9,099	2,360	6,172	46		23,170
1990	2,859	6,175	4,365	5,749	0		19,148
1995	9,042	1,622	2,169	2,603	2,594		18,030
1996	7,926	4,456	2,789	2,768	1,599		19,538
1997	7,052	7,089	213	3,452	2,025		19,831
1998	8,069	4,328	802	4,312	1,033		18,544
1999	6,419	7,061	3,955	1,621	1,669		20,725
2000	6,779	5,836	4,579	2,674	1,698		21,566
2001	5,727	6,292	4,030	905	2006		18,960
2002	5,951	7,127	3,720	1,978	1,157		19,933
2003	6,722	4,874	5,546	2,898	316		20,356
Projected Supply							
2004	6,700	8,000	4,200	4,600	3,000	0	26,500
2009	6,700	8,000	4,200	4,400	3,000	2,262	28,562
2014	6,700	8,000	4,200	4,100	3,000	2,262	28,262

Notes:

1. Ventura River future supply is the average long-term production based on analysis of the period from 1939 to 1982 per the Evaluation of Long Term Alternative Water Sources, James M. Montgomery, June 1993.
2. Includes the City's total past Casitas purchases in addition to raw water and oil recovery users; projected supply is the City's current in-district use.
3. Mound Basin future supplies are 75 percent of well pump rated output.
4. Oxnard Plain Basin future supply is based on GMA restricted extraction limits rounded to nearest 100 AF.
5. Santa Paula Basin future supply is the pumping allocation of the Stipulated Judgement.
6. Saticoy Yard Well future supply is 75 percent of design maximum pump output capacity.
7. Includes treated and raw water; excludes reclaimed water supply.

IV. Historic and Projected Water Demand

A. Historic Water Demand

Water consumption within the City (excluding raw water/oil company use) has decreased in recent years as shown by the per capita use figures in Table 2. The annual per capita usage from 1940 to 1970 averaged about 0.31 acre-feet per person (AF/capita). In the period 1976-1989 (pre-mandatory water conservation), the annual per capita use averaged about 0.22 AF/capita. In the period 1994-2003 (post mandatory water conservation), the per capita figure dropped to an average of 0.182 AF/capita. This decrease in per capita consumption is the result of structural improvements such as low flow fixtures and low water consuming appliances in some existing and all new housing and an active water conservation program adopted by the City in 1975 and further strengthened with mandatory regulations in 1990. Mandatory regulations were lifted in 1993, however water conservation efforts remain very effective.

Table 2: Historic Water Production and Population

Year	Total Prod. (AF) (1)	Raw Water Use (AF) (2)	Treated Water Use (AF) (3)	Est. Pop. Served by Water System (4)	Per Capita Use (AFY) (5)	Annual Rainfall (in.) (6)
1940	4,240	0	4,240	13,264	0.320	12.54
1950	5,307	0	5,307	16,534	0.321	13.34
1960	8,832	0	8,832	29,114	0.303	12.08
1970	21,524	4,473	17,051	57,964	0.294	13.92
1980	22,147	4,766	17,381	73,774	0.236	24.78
1990	19,148	2,317	16,831	94,856	0.177	5.53
1991	14,660	2,077	12,583	94,913	0.133	17.01
1992	16,469	1,625	14,846	95,626	0.155	20.91
1993	17,459	2,010	15,449	96,540	0.160	28.21
1994	18,980	2,000	16,980	97,154	0.175	11.47
1995	18,030	1,602	16,428	99,668	0.165	34.52
1996	19,538	1,500	18,038	100,482	0.180	13.81
1997	19,831	1,829	18,002	101,096	0.178	16.02
1998	18,544	1,769	16,775	101,610	0.165	43.25
1999	20,725	1,067	19,657	102,224	0.192	10.56
2000	21,566	1,129	20,481	103,238	0.198	17.04
2001	18,960	889	18,071	104,153	0.173	23.22
2002	19,933	968	18,965	105,267	0.180	7.24
2003	20,356	846	19,510	106,782	0.182	20.06
Average	1940-70				0.31	
Average	1976-89	Pre-Mandatory Water Conservation)			0.22	
Average	1994-2003	Post-Mandatory Water Conservation			0.179	

Notes for Table 2:

1. Total production includes all water produced by the City and purchased from the Casitas Municipal Water District, including raw water and oil recovery use.
2. Raw water use includes oil and raw water users.
3. Treated water use is total production less raw water use.
4. Population figures provided by City of Ventura Community Development Department and California Department of Finance. Estimated population served by water system for 1990-date includes areas outside of city limits served by the City.
5. Per capita use excludes raw water and oil use (treated water use ÷ population).
6. Annual rainfall is the average of measured precipitation for the water year (October 1st through September 30th) for four rain gauge stations throughout the City (Stations #66, #122, #167, and #222) as provided by the Ventura County Flood Control District.

B. Population Projections

Recent historical populations (see Table 2) are from adjusted Department of Finance figures for the City's Planning Area, including the County water service area. Projected populations used in this study (see Table 3) were provided by the City Community Development Department, and reflect the figures shown in the 1989 Comprehensive Plan for the City's Planning Area, adjusted to the 1990 and 2000 census. We have also included the portion of our water service area, which covers unincorporated areas adjacent to the City. These are slightly different than the population figures used in the City's 2002 Biennial Water Supply Report, due to recent adjustments by the Department of Finance.

It is important to note that the projected population figures used in this report are not intended to represent either support for or any commitment to this level of growth. Rather they are intended to provide a safe margin in planning for long-term water improvements that might be needed given the rate of growth that could be allowed under the 1989 Comprehensive Plan. Currently the City is going through the process of revising the Comprehensive Plan.

Table 3: Estimated Population Growth for Water Service Area

Year	Projected Planning Area Population
2004	108,651
2009	113,162
2014	118,295

Note: City population estimates are based on the U.S. 2000 Census and

a growth rate of 0.9%. Additional population for the unincorporated area served by Ventura's water system, is based on 2004 count of customers outside city limits and a growth rate of 0.6%.

C. Projected Water Demand

For planning purposes, in 1990 the City used 0.22 AF of water per capita per year based on the average pre-mandatory conservation per capita use data (see Table 2). Anticipated demand reductions, through long-term conservation programs, have lowered the per capita water usage factor. Estimated demand reductions due to conservation in 1990 were anticipated to be five percent in 1995 (0.209 per capita use), 10 percent in 2000 (0.198 per capita use), and 12 percent thereafter (0.194 per capita use). The figures in Table 2 show that the reductions assumed in 1990 have been exceeded and are now around 17 percent. Based on data from the past 10 years since mandatory conservation ended, the average per-capita usage is 0.179 AFY. For the purpose of this report 0.179 AFY per capita will be used to estimate future water demands.

In addition, raw water demand for oilfield injection has declined steadily since 1970. Average raw water usage for the past 5 years was 1,000 AFY. For the purpose of this report a future raw water demand of 1000 AFY will be used.

Applying this per capita demand factor to the projected populations provides an estimate of treated water demands for the next 10 years, as shown in Table 4. As stated, the numbers in Table 4 reflect the belief that there will be few substantive changes in the near future, with planned long-term improvements.

Table 4: Projected Water Demand (Acre Feet) - (Normal year, weatherwise)

Year	Est. Water Service Area Pop. (1)	Per Capita Usage AFY (2)	Treated Water Demand (2)	Raw Water Demand (3)	Total Water Demand
2004	108,651	0.179	19,449	1,000	20,449
2009	113,162	0.179	20,256	1,000	21,256
2014	118,295	0.179	21,175	1,000	22,175

Notes:

1. Estimated planning area populations are from Table 3.
2. Treated water demand is estimated population multiplied by 0.179 AF/capita based on the 1994-2003 average post-mandatory water conservation per capita use from Table 2.
3. Raw water demand projections include raw water and oil users.

V. Water Supply and Demand Summary

Table 5 summarizes the City's projected water demand and supply through the year 2014. Additional water supplies will not be needed until sometime after 2014 under average non-drought weather conditions.

Table 5: Summary of Projected Water Demand and Supply (Acre Feet) - (Non-Drought Conditions)

Year	Projected Planning Area Pop.(1)	Projected Water Demand(2)	Projected Water Supply(3)	Additional Water Supply Needed(4)
2004	108,651	20,449	26,500	No
2009	113,162	21,256	28,562	No
2014	118,295	22,175	28,262	No

Notes:

1. Projected planning area population is from Table 3.
2. Projected water demand is from Table 4, and includes oil and raw water use.
3. Projected water supply is from Table 1.
4. Additional water supply needed is the projected water supply less the projected water demand. Additional supply to meet water quality goals is not included.

Based on the above projection, the existing water supply and planned improvements are sufficient to satisfy the City's water needs for at least the next ten years.

VI. Planned Improvements

The City will continue to implement capital improvements and do resource planning for our water system. These improvements will increase production capacity and storage, improve our ability to move water from the diverse sources of supply to all points of use, improve water quality, reliability and safety. We anticipate an update of the Water System Master Plan during the 2004-05 fiscal year.

The availability of the facilities below are essential to meet future water production, storage and transport needs. For purposes of this report, we have assumed these projects will proceed as currently anticipated. Detailed system condition and hydraulic evaluations for both normal and drought condition operation are still to be completed. When completed these may change the projects on this list.

- Upgrade of Foster Park Production Facilities. This will include replacing the production capacity of the surface diversion with new wells. Upgrades of the facilities have been designed and are pending environmental approval. Construction should begin in 2006 and be completed by 2008.
- Saticoy Conditioning Facility Renovation. Upgrades to the facility, including the installation of an emergency generator, will provide capacity to treat production from two wells simultaneously.
- Construction of Saticoy Well No. 3. This new well is currently included with the upgrade of the Saticoy Conditioning Facility. Design is underway and completion is anticipated by 2006.
- Construction of Connecting Pipelines. Several system connections are still needed to enable efficient movement of water from sources to distant sections of the City.
- North Wells Road Reservoir. This 4 million gallons of additional storage will serve the eastern portion of the area to improve fire and domestic supply reliability.

Other projects currently included in the 5-year Capital Improvement Plan include both projects needed to maintain our existing water system infrastructure and projects planned to improve system efficiency and reliability. They include:

- Rehabilitate and upgrade mechanical/electrical system for Golf Course Well #3;
- Correction of distribution system dead-ends and complete system service loops;
- Replacement of aging cast iron mains;
- Continue modernization of and provide emergency backup power for the booster pump stations that deliver treated water to system storage; and
- Construct new pipeline improvements to include interties for the 210/330 and 210/430 zones and backup zone connections for the Pierpont-Harbor neighborhood.

Although additional water supplies are not needed at this time, the following system efficiency improvements will make the water system capable of supporting increased demands:

- Continue to work with participating agencies on the Ventura River Watershed and Habitat Conservation Plans for Steelhead Trout.
- Continue discussions with local agencies concerning our State Water Project Entitlement.

- Continue work towards development of Santa Paula Basin Operational/Management Plan with United Water Conservation District & Santa Paula Pumpers Association.
- Implement the recommendations in the West County Water Supply Reliability Study, which would provide an emergency connection between the Ventura and Oxnard water systems.
- Work with the Casitas Municipal Water District to formally define the City's water service in the North Ventura Avenue area.

VII. Certification

By adopting the 2004 Biennial Water Supply Report, the City Council certifies that based on the findings of this report, there is sufficient water supply available with existing local resources to satisfy the City's water needs for at least the next ten years. The next biennial certification review will take place in the Fall of 2006.

Responses to Comments on the Draft EIR

RESPONSES TO COMMENTS ON THE DRAFT EIR

The letters that follow are the public comment letters on the Draft Environmental Impact Report (EIR) for the proposed 2005 Ventura General Plan. The Draft EIR was circulated for a public review period that began on June 1, 2005 and concluded on July 18, 2005. This appendix includes responses to comments on the Draft EIR.

The City received 32 comment letters on the Draft EIR. Commenters and the pages on which each letter appears are listed below.

Commenter	Page
1. Terry Roberts, Director, State Clearinghouse, Governor's Office of Planning and Research	3
2. Richard A. Rojas, Superintendent, Channel Coast District, California Department of Parks and Recreation	7
3. Kim Uhlich, Senior Analyst, Ventura Local Agency Formation Commission	11
4. Carol Schwartz and Demitrius Zeigler, Casden Properties, LLC	34

Subject: City of Ventura 2005 General Plan Draft EIR
SCH#: 2004101014

Dear Kari Giaketsis:

The State Clearinghouse submitted the above named Draft EIR to selected state agencies for review. On the enclosed Document Details Report please note that the Clearinghouse has listed the state agencies that reviewed your document. The review period closed on July 13, 2005, and the comments from the responding agency (ies) is (are) enclosed. If this comment package is not in order, please notify the State Clearinghouse immediately. Please refer to the project's ten-digit State Clearinghouse number in future correspondence so that we may respond promptly.

Please note that Section 21104(c) of the California Public Resources Code states that:

"A responsible or other public agency shall only make substantive comments regarding those activities involved in a project which are within an area of expertise of the agency or which are required to be carried out or approved by the agency. Those comments shall be supported by specific documentation."

These comments are forwarded for use in preparing your final environmental document. Should you need more information or clarification of the enclosed comments, we recommend that you contact the commenting agency directly.

This letter acknowledges that you have complied with the State Clearinghouse review requirements for draft environmental documents, pursuant to the California Environmental Quality Act. Please contact the State Clearinghouse at (916) 445-0613 if you have any questions regarding the environmental review process.

Sincerely,

Terry Roberts

Terry Roberts
Director, State Clearinghouse

**Document Details Report
State Clearinghouse Data Base**

SCH# 2004101014
Project Title City of Ventura 2005-General Plan Draft EIR
Lead Agency San Buenaventura, City of

Type EIR Draft EIR

Description The 2005 Ventura General Plan is an update to the 1989 Comprehensive Plan that currently serves as the blueprint for development in the City of Ventura. The 2005 General Plan updates each of the 1989 Comprehensive Plan elements, other than the Housing Element (an update of which was approved in 2004) with policies and action items that reflect the current needs and preferences of the community. The land use map will also be updated including a simplification of the number of land use categories from over 30 to 9 land use categories.

The 2005 General Plan DEIR includes analysis of six separate land use scenarios. These scenarios range from an intensification/reuse only option with minimal changes to the City's sphere of influence (SOI) to an option that includes three expansion areas totaling 1,449 acres currently in agricultural use for possible future development. The DEIR would also be used as a Master Environmental Assessment (MEA) for future environmental analysis in the planning area.

Letter 1

COMMENTER: Terry Roberts, Director, State Clearinghouse, Governor's Office of Planning and Research

DATE: July 14, 2005

RESPONSE:

The commenter attaches a letter from the California Department of Parks and Recreation and acknowledges that the City has complied with State Clearinghouse review requirements for draft environmental documents. The comments from the Department of Parks and Recreation are addressed in the response to Comment Letter 2.

RE: City of Ventura General Plan Draft EIR - SCH #2004101014

Dear Reader:

Thank you for the opportunity to review and comment of the Draft EIR (DEIR) for the City of Ventura's General Plan. Two state park units and a portion of the Ormer Rains Bike trail are within the jurisdiction of the City. We have had a long and successful working relationship with the City and look forward opportunities to work together.

Our comments on the DEIR focus on the biological resources. There are four specific points/considerations we believe should be brought to the City's attention. They are:

1. **Coastal strand/Beach:** Our field data records have recorded two Western snowy plover nests on the beach north of the Santa Clara River in Summer 2005. Western snowy plovers also use this coastal strand/beach as wintering foraging habitat. It is also an area known for nesting by the California Least Tern. A
2. **Special status communities/areas:** The beach area north of the Santa Clara River should be considered as a sensitive habitat area because it supports both Western Snowy Plover and California Least Tern habitat. B
3. **Summary comparison of impacts for EIR scenarios:** All development and intensification of use in the City has potential for increasing impacts on the Santa Clara River Estuary due to discharges from the City's wastewater treatment plant. Unless contemplated water recycling programs keep pace with increased growth there will be increased levels of discharge into the Santa Clara River Estuary. Other less easily quantified impacts will occur in riparian, wetlands, and open water habitats due to increased runoff tied to increased impermeable surface area within developments. These in turn could affect special status species such as tidewater goby, steelhead, and other aquatic spp. through the potential for increased erosion and associated sediment entering waterways, increased contaminants entering waterways, and other effects associated with increased impermeable surfaces C
4. **Action 1.8 should include the buffering all watercourses.** Action Items to protect riparian areas from the impacts of future development effective in protecting riparian areas should include the avoidance of building within the D

Letter 2

COMMENTER: Richard A. Rojas, Superintendent, Channel Coast District, California
Department of Parks and Recreation

DATE: July 13, 2005

RESPONSE:

Response 2A

The commenter notes that Department of Parks and Recreation records indicate that two Western snowy plover nests were identified on the beach north of the Santa Clara River in summer 2005 and notes that the same area is also known for nesting by California least tern. In response to this comment, the second paragraph under Coastal Strand/Beach on page 4.4-1 of Section 4.4, *Biological Resources*, will be revised to read as follows:

Cobble beach habitat is also found near the Ventura River mouth and in patches intermixed with sandy beach habitat. Littleneck and bean clams may be found buried next to cobbles used by gastropods such as the black turban snail. The cobble area also contains a few striped and yellow shore crabs. The listed Western snowy plover forages in the beach habitat in the City and has been identified on the beach north of the Santa Clara River. The listed least tern also nests in sandy beach/coastal strand habitat north of the Santa Clara River mouth.

This minor clarification does not affect the conclusions of the Draft EIR. Implementation of proposed General Plan policies and actions would reduce potential impacts to the Western snowy plover and California least tern to a less than significant level.

Response 2B

The commenter states that the beach area north of the Santa Clara River should be considered a "sensitive habitat" because it supports the Western snowy plover and California least tern. General Plan Action 1.17 identifies "shoreline areas" as sensitive habitats and requires surveys and appropriate buffers and other mitigation for any projects that may affect such areas. Implementation of this action would address possible future impacts to the Western snowy plover and California least tern.

Response 2C

The commenter states that the intensification of land use within the City has the potential to indirectly affect the Santa Clara River estuary and other open water habitats because of increased discharges from the wastewater treatment plant and increased surface runoff associated with the increase in impermeable surface area. Issues relating to wastewater treatment and surface water quality are addressed in Sections 4.13, *Utilities and Service Systems*, and 4.8, *Hydrology and Water Quality*. As discussed in Section 4.13, the City's wastewater treatment plant has adequate capacity to handle the projected increase in wastewater flow under any of the six EIR land use scenarios. As such, although an increase in overall wastewater generation would occur, wastewater

treatment would continue to meet Regional Water Quality Control Board discharge requirements and significant impacts would not occur. As discussed in Section 4.8, all future development in the City would be subject to the requirements of the Ventura County SQUIMP, which provide specific stormwater runoff treatment requirements and performance standards. The standards for new development and redevelopment exceed the standards of most existing development in the City and generally restrict post-project runoff levels to pre-project levels. Continued implementation of SQUIMP requirements on all new development and redevelopment within the City would be expected to generally improve the quality of stormwater runoff and reduce impacts to surface water quality to a less than significant level.

Response 2D

The commenter states an opinion that Action 1.8 should include the buffering of all watercourses and that building within the floodplain should be avoided. Proposed Action 1.8 provides for a minimum 50-foot buffer for waterways that retain natural soil slopes and thus have the potential for biological value. This action is not intended to apply to existing concrete-lined channels since such channels have little or no biological resource value. However, Action 1.10 calls for the removal of concrete channel structures as funding allows and where doing so will fit the context of the area and not create unacceptable flood or erosion potential. As discussed in Section 4.8, *Hydrology and Water Quality*, the six EIR land use scenarios include only a limited amount of developable land within the floodplain. Any future development proposals within 100-year flood zones would be required to comply with all Federal Emergency Management Agency requirements as well as the City's Flood Plain Ordinance.

PLANNING DIVISION

RE: 2005 Ventura General Plan EIR Comments

Dear Kari:

Thank you for providing the Ventura Local Agency Formation Commission (LAFCO) with the opportunity to comment on the Draft Program EIR for the Ventura General Plan. As a responsible agency for subsequent projects that may be implemented according to the General Plan, LAFCO must be able to make findings that the CEQA determinations made by the lead agency are appropriate for proposed project(s). Having the opportunity to comment on draft environmental documents helps to ensure that the CEQA issues as they pertain to the LAFCO process are addressed prior to application to LAFCO. Please understand that the specific comments about the DEIR detailed below are those of the LAFCO staff. The DEIR has not been reviewed or discussed by the Commission.

Section 2.0 – Project Description

- 1. Figures 2-4, 2-5, 2-6, 2-7 and 2-8 contain multiple, confusing references to areas within the North Ventura Avenue area ("North Avenue Potential Expansion Area", "Upper North Avenue District" and "North Avenue District"). These Figures and all related text references should be clarified so the reader can better distinguish between "Districts" and the "Potential Expansion Areas" in the North Ventura Avenue area. A
- 2. Due to the relatively large scale of the "Scenario" maps (Figures 2-3 through 2-8), it would be helpful if a list or table of Assessor parcel numbers is included as part of the Project Description Chapter to distinguish the specific boundaries of each of the potential expansion areas. B

Section 4.2 - Agriculture

- 1. Please find enclosed additional comments offered in 11 x 17-inch chart format in an effort to reduce the length of our narrative comments. This chart is intended to clarify and supplement the information provided in the agricultural impacts chart on Page 4.2-12 of the EIR. In particular, please note Footnote No. 3 on the chart. As currently described in the EIR, annexation of the North Avenue Potential Expansion C

Area is not possible based on the fact that geographic contiguity cannot be established unless the EIR is revised to include parcels to the south not already analyzed in the scope of the proposed General Plan land use scenarios.

Please also note the a portion of the 11-acre property north of the wastewater treatment plant included in Scenario 1 is subject to City SOAR according to County GIS maps.

2. Although the City of Ventura may use the State Important Farmland Maps as a threshold for significance for their initial study checklist, LAFCO must comply with the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000 definition of prime agriculture to determine agricultural impacts. The definition is as follows:

(Government Code (G.C.) Section 56064)

"...an area of land whether a single parcel or contiguous parcels, that has not been developed for a use other than an agricultural use and that meets any of the following qualifications:

- (a) Land that qualifies, if irrigated, for rating as class I or II in the USDA Natural Resource Conservation Service land use capability classification, whether or not land is actually irrigated, provided that irrigation is feasible.*
- (b) Land that qualifies for rating 80 and 100 Storie Index Rating.*
- (c) Land that supports livestock used for the production of food and fiber and that has an annual carrying capacity equivalent to at least one animal unit per acre...*
- (d) Land planted with fruit or nut-bearing trees, vines, bushes, or crops that have a nonbearing period of less than five years and that will return during commercial bearing period on an annual basis...of not less than \$400 per acre.*
- (e) Land that has returned from the production of unprocessed agricultural plant products an annual gross value of not less than \$400 per acre for three of the previous five years."*

For LAFCO purposes, the USDA rating and storie class of the site should be addressed in the EIR or at the time of application for a specific boundary change.

3. Not all parcels under Land Conservation Act (LCA) contract within the Olivas Potential Expansion Area are shown on Figure 4.2-3. Based on our review of County GIS maps, it appears that approximately 170 acres of land are under LCA contract in the Olivas area rather than 24 acres as indicated in the EIR (Assessor Parcels: 080-0-020-200 and 138-0-060-495). The map and accompanying text references to total acreage under LCA contract should be revised accordingly.

4. For those Expansion Areas containing parcels subject to LCA contracts, the EIR should describe the consistency review process according to Government Code Section 56856.5 and acknowledge that this generally precludes the ability of LAFCO to approve the annexation of such lands to a city. G
5. The first paragraph on Page 4.2-11 indicates that any change to greenbelt agreement boundaries between cities requires approval from LAFCO. This is incorrect. Greenbelt agreements are statements of local policy adopted by one or more cities and the County of Ventura. However, although LAFCO is not a party to greenbelt agreements, it has “endorsed” all such agreements as statements of local policy. As such, LAFCO has adopted a policy providing that a proposal from a city that is in conflict with any greenbelt agreement will not be approved unless exceptional circumstances exist. A greenbelt amendment must be amended by all parties involved prior to any proposal which may be in conflict with the agreement being considered by LAFCO (see enclosed Section 2.5.3 of the LAFCO Commissioner’s Handbook). H
6. The EIR references proposed General Plan Policy 3D (“Continue to preserve agricultural lands within the City’s Planning Area”) and cites proposed General Plan Action 3.12 as being one means to this end. General Plan Action 3.12 directs the City to renew and “modify” greenbelt agreements as necessary to direct development to already urbanized areas.” I

Page 4.2-16 of the EIR contains the following statement:

“ Implementation of the above policies/actions would minimize the *premature* conversion of agricultural lands under any of the land use scenarios. Outside of re-designating important farmlands for continued agricultural use, additional mitigation is not available.” (emphasis added)

Given the above statement acknowledging that agricultural land would not be permanently preserved within the timeframe and context of the development contemplated under the proposed General Plan, and based on the EIR conclusion that all six land use scenarios would result in the conversion of agricultural land within the sphere, and that two of the scenarios (Scenario 2 and 3) would actually require a reduction in the area covered by the Oxnard-Ventura Greenbelt, it is unclear how any of the proposed scenarios could be found to be *consistent* with General Plan Action 3.12, let alone how these policies could be found to serve as “mitigation measures” (see next comment).

7. Two of the mitigation measures proposed by the EIR to address impacts associated with the conversion of agricultural land (Pages 4.2-15 – 4.2-16) refer to implementation of General Plan Actions 3.12 and 3.15 which, respectively, directs J

the City to renew and modify greenbelt agreements as necessary to direct development to already urbanized areas, and to adopt use permit standards for non-farm activities in agricultural areas that protect and support farm operations (including requiring non-farm uses to provide buffers). However, the EIR acknowledges that these policies merely serve to minimize the "premature" conversion of agricultural land and, and that "outside of re-designating important farmlands for continued agricultural use (which the EIR does not propose to do), additional mitigation is not available." As such, reliance on these policies which serve as only *temporary* means to preserve agricultural land as "mitigation" does not seem to reflect the true intent of mitigation under CEQA. Moreover, given that the impacts regarding agricultural land conversion would remain unavoidably significant, even with this "mitigation", we believe that the references to the proposed General Plan actions as "mitigation" should be deleted altogether.

8. Please note that LAFCO is planning to prepare a Municipal Service Review (MSR) for the City of Ventura, which is required before LAFCO can undertake an update of the City's sphere of influence. As part of this process, LAFCO policy 4.1.2.3 (enclosed) provides that city spheres of influence should coincide, with or cover lesser area than, voter approved growth boundaries. LAFCO will base the update of the City's sphere of influence on the above-noted policy, unless there is sufficient justification for change. This project EIR and subsequent decisions by the City about its SOAR boundary will be used as part of the basis for the City's sphere of influence update by LAFCO. Thus, once LAFCO completes the MSR, the probable result will be that all territory located within the current sphere of influence but subject to the City's SOAR ordinance will be removed from the sphere (including all or portions of land use Scenarios 2-6, and possibly even Scenario 1, with respect to the 11-acre area that is outside of the current sphere and a portion of which is subject to the City SOAR). If LAFCO's sphere of influence update is completed prior to the passage of a SOAR vote to redesignate any of the Expansion Areas, any of the Expansion Areas that are subject to the City SOAR ordinance could also be outside the City's sphere of influence. As such, the EIR should discuss the fact that an application for a sphere amendment may need to be approved by LAFCO prior to considering these lands for annexation. K
9. The first paragraph of page 4.2-18 incorrectly references the Olivas area as being part of Scenario 4. L
10. The discussion on page 4.2-18 under Scenario 5 indicates that a portion of the Western Cañada Larga area could only be converted to another use upon cancellation of existing LCA contracts and approval of a sphere of influence amendment by LAFCO. Scenarios 2 and 3 would also require cancellation of existing LCA contracts. The applicable sections of the EIR should be revised to acknowledge this fact. Also, based on the City's current sphere of influence M

boundary. Scenarios 1, 2, 3 and 4 would require sphere of influence amendments.
Scenario 6 may potentially require a sphere amendment following the pending sphere update to be performed by LAFCO as part of the Municipal Service Review process.

11. Under Scenario 1 on page 4.2-20, the EIR states, "several agricultural properties within the proposed SOI that are currently designated for non-agricultural uses could be developed under this scenario." The EIR proceeds to reference properties in the Saticoy area that may present potential agricultural/urban compatibility conflicts, however, there is no information about any specific property in the Saticoy area and no mapped reference. For the record, we would like it noted that the subject EIR does not contain sufficient information to assess impacts associated with any annexations associated with these properties. Any future actions requiring LAFCO approval will require additional environmental review. N

Section 4.14 - Land Use and Planning

12. Section 4.14 (Land Use and Planning) of the EIR contains erroneous interpretations of the Cortese-Knox-Hertzberg Act of 2000 (California Government Code Section 56000 et seq.), LAFCO policies and the Ventura County Guidelines for Orderly Development. Please refer to the "Frequently Asked Questions" link on our website at www.ventura.lafco.ca.gov for additional information. For the sake of ease and clarity, we recommend that the EIR simply reference the applicable Code Sections or local policy documents in sufficient detail for interested readers to locate on their own accord rather than include inaccurate restatements of statutes and policies. As such, we recommend that all the applicable interpretations found on pages 4.14.6 and 4.14.7 be deleted. O

13. In addition to the factors contained in Government Code Section 56000 et seq., the Ventura LAFCO has adopted local polices that will also be considered as a part of any LAFCO review of the project. A discussion about consistency with these Ventura LAFCO policies and any resulting environmental impacts should be included in the EIR. All of these polices are contained in the Ventura LAFCO Commissioner's Handbook. A complete copy of the Commissioner's Handbook is available from the Ventura LAFCO and on-line at the Ventura LAFCO web site. Specific applicable LAFCO policies are enclosed and include: P
- a. Conformance with local plans and policies (policy 2.5.1), especially in relation to any changes that may be necessary to the City's SOAR ordinance.
 - b. Agriculture and open space conversion (policy 3.1.5 in its entirety). Note that policy 3.1.5 requires a detailed alternative site analysis of non-prime agricultural or vacant lands as well as an analysis of the impacts on

adjoining prime agricultural or open space lands. Also note that this policy refers to phasing annexation for very large developments that may involve time horizons over 5 years.

- c. School capacity (policy 3.1.6)
- d. Annexation of unincorporated island (policy 3.2.3)

Given that the subject EIR does not include an analysis of several of the above noted policies, LAFCO does not consider this EIR adequate for the purposes of any future sphere amendments or annexations unless supplemental analysis is provided.

Paragraph b, above is emphasized in response to statements in the EIR indicating that the 2005 General Plan would not change the land use designation for any of the areas under Scenarios 2 through 6 (pages 4.2-17 through 4.2-18). At the point when the City begins to implement any land use scenario that requires an amendment to the sphere of influence, please note that LAFCO discourages such unless annexation of the territory involved is anticipated within five years. Note further, however, that once territory is within the City's sphere of influence there is no requirement that it be annexed within five years or any other specific timeframe.

- 14.** In acting on any governmental boundary reorganization proposal LAFCO must consider the factors identified in Government Code Section 56668. Each of these factors should be fully discussed in the appropriate sections of the EIR. Note that these factors include a reference to Government Code Section 56377 concerning open space conversion and that LAFCO uses the definition of open space contained in Section 65560 of the Public Resources Code.

Again, thank you for the opportunity to comment. If there are any questions regarding our comments, please feel free to contact me at 805-654-2866.

Sincerely,

Kim Uhlich
Senior Analyst

DIVISION 2 – OPERATIONAL POLICIES

CHAPTER 5 – LOCAL PLANS AND POLICIES

SECTION 2.5.1 CONFORMANCE WITH LOCAL PLANS AND POLICIES

2.5.1.1 Consistency with General and Specific Plans: Unless exceptional circumstances are shown, LAFCO will not approve a proposal unless it is consistent with the applicable general plan and any applicable specific plan. For purposes of this policy, the applicable general plan is as follows:

- i. For proposals by a city, the general plan of the city.
- ii. For proposals by a district, where the affected territory lies within an adopted sphere of influence of a city, the general plan of the city.
- iii. For proposals by a district, where the affected territory lies outside an adopted city sphere of influence, the Ventura County General Plan.

2.5.1.2 Consistency with ordinances requiring voter approval: For cities that have enacted ordinances that require voter approval for the extension of services or for changing general plan designations, LAFCO will not approve a proposal unless it is consistent with such ordinances and voter approval has first been granted, or unless exceptional circumstances are shown to exist.

SECTION 2.5.2 GUIDELINES FOR ORDERLY DEVELOPMENT

LAFCO encourages proposals that involve urban development or that result in urban development to include annexation to a city wherever possible. In support of this policy LAFCO has adopted Guidelines for Orderly Development, the policies of which are incorporated by reference.

SECTION 2.5.3 GREENBELTS

The County of Ventura and various cities in the County have adopted Greenbelt Agreements for the purposes of preserving agriculture and/or open space, providing separation between cities, and/or limiting the extension of urban services. The Ventura LAFCO is not a direct party to these Greenbelt Agreements, but has endorsed them as statements of local policy. As such, LAFCO will not approve a proposal from a city that is in conflict with any Greenbelt Agreement unless exceptional circumstances are shown to exist. A Greenbelt Agreement shall be amended by all parties involved prior to any proposal which may be in conflict with the Agreement is considered by LAFCO.

SECTION 3.1.5 AGRICULTURE AND OPEN SPACE PRESERVATION

3.1.5.1 Findings and criteria for prime agricultural and open space land conversion: LAFCO will approve a proposal for a change of organization or reorganization which is likely to result in the conversion of prime agricultural or open space land use to other uses only if the Commission finds that the proposal will lead to planned, orderly, and efficient development. For the purposes of this policy, a proposal for a change of organization or reorganization leads to planned, orderly, and efficient development only if all of the following criteria are met:

- i. The territory involved is contiguous to either lands developed with an urban use or lands which have received all discretionary approvals for urban development.
- ii. The territory is likely to be developed within 5 years and has been pre-zoned for non-agricultural or open space use. In the case of very large developments, annexation should be phased wherever possible.
- iii. Insufficient non-prime agricultural or vacant land exists within the existing boundaries of the agency that is planned and developable for the same general type of use.
- iv. The territory involved is not subject to voter approval for the extension of services or for changing general plan land use designations. Where such voter approval is required by local ordinance, such voter approval must be obtained prior to LAFCO action on any proposal unless exceptional circumstances are shown to exist.
- v. The proposal will have no significant adverse effects on the physical and economic integrity of other prime agricultural or open space lands.

3.1.5.2 Findings that insufficient non-prime agricultural or vacant land exists: The Commission will not make affirmative findings that insufficient non-prime agricultural or vacant land exists within the boundaries of the agency unless the applicable jurisdiction has prepared a detailed alternative site analysis which at a minimum includes:

- i. An evaluation of all vacant, non-prime agricultural lands within the boundaries of the jurisdiction that could be developed for the same or similar uses.
- ii. An evaluation of the re-use and redevelopment potential of developed areas within the boundaries of the jurisdiction for the same or similar uses.
- iii. Determinations as to why vacant, non-prime agricultural lands and potential re-use and redevelopment sites are unavailable or undesirable for the same or similar uses, and why conversion of prime agricultural or open space lands are necessary for the planned, orderly, and efficient development of the jurisdiction.

3.1.5.3 Impacts on adjoining prime agricultural or open space lands: In making the determination whether conversion will adversely impact adjoining prime agricultural or open space lands, the Commission will consider the following factors:

- i. The prime agricultural and open space significance of the territory and adjacent areas relative to other agricultural and open space lands in the region.
- ii. The economic viability of the prime agricultural lands to be converted.
- iii. The health and well being of any urban residents adjacent to the prime agricultural lands to be converted.
- iv. The use of the territory and the adjacent areas.
- v. Whether public facilities related to the proposal would be sized or situated so as to facilitate the conversion of prime agricultural or open space land outside of the agency's sphere of influence, or will be extended through prime agricultural or open space lands outside the agency's sphere of influence.
- vi. Whether natural or man-made barriers serve to buffer prime agricultural or open space lands outside of the agency's sphere of influence from the effects of the proposal.
- vii. Applicable provisions of local general plans, applicable ordinances that require voter approval prior to the extension of urban services or changes to general plan designations, Greenbelt Agreements, applicable growth-management policies, and statutory provisions designed to protect agriculture or open space.
- viii. Comments and recommendations by the Ventura County Agricultural Commissioner.

SECTION 3.1.6 SCHOOL CAPACITY

In addition to the factors and determinations required by state law, LAFCO will consider whether or not the territory involved in a proposal for a change of organization or reorganization can be served by affected school districts. LAFCO will not favor any change of organization or reorganization proposal where any affected school district certifies that there is not sufficient existing school capacity, or will not be sufficient school capacity at the time of development, to serve the territory involved.

SECTION 3.2.3 ANNEXATION OF UNINCORPORATED ISLAND AREAS BY CITIES

(Added 4/16/03)

Any approval of a proposal for a change of organization or reorganization will be conditioned to provide that proceedings will not be completed until and unless a subsequent proposal is filed with LAFCO initiating proceedings for the change of organization or reorganization of all unincorporated island areas that meet the provisions of Government Code Section 56375.3, provided all of the following criteria are applicable:

- i. The approved proposal was initiated by resolution of a city that surrounds or substantially surrounds one or more unincorporated island areas that meet the requirements of Section 56375.3.
- ii. The territory in the approved proposal consists of one or more areas that are each 40 acres or more in area.
- iii. The territory in the approved proposal will not be used exclusively for agriculture or open space purposes after the completion of proceedings.
- iv. The territory in the approved proposal is not owned by a public agency or used for public purposes.

DIVISION 4 – SPHERES OF INFLUENCE

CHAPTER 1 – GENERAL POLICIES

SECTION 4.1.1 APPLICABILITY AND WAIVER

4.1.1.1 Applicability:

(a) These policies and standards do not preempt state law. In the event of a conflict between these policies and the provisions of state law, the provisions of state law shall prevail.

(b) In the event of a conflict between these policies relating to spheres of influence and the rules and regulations, or the operational policies, adopted by the Ventura LAFCO, the provisions of the rules and regulations and the operational policies shall prevail.

4.1.1.2 Waiver: These policies and standards relating to spheres of influence shall be given great weight as a part of the Ventura LAFCO's consideration of proposals. They are general guidelines for the Commission to follow, however, they are not mandatory or binding. The Commission can and will consider each proposal upon its merits within the parameters set forth in state law. Should the Commission elect not to follow a policy, it shall, as a part of any resolution on the matter and as part of the written record, set forth the specific waiver, and the reason for it.

SECTION 4.1.2 BOUNDARIES

4.1.2.1 Compliance with state law: All boundaries shall comply with the provisions of state law.

4.1.2.2 Conformance with lines of ownership and assessment: Sphere of influence boundaries should coincide with lines of assessment or ownership. If sphere of influence boundaries do not coincide with lines of assessment or ownership they shall be described by metes and bounds legal descriptions sufficient for definitive mapping purposes using geographic information system software.

4.1.2.3 Consistent with voter approved growth boundaries: For cities that have enacted ordinances that require voter approval for the extension of services or for changing general plan designations, sphere of influence boundaries should coincide with, or cover lesser area than, voter approved growth boundaries.

Q

2005 Ventura General Plan EIR: Comparison of Scenarios 1 -6 Integrating LAFCo Law/Policies and Minor Data Corrections

CRITERIA	Scenario 1 (4)	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
Prime Farmland Conversion?	Yes; refer to EIR for acreage	Yes; refer to EIR for acreage	Yes; refer to EIR for acreage	Yes; refer to EIR for acreage	Yes; refer to EIR for acreage	Yes; refer to EIR for acreage
Conflicts with SOAR? (1)	Portion of the 11 acres north of water filtration plant subject to City SOAR	Yes; refer to EIR for acreage	Yes; refer to EIR for acreage	Yes; refer to EIR for acreage	Yes; refer to EIR for acreage	Yes; refer to EIR for acreage
Conflicts with LAFCo Law/Policy? (2)	11 acres north of water filtration plant would require SOI amendment prior to annexation. However, annexation of noncontiguous territory is prohibited by Sec. 56741 of C-K-H	North Avenue area is not contiguous to City boundary, annexation is prohibited by Sec. 56741 of C-K-H	North Avenue area is not contiguous to City boundary, annexation is prohibited by Sec. 56741 of C-K-H	North Avenue area is not contiguous to City boundary, annexation is prohibited by Sec. 56741 of C-K-H	North Avenue and Western Canada Larga areas are not contiguous to City boundary, annexation is prohibited by Sec. 56741 of C-K-H.	North Avenue area is not contiguous to City boundary; annexation is prohibited by Sec. 56741 of C-K-H.
Conflicts with Guidelines for Orderly Development (3)?	Yes; land to be developed for urban purposes should first be annexed to City. North Avenue area cannot be annexed per LAFCo policy	Yes; land to be developed for urban purposes should first be annexed to City. North Avenue area cannot be annexed per LAFCo policy	Yes; land to be developed for urban purposes should first be annexed to City. North Avenue area cannot be annexed per LAFCo policy	Yes; land to be developed for urban purposes should first be annexed to City. North Avenue area cannot be annexed per LAFCo policy	Yes; land to be developed for urban purposes should first be annexed to City. North Avenue and Western Canada Larga areas cannot be annexed per LAFCo policy	Yes; land to be developed for urban purposes should first be annexed to City. North Avenue area cannot be annexed per LAFCo policy
Conflicts with greenbelt agreement?	No, according to criteria for Scenario 1 eligibility as stated in EIR (5)	Yes; refer to EIR for acreage	Yes; refer to EIR for acreage	No	No	No
Conflicts with LCA contract(s)?	No, according to criteria for Scenario 1 eligibility as stated in EIR (5)	Yes; 170 acres in Olivias area under LCA contract (EIR indicates 24 total acres)	Yes; 170 acres in Olivias area under LCA contract (EIR indicates 24 total acres)	No	Yes; refer to EIR for acreage	No

NOTES:
 (1) The EIR should indicate that LAFCo will not accept an application for a sphere amendment or an annexation for any territory subject to the City SOAR ordinance until and unless voter concurrence is reached.
 (2) Through a pending State-mandated review and update of the City's sphere of influence to be performed by LAFCo within the next year, and based on Ventura LAFCo policies, all land currently subject to the City SOAR ordinance will potentially be removed from the SOI. As such, several areas identified as being within the SOI will potentially be removed from the SOI. This information should be included and made part of the EIR analysis.
 (3) The location of the "North Avenue Potential Expansion Area" as described in the EIR does not include territory that would make annexation of this PEA possible under State law. It is possible to annex the parcels within the North Area PEA but in order to do so under this EIR it would be necessary to revise the project description and the boundaries of one or more of the land use scenarios to include properties south of the PEA that provide a means of geographical contiguity with properties already within the City boundaries located considerably south of the currently described North Avenue PEA. Some of these properties may be subject to the City SOAR ordinance and thus their inclusion in the General Plan area would need to be analyzed along with any other additional potential impacts.
 (4) This analysis for Scenario 1 includes analysis of "incorporation" (sic) of approximately 11 acres north of water filtration plant in the North Avenue area as referred to in EIR. Specific properties included in under this Scenario are not all identified in the EIR. Those areas that are identified, such as the McGrath property, Thille area property, and several Saitcoy sites, should be included in the impact analysis if they are known to be part of Scenario 1.
 (5) Page 4.2-16 refers to criteria that properties eligible to be part of Scenario 1 must meet, such as properties not subject to City SOAR, can include agricultural land but must be designated for urban use, not subject to an LCA contract, not within a greenbelt and within the current SOI. However, Page S-1 of the EIR describes Scenario 1 as one that limits development "almost exclusively" to areas within the current SOI. Other EIR references to Scenario 1 indicate that no land outside the SOI will be included. Thus, the parameters of Scenario 1 are inconsistent and unclear.
 (6) According to the County GIS maps, approximately 29 acres within the W. Canada Larga PEA and approximately 66 acres in the North Ventura Avenue PEA, for a total of approximately 95 acres, are subject to the City SOAR.

Letter 3

COMMENTER: Kim Uhlich, Senior Analyst, Ventura Local Agency Formation Commission

DATE: July 11, 2005

RESPONSE:

Response 3A

The commenter notes that there are multiple confusing references to the North Avenue District, Upper North Avenue District, and North Avenue Expansion Area on Figures 2-4 through 2-8. The Upper North Avenue district is shaded gray and numbered "1." The North Avenue district is shaded gray and numbered "2." The North Avenue expansion area is shown with a hatch pattern and labeled as such. All three areas are within the current Sphere of Influence. However, the North Avenue expansion area is considered such because it is designated Agriculture in the current Comprehensive Plan land use map and therefore would need voter approval for re-designation and subsequent development.

Response 3B

The commenter requests a listing of parcel numbers for each of the potential expansion areas. This list was provided to the LAFCO staff upon their request and is attached.

Response 3C

The commenter notes that annexation of the North Avenue potential expansion area is not possible because it is not contiguous with the current City boundary. It is presumed that annexation and development of the North Avenue area would not occur (if at all) until such time as areas to the south and/or west are annexed to the City. The Draft EIR Project Description is unclear on this point. Therefore, the discussion of the City's corporate limits in Section 2.0, *Project Description*, will be revised as follows in the Final EIR (new text is underlined):

a. Corporate Limits. The corporate limits of the City currently encompass approximately 13,700 acres, or 21 square miles. The City stretches from the Pacific Ocean eastward to the community of Saticoy and northward up the Ventura River valley. The City is not currently seeking annexation of any lands outside the current City limits. However, the City may seek annexation of unincorporated islands as well as urbanized areas adjacent to the current City limits (such as in Saticoy and the North Ventura Avenue area) over the life of the 2005 General Plan. Any annexations would be sought only at such time as the area to be annexed is contiguous with the current (at that time) City limit.

In addition, the first full paragraph on page 2-5 will be replaced with the following in the Final EIR to clarify whether and how the City may seek adjustments to the Sphere of Influence:

The City is not seeking any adjustments to the SOI at this time. However, the 2005 General Plan includes a land use designation ("Industrial") for a small area outside the current SOI. This area encompasses approximately 10-11 acres located north of the City's water filtration plant. The City may seek inclusion of that area within the SOI over the life of the 2005 General Plan; however, any application for an adjustment to the SOI and annexation would occur (if ever) only at such time as the City's corporate boundary has been extended to be contiguous with the boundary of the area. Similarly, should any potential expansion areas be selected for inclusion in the General Plan land use map in the future, the SOI may be proposed for adjustment at that time to encompass the expansion areas. Applications for any necessary SOI adjustments would be sought at such time as development of these areas is proposed. The SOI adjustments that would be needed for each expansion area are discussed in detail in subsection 2.5. Finally, the City is interested in having the SOI moved to be coterminous with the City's corporate boundary for the hillside areas above the City pursuant to Action 1.13 of the Draft General Plan. It is the City's understanding that the Ventura LAFCO is planning to prepare a Municipal Service Review (MSR) for the City that will likely result in the removal this area (and possibly other areas, including all of the potential expansion areas) from the SOI; therefore, the City will not seek an SOI adjustment at this time. However, if the LAFCO does not take action to remove the hillside areas from the SOI, the City may apply for such an adjustment in the future.

Subsection 2.5.3.c of the EIR Project Description will be revised to read as follows in the Final EIR (new text is underlined):

c. Possible Future Changes to Sphere of Influence Boundaries. As noted in subsection 2.2, although the City is not seeking adjustment to the Sphere of Influence (SOI) at this time, implementation of the 2005 General Plan may require several adjustments to the Sphere of Influence (SOI) that would subsequently be processed and subject to approval by LAFCO. About 2,300 acres in the hillsides above the City are proposed to be removed from the SOI. This would remove these areas from consideration for future City extension of services and focus future development on non-hillside areas. In addition, approximately 10-11 acres north of the City's water filtration plant along the west of SR 33 may need to be included in the SOI at some point in the future. This area is partly in agricultural use, but it is designated for industrial development in the Ventura County General Plan and in the 1989 Comprehensive Plan.

The SOI would not need to be adjusted at this time to include any of the expansion areas considered in this EIR. However, certain expansion areas would require expansion of the SOI if they are to be considered for future development. Such SOI expansions would be sought, if ever, at such time as development of the areas is proposed. Possible future expansions of the SOI include the following:

- Western Cañada Larga – This 110-acre area, located at the northern end of the Planning Area along the State Route (SR) 33 corridor, would need to be included in the SOI if selected for possible future development. Inclusion within the SOI could occur only at such time as the City's corporate boundary has been extended to be contiguous with the boundary of the expansion area.*
- Olivas – About 55 acres of the 930-acre Olivas area (the portion of this area north of U.S. 101) are within the current SOI. However, the remaining 875 acres, which*

consist of agricultural land located primarily between U.S. 101 and Harbor Boulevard, would need to be included in the SOI if this area is selected for possible future development.

- *Serra – About 160 acres of the 438-acre Serra area are currently outside the SOI. This area, which is located south of Bristol Road and along the north bank of the Santa Clara River, would need to be included in the SOI if the Serra area is selected for possible future development.*

Because the Ventura LAFCO may remove all areas subject to voter approval from the SOI as a result of its Municipal Service Review, any of the expansion areas may have been removed from the SOI by the time they are considered for development. Therefore, an SOI adjustment may need to be sought for any of the expansion areas.

The second, third, and fourth paragraph under subsection 2.6 (those related to LAFCO approvals) will be replaced with the following:

The City is not seeking annexation of lands or adjustments to the SOI at this time. However, implementation of the 2005 General Plan may require future approval of adjustments to the City's SOI, as described above. Annexations and SOI adjustments would be sought as appropriate at such time as developments are proposed for the areas in question. Any adjustments to the SOI will require approval from the Ventura LAFCO.

Other references to future SOI adjustments throughout the Draft EIR will be adjusted to reflect the above. In addition, Figures 2-3 through 2-8 will be revised to eliminate the future SOI boundaries that are depicted.

Response 3D

The commenter states that the 11-acre property north of the water treatment plant is subject to SOAR according to County records. In actuality, two small pieces of the property in question are designated Agriculture in the current Comprehensive Plan and therefore subject to SOAR. However, the bulk of the property (and the entire area included within the Upper North Avenue District depicted on Figures 2-3 through 2-8) is designated Industrial and not subject to SOAR.

Response 3E

The commenter notes that the Ventura County LAFCO uses the USDA rating and storic class of the site to determine the significance of agricultural resource impacts. Any project EIR for future annexation or SOI adjustment proposals will address these factors, in accordance with LAFCO requirements.

Response 3F

The commenter notes that the Olivas area includes an additional Land Conservation Act (LCA) contract not noted in the Draft EIR. In response to this comment, Figure 4.2-3 will be amended to reflect this additional LCA contract. In addition, Table 4.2-3 and accompanying text will be

amended to reflect the fact that EIR Scenarios 2 and 3 would potentially affect 170 acres if land under LCA contract. This change in acreage does not affect the findings or conclusions of the Draft EIR as conflicts with agricultural designations were already identified as unavoidably significant for Scenarios 2 and 3.

Response 3G

The commenter suggests that the EIR should describe the LAFCO review process required by the California Government Code and that the presence of LCA contracts within an area generally precludes LAFCO from approving annexation. In response to this comment, the following will be added to the first paragraph under "Scenario 2 - Intensification/Reuse + North Avenue + Olivas + Serra" on page 4.2-17 (under Impact AG-2):

The California Government Code (Section 56856.5) generally precludes the LAFCO from approving annexation of lands under LCA contract unless a notice of non-renewal has been filed and the annexing agency (the City) agrees that no services will actually be provided during the remaining life of the contract for land uses or activities not allowed under the contract.

This same sentence will also be added under the discussion of Scenarios 3, 4, and 5.

Response 3H

The commenter notes that the Draft EIR incorrectly states that the LAFCO needs to approve amendments to greenbelt agreements. In response to this comment, the last sentence of the first paragraph under "Greenbelt Agreements" on page 4.2-11 will be replaced with the following:

A greenbelt agreement must be amended by all parties involved before the LAFCO will consider any proposal that may be in conflict with the agreement.

Response 3I

The commenter questions how the conversion of land within the Oxnard-Ventura Greenbelt Agreement could be found to be consistent with proposed General Plan Action 3.12 relating to the preservation of farmland and greenbelt agreements and how the proposed General Plan action could serve as a "mitigation measure." The action to which the commenter refers is not a "mitigation measure." Rather, it is an action proposed in the draft General Plan and thus is part of the "proposed project." In CEQA terms, mitigation measures are additional actions above and beyond those included in the proposed project. With respect to consistency with Action 3.12, it is the City's stated intent, throughout the 2005 General Plan, to focus first on intensification and reuse of lands within the SOI prior considering expansion of the SOI boundaries. It is expected that the focus on intensification and reuse will relieve pressure for the development of farmland at the City's periphery. Nevertheless, the City acknowledges that some planning objectives may not be met through intensification/reuse alone and, under Scenarios 2-6, would retain the flexibility to consider annexation of various expansion areas at some point in the future. Though the City's general approach to planning is expected to minimize pressure for the future conversion of farmland, the Draft EIR acknowledges that such conversion would be an unavoidably significant impact. Finally, it should be noted that City

staff are recommending adoption of a variation on Scenario 1 (the "Intensification/Reuse Only" scenario), which includes none of the expansion areas and thus would not affect any areas within existing greenbelt agreements.

Response 3J

The commenter states an opinion that General Plan Actions 3.12 and 3.15 should not be referred to as "mitigation measure." As noted in Response 3I, the actions to which the commenter refers are not "mitigation measures," but rather are proposed General Plan policies that are part of the "proposed project." The discussion in the Draft EIR is merely intended to direct the reader to proposed General Plan actions that address the issue of farmland conversion. The Draft EIR acknowledges that, despite the inclusion of these actions in the draft General Plan, buildout of any of the EIR land use scenarios would result in unavoidably significant impacts relating to the conversion of important farmlands.

Response 3K

The commenter notes that the LAFCO is currently planning to prepare a Municipal Service Review that may result in the removal of all areas subject to voter approval from the SOI and states that the EIR should acknowledge this fact. Such a discussion will be added to the Final EIR. Please see Response 3C.

Response 3L

The commenter notes that the discussion of Alternative 4 incorrectly references the Olivas area. In response to this comment, the last sentence of the first paragraph on page 4.2-18 will be removed in the Final EIR.

Response 3M

The commenter notes that the statement regarding LCA contract cancellation under Scenario 5 also applies to Scenarios 2 and 3. The commenter also notes that any of the scenarios could ultimately require an expansion of the SOI. In response to this comment, the following sentence will be added to the discussion of Scenarios 2 and 3 on page 4.2-18 (under Impact AG-2):

Lands under LCA contract could only be converted upon cancellation of the contracts.

The SOI issue is discussed in previous responses. A statement regarding the need to expand the SOI for Scenarios 2, 3, and 4 will be added to the applicable discussions under Impact AG-2 and a statement of the possible need for an SOI adjustment will be added to the discussion of Scenario 6. Such a statement is not necessary for Scenario 1 since, although development under that scenario may require a future SOI adjustment, such an adjustment would not involve agriculturally-designated land (please see Response 3D).

Response 3N

The commenter notes that the LAFCO will require additional environmental review for the future conversion of agricultural parcels within the SOI prior to any actions requiring LAFCO approval. Agricultural lands within the Planning Area are shown on Figure 4.2-1. The EIR is a program level document that analyzes the overall impact of growth under the 2005 General Plan. Project-specific environmental review will be conducted for individual development projects at such time as projects are proposed.

Response 3O

The commenter suggests that the text describing LAFCO policies and the Cortese-Knox – Hertzberg Act of 2000 be replaced with simple references to these policies in order to avoid inaccurate representations of policy intent. The commenter suggests that the EIR should include discussion of several additional policies relevant to LAFCO’s review of the 2005 General Plan that are not included in the Draft EIR. In response to this comment, the discussion under Impact LU-1 will be replaced with the following in the Final EIR:

Impact LU-1 No boundary adjustments are being sought at this time and all of the General Plan scenarios emphasize intensification and reuse over expansion of the City. Annexations and Sphere of Influence adjustments could be sought at some point in the future under any of the scenarios and certain possible annexations/Sphere of Influence adjustments could potentially conflict with relevant State and LAFCO policies. However, because any conflicts would need to be resolved prior to LAFCO approval of any boundary adjustment, impacts can be reduced to a Class III, less than significant level, for all six scenarios.

The State of California possesses the exclusive power to regulate boundary changes, which means that no local government has the right to change its own boundary without State approval. The Legislature has prescribed a “uniform process” for boundary changes for both cities and special districts that is now embodied in the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000 (California Government Code Section 56000 et seq.). This Act delegates the Legislature’s boundary powers to local agency formation commissions (LAFCOs).

The Ventura LAFCO is responsible for reviewing and approving proposed jurisdictional boundary changes in Ventura County, including the annexation and detachment of territory to and/or from cities and most special districts, incorporations of new cities, formations of new special districts, and consolidations, mergers, and dissolutions of existing districts. In addition, LAFCOs must review and approve contractual service agreements, conduct service reviews, and determine spheres of influence for each city and district.

In addition to the Cortese-Knox-Hertzberg Act, the Ventura LAFCO has adopted local policies that it considers in its review of projects. The LAFCO also enforces the County’s Guidelines for Orderly Development. A complete listing of policies that

LAFCO considers in its review of proposed boundary changes can be found in the LAFCO website (www.ventura.lafco.ca.gov).

No adjustments to the City's corporate boundaries or Sphere of Influence (SOI) are proposed at this time. However, all of the 2005 General Plan scenarios could accommodate the development of lands that are outside the current City boundaries and SOI. Specific analysis of individual proposals would be needed at the time such possible future boundary adjustments are proposed, but boundary adjustment policies are discussed below as they relate to the 2005 General Plan.

Conformance with Local Plans and Policies

Unless exceptional circumstances are shown, LAFCO will not approve a proposal unless it is consistent with the applicable general plan and any applicable specific plan. No boundary adjustments are being sought at this time. Although boundary adjustments may be sought in the future under any of the EIR scenarios, it is anticipated that such adjustments would be consistent with the 2005 General Plan, regardless of which of the EIR scenarios is adopted.

LAFCO will not approve a proposal unless it is consistent with ordinances requiring voter approval. Scenarios 2-6 all includes potential expansion areas that are subject to voter approval. No land use designated or boundary adjustment is being sought at this time for any of the expansion areas. If such adjustments are sought at some point in the future, they will be sought only after voter approval of a land use designation change for the property in question.

Guidelines for Orderly Development

LAFCO encourages proposals that involve urban development or that result in urban development to include annexation to a city wherever possible. All of the EIR scenarios emphasize intensification/reuse over expansion of the City's boundaries and no boundary adjustments are being sought at this time. Nevertheless, all of the scenarios would accommodate development in lands that are outside the current corporate boundaries and the SOI. Development of such areas could be found to be in conflict with the Guidelines for Orderly Development, particularly with respect to the North Avenue and Western Cañada Larga expansion areas, which are not contiguous with the existing City corporate boundary. However, no development would occur until such time as the property in question is annexed and, if necessary, included in the SOI. Such adjustments could be made only with LAFCO approval and, in the case of the expansion areas, voter approval under SOAR. Given that future boundary adjustments would only be made at such time as they are deemed consistent with the Guidelines for Orderly Development, any of the scenarios could be found to be consistent with the Guidelines.

Greenbelts

LAFCO will not approve a proposal for a city that is in conflict with any Greenbelt Agreement unless exceptional circumstances are shown to exist. Scenarios 1, 4, 5, and 6 do not include any lands that are subject to existing Greenbelt Agreements. However, the Olivas expansion area that is included in Scenarios 2 and 3 is within the Oxnard-

Ventura Greenbelt. As such, the Olivas area could be brought into the SOI and annexed to the City only if it is removed from the Greenbelt. Such an amendment to the Greenbelt Agreement could be made only with the consent of the City of Oxnard. Moreover, approval of a land use designation change could only be made with voter approval under the SOAR Ordinance.

Agricultural and Open Space Preservation

LAFCO will approve a proposal for a change of organization that is likely to result in the conversion of Prime agricultural land or open space land only if it finds that the proposal will lead to planned, orderly, and efficient development. For a development to be deemed planned, orderly, and efficient, all of the following criteria must be met: (1) the territory involved is contiguous with lands developed with an urban use or that have received approvals for urban development; (2) the territory is likely to be developed within 5 years and has been pre-zoned for non-agricultural use; (3) insufficient non-Prime agricultural land or vacant land exists within the existing boundaries of the agency that is planned and developable for the same general type of use; (4) the territory is not subject to voter approval for the extension of services or changing of land use designations; and (5) the proposal will have no significant adverse effects on the integrity of other Prime agricultural or open space lands.

All of the EIR scenarios emphasize intensification and reuse of existing urban lands prior to the development of agricultural lands. Nevertheless, as discussed in Section 4.2, Agricultural Resources, any of the six scenarios would potentially accommodate the conversion of some Prime agricultural lands if the City's planning objectives cannot be met through intensification and reuse. All of the areas that could potentially be converted are contiguous with existing urban uses and, in many instances, are surrounded by urban uses. Although the North Avenue, Olivas, Serra, and Poinsettia expansion areas are subject to voter approval under the SOAR Ordinance, voter approval would have to be received prior to any LAFCO action. In addition, it is anticipated that inclusion within the SOI and/or annexation would not be sought unless development were planned within five years. In the case of large developments that could potentially be accommodated under Scenarios 2, 3, 4, and 6, development and annexation may need to be phased. Any of the agricultural lands that could be converted under Scenarios 1-6 could be found to be consistent with LAFCO's agricultural and open space preservation policies, though LAFCO's determination would need to be at the time of individual proposals based upon current (at that time) circumstances and the nature of the proposals.

School Capacity

LAFCO will not favor a change of organization where any affected school district certifies that there is no sufficient existing school capacity to serve the territory involved. As discussed in Section 4.11, Public Services, many VUSD schools are at or near capacity and would be over capacity in 2025 with the growth projected under any of the EIR scenarios. Scenario 1 would only accommodate a minor SOI adjustment that would not bring any residential development, though the annexation of individual properties that may be sought in the future under Scenario 1 could generate new VUSD students. The expansion areas included in Scenarios 2, 3, 4, and 6 include sufficient acreage to

accommodate new schools that would be needed to serve the areas. However, the expansion areas included in Scenario 5 may lack sufficient land to accommodate the development of new schools. The impacts of individual developments on schools will need to be addressed on a case-by-case basis as such impacts depend upon the nature of the project and the circumstances for the VUSD at the time of the individual application.

Annexation of Unincorporated Island Areas

Any approval of a proposal for a change of organization for an area of 40 acres or more will be conditioned to provide that the proceedings will not be completed until and unless a subsequent proposal is filed with LAFCO initiating proceedings for the change of organization of all unincorporated island areas that meet the provisions of Government Code Section 56375.3. This policy means that LAFCO will not approve annexations of 40 acres or more unless the City has filed an application to annex all of the island areas in the City, which include eight separate islands in the Montalvo area totaling about 55 acres. Therefore, no additional annexations will be completed until an application for annexation of these island areas has been filed.

***Mitigation Measures.** No mitigation is required. Individual boundary adjustment proposals will need to be addressed by the City and the Ventura LAFCO on a case-by-case basis.*

***Significance After Mitigation.** As the City is not seeking any boundary adjustments at this time, no inconsistencies would occur with respect to any of the six scenarios. Certain areas that may be considered for future annexation and/or inclusion within the SOI would not be eligible under current conditions; however, it is assumed that boundary adjustments would not be sought until such time as such adjustments could be found to be consistent with state and local requirements.*

The summary matrix and EIR summary table will also be revised to reflect this revised discussion.

Response 3P

The commenter notes that LAFCO must consider factors identified in Government Code Section 56668 in acting on any governmental boundary reorganization and suggested that these factors should be discussed in the EIR. Please see Response 3O. As noted in previous responses, although development that could be accommodated under any of the EIR scenarios may involve the consideration of future adjustments to the City's corporate boundary and/or sphere of influence, the City is not seeking any boundary adjustments at this time. As specific boundary adjustments are proposed in the future, the City will conduct analysis of applicable Government Code provisions as required by LAFCO.

Response 3Q

The commenter has attached a matrix with LAFCO's analysis of each of the EIR scenarios. Most of the items contained in the matrix are addressed in Responses 3A through 3Q. However, several additional items are addressed below.

The commenter states that County records indicate that 95 acres included in EIR Scenario 5 are subject to the SOAR Ordinance rather than the 84 acres indicated in the Draft EIR. The commenter may have included in the 11 acres north of the City's water treatment plant in the estimate of SOAR acreage. As discussed in Response 3D, only a very small piece of the 11-acre property north of the City's water treatment plant is subject to SOAR.

With respect to the North Avenue expansion area, it is correct that this area could not currently be annexed. However, no annexation would be sought at this time even if that expansion area were included in the selected General Plan land use map. Rather, annexation may be sought in the future, but not until and unless contiguous properties to the south and/or west were incorporated either before or as a part of the same request. If annexation is sought at some point in the future to accommodate a specific development proposal, a separate environmental review of the specific proposal will be conducted.

Footnote 4 of the LAFCO's suggested corrections table suggests that the EIR should include specific analysis of several sites within the current SOI that could be considered for future annexation under EIR Scenario 1. The Draft EIR acknowledges that a number of properties outside the corporate limits may be considered for annexation and development in the future and addresses the overall citywide impacts associated with the possible future development of these areas. However, project-specific analysis is not the purpose of the General Plan EIR, nor is such analysis possible given that no specific developments have been proposed at any of the sites in question. If and when specific development applications are submitted to the City, project-specific analysis, including analysis of applicable LAFCO policies, will be conducted at that time.

Re: Casden Properties LLC site at Johnson and North Bank Drives, Ventura, CA

Dear Ms. Porras:

You will soon be considering the Public Review Draft of the Ventura General Plan ("Draft General Plan") for adoption and the supporting Draft Environmental Report ("DEIR"). In the attached letter to Ms. Daluddung, Community Development Director, we have outlined our comments for your consideration in this matter.

We own an 8-acre site located at the northeast corner of Johnson and North Bank Drives. After initial meetings with City staff in early 2003, we were told that staff anticipated that the new planning designation of our site would support a dense, mixed-use development. We revised our proposal accordingly and shared this new plan with staff and with the CPAC at a hearing. Upon the City's recommendation, we withheld submission of a formal application and participated in the General Plan amendment process, waiting to submit our project once the General Plan is amended. We were quite surprised that our proposed project was not reflected in the Draft General Plan or the DEIR and that, in fact, the development potential for the entire Johnson Drive Corridor was lower than that proposed for just our project.

Please review the attached letter on the Draft General Plan and our proposed project and consider our recommendations. We are committed to supporting the goals of the City and would be happy to discuss our proposed project with you at your convenience. Thank you for your consideration.

Sincerely,

Carol Schwartz, Assistant Vice President
Community Development

Ref.: Casden Properties LLC site at Johnson and North Bank Drives
Ventura, CA

Dear Ms. Daluddung:

We have reviewed the Public Review Draft of the Ventura General Plan (“Draft General Plan”) and respectfully submit these comments for your review and consideration. We believe that the Development Potential identified for the Johnson Drive Corridor should be increased, especially with respect to the residential component.

Our Property

As you are aware, in January 2003, Casden Properties LLC, through an affiliate, acquired an 8.03 acre site in Ventura located at the northeast corner of Johnson and North Bank Drives. In Spring 2003, we met with City staff for a pre-application meeting for development of this site. At the meeting, we were informed that the City had embarked on the update of the General Plan based on Smart Growth principles and were anticipating that the new designation of our site would support a dense, mixed-use development. We therefore revised our development scheme to a mixed-use project including 300 rental housing units and 22,500 square feet of commercial space, which we shared with staff. Because of the review process, we postponed the submission of a formal application for this project until the General Plan was amended.

In the intervening period, we have participated in the General Plan Update process, attending the various scoping and community meetings and shared the proposed project at a CPAC hearing. The Draft General Plan designated our site in the Johnson Drive Corridor for Commercial use. The Commercial designation “encourages a wide range of building types of anywhere from two to six stories that house a mix of functions, including commercial, entertainment, office, and housing” which supports the mixed-use concept we have proposed.

A LIMITED LIABILITY COMPANY

However, we are concerned that the Development Potential that was identified in the Draft General Plan for the Johnson Drive Corridor appears to understate the potential for this area. While we recognize that the City has stated that the guidelines are not limits of development, we believe that a greater level of development should be encouraged in this Corridor to better support the City's growth goals.

The Draft Environmental Impact Report that was prepared to support the Draft General Plan states that the growth was distributed among the various corridors and districts in the City "[B]ased on the development potential of each growth district and corridor and direction from the community, CPAC, Planning Commission and City Council on where growth in the community should be encouraged". We believe that the Johnson Drive Corridor, and in particular, our site, is an excellent location for rental housing as a component of a mixed-use project. In this letter, we will present our rationale for increasing the residential potential of the corridor. We hope that the planners and members of the CPAC can review the allocation for housing and revise it, taking into account our 300 units before the General Plan is finalized and adopted this summer.

Johnson Drive Corridor

The Johnson Drive Corridor appears to have two large sites remaining for development—our site and the site bounded by Johnson Drive, North Bank and the Ventura Freeway. The remainder of the corridor is developed with entertainment/retail use, commercial buildings and self storage.

While some of the existing projects might ultimately be redeveloped, we would anticipate that the Development Potential for the Corridor is much greater than the proposed 150 residential units, 50,000 square feet of retail space and 20,000 square feet of office space, and would be easily realized on these two undeveloped sites. Given its location, fronting the freeway, the other site would not be a prime location for residential development. However, our site is an excellent location for rental housing. We contend that a build-out of 300 units at this location would provide the appropriate scale of development to support the City's goals for Smart Growth.

The City of Ventura is committed to the principles of Smart Growth and has identified a number of Smart Growth concepts as part of the Draft General Plan. Increasing the intensity of residential development in the Johnson Drive Corridor serves to further support Smart Growth precepts. We will demonstrate how intensification of residential development in the Johnson Drive Corridor will support Smart Growth objectives and how a larger critical mass of residential development is needed at our site to support these Smart Growth goals and desirable development forms.

Johnson Drive Corridor as Location for Housing

Mix land uses. Smart Growth encourages a mix of land uses both vertically and horizontally. By introducing a significant component of residential units to this commercial corridor, residents can benefit from proximity to services and existing

businesses can benefit from this additional customer base. For example, the commercial center adjacent to the project site includes a TutorTime childcare facility which tends to attract new families with young children. This facility would benefit from an adjacent residential property that could provide additional client families.

Create a range of housing opportunities and choices. Because of the commercial nature of the corridor, a significant amount of rental housing would be an appropriate infill use. Rental product in this area will provide a much needed alternative to the for-sale product available further north on Johnson Drive.

Create walkable communities. By developing a substantial number of residential units at this site, we increase the opportunity for neighboring businesses and for the on-site retail and live/work units to be supported by walk-in customers. Residents will be able to walk to the movies or the video store located across the street or to the shops and services on the property. Our scheme also incorporates pedestrian access to the Linear Park which runs along the perimeter of the site.

Preserve open space, farmland, natural beauty and critical environmental areas. Our site is an infill location within the Johnson Drive Corridor. It is adjacent to the farmland of the Serra Expansion Area, being considered in the Draft EIR for future development and expansion of the City. By intensifying the development in this existing corridor, it forestalls the development of this agricultural area.

Provide a variety of transportation choices. Intensifying the residential development in the Corridor allows an increased number of residents to benefit from proximity to the South Coast Area Transit (SCAT) bus route along Johnson Drive, Ventura Intercity Service Transit Authority (VISTA) bus stops and easy access to the Freeway. By locating more potential commuters adjacent to the Freeway, we reduce the impact of these new households on local traffic patterns.

Foster distinctive, attractive communities with a strong sense of place. The Johnson Drive Corridor lacks a cohesive focus or image. The addition of a substantial, high-quality housing component will support a more diversified base of commercial establishments to better serve the corridor and the neighboring communities.

Casden Properties LLC Development Concept

Mix land uses. We have proposed the development of 22,500 square feet of retail space and 300 residential units, a number of which will be live/work product. We have designed the site with retail at the western portion of the site, along North Bank Drive, with live/work space transitioning to the residential eastern portion of the site. Our site is a preferable location for residential units in the City as the mix of uses at our site and the proximity to surrounding commercial development allows for pedestrian access, reducing the traffic impact that might accompany a similar level of residential development elsewhere.

Take advantage of compact building design. The residential component of the Casden proposal is comprised of 3-story buildings set on slightly elevated podiums. The required parking is primarily accommodated under the podium in a semi-subterranean structure. This creates a compact building form above ground, surrounding landscaped courtyards. The sprawl that comes from vehicular circulation and parking in projects with grade level automobile accommodation is avoided in this design scheme. It is important to note that podium products are very expensive to construct. We need to be able to develop a critical mass of units (approximately 300) before the substantial investment needed for this product is supported.

Create a range of housing opportunities and choices. Our project concept includes a range of housing product and target markets. Our current proposal includes both traditional rental units as well as live-work units fronting the commercial edge of our site. We also plan to provide both market rate and a significant component of affordable housing units in our project.

Foster distinctive, attractive communities with a strong sense of place. Casden Properties LLC is committed to developing beautiful projects with a high level of amenity. This proposed project will be distinctive by virtue of the podium product separating the vehicular from the pedestrian circulation and allowing for significant landscaping. By developing this site with 300 units, we are able to provide a high level of community amenities, including a large recreation center and pool area, which are anticipated to become a focal point for the residents. With lower development potential, the level of community amenities must be scaled back significantly.

Strengthen and direct development toward existing communities. As an infill site within an existing community, development should be intensified at this location. By increasing the amount of housing at the site, a critical mass of units can be developed to strengthen the sense of community here. The currently contemplated 150 units are simply too few to achieve a true sense of community in this location, which does not abut other residential areas.

Achieving critical mass on our site is necessary to develop and maintain a project that is consistent with City goals.

- Quality Product: The podium product we plan to develop creates very desirable, walkable communities, with large amounts of landscaped areas free from vehicular traffic.
- Project Amenities: Our proposed project includes a large recreation center, pool, spa, and large landscaped areas as project amenities. This level of amenity requires a critical mass of units to support their inclusion and maintenance.
- On-going, Committed Management: In order to operate and maintain this project at the appropriate level of service and security, dedicated property management is required, which can only be supported at a project of significant size.

Casden Properties LLC respectfully submits this request to increase the residential allocation in Johnson Drive Corridor to at least 300 units. We are very committed to supporting the goals of the City while developing this project and are eager to discuss our proposal further at your convenience. Attached for your perusal are a copy of the proposed site plan and a description of the project.

Sincerely,

Carol Schwartz

Project Description
Site Plan

Project Site: Johnson and North Bank Drives
Northeast Corner of intersection
The site is accessible off Highway 101 North at the Johnson Drive exit.

Site Description:

Lot Area: 8.03 acres
Density: 300 dwelling units / 52 du/acre Residential
22,500 SF Commercial
Parking: 510 stalls –Residential [includes direct and tandem]
90 stalls -Commercial

Project Description:

This project is designed to include 300 dwelling units including an affordable component in a community where people can live and work.

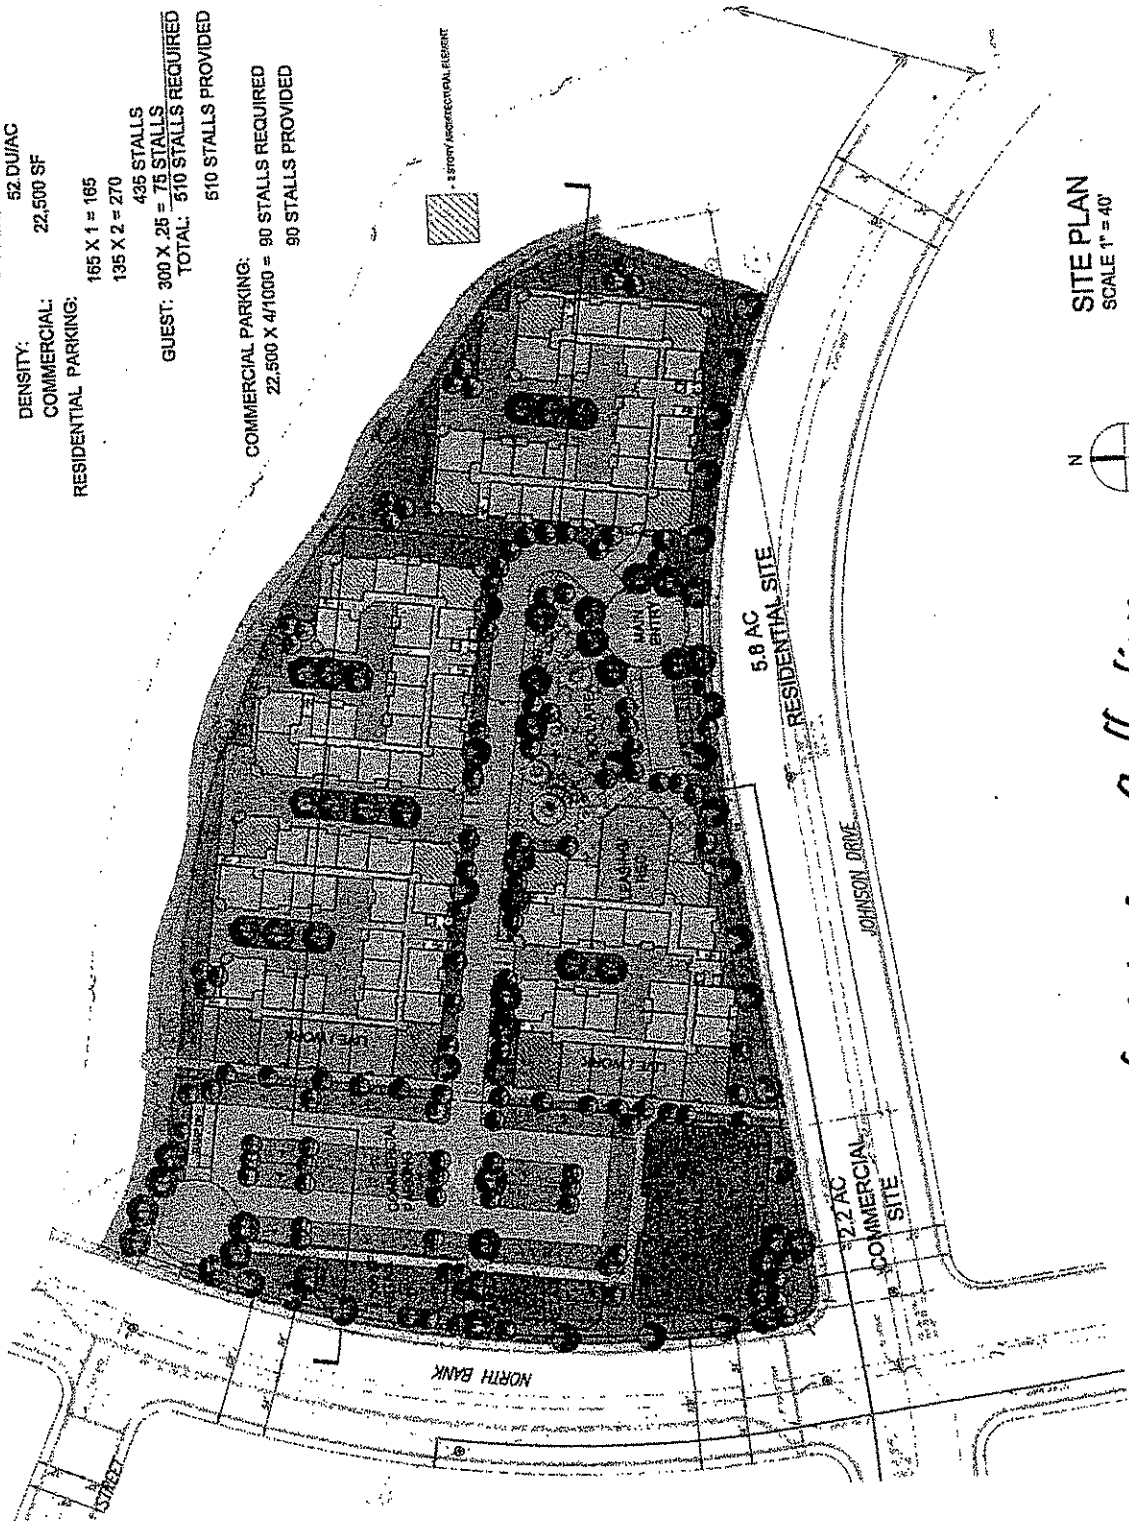

The development is arranged to respond to the constraints and opportunities presented by its surroundings. The main entrance is off Johnson Drive. This provides great visibility from the Highway 101. The site will be lushly landscaped, feature decorative paving and planting to entice the motorist.

The proposed project is bounded by commercial sites to the north, and west. To the east is agricultural developed land; however this site borders the east end of San Buenaventura. The adjacent site to the east is outside of San Buenaventura. The south edge of the site borders Highway 101.

The buildings are designed with three stories over semi-subterranean parking. A main drive runs through the site past a 3,500 square foot clubhouse with attendant. The residential buildings front on this main drive or perimeter view opportunities as appropriate.

The typical building has eighteen dwelling units. These apartments include one bedroom, and two bedroom configurations.

Notes:

- Overall residential growth is based on 0.88% annual growth through 2025. Overall non-residential growth is based on estimates provided by Stanley R. Hoffman Associates, Inc. All unit and square footage numbers are estimates of how future growth may be distributed based on available land, local land use practices, and recent Council and community direction and preferences. All figures are for analytical purposes only. The actual distribution of future growth in the City may vary based on market forces and other factors. Both the districts/corridors and expansion areas could accommodate more development and/or a different mix of development.
- The distribution of growth in the districts and corridors is based on the following general assumptions: (a) The Downtown area and, to a lesser extent, the Ventura Avenue corridor will be the focus of future residential and commercial growth; (b) the Arundell, North Avenue, and Upper North Avenue areas will be the focus of future industrial growth; (c) other districts and corridors will not be the focus of growth, but will accommodate a certain amount of growth over time. When possible, knowledge of possible future plans or land availability has been used to estimate future growth. For example, the estimates of growth in the Downtown and Harbor Districts are based on the Downtown Specific Plan and Master Plan and staff knowledge of likely projects. Growth estimates for the Arundell community consider the likely development of the 75-acre McGeeth property with a mix of uses and development of other vacant lands. Growth estimates for the Auto Center area consider the possibility of a "big box" retailer in that area.
- Estimates of growth in the SO/Other Infill sites are based on the following general assumptions: (a) 101/126 Orchard site will develop similarly to a project recently proposed for that site; (b) Wells/Salicoy sites will develop in accordance with ongoing planning efforts for those areas; (c) the Pierpont area will develop generally in accordance with a conceptual project recently considered by the City; (d) Second Units will be added at a rate of 15/year; (e) roughly half of underutilized lands identified in the Housing Element will be re-developed over the next 20 years; (f) all vacant lands outside the districts and corridors will be developed in accordance with the proposed land use designations.
- Planned and Pending Developments based upon the City's 2004 Planning and Pending Developments list. Building areas do not include self storage facilities.
- Expansion area totals are conceptual estimates that encompass a mix of uses and residential densities.
- The following potential projects not included in the 2004 Planned and Pending Developments list have been included in the future development totals: (1) 150,000 square feet of industrial development in the Auto Center area; (2) 165,000 square feet of retail development along Wells Road in the Salicoy area; (3) 50,000 square feet of office development on a 3.5-acre site along Ralston Drive. The Auto Center industrial project is included in the Auto Center district; the other two projects are included in the "vacant" category. The square footage associated with these projects has been added to the projections of future growth to provide a "worst-case" analysis of possible future impacts.

Letter 4

COMMENTERS: Carol Schwartz and Demetrius Zeigler, Casden Properties, LLC

DATE: June 14, 2005

RESPONSE:

The commenters state concerns that their project near the northeast corner of the Johnson Drive/North Bank Drive intersection was not reflected in the Draft EIR and note that the development potential for the Johnson Drive corridor identified in the Draft EIR is lower than for their project. The commenters also attach a letter describing their proposal and how it relates to various City development goals and requesting an amendment to the development "allocation" for the Johnson Drive corridor.

It is not the intent of the Draft EIR to identify or analyze the impacts of specific development proposals. As discussed in Section 1.0, *Introduction*, the Draft EIR is intended to meet the requirements of a Program EIR, which is prepared on a series of actions (such as a General Plan) that may be characterized as one large project. By design, a Program EIR is more conceptual in nature than a Project EIR and contains a more comprehensive discussion of impacts, alternatives, and mitigation measures. Once a Program EIR has been prepared, subsequent activities within the program (such as individual development proposals) must be evaluated to determine whether an additional CEQA document needs to be prepared.

The development totals used in the Draft EIR, as reflected in Appendix C of the Draft EIR, should not be interpreted as "allocations" of growth for individual districts, corridors, or neighborhood centers. Rather, they are estimates of the distribution of future growth within the Ventura Planning Area based on direction from the City Council, ongoing development trends in the City, and other factors. The estimates for individual districts, corridors, and neighborhood centers are not intended to serve as growth caps for those areas, but rather, were developed for analytical purposes only in order to estimate the overall effects of projected citywide growth through 2025. In no case do the estimates of projected growth for an individual district, corridor, or neighborhood center reflect the maximum growth potential for that district, corridor, or neighborhood center. Actual growth within each district, corridor, and neighborhood center may be higher or lower than projected in the Draft EIR. Individual developments will need to undergo separate environmental review on a case-by-case basis to determine their specific impacts.

In response to several comments on the Draft 2005 General Plan and Draft EIR, a table will be added to the General Plan that will show the carrying capacity of the total land area for the Plan. This table is intended to show what the total development potential is versus the realistic estimates provided in the original table (May Draft Overview, Table 2, pages 14 & 15).

Re: Correction to Assessor's Parcel Number referenced in 2005 General Plan EIR – Page 6-17, paragraph 6.6.1., lines 5 & 6.

I have noticed a typographical error in the 2005 EIR of the Assessor's Parcel Number for my property located at 1456 Alelia Street in Saticoy.

My parcel is incorrectly identified as 90-043-13. The correct APN is 90-143-13.

Two additional APN's should also be referenced. The Southerly extension of Alelia Street has been abandoned by the County of Ventura and the acreage deeded back to myself and the property owner to the West - APNs 90-142-14 & 90-143-17. Please see the enclosed platt map.

Therefor, all four APN's should be referenced in paragraph 6.6.1 as follows: APNs 90-142-11, 90-142-14, 90-143-13 and 90-143-17.

Thank you for your assistance in this matter.

Respectfully,

Charles W. Rogers
Owner APNs 90-143-13 & 90-143-17

Enclosures:
Platt map
2005 EIR page 6-17

Like 2005 General Plan Scenarios 2-6, this alternative would generally be consistent with most regional land use plans and policies. This alternative would pose the same potential conflict with the Guidelines for Orderly Development associated with Scenario 5, but would not pose the potential conflict with Coastal Act policies pertaining to the preservation of Prime farmland that would occur under Scenarios 2 and 3.

Population and Housing

Population and housing growth would be similar to that of General Plan Scenarios 2-6. The 2025 population is projected to exceed SCAG and Ventura County AQMP forecasts. As with the 2005 General Plan scenarios, implementation of this alternative would be expected to maintain a balance of jobs and housing in the City.

6.6 INTENSIFICATION/REUSE + MINOR MAP CLEAN-UP

6.6.1 Description

This alternative is a variation of 2005 General Plan Scenario 15, the Intensification/Reuse Only scenario. The purpose of this alternative is to address three minor map clean-up issues identified following receipt of City Council direction on the recommended 2005 General Plan land use map. The first of these involves the re-designation of approximately five acres along the south side of Rosal Lane in the unincorporated area of Saticoy (APNs 90-142-11 and 90-043-13) that are designated "Industrial" on the draft General Plan land use map, but are designated "Residential Two Family" in the County of Ventura's Saticoy Area Plan. To achieve consistency with the Saticoy Area Plan, these lots would be redesignated "Residential Medium Density" under this alternative. The second change involves properties located on the Westside between Ramona (north), Simpson Street (south) and straddling Sheridan Way. This map change would include changing the proposed land use designation from low to high density residential to be consistent with the neighborhood and existing uses on the properties. A third change involves properties located in the Simpson Historic District located to the south of Simpson Street in generally the same area. The land use map would be changed from high to medium density, which is consistent with existing development in the Simpson Historic District and would generally allow 2 units per parcel.

90-143-13

Other than the three changes described above, this alternative is identical to 2005 General Plan Scenario 1. An estimated 8,300 residential units are projected to be added through 2025.

6.6.2 Impact Analysis

Other than issues pertaining to land use compatibility (aesthetics, noise, hazards), this alternative's impacts would be identical to those of Scenario 1. Re-designation of the five-acre area in Saticoy may incrementally increase the potential for compatibility conflicts with existing and future industrial uses in the area as properties to the south are designated "Industrial." However, potential conflicts relating to lighting, noise, and hazards can be addressed through appropriate design, including, if necessary, the construction of solid block walls between residential and industrial uses. In addition, it should be noted that the properties along the north side of Rosal Lane, immediately across the street, are designated "Residential Medium Density." As such, developing the site along the south side of Rosal Lane with residential uses

Letter 5

COMMENTER: Charles W. Rogers, Owner APNs 90-143-13 and 90-143-17

DATE: June 20, 2005

RESPONSE:

The commenter notes that the assessor's parcel numbers for the site along the south side of Rosal Lane in Saticoy that would be re-designated "Residential Medium Density" under the "Intensification/Reuse + Minor Map Cleanup" alternative discussed in Section 6.0, Alternatives, are incorrectly identified. In response to this comment, the first paragraph under the "Description" of that alternative on page 6-17 will be amended to read as follows (changes are underlined):

This alternative is a variation of 2005 General Plan Scenario 5, the Intensification/Reuse Only scenario. The purpose of this alternative is to address three minor map clean-up issues identified following receipt of City Council direction on the recommended 2005 General Plan land use map. The first of these involves the re-designation of approximately five acres along the south side of Rosal Lane in the unincorporated area of Saticoy (APNs 90-142-11, 90-142-14, 90-143-13, and 90-143-17) that are designated "Industrial" on the draft General Plan land use map, but are designated "Residential Two Family" in the County of Ventura's Saticoy Area Plan. To achieve consistency with the Saticoy Area Plan, these lots would be redesignated "Residential Medium Density" under this alternative. The second change involves properties located on the Westside between Ramona (north), Simpson Street (south) and straddling Sheridan Way. This map change would include changing the proposed land use designation from low to high density residential to be consistent with the neighborhood and existing uses on the properties. A third change involves properties located in the Simpson Historic District located to the south of Simpson Street in generally the same area. The land use map would be changed from high to medium density, which is consistent with existing development in the Simpson Historic District and would generally allow 2 units per parcel.

This minor text correction does not change the EIR conclusions or result in any significant impacts not identified in the Draft EIR. The change in land use would not create any significant land use conflicts that could not be addressed through site design.

Subj: 2005 General Plan Draft Environmental Impact Report Review Comments

1. A review of the General Plan Draft Environmental Impact Report June 2005, Section 4.13, UTILITIES & SERVICE SYSTEMS, was conducted and resulted in development of the following comments.

A. Page 4.13-1, of the General Plan Draft Environmental Impact Report¹ states "An operational evaluation prepared as part of the 1993 City Water Master Plan provides a detailed analysis of the water system and future needs.", however, the Water System Operational Evaluation & Improvement Program Report² findings are not discussed and has not been updated to reflect current conditions of the water system, sources of water supply or the population being served by the water system.

A

B. The General Plan Draft Environmental Impact Report does not address: historic or future water consumption by category; the impact of drought conditions on the yield of existing water sources; or the potential future water source requirements. Page 4.13-9 of the General Plan Draft Environmental Impact Report³ identifies the City of Ventura Historic and Projected Water Production⁴ and is based on the 2004Biennial Water Supply Report⁵. The water system analysis contained in the 2004Biennial Water Supply Report⁶ does not address: 1) historic or future water consumption by category⁷; 2) the impact of drought conditions on the yield of existing water sources⁸; or 3) the potential future water source requirements⁹. A graph of the annual rainfall data for Ventura Station 66 obtained from the Ventura County Watershed Protection District for the period 1892-2001 is attached for information as Figure 1. The graph shows a trend for above average rainfall began in 1991.

⁹ Water System Operational Evaluation & Improvement Program Potential Future Water Source Requirements, Table ES-10

Figure 1 – Total Annual Rainfall and Cumulative Deviation from Annual Average Rainfall for Ventura Station 66 for the Period of 1892-2001.

C. Page 4.13-9 of the General Plan Draft Environmental Impact Report¹⁰ identifies the City of Ventura Historic and Projected Water Production¹¹. The projected future treated water production requirements are computed from a constant per capita water usage of 0.179 and the expected population being served. There appears to be a discontinuity in the Years 1989-1991 between the per capita water usage data contained in the Water System Operational Evaluation & Improvement Program Historic Water Demand Trends, Table ES-1¹² and General Plan Draft Environmental Impact Report, Historic and Projected Water Production, Table 4.13-8¹³. Chart of the annual per capita water usage contained in 1993 Water Report and 2005 DEIR are contained in Figures 2 and 3. It is recommended this discontinuity in the per capita water usage between the 1993 and 2004 Water Reports be explained in the DEIR.

¹⁰ General Plan Draft Environmental Impact Report June 2005

Figure 2 – Comparison of Per Capita Water Usage Data contained in the Water System Operational Evaluation & Improvement Program Historic Water Demand, Table ES-1¹⁴ and General Plan Draft Environmental Impact Report, Historic and Projected Water Production, Table 4.13-8¹⁵.

Figure 3 – Trend Lines for Annual Per Capita Water Usage Data contained in 1993 Water Report and 2005 DEIR.

D. Furthermore, a detailed trend analysis of the per capita water usage between the years 1991 and 2004 reveals a increase in 0.0028 A-F per capita per year which is not factored into future treated water requirements and is shown in Figure 4. The General Plan Draft Environmental Impact Report, Projected Water Demand, Intensification/Reuse Only, Table 4.13-15¹⁶ appears to use 0.504 A-F per year water use per unit which equates to a 0.196 A-F per capita per year based on an occupancy of 2.57 persons per dwelling unit. A need for an additional source of water can be expected to meet treated water needs between the years 2020 and 2025 and is shown in Table 1 if the projected annual increase in per capita water usage is used to compute future requirements. The potential requirement for future water sources depends on several factors including the anticipated long-term yield of existing water sources under

Potential Future Water Sources Requirements

The quantity of water needed by the City from new sources depends on several factors, including the anticipated long-term yield of existing water sources under varying weather conditions, potential future water demands in the system, which potential future water sources are implemented, and water quality goals. Even without improving the quality of water provided to the customers, additional water is needed now and in the future just to meet quantity deficits in dry years. Table ES-10 summarizes the water quantity needs for future demand conditions based on potential yields from existing sources only. As shown in the table, water quantity deficits are anticipated in all future dry years, and in average years by 2040. Dry year deficits would be approximately 4,500 acre-feet in 1995 and approximately 7,000 acre-feet per year by 2010. Additional water quantities beyond those indicated would be needed to improve water quality.

Figure 4 - Water System Operational Evaluation & Improvement Program
Potential Future Water Sources Requirements, Page ES-16

E. Page 4.13-9 of the General Plan Draft Environmental Impact Report¹⁸ identifies the City of Ventura Historic and Projected Water Production¹⁹. The projected future treated water production requirements are computed from a constant per capita water usage of 0.179 and the expected population being served. There appears to be a discontinuity in the Years 1989-1991 between the treated water used data contained in the Water System Operational Evaluation & Improvement Program Historic Water Demand Trends, Table ES-1²⁰ and General Plan Draft Environmental Impact Report, Historic and Projected Water Production, Table 4.13-8²¹. Chart of the treated water used contained in 1993 Water Report and 2005 DEIR are contained in Figure 5. It is recommended this discontinuity in the treated water requirements between the 1993 and 2004 Water Reports be explained in the DEIR.

Figure 5 – Chart of Treated Water Used.

11/22/09

1/ Total production is all water produced or delivered from City sources; AF = acre feet.
 2/ Untreated water use is oil company and agricultural water use in the North Ventura Avenue area (CMWD direct + Kingston effluent).
 3/ Treated water use is total production less untreated water use.
 4/ Maximum day demand is based on treated water production (Ball Course Wells + Sycamore Well + Victoria Well + CMWD #2 + A's MWD + Power effluent + Valley Vista BPS); MGD = million gallons per day.
 5/ Peaking factor for maximum day demand is related to average day demand.
 6/ Estimated water population is the approximate population served by the water system; this is slightly higher than the population within the City limits (see Table 5).
 7/ N/A = data not available.
 8/ Per capita use factor is treated water use divided by population.
 City-wide annual rainfall averaged from four rainfall stations: Downtown, Avenue 10, Hill Canyon, and the County Government Center.

Existing Source	Potential Long-Term Yield (acre-feet) ^{1/}			Projected Water Quality (mg/l TDS) ^{2/}
	Wet Year	Avg Year	Dry Year	
Ventura River	11,000	6,700	700	660
Lake Casitas ^{3/}	7,090	7,090	4,960	450
Oxnard Plain Basin ^{4/}	4,090	4,090	4,090	1,100
Santa Paula Basin	3,000	3,000	3,000	1,000
Mound Basin	<u>6,000</u>	<u>6,000</u>	<u>6,000</u>	2,100
Total	31,180	26,880	18,750	

- 1/ Potential long-term (year 2010) yield of existing sources per the Long-Term Sources Evaluation study. Some of the existing sources require additional production facilities to provide the potential yields shown. Assumes groundwater safe yields extracted in wet, average, and dry years.
- 2/ Projected water quality is the average TDS for the past five years, except for the Mound Basin where quality is expected to continue to deteriorate from current levels.
- 3/ Lake Casitas yield is the City's Stage 2 annual allocation for wet and average years, and Stage 5 allocation (70% of Stage 2 allocation) for dry years.
- 4/ Oxnard Plain Basin long-term yield (year 2010 and beyond) is 75% of GMA baseline allocation (yield decreases in 5% steps from baseline beginning in 1992).

Water System Operational Evaluation & Improvement Program Potential Yield of Existing Water Sources, Table ES-8

TABLE ES-10

**POTENTIAL FUTURE WATER SOURCE REQUIREMENTS
(For Annual Water Quantity Needs Only -
Quality Needs Are Not Included)**

Study Year	Total Demand ^{1/}	Potential Yield from Existing Sources ^{2/}			Net Supply (Deficit) ^{3/}		
		Wet Yr	Avg Yr	Dry Yr	Wet Yr	Avg Yr	Dry Yr
1995	24,027	31,990	27,690	19,560	7,963	3,663	(4,467)
2000	24,280	31,720	27,420	19,290	7,440	3,140	(4,990)
2010	25,732	31,180	26,880	18,750	5,448	1,148	(6,982)
2040	30,959	31,180	26,880	18,750	221	(4,079)	(12,209)

1/ From Table ES-4 (all values in table are in acre-feet).

2/ From Table ES-8 and including GMA Stepped reductions of Oxnard Plain Basin sources (5% reduction increments in 1995, 2000, 2005, and 2010). Some of the existing sources require additional production facilities to provide the potential yields shown.

3/ Total existing source capacity less total demand.

Conjunctive Use of Sources

One of the recommendations of the Long-Term Sources Evaluation study is to increase the overall yield of existing water sources by implementing a conjunctive use operating procedure. This procedure would involve utilizing surface waters (Ventura River, Lake Casitas, and SWP) during wet years to the fullest extent possible while letting groundwater sources rest. During dry years when the surface water source yields are reduced, the groundwater sources can be pumped to meet remaining demands. Production facilities for the additional dry year extractions would be required. This approach can also be implemented if desalinated seawater is chosen by conjunctively using groundwater and Ventura River and Lake Casitas water.

Conjunctive use of the City's existing groundwater sources is limited by the requirement to maintain long-term production from the groundwater basins within their safe yields. The total safe yield of existing groundwater sources is estimated to be approximately 13,000 acre-feet per year in the year 2010. The Oxnard Plain and Mound Basins are recommended to be conjunctively used, because both basins have large storage and transmissivity capacities. The Oxnard Plain Basin also has an accounting system in place per the GMA ordinances.

In order for conjunctive use of existing groundwater sources to be feasible, a long-term balance between wet, average, and dry year conditions must occur. Beginning a conjunctive use program after an extended dry period is not recommended, because groundwater levels have been reduced and require several wet years to bring levels back to normal conditions.

Potential Future Water Sources Requirements

The quantity of water needed by the City from new sources depends on several factors, including the anticipated long-term yield of existing water sources under varying weather conditions, potential future water demands in the system, which potential future water sources are implemented, and water quality goals. Even without improving the quality of water provided to the customers, additional water is needed now and in the future just to meet quantity deficits in dry years. Table ES-10 summarizes the water quantity needs for future demand conditions based on potential yields from existing sources only. As shown in the table, water quantity deficits are anticipated in all future dry years, and in average years by 2040. Dry year deficits would be approximately 4,500 acre-feet in 1995 and approximately 7,000 acre-feet per year by 2010. Additional water quantities beyond those indicated would be needed to improve water quality.

Water System Operational Evaluation & Improvement Program Potential Future Water Sources Requirements, Page ES-16

**Table 2-3
Population and Housing Projections**

	2004 Levels ^a	2025 Estimates		Change from 2004-2025	
		0.88% Annual Growth	1.14% Annual Growth	0.88% Annual Growth	1.14% Annual Growth
Population	104,952	126,153	133,160	21,201	28,208
Housing Units ^b	40,880	49,138	51,867	8,258	10,987

^a Source: California Department of Finance, City/County Population and Housing Estimates, 1/1/2004. Note that 2004 data are used as the baseline because 2005 data were not available when the EIR was initiated in Fall 2004; 2005 population and housing estimates are provided in Table 3-1 in Section 3.0, Environmental Setting.

^b Housing unit estimates assume that the current ratio of 2.57 persons per household remains constant through 2025. In reality, the number of persons per unit could go up or down, depending upon housing costs, the types of housing built in the City, population growth, and other factors.

General Plan Draft Environmental Impact Report, Table 4.13-15

Table 1: Historic and Projected Water Source Production and Supply Availability (acre-feet)

Year	Surface Water		Ground Water				Total Water Supply (7)
	Ventura River (1)	Lake Casitas (2)	Mound Basin (3)	Oxnard Plain Basin (4)	Santa Paula Basin (5)	Saticoy Yard Well (6)

2003	6,722	4,874	5,546	2,898	316		20,356
Projected Supply							
2004	6,700	8,000	4,200	4,600	3,000	0	26,500
2009	6,700	8,000	4,200	4,400	3,000	2,262	28,562
2014	6,700	8,000	4,200	4,100	3,000	2,262	28,262

Notes:

1. Ventura River future supply is the average long-term production based on analysis of the period from 1939 to 1982 per the Evaluation of Long Term Alternative Water Sources, James M. Montgomery, June 1993.
2. Includes the City's total past Casitas purchases in addition to raw water and oil recovery users; projected supply is the City's current in-district use.
3. Mound Basin future supplies are 75 percent of well pump rated output.
4. Oxnard Plain Basin future supply is based on GMA restricted extraction limits rounded to nearest 100 AF.
5. Santa Paula Basin future supply is the pumping allocation of the Stipulated Judgement.
6. Saticoy Yard Well future supply is 75 percent of design maximum pump output capacity.
7. Includes treated and raw water; excludes reclaimed water supply.

Letter 6

COMMENTER: Daniel Cormode

DATE: June 19, 2005

RESPONSE:

Response 6A

The commenter states that the Draft EIR does not provide updated information on the water system from the 1993 Water Master Plan. The current water system is described on pages 14.13-1 through 4.13-7 based on updated information provided by City Public Works Department staff. The 1993 Water Master Plan is incorporated by reference in the Final EIR.

Response 6B

The commenter states that the Draft EIR does not address historic or future water source by category, the impact of drought conditions on the yield of existing water sources, or potential future water source requirements. Detailed historic water consumption by land use category is not available. Detailed future consumption by area and by land use category is provided in Tables 4.13-15 through 4.13-20 for Scenarios 1 through 6, respectively. Potential sources of supply are shown in Table 4.13-7 and the entire discussion under Impact U-1 compares projected future water demand to available supply. The Biennial Water Supply Report included in Appendix F includes discussion of various City programs that augment City supplies under drought conditions. A detailed analysis of available water supply during various drought conditions will be undertaken as part of the City's Urban Water Management Plan, which must be updated in years ending in zero and five. Demand projections from the various scenarios were, however, compared to those of the 2000 UWMP and all were below those projections.

Response 6C

The commenter suggests that the Draft EIR estimates future water demand based on a constant per capita rate and notes that per capita water consumption has risen since 1991. The projections of future water demand contained in Section 4.13 of the Draft EIR are not based upon a per capita rate, but rather are based upon water demand factors for the various uses anticipated under the 2005 General Plan. Therefore, the fact that per capita consumption may have increased slightly does not affect the water demand projections or conclusions regarding the availability of water supply.

Future water demand was not projected based on a per capita rate, but rather was projected based on typical rates for the uses anticipated to be developed through 2025. Therefore, the current per capita rate from the Biennial Report (which includes all water demand associated with all uses) cannot be compared only to the demand associated with future residential development. Instead, it should be compared to the entire projected demand associated with all uses. For comparison purposes, the increase in annual water demand for Scenario 6 is estimated at 7,611 acre-feet, while the projected population increase for that scenario is 28,208

(as shown in Table 2-3 in Section 2.0, *Project Description*). This equates to a per capita rate of 0.269 acre-feet per person (7,611/28,208). Other scenarios would yield similar per capita consumption.

The projected per capita rate of 0.269 acre-feet per year is about 50% higher than the current citywide per capita rate of 0.179 acre-feet per year. Therefore, water demand associated with future development has been projected based upon a conservative estimate of per capita water consumption. The estimates of overall citywide water demand in 2025 are conservative not only because of the high per capita rate assumed, but also because the baseline citywide water demand assumed for all scenarios is the highest water use from the past five years (21,500 acre-feet per year).

Subj: 2005 General Plan Draft Environmental Impact Report Review Comments

Ref: (a) Daniel Cormode ltr re: 2005 General Plan Draft Environmental Impact Report Review Comments dated 19 June 2005

1. A review of the General Plan Draft Environmental Impact Report June 2005, Section 4.13, UTILITIES & SERVICE SYSTEMS, was conducted and comments were contained in reference (a)/
2. Additional comments are forwarded relative to review of the subject document.
3. The subject document does not adequately address the impact of a prolonged drought and the adequacy of water resources to supply the required water under those conditions.
4. During the April 1986 through January 1991, the volume of water stored in Lake Casitas decreased by 48% from 254,800 A-F to 129,173 A-F and is shown in Figure 1.

Data Source:

California Department of Water Resources, Division of Flood Management, June 2005 Lake Casitas
Figure 1 – Lake Casitas Water Storage (A-F)

5. It is highly probable that additional droughts can be identified from the examination of rainfall data for the years 1891-2001 for Ventura Station 66 shown in Figure 2. Droughts of 8 years probably occurred during the years 1893-1905, 1918-1925 and 1944-1951 and a 5 year drought occurred during 1986-1990.

Data Source: Ventura County Watershed Protection District, 2003, Ventura Station 66
Figure 2 - Annual and Cumulative Deviation from Average Rainfall for Ventura Station 66

6. Drought conditions also impact the ability of the City to pump water from the Ventura River basin. And increase the load on the Oxnard and Mound aquifers and i9s shown in Figure 3. The DEIR does not discuss the ability of the aquifers to supply water during prolonged drought conditions.

Data Source: Developed from City fo San Buenaventura, Public WorksDepartment, Utilities Division, June 2005 Source Data

SOURCE PRODUCTION - DATA IN ACRE FEET					
APRIL 1986 - FEBRUARY 1991

COMMENTER: Daniel Cormode

DATE: June 23, 2005

RESPONSE:

The commenter states an opinion that the Draft EIR does not adequately address the impact of a prolonged drought and the adequacy of water resources to supply the required water under those conditions. As stated in responses to Letter 6 (the commenter's June 19, 2005 letter), the Biennial Water Supply Report included in Appendix F discusses various City programs that augment City supplies under drought conditions. The impact of drought on the ability of the water supply system, including the management of surface and groundwater storage, is addressed in the City's Urban Water Management Plan, which is updated in years ending in zero and five. It should also be noted that any future development of more than 500 dwelling units would also be subject to the requirements of Senate Bills 221 and 610, which require a Water Supply Assessment and Verification Report that must address drought conditions.

Subj: 2005 General Plan Draft Environmental Impact Report (DEIR) Review Comments

Ref: (a) Daniel Cormode e-mail of 20 May 2001

1. The subject DEIR identifies impacts to fire services, police services, traffic; circulation, storm drain systems and schools which will required additional funding. Some of those mitigation measures will require public finding as they will benefit the general population and other mitigation measures having direct impact as a result of the development require funding by developer. These magnitude of these economic impacts do not appear to be discussed in either the proposed 2005 General Plan nor the subject DEIR.

2. It is recommended discussion of the following relevant economic/fiscal elements identified in the State of California General Plan Guideline be adequately addressed in the subject DEIR and discussion should be contained therein. Those elements include discussing:

a. Fiscal Stability, including existing and potential revenue resources, costs of services and facilities and economic forecasts.

b. Budgetary Structure, including: existing outlays to departments, services and comparable revenue recoupment mechanisms and levels; and comparison of facility and services versus efficiency of providing the programs.

3. For additional information, please contact me by telephone at 805-647-4063 or by e-mail at dcormode@sbcglobal.net.

Subj: Economic Development Issue Paper
Date: 5/20/01
To: merrymanwcc@aol.com
CC: sandmand@pacbell.net
BCC: ttanda@pacbell.net

Margaret,

At the 16 May 01 CPAC Meeting, an Economic Development Issue Paper for the City of San Buenaventura Comprehensive Plan was presented to members of the Comprehensive Plan Advisory Committee (CPAC).

The presentation stated that Economic Development Goals and policies can assist the City in achieving its overall Vision by:

- Guiding economic revitalization in key areas of the community;
- Presenting new economic options for development at key entry points to the City;
- Promoting the City's economic potential to achieve regional prominence, strengthen the economic base of the City, and stimulate other economic investments in the community;
- Seeking to minimize sales tax "leakage" to surrounding areas and increase fiscal benefits;
- Providing a healthy climate to encourage economic investments in the community;
- Emphasizing training and job opportunities for local workers;
- Providing a choice of housing opportunities commensurate with job growth;
- Maintaining a high level of public services and infrastructure for residents and businesses; and
- Actively pursue opportunities for a more balanced economic base in all focus areas.

What is missing from both the above presentation and the Vision, are identification, and potential cost if applicable, of:

- Key areas of the City requiring revitalization;
- The type of revitalization required for each key area;
- Specific economic options;
- Key entry points to the City;
- The economic potential of the City through an economic model or other measurable statistical analysis tool;
- The ability for the City to sustain itself economically, both currently and in the future, based on City infrastructure maintenance and support requirements;
- The climate needed to encourage economic investment in the City;
- Training and job opportunities for local workers;
- Types of housing opportunities available;
- Areas of current/expected job growth;
- Current/Future public services and infrastructure requirements by both residents and business; and
- opportunities for a more balanced base.

Furthermore, I feel the data contained in the presentation did not clearly relate to the following relevant economic/fiscal elements identified in the State of California General Plan Guidelines:

- Business retention and development by sector;
 - Identification of the needs, limitations and alternatives to existing businesses;
 - Identification of potential improvements and strategies which would encourage business retention;
- Employee Development

- Areas of employment growth, shortages and needs;
- Business Recruitment:
 - Relevant issues concerning the types, number, and success of existing and potential recruitment strategies.
 - Identification of those businesses which would be compatible with the objectives of the general plan and consistent with the carrying capacity of the land and infrastructure.
- Fiscal Stability
 - Includes existing and potential revenue resources, costs of services and facilities and economic forecasts.
- Budgetary Structure
 - Existing outlays to departments, services and comparable revenue recoupment mechanisms and levels.
 - Comparison of facility and services versus efficiency of providing the programs.

Recommend the above concerns be either placed on the CPAC meeting agendas for discussion or forwarded on to City Staff for action as appropriate.\

R/

Daniel Cormode
805-647-4063

Excerpts fro Draft EIR

- **Storm Drain System** - potential impacts due to system deficiencies in older parts of the City, including Ventura Avenue corridor and Downtown district (all scenarios); this impact can be mitigated through development of funding mechanisms to address system deficiencies
- **Fire Protection Service** - potentially significant impacts to fire protection service in the North Ventura Avenue area (Scenarios 2-6); this impact can be mitigated through development of a new fire station in the North Ventura Avenue area
- **Police Protection Service** - potentially significant impacts relating to the need for new facilities (all scenarios); this impact can be mitigated through expansion of facilities as necessary
- **Traffic Performance Standards** - potentially significant impacts to roadway intersections (Scenarios 1, 3, 4, 5, and 6); impacts can be mitigated through policies and actions directing implementation of feasible system improvements as needed

<p>Impact HWQ-2 Development accommodated through the year 2025 under any of the land use scenarios under consideration for the 2005 General Plan would increase the amount of impervious surfaces within the Planning Area, potentially increasing surface runoff in areas where existing storm drain systems are deficient. This is considered a Class II, significant but mitigable, impact for all scenarios.</p>	<p>HWQ-2 Additional Drainage Actions. The following actions shall be added to the 2005 General Plan to address existing storm drain system deficiencies:</p> <ul style="list-style-type: none"> • Develop a financing program for the replacement of failing corrugated metal storm drain pipes in the City. • Adopt assessment districts or other financing mechanisms to address storm drain system deficiencies in areas where new development is anticipated and deficiencies exist (e.g., Downtown district, Ventura Avenue corridor, and Harbor district). 	<p>Less than significant for all scenarios.</p>
---	---	---

<p>Impact PS-1 Development under any of the 2005 General Plan land use scenarios would increase the City's population and density of development, and introduce new development into high fire hazard areas. This would increase demand for fire protection services and potentially create the need for new fire protection facilities. With proposed General Plan policies, impacts for Scenario 1 are Class III, less than significant. Impacts for Scenarios 2-6 are considered Class II, significant but mitigable.</p>	<p>PS-1(a) North Avenue and Western Cañada Large Expansion Areas. The following action shall be added to the 2005 General Plan if any land use scenario that includes possible future development of the North Avenue expansion area or the Western Cañada Large expansion area is adopted:</p> <ul style="list-style-type: none"> • Add a fire station in the North Avenue area as determined necessary by the Ventura Fire Department. Consider an assessment district for the North Avenue area to fund a new station. <p>PS-1(b) Poinsettia Expansion Area. The following action shall be added to the 2005 General Plan if any land use scenario that includes possible future development of the Poinsettia expansion area is adopted:</p> <ul style="list-style-type: none"> • Include a fire station site in any future specific plan for the Poinsettia expansion area if determined necessary by the Ventura Fire Department. 	<p>Less than significant for all scenarios.</p>
---	---	---

<p>Impact PS-2 Possible future development under Scenarios 1-6 would increase the City's population and density of development, thereby resulting in the need to construct new facilities in order to provide effective police protection service. Impacts would be Class II, significant but mitigable, for any of the six land use scenarios.</p>	<p>PS-2 Police Protection Service. The following actions shall be added to the 2005 General Plan:</p> <ul style="list-style-type: none"> • Establish a new Downtown storefront to meet the needs of the growing Downtown population • Expand the Police Department headquarters as necessary to accommodate staff growth. 	<p>Less than significant for all scenarios.</p>
--	--	---

<p>Impact PS-3 Projected enrollment growth under the 2025 General Plan would exceed the capacity of existing schools within the Ventura Unified</p>	<p>None required, but the following are recommended:</p> <p>PS-3(a) School Coordination. The</p>	<p>Less than significant for all scenarios.</p>
<p>School District, thereby creating the need to construct additional facilities. However, payment of State-mandated school impact fees is presumed to provide funding for needed new school facilities. Therefore, although available land for new schools may be limited (particularly for Scenarios 1 and 5), impacts to schools would be reduced to a Class III, less than significant, level for any of the six land use scenarios.</p>	<p>following action should be added to the 2005 General Plan:</p> <ul style="list-style-type: none"> • Coordinate with the Ventura Unified School District to ensure that school facilities can be provided to serve new development. <p>PS-3(b) Expansion Area Schools. The following action should be added to the 2005 General Plan if any land use scenario that includes an expansion area is adopted:</p> <ul style="list-style-type: none"> • Require expansion area specific plans to be prepared in coordination with the Ventura Unified School District and set aside land needed for new school facilities. 	

<p>Impact TC-1 Growth accommodated under any of the General Plan land use scenarios could result in deficiencies to the local circulation system based on recommended level of service standards. The number of locations that could have deficiencies based on the projected growth scenarios ranges from one (for Scenario 1) to four (for Scenarios 2 and 4). Feasible improvements are available to address all projected deficiencies for Scenarios 1, 3, 4, 5, and 6; therefore, impacts associated with those scenarios are considered Class II, significant but mitigable. For Scenario 2, implementation of feasible improvements would not achieve performance standards at the Johnson Drive/North Bank Drive intersection. The impact at that location is considered Class I, unavoidably significant, for Scenario 2.</p>	<p>To ensure that impacts are addressed and that the improvements identified in this EIR (or other feasible improvements that achieve the same objectives) are identified, the following measure is required:</p> <p>TC-1 Additional Circulation Action. The following action shall be added to the 2005 General Plan to ensure that traffic impacts of future developments are addressed and mitigated:</p> <ul style="list-style-type: none"> • Require project proponents to analyze traffic impacts and implement mitigation as appropriate prior to development. Depending upon the nature of the impacts and improvements needed, mitigation may either consist of implementing needed physical improvements, contributing "fair share" fee toward implementation of needed improvements, or some combination thereof. 	<p>Less than significant for Scenarios 1, 3, 4, 5, and 6. Unavoidably significant at Johnson Drive/North Bank Drive intersection for Scenario 2.</p>

COMMENTER: Daniel Cormode

DATE: June 20, 2005

RESPONSE:

The commenter states an opinion that the Draft EIR should include economic and fiscal analysis relating to increased demand for police and fire service, and transportation and storm drain infrastructure. It is not the EIR's purpose to discuss environmental or fiscal effects. The purpose of the EIR is to identify and, when possible, mitigate potentially significant environmental effects, which generally relate to physical changes to the environment. Section 15131 of the *CEQA Guidelines* states that "economic or social effects of a project shall not be treated as significant effects on the environment."

Hello Charles:

I understand that granny flats is the vernacular way of describing a guest house and even is used to describe second units. My understanding is that you are asking about second units.... under the law it has this new name.. People often the two. Two Second units are exempt from CEQA under State statute. the second point is that both second units and "granny flats " do not have an impact separate and apart from any other population-- so the answer is yes, the City has taken them into account with our population projections. I will forward you to our consultant if you are asking for more detailed information.

Have a great day.

Subject: EIR

Has the EIR made any provision for the impact of the Granny Flats that have been included in the general plan? Since the implementation of the program will be impacted by the city's understanding of the resources required to build the flats, has a sensitivity analysis been done concerning alternate ways to implement the plan. Granny flats can create a lot of problems in neighborhoods with limited parking. Since residents are often using their garage for storage rather than their cars, just because a house has a garage does not mean that there is adequate parking. Since this issue can create a lot of legal issues between neighbors, how ill disputes be resolved without burdening the courts?

Charles Spraggins
Ventura, CA

Letter 9

COMMENTER: Charles Spraggins

DATE: June 26, 2005

RESPONSE:

The commenter asks whether the EIR has made any provision for “granny flats” and how disputes about parking associated with these units will be resolved. The EIR analysis assumes that up to about 300 second units will be built in the City through 2025, or about 15 units per year for 20 years. Therefore, the overall citywide impact of adding second units has been accounted for in the EIR. Any analysis of the impacts of individual second units would be speculative as the nature and magnitude of impacts would depend upon where such units are built. In any event, it should be noted that State law allows for the construction of second units in certain instances regardless of whether or not the proposed 2005 General Plan is adopted.

SUBJECT: COMMENTS TO THE DRAFT EIR

Dear Ms. Gialketsis:

We have reviewed the Public Review Draft Environmental Impact Report ("DEIR") and respectfully submit the following comments regarding the development potential identified for the Johnson Drive Corridor for City decision makers' consideration. We are concerned that the Development Potential identified in the DEIR of 150 residential units, 50,000 square feet of retail space and 20,000 square feet of office space appears to considerably understate the potential for this area.

We feel that a greater level of development should be encouraged in the Johnson Drive Corridor to better support the City's smart growth goals, and other sustainable development policies, especially with respect to the residential component. We believe that future intensification and redevelopment in the Johnson Drive Corridor, combined with future new development on available infill sites, makes the stated Development Potential in the Corridor insufficient. It is quite likely that the projected thresholds for residential and non-residential development described in the DEIR would be quickly realized on the two remaining undeveloped sites in the Corridor (both located at the intersection of Johnson and North Bank Drives). We contend that significantly increasing the intensity of residential development in the Johnson Drive Corridor would support the City's Smart Growth goals and encourage desirable development forms in this very important "gateway" corridor. Intensifying the residential development potential in the Johnson Drive Corridor would:

- 4. *Preserve open space, farmland, natural beauty and critical environmental areas.*
The Johnson Drive Corridor is adjacent to the farmland of the Serra Expansion Area being considered in the Draft EIR for future development and expansion of the City. By intensifying the development in this existing Corridor, it forestalls the development of nearby agricultural areas.

- ⊥ *Foster distinctive, attractive communities with a strong sense of place.* The Johnson Drive Corridor lacks a cohesive focus or image. The addition of a substantial, high-quality housing component would support a more diversified base of commercial establishments to better serve the corridor and the neighboring communities.
- ⊥ *Mix land uses.* Smart Growth encourages a mix of land uses both vertically and horizontally. By introducing a significant component of residential units to this commercial corridor, existing businesses can benefit from the stabilizing effect of this sizeable, adjacent customer base, while residents benefit from proximity to services and stores.
- ⊥ *Create walkable communities.* By encouraging the development of a substantial number of residential units in this corridor, we increase the opportunity for local businesses to be supported by walk-in customers. Residents will be able to walk to the movies or the nearby shops and make use of the Linear Park which runs along the perimeter of the Corridor.
- ⊥ *Create a range of housing opportunities and choices.* Because of the generally commercial nature of the corridor, a significant amount of housing would be an appropriate infill use. For example, rental product in this area would provide a much needed alternative to the for-sale product available further north on Johnson Drive.
- ⊥ *Provide a variety of transportation choices.* Intensifying the residential development in the Corridor allows an increased number of residents to benefit from proximity to the South Coast Area Transit (SCAT) bus route along Johnson Drive, Ventura Intercity Service Transit Authority (VISTA) bus stops, and easy access to the Freeway. By locating more potential commuters adjacent to the 101 Freeway, the impact of these new households on local traffic patterns would be reduced.

We understand that the City intends for the projections included with the DEIR to be assumptions for analytical purposes only, and that the Districts, Corridors and Expansion Areas could accommodate more development based on market forces and other factors. We acknowledge City staff's assertion that the Development Potential described in the DEIR is not intended as a future "cap" on development; however, we are concerned that the described Development Potential would later be perceived by members of the public (or even the City Council) as a limit to growth and, thus, constrain new residential development in this corridor otherwise ripe for infill/intensification. We fear this is a real possibility since the DEIR indicates that projected City growth was distributed among the various corridors and districts in the City "based on the development potential of each growth district and corridor and direction from the community, CPAC, Planning Commission and City Council on where growth in the community should be encouraged." Even clear language qualifying the empirical assumptions, as provided in

the footnotes to "Appendix C" of the DEIR, may do little to change the perception that the Development Potential projections are not targets or limits.

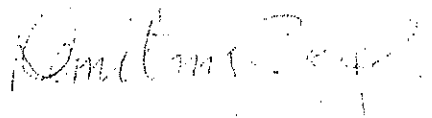

Equally concerning to us is the anticipated relationship among the DEIR, Draft General Plan and forthcoming Development Code, such that the same assumptions and projections used solely for analytical purposes in the DEIR (such as residential development potential) could become policy through the creation of the formal Development Code. In other words, those projections used solely for analysis in the Draft General Plan and DEIR could seriously limit future development opportunities if adopted into ordinance with the Development Code if the zoning density designations are derived from these figures. This could have the unintended consequence of turning the otherwise "analytical projections" into local law.

As a result of the above considerations, we respectfully recommend that the residential development potential in the Johnson Drive Corridor be revised substantially upward to accommodate the appropriate scale and quality of future housing in this key infill Corridor.

Sincerely,

Letter 10

COMMENTERS: Carol Schwartz and Demetrius Zeigler, Casden Properties, LLC

DATE: July 7, 2005

RESPONSE:

The commenters re-state concerns about the amount of development assumed in the Draft EIR for the Johnson Drive corridor and request that the amount of development assumed for the Johnson Drive corridor be revised upward. These concerns are addressed in the response to Comment Letter 4. As the commenters acknowledge, the growth estimates included in the Draft EIR for all districts, corridors, and neighborhood centers are assumptions to be used for analytical purposes. These do not represent growth caps or restrictions and do not limit the ability of the City to approve individual projects that include more units or square footage than have been assumed in the EIR analysis. As such, there is no reason to adjust the growth estimates shown in the Draft EIR. The specific impacts of individual development projects will need to be addressed on a case-by-case basis.

In response to several comments on the Draft 2005 General Plan and Draft EIR, a table will be added to the General Plan that will show the carrying capacity of the total land area for the Plan. This table is intended to show what the total development potential is versus the realistic estimates provided in the original table (May Draft Overview, Table 2, pages 14 &15).

Subject: **Response to the Draft Environmental Impact Report for the 2005 Ventura General Plan**

On behalf of the partners of the Howard and Howard Ranch, and also, of all the farmers in the Serra area, I would like to take this opportunity to commend both Staff and the Consultants for a remarkable achievement in producing this EIR on the 2005 Draft Ventura General Plan. Having been an active citizen participant over the course of the past 5 years of this process, I am particularly gratified that so much attention was given to the issues of agriculture in the Ventura urban environment, and to the Serra area in particular. **A**

We understand that Scenario 1 – Intensification/Reuse is the first priority of the General Plan and that further discussion of the potential expansion areas, identified as Scenarios 2-6, will be postponed until after the adoption and ratification of both the General Plan and the EIR has occurred on August 8th. As owners of commercial agricultural land within the Serra area, we support this approach. However, we also agree with the statement in the General Plan (page 3-10) that “even the most successful effort to achieve community planning goals through infill may need to be supplemented at some point by expanding into areas outside the city limits.”

The Draft EIR has included the Serra area in two of the potential growth expansion scenarios, Scenario 2 (Intensification/Reuse + North Avenue + Olivas + Serra) and Scenario 4 (Intensification/Reuse + North Avenue + Serra). We are also aware that Staff has recommended “the North Avenue and Serra expansion areas as the top priority for development if future growth to the year 2025 cannot be met through infill development alone.” (Attachment D – Long-Term Potential Expansion Strategy to the General Plan). We strongly support their recommendation.

This response to the Draft EIR addresses several major concerns, contradictions, and what we believe to be errors in the content of the document, particularly as they affect the discussion of the Serra area. These points are as follows:

LACK OF CONSISTENCY IN THE MAPS (FIGURES) INCLUDED IN THE DRAFT EIR SHOWING THE SERRA AREA

The First Assembly of God Church site at the corner of Montgomery Avenue and Bristol Road

B

In November, 1999, this 25.59-acre parcel was removed from SOAR restrictions and pre-zoned to an R-1 Single Family zone with a subzone of R-1-1AC with the passage of Measure C the "First Assembly of God Land Initiative." (See Appendix F, Draft General Plan). In early 2004, the church submitted plans for the development of the site to the Community Development Department. Those plans, proposed to be built in several phases, include at least seven sports fields, a large church sanctuary, multiple other church buildings, two maintenance buildings, two concession buildings, an amphitheater, picnic areas, parking areas, and a jogging track. Although no further action has been taken by the church to proceed with this development, the plans are included in the City's Pending Project list.

Section 2.5.5 b. (pg. 2-31) of the Draft EIR states, "Currently planned and pending projects were taken from the City's Pending Projects list. These were assumed to occur".

Despite this stated assumption, only seven maps out of a total of 36 maps showing the Serra Expansion Area correctly show the First Assembly of God Church site removed from the Serra Expansion Area. One map includes the parcel as outside the City Limit boundaries (Figure 2-9) and is correct. Two other maps show this site as continuing in agriculture, so are possibly correct, despite the plans to urbanize this land in the near future. The remaining 26 maps erroneously include this parcel in the Serra Expansion Area and contradict the Draft's stated working assumptions and methodology of assuming pending projects to occur. Figure 4.2-3 (Greenbelts, Land Conservation Act Contracts, SOAR Designated Lands, and Hillside Voter Participation Areas) is particularly inaccurate, given that the church property has not been under SOAR since 1999. (Specific details of these maps are given below.)

On several occasions since 2000, I have requested the Community Development Department to change their maps to accurately reflect this change in the Serra area. I was assured that the General Plan would reflect this change: most maps presented in both the Draft General Plan and the Draft EIR do not. We believe that no accurate future growth planning of this area can be accomplished without an accurate report of the extent to which urban uses have and are encroaching upon commercial farmland under SOAR restrictions in Serra. We respectfully request that all maps in both the Draft General Plan and the Draft EIR be corrected to accurately depict the First Assembly of God Church site.

Maps CORRECTLY showing Serra WITHOUT the First Assembly of God Church site
(These maps are correct)

- Figure 2-3 (page 2-17) Scenario 1 – Intensification/Reuse Only
- Figure 2.4 (page 2-19) Scenario 2 – Intensification/Reuse + No. Avenue + Olivas + Serra
- Figure 2.5 (page 2-21) Scenario 3 – Intensification/Reuse + No. Avenue + Olivas
- Figure 2.6 (page 2-23) Scenario 4 – Intensification/Reuse + No. Avenue + Serra
- Figure 2.7 (page 2-25) Scenario 5 – Intensification/Reuse + No. Avenue + Western Canada Larga
- Figure 2.8 (page 2-27) Scenario 6 – Intensification/Reuse + No. Avenue + Poinsettia

**Maps Showing 1st Assembly of God site in agriculture despite “Assumed” Development
(These maps may be correct)**

Figure 4.2-1 Lands in Agricultural Use
Figure 4.2-2 Important Farmlands

**All Other Maps in the Draft EIR Showing the Serra Area *INCORRECTLY INCLUDE* the First
Assembly of God Church site**

VUSD Property (South of Ralston where it meets the Serra Area Agricultural Land)

C

This ten-acre parcel is owned by the VUSD and is therefore under no SOAR restrictions. It can be developed at any time. Curiously, it appears on only one map in either the Draft General Plan or the Draft EIR as separate from the rest of the agricultural lands in the Serra Potential Expansion Area.

Figure 4.12-5 – Pedestrian System includes this parcel as a school-owned property, nestled in a corner of the Serra Potential Expansion Area (see the lilac colored square under the letters EX.)

More curious still, this area does not even appear as a school site on the following map
Figure 4.11-3 –Public Schools and Libraries.

Figure 4.2-3 – Greenbelts, Land Conservation Act Contracts, SOAR Designated Lands, and Hillside Voter Participation Areas, inaccurately shows this area to be part of SOAR Designated Lands. It is not and has never been under SOAR restrictions.

Our concerns regarding this property are similar to those we have with the presentation of the 1st Assembly of God site as being part of the Serra Potential Expansion Area. Again, we believe that accurate reporting of the land designations and uses in this area are vital to responsible future growth planning. We respectfully request that all maps in both the Draft General Plan and the Draft EIR be corrected to accurately depict the VUSD property in the Serra Area.

TRANSPORTATION AND CIRCULATION – SECTION 4.12

D

This section of the Draft EIR includes a number of errors and omissions, as well as some proposed “roadway improvements” that directly contradict a primary goal of the 2005 General Plan “to protect our hillsides, farmlands and open spaces”. Below is a discussion of those areas of particular concern, including the widening of Montgomery and Ramelli Avenues, the extension of Kimball Road and Ralston Street, and proposed Class II bikeways, any and all of which will remove farmland from the Serra Potential Expansion Area.

Widening of Ramelli and Montgomery Avenues

Ramelli Avenue borders existing SOAR farmland on the northwest section of the Serra Potential Expansion area and Montgomery Avenue borders existing SOAR farmland on the northeast section of Serra.

Common sense might dictate that both of these roads be widened as a consequence of increased urban development in the area, specifically that of the Community Park and the First Assembly of God Church site. However, if these roads are widened it will necessitate removing farmland currently under SOAR restrictions for the purpose of building the road improvements. These two roads will take land from three of the five remaining farmers in the Serra area. Hence, any discussion of changes to Ramelli and/or Montgomery is of great concern to those of us who own farmland in Serra.

Both the Draft General Plan (Figure 4-3 Roadway Classification Plan) and a number of maps in Appendix E graphically show the City's intention to widen both of these roads, under each and every scenario presented in the EIR. Yet, the EIR does not mention these roadway improvements anywhere else in the document, either in the text or in any table in the EIR or Appendix E to the EIR.

It should be noted that unless the Serra Potential Expansion Area is selected for growth expansion, the widening of Ramelli and/or Montgomery Avenues would be in direct conflict of the stated goal to "protect and preserve farmland". In the case of these two roadway improvements, farmland would be removed from production not only for the road itself, but also for any buffer that might be required by the County Agricultural Commissioner and the City. In addition to actual farmland lost from production, the additional encroachment of urban traffic in this area will only serve to exacerbate already serious ag/urban conflict issues.

It is impossible to know whether these the maps, showing the widening of these roads, have been printed in error, or whether there have been multiple omissions in not including these roadway improvements in the various tables in the Draft EIR and Appendix E to the Draft EIR. Regardless, this needs to be clarified and corrected before the final approval and ratification of this document. We respectfully request that this be done.

Howard and Howard Response to the Draft EIR
 July 14, 2005
 Page Five

Extensions of Kimball Rd. and Ralston St. in Scenario 5 (Intensification/Reuse + No. Avenue + Western Canada Larga)

The discussions of Scenario 2 (Intensification/Reuse + North Avenue + Olivas + Serra) and of Scenario 4 (Intensification/Reuse + North Avenue + Serra) include a Kimball Road extension from Telephone Road to North Bank Drive and a Ralston Street extension from Ramelli Avenue to Montgomery Avenue. Certainly, if either of these two scenarios is selected for future growth expansion, these two road extensions will be crucial to a well-planned development of the Serra area. E

Discussion for Scenario 5 (Intensification/Reuse + North Avenue + Western Canada Larga), however also anticipates that new roadway links would include a “Kimball Road extension from Johnson Drive to Bristol Road” and a “Ralston Street extension from Ramelli Avenue to Montgomery Avenue” (Section 4.12 Scenario 5, page 4.12-63). We believe this to be an error for the following reasons:

1. A Kimball Road extension from Johnson Drive to Bristol Road would transect farmland in Serra that is supposed to remain in farmland under Scenario 5 until at least 2025.
2. The Transportation and Circulation Element of every General Plan since the early 1970’s has included an extension of Kimball Road to Bristol Road, but never one from Johnson Drive to Bristol Road, so it begs the question whether this is really the intended extension.
3. A Ralston Street extension from Ramelli Avenue to Montgomery Avenue makes absolutely no sense in that it would horizontally bisect the northern portion of the Serra farmland when this area is supposed to remain in farmland under Scenario 5. It makes even less sense to extend Ralston Street, without also including the extension of Kimball Road from Telephone Road to Bristol Road.
4. **These road extensions are INCLUDED in the following discussion of Scenario 5:**
 Draft EIR Transportation and Circulation Scenario 5 text (page 4.12-63)
 Draft EIR Table 4.12-12 Roadway Improvements – Scenario 5 (page 4.12-67)
 Appendix E Table 3-14 Roadway Improvements – Scenario 5 (page 3-52)
 Appendix E Table 3-15 2025 ICU Summary-Scenario 5. (page 3-56)
5. **These road extensions are NOT INCLUDED in the following discussion of Scenario 5:**
 Appendix E Scenario 5 Text related to roadway improvements (pgs. 3-45, 3-50)
 Appendix E Figure 3-14 2025 ADT Volumes – Scenario 5 (page 3-48)
 Appendix E Figure 3-15 2025 ICU – Scenario 5 (page 3-49)
 Appendix E Figure 4-14 Roadway Classifications – Scenario 5 (page 4-22)
 Appendix E Figure 4-15 ADT Volumes – Scenario 5 (page 4-23)

Given the conflicting information presented in the Draft EIR and the Appendix to the Draft EIR it is difficult to know if these two road extensions are planned under Scenario 5 or not. I recently spoke with a member of

Staff, who assured me that yes, indeed, these road extensions had been planned through Serra under Scenario 5, despite the fact that Serra is not included as a Potential Expansion Area under this scenario.

Howard and Howard Response to the Draft EIR
July 14, 2005
Page Six

Therefore, in response to this EIR, we must strenuously object to the extension of these two roads in particular, in any configuration, and also to the development of any roads that will transect and/or remove farmland that potentially will remain under SOAR restrictions and/or are designated Agriculture Only until at least 2025 in this General Plan.

For five years I have argued in both oral presentations and written submissions to the CPAC, the Planning Commission, and the City Council that any road extensions or expansions through farmland that is expected to remain under SOAR restrictions should be removed or abolished from any growth development plan for Ventura. This is particularly true in the case of "roadway improvements", such as the Kimball and Ralston Road extensions discussed here and the widening of Ramelli and Montgomery discussed above.

To intentionally design urban incursion by road extensions that will subdivide what is left of already small islands of farms segregated in the Ventura urban area, while requiring those farms to remain as farms is to violate every goal, policy and action plan that calls for the protection and preservation of agricultural land. As stated above, in addition to actual farmland lost from production for these road extensions, the additional encroachment of urban traffic in this area will only serve to exacerbate already serious ag/urban conflict issues.

Either the citizens of Ventura want to preserve farmland, already completely encircled by urban development, or they don't. If they do, they must accommodate the farms they say they want to protect. If they want to realistically protect these "inner city" farms, they will have to deal with traffic congestion that might otherwise be accommodated by driving roads through what is now farmland. They will also have to learn to accept other inconveniences associated with having farms in the midst of the urban environment. If the citizens of Ventura do not wish to do these things, they must allow this farmland to be developed.

Therefore, we respectfully demand that the extensions of both Kimball Road and Ralston Street as described in Scenario 5 be deleted from the Traffic and Circulation section of the Draft EIR and also from Appendix E of the Draft EIR.

Class II Bike Lane as shown in the Serra Area

A Class II Bike Lane is defined in Section 4.2 Transportation and Circulation 4.12.1 Setting d. Bicycle/Pedestrian Travel (page 4.12-15) as a "lane on a road that is reserved for bicycles. The lane is painted with pavement lines and markings and is signed. The lane markings decrease the potential for conflicts between

F

motorists and bicyclists. Bike lanes are one-way, with a lane on each side of the roadway between the travel lane and the edge or paving or, if parking is permitted, between the travel lane and the parking lane. The lanes are at least four feet wide, five feet if parking is permitted.”

Howard and Howard Response to the Draft EIR
July 14, 2005
Page Seven

Both Figure 4-1 (Bicycle Facilities) of the General Plan and also Figure 4-12-4 of Section 4.12 Transportation and Circulation Figure show Class II Bike Lanes where there would be potential extensions of Kimball Road and Ralston Street.

Given that Class II Bicycle Lanes can only exist where there are developed roads, it would seem reasonable to suggest that these potential bikeways should only appear in those areas, and under those circumstances, in which those roads would be extended.

Therefore, while we encourage the use of alternative transportation, especially that of bicycles, we must object to the presentation in both the Draft General Plan and the Draft EIR of these Class II Bicycle lanes along presupposed extensions of Kimball Road (from Telephone Road to Bristol Road) and/or the extension of Ralston Street from Ramelli to Montgomery. Until and unless the Serra Area is selected as a Growth Expansion Area, it is inappropriate to identify bike lanes going through the area, without the confirmation of the development of the associated roads.

Consequences of the First Assembly of God Church Site Development

G

As owners of one of the two SOAR-restricted agricultural properties that are adjacent to the First Assembly of God Church site in the Serra Area, we are incredibly concerned about the impact that the development of this site will have on our land, and also the other remaining farmlands in the Serra area. A Staff member assured me that the Church property had been evaluated and had been included in the EIR analysis as a “pending project”.

Considering the contradictions and confusions in the Draft EIR Transportation and Circulation section, as presented above, we believe that there is some reason to be skeptical.

We are not traffic engineers, but it is difficult for us to believe that there will be no adverse or even increased traffic impact in the area considering the stated intentions of Church officials that this very intensely developed parcel will be in operation from 7 AM to 10 PM seven days a week. Despite assurances, we cannot but believe that at least Montgomery Road will need to be widened (as has been shown in many maps, although not detailed in any text or tables – See Above). We also believe that Ralston Street will need to be analyzed for expansion, even though the EIR traffic studies would indicate otherwise.

AGRICULTURE

The Draft EIR does an exemplary job of describing the impacts of development accommodated under the 2025 General Plan on existing agriculture in the Ventura Area.

Description of Serra in Section 4.2.1 Agriculture Setting (page 4.2-7)

H

The description of Serra in the Draft EIR is incorrect in several respects, including crops currently in production, the proximity of residential development to existing farmland, and the absence of discussion of the First Assembly of God Church site and the UVSD parcel (discussed above) that abut farmland.

Howard and Howard Response to the Draft EIR
July 14, 2005
Page Eight

We suggest the following rewrite (*Italics used for new language*):

This 464-acre area is currently used *for lemon and avocado orchards and for row crops. Adjacent to the farmland on the north is residential development and Telephone Road. Across Telephone Road on the north are more single-family homes and the new 100-acre community park that is expected to open during the summer of 2005. To the east is low-density residential development, and to the west both low and medium density residential development. At the corner of Montgomery Avenue and Bristol Road is a 26-acre parcel that is no longer under SOAR restrictions and which is planned for development.* Commercial uses are to the southwest along Johnson Drive. The Santa Clara River is located along the southern boundary of this area. The Department of Conservation has classified the entire Serra Area as a mix of "Prime", "Statewide Importance", and "Unique".

Buffers

For a number of years, the commercial farmers operating within the SOI of Ventura have asked the City to adopt a buffer policy that would help, in some measure, protect our land from the effects of urban encroachment. We are delighted that the 2005 General Plan includes two Actions that provide buffer policy.

Action 7.24 in the General Plan states: "Require non-agricultural development to provide buffers of 50 feet or more from agricultural operations to minimize the potential for pesticide drift." This action is also included in the Draft EIR in Section 4.7 Hazards and Hazardous Materials (page 4.7-13).

Action 3.15 in the General Plan states "Adopt use permit standards for non-farm activities in agricultural areas that protect and support farm operations, including requiring non-farm uses to provide all necessary buffers as determined by the Agricultural Commissioner's Office." This action is not specifically included in the Draft EIR. We believe that it would be appropriate to include this Action in Section 4.2 Agriculture in the Draft EIR. We respectfully request that Action 3.15 be included.

I

Portions of Land Not Developed in Scenarios 2-6 Allowed to Remain in Agriculture

J

Throughout the Draft EIR, discussions of Scenarios 2-6 submit the possibility that in such cases where there is more land than necessary to accommodate growth, that "any development could include wide areas of open space that could either allow portions of the areas to remain in agriculture or allow for large areas of civic spaces (parks) ..." (Section 4.1 Aesthetic and Community Design, page 4.1-15).

It is important to stress that any urban development that is built adjacent to commercial agricultural lands is potentially threatening to the protection and preservation of those agricultural lands. Even with buffers

required as part of the design of the new urban development, natural conflicts will arise between the urban interests and the agricultural interests. A list of such conflicts is presented in Section 4.2 Agriculture (pages 4.2-7 and 4.2-8). While it is gratifying that this EIR recognizes such conflicts, it is also somewhat troubling that it is potentially proposing that if too much land exists in a selected scenario, that the City will build what it needs, while leaving the remaining agriculture to deal with the consequences of adjacent development.

We suggest that any Long-term Potential Expansion Strategy that is selected give careful consideration to attempting to avoid creating new and potentially destructive ag/urban conflicts.

Howard and Howard Response to the Draft EIR
July 14, 2005
Page Nine

Right-to-Farm Ordinances

K

Section 4.2.1 c of the Draft EIR discusses the Right-to-Farm Ordinance approved by the City in 1997. However the description of this Ordinance presented here does not include the disclaimer built into the Ordinance that it does not apply "if the agricultural activity, operation, or facility obstructs the free passage or use, in the customary manner of ... any public park, square, street, or highway." (Right-to-Farm Ordinance, Section 4162) (underlining for emphasis.)

Given today's litigious-happy society, we believe it is important for the City to consider these exceptions to the Right-to-Farm Ordinance before adopting any growth plan or policy that will require roads or parks to encroach on existing agricultural land.

CONCLUSION

We congratulate everyone involved in the preparation of this Draft Environmental Impact Report to the 2005 Ventura General Plan. It is an outstanding effort and accomplishment. The scope and detail required in the production of this document is truly impressive.

We hope that you will accept the comments and suggestions included in this response to the Draft EIR knowing that we offer them with the sole purpose of making an already remarkable document even better.

Subject: **Response to the Draft Environmental Impact Report for the 2005 Ventura General Plan** L

The following are additional corrections that should be made to the Draft EIR. I suspect that by now, most of these have probably been cleaned up for the Final version, but just in case, I offer them here.

- Page iii Under List of Figures, after Figure 2-8, add "Scenario 6" before Intensification/Reuse + North Avenue + Olivas
- Page 4.2-18 At the end of the first paragraph under "Scenario 4 – Intensification/Reuse + North Avenue + Serra, the final sentence "In addition, about 24 acres within the Olivas area are under LCA contract" should be deleted. Olivas is not an expansion area studied under this scenario.
- Figure 4.11-2 This map is labeled "Parks and Recreational Facilities". It should be renumbered to read Figure 4.11-4. Figure 4.11-2 appears earlier in the section as a map labeled "Wildfire Risk Areas"
- Page 4.12-76 The heading at the top of the page reads "Scenario 6 – Intensification/Reuse + North Avenue + Olivas + Serra". This should be changed to read "Scenario 6 – Intensification/Reuse + North Avenue + Poinsettia".
- Page 4.12-89 A graphic box should be added around the section TC-1.

Again, many kudos for a job well done.

Respectfully submitted,

Jean Howard Mann

Letter 11

COMMENTERS: Jean Howard Mann, Owner and Managing Partner, Howard and Howard Ranch

DATE: July 14, 2005

RESPONSE:

Response 11A

The commenter states support for the City's emphasis of intensification and reuse as the top priority for future growth as well as staff's recommendation that the North Avenue and Serra areas be the top priority for development if future growth through 2025 cannot be met through infill development alone. This support is noted.

Response 11B

The commenter states that there are inconsistencies on several maps, suggesting that some maps show the First Assembly of God Church site as within the Serra expansion area and that others of show the church as outside the Serra expansion area. All of the Draft EIR maps that depict the Serra expansion area include the First Assembly of God Church site within the expansion area. However, the commenter correctly notes that re-designation of the site has received voter approval and the site is no longer subject to the SOAR Ordinance. Therefore, although the First Assembly of God Church site is outside the current City boundary, it will be removed from the Serra expansion area. The maps throughout the Draft EIR will be revised to reflect this change, which will reduce the size of the Serra expansion area to an estimated 438 acres. This change will not substantively affect any of the Draft EIR conclusions, though the total acreage of agricultural land conversion for the Intensification/Reuse Only scenario will increase by about 26 acres and the amount of land subject to SOAR under Scenarios 2 and 4 will decrease by a similar amount. These changes will be made in the Final EIR.

Response 11C

The commenter notes that a 10-acre parcel south of Ralston Street is owned by the Ventura Unified School District (VUSD) and states an opinion that EIR figures should depict the site as a school and not subject to the SOAR Ordinance.

Figure 4.11-3 to which the commenter refers is intended to show existing school facilities, not merely VUSD-owned properties. Though owned by the VUSD, the site in question is currently used for agricultural production, not a school; therefore, no correction to Figure 4.11-3 is needed.

With respect to Figure 4.2-3, whether or not school district-owned properties are subject to local policies such as the SOAR Ordinance has been the subject of some debate. While it may be true that a public school could be developed without a SOAR vote, any other development on the property would be subject to a SOAR vote. For example, if the VUSD were to sell the property to a private developer (as has occurred with several other VUSD properties), development of

the site could occur only with voter approval. Because the 10-acre site in question could be subject to SOAR under certain circumstances, no correction to Figure 4.2-3 is needed.

Response 11D

The commenter states that there are inconsistencies between figures and tables in the EIR traffic study. Specifically, the comment states that several figures suggest that Ramelli Avenue and Montgomery Avenue are to be widened, but that accompanying tables omit the widening of those same roadways. Neither Ramelli Avenue nor Montgomery Avenue would be widened to add lanes or increase the road capacity. The widening that could potentially occur would be to add on-street park and/or sidewalks. However, such widening would only be expected to occur in conjunction with the possible future development of the Serra area.

Response 11E

The commenter states that there are inconsistencies in the Draft EIR with respect to whether or not the extensions of Kimball Road and Ralston Street would be implemented in conjunction with buildout of Scenario 5, which does not include the Serra expansion area. It is not anticipated that either Kimball Road or Ralston Street would be extended through the Serra expansion area under Scenario 5. The traffic modeling for that scenario did not assume the extension of either roadway. Any references to the extension of those two roadways for Scenario 5 contained in the Draft EIR will be corrected in the Final EIR.

Response 11F

The commenter states an opinion that figures showing the future extension of the bikeways through the Serra expansion area should be amended to exclude those extensions until and unless the Serra area is planned for development. In response to this comment, Figure 4-1 in the traffic study in Appendix E and Figure 4.12-4 in Section 4.12, *Transportation and Circulation*, will be amended to include a note indicating that bikeways through agricultural or open lands would be constructed only in conjunction with development of the area.

Response 11G

The commenter states concerns about the impact of the First Assembly of God Church site development on remaining agricultural lands and re-states concerns about the possible future expansion of Montgomery Road and Ralston Street. Agricultural/urban conflicts are discussed generally in Section 4.2, *Agricultural Resources*, and it is acknowledged that conflicts between the agricultural growers in the Serra area and adjacent urban uses may persist if the Serra area remains in agricultural use. The specific impacts of the First Assembly of God Church site on adjacent agricultural lands would need to be addressed as part of a site-specific environmental review of the church's development plans. See Response 11D for a response to concerns about the possible future widening of Montgomery Avenue. No widening of Ralston Street is planned.

Response 11H

The commenter suggests several clarifications with respect to the discussion of the Serra expansion area in Section 4.2, *Agricultural Resources*. In response to this comment, the paragraph describing the Serra area on page 4.2-7 is revised as follows (text revisions are underlined):

Serra. This 438-acre area is currently used for lemon and avocado orchards and for row crops. Adjacent to the farmland on the north are residential development and Telephone Road. Across Telephone Road to the north are more single family homes and the new 100-acre community park that is currently under construction. To the east is low density residential development, and to the west are both low and medium density residential development. At the corner of Montgomery Avenue and Bristol Road is a 26-acre parcel that is no longer subject to the SOAR Ordinance and that is planned for development. Commercial uses are to the southwest along Johnson Drive. The Santa Clara River is located along the southern boundary of this area. The Department of Conservation has classified this area as a mix of "Prime," "Statewide Importance," and "Unique" farmland.

Response 11I

The commenter requests that General Plan Action 3.15 pertaining to requiring non-farm uses to provide necessary buffers between agricultural and urban uses be included in the Final EIR. Action 3.15 is discussed in two separate places in the Draft EIR, on pages 4.2-16 and 4.2-22.

Response 11J

The commenter states concerns about what she perceives as a proposal in the Draft EIR to develop only as much of the expansion areas as needed, while leaving remaining agriculture to deal with the consequences of adjacent development. The Draft EIR is not proposing that portions of the expansion areas should be left in agricultural use, but rather merely acknowledges that, depending upon the level of development that is proposed in the expansion areas in the future (if any), all of the expansion area land may not be needed to accommodate planned development. In such an instance, remaining land not used for development could potentially remain in agriculture, but could also be used for other purposes (such as schools, parks, or other civic spaces). It is true that if only a portion of the Serra area, for example, were used for urban development, the remaining growers within the Serra area would be further isolated and would likely experience greater levels of conflict with urban uses.

Response 11K

The commenter notes that the City's Right-to-Farm Ordinance provides exceptions when agricultural activity obstructs the use of a public park, square, street, or highway. This exception is noted. As discussed under Responses 11E and 11F, no extensions of roadways or bikeways through the Serra expansion area would be expected to occur until and unless that area is planned for development.

Response 11L

The commenter notes five minor typographical errors in the Draft EIR. These will be corrected in the Final EIR.

DELIVERED VIA E-MAIL & FAXCIMILE

RE: San Buenaventura City General Plan EIR

Dear Ms. Gialketsis:

On behalf of the approximately 500 companies and their representative employees who make up the Greater LA/Ventura Chapter of the Building Industry Association of Southern California, thank you for the opportunity to comment on the City of Ventura's proposed 2005 General Plan and its accompanying Environmental Impact Report.

While the General Plan document is quite benign, we believe the "devil is in the details" of the almost 1000 page EIR. It is this document that will serve as the true guideline when questions or concerns arise. While we respect Ventura's efforts to seek the highest environmental standards that arise due to construction; we have concerns with some aspects of the proposed EIR. These concerns include the air quality standards, population growth, standards on public services, transportation and road construction, and utilities and services.

I. AIR QUALITY

The EIR uses numbers based on SCAG projections. The SCAG projections are lower than the city's; thus, every project becomes an unavoidable significant impact. The Air Quality thresholds (and population thresholds) should be consistent with the city's chosen alternative. The EIR should be revised once the city chooses its population limit so that development within that limit is not determined to create an unavoidable significant impact.

A

II. POPULATION AND HOUSING

The preferred environmental alternative, infill and intensification of reuse only without expansion areas, sets a limit of 8258 units of residential housing up until the year 2025. It is our thought that this number might be too low, not taking into account the maximum use of underdeveloped properties throughout the city.

B

III. PUBLIC SERVICES

It is in this section that we have the most concerns. The city has been using very high standards for parkland per 1000 residents, as well as for police and fire. The question should be asked "are these standards realistic?" Has the city ever met these standards during the previous general plan? If these arbitrary standards are carried over, then they should be evaluated against reality, and lowered where appropriate. This will avoid having every project in conformance with the plan have an unavoidable significant impact. These unattainable ratios will be the basis for new fees on development. The EIR must be made clear that new development does not pay for existing deficiencies, just the impacts of the new residents only. Parks take a significant role in this chapter.

C

The standard for a neighborhood park of 5 acres is arbitrary and outdated, again the same as in earlier General Plans. The BIA requests that the 5-acre standard be removed.

Fire services are another area in which the BIA has concern. All new residential construction requires fire sprinklers. This standard should be sufficient to help mitigate the need for additional fire personnel at least that of which is to be paid for by new development.

We are also concerned with the standards put forward on public schools. Is there a demographic analysis that takes into account the aging population?

IV. TRANSPORTATION AND CIRCULATION

We would like to request an addition to the EIR that states, "All future roadway, bikeway, and pedestrian path alignments are shown for illustrative purposes only. Exact alignments will be determined during project review." Some of these alignments are carried over from the 1975 plan, and may not reflect the most current topography or development which has since taken place. The city must maintain design flexibility, and avoid the duplicative process of a general plan amendment for road location on projects which conform to land use and other elements.

D

V. UTILITIES AND SERVICES

In this section there is a breakdown of new residential units and other construction by neighborhood. This breakdown is used for water and wastewater analysis only. The BIA feels the breakdown should be for illustrative purposes only; otherwise, a permanent breakdown will be adopted as part of the EIR, and will pre-ordain the RGMP process, and leave little discretion for decision makers.

E

While the General Plan update process has been quite lengthy, the BIA thanks the City of San Buenaventura for allowing us to be part of the discussion to date. As the City of Ventura focuses on streamlining their development processes, we welcome the opportunity to continue to be a part of the collective and collaborative processes which will someday result in an easier development process for our members to navigate.

Thank you once again for the opportunity to provide comments. Please feel free to contact me at 661-257-5042 or tdonlon@bialaventura.org if you have any questions or comments. Please note that in the last few weeks we have moved offices, we are now located at 28460 Avenue Stanford, Suite 110, Santa Clarita, CA 91355.

Sincerely,

Terra Donlon
Director of Government Affairs

Cc: Mr. Brian Brennan, Mayor
San Buenaventura City Council Members
Mr. Rick Cole, City Manager
Susan Daluddung, Community Development Director

Letter 12

COMMENTER: Terra Donlon, Director of Government Affairs, Building Industry Association

DATE: July 15, 2005

RESPONSE:

Response 12A

The commenter notes that the EIR uses numbers based on SCAG projections and suggests that the EIR should be revised once the City chooses a population limit so that future developments would not create unavoidably significant impacts. The population growth estimates included in the Draft EIR were directed by the City Council and are not purported to be a "limit". Because the projected citywide growth through 2025 based on the Council-directed growth rates exceeds the SCAG/Ventura County AQMP growth forecast for the City, any of the EIR scenarios could be found to be inconsistent with the AQMP. However, as noted in the Draft EIR and in the comment letter from the Ventura County Air Pollution Control District (Letter 27), the 2007 AQMP will include revised growth forecasts that will take into account the City's growth projections under the 2005 General Plan. As such, future developments that are consistent with the 2005 General Plan will likely be found to be consistent with the new AQMP.

Response 12B

The commenter states an opinion that the 8,258 residential units assumed to be added to the City through 2025 under Scenario 1 may be too low. This opinion is noted. The 0.88% average annual growth rate assumed for Scenario 1 represents the average annual rate of growth that has occurred in the City over the past 10 years (1994-2004) and as stated in 12A above, were directed by City Council to use as estimates.

Response 12C

The commenter disagrees with the standards for parks, fire service, and schools that are discussed in Section 4.11, *Public Services*. The park acreage standards presented in the Draft EIR are the currently adopted City standards, while the fire service standards are those provided by the Ventura Fire Department. Similarly, the projected number of new students associated with growth through 2025 is based on students per housing unit generation rates provided by the Ventura Unified School District. The Draft EIR differentiates between existing deficiencies based upon currently adopted standards and the demands for increased service associated with new development. New developments will be subject to existing park and school impact fees, which are intended to offset the demands associated with new developments rather than to alleviate existing deficiencies. Any new fire impact fees that the City may develop in the future would similarly be designed to have new developments offset the cost of providing facilities to serve the new development rather than to address existing deficiencies. It should be noted that existing impact fees for schools and parks, as well as any possible future impacts fees for other services (such as fire protection), can be used only for facilities and equipment, not for personnel.

Response 12D

The commenter requests that maps showing future roadway, bikeway, and pedestrian path alignments be amended to include a note indicating that the alignments shown are for illustrative purposes only and that final alignments will be determined during project review. These maps will be amended to include such a note in the Final EIR and General Plan.

Response 12E

The commenter requests that the breakdown of uses by location within the City in several tables in Section 4.13, *Utilities and Service Systems*, should include a note stating that the breakdown is for illustrative purposes only and that the actual amount of development within individual areas of the City may vary. The tables in Section 4.13 will be amended to include such a note in the Final EIR.

City of Ventura 2005 General Plan Update Draft E.I.R.
City Council & Planning Commission Joint Workshop#2
Review of the Draft E.I.R.

Re: **General Plan Scenario 5: Intensification/Reuse +
North Avenue + Western Canada Larga**

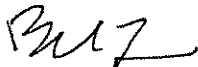

Dear Council Members & Commissioners:

Thank you for today's opportunity to address you with my comments
Concerning the City's 2005 General Plan Update Draft Environmental Impact Report.
Unfortunately, speaker time does not permit me to fully comment on all of the issues raised in
the analyses of General Plan Scenario 5. I will submit all of my written comments by the
conclusion of the 45-day review period July 18, 2005.

Today, I submit for your consideration a letter and maps concerning watershed flood
plain issues not addressed in the document's "Upper North Avenue District Housing"
Alternative. This Alternative is a variation of General Plan Scenario 5 relating to the Brooks
Campus expansion and the Petrochem Refinery residential reuse. The attached County G.I.S.
maps illustrate those sites to be substantially within the 100 year flood plain of Canada Larga
Creek.

I will limit my oral comments to 3 issues raised in the Environmental Impact Report
analyses of General Plan Scenario 5, which includes the Westernmost 120 acres portion of the
original 800 acre P.E.A. #1 Canada Larga. Those issues are Density, Guidelines for Orderly
Development and Farmland Conversion.

Thank you,

Shull Bonsall, Jr.
Rancho Canada Larga

Subject: SUMMARY OF CANADA LARGA CREEK FIELD TRIP ON JUNE 2, 2005

Dear Mr. Bonsall:

The Canada Larga watershed is located about 5 miles north of the City of Ventura and has a catchment area of about 12,311 acres (19.24 square miles). Current land usage of the watershed are mostly natural woodlands and grass lands with cattle grazing. Canada Larga Creek is one of the two largest tributaries of Ventura River. A preliminary hydrologic study indicates that the 100-year peak flood flow discharge at the confluence with Ventura River is about 13,386 cubic feet per second (cfs).

In January and February of 2005, two major storms struck Southern California and resulted in over-bank flooding of Canada Larga Creek (approximately 40-year return period), causing damages to properties, agriculture and infrastructures; especially at the lower reach of Canada Larga Watershed.

To better understand the issue in Canada Larga Watershed, the District engineers, Sergio Vargas, Denny Tuan and Yunsheng Su, visited the site with you on June 2, 2005. This letter summarizes the findings of that field trip:

1. Lower reach of the Canada Larga Watershed is subject to frequent flooding. It is caused not only by undersized channels and road crossings, but also by the excessive amount of debris and sediment.
2. The District has identified the needs to address the issues, and a project is proposed in our Integrated Watershed Protection Plan (20-year plan). However, the present benefit-cost ratio does not rank a higher priority than other urgently needed District facilities improvements.

Mr. Shull Bonsall
June 23, 2005
Page 2 of 2

3. You mentioned that the Brooks Institute Camp Expansion project is under planning downstream of HWY 33, and that a land development project might be planned upstream of HWY 33 in the future. Should there be funding opportunities due to future land developments, the District can provide information, mapping, and engineering expertise in a watershed-wise evaluation for solutions of flood control, water quality and habitat restoration.
4. You explained your concept for a potential detention/debris basin. However, before any conclusion is reached, watershed-wise hydrology, hydraulics, and sediment transport studies have to be conducted to evaluate the baseline (existing) and the proposed conditions.

We appreciate the opportunities to work with you. Please feel free to give me a call at 805-650-4077 if you have any questions.

Sincerely,

Sergio Vargas, P.E.
Deputy Director

Letter 13

COMMENTER: Shull Bonsall, Jr., Rancho Cañada Larga

DATE: June 25, 2005

RESPONSE:

The commenter attaches a letter from the Ventura County Watershed Protection District, which addresses flooding issues in the Upper North Avenue district and notes that portions of the Brooks Institute campus and Petrochem refinery are within the 100-year flood zone. The commenter is correct that portions of the Upper North Avenue area is within the 100-year flood zone. This is discussed in Section 4.8, *Hydrology and Water Quality*. Any development within the 100-year flood zone would be subject to FEMA requirements as well as the requirements of the City's Floodplain Ordinance. In order to clarify the flooding potential as it relates to the Upper North Avenue District Housing alternative, the discussion under "Hydrology and Water Quality" for that alternative on page 6-15 will be amended to read as follows (new text is underlined):

Residential development within the Upper North Avenue District would be within the 100-year flood zone and would therefore be subject to the requirements of FEMA and the City's Floodplain Ordinance. Placing residential development within the Upper North Avenue district adjacent to the Ventura River would incrementally increase the potential for water quality impacts within the river. However, possible impacts could be addressed on a case-by-case basis through compliance with standard engineering practices and runoff control requirements. Overall, hydrology and water quality impacts would be somewhat greater than those associated with 2005 General Plan Scenario 5, but could be reduced to a less than significant level.

CITY OF
SAN BUENAVENTURA

JUL 18 2005

COMMUNITY DEVELOPMENT

Ms. Kari Gialketsis
City of San Buenaventura
Community Development Department
501 Poli St.
Ventura, CA 93001

Dear Ms. Gialketsis,

Thank you for the opportunity to comment on the Public Review Draft of the Ventura General Plan, May 24, 2005 and the associated Draft EIR. The Ventura Audubon Society has the following concerns.

The General Plan asserts that there is an intention to preserve the essential nature of our community. Specifically in Policy 1B it states that the City wishes to increase the area of open space protected from development impacts. The proposed expansion areas for development will significantly decrease the area of open space and we are opposed to this action. A

Agricultural open space does have some wildlife value. In the case of row crops; e.g. most of the proposed Olivas expansion, the wildlife value is very low, but in the other proposed expansion areas that contain orchards there is a medium level of wildlife value. Orchards provide cover and food, from associated insects, for many bird species. Virtually all of the proposed expansions are either in SOAR designated areas or are in designated Land Conservation Act Contracts and we feel that they should remain as open space.

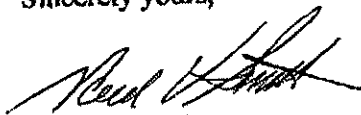

Action 1.8 states: "Buffer barrancas and creeks that retain natural soil slopes from development with a minimum of 50 feet of natural existing or restored vegetation." We feel that this may encourage removal of existing riparian forests (consisting of Cottonwood, Willow, White Alder and Sycamore trees) that are wider than 50 feet adjacent to watercourses. The loss of Riparian Forest is the cause of the significant decline of many bird species, e.g. Yellow-billed Cuckoo and Southwestern Willow Flycatcher that are dependent of this habitat. This action should be amended to require preservation of wider existing areas of Riparian Vegetation. B

Action 1.11 states: "Require that sensitive wetland and coastal areas be preserved as undeveloped open space wherever feasible." We feel this should be amended to require a level of "no net loss" of either sensitive wetlands or 'natural' coastal areas. C

Policy 1C states: "Improve protection for plants and animals." Within this policy, Action 1.18 states: "Prohibit dredging during fish spawning and bird migration cycles." This action is sufficiently vague to render it not useful. Does it apply to inland or coastal dredging? Western Snowy Plovers and California Least Terns nest on local beaches outside of normal bird migration times of the year and would be adversely impacted by dredging operations during that time. Which fish species are to be protected? The Ventura Port District often discharges dredge material into the ocean at the mouth of the Santa Clara River during the winter. This would not affect Tidewater Gobys but may impact Steelhead Trout wishing to migrate up the river. D

We are thankful that the City of Ventura has an attitude of environmental concern that is translated into day to day concerns by City staff. We look forward to working with the City in the future to preserve and protect the existing wildlife habitats that make Ventura a desirable place to live and work. We look forward to receiving your written responses to our comments. Please feel free to contact me at (805) 644-9344 if you have questions about our comments.

Sincerely yours,

Reed V. Smith
Board Member, Science Chair
Ventura Audubon Society

Letter 14

COMMENTER: Reed V. Smith, Board Member, Science Chair, Ventura Audobon Society

DATE: July 17, 2005

RESPONSE:

Response 14A

The commenter states opposition to the inclusion of any of the expansion areas in the 2005 General Plan, noting that agricultural open space has some wildlife value. This opposition is noted. City staff are currently recommending adoption of the "Intensification/Reuse Only" scenario, which includes none of the expansion areas.

Response 14B

The commenter suggests that buffers around riparian areas should be larger than the 50 feet identified in General Plan Action 1.8. This opinion is noted. The 50-foot buffer is a minimum requirement for new development adjacent to riparian areas. City staff believe that this is an appropriate minimum buffer area given the urban/suburban nature of the Planning Area. The 50-foot buffer is consistent with that adopted by many cities throughout California. If a larger buffer is needed in specific locations in order to address potentially significant impacts to a riparian corridor, then such a buffer can be required on a case-by-case basis.

Response 14C

The commenter suggests amending General Plan Action 1.11 to require no net loss of wetland and coastal areas. In response to this comment, Action 1.11 will be amended to read as follows (new text is underlined):

Require that sensitive wetland and coastal areas be preserved as undeveloped open space wherever feasible and that future developments result in no net loss of wetlands or "natural" coastal areas.

Response 14D

The commenter suggests that Action 1.18 regarding the timing of dredging should be modified to be more specific as to what type of dredging is being addressed and when dredging may occur. In response to this comment, Action 1.18 will be replaced with the following:

Action 1.18: Conduct coastal dredging in accordance with the U.S. Army Corps of Engineers and California Department of Fish and Game requirements in order to avoid impacts to sensitive fish and bird species.

RE: SCAG Comments on the Draft Environmental Impact Report (DEIR) for the 2005 Ventura General Plan
SCAG No. I 20050363

Dear Ms. Gialketsis:

Thank you for submitting the Draft Environmental Impact Report for the 2005 Ventura General Plan to the Southern California Association of Governments (SCAG) for review and comment. SCAG's responsibility as the region's clearinghouse per Executive Order 12372 includes the implementation of California Environmental Quality Act (CEQA) §15125 [d]. This legislation requires the review of local plans, projects and programs for consistency with regional plans.

SCAG staff has evaluated your submission for consistency with the Regional Comprehensive Plan and Guide (RCPG), Regional Transportation Plan (RTP), and the Compass Growth Vision. The Draft EIR addresses SCAG's policies and forecasts appropriately and has provided sufficient explanation of how the project helps meet and support regional goals. Based on the information provided in the DEIR, we have no further comments. We would appreciate notification of the Final EIR, especially should a change in project scope occur.

A description of the proposed Project was published in the June 1-15, 2005 Intergovernmental Review Clearinghouse Report for public review and comment.

If you have any questions, please contact me at (213) 236-1851. Thank you.

Sincerely,

Brian Wallace
Associate Regional Planner
Intergovernmental Review

RE: Draft Environmental Impact Report #SCH2004101014
City of Ventura General Plan Amendment Update 2005

Dear Ms Gialketsis:

As an interested property owner, we have reviewed the Draft Environmental Impact Report (DEIR) and General Plan Update. Overall, we are quite impressed with the new direction the City is taking.

In reviewing the Land Use Section of both the DEIR and General Plan Update, we agree with the City's proposed land use designation for high density residential on our property.

We would like to make the following comment regarding the DEIR:

- Transportation and Circulation Element – Many of the Exhibits show specific alignments for proposed bikeways and streets. We believe that it would be appropriate to note within the DEIR that these alignments are for illustrative purposes only. We feel that the City should retain the flexibility to adjust these alignments and locations as projects are developed.

We hope that the City incorporates our comment in the Final Environmental Impact Report.

Sincerely,

William M. Borgers
Vice President

Cc Rick Cole – City Manager
Susan Daluddung – Community Development Director
Lisa Porras – City Planner
Rincon Environmental

Letter 16

COMMENTER: William M. Borgers, Vice President, Ventura Citrus Properties, Inc.

DATE: Not dated

RESPONSE:

The commenter suggests that maps depicting road and bikeway alignments be amended to clarify that the locations shown are for illustrative purposes and that final alignments will be determined during project review. These maps will be amended to include such a note in the Final EIR.

Memo of Buz Bonsall's 3-minute public comments at the June 25, 2005 City Council/Planning Commission Workshop #2

Re: City of Ventura 2005 General Plan Update Draft E.I.R.

- **Achieving the Vision**

Cañada Larga was the only one of what ultimately became 12 P.E.A.s to be specifically called out for in the March 2000 Vision document. Had the original 800 acre P.E.A. #1, Cañada Larga, been studied in this Draft E.I.R., there would be plenty of excess acreage for Open Space, Parkland and School land use which were found lacking in Scenario 5: Intensification/Reuse - North Avenue + Western Cañada Larga. All or part of that acreage is still available for those purposes.

A

- **Density**

Assigning 1700 housing units to the roughly 80 usable acres of the 120 Acre Western Cañada Larga Expansion Area is a totally unrealistic density for this semi-rural area, making for unrealistic impacts. I would not want 1700 units on the entire original 800 Acre P.E.A. much less on the reduced acreage. A 3-digit number would be more appropriate for the land in either case.

B

- **Guidelines for Orderly Development**

In the potential Class 1, Unavoidably Significant Impacts of "Guidelines for Orderly Development Inconsistency," my conversations with Everett Mallais and Kim Uhlich of L.A.F.CO. lead me to believe this is an error. They say Scenario 2 and 3 would have the same impacts if looked at the same way as Scenario 5 or there would be no inconsistency with all three Scenarios 2, 3 & 5. They will make their comments.

C

- **Farmland Conversion**

I refer you to Table 4.2-1 on Page 4.2-2. The 120 Acre Western Cañada Expansion Area has no Prime Farmland, Statewide Importance Farmland or Unique Farmland - 0 acres total. This is also true for the original 800 acre P.E.A. All but 15 unusable riverbed and flood plain acres of the Cañada Larga Expansion Area, 120 acres or 800 acres, does not require a City S.O.A.R. vote to be utilized. I would direct you to the Ventura County Office of Agricultural Commissioner's letter in the Appendix A commenting on the Revised Notice of Preparation quote: "In reviewing the alternative P.E.A.s under consideration we have the following observations: ... Alternative #3 appears to be most in keeping with all the stated policies and goals of both the City and the County of Ventura. This Scenario requires minimum expansion of Sphere of Influence. Limited removal of Prime Agricultural soils and Lands protected under S.O.A.R. and provides direction for growth to 2025."

D

In the revised NOP, the referenced Alternative #3 is now Scenario 5: Intensification/Reuse + North Avenue + Western Cañada Larga in this E.I.R. document. Cañada Larga has no Farmland Conversion by itself.

Thank you.

Buz

Letter 17

COMMENTER: Buz Bonsall, Rancho Cañada Larga

DATE: June 27, 2005

RESPONSE:

Response 17A

The commenter notes that the 800-acre Cañada Larga area includes sufficient acreage to accommodate open space, parks, and schools. It is correct that the 800 acres included in the original Cañada Larga area considered by the CPAC, Planning Commission, and City Council would likely include sufficient acreage to meet school and park demands associated with development of the area.

Response 17B

The commenter states an opinion that the 1,700 residential units assumed for the Western Cañada Larga expansion area included in EIR Scenario 5 is unrealistic. The density assumed in the Draft EIR was directed by the City Council. City staff agree that the density assumed is not realistic; therefore, an alternative that reduces the density for the Western Cañada Larga and North Avenue expansion areas as compared to Scenario 5 was included in Section 6.0, *Alternatives*. That alternative, known as the "Upper North Avenue District Housing" alternative would replace some of the development assumed for the Western Cañada Larga expansion area with additional development in the Upper North Avenue district.

Response 17C

The commenter suggests that the conclusion regarding an inconsistency of the Western Cañada Larga area with respect to the Guidelines for Orderly development is an error. In its comment letter on the Draft EIR (Letter 3), the Ventura LAFCO suggested that inclusion of the Western Cañada Larga within the City's sphere of influence at this time would be inconsistent with the Guidelines for Orderly Development since that area is not contiguous with the current City limit. The LAFCO also suggests that development of the North Avenue expansion area may be inconsistent with the Guidelines for Orderly Development since it is not contiguous with the City boundary and, therefore, may not be annexed at this time. The LAFCO notes that annexation of the Olivas area (which is included in Scenarios 2 and 3) would not conflict with the Guidelines for Orderly Development. It should also be noted that, in response to the LAFCO letter, portions of the EIR Project Description and Section 4.14 were re-written to clarify how and when boundary adjustments may occur in the future and how the General Plan relates to future boundary adjustments. Because no boundary adjustments are being sought by the City at this time and it is presumed that future boundary adjustments would be sought only at such time as they could be found to be consistent with applicable State and LAFCO policies, the impact with respect to consistency with LAFCO policy has been changed to Class III, less than significant, for all scenarios.

Response 17D

The commenter notes that the Western Cañada Larga expansion area does not include any important farmlands and that the Agricultural Commissioner's Office has stated an opinion that Scenario 5 appears to be most in keeping with the policies of the City and County (note that the current Scenario 5 was called Scenario 3 in the Notice of Preparation). As discussed in Section 4.2, *Agricultural Resources*, it is correct that the Western Cañada Larga expansion area does not include any farmland designated as Prime, Statewide Importance, or Unique.

Subject: City of Ventura
2005 General Plan Draft Environmental Report

Dear Ms. Gilaketsis:

We appreciate the opportunity to provide you with our comments on the City's Draft Environmental Impact Report (DEIR) for the City's proposed 2005 General Plan. The DEIR is well written and comprehensive. A

We have focused our comments on the DEIR's analysis of the future development potential of the Upper North Avenue District (UNAD). The comments are offered in the spirit of ensuring that there is adequate flexibility in the General Plan's land use designation of "Industry" to allow a mixed-use project to be considered for the expansion of the Brooks Campus and adjacent area and to be found consistent with the City's 2005 General Plan. We are seeking to protect the potential that we believe exists for the City to realize numerous land use and economic objectives in the UNAD should it be annexed in the near future.

A conceptual plan, known as the *Village at Crooked Palm*, has been under development and would result in expansion of the Brooks Institute, the creation of an urban village, and the remediation and reuse of the former USA Petrochem site. With respect to this potential project in the UNAD, the City's Economic Development Strategy document (adopted on April 25, 2005) describes its potential to "...transform the upper North Avenue area from an industrial ghost town to a dynamic economic engine...." and proceeds to state that:

Setting the groundwork for project entitlement will be the City's primary focus for the next few years. Critical to the effort is site remediation, resolving outstanding land use issues that allow consistency with the General Plan update, and future annexation to the City (page 5).

To this end, the following comments reflect a desire to ensure that the groundwork is clearly established within the 2005 General Plan. We want to ensure that the opportunity is not lost to facilitate the City's future ability to consider an urban village concept within the UNAD and find it consistent with its newly adopted General Plan and the City's Economic Development Strategy.

Ms. Kari Gialketsis, Principal Planner
July 18, 2005
Page 2-

"Industry" Land-Use Designation

The proposed General Plan designates the land use for the UNAD as "Industry." With respect to the land use designations within the proposed General Plan, page 2-13 of the DEIR states that: *"For industrial parcels, industrial only projects would be allowed, but it is assumed that residential uses would be limited to work/live or live/work residences"*. This stated assumption is limiting and too restrictive to facilitate a future finding of General Plan consistency with the Economic Development Strategy for the Brooks campus and urban village land use concept currently under development. Residential use would not be limited to work/live units as there is also the extraordinary opportunity to create neighborhoods that would provide a variety of housing types to support Brooks' campus and the associated office, retail, cultural, and recreational uses.

Given these opportunities and land area available within the UNAD, a housing density consistent with the General Plan's "Neighborhood-Medium" providing for 9-20 dwelling units per acre, would be appropriate and should be considered for the UNAD.

The DEIR's assumptions regarding the limits of an *Industry* land use designation also runs counter to important planning objectives stated in the proposed 2005 General Plan and to the adopted goals of the Economic Development Strategy. For example, the proposed 2005 General Plan states:

Industrial sites that are fast converting to light industry, high tech manufacturing and assembly could become factory villages with green space, multiple types of housing, small scale retail to serve workers and spin-off businesses. (page 3-5)

The proposed General Plan also states in its description of corridors and districts:

One of the primary objectives for infill in Ventura is to produce mixed-use development that places everyday requirements in close proximity to dwellings. (page 3-7)

We therefore specifically request that the DEIR either broaden its assumptions of what land uses would be allowed in lands designated as *Industry* or that the land use designation for the UNAD be revised to Commerce or Residential (or a combination of all three) such that a mixed-use, urban village project could be processed and found to be consistent with the 2005 General Plan.

The document should also clarify how the existing Brooks Campus is a use consistent with the proposed land use designation of *Industry* or if the proposed plan will result in an existing use being inconsistent with the newly adopted General Plan.

Ms. Kari Gialketsis, Principal Planner
July 18, 2005
Page 3 -

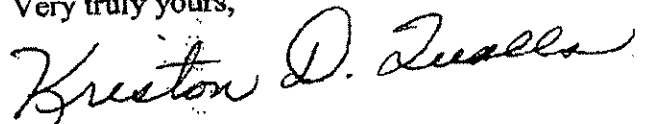

Alternatives Analysis

We note that a project concept similar to what is described above is included within the Alternatives Analysis (section 6.5 Upper North Avenue District Housing) as an alternative to Scenario 5 which is noted as having insufficient acreage to accommodate a mix of housing types or to accommodate parks, schools, or other public facilities. The DEIR analysis considers a mix of office, retail, student/rental housing and 750 other residences being developed on within the UNAD. The analysis also assumes that this level of development would reduce, commensurately, that which would otherwise be developed within the Western Cañada Larga and North Avenue sites. Beyond merely offsetting the intensity of development that might occur in these expansion areas, the DEIR description and analysis (beginning on page 6-13) should also clearly identify the other advantages resulting from developing the UNAD:

- Expanding Brooks' campus and creating jobs and new related growth opportunities in a mix-use urban environment consistent with the city's Economic Development Strategy.
- A brownfield site would be eliminated and reused.
- Development of the UNAD would meet the City's goal of utilizing existing urban infill sites before developing expansion areas.
- The development of the UNAD would be consistent with the County's Guidelines for Orderly Development by developing a site that is currently within the City's Sphere of Influence and contiguous with the City's boundary.

Thank you for your consideration of the foregoing comments. The UNAD is currently within the City's Sphere of Influence and will likely be considered for annexation in the near future. Given that the 2005 General Plan is intended to guide the City's land use decisions until 2025, it should provide the City's future decision-makers with the flexibility to consider exemplary projects and land uses on underutilized parcels that could potentially satisfy many of the City's economic, job creation, housing and community planning objectives.

Very truly yours,

Kriston D. Qualls
General Counsel

cc: Susan Daluddung, Community Development Director
Rob Rossi, Hollywood West LLC

Letter 18

COMMENTER: Kriston D. Qualls, General Counsel, USA Petroleum Corporation

DATE: July 18, 2005

RESPONSE:

Response 18A

The commenter notes that the 2005 General Plan includes various statements suggesting that mixed use development is encouraged within light industrial areas, but that the Draft EIR suggests that residential uses within Industrial-designated areas would be limited to work/live or live/work residences. It is true that various types of residences could be found to be compatible with light industrial development and that one of the 2005 General Plan objectives is to produce mixed use development where everyday requirements are in close proximity to residences. In response to this comment, the last sentence of the first paragraph of EIR page 2-13 will be amended to read as follows (new text is underlined):

For Industrial-designated parcels, industrial only projects would be allowed. Residential uses could include work/live or live/work residences, or traditional housing as part of mixed use development so long as residences are not subject to significant compatibility conflicts relating to such issues as aesthetics, noise, or health and safety that cannot be addressed through site planning.

Response 18B

The commenter suggests that the analysis of the "Upper North Avenue District Housing" alternative should be amended to acknowledge various environmental benefits of that alternative, including implementation of the City's economic development strategy, elimination of a brownfield site, emphasizing intensification/reuse, and consistency with the Guidelines for Orderly Development. The Draft EIR already implicitly acknowledges that development of the Upper North Avenue district would be consistent with City goals and objectives as well as the Guidelines for Orderly Development. In response to this comment, the discussion under "Hazards and Hazardous Materials" for the Upper North Avenue District Housing alternative will be amended to read as follows (new text is underlined):

Hazard impacts would be similar to those of 2005 General Plan Scenario 5. This alternative could potentially increase safety conflicts relating to the placement of residential development in proximity to oil production in the Upper North Avenue area. On the other hand, redevelopment of the Petrochem refinery site would eliminate an existing brownfield. Compliance with 2005 General Plan policies and standard safety requirements on new development would reduce impacts relating to hazardous materials to a less than significant level.

RE: 2005 Ventura General Plan EIR Comments

Dear Kari:

CITY OF VENTURA DRAFT ENVIROMENTAL IMPACT REPORT JUNE 2005

Comments and Corrections by Buz Bonsall, owner of the 120 acre Western Cañada Larga Potential Expansion Area.

Pg. S-1 2nd ¶ "...Three Five "Expansion Areas" "

A

Fig. 2-1a & Fig. 2-1b "Planning Area" Boundaries inconsistent on maps at City Water Facility in Cañada Larga area.

B

Pg. 4.1-18 Photo 13 caption "... Portions of the hillside area fronting the freeway could potentially be graded has already been removed and graded for SR33 Freeway and could be regraded and developed if this expansion area is selected."

C
Regraded

Pg. 4.1-18 Photo 14: This photo depicts M2- Industrial zoned industrial land on the Westside of SR33 and does not represent the grazing land on the Eastside of SR33.

West D

Pg. 4.2-1 Legend "Row Crops" incorrectly depicted on Western most portion (West of bike path) of Western Cañada Larga Expansion Area

E

Pg. 4.4-24 Photo 3: Depicts a Caltrans SR33 Freeway 15+ acres hillside removal and grading project (Late 1969) with natural plant recovery.

F

Pg. 4.4-25 Scenario 5 paragraph, final sentence "the Western Cañada Larga area is the least most disturbed of the expansion areas (15+ acres of hillside removal and massive grading for the SR33 freeway in 1969)...."

G

Pg. 4.4-26 First paragraph reference to Photo 3: There is no native bunch grass or oak woodland present in photo 3. Line 5 "Santa Clara River" should be Ventura River.

H

RANCHO CAÑADA LARGA

Pg. 4.5-17 "Scenario 5" paragraph...." A portion of the mission aqueduct is located ~~within~~ outside to the south of Western Cañada Larga expansion area."

I

Pg. 4.11-51 Top of page final sentence ".....with that scenario." It should be noted that the owners of the Western Cañada Larga Expansion Area have over 6000 acres adjacent to the Arca for potential parkland. There is no shortfall of acres.

J

Pg. 6-20 Public Services: It should be noted there is a Ventura County Fire Department Station building on North Ventura Avenue next to the City's Water Treatment facility.

K

General Comment: As noted by the D.E.I.R. authors at Pg. 4.1-19 Scenario 5, 1700 housing units assigned to the reduced acreage (120 acres) of the original 800 acre Potential Expansion Area of Cañada Larga is "unrealistic", hence the unrealistic impacts in D.E.I.R. data (such as sewer plant capacity etc.) throughout the report.

L

Thank you for the opportunity to comment. If there are any questions regarding my comments, please feel free to contact me at 805-565-0629.

Sincerely,

Buz Bonsall
Rancho Cañada Larga

Letter 19

COMMENTER: Buz Bonsall, Rancho Cañada Larga

DATE: July 18, 2005

RESPONSE:

Response 19A

The commenter notes a typographical error in the Summary. This will be corrected in the Final EIR.

Response 19B

The commenter notes an inconsistency in the depiction of the Planning Area shown in Figures 2-1a and 2-1b. The Planning Area boundary shown in Figure 2-1a will be corrected in the Final EIR.

Response 19C

The commenter suggests a clarification of the caption accompanying Photo 13 in Section 4.1 of the EIR to note that the area shown was previously graded as part of the SR 33 construction. The caption will be amended as suggested by the commenter in the Final EIR.

Response 19D

The commenter correctly notes that the area shown on Photo 14 in Section 4.1 is designated Industrial. The caption accompanying that photo will be revised in the Final EIR to read as follows:

Agricultural land adjacent to the Western Cañada Larga expansion area looking south from SR 33. This area is within the Upper North Avenue District and is currently designated Industrial.

Response 19E

The commenter notes that the area west of the bike path within the Western Cañada Larga expansion area is not in row crop production, as shown on Figure 4.2-1. Figure 4.2-1 will be corrected in the Final EIR to show that area as "Grazing/Livestock" land.

Response 19F

The commenter notes that the area shown in Photo 3 in Section 4.4, *Biological Resources*, was previously graded as part of the SR 33 construction. This comment is noted, though no change to the photo caption is necessary.

Response 19G

The commenter states an opinion that the Western Cañada Larga area is the most disturbed among the expansion areas. Even though much of the area in question has been disturbed historically by past grading activity, the open lands of the Western Cañada Larga area maintains higher biological resource value than the irrigated agricultural lands associated with the other expansion areas. Therefore, from a biological resource perspective, it would be considered the least disturbed.

Response 19H

The commenter notes that Photo 3 on Figure 4.4-4 does not depict native bunch grass or oak woodland. The commenter also notes that the reference to the Santa Clara River on the fifth line of page 4.4-26 should be to the Ventura River. The reference to the Santa Clara River will be corrected in the Final EIR. Although Photo 3 does not depict the habitats mentioned by the commenter, the statement to which the commenter refers merely notes that the Western Cañada Larga has the potential for such habitats. Site specific surveys of the area would be needed to determine whether such habitats actually are present. Such surveys would appropriately be conducted in conjunction with the environmental review of any specific development project for the area.

Response 19I

The commenter requests a clarification of the location of the Mission Aqueduct, as discussed on page 4.5-17. The Mission Aqueduct is known to be in the North Avenue area, but actual location of the Mission Aqueduct is not known with certainty. In response to this comment, the sentence noted by the commenter will be revised to read as follows (new text is underlined):

A portion of the Mission Aqueduct is located in the vicinity of the Western Cañada Larga expansion area.

Response 19J

The commenter notes that acreage is available for parks within Rancho Cañada Larga. This comment is noted, though the areas mentioned by the commenter are not within the Western Cañada Larga expansion area discussed in the Draft EIR.

Response 19K

The commenter notes that there is a County Fire Department station next to the City's water treatment facility. This comment is noted, though the City would need to provide fire protection service in the event that properties within the North Avenue area are annexed and developed.

Response 19L

The commenter states an opinion that the development total assumed for the Western Cañada Larga expansion area are unrealistic. Please see Response 17B.

VENTURA UNIFIED SCHOOL DISTRICT

THE POINSETTIA CITY BY THE SEA

Community Development Department
City of San Buenaventura
P.O. Box 99
Ventura, CA 93002

RECEIVED

JUL 16 2005

PLANNING DIV.

Dear Ms. Porras:

Thank you for the opportunity to review and provide input to the Draft Environmental Impact Report for Ventura's General Plan. The following are our comments pertaining to the K-12 Educational School Facilities.

- 1) Attached is a sample copy of the District's letter to the City dated September 18, 2003 concerning the Draft Comprehensive Plan Update and Draft Issue and Alternative Report. It seems these comments were not addressed on the Draft EIR Report. Also attached is a letter to the Planning Commission concerning public school classroom capacity and proposed residential development dated October 10, 2003. A
- 2) Figure 4.11-3 shows the locations of school facilities and administration facilities within the planning areas operated by Ventura Unified School District (VUSD). There have been some changes. The District no longer owns the Arcade District office site. It was sold last year. The Santa Clara District office site is currently in escrow and the Transportation Department only occupies this site. The administration staff that once occupied the Arcade and Santa Clara office sites has been relocated to the newly remodeled Education Service Center, (formerly Kinko's Corporate Office). Education Service Center is located at 255 West Stanley Avenue. Please make these changes to Figure 4.11-3. B
- 3) The Draft Environmental Impact Report did not take into consideration the relationship between commercial and industrial development projects and school facility needs. Economic opportunities as a result of the development of commercial and industrial space attract new households to the community. C

Commercial and industrial development along with residential development has an impact on school enrollment. New jobs require a larger labor force while in turn, causes new housing to be built to increase the housing supply. The families in these new houses will have their children enrolled in the local school district. This enrollment growth, a joint result of the commercial, industrial and residential development impacts the facility capacities of our District. In conclusion, this type of new development will cause a need for school facilities in Ventura Unified School District. Please note besides residential development, new commercial and industrial development projects are also subject to school impact fees.

City of San Buenaventura
July 18, 2005
Page 2 of 4

- 4) On page 4.11-37, it states, "One alternative to developing new schools would be to expand existing schools". Existing District facilities will be pressed beyond capacity solely with the projected student enrollment from new residential development. Our facilities have minimal space remaining to accommodate projected enrollments from new development. D

Both classrooms and support space are needed to house additional students. As classrooms are added to schools, overcrowding becomes greater in the multi-purpose facility, library, administration office and other support areas. Without additional core space, the current standards of support space will suffer. As result of the implementation of class size reduction in grades Kindergarten through third grades several years ago, it maximized the space at several elementary school sites. Also, parking facilities at our sites will be impacted. Schools such as Balboa Middle, Loma Vista Elementary, Mound Elementary and E.P. Foster Elementary already have inadequate parking facilities that, in turn, impact adjacent neighborhoods.

Ventura Unified School District considers a school overcrowded when it operates at 90 percent of capacity. Using this standard, 18 of the District's schools are overcrowded. Students are being transferred to less crowded schools and are unable to attend a school in their neighborhood. The enrollment projection indicated in the Draft EIR will continue to grow and exceed available school space. One of the goals in the Districts master plan is to construct a new middle school in the east end of the City in the Wells Road area. This will help accommodate students generated from the housing development that has occurred in the east end in the last 6 years.

The remaining student capacity at this district's elementary, middle and high school is of the greatest short-term concern, while the new schools will be required to meet long-term student population progression. In addition many of the existing schools are in older neighborhoods. In these areas, minimal vacant land is available for expansion.

- 5) In relation to Impact PS-3, page 5.17, we disagree with the statement "less than significant for all scenarios." We consider the impact to school facilities as unavoidably significant for all scenarios. The implementation of the project will result in a potentially significant impact. We request that a School Facility Availability Ordinance a Memorandum of Understanding be adopted by the City Council as a proposed residential development should be approved only in confirmation with this ordinance. This involves the City encouraging the school district and developer to engage in early discussions about the nature and scope of the proposed projects, possible fiscal impact and mitigation measures. It is my understanding a similar measure was adopted by the City Council and spearheaded by the past Councilman, Mr. Steve Bennett that was Resolution NO. 97-98 E
- 6) In addition to SB 50 as mitigation measure and the above noted resolution. We recommend that the following objectives and policies be included to address education issues and impacts to public schools within the project scenarios. F

City of San Buenaventura
 July 18, 2005
 Page 3 of 4

Objective: Accommodate the growth of all educational facilities.

- Policy: Provide an adequate level of infrastructure and services to accommodate campus growth at all educational levels.
- Policy: Work with the school district to locate school sites where infrastructure already exists to minimize costs to the school district in new school construction.
- Policy: Include school district staff in the review and input of annexation proposals to guide campus site selection and desirable design elements.
- Policy: Streamline the permitting process for educational facilities as practicable

Objective: Emphasize smart growth principles through all steps of the land development process.

- Policy: Ensure well-planned infill development Citywide, allow for increased density in selected areas along established transportation corridors.

The policies listed above will significantly lessen impacts directly related to the Project. We request that individual development proposals will comply with proposed City standards and practices regarding review of the adequacy of educational facilities. These proposed standards and practices include:

- Use the CEQA review process to evaluate impacts of future development on local schools.
- Ensure the payment of SB 50 school impact fees by project proponents as necessary.

We do concur to some degree with the mitigation measures listed on page S-17 and S-18 but need additional enforcement by the City to implement the above noted recommended objectives and policies.

- 7) The Draft EIR indicates the overall acreage needed to accommodate new school facilities has ranges for each potential expansion scenario. This range does not match the Assumed Expansion Area Acres by Use on Table 2-8, page 2-35. For example, Scenario 2, page 4.11-38 indicates a range from about 38 to 103 acres, but when you compare this to Table 2-8, it shows 110 acres for a school scenario. Please make the necessary corrections G
- 8) No land use designation is indicated on the expansion area maps to accommodate future school sites. H

City of San Buenaventura
July 18, 2005
Page 4 of 4

- 9) On page 4.11.40 Significance after Mitigation states: "Continue collection of State-mandated school impact fees would fund the construction of new school facilities that would be required to accommodate projected increases in school enrollment and would reduce school impacts to a less than significant level for any of the six scenarios." However, the cost of school facility needed by the district to accommodate students related to new development projects is greater than the fees which may be levied against respective type of new development projects. This statement is supported by Development Impact Fee Justification Study dated July 3.2003. As you are aware, construction cost to built public outlay projects continue to increase dramacily in the state of California. I
- 10) We request that the consultant provide a detail methodology how they determined the projected 2025 student enrollment and school acres needed listed on Tables 4.11-14 and 4.11-15. Please confirm that the California Department of Education's usage standard was used to determine the square footage needed per student generated from development. J

In conclusion, the City should consider suitable school capacity when they approve development. It is the overall benefits to the City that adequate and school facilities are established with helps contribute to the quality of education in the community.

We would like to meet with the consultants and City Staff to discuss our comments. Please call me to schedule this meeting at 289-7981, extension 1010. Thank you.

Sincerely,

Jorge B. Gutierrez

Dear Commissioners:

This letter is concerning the K-12 Educational School Facility issues related to the Draft Comprehensive Plan Update and Draft Issues & Alternatives Report. For your information, I have been a member of the Comprehensive Plan Advisory Committee for the past two years. During my tenure, I have tried to provide vital input into the development of the plan as well as its impact on public school facilities.

I would like you to consider the comments I addressed to the City of Ventura Planning Department concerning the Draft Plan (see attached).

Further, I have attached a copy of Resolution No. 97-98: "A Resolution of the City Council Amending the Land Use Land Plan Element of the Comprehensive Plan Regarding Public School Classroom Capacity and Proposed Residential Development". I recommend that this resolution be incorporated into the Comprehensive Plan.

If you have any questions, please do not hesitate to call me at 289-7981, extension 1010. I appreciate your time and consideration in this matter.

Sincerely,

Jorge Gutierrez
Director of Facilities, Maintenance and Operations

VENTURA UNIFIED SCHOOL DISTRICT

September 18, 2003

City of San Buenaventura
City Planning Department
Attn: Lisa Porras, Associate Planner
P.O. Box 99
Ventura, CA 93002

Dear Ms. Porras:

Thank you for the opportunity to review and provide input on the draft Comprehensive Plan Update and Draft Issues and Alternatives Report. Below are our comments pertaining to the K-12 Educational School Facilities.

PUBLIC SERVICES

On page 11, under Public Services, a statement was made that; "... public schools overcrowding has been alleviated with the recent opening of Foothill Technology High School ..." This statement is incorrect. The Foothill Technology High School helped relieve the student overcrowding at the high school level, but did not alleviate the total problem.

It was indicated that District middle schools have sufficient space. Again, this is not an accurate statement. Based on the Districts' 2002-03 Classroom Usage Report, Anacapa Middle School is at 99% student capacity; and Balboa Middle School, located in the east end of the city, is at 91% student capacity.

Last year, Balboa middle school's enrollment was 1454. The District prefers student enrollment at the middle school level to be around 1200. This school contains the largest student population among the four middle schools in the District. Also, of the 55 classrooms on site, 12 are portable, which means 22% of the class space is relocateable. The student population continues to grow every year as a result of housing developments that have occurred in the past 10 years in the east end of the city. Although portables have been placed at Anacapa and Balboa middle schools, the core facilities, such as cafeterias, have not been expanded.

The elementary schools in the west side of the city, which include E.P. Foster and Sheridan Way, are at 100% capacity. There are 22 classrooms at E.P. Foster Elementary School of which 13 are portable classrooms. This means 59% of the classroom space at E.P. Foster is relocateable; Sheridan Way Elementary School's relocateables make up 38% of classroom space.

The Public Services section relating to public schools do not portray a true picture of overcrowding conditions facing Ventura Unified School District. We recommend the data previously provided to the consultant working on the Comprehensive Plan should be expanded to include the above-noted information at the elementary, middle and high schools level.

City of San Buenaventura

September 17, 2003

Page 2 of 3

PUBLIC SERVICES ISSUES

We request that the Public Services Issues on Page 12 concerning schools be expanded to add the following pertinent issues:

1. Crowding problem will still arise as more relocateables are added to existing school sites;
2. Need to replace and upgrade aging portable classrooms;
3. Need to expand support spaces such as libraries, restrooms, cafeterias and multi-purpose rooms in same proportion to classrooms to alleviate school overcrowding;
4. Constraints - Opportunity to expand existing campuses is limited by the physical size of the school sites and by the capacities of existing permanent facilities; and
5. Explore the feasibility of the City adopting a School Facility Availability Ordinance.

In respect to the School Facility Availability Ordinance, this type of ordinance may have been adopted by the City Council, several years ago, which was spearheaded by past Councilmen, Steve Bennett. As a proposal, residential development should be approved only in confirmation with the School Facility Availability Ordinance. This involves the City encouraging the school district and developers to engage in early discussions about the nature and scope of proposed projects and possible fiscal impact and mitigation measures.

HOUSING DEMAND – Section 3.1.1

The Population and Housing section does not reflect the school age population (5-17 years) in the City of Ventura. We request a figure be prepared which show the school age population from 1970 to 2025. This figure requested will show the magnitude of growth at different periods of time during the duration of the General Plan. Also, will rising birth rates result in increased enrollment from older homes?

SCHOOLS – Section 3.1.2

We would like to meet with the consultants to determine their methodology in determining land needed for new schools. Our projections used by the State Department of Education are different than what is proposed for land needed at each school grade level. The projected school needs should comply with the State Services Land Standards for the number of students per classroom and laboratory, recommended size of parcel for a given number of students, and the number of pupils per acre. Services level standards measure the physical attributes of educational facilities and their ability to provide a given level of educational benefit.

COMMERCIAL AND INDUSTRIAL SITES – Section 3.2.4

We would like to know if the consultant took into consideration the relationship between commercial and industrial development and schools impact. For example, in a case of a business moving to a new facility from an existing building in the city, it is assumed that on average, the older facility will be occupied by a new business enterprise with the same number of employees as the business that moved out. It is the growing capacity of the community to accommodate employment that result in residential growth and increased school demand.

City of San Buenaventura

September 17, 2003

Page 3 of 3

SCHOOLS – Section 5.7

We disagree with the statement "the acreage estimate could be reduced in various ways, including more intensive use of existing schools, reducing the acreage requirement of new schools". The schools in our district are at or near capacity. With the District's implementation of class size reduction at K-3 grade level, additional relocateable classrooms were placed at elementary school sites, and at the same time, support space such as libraries and cafeterias were not expanded. With the additional classroom space added in the past ten years, there exists a lack of available open space to address future growth without impacting playground and support space.

The recommendation to reduce the acreage requirements of new schools will impact the District's ability to meet the Department of Education State Services Standards. By not meeting these standards, the District will not provide a quality level of educational environmental benefits to support curriculum and the learning process. Also, it will perpetuate overcrowding conditions for students and staff at impacted school sites.

At the top of page 93, it states "... no land within the existing City/SOI is specifically designed for new schools" ... except for the 10-acre elementary school PEA #2 (North Avenue). We feel there is sufficient property within PEA #2, #7, #8 and #9 to designate as new school sites. We recommend that the 100-acres required for new schools be address in the General Plan. Also, this plan fails to address the financial measures to pay for the new schools as a result of population growth.

We would like to meet with the consultants and City staff to discuss the possible 20-acre site Pacific View Mall (North Site) and the 35-acre area south of DeAnza Middle School.

Should you have any questions, please do not hesitate to call me at 289-7981, extension 1010.

Sincerely,

Jorge B. Gutierrez
Director of Facilities, Maintenance and Operations

Letter 20

COMMENTS: Jorge B. Gutierrez, Director of Facilities, Maintenance and Operations,
Ventura Unified School District

DATE: July 18, 2005

RESPONSE:

Response 20A

The commenter references letters submitted to the City in 2003 and suggests that the Draft EIR does not address comments included in those letters. The Draft EIR incorporates relevant information contained in the referenced letters. In addition, consultant staff contacted the VUSD several times during the preparation of the Draft EIR in the first half of 2005 and received current enrollment and other data from the VUSD during that time period as well.

Response 20B

The commenter notes two changes to the locations of VUSD facilities that should be reflected on EIR Figure 4.11-3. Figure 4.11-3 will be amended in the Final EIR to reflect the new location of the VUSD Education Service Center on Stanley Avenue.

Response 20C

The commenter states an opinion that the Draft EIR does not take into account the relationship between commercial/industrial development and school enrollment. As suggested by the commenter, the generation of new jobs in the community is expected to contribute to population growth. However, the population and housing growth estimates discussed in the Draft EIR include all new housing and population growth anticipated for the Ventura Planning Area, including people who relocate to the area to fill new jobs. As discussed under Impact PH-4 in Section 4.15, *Population and Housing*, the City is projected to maintain a balance of jobs and housing through 2025 under any of the six land use scenarios studied in the Draft EIR. Therefore, the effect of job growth on school enrollment has been accounted for in the Draft EIR. As the commenter notes, non-residential developments would continue to be required to pay State-mandated school impact fees.

Response 20D

The commenter notes that a number of VUSD schools are already at or near capacity, that existing facilities have minimal space to accommodate projected enrollment increases, and that minimal vacant land is available in many existing neighborhoods. The commenter also notes that the VUSD is planning to construct a new middle school in the Wells Road area.

The comments with respect to school enrollment and capacity, and available land for new schools are consistent with the discussion under Impact PS-4 in Section 4.11, Public Services. Table 4.11-4 shows that projected 2025 enrollment exceeds the capacity of VUSD schools at the elementary, middle, and high school levels, while the discussion under "Scenario 1 -

Intensification/Reuse Only” acknowledges that there is “limited land that could be used for the development of new school facilities.” In response to this comment, the following sentence will be added at to the last paragraph on page 4.11-11:

One of the goals in the VUSD master plan is the construction of a new middle school in the Wells Road area.

Response 20E

The commenter states disagreement with the conclusion that impacts to schools would not be significant under CEQA and requests that the City adopt a “school availability ordinance” or memorandum of understanding in which residential development would only be approved following developer discussions with the VUSD and development of appropriate mitigation measures. The opinion with respect to the significance of school impacts is noted. As acknowledged in the Draft EIR, projected school enrollment exceeds the capacity of VUSD schools and, under some EIR scenarios, limited land is available for the development of new schools. However, as noted in the Draft EIR, pursuant to Section 65995(h) of the California Government Code (Senate Bill 50, chaptered August 27, 1998), the payment of statutory fees “...is deemed to be full and complete mitigation of the impacts of any legislative or adjudicative act, or both, involving, but not limited to, the planning, use, or development of real property, or any change in governmental organization or reorganization.” As the State legislature has made this determination, the City has no authority to make a determination that payment of State-mandated fees would not mitigate impacts.

The Draft EIR includes two recommended actions that would at least in part address the request for coordination between developers, the City, and the VUSD. These are listed below.

PS-3(a) School Coordination. The following action should be added to the 2005 General Plan:

- Work with the Ventura Unified School District to ensure that school facilities can be provided to serve new development.

PS-3(b) Expansion Area Schools. The following action should be added to the 2005 General Plan if any land use scenario that includes an expansion area is adopted:

- Require expansion area specific plans or community plans to be prepared in coordination with the Ventura Unified School District and set aside land needed for new school facilities.

Response 20F

The commenter suggests several additional policies/ actions for inclusion in the 2005 General Plan. The actions listed in Section 4.11 of the DEIR and under Response 20E partially address these suggestions. The City will continue to cooperate with the VUSD to identify new school sites in areas where residential growth is anticipated to occur. Chapter 3 of the 2005 General Plan addresses “smart growth,” which is one of the

primary emphases of the General Plan. The City will be required by law to continue to use the CEQA process to evaluate the impacts of local development on schools and collect State-mandated school impact fees on behalf of the VUSD.

Response 20G

The commenter notes that the acreage assumed for schools within expansion areas does not match the acreage needed to meet the demands of individual EIR land use scenarios. These acreages are not intended to match. The commenter notes that the school acreage assumed for the expansion areas under Scenario 2, for example, is 110 acres, while the projected overall demand for acreage ranges from about 38-103 acres. This suggests that the expansion areas included in Scenario 2 provide more than enough acreage to meet overall demand associated with buildout of that scenario. Thus, inclusion of the expansion areas could help accommodate students generated by intensification and reuse development.

Response 20H

The commenter notes that the expansion areas do not include land use designations to accommodate schools. As noted in Section 2.0, *Project Description*, the City is not proposing to re-designate any of the expansion areas at this time. The Draft EIR considers these areas as possible future expansion areas. It is anticipated that any future development proposal for any of the expansion areas would involve a Specific Plan that would include provisions for schools.

Response 20I

The commenter notes that the costs of school construction are greater than that provided by State-mandated fees. As discussed in Section 4.11 and in Response 20E, State law dictates that payment of the State-mandated fees constitutes full and complete mitigation under CEQA.

Response 20J

The commenter requests an explanation of the methodology used to project school enrollment and school acreage requirements. This methodology is described in Section 4.11, *Public Services*. To estimate growth in student enrollment, the projected number of new housing units was multiplied by the students-per-household rates provided by the VUSD. To estimate the acreage of new schools needed, the following methodology was used:

- The current school capacity totals were subtracted from the projected number of new students (these totals are shown in the second column of Table 4.11-15)
- These totals were divided by the projected number of students per school (shown in the third column of Table 4.11-15) to determine the number of new schools needed (shown in the fourth column of Table 4.11-15)
- The number of schools needed were multiplied by the number of acres per school, from the California Department of Education recommended school size, to determine the amount of school acreage needed (shown in column 5 of Table 4.11-5)

Re: *Comments on City of Ventura 2005
General Plan Draft Environmental Impact Report*

Dear Ms. Gialketsis:

I am submitting these comments regarding the Draft Environmental Impact Report ("DEIR") for the City of Ventura 2005 General Plan ("General Plan") on behalf of my client, Mariano Rancho, LLC. Mariano Rancho owns approximately 215 acres of vacant property within the City of Ventura ("City"), located north of Poli Street/Foothill Road and zoned R-1-7. As a longstanding member of the Ventura community, Mariano Rancho shares the City's interest in supporting responsible and sustainable planning for the future of the community.

To that end, we have reviewed the General Plan, the DEIR for the General Plan and the City of San Buenaventura 2000-2006 Housing Element ("Housing Element") to ensure that the documents are accurate and consistent. Our comments touch on apparent inconsistencies between the Housing Element and the General Plan, difficulties in tracking housing unit allocations and corresponding traffic impacts for particular areas across the three documents, characterization of the habitat conditions on the Mariano Rancho property and the Ventura hillside areas generally, and the need to clarify the status of linear parks delineated in the General Plan.

Page 2

I. Apparent Inconsistency Between the General Plan Projected Housing Growth Distribution and the Housing Element**A**

A general plan must be integrated and internally consistent among and within each element. Government Code § 65300.5. The housing element is one of seven mandated elements in the general plan. Gov. Code § 65302. Although it must be updated every five years, rather than the longer time frame permitted for updating general plans, the housing element must still be consistent with the overall general plan. Gov. Code § 65888

In Ventura's case, the City adopted the most recent Housing Element in April 2004, while the multi-year General Plan updating process was underway. The Housing Element contains certain assumptions about development potential which should be carried through to the General Plan. In particular, in its analysis of availability of sites for housing, the Housing Element states that 2,050 housing units can be developed on vacant lots in Ventura, of which 486 units may be developed on vacant sites zoned R-1-7.¹ Appendix D of the Housing Element provides a complete inventory of vacant sites, including parcel number, zoning and acreage. Mariano Rancho's property (740010015 R-1-7) is listed as 215.40 acres with "constraint" acreage of 71.97. Assuming this very conservative constraint estimate is accurate (which cannot be confirmed without the benefit of a project-specific analysis for the site), by applying the maximum density of 6 units per acre and the 70% of lot maximum density assumption used in the Housing Element, the unit potential derived for the Mariano Rancho property in the Housing Element is:

$$71.97 \text{ acres} \times 6 \text{ DU/acre} \times 70\% = 302 \text{ dwelling units.}$$

Turning to the General Plan DEIR, Table 2-5 summarizes Projected Housing Growth Distribution for the 20-year planning period of the General Plan under all scenarios by growth area. The General Plan proposes to focus most of the new growth into the specified Growth Districts/Corridors; these areas account for 3,950 units in all scenarios. The Mariano Rancho property is not located within one of these nine Growth Districts/Corridors. The DEIR projects another 2,650 units to be built within the proposed smaller Sphere of Influence and existing areas designated for urban uses, of which 700 units are projected to be built on vacant and underutilized parcels outside the Growth Districts/Corridors. (DEIR p. 2-32.) Appendix C to the DEIR breaks these 700 infill units down further into 250 units projected to be developed on underutilized sites and 450 units projected to be built on vacant property. Note 3 to the tables in Appendix C explains that these tables assume that "all vacant land outside the districts and corridors will be developed in accordance with the proposed land use designations."

Taken together, it is difficult to reconcile the assumptions in the Housing Element with those in the General Plan. Specifically, how do the 486 units assumed for just the R-1-7 zoned areas in the Housing Element compare to the 450 units projected for all non-Growth District/Corridor vacant property in the General Plan EIR? Using the Housing Element methodology and assuming the property is developed in accordance with its zoning, the Mariano Rancho's 302 units alone would account for 67% of all the units projected to be built

¹ Adopted City of San Buenaventura 2000-2006 Housing Element, April 2004, pp. 4-1, Chart 4-1 on p. 4-2.

GIBSON, DUNN & CRUTCHER LLP

Kari Gialketsis
July 15, 2005
Page 3

on vacant properties designated for urban uses outside the Growth Districts/Corridors and within the city limits. Additional clarification of how the Housing Element assumptions relate to the General Plan's Projected Housing Growth is necessary to confirm that the General Plan is internally consistent as required by state law.

II. The Circulation Element Update Traffic Study Does Not Track the Housing Element Assumptions

B

The need for clarification extends to the issue of how Appendix E to the DEIR, the Comprehensive Plan Circulation Element Update Traffic Study ("Traffic Study"), accounts for the trips that would be generated by the growth assumed in both the Housing Element and the land use element of the General Plan. Attached to this comment letter is a communication from Paul W. Wilkinson, of the traffic engineering firm Linscott Law & Greenspan, noting the difficulties he had confirming that the permitted development assumed in the Housing Element was carried over to the development potential tabulation input to the General Plan and the Traffic Study. Mr. Wilkinson's analysis is hereby incorporated into this comment letter by reference.

In particular, we request that the General Plan and Traffic Study be amended to include a Traffic Analysis Zone ("TAZ") Exhibit and a trip table (development summary and trip forecast) that presents a development and trip making forecast for every TAZ that is consistent with all elements of the General Plan. Such TAZ and trip table exhibits would enable planners, property owners and community members to more clearly assess the traffic impacts of the growth assumptions and provide a basis for comparing site specific analyses to the General Plan's overall growth and circulation goals, policies and actions.

III. Characterization of the Habitat on the Mariano Rancho Property and Hillside Areas Overstate Potential Impacts

C

Figure 4.4-1 on page 4.4-3 of the DEIR maps the habitat types found within the planning area of the General Plan. The map depicts a substantial portion of the Mariano Rancho property and nearly all of the hillside property as containing coastal sage scrub habitat. A note on Figure 4.4-1 states that the vegetation cover types were derived from Landsat Thematic Mapper satellite imagery. We understand that at the analytical level of a General Plan detailed site characterizations are impractical and inappropriate. However, more detailed studies of the area indicate that Figure 4.4-1 vastly overstates the extent of coastal sage scrub in the Mariano Rancho and hillside areas. As a result, we would expect that as part of a site-specific analysis, some of the potential impacts identified, such as BIO-2 potential adverse affects on sensitive habitats, BIO-3 potential affects on special-status plants and animals and BIO-4 potential affects on ecological connectivity through wildlife corridors, would not be found or would be avoided.

GIBSON, DUNN & CRUTCHER LLP

Kari Gialkatsis
July 15, 2005
Page 4

IV. Status of Designated Linear Parks Should be Clarified

Figure 4.11-4² Parks and Recreational Facilities on page 4.11-15 of the DEIR, depicts a linear park network that includes a linear park running through the Mariano Rancho property and portions of the hillside areas. The Final EIR should clarify that these linear parks do not currently exist, have not been offered for dedication to the City and that the City has not presently offered to purchase the land for these parks.

In addition, the text at page 4.11-20 acknowledges that the "[r]esources available for constructing the linear park and trail system are acquired through conditions placed on developers who plan to build in areas within the linear park network." This approach to building the linear park therefore appears to presume the development of the hillside property in order to obtain the exactions necessary to dedicate and construct the linear park through the hillside portion of the City. This appears to be at odds with the General Plan's overall goal of focusing future development on non-hillside areas.³ Therefore, the DEIR and the General Plan should be revised to either remove the linear park network designations from the hillside areas or include a statement that the linear parkland in this area may be acquired through purchase of the property or the permitting of limited development in the area to obtain the parkland through dedications.

Finally, the linear park system proposed for the hillside area in Figure 4.11-4 does not appear to have been delineated with consideration of the natural topography of the area. We suggest that text be added to the General Plan and DEIR stating that the final alignment of the Mariano Rancho and hillside linear parks may be revised to account for topography, habitat and other considerations.

We appreciate the opportunity to comment on the General Plan DEIR and look forward to reviewing the final document in the coming weeks.

Very truly yours,

Cecilia V. Estolano

**Subject: Review of General Plan and Related City Documents
Mariano Rancho Property
Ventura, California**

Dear Ms. Estolano:

At your request, we've reviewed several documents prepared by the City of Ventura as part of its General Plan update process. Those documents include the following:

- City of San Buenaventura, *Ventura General Plan, Public Review Draft*, May 24, 2005;
- City of Ventura, *2005 General Plan: Draft Environmental Impact Report*, SCH #2004101014, June 2005;
- City of San Buenaventura, *Comprehensive Plan Circulation Element Update Traffic Study*, May 2005, Appendix E;
- *Adopted, City of San Buenaventura, 2000-2006 Housing Element*, April 2004.

These documents were reviewed with the intent of tracking the "placeholder" within each for the Mariano Rancho property, which lies generally northeast of Downtown, north of Poli Street and Foothill Road, and south of the "Hillsides" open space area illustrated in the Draft General Plan Diagram (follows page 16 of the *Public Review Draft of the General Plan*). The intent of that tracking was to confirm that the permitted development on the property as outlined in the City's *Adopted 2000-2006 Housing Element* was carried over to the development potential tabulation input to the *General Plan Public Review Draft*, which in turn was specifically input to the *Circulation Element Update Traffic Study*.

Such a process would normally ensure that a future housing development proposal on a specific site, when consistent with the *Housing Element* assumptions for that site, would also be consistent with the City's circulation planning for the site area. This consistency would be most conveniently indicated when the trip table for the Traffic Analysis Zone (TAZ) of the *Circulation Element Update* traffic studies indicates a unit count, attributable to that specific site, which exactly (or very nearly equals) the

Page 2

unit count permitted by the *Housing Element* (and by extension the *General Plan* Land Use component, since the *Housing Element* and *General Plan* are supposed to be consistent).

Unfortunately, as the following discussion will reveal, we are not able to make that finding of internal consistency between the *Housing Element* "placeholder" for the site, and the traffic analyses that support the *Circulation Element Update*. It may be possible that they are, but we doubt it. Having been unable to reconstruct that consistency from document to document, we recommend that the question be posed to the City as part of the public review process, ensuring that that which is called for on the Mariano Rancho property within the *Housing Element* is indeed represented in the circulation planning and impact studies conducted by the City.

Adopted City of San Buenaventura 2000-2006 Housing Element (April 2004)

Chart 4-1 of this report (page 4-2, which is also Page 124 in the electronic version) identifies the residential development potential on vacant sites in the City. The Mariano Rancho falls within the R-1-7 zoning designation, where the maximum density is 6 units per acre. The chart indicates that there are 56 parcels within this category, with vacant acreage totaling 111.7 acres, and with a development potential (at 70% of maximum density) of 486 dwelling units. (As an aside, the math here may be in error: $111.7 \times 6 \times 70\% = 469$ dwelling units).

Looking to Appendix D of this report, all of the assessor's parcel numbers that resulted in the Chart 4-1 summary are indicated, sorted to either underutilized or vacant sites (the later includes the Mariano Rancho). Looking to the "vacant sites" summary, the zoning designation, parcel acreage, and "constraint" acreage (presumably useable acreage) are indicated. As we understand it, the Mariano Rancho is APN 740010015 R-1-7, for which the total site acreage is 215.40, and the "constraint" acreage is 71.97. Taking the later, and the methodology underlying Chart 4-1, the unit potential of the Mariano Rancho would be as follows:

$$71.97 \text{ AC} \times 6 \text{ DU/AC} \times 70\% = 302 \text{ dwelling units.}$$

Using our terminology, this constitutes the future development "placeholder" we would expect to be carried to the other documents discussed below.

City of San Buenaventura, Ventura General Plan, Public Review Draft, May 24, 2005

Continuing our focus on the Mariano Rancho as a future residential development site, with as many as 302 dwelling units per the adopted *Housing Element*, Table 2 (pages 14 and 15) of the *General Plan Public Review Draft* presents the development potential for both residential and non-residential categories throughout the City. The *Draft* indicates, "Table 2 provides estimates of the amount of development that could reasonably be expected to occur in the city, sphere of influence, and potential expansion areas based on the densities and intensities allowed under each planning designation". These estimates

N:\2600\3-052685-1\Mariano Rancho Property.doc

Ms. Cecilia V. Estolano
July 15, 2005
Page 3

are sorted to "districts" and "corridors" (both of which are identified in the Draft General Plan Diagram following page 16 of the *Draft*), as well as "sphere of influence (SOI) / other infill" and "planned and pending developments" which, in our reading are not located on any figure of the *Draft*. In reviewing Table 2, it appears that Mariano Rancho is not represented among any of the described sub areas or projects. Thus while a development total of 302 units is the inferred unit potential of the site in the *Adopted Housing Element*, those units appear not to be included in any of the land use scenarios considered in the *Draft*, or its companion EIR *Draft*.

It is worth noting that among all four categories and their sub areas, Table 2 indicates an added development potential of 8,318 DU in the City, and this total appears to presume no development on the Mariano Rancho.

City of San Buenaventura, Comprehensive Plan Circulation Element Update Traffic Study, May 2005, Appendix E

From this document, it is evident that the Mariano Rancho is located within Sub Area 17 of the traffic analysis (Figure 3-1, Page 3-5). It will be noted that the report presents six figures using this base, one for each of six land use scenarios studied by the consultant. While the ADT pie chart varies among those six figures, Sub Area 17 includes the Mariano Rancho and the much larger surrounding area that includes the "Hillsides" area plus those intervening undeveloped sites between the "Hillsides" on the north and Poli Street and Foothill Road on the south.

Table 3-1 (page 3-4) of this report identifies the growth by land use type for the 17 sub areas of the study. A total of 435 dwelling units are identified for Sub Area 17 in Table 3-1. While this table refers specifically to Scenario 1 (of six) analyzed in the study, the 435 added unit ("total growth") total in Sub Area 17 is the same for all six scenarios. While 435 is clearly greater than the 302 unit development potential for Mariano Rancho inferred from the *Adopted Housing Element*, there is no way to tell from the studies we have if Mariano Rancho is included at any specific DU count.

Further, it is worth noting from Table 3-1 that the total growth potential for housing units among all 17 sub-areas of the traffic study is 8,539 dwelling units. For other scenarios, this total amount varies between 11,241 and 11,255 units, but the added unit count in Sub Area 17 remains constant at 435 units. Referring back to the discussion on Table 2 of the *General Plan Public Review Draft*, the development potential throughout the study area was estimated at 8,318 units. All six scenarios of the traffic study presume a greater unit total (meaning the traffic forecasts and findings are conservative...a good thing), but again we cannot isolate the specific development "placeholder" for Mariano Rancho.

JUL 18 2005 3:30PM GDC LA 7

Ms. Cecilia V. Estolano
July 15, 2005
Page 4

Conclusion

Given all of the above, we conclude that:

1. The *Adopted Housing Element* intended a total development of 302 residential units on Rancho Mariano.
2. The *General Plan Public Review Draft* identified a development potential of 8,318 residential units throughout the General Plan study area. Mariano Rancho does not appear to be part of that summary at any total, including the 302 units inferred by the *Adopted Housing Element*.
3. Mariano Rancho is included within Sub Area 17 of *The Comprehensive Plan Circulation Element Update Traffic Study*. That sub area is much larger than the footprint of Mariano Rancho. The projected housing growth in Sub Area 17 is 435 units regardless of the scenario evaluated. While 435 exceeds the 302 unit development total per the *Housing Element*, it still is not clear if the traffic study recognized / established a 302 unit "placeholder" for Mariano Rancho in circulation planning for the City.
4. In our experience, the ability to track, or "map", the development totals of a specific development proposal against prior land planning and circulation studies prepared at the city-wide level is an indispensable tool in reviewing and processing those eventual development applications. The documents we have do no allow us to conclude a consistency between the *Adopted Housing Element*, the *General Plan Public Review Draft*, and *The Comprehensive Plan Circulation Element Update Traffic Study* for the Mariano Rancho property.
5. While we've come to this conclusion as we tried to create this "map" for Mariano Rancho, we are concerned that virtually any future development proposal in the City could have the same difficulty, creating unnecessary trauma for the decision maker, staff, community and applicant. We recommend that such a mapping correlation process be framed now, as part of this General Plan review process, to avoid those unnecessary difficulties in the future. Such a framework may require refinement to these studies, or from a circulation perspective, might be relatively easily solved through a straight forward reconciliation process that presents a specific Traffic Analysis Zone (TAZ) exhibit and identifies a trip table (development summary and trip forecast), that for every TAZ, presents a development and trip making forecast that is deemed consistent with the selected Scenario of the General Plan adoption.

COMMENTER: Cecilia V. Estolano, Gibson, Dunn & Crutcher, LLP, on behalf of Mariano Ranch, LLC

DATE: July 15, 2005

RESPONSE:

Response 21A

The commenter states concerns about what are perceived as inconsistencies between the housing growth projections contained in the Housing Element and the 2005 General Plan EIR. The Housing Element and the 2005 General Plan EIR use different methodologies to project possible growth because they have different purposes. The purpose of the analysis in the Housing Element was to demonstrate the ability to meet the City's housing needs; therefore, the numbers provided in the Housing Element illustrate the maximum development potential based upon the current zoning. The Draft EIR, on the other hand, is attempting to provide a "realistic" estimate of how much growth will actually occur through 2025 rather than illustrate the maximum amount of development that could occur theoretically. The growth factors upon which the Draft EIR analysis is based represent historic growth rates over the past 10 years (0.88% annually) and the past 20 years (1.14% annually). Theoretically, any of the land use scenarios considered in the Draft EIR could accommodate substantially more growth if all of the designations shown on the land use map(s) were built out to their maximum. However, it is unlikely that such growth would actually occur within the 20-year timeframe of the 2005 General Plan.

It is important to note that the EIR is an informational document, not a policy document, and that the growth numbers presented in the Draft EIR are assumptions developed for analytical purposes only. City and consultant staff attempted to distribute the future growth through the City in a manner consistent with the General Plan land use designations, Council direction, and current growth patterns in the City. However, the actual amount of growth that may occur in any given area may be higher or lower than that presented in the Draft EIR and a deviation from the number of projected units for any specific area would not represent an inconsistency with the General Plan.

Finally, it is also important to note that the proposed land use designation for the Mariano Ranch property about which the commenter is concerned (Low Density Residential) affords the same development potential as the current 1989 Comprehensive Plan designation (a maximum of 8 units per acre). Therefore, the development potential of the property has not changed.

Response 21B

The commenter attaches an analysis from a traffic engineering firm and requests that the traffic study include a traffic forecast for every traffic analysis zone that is consistent with all elements of the General Plan. A table such as that described by the commenter would not be useful and would more likely be the source of substantial confusion. As discussed under Response 21A, the maximum development potential estimates shown in the Housing Element and the

projections of growth over the next 20 years contained in the Draft EIR are not the same, nor are they intended to be as the two documents are intended to serve different purposes. It should again be noted that the development potential of the Mariano Ranch property about which the commenter is concerned would not change under the 2005 General Plan.

Response 21C

The commenter states an opinion that the biological resource analysis in the Draft EIR overstates the extent of coastal sage scrub in the Mariano Ranch area and individuates that biological resource impacts can likely be avoided if that area were to develop. The Draft EIR is intended to provide a conservative estimate of possible future impacts. It is correct that site-specific analysis of individual properties may reveal that biological resource impacts may be lower than suggested in this program level document. In any event, the City concurs with the opinion that biological resource impacts can be avoided or mitigated, as evidenced by the fact that the Draft EIR concludes that proposed General Plan policies would reduce biological resource impacts to a less than significant level.

Response 21D

The commenter notes that the Final EIR should clarify that linear parks shown in the hillside areas do not currently exist and, if they are to be developed, would need to be acquired through property acquisition or permitting of limited development to obtain parkland through dedications. The commenter also suggests that text be added to the figure depicting linear parks be amended to include text indicating that the alignments shown are conceptual and subject to change based upon site-specific conditions. The commenter is correct that linear parks in these areas would need to be acquired or obtained through dedications. A note will be added to the EIR and General Plan maps indicating that the linear park locations are conceptual.

RECEIVED
JUL 18 2005
PLANNING DIV.

Ms. Lisa Y. Porras
City of San Buenaventura
Community Development Department
501 Poli Street
P.O. Box 99
Ventura, CA. 93002-099

Subject: General Plan Update

"Dear Ms. Porras,

My firm's review of the City draft EIR evaluating the effects on the environment of the new City General Plan is summarized as follows:

1. It does not appear to evaluate current and future potential redevelopment within the City and its ultimate effect on traffic, air quality, noise, etc
2. It selects an already underutilized use of City lands, both within the City limits and Sphere of Influence boundaries, leading to Scenario No.1, but doesn't take into account natural population increases less deaths in addition to minor proposed housing increases. Use of antiquated SCAG guidelines fails to account for natural increases nor for redevelopment of such areas as the Harbor, Mid-Town and Ventura Avenue North to Canada Larga.
3. The most appropriate population scenario should assume a rate of housing at 1.14% rather than 0.88%.
4. It would be a burden on staff and costly to choose a population level that will be regularly exceeded, thus causing need for General Plan amendments, most of which would require complex and convoluted election campaigns. Using the SCAG population numbers is not being current and automatically causes almost every project to exceed City population and require a General Plan Amendment.
5. General Plan Amendments in Ventura are expensive and problematic.
6. As to one of our projects, Westwood Communities' Parklands, we assume that its location is considered infill in the new General Plan despite the need to annex it to the City.

A

B

C

D

E

F

7. At S-11, Biological Resources, Impact BIO-1: A specific standard of 50 feet of setback from barrancas appears inconsistent with a Form Based Code approach in the New General Plan. Buffers from barrancas should be adaptable depending on (1) whether the barranca edge is where scenic retail or housing may be located, (2) the layout of contiguous parallel pedestrian and bike paths, etc. As an example, the buffer for Parklands is planned at 40 feet on each side of Brown Barranca. Where a barranca runs through a project area and not along one side, the amount of the buffer becomes doubled, impacting not only the adaptation of the barranca into the plan but keeping quite a bit of land out of use.

8. At S-18, Public Services, Impact PS-3: We bring to your attention that a new school is not planned for the Parklands.

9. At 4.11-18, City Park Facilities: Please recognize that the amount of acreage and size of public parks needs greater flexibility upon adoption of a Form Based Code approach to residential development. Our understanding of New Urbanism Parks calls for multiple parks of smaller acreage, dispersed through a proposed residential project. An example of this is our Parklands project, which has a proliferation of smaller than 5 acre parks, including tot lots, informal pitch and hit parks, etc.

10. In the sections on Circulation and connecting streets, we strongly urge that not all connecting streets be required to be straight alignments between existing termini and entry into secondary and primary public streets. As an example, because of the strong desires of the residents west of Parklands, the east-west connector to Wells Road is designed to connect, but not in a straight run. This alignment was urged by the neighbors to the project as a means of keeping future trips from running through their home streets. Thus, we are urging that you provide street standards which allow for a convoluted, but nevertheless actual connection without having to leave an existing or proposed residential neighborhood.

Respectfully submitted,

David J. Rose
DTR Engineering

Chuck Cohen
Weston Benshoof Rochefort Rubalcava & MacCuish

Letter 22

COMMENTER: David J. Rose, DTR Engineering

DATE: July 18, 2005

RESPONSE:

Response 22A

The commenter states an opinion that the Draft EIR does not appear to evaluate the effects of current and future redevelopment. The Draft EIR evaluates the impacts of potential citywide growth through 2025, including intensification/reuse (including redevelopment of properties) and, in some instances, expansion of the City. As noted in Section 2.0, *Project Description*, approximately 8,300 housing units are assumed to be added to the City through intensification and reuse over the next 20 years and each of the analysis subsections in Section 4.0, *Environmental Impact Analysis*, evaluates the impacts associated with such intensification/reuse development. Traffic, air quality, and noise issues are discussed in detail in Sections 4.12, 4.3, and 4.10, respectively. Traffic impacts are further discussed in the full traffic study included in Appendix E.

Response 22B

The commenter states an opinion that the use of SCAG guidelines fails to account for natural population increases or the redevelopment of various areas. It is not clear to which SCAG guidelines the commenter is referring. The Draft EIR analysis discusses SCAG policies in Sections 4.14 and 4.15. However, as discussed in the Draft EIR, the population projections used in the Draft EIR exceed SCAG forecasts for the City; therefore, the City is not relying on SCAG's guidelines with respect to projected population growth through 2025. With respect to redevelopment, each of the Draft EIR land use scenarios anticipates the development of approximately 8,300 housing units in the City through intensification and reuse, including a substantial number of units in the Harbor, Midtown, and Ventura Avenue areas. Finally, both of the growth rates used in the Draft EIR (0.88% annually and 1.14% annually) are higher than the natural growth rate for the area, which is generally estimated at about 0.6% annually.

Response 22C

The commenter states an opinion that the 1.14% annual average growth rate is more appropriate than the 0.88% growth rate. These numbers were directed by City Council to be used as reasonable growth estimates over the next 20 years.

Response 22D

The commenter states an opinion that using SCAG population projections that are not current causes almost every project to exceed the City's population projections and therefore require a General Plan amendment.

The Draft EIR does not rely on SCAG forecasts. It merely acknowledges that the population projections used in the Draft EIR exceed SCAG growth forecasts for the City. Individual projects would not require a General Plan amendment merely because the City's population projections exceeds SCAG's forecast. The more likely scenario is that SCAG will update its forecasts to reflect the City's current growth projections following adoption of the 2005 General Plan. Similarly, it is anticipated that the Ventura County APCD will update its growth forecasts for Ventura in the 2007 AQMP that is currently in preparation.

Response 22E

The commenter notes that General Plan amendments are expensive and problematic. This comment is noted; however, as discussed above, exceedance of SCAG population forecasts would not necessitate a General Plan amendment for individual projects.

Response 22F

The commenter assumes that the Westwood Communities Parklands' project is considered infill even though the site requires annexation. The site is within the current Sphere of Influence and designated for urban use; therefore, its development would be included in the Intensification/Reuse Only scenario.

Response 22G

The commenter notes that the 50-foot buffer from riparian areas can affect large amounts of land and suggests that requiring such a buffer is inconsistent with a Form Based Code approach. This concern is noted. It is not clear why such a requirement would be inconsistent with a Form Based Code approach. Buffers can be adaptable depending upon circumstances, but the 50-foot buffer has been determined to provide the minimum distance needed to effectively protect riparian habitat and associated wildlife movement corridors. This minimum distance is consistent with that adopted by a number of communities in the southern California region.

Response 22H

The commenter notes that the Parklands project does not include a new school. This comment is noted. The developer will be required to pay State-mandated school impact fees.

Response 22I

The commenter notes that the size and acreage of parks needs greater flexibility under a Form Based Code approach. City staff agree with this statement generally and will continue to seek various means of meeting park and recreational demands associated with new development on a case-by-case basis. In addition, language has been added to the General Plan under Policy 6A as follows:

Update standards for citywide public parks and open space to include an expanded menu of shared park types, and identify locations and potential funding sources for acquiring new facilities in existing neighborhoods.

Response 22]

The commenter suggests that not all connecting streets should be required to provide straight alignments between existing termini and entries into public streets. Specific alignments of new road extensions will continue to be reviewed on a case-by-case basis. The alignments shown in the Draft EIR and traffic study are conceptual only and will need to be adjusted to reflect on the ground conditions as part of individual project review.

Ventura, CA 93001

Re: City of Ventura Draft Environmental Impact Report, SCH # 2004101014

To Whom It May Concern:

I am responding to the extraordinary above captioned Draft EIR. I am certain that you have already been told that it works better than weights in the gym. While totally impressed, it doesn't mean that I don't have some concerns and comments.

Initially, I offer a concern about Scenario 1 and the population limited therein and related to an outdated SCAG maximum number for the City. During the course of the CPAC update, at least three population alternatives were announced, including a recommendation of the Planning Commission to peg the new number based on a ratio of 1.14% per year rather than 0.88%. Scenario 1 is very restrictive, and one could assume that the annual birth rate produces a greater number of new Ventura residents, at least by a factor of 1+%, than the number which die or leave the community for other reasons. It essentially omits or doesn't provide for at least some new residents attracted to this beautiful, now vibrant city.

I was unable to find a population allowance for redevelopment, particularly along major streets in mid-town, The Avenue and the Harbor.

While the General Plan is silent on population, the EIR is likely to be relied on by persons generally opposed to new projects, and it will be used as a supportable statistical basis to declare a new project as not being consistent with the General Plan as it relates to population, and its concomitant effects on traffic, air quality, etc., regardless of the absence of a formal cap in its text.

Community Development Department
 City of Ventura
 July 18, 2005
 Page 2

The foregoing analysis of the population base leads me to the more important, costly and time consuming concern that, while there is an implicit flexibility of dealing with added population, the current text could require worthwhile and well located applications to go through an amendment to the General Plan due to its reliance on the known unrealistic SCAG projection, which is already less than actual.

It is my understanding that the new General Plan is a precursor to the City adopting a Form Base Code approach to all new development. The initial application is taking shape in Downtown and was recently informally applied to the School District's Hails property under contract to The Olsen Company. Should my premise be correct, the EIR should be similarly oriented, and not include hard edge archaic current zoning standards. In that regard, it should be a prospectively designed General Plan.

To illustrate the foregoing, please consider:

Public Services:

Park Area: Ventura is a mature City with existing park and recreation areas, which have been added to over the years as needed. One outstanding feature of the City is its beaches, which provide a recreation amenity non-coastal cities would die for. Yet, it appears that the EIR is calling for the same green park acreage as is required in non-coastal cities. A review of Tables 4.11-8, 4.11-9 and 4.11-10 find sufficient park acreage aggregating from the three categories examined in those Tables. On the larger scale, Ventura is addressing active sports parks. In a Form Base Code setting, minimum 5 acre parks are arbitrary and likely questionable or unnecessary. More apropos would be an EIR statement to the effect that new projects require new ideas, dimensions and types of common recreation, specially in light of more attached housing, smaller lots and less private on-site recreation area. Thus, in my opinion, rigid park requirements are out of touch with the new planning paradigm. B

Fire Facilities: The standards discussed in the EIR relate to a different, earlier time when fire fighters were primarily engaged in fire protection and fire fighting rather than as now, with a change of emphasis to serving as paramedics. There will always be a necessary role for fire personnel to keep our C

 WESTON BENSHOFF
 ROCHFORD RUBALCAVA MACCUISH LL
 ATTORNEYS AT LAW

Community Development Department
 City of Ventura
 July 18, 2005
 Page 3

cities safe and to do prevention. But old standards do not take into full consideration the requirements of the State Uniform Building Code, improved construction materials, e.g. roofing, and methods, e.g. interior sprinklers, wall construction treatment, etc. Thus, the issue is whether the EIR should comment generally rather than specifically on such facilities and crew numbers.

Biological Resources at page S-11: The specificity of the buffer area in Action 1.8 related to rivers, creeks and barrancas is too binding. Each of such natural settings need be protected, and protection provided from potential overflows to nearby development. But to specify an arbitrary set back of 50 feet is to, in my opinion, miss the point of the Form Base Code, which enables a recognition of greater integration, not based on arbitrary dimensions or distances, of such natural features with new projects to enhance the aesthetic, recreation and socialization character of such new projects. Thus, non intrusive bike and walking paths—not subject to effects of spillover—as well as detention/retention areas used for passive recreation could be forced away from the top of banks where the full experience of being close to water courses is best enjoyed. Similarly, the matter of proximity of restaurants or even residences to such water courses should be left to topographic and site design and safe and thoughtful construction methods, all of which would go through rigorous review to reach a more spontaneous, natural and random product. Such creativity should be rewarded and not preempted by language in the FEIR or the General Plan.

Public Schools: PS-3 is a positive example of dealing with a generic matter of placement of new schools as need arises.

Noise:

Impact N-1: By specifying a sound wall in the EIR pursuant to Action 7.28, other values such as views of the Santa Clara River could be unintendedly obscured and subordinated. Such a sound issue could be addressed on a specific project look and not clutter the EIR and General Plan.

Utilities and Service Systems:

Impact U-2(b): It is observed that the reference to sanitation capacity in this subsection specifies Ojai Valley Sanitary District capacity. It is found that the language in this subsection hands jurisdiction or development veto

Community Development Department
City of Ventura
July 18, 2005
Page 4

power to that special district to the detriment of the City maintaining final authority and options. If it is necessary to specify the subject District, you might consider adding language, to wit: "only when the Ojai Valley Sanitary District has adequate capacity for projected wastewater flows or there is other mitigation approved by the City Engineer."

Population and Housing:

Impact PH-2: The finding of Significance after Mitigation in the third column of Table S-1 would not be required but for the tie-in of all Scenarios 1-6 to the SCAG population projection.

H

Transportation and Circulation:

Policy 3E and Action 3.17 are other positive examples of, in this case, dealing with road alignments and dimensions in a Form Based Code mode, wherein there is flexibility to provide for connectivity of existing to new roadways in a manner which enhances walkability and direct access without overburdening existing neighbors, e.g. design for Parklands' street system, particularly connecting the existing neighborhood street on the west boundary to Wells Road, but not necessarily in a straight alignment.

I

Congratulations on a heroic effort and documented study.

Very truly yours,

Charles W. Cohen

Letter 23

COMMENTER: Charles W. Cohen, Weston, Benshoof, Rochefort, Rubalcava & MacCuish, LLP

DATE: July 18, 2005

RESPONSE:

Response 23A

The commenter states an opinion that the 0.88% population growth rate considered in the Draft EIR is overly restrictive. The commenter also states concerns about reliance on SCAG population projections and what he believes is the lack of a "population allowance" for the Midtown, Ventura Avenue, and Harbor areas. Finally, the commenter states an opinion that the EIR should not include "hard edge archaic zoning standards."

The opinion with respect to the appropriate population growth rate for the City is noted. As noted in the Draft EIR, the 0.88% average annual growth rate assumed for Scenario 1 represents the average over the past 10 years, while 1.14% growth rate assumed for Scenarios 2-6 represents the average over the past 20 years. It is important to note that the growth rates assumed in the Draft EIR are not intended to be growth caps. Rather, they are estimates used for analytical purposes that are intended to provide a realistic picture of likely conditions in 2025.

As part of the overall anticipated growth, the Draft EIR relies on certain assumptions about where future growth might occur and assigns growth to areas throughout the City, including the Midtown, Ventura Avenue, and Harbor areas. However, as with the overall population growth assumptions in the Draft EIR, the assumed amount of growth for individual areas within the City are not meant to be growth caps for those areas. Any of the districts, corridors, or neighborhood centers could theoretically accommodate substantially more growth than assumed in the Draft EIR based on the land use designations. However, it is not realistic to assume that all areas of the City would build out to the maximum theoretical degree over the next 20 years.

In response to several comments on the Draft 2005 General Plan and Draft EIR, the table in the 2005 General Plan will be revised to eliminate the detailed estimates of future growth by geographic location. The Final 2005 General Plan will include a table that summarizes growth projections by general category (districts/ corridors, neighborhood centers, other) in order to eliminate confusion about whether the growth projections for individual areas used for the EIR analysis constitute growth caps for those areas.

The Draft EIR does not rely on SCAG forecasts. It merely acknowledges that the population projections used in the Draft EIR exceed SCAG growth forecasts for the City. Individual projects would not require a General Plan amendment merely because the City's population projections exceeds SCAG's forecast. The more likely scenario is that SCAG will update its forecasts to reflect the City's current growth projections following adoption of the 2005 General

Plan. Similarly, it is anticipated that the Ventura County APCD will update its growth forecasts for Ventura in the 2007 AQMP that is currently in preparation.

It is correct that the City intends to adopt a Form Based Code subsequent to approval of the 2005 General Plan. However, it is not clear which zoning standards to which the commenter is referring. The Draft EIR analysis does not rely on current zoning standards.

Response 23B

The commenter states concerns about the use of current City park standards in the Draft EIR and suggests that the EIR is "calling for the same green park acreage as is required in non-coastal cities." The commenter also states an opinion that the use of rigid park requirements is not appropriate. The opinion regarding park standards is noted. The Draft EIR uses current City park acreage standards to estimate future demand for parks. However, it is true that acreage is only one component of park demand. In addition, as noted in the Draft EIR, the estimate of existing park acreage does not include beaches, schools, or regional park and open space facilities located outside the Planning Area. All of these facilities offset the "shortfall" of parks identified in the Draft EIR and will continue to do so in the future. The City will continue to seek creative ways of meeting the park and recreational needs of the community, which likely will involve some variation from the adopted standards in some instances. In addition, language has been added to the General Plan under Policy 6A as follows:

Update standards for citywide public parks and open space to include an expanded menu of shared park types, and identify locations and potential funding sources for acquiring new facilities in existing neighborhoods.

As noted in the Draft EIR, the continued collection of park fees and use of these funds to develop new parks and recreational facilities would reduce park-related impacts to a less than significant level.

Response 23C

The commenter states an opinion that the standards for fire protection service discussed in the Draft EIR are inappropriate given the current emphasis on paramedics. The commenter also suggests that the EIR should comment on fire service more generally, rather than providing information about specific personnel and facility needs. These opinions are noted. The information regarding current fire service needs was obtained directly from the Ventura Fire Department as part of the Draft EIR preparation. Therefore, it is presumed that the needs identified in the Draft EIR reflect the current Department needs.

Response 23D

The commenter states an opinion that the 50-foot riparian area setback specified in the Draft EIR is unnecessarily binding, noting that in certain circumstances a less restrictive setback may be adequate. This opinion is noted. The City will retain flexibility in how the setback requirement is to be applied. However, the recommended 50-foot buffer provides the minimum determined to be needed to maintain the biological integrity of "natural" riparian areas.

Response 23E

The commenter states agreement with the manner in which school impacts is addressed in the Draft EIR. No response is necessary.

Response 23F

The commenter states an opinion that the need for sound walls would be more appropriately addressed as part of a specific project than as part of the General Plan. This opinion is noted. The action mentioned by the commenter is intended to address existing noise issues for current residences located adjacent to area freeways. Project-specific analysis of future development proposals would not address this existing condition.

Response 23G

The commenter suggests a revision to Mitigation Measure U-2(b) to provide additional flexibility for the City. In response to this comment, Measure U-2(b) is revised to read as follows (new text is underlined):

U-2(b) *Ojai Valley Sanitary District Capacity. The following action shall be added to the 2005 General Plan if Scenario 5 or any other scenario that includes both the North Avenue and Western Cañada Larga expansion areas is selected:*

- *Allow development within the North Avenue expansion area or Western Cañada Larga expansion only when the Ojai Valley Sanitary District has adequate treatment capacity for projected wastewater flows or other mitigation is approved by the City Engineer.*

Response 23H

The commenter notes that the unavoidably significant impact relating to population projections is due to the comparison to SCAG growth forecasts. This is correct. However, it should be noted that the unavoidably significant impact does not prevent the City from approving the 2005 General Plan, nor does it mean that future individual projects would be inconsistent with the General Plan. The City merely needs to acknowledge the discrepancy between the forecasts and adopt a Statement of Overriding Considerations setting forth the reasons the project's benefits outweigh the impact. It is anticipated that SCAG will update its population forecasts for the City in response to new projections provided by the City following approval of the General Plan Update.

Response 23I

The commenter states agreement with the approach taken in General Plan Policy 3E and Action 3.17. No response is necessary.

TO: Carl Morehouse
B.S.

FROM: Bruce Smith, Manager
General Plan Section

DATE: July 18, 2005

SUBJECT: Draft Environmental Impact Report for Update of Comprehensive Plan (City of San Buenaventura)

The Ventura County Planning Division has reviewed the Draft Environmental Impact Report (DEIR) for the Update of the City of San Buenaventura Comprehensive Plan. While the EIR itself appears to adequately address the impacts of the Comprehensive Plan Update, we offer the following comments relative to conflicts with the County General Plan with respect to Saticoy and the North Ventura Avenue Area:

Conflict with Saticoy Area Plan

The City's proposed Comprehensive Plan indicates that the residential neighborhood between Nardo Street and Rosal Lane is designated as "Medium Density Residential (9-12 dwelling units per acre)". The area south of Rosal Lane is designated as "Industrial" by the Comprehensive Plan.

The Ventura County Saticoy Area Plan designates the Rosal Lane area as "2-Family Residential" which is consistent with the City's Plan, but the County's residential designation extends further south 225 feet into the area designated by the City as "Industrial". This conflict between the City and County plans creates an 8.5-acre "no-man's land" which is not developable because the City is unable to extend water service for a residential land use which is inconsistent with the Comprehensive Plan and the County cannot approve industrial development on land zoned and planned for residential development. The area cannot be annexed to the City as it is not currently contiguous to the existing City limits. The County plan designation has been in place since at least 1967. Land use in this "no man's land" area is largely vacant, but includes two or three residential units south of Rosal Lane at Alelia Avenue, and one small commercial property fronting on Los Angeles Avenue. We presume that the City does not intend a conflict and that the Comprehensive Plan map may reflect a mapping error. We ask that the City evaluate this conflict with the County's plan and determine whether or not a boundary adjustment is appropriate at this time.

Carl Morehouse Memorandum
DEIR for City of Ventura Comprehensive Plan Update
July 18, 2005
Page 2

Conflict with North Ventura Avenue Area Plan

In 1982 and 1984 the City and County jointly adopted an area plan for the North Ventura Avenue area. Policies of the joint plan required that future City and County amendments should be processed and approved by both jurisdictions to avoid conflicts between City and County plans for the area. Although there were minor differences between the City and County plans for the North Ventura Avenue area in formatting and terminology even when first adopted, the City plan has evolved over time and now evidences significant land use conflicts with the County Area Plan. The principal differences appear to be that the former "Floodplain" area is now largely designated as "Agriculture"; a portion of the former "Floodplain" area (the unincorporated portion of the City's wastewater treatment plant site) has been designated as "Industrial" and large areas formerly designated as "Oil Extraction Industrial" have been re-designated as "Industrial", "Agricultural" or "Open Space". While we have no particular concerns with most of the land use amendments the City has approved over time, we are concerned that the two plans are no longer in sync, resulting in confusion and unnecessary complications for applicants for discretionary applications. We suggest that the City direct its staff to work with the County to identify and eliminate where feasible conflicts between the City and County plan either by amendment of the County Plan, the City Plan or both, as appropriate.

We also suggest that the proposed "Industrial" designation of the unincorporated portion of the City treatment plant may be inappropriate because of the potential flood hazard. We suggest a designation of "Public and Institutional" would better serve as a land use designation for this site.

Thank you for the opportunity to review the Draft EIR and Comprehensive Plan Update.

B

Letter 25

COMMENTER: Bruce Smith, Manager, General Plan Section, County of Ventura Planning Division

DATE: July 18, 2005

RESPONSE:

Response 25A

The commenter notes a discrepancy between the General Plan land use map and the County's Saticoy Area Plan for properties along the south side of Rosal Lane. This discrepancy is addressed as part of the "Intensification/Reuse + Minor Map Clean-Up" alternative studied in Section 6.0, *Alternatives*. City staff are recommending revision of the General Plan land use map to provide a "Residential Medium Density" designation for the properties in question. It should also be noted that one of the property owners submitted a comment letter (Letter 5) correcting the APNs listed in the Draft EIR. Those numbers will be corrected in the Final EIR.

Response 25B

The commenter suggests that City and County staff work together to resolve discrepancies between the City and County plans for the North Ventura Avenue area. The commenter also suggests that the "Industrial" designation for the unincorporated portion of the City's treatment plant may be inappropriate because of the potential flood hazard in the area. City staff will continue to work with County staff regarding the planning of the North Ventura Avenue area. With respect to the water treatment plant site, it is presumed that the commenter is referring to the area immediately north of the treatment plant. That area is already designated "Industrial" in the current Comprehensive Plan. Therefore, the "Industrial" designation represents no change. Any development within the 100-year flood zone would need to comply with FEMA requirements as well as the requirements of the City's Floodplain Ordinance.

**VENTURA COUNTY
WATERSHED PROTECTION DISTRICT
PLANNING AND REGULATORY DIVISION**
800 South Victoria Avenue, Ventura, California 93009
PAUL CALLAWAY, Permit Manager - 805 654-2011

DATE: July 14, 2005
TO: CARL MOREHOUSE
FROM: PAUL CALLAWAY
SUBJECT: Comments to the DEIR for the Ventura's General Plan Update
RMA 04-086-2

We have reviewed the DEIR and have the following comments on our areas of concern

PERMIT SECTION:

In section 4.8 the DEIR discusses ways to mitigate the increase in peak runoff due to the increase in impervious area from the proposed future development scenarios. In reviewing the proposed mitigation measures to make the effect less than significant we found that these measures are acceptable but we think that developments and re-developments in the areas adjacent to our jurisdictional channels should be conditioned, as an additional possible mitigation measure, to dedicated right of way to meet the future needs of the Watershed Protection District (District), and to build and dedicate to the District improvements that will address the deficient facilities along and in those channels. These right of way needs will depend on the type of channel the city would like to see in these areas such as a soft environmentally friendly channel which would require a larger right of way compared to the District's preferred channel which is a vertical walled concrete channel with access road.

A

ENVIRONMENTAL SERVICES SECTION:

The Environmental Services Section of the District has reviewed the DEIR dated June 2005, and has the following comments.

B

The lands and land use changes that are evaluated in the DEIR, including project alternatives, may include impacts on engineered drainages, debris or detention basins, rivers or streams, and adjacent 100-year floodplains that are owned by the District or subject to the District's jurisdiction.

The proposed plan and the policies therein, present an opportunity for the District to work cooperatively with the City of Ventura to set aside undeveloped floodplains for the purpose of providing "soft" solutions to flood control and to maintain rivers and streams

In their natural state. These public trust resources are amenities that improve the quality of life in the City of Ventura and its Sphere of Influence.

Section 4.8 of the DEIR identifies flooding and flood mitigation measures for developable areas within the 100-year floodplain under each land use scenario. In addition, several Actions (Actions 1.10, 1.14, 5.2) described in this section indicate that the City will pursue removal concrete and renovation of flood control facilities for the purpose of creating "soft" flood control facilities (e.g., natural stream, wetlands, etc.) and greenbelts.

In most cases, natural channels generally require a much wider floodplain than engineered structures. However we note that the proposed plan does not present any land use goals, policies or actions that would limit development in the floodplains or encourage dedication of floodplain for such purposes. Further, policies that limit the use of variances that would allow development in the 100-year floodplain should also be considered and included in the adopted plan.

The DEIR also describes mitigation measures for development in 100-year floodplains in the various land use scenarios. These include structural or building solutions that elevate finish floors, and/or Letters of Floodplain Map Revision from FEMA. In light of the plan goals for soft solutions to flood control, these mitigation measures are incongruous. If the City intends to restore and maintain natural streams for flood control purposes over the life of the plan, land use policies which promote this approach to flood control and dedication of floodplain right-of-way must be adopted, applied, and enforced.

Establishing and strengthening protective policies for floodplains in this plan update is valuable. As history illustrates, over time, continued encroachment into the floodplain by urban development in cities and in unincorporated areas results in substantial flooding problems, which then require traditional flood control improvements. Moreover, the pressure for additional tax-payer funded flood control projects in natural rivers and streams will increase.

Planning and Regulatory Division

K:\WQ\Environmental Services\EIR Reviews\City of Ventura Comp Plan_DEIR.DOC

Letter 26

COMMENTER: Paul Callaway, Ventura County Watershed Protection District

DATE: July 14, 2005

RESPONSE:

Response 26A

The commenter suggests that the EIR should include an additional mitigation measure requiring the dedication of right-of-way for future Watershed Protection District needs for developments adjacent to jurisdictional channels. In response to this comment, Mitigation Measures HWQ-2 will be amended to read as follows (new text is added):

HWQ-2 *Additional Drainage Actions. The following actions shall be added to the 2005 General Plan to address existing storm drain system deficiencies:*

- *Develop a financing program for the replacement of failing corrugated metal storm drain pipes in the City.*
- *Adopt assessment districts or other financing mechanisms to address storm drain system deficiencies in areas where new development is anticipated and deficiencies exist (e.g., Downtown district, Ventura Avenue corridor, and Harbor district).*

The following actions are recommended to minimize the impact of future development on the local storm drain system and implement City goals regarding sustainable infrastructure:

- *As feasible, require new developments to incorporate stormwater treatment practices that allow percolation to the underlying aquifer and minimize offsite surface runoff. Such methods may include, but are not limited to, (1) the use of pervious paving material within parking lots and other paved areas to facilitate rainwater percolation; and (2) construction of retention/detention basins to limit runoff to pre-development levels and to encourage infiltration into the groundwater basin.*
- *Where deemed appropriate, require new developments adjacent to Ventura County Watershed Protection District channels to dedicate necessary right-of-way to meet future District needs.*

Response 26B

The commenter reiterates the need for dedicated right-of-way adjacent to District drainage channels and suggests that the General Plan should strengthen land use policies to direct development away from floodplains rather than providing for structural solutions to flooding issues. Please see Response 26A. Also, the proposed 2005 General Plan is primarily intended to direct development away from drainages and focus on intensification and reuse within the

already urbanized areas of the City and contains many policies and statements that enforce this intent. In the event that any structural solutions are considered, the City will discuss them with the Watershed Protection District.

27

JUL 15 2005

**VENTURA COUNTY
AIR POLLUTION CONTROL DISTRICT**
Memorandum

TO: Carl Morehouse, Planning

DATE: July 13, 2005

FROM: Alicia Stratton AS

SUBJECT: Request for Review of Draft Environmental Impact Report for the Update of 1989 Comprehensive Plan, City of Ventura (Reference No. 04-086-2)

The proposed project involves the update of the 1989 Comprehensive Plan, which serves as the blueprint for the development of the City. Each of the Comprehensive Plan elements other than the Housing Element (an update of which was approved earlier this year) will be updated with goals, policies, and objectives that reflect the current needs and preferences of the community. The land use map will also be updated.

The City intends to emphasize infill development and reuse of developed lands within the current Sphere of Influence over the life of the Comprehensive Plan Update (through 2025), and has identified a number of growth districts and corridors where infill/reuse is to be focused. However, as part of the Comprehensive Plan update, the City is also considering inclusion of certain areas outside the current Sphere of Influence for future development.

We wish to submit the following comments on the draft environmental impact report:

1. Table 4.3-1 on Page 4.3-2 should be revised to reflect that the federal one-hour ozone standard has been revoked, effective June 15, 2005 (see attached). The corresponding paragraph discussing the table should be revised accordingly (Pages 4.3-2 and 4.3-3). A
2. The discussion on Current Ambient Air Quality on Page 4.3-5 should be revised to include data from the APCD air quality monitoring station at Emma Wood near Ventura. Data from this monitoring station is representative of air quality in the coastal areas of Ventura; data from the El Rio monitoring station is more representative of the inland portions of Ventura. The Emma Wood station only monitors ozone levels. B
3. The discussion of the 1994 Air Quality Management Plan (AQMP) in Section 4.3.1 Setting (d) on Page 4.3-5 should include this statement following the last sentence of the fifth paragraph: "To that end, the APCD is currently developing a new AQMP, which will be completed in 2007. The 2007 AQMP will contain C

strategies for attainment of the new eight-hour federal ozone standard by 2010. It will also incorporate updated projections of population, dwelling units and motor vehicle emissions."

4. The second paragraph on Page 4.3-14 should be revised to state that: "The Ventura County AQMP provides recommendations for reducing emissions from transportation-related sources by reducing vehicle use or improving traffic flow. These techniques are referred to as Transportation Control Measures (TCMs)." D
5. The Mitigation Measures discussion on Page 4.3-20 should be expanded to include this additional measure: "Require other air pollutant mitigation measures found feasible at the time of project approval." E

If you have any questions, please call me at 645-1426 or email me at alicia@vcapcd.org.

National Ambient Air Quality Standards (NAAQS)

The Clean Air Act, which was last amended in 1990, requires EPA to set National Ambient Air Quality Standards for pollutants considered harmful to public health and the environment. The Clean Air Act established two types of national air quality standards. **Primary standards** set limits to protect public health, including the health of "sensitive" populations such as asthmatics, children, and the elderly. **Secondary standards** set limits to protect public welfare, including protection against decreased visibility, damage to animals, crops, vegetation, and buildings.

The EPA Office of Air Quality Planning and Standards (OAQPS) has set National Ambient Air Quality Standards for six principal pollutants, which are called "criteria" pollutants. They are listed below. Units of measure for the standards are parts per million (ppm) by volume, milligrams per cubic meter of air (mg/m³), and micrograms per cubic meter of air (µg/m³).

National Ambient Air Quality Standards

Pollutant	Primary Stds.	Averaging Times	Secondary Stds.
Carbon Monoxide	9 ppm (10 mg/m ³)	8-hour ¹	None
	35 ppm (40 mg/m ³)	1-hour ¹	None
Lead	1.5 µg/m ³	Quarterly Average	Same as Primary
Nitrogen Dioxide	0.053 ppm (100 µg/m ³)	Annual (Arithmetic Mean)	Same as Primary
Particulate Matter (PM ₁₀)	50 µg/m ³	Annual ² (Arith. Mean)	Same as Primary
	150 µg/m ³	24-hour ¹	
Particulate Matter (PM _{2.5})	15.0 µg/m ³	Annual ³ (Arith. Mean)	Same as Primary
	65 µg/m ³	24-hour ⁴	
Ozone	0.08 ppm	8-hour ⁵	Same as Primary
Sulfur Oxides	0.03 ppm	Annual (Arith. Mean)	-----
	0.14 ppm	24-hour ¹	-----
	-----	3-hour ¹	0.5 ppm (1300 µg/m ³)

¹ Not to be exceeded more than once per year.

² To attain this standard, the 3-year average of the weighted annual mean PM₁₀ concentration at each monitor within an area must not exceed 50 µg/m³.

³ To attain this standard, the 3-year average of the weighted annual mean PM_{2.5} concentrations

EPA National Ambient Air Quality Standards (NAAQS)

Page 2 of 2

from single or multiple community-oriented monitors must not exceed 15.0 ug/m³.

⁴ To attain this standard, the 3-year average of the 98th percentile of 24-hour concentrations at each population-oriented monitor within an area must not exceed 65 ug/m³.

⁵ To attain this standard, the 3-year average of the fourth-highest daily maximum 8-hour average ozone concentrations measured at each monitor within an area over each year must not exceed 0.08 ppm.

Letter 27

COMMENTER: Alicia Stratton, Ventura County Air Pollution Control District

DATE: July 13, 2005

RESPONSE:

Response 27A

The commenter suggests revising Table 4.3-1 to reflect the fact that the federal one-hour ozone standard was revoked on June 15, 2005. That table and the corresponding text will be revised accordingly in the Final EIR. This minor text change will not affect any EIR findings or conclusions.

Response 27B

The commenter suggests that the discussion of ambient air quality on page 4.3-5 should be revised to include data for the Emma Wood monitoring station. In response to this comment, the following table will be added to EIR Section 4.3-3 and the accompanying text will be revised accordingly. Subsequent tables will be renumbered.

**Table 4.3-3
Ambient Air Quality Data for the Emma Wood Monitoring Station**

Pollutant	Air Pollution Data		
	2002	2003	2004
Ozone, ppm - maximum hourly concentration (ppm)	0.078	0.094	0.093
Number of days of state exceedances (>0.09 ppm)	0	3	1
Number of days of federal exceedances (>0.12 ppm)	0	0	0
Ozone, ppm - maximum 8-hour concentration (ppm)	0.069	0.078	0.082
Number of days of federal exceedances (>0.08 ppm)	0	0	1

Source: ARB, Air Quality Data Statistics; available at <http://www.arb.ca.gov/aqd/aqdpag.htm>.

Response 27C

The commenter suggests the addition of a sentence about the 2007 AQMP. In response to this comment, the following will be added to the end of the first paragraph under subsection d (Air Quality Management Plan):

To that end, the APCD is currently developing a new AQMP, which will be completed in 2007. The 2007 AQMP will contain strategies for attainment of the new eight-hour

federal ozone standard by 2010. It will also incorporate updated projections of population, dwelling units, and motor vehicle emissions.

This minor text changes does not affect the EIR findings or conclusions.

Response 27D

The commenter suggests a clarification with respect to AQMP programs to reduce vehicle use and improve traffic flow. In response to this comment, the first two sentences of the first full paragraph of page 4.3-14 will be replaced with the following:

The Ventura County AQMP provides recommendations for reducing emissions from transportation-related sources by reducing vehicle use or improving traffic flow. These techniques are referred to as Transportation Control Measures (TCMs).

This minor text change does not affect the EIR findings or conclusions.

Response 27E

The commenter suggests an additional mitigation measure. In response to this comment, the first bullet point of Measure AQ-2 will be revised to read as follows (new text is underlined):

- *Require air quality analysis of individual development projects in accordance with the most current version of the Ventura County Air Pollution Control District Air Quality Assessment Guidelines and, when significant impacts are identified, require implementation of air pollutant mitigation measures determined to be feasible at the time of project approval.*

28

PUBLIC WORKS AGENCY
 TRANSPORTATION DEPARTMENT
 Traffic, Advance Planning & Permits Division
MEMORANDUM

DATE: June 23, 2005

TO: Resource Management Agency, Planning Division
 Attention: Carl Morehouse

FROM: Nazir Lalani, Deputy Director *NL*

SUBJECT: Review of Document 04-086-2, Draft EIR
 Update of the 1988 Comprehensive Plan for the City of Ventura
 Project involves updating the 1988 plan through the year 2025 with the current goals, policies and objectives that reflect the current needs and preferences of the community. The plan will also consider inclusion of certain areas outside the current Sphere of Influence for development.
 Project Applicant/ Lead Agency: City of San Buenaventura

The Public Work Agency - Transportation Department has reviewed the revised the Draft Environmental Impact Report (DEIR) to update the City of Ventura Comprehensive Plan, which serves as a blue print for development in the City. Our comments are the same as in our memo dated November 1, 2004 and are as follows:

The EIR should address the following comments:

1. Road improvements associated with all six scenarios along the major transportation corridors should match those shown in Appendix 8.3 of the County's General Plan Update DEIR. A copy of Appendix 8.3 is attached. The major corridors include Victoria Avenue, Olivas Park Drive, Harbor Blvd, Ventura Avenue, Foothill Road, Telegraph Road, Hwy 118 and Hwy 232. This would include bicycle and pedestrian facilities. A
2. On Page S-1, the DEIR makes reference to North Avenue, Olivas Park, Serra, Western Canada Larga and Poinsettia areas. A map should be provided to indicate the limits of these areas. B
3. Page 4.12-10 "Presently, two trains in both AM and PM operate the entire length of the route between Ventura and Union Station." There are three Metrolink trains that operate currently along this stretch. The EIR should make this correction. C
4. As noted in our memo on the Notice of Preparation of the DEIR, dated January 20, 2005, in accordance with the Ventura LAFCO Commissioner's Handbook, section 3.2.1, cities shall annex entire roadway sections adjacent to territory proposed to be annexed and shall include complete intersections. The EIR should require conditions for annexing county roadway section adjacent to the development, when the proposed expansion areas are developed. D

5. As noted in our memo on the Notice of Preparation of the DEIR, dated January 20, 2005 the updated 2025 comprehensive plan should address annexing of unincorporated islands in the County such as Montalvo, and developed areas immediately adjacent to the City limits such as Saticoy and existing development on North Ventura Avenue. E
6. One of the alternatives being considered by the Comprehensive Plan Update includes annexation and development of the Canada Larga arca. As demonstrated by the 2005 winter storms, this area is prone to major damage by flooding. The EIR should address this issue. F
7. Ventura Avenue south of Shell Road is subject to severe flooding during winter storms. Annexation of this area by the City should address the need to provide an adequate storm drain system. G
8. All of the scenarios are associated with major intersection and road segment improvements that will be needed to mitigate the traffic growth generated by the land use changes. The EIR should address how these improvements are to be funded. H
9. The cumulative impacts of the development of this project when considered with the cumulative impact of all other approved (or anticipated) development projects in the County will be potentially significant. To address the cumulative adverse impacts of traffic on the County Regional Road Network, the appropriate Traffic Impact Mitigation fees should be paid to the County when development occurs. With payment of the Traffic Impact Mitigation Fees, the Level of Service and safety of the existing roads would remain consistent with the County's General Plan. I

Our review of this project is limited to the impacts this project may have on the County's Regional Road Network.

Please call me at 654-2080 if you have questions.

Attachment: Appendix 8.3

LOS is based on thresholds from Figure 4.2.2 in the Ventura County General Plan

Letter 28

COMMENTER: Nazir Lalani, Deputy Director, County of Ventura Public Works Agency,
Transportation Department

DATE: June 23, 2005

RESPONSE:

Response 28A

Road improvements associated with all six scenarios along the major transportation corridors such as Victoria Avenue, Olivias Park Drive, Harbor Boulevard, Ventura Avenue, Foothill Road, Telegraph Road and Highways 118 and 23 match those shown in Appendix 8.3 of the County's General Plan update DEIR as stated by the commenter. Following adoption of the 2005 General Plan (and the Circulation Element), the City will discuss the changes in land use and circulation resulting from the General Plan Update with the County. The discussion will compare inconsistencies in roadway classifications in the City's Circulation Element with those in the County's General Plan to some of the minor roadways. Since the traffic analysis carried out for the General Plan Update uses the most recent long-range traffic data for circulation planning purposes, it can thereby provide a technical basis for evaluating those differences. An agreement can then be reached as to where future changes to the County's General Plan may be appropriate to establish consistency.

Response 28B

The commenter requests clarification with respect to the locations of the potential expansion areas considered in the Draft EIR. These areas are depicted on Figure 2-4 through 2-8 of Section 2.0, *Project Description*.

Response 28C

The commenter notes that three Metrolink trains operate between Ventura and Union Station in Los Angeles rather than the two trains noted in the Draft EIR. This will be corrected in the Final EIR. This minor text change will not affect the EIR findings or conclusions.

Response 28D

The commenter states an opinion that the EIR should include conditions for annexing County roadway sections adjacent to expansion areas at such time as those areas are developed. The scenario being recommended by City staff is the "Intensification/Reuse Only" scenario with some minor map clean-up. Because no expansion areas are being recommended at this time, the condition suggested by the commenter is not applicable. If and when any of the expansion areas are considered for annexation, appropriate conditions regarding annexation of adjacent roadways will be made part of the annexation.

Response 28E

The commenter suggests that the City should consider annexation of unincorporated islands such as Montalvo and developed areas adjacent to the City limits, such as in Saticoy and the North Avenue area. Annexation of these areas is one of City's goals for the 2005 General Plan. Portions of several of the districts and corridors that are to be the focus of future development are within the Saticoy and North Avenue areas.

Response 28F

The commenter notes that portions of the Western Cañada Larga area are subject to flooding. Flooding issues are addressed in Section 4.8, *Hydrology and Water Quality*. Portions of that expansion area are within the 100-year flood zone. As noted in Response 27D, City staff are not recommending inclusion of the Western Cañada Larga area as a potential expansion area on the 2005 General Plan land use map.

Response 28G

The commenter notes that Ventura Avenue south of Shell Road is subject to severe flooding. The area to which the commenter refers is within the North Avenue District, which the City anticipates annexing and making one of the focal points for future industrial development. Flooding issues along that stretch of Ventura Avenue will be addressed as that area redevelops.

Response 28H

The commenter states an opinion that the EIR should address how future roadway improvements are to be funded. Subsequent to adoption of the 2005 General Plan, the City will undertake a revision to its traffic impact fee program. As part of that revision, the cost of planned improvements and development impact fees will be determined.

Response 28I

The commenter states that potentially significant cumulative impacts to the County road network can be mitigated by requiring developers to pay the County's Traffic Impact Mitigation Fees. The City will continue to require developers to pay the County's Traffic Impact Mitigation Fees, in accordance with the City's agreement with the County.

RE: CITY OF VENTURA GENERAL PLAN DEIR

Dear Ms. Gialketsis:

Thank you for the opportunity to review and provide input to the Draft Environmental Impact Report (DEIR) for the proposed update to the General Plan of the City of Ventura. We appreciate the opportunity to review the plan and the associated environmental report because it provides us the opportunity to better coordinate our planning and development of the electrical facilities needed to provide services to the existing and future residents and businesses in the city.

Although the proposed General Plan document and its DEIR did not have any specific discussions about electrical facilities, whether existing or planned, we believe that future development projects deemed consistent with the proposed document may have impacts on SCE facilities and thus may require detailed environmental evaluation. For example, the General Plan proposes the widening of many roads and arterials. Such activities may require the construction or relocation of SCE facilities, and those SCE actions may themselves have environmental consequences cognizable under the California Environmental Quality Act (CEQA). If those environmental consequences are properly identified and adequately addressed in the development documents and CEQA approval process, SCE may not be required to pursue the mandatory CEQA review through

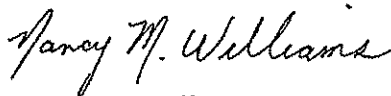

the California Public Utilities Commission (CPUC) and its General Order 131-D process (the CPUC being the CEQA "lead agency" for SCE projects unless one of the exemptions in G.O. 131-D applies).

We are hopeful that the City will continue to require the evaluation of site-specific environmental impacts of subsequent non-exempt development proposals in compliance with CEQA, including mandatory noticing and public review requirements. This will allow SCE and other affected stakeholders the opportunity to work with the City to address relevant environmental issues and recommend viable mitigation measures.

If any of the subsequent development proposals implementing the General Plan affect SCE facilities, it is essential that their environmental impacts are adequately addressed. This is particularly true for projects that do not fit into any GO 131-D exemptions and would otherwise require CEQA review by the CPUC, a process that could delay project implementation.

We look forward to working with you as you update your General Plan, and on its implementation upon adoption. SCE does have the capacity to continue to serve the existing and future developments in the city, and we are committed to working with the City, project proponents and developers to facilitate the design and subsequent construction of relevant facilities to serve all proposed projects. If you have any questions or seek clarifications, please contact me at 805 654-7226. Thank you.

Sincerely Yours

Nancy M. Williams

Region Manager

Letter 29

COMMENTER: Nancy M. Williams, Region Manager, Southern California Edison

DATE: July 18, 2005

RESPONSE:

The commenter notes that SCE has the capacity to continue to serve existing and future developments in Ventura, but notes that certain projects that may be accommodated under the 2005 General Plan (road widenings, for example) may require the construction or relocation of SCE facilities. As the commenter notes, the City will undertake project-specific environmental reviews for individual projects accommodated under the 2005 General Plan. Any impacts to SCE facilities, including potential secondary effects associated with the relocation of facilities, will be addressed as part of future project-specific environmental documents.

DELIVERED VIA E-MAIL AND FAX

RE: City of San Buenaventura 2005 General Plan Draft EIR

Dear Ms. Gialketsis:

On behalf of HOME (Housing Opportunities Made Easier) thank you for the opportunity to comment on the City of Ventura's proposed 2005 General Plan and its accompanying Draft Environmental Impact Report, dated June 2005. HOME is a volunteer-based alliance of non-profit organizations, area business leaders, elected officials and concerned citizens who have as a common goal, working together to create a more receptive environment for the development of high-quality workforce housing in Ventura County. HOME's mission is to facilitate community engagement and support for proactive solutions to create a greater diversity in housing choices.

HOME supports smart growth strategies, which include mixed-use, higher density, and pedestrian/transit oriented development by concentrating growth, when possible, on infill sites and by the revitalization of older, underutilized, or deteriorating properties and areas of the community located near transit, or within walking/biking distance of jobs and services. We applaud Ventura's leadership in this area, and encourage you to continue your efforts to streamline the development process for these types of properties. We do, however, have several concerns regarding the assumptions, and the implementation feasibility of the 2005 General Plan. HOME offers the following comments for your consideration:

- A) The Project Objectives section of the DEIR lists the Ventura Vision Goals, which have been translated into the required General Plan Elements. While we appreciate this creative approach to integrating the community's priorities (as expressed in the "Ventura Vision" document) into the City's General Plan Update, we are concerned that the General Plan does not contain enough specificity, in some areas, to successfully implement the Vision. We understand that, following the Ventura Vision, the 2005 General Plan is "the second in a series of three connected documents that will guide future conservation and change in the City" (DEIR 1-2). However, until the City completes the third step in this process, the form-based Development Code, which will provide the regulatory structure for implementation of the 2005 General Plan, it may prove difficult to successfully, and efficiently implement some of the General Plan Policies.

We encourage the City to create greater clarity in how development proposals will be reviewed and regulated, until stage three (new form-based Development Code) is adopted. Numerous General Plan Action items, including 3.11, 3.17, and 3.18, indicate the City's intent to re-write its zoning ordinances and development codes to better facilitate its intensification/reuse strategy. HOME encourages the City to expedite this process, and to make clear and decisive policy decisions as to how it will respond to proposed development projects, which are submitted during the period prior to the adoption of the new codes. Without the adoption of the form-based Development code, it would appear that it will be all but impossible to process a new proposed development.

Infill Development is already inherently risky, and can often be more costly and difficult to complete, due to existing site issues, constraints, and perceived conflicts with existing uses. In order to: "Utilize infill development to accommodate the targeted number and type of housing units described in the Housing Element" (Action 3.11), it is incumbent upon the City to work diligently to remove regulatory obstacles and barriers to realization of this goal.

- B) Alternatives:** While we recognize that, for the reasons mentioned in the DEIR, the "No Project" Alternative is not realistic, we disagree with the assertion that since "this alternative assumes that no further development occurs in the City..." then "environmental conditions do not change" (DEIR S-4). HOME recognizes that while this statement may be "technically accurate" based on the definitions and guidelines for environmental review under CEQA, it is "functionally inaccurate", in that development does not, in and of itself, dictate population growth; nor will the lack of it allow the City to avoid the environmental impacts created by a failure to plan for realistic projections of future population growth. HOME strongly advocates the reform of this type of "one-sided" view of the environmental review process, as implemented under CEQA. In order to facilitate the production of workforce housing, while also protecting our natural and existing built environment, we must begin to clearly and objectively assess both the positives and negatives of our land use decisions, including the negative impacts which may be caused from a failure to adequately plan for the future housing needs of our workforce, and all of Ventura's residents. B
- C) Population Growth Projections:** The Intensification/Reuse Only Scenario assumes an annual population growth rate of 0.88%, while all of the other Scenarios are based on a projected rate of 1.14%. While the 0.88% annual rate reflects Ventura's actual growth rate for the past 10 years (1994-2004), we believe that this growth rate was uncharacteristically low for that timeframe, due in part to the 1990s recession, which hit the construction industry hard. We believe that the 1.14% growth rate, which is much closer to the Countywide rate of 1.2%, and reflects the City of Ventura's most recent (2000-2005) actual growth rate of 1.0%, is a more realistic projection of growth that will actually occur, and for which the City should plan. It appears as though the 0.88% growth rate was selected largely due to concerns regarding the potential to exceed SCAG and/or AQMP growth projections, even though these limitations are discounted elsewhere in the DEIR as being outdated. This "two-sided" argument, both for and against adherence to these growth projections, could likely be used by "no growth" advocates to challenge future development approvals. C
- D) Our Well Planned Community:** In order to satisfy State requirements, every General Plan must include policies for the seven required "elements", including the Land Use Element, which "establishes the general distribution and intensity of land uses, including housing, commerce, industry, open space, education and public facilities." (2005 GP page 11) D

The proposed 2005 General Plan includes a number of "over-arching goals for the City of Ventura", including: "Our Well Planned and Designed Community", which has been incorporated into the Land Use, Housing, and Community Design Elements. Table 2-1 of the DEIR (page 2-11), gives the following "Examples of Topics Covered" under these General Plan Elements: "Development patterns, neighborhoods, visual character, urban design, demographics, housing needs, affordability, constraints on production." And yet, the 2005 General Plan offers this description of the General Plan Chapter, called "Our Well Planned Community ... Our goal is to protect our hillsides, farmlands, and open spaces; enhance Ventura's historic and cultural resources; respect our diverse neighborhoods; reinvest in older areas of our community; and make great places by insisting on the highest standards of quality in architecture, landscaping and urban design."

While the items expressed in this section may certainly be valid goals for the City to pursue, HOME questions the appropriateness of including them in the "Land Use Element" of the General Plan. It seems to us, that many of these priorities are more appropriately expressed elsewhere in the Plan,

(i.e. the Conservation, Open Space, and/or Culture Elements). The Land Use Element should focus on such things as development patterns and urban design, not conservation issues. While the 2005 General Plan clearly defines infill as a priority, and refers to planning tools such as form-based codes that the City intends to adopt in the future, we are concerned that the City currently lacks the regulatory structure that will allow it to implement its planning goals, and land use policies. Chapter 3 of the 2005 General Plan effectively describes the City's vision, but provides limited details as to how, or when, it will adopt and/or revise the existing codes and programs (like the RGMP-Action 3.18) in order for this vision to be realized. It is not enough for the City to simply "insist on the highest standards of quality in architecture, landscaping and urban design", it is incumbent upon the City to provide the development community with the proper tools and regulatory structure, to facilitate quality development.

One further concern regarding the Land Use Element is in the area of open space, education, and public facilities. The DEIR points to several limitations to the City's ability to adequately plan for and meet its needs in these areas, via the Intensification/Reuse Only Scenario. The DEIR identifies several "potentially significant impacts" relating to the need for new facilities that cannot be adequately mitigated with an infill only strategy. While HOME fully supports infill development, whenever and wherever possible, we also recognize the inherent limitations of this approach in meeting some of the more land-intensive needs of the community's growth. We encourage the City to refrain from limiting its ability to include additional land in its planning inventory, which could allow it to meet the need for additional public facilities, parks, and open space.

- E) Housing Affordability:** As previously stated, HOME's mission revolves around "workforce housing", which may include, but is not limited to "affordable housing" per the legal definitions. However, we are very concerned about issues that impact housing affordability, including the costs associated with the development and construction of new housing units. As such, there are numerous references in the DEIR, which identify City infrastructure deficiencies that will need to be upgraded, repaired, and/or replaced in order to accommodate the intensity of development that is called for in Scenario 1. We encourage the City to aggressively pursue an action plan, and funding sources, to correct existing infrastructure deficiencies, which would not place the entire burden of financing these community-wide needs on the backs of builders and new home buyers. E
- F) Process:** Section 1.5 of the DEIR clearly defines the CEQA Environmental Review Process, which requires that the City's decision making bodies have an opportunity to review and consider the FINAL EIR, including all public comments and responses, prior to making a decision on Final EIR Certification of the proposed project (the 2005 General Plan). HOME questions the City's ability to meet this CEQA requirement, given the proposed timeframes for closing the public comment period on July 18th, while scheduling Public Hearings with the Planning Commission and City Council on July 19th and August 8th, respectively. How can the City possibly consider and respond to all public input within such a compressed timeframe? F
- G) Conflicting Priorities:** We are concerned that some of the stated Policies, Actions and Priorities expressed in the 2005 General Plan may be internally inconsistent or lacking sufficient specificity for the GP to be a useful tool in guiding future growth and development. Some of these inconsistencies are addressed above, as in the focus on Intensification/Reuse to meet the projected growth, in spite of clearly identified physical and regulatory constraints in many of the areas targeted for infill development. Another, more subtle example of this issue is Action 1.20, which calls for the City to "Adopt development code provisions to protect mature trees..." without defining "mature trees" or how they will be "protected". Furthermore, Section 4.5 of the DEIR discussed the prevalence of Cultural and Historic Resources in several of the areas that have been identified for intensification/reuse, without fully acknowledging the extent to which the City's *Historic* G

Preservation Regulations, which are much broader and less clearly defined than State or Federal Historic Preservation Policies, may limit development in these locations.

H) Parks: The City of Ventura is a mature city with existing park and recreation areas that have come on line as needed. We are fortunate enough to have an incredible park that inland cities would die for in our beaches. Yet, the EIR is recommending that we apply the same park acreage as required in non-coastal cities. When the Form Base Code guidelines come on line, it would seem that minimum 5 acre parks would be too rigid and unnecessary. Park space should be designed and formatted with the same flexibility that Form Based Code itself offers. Changing housing stock and the impending change of lifestyle that will accompany it, will lead to creative design and uses of parkland that should not be restricted by outdated and less fluid guidelines. H

I) Biological Resources: The specificity of the buffer area in Action 1.8 related to rivers, creeks and barrancas is too binding. While we acknowledge the need to protect these precious environs, an arbitrary set back of 50 feet could severely limit the creativeness and integration that the Form Based Code encourages. Strictly applied, this buffer area could squash entire infill developments. We encourage arbitrary requirements like this to be removed from the EIR and left to the already strenuous and rigorous review that all projects must be subjected. I

Thank you for the opportunity to submit our comments. HOME is truly excited about the principles of Form Based Code that the City of Ventura has embraced, and we are pleased to see the City's leadership in promoting a new way to grow our incredible city.

HOME sincerely looks forward to the adoption of the new General Plan and EIR.

Brad Golden

Letter 30

COMMENTER: Brad Golden, Vice Chair of HOME and Ventura resident

DATE: July 26, 2005

RESPONSE:

Response 30A

The commenter urges the City to expedite the preparation of a new development code, noting that processing of new developments may be difficult until the new code is adopted. The City will be initiating preparation of the new development code upon adoption of the 2005 General Plan. However, in the interim period between adoption of the General Plan and the new development code, the City will continue to process applications based on the current code requirements and the guidance provided in the 2005 General Plan.

Response 30B

The commenter states disagreement with the approach to the analysis of the "no project" alternative, which is based on the assumption that no physical changes to the environment would occur. The commenter is correct that a moratorium on development would not necessarily stop population growth in the City and that failure to provide new housing may lead to a variety of undesirable conditions (overcrowded housing, higher housing prices, etc.). The Draft EIR acknowledges these facts as well as the fact that the "no project" alternative is not feasible.

Response 30C

The commenter states opinions that the 1.14% annual growth rate is more realistic than the 0.88% growth rate and that it appears as though the 0.88% annual growth was selected due to concerns about SCAG and AQMP growth projections. The opinion regarding the appropriate growth rate is noted. Both growth rates discussed in the Draft EIR were selected by the City Council and represent historic growth rates in the City (the 1.14% rate is the 20-year growth rate while the 0.88% growth rate is the 10-year growth rate). SCAG and AQMP population forecasts were not used to develop either rate and, in fact, both growth rates exceed the SCAG and AQMP forecasts. The Draft EIR acknowledges this exceedance. However, it is anticipated that, following adoption of the 2005 General Plan, both SCAG and the Ventura County APCD will update their population forecasts for the City to reflect the new General Plan.

Response 30D

The commenter states opinions about the format and content of the 2005 General Plan and notes that the Draft EIR points out several limitations associated with the "Intensification/Reuse Only" scenario. The commenter also encourages the City not to limit its ability to include additional land in its planning inventory. The comments about the 2005 General Plan are not relevant to the adequacy of the Draft EIR, but will be considered by the City Council as they review the final General Plan. It is true that the Draft EIR points out certain limitations for

the “Intensification/Reuse” scenario, particularly relating to land available for new schools and parks. However, the Draft EIR does not identify such limitations as “significant” impacts. Although City staff are not recommending inclusion of any of the expansion areas at this time, several of the expansion areas could provide acreage for parks and schools and the City may consider future General Plan amendments to allow development of one or more of these areas in the future if such an amendment would meet planning objectives that cannot be met through intensification or reuse. It should be noted, however, that conversion of any of the expansion areas except for portions of the Western Cañada Larga area would be allowed only following voter approval under the SOAR Ordinance.

Response 30E

The commenter encourages the City to pursue action plans for addressing infrastructure deficiencies that will not place the entire burden of financing community-wide needs on builders and new home buyers. The City will develop such action plans to address needed improvements to roads, storm drains, and water and sewer lines. Builders will be responsible for financing improvements needed to serve their developments, but not to correct existing deficiencies.

Response 30F

The commenter questions how the Final EIR can be completed within a compressed timeframe. Responses to comments on the Draft EIR were completed and provided to agency commenters 10 days prior to the City Council’s August 8 hearing (at which the Council may certify the Final EIR), thus complying with CEQA’s requirement that public agency commenters receive responses at least 10 days prior to certification.

Response 30G

The commenter states an opinion that the General Plan may include conflicting priorities, specifically by calling for the preservation of mature trees and historic resources in areas where intensification and reuse are expected to occur. Every General Plan (and every community) has certain priorities that can be in conflict. The two examples cited by the commenter reflect the City’s desire to preserve its resources. The exact manner in which these actions are to be implemented will be detailed in the new development code. New developments that are consistent with general policy goals while potentially conflicting with others will need to be addressed on a case-by-case basis to determine whether and how such conflicts can be reconciled and which priorities take precedence.

Response 30H

The commenter states an opinion that park standards need to be flexible. This opinion is noted. The Draft EIR discusses the City’s general standards in order to provide an overall analysis of citywide impacts associated with projected growth; however, the City will continue to seek creative and flexible ways of meeting the community’s needs with respect to parks and recreation. In addition, language has been added to the General Plan under Policy 6A as follows:

Update standards for citywide public parks and open space to include an expanded menu of shared park types, and identify locations and potential funding sources for acquiring new facilities in existing neighborhoods.

Response 30I

The commenter states an opinion that the 50-foot buffer from riparian areas in Action 1.8 is overly restrictive. This opinion is noted. The 50-foot buffer has been determined to provide the minimum distance needed to effectively protect riparian habitat and associated wildlife movement corridors. This minimum distance is consistent with that adopted by a number of communities in the southern California region. It should be noted that this requirement only applies to waterways that retain natural soil slopes.

COMMUNITY DEVELOPMENT

RECEIVED

JUL 18 2005

PLANNING DIV. *RA*

July 15, 2005

31

Carolyn Briggs, Chair and
Members of the Planning Commission
501 Poli Street
Ventura, California 93002

Dear Chair Briggs and Members of the Planning Commission:

These preliminary comments on the draft 2005 Ventura General Plan (May 2005) ("DGP") and draft Environmental Impact Report ("DEIR") are made on behalf of the Ventura Port District ("District"). In 1999, the City Council and the Board of Port Commissioners entered into a Memorandum of Understanding ("MOU") for the preparation of a Master Plan for the Harbor Area. The MOU is attached as Exhibit A. It was contemplated that the Master Plan would be adopted as a Specific Plan and constitute the land use plan and zoning for the Harbor Area. The draft Master Plan and Master Environmental Impact Report ("MEIR") have been complete for over two years. The District has, however, refrained from circulating the documents for public review in an effort to reach agreement with the City on how to address an existing deficiency in fire service response times in and around the Harbor Area. The DGP and DEIR raise a number of issues of concern with respect to the draft Master Plan/Specific Plan, some of which are outlined below.

1. Harbor Master Plan.

The DGP (p. 3-8) establishes the "Harbor District" and describes it as an area with visitor serving uses and marine facilities to be regulated by a Harbor master plan. The DGP land use map designates The Harbor as "Draft Harbor Master Plan." This should be "Specific Plan." Because the draft Harbor Master Plan has been incorporated by reference into the DGP, it should become the overriding policy document for land use, water use, and future development of the Harbor upon adoption of the DGP, whether the Master Plan has itself been adopted or not or as a Specific Plan. The policy language in the DGP should be expanded and clarified to make it clear, without question, that the Harbor Master Plan/Specific Plan is the overriding policy document for the Harbor. A copy of a booklet describing the master plan is enclosed. This booklet was distributed at the joint City Council/Board of Port Commissioners meeting in April 2005.

July 15, 2005
Page Two.

2. Local Coastal Program.

B

The draft Master Plan/Specific Plan are based on the City's certified Local Coastal Program ("LCP"). Apparently, the DGP is intended to supercede the Land Use Plan ("LUP") of the LCP. If this were to occur, there would be serious procedural and substantive issues, some of which are outlined below.

a. The DGP may not be specific enough to satisfy the Coastal Act or the California Coastal Commission ("CCC") and the CCC would want to review the LUP together with the Local Implementation Plan [zoning]. For example, the Land Use Plan does not show "visitor serving uses" or public access ways. The District could be caught between the City and the CCC. Until a development code is adopted and approved by the CCC, there would be a lack of certainty regarding what may or may not be built in the Harbor.

b. Processing a LUP amendment is very time-consuming. A whole new LUP could take years to get in place.

c. If the certified LUP is repealed or superceded while the CCC reviews a new one, this would leave the City without the ability to process any projects in the coastal zone during the interim. Applicants would need to seek approvals from the CCC, which is time consuming and difficult without a certified LUP. Further, it is unlikely a new LCP or LUP with residential units would be certified by the CCC.

d. The Harbor would need to separately seek CCC approval of the Master Plan/Specific Plan. This would otherwise be unnecessary because the draft Master Plan is consistent with the existing LUP.

e. The Sondermann/Ring project, which is critical to the economic vitality of the Harbor, may be greatly delayed.

f. Because the DGP does not appear to be inconsistent with the certified LUP, it would be wise to leave the LUP in place and overlay applicable DGP policies and "actions." This would avoid seeking CCC approval at all.

g. If there is an inconsistency between the DGP and the LUP, a specific amendment to the LUP could be sought concurrently with the LCP amendment required to support the Sondermann/Ring project.

h. The certified LUP could be attached as an appendix to the DGP for easy reference. The maps could be revised to specify LUP in the coastal zone.

i. Specific plan areas could be shown as "Specific Plan." The Harbor area should be titled "Harbor Specific Plan," not draft Master Plan.

July 15, 2005

Page Three.

j. These changes to the DGP are not complex and would avoid what could become a procedural nightmare and engender costly litigation from developers unable to process their projects in the coastal zone.

3. Fire Services. C

The DEIR suggests that a new fire station and nine firefighters are needed to accommodate anticipated growth in the Harbor. The DGP and DEIR also state that a new fire station is needed to address current deficiencies. Thus, the 9 firefighters needed for the new station are also necessitated by an existing condition. Based on a desired ratio of 0.98 per 1,000 residents (the City now operates at 0.69 firefighters per 1,000 population), development of Parcels 15 and 18, hotel expansion, and the marine learning center, do not, themselves come close to justifying a new station or 9 firefighters. These developments should, like any other new development, provide a fair share toward the capital costs of a new station. Neither the DGP nor the DEIR justify requiring the Harbor to fully fund development and the operation and maintenance of a fire station. While the DGP calls for resolving extended response times by adding a fire station at the "Pierpont/Harbor area," it only calls for studying the feasibility of funding services from fees, taxes or assessments "as new subdivisions designed on the New Urbanism concept are established." Action 7.13, which is intended to address fire response mistakenly refers to police services. In addition, neither the DGP nor the DEIR actually address the need for firefighting capabilities for non-residential use. The only concept of fair share related to the ratio of firefighters to population is set forth in the DEIR. The discussion of plans for a fire station in the Harbor are more detailed than called for by the DGP. (See DEIR, p. 4.11-28.) It is not certain that impact fees would be sufficient to pay for fire facilities and equipment. Impact fees cannot be used to cure existing deficiencies or for operational costs. (See, DEIR, p. 4.11-31.) Assessments require voter approval.

4. Process. D

Cooperation and input from the District in the preparation of the DGP policies was not requested. DEIR p. 1-2 describes 11 City Council meetings from Feb. - Aug. 2004 taking input from the CPAC and Planning Commission. Nowhere in the DGP and DEIR is there a discussion of the District's input into the process. As discussed below, the DGP policies and actions could conflict with contractual rights of District lessees.

5. Responsible Agency. E

The District should be designated as a "responsible agency" under the CEQA definition. The District is a public agency that would carry out policies of the DGP and LCP as it pertains to the Harbor.

July 15, 2005
Page Four.

6. Assumed Net Increase in Development at Buildout.

The level of future development assumed within the Harbor is not clearly called out in the DEIR, but can be determined from tables estimating water and sewer impacts. Based on these tables, the proposed DGP assumes a net increase within the Harbor of 300 dwelling units at 216,000 square feet of non-residential building area. Of this non-residential area, 150,000 square feet are identified as hotel use, leaving 66,000 square feet for expansion of other non-residential uses within the Harbor. This is insufficient to provide for development of the Marine Learning Center (approximately 77,000 square feet) and commercial uses within Parcels 15 and 18.

7. Protecting and Restoring Coastal Resources.

DGP Action 1.3 would require the District to determine and carry out appropriate methods for protecting and restoring coastal resources, including supplying sand at beaches (from dredging operations). This could be costly and unreasonable for the District to carry out this action on its own. It is uncertain whether dredging spoils would be suitable for such beach restoration.

8. Preservation of Sensitive Wetland and Coastal Areas.

DGP Action 1.11 would require sensitive wetland and coastal areas to be preserved as undeveloped open space wherever feasible. This could affect the District's ability to develop vacant Parcels 8, 15 and 18 depending on how "sensitive wetland and coastal areas" are defined. The CCC has very specific and rigorous restrictions on development in and adjacent to environmentally sensitive habitat areas (see California Coastal Act Section 30240). Although it does not appear that "sensitive wetland and coastal areas" affect any of the areas planned for development within the Harbor, it is necessary to make sure that such definitions will not apply.

9. Updating and Enforcing Stormwater Quality and Watershed Protection Measures.

DGP Action 1.14 requires compliance with directives from regulatory authorities to update and enforce stormwater quality and watershed protection measures. This could be costly, extensive, and unreasonable for the District to carry out such regulatory directives since watersheds extend miles inland from the Harbor. The Harbor is the "end user" and should be responsible for actions within the Harbor, and not for stormwater protection in the entire watershed.

10. Prohibition on Dredging.

DGP Action 1.18 would prohibit dredging during fish spawning and bird migration cycles. Without clear and specific definitions of species and types of fish spawning and bird migration, this could severely limit or shut down dredging operations in The Harbor.

July 15, 2005

Page Five.

11. Promote Channel Islands Tours and Develop an Aquarium.

DGP Action 2.17 would establish a partnership between the City, District, and National Park Service to promote Channel Islands tours and develop an Aquarium. This is helpful, but not a definitive commitment, nor are details are provided.

12. Prioritization of Uses in the Harbor Master Plan Area.

DGP Action 2.18 would prioritize uses in the Harbor Master Plan area as follows: (1) commercial visitor-serving, (2) recreation, boating, fishing, (3) commercial fishing, and (4) public service facilities. This prioritization of uses conflicts with the range of uses in the Harbor Master Plan. For example, residential use is excluded from the prioritized list of uses, even though the CCC has taken specific action to permit such uses within the mobile home park and on Parcels 15 and 18. Commercial fishing is the number two priority in the Master Plan and is a critical use required to sustain the District's eligibility for federal dredging funds.

13. Public View and Solar Access Preservation.

DGP Action 3.3 would require preservation of public view sheds and solar access. This policy could affect the District's ability to develop vacant Parcels 15 and 18 depending on how "public view sheds and solar access" areas are defined.

14. Public Access.

DGP Actions 3.4, 4.20-6.5, and 6.6 would require (and encourage) public pedestrian and bicycle access to and along the coast on all shoreline development. The policies would affect the design of new development on vacant Parcels 8, 15 and 18, and may impact the Yacht Club due to lack of shoreline access on the Yacht Club parcel. Clarification is needed to determine if the public access system set forth in the Master Plan fulfills these actions.

15. Form-Based Development Code.

DGP Action 3.17 would affect building and site design on Harbor parcels to emphasize pedestrian orientation, integration of land uses, treatment of streetscapes as community living space, and environmentally sensitive building design and operation. While form-based codes have a number of benefits, it is questionable whether the CCC would accept such a code as the sole basis for a Local Implementation Plan.

16. Minimize Truck Traffic on Residential Neighborhoods.

DGP Action 4.9 would identify, designate, and enforce truck routes to minimize the impact of truck traffic on residential neighborhoods. This policy could adversely impact the movement of goods and cargo in and out of the District depending on how it is implemented. Action 4.9 should be clarified to specify the location of truck routes.

I

July 15, 2005

Page Six.

17. Alternative Transportation Modes and Transit.

DGP Actions 4.15, 4.16, 4.17, 4.18, 4.27, 4.31, 4.32, and 4.34 encourage alternative modes of transportation and transit systems to reduce vehicle trips and congestion. This could affect circulation and access to the Harbor depending on how these policies are implemented.

18. Expanded Recreational Opportunities.

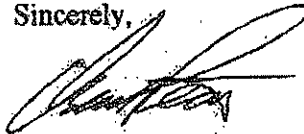

DGP Actions 6.15 and 6.16 call for new recreational programs that would occur in the Harbor, such as surfing, sailing, kayaking, bird watching, and additional boating and swimming access. Care must be taken in how these expanded recreational uses are conducted, for example, allowing swimming in boat navigation channels could be hazardous.

19. Cultural, Historical, and Archaeological Resources.

DGP Actions 9.2, 9.3, 9.12, 9.13, 9.14, 9.15, 9.16, 9.17, 9.18, and 9.19 would affect activities, operations, redevelopment, design and restrictions on District parcels. District input on these policies would be appreciated.

Thank you for considering these comments. The District respectfully requests that the hearings on the DGP and DEIR be continued for three months to provide an opportunity for the District and the City to resolve these and other issues.

Sincerely,

Oscar F. Peña
General Manager

Susan J. Daluddung
James E. Neuerburg

Agreement No. 99-88City Council Approved: 8/4/99

**MEMORANDUM OF UNDERSTANDING
AND LEAD AGENCY AGREEMENT**

This Agreement is made by and between the City of San Buenaventura ("City") and the Ventura Port District ("District") in consideration of the following facts.

A. The District desires to update its master plan for the Ventura Harbor in accordance with requirements set forth in the 1998 Local Coastal Program ("LCP") amendment.

B. The City and the District desire to work together to initiate a joint process for developing a specific plan for the Harbor area.

C. It is contemplated that the master plan would be the land use plan for the specific plan and the specific plan would constitute the zoning for the Harbor area.

These regulations are hereinafter referred to collectively as the "Specific Plan".

D. Amendments to the LCP may be desirable to realize the objectives of the Specific Plan.

E. It is contemplated that a master environmental impact report ("MEIR") will be prepared for the project.

F. The parties desire to (1) designate a Lead Agency for the MEIR; (2) specify general procedures for actions relating to A through E, above; (3) allocate costs for preparing and processing the MEIR and the Specific Plan; and (4) specify the currently contemplated time frame for processing the MEIR and Specific Plan.

G. All parties desire to process the foregoing planning documents in an efficient and timely manner that maximizes public input and stakeholder involvement.

To that end, it is hereby agreed as follows:

1. This Agreement shall become effective between the City and the District upon approval by the City Council and the District Board.
2. The District will act as Lead Agency for the MEIR and the City shall be a Responsible Agency as defined by the California Environmental Quality Act.
3. The District and the City will jointly select consultants necessary for processing the MEIR and the Specific Plan.
4. Public workshops will be held to solicit input from all stakeholders and the public, including, but not limited to, lessees, franchisees, businesses in the Harbor area, potential developers, surrounding residents and environmental and special interest groups such as fishing, boating and surfing organizations.
5. During the public review period, the City Planning Commission may convene hearings on the draft master plan and MEIR, as it deems appropriate, to provide comments to the District.
6. Prior to adoption of the master plan and certification of the final MEIR, the District will fully consider and evaluate all City recommendations, and explain in writing the reason(s) any such recommendation is rejected.

7. The parties contemplate that the Specific Plan will be adopted by the City Council after adoption of the master plan and certification of the MEIR by the District.

8. The cost of preparing and processing the Specific Plan, the MEIR and LCP amendments, if any, (excluding administrative overhead expense) will be shared equally by the District and the City, up to a budgeted \$100,000 for each agency.

9. District and City will separately, and jointly, as the case may be, apply for grants to defray the costs of the Specific Plan and MEIR (herein the "Project Costs"). In addition, it is contemplated that Harbor tenants and developers whose development proposals are to be considered or included as part of the Specific Plan and MEIR may contribute to funding of the Project Costs. Upon receipt of such grant funds, and/or tenant and developer contributions, such grant funds and contributions, together with any District and City funds required to be contributed as grant matching funds, shall be applied first to Project Costs. Thereafter, District and City funds shall be applied to Project Costs only when the grant funds, and/or tenant and developer contributions are exhausted. Excess funds, if any, remaining after completion of the Specific Plan and MEIR shall be returned to District and City in amounts proportional to their contributions to Project Costs which are contemplated to be equal. District and City will also establish a procedure, pursuant to Government Code section 65456 and Public Resources Code section 21157(c), whereby tenants and developers who haven't contributed their fair

share of the Project Costs prior to commencement of work on the Specific Plan and MEIR will be charged a fee in an amount equal to their proportionate share of the Project Costs, at the time of application for a permit, or other entitlement for a development project considered or included in the Specific Plan and MEIR. All revenues received from such fees shall be used to reimburse District and City for their Project Costs in amounts proportional to their contributions to the Project Costs.

10. The District will contract with the consultant(s) and forward a copy of approved bills to the City's Director of Management Services. The City will pay the District one-half of the approved bills within 30 days of City's receipt of the approved bill.

11. In the event litigation is filed challenging the MEIR and/or the Specific Plan, the District and the City will cooperate in the defense of the action and equally share their expenses of the defense.

12. In the event LCP amendments are proposed, such amendments will be processed with the California Coastal Commission following adoption of the Specific Plan by the City.

13. The currently contemplated time line for processing the Specific Plan and possible LCP amendments, if desirable, is attached as Exhibit A.

14. Notices shall be provided as follows:

VENTURA HARBOR MASTER PLAN

Ventura Port District
City of San Buenaventura

April 4, 2005

Purpos

- Define a consistel
- Create a planning Harbor.
- Facilitate a Master

Existing Setting

■ Central Harbor

Plan 10A
 Planning Copy
 Central Harbor

VENTURA HARBOR
 MASTER PLAN

L S A

Existing Setting

■ Southwest Harbor

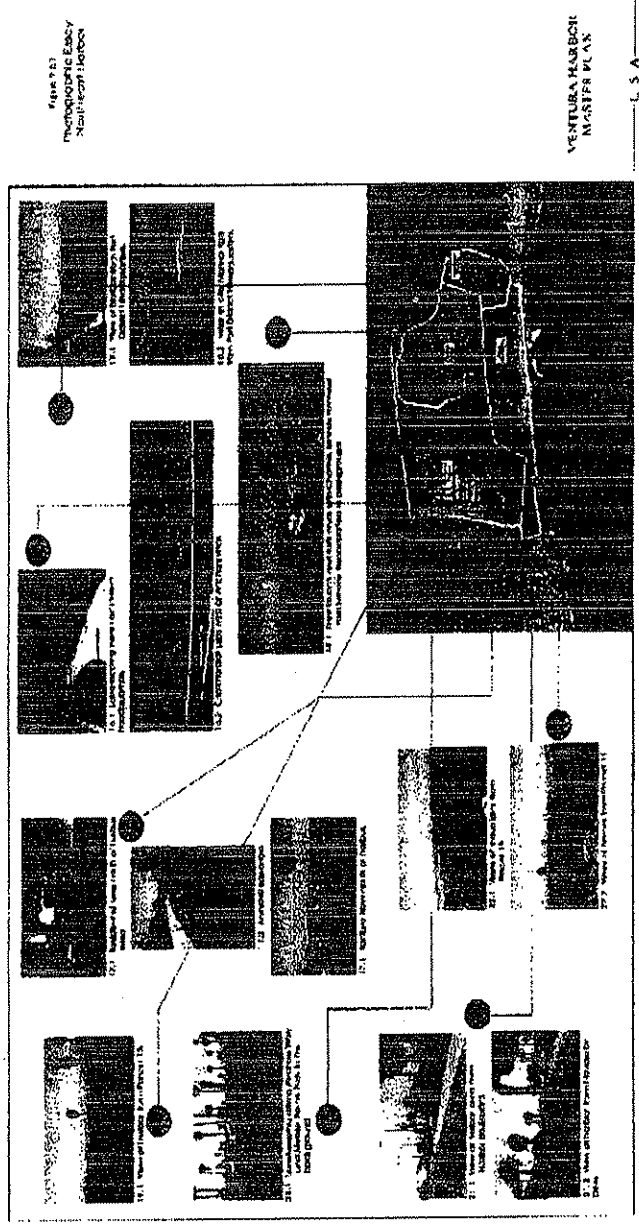

Existing Setting

- South Peninsula

Existing Setting

■ Northeast Harbor

Coastal Act Priorities

- Coastal Dependent and Ocean-Related Uses
- Commercial Fishing
- Coastal Access
- Visitor-Serving Commercial and Recreational Uses

Local Coastal Plan and Comprehensive Plan Requirements

- Northeast Harbor
 - Harbor Commercial
 - Harbor-Related Mixed Use
 - Mobile Home Park
- Central Harbor
 - Harbor Commercial
- Southwest Harbor
 - Harbor Commercial
- South Peninsula
 - Harbor Commercial

Land Use Objectives

- Create a recognizable visitor-serving destination, well integrated with the functions of a working harbor.
- Provide a human-scaled environment, and provide gathering places and amenities for people to enjoy.
- Facilitate walking and biking for recreation and transportation.
- Emphasize views of the harbor, ocean, and coastal mountains.
- De-emphasize the visual prominence of automobiles within the Harbor.

Land Use Plan

- All existing uses are considered to be permitted uses, may remain, and expand.
- Future land uses are options for future development.
- Master EIR to facilitate future development review for new permitted uses and expansion of existing uses.

Circulation: Roadway Improvements

- Harbor Boulevard
 - Signal at Oyster Street and modifications to slow traffic speeds. (Not part of Master Plan)
- Beachmont Street
 - One-way crossing of the Arundell Barranca.
 - Traffic calming.
- Anchors Way
 - Limit northbound left turns; improve ease of permitted turning movements.

Circulation: Roadway Improvements

- Spinnaker Drive
 - Reconfigure intersection at Navigator Drive to eliminate left turns from Navigator.
 - Access to commercial center on Harbor Boulevard would be right in/out only along Spinnaker Drive.
 - End public street right-of-way at Parcel 6, and reconfigure parking areas.
- Schooner Drive
 - Modify median to permit left turns into Parcel 19A.

Parking

- Projected deficit of 195 spaces (weekend) at build out.
- Solution: establish common parking areas and shuttle service.
- Potential locations for common parking:
 - Parcels 19A, 5, and 7.
 - Vacant land adjacent to mini-warehouses.

Coastal-Related Services and Facilities

- Pedestrian and Bicycle Access
 - Improve crossings of boat storage (Parcel 20), boat launch (Parcel 12).
 - Connection through Parcels 15, 16, 18.
 - Improve crossing of fish off-loading area (striping and signage).
 - Improve connections to beach.
- Waterfront Promenade
- Beachfront Boardwalk
- Spinnaker Drive Crossings
 - Signage.
 - New crossing at Parcel 3A to the existing parking.

Recreational Opportunities

- Marina Facilities
 - Provide additional space for large boats.
- Channel Islands National Park
 - Assist NPS in meeting headquarters needs.
 - Facilitate Channel Islands visitation.
- Marine Learning Center and Aquarium
- Boat Launch
- Park on Parcel 16

Visitor-Serving Opportunities

- Hotel Expansion
- Expand Harbor Village
- Park and waterfront trail on Parcels 15, 16, 18
- Sport fishing and charters (Parcel 5)
- Expanded facilities for Island Packers

Public Services and Facilities

- Water Facilities
- Sewer Facilities
- Drainage
- Electricity and Natural Gas
- Public Safety Services
 - Law Enforcement
 - Fire Protection

Fire Protection Issues

- Majority of existing Harbor area does not meet Fire Department response time objectives.
- Majority of service calls are for emergency medical assistance.

Recommended Fire Service Provisions

- Port District to assume responsibility as first responder for emergency medical calls within Harbor.
- New commercial, retail, office, and public facilities development over 500 s.f. of building area will install automatic fire sprinkler systems, or meet requirements of City's Automatic Sprinkler Ordinance, whichever is more restrictive.
- Use of fire-resistant construction materials.

Recommended Fire Service Provisions (cont'd)

- Provide adequate address signage to facilitate emergency response.
- Pursue joint training of Harbor Patrol and Fire Department personnel to better respond to water-related emergencies within the general Harbor area.
- Port District to make available a fire boat for fire and emergency service within the Harbor and Keys area and catastrophic emergency services to the City pier.
- Provide fire hydrants and water lines in compliance with UFC and City requirements.

Recommended Fire Service Provisions (cont'd)

- Design internal circulation on development sites to accommodate fire suppression equipment with adequate turn-around areas.
- Ensure that City fire flow standards are met.
- Provide a usable 1/2-acre site within the northern end of Parcel 19A for establishment of an "all risk" fire station by the City upon notice that the City is prepared to construct and establish service at the station.
- Payment of fees pursuant to City ordinance, if adopted.

Master EIR

- Notice of Preparation (NOP) distributed on January 30, 2002.
- Issues addressed in the MEIR:
 - Aesthetics
 - Air Quality
 - Hydrology
 - Noise
 - Public Services
 - Traffic and Circulation
- No significant unavoidable impacts identified.

Master EIR (cont'd)

- Effects found not to be significant:
 - Agricultural Resources
 - Biological Resources
 - Cultural Resources
 - Geology and Soils
 - Hazards and Hazardous Materials
 - Land Use and Planning
 - Mineral Resources
 - Population and Housing
 - Park Services; Recreation

Purpose

- Define a common vision for the Harbor, consistent with the City's "Seize the Future."
- Create a consolidated reference document for planning and development within Ventura Harbor.
- Facilitate future development review through a Master EIR.

Process

- Analyze existing conditions, issues, and opportunities. Workshops.
- Prepare alternatives and select preferred alternative (March 2000). Workshop.
- Prepare, review and revise Master Plan (September 2002). Workshop.
- Revise Master Plan and prepare EIR (August 2003).
- Resolve fire service issues (ongoing).

Land Use Issues and Opportunities

Issues

- Land use incompatibilities (wastewater treatment, oil storage).
- Seasonal economy; lack of a focal point.
- Limitations on office use.
- Fire protection.

Land Use Issues and Opportunities

Opportunities

Issues

- Commercial fishing fleet.
- Regionally central location.
- Marine Learning Center and Channel Islands National Park Headquarters.

- Land use opportunities
- Water treatment plant
- Regional community lack of a focal point.
- Limitations on office use

Land Use Plan: Northeast Harbor

- Parcels 15, 16, 18
 - Mixed-use with 300 du's, 150 boat slips, and 20,000 s.f. commercial
- Expand hotel
- Improve entry to Parcels 10A and 10B
- Retain Mobile Home Park, restaurant, and boat yard

Land Use Plan: Central Harbor

- Improve Harbor entry and provide directional signage.
- Hotel expansion on Parcel 19.
- Continue marina uses and provide for future expansion.

Land Use Plan: Southwest Harbor

- Wharf (Parcels 3A and 3B).
- Connections to wildlife ponds, Santa Clara River mouth, McGrath State Beach.
- Expand Harbor Village and improve connections to the beach.

Recreational Opportunities

- Marina Facilities
 - Provide additional space for large boats.
- Channel Islands National Park
 - Assist NPS in meeting headquarters needs.
 - Facilitate Channel Islands visitation.
- Marine Learning Center and Aquarium
- Boat Launch
- Park on Parcel 16

Visitor-Serving Opportunities

- Hotel Expansion
- Expand Harbor Village
- Park and waterfront trail on Parcels 15, 16, 18
- Sport fishing and charters (Parcel 5)
- Expanded facilities for Island Packers

Letter 31

COMMENTER: Oscar F. Peña, General Manager, Ventura Port District

DATE: July 15, 2005

RESPONSE:

Response 31A

The commenter states that the draft General Plan should be revised to clarify that the Harbor Master Plan/Specific Plan is the overriding policy document for Ventura Harbor. The text of the 2005 General Plan will be revised to clarify that the City and Port District are working together to cooperatively complete the Master Plan/Specific Plan for the Harbor area. Once the Harbor Specific Plan is adopted, it will become the overriding policy document for Ventura Harbor.

Response 31B

The commenter is concerned that the Draft General Plan is intended to supercede the current Land Use Plan and Local Coastal Program (LCP). The Port District's Draft Master Plan/Specific Plan is based on the City's current certified LCP. While the Port District's concerns are valid, it is not the intent of the 2005 General Plan to supercede the existing LCP. City staff has engaged in several discussions with the Port District to address this issue. In fact the Planning Commission Resolution recommending approval of the Draft 2005 General Plan (July 26, 2005) was specifically written to ensure that this is not the case. The intent is that the existing LCP would remain in full force and effect until the Coastal Commission adopts the new LCP. Thus, all areas of the City within the Coastal zone boundary and subject to the LCP would remain under the same regulations until either an LCP amendment (including the Draft Harbor Master Plan/Specific Plan) is adopted or the new LCP is adopted. In addition, there is specific language in the Draft 2005 General Plan that indicates that the City intends to work with the Port District to complete the Draft Harbor Master Plan and Specific Plan. Therefore, the concerns stated in the Port District's comment letter regarding requiring processing of Land Use Plan amendments would not require any different processing than currently is the case under the existing LCP/LUP.

The draft 2005 General Plan also contemplates the development that is considered in the Draft Harbor Master Plan and is not intended to preclude any current development proposals such as the Sonderman/Ring project.

City staff is not proposing to attach the existing LUP as it is not recommended that it will be superceded with adoption of the 2005 General Plan. The "Commerce" and "Mobile Home Park" designations shown on the proposed General Plan diagram are consistent with the current land use designations in the Harbor area and thus will not create any inconsistencies.

Response 31C

The commenter notes that a new fire station is needed in the Harbor area, but states that developments within the Harbor do not in themselves justify a new fire station or nine firefighters. The commenter also notes a typographical error in Action 7.13 of the General Plan. The typographical error will be corrected. As discussed in Section 4.11, *Public Services*, the Fire Department already has plans to construct a new fire station in the Harbor area in response to an existing service deficiency. If the City adopts a fire impact fee program, new development in the City, including development within the Harbor, would be subject to such fees. Though not an environmental impact of the 2005 General Plan, the VFD has identified the need for approximately 30 new firefighters to offset current staff deficiencies in addition to the new firefighters needed for the new Harbor station. As with all firefighting staff, funding for new personnel to staff a new station would come from the City's general fund unless other negotiated means can be determined.

Response 31D

The commenter states that the input from the Harbor was not requested for the draft 2005 General Plan. The draft plan has been circulated for public review since May 2005 in order to solicit comments prior to preparation and approval of a final plan. The City will incorporate relevant concerns from the Harbor into the final 2005 General Plan.

Response 31E

The commenter notes that the Port District should be designated as a "responsible agency." The Port District will be listed as a responsible agency in Section 1.0, *Introduction*.

Response 31F

The commenter states the level of development assumed for the Harbor does not account for all planned Harbor development. The Marine Learning Center and other developments in the Harbor have been accounted for in the EIR traffic and related noise analysis. The estimates of water demand and wastewater generation do not specifically include all of the facilities included in the Harbor Master Plan; however, on a per capita basis, the estimate of future water demand amounts to about 0.269 acre-feet per person per year, which is about 50% higher than the current per capita demand of about 0.179 acre-feet per year. Thus, the estimates of water demand and wastewater generation are conservative and more than account for additional non-residential development that may occur in the Harbor. The Draft EIR analysis is not intended to provide a "full buildout" estimate for the City, but rather to provide a reasonable estimate of growth that may occur over the next 20 years. Nevertheless, the table depicting possible Harbor development in the 2005 General Plan will be revised to reflect buildout estimates included in the Draft Harbor Master Plan.

Response 31G

The commenter expresses concerns about 2005 General Plan policies pertaining to protection of coastal resources and sensitive wetland and coastal areas, and enforcement of stormwater quality measures (items 7-9 of the Port District letter). None of these policies/actions are

expected to affect operations at the Harbor or restrict the Harbor's plans for development under its Master Plan.

Response 31H

The commenter expresses concerns about Action 1.18, which relates to dredging. In response to this and another comment, that action will be revised to read as follows:

Action 1.18: Conduct coastal dredging in accordance with the U.S. Army Corps of Engineers and California Department of Fish and Game requirements in order to avoid impacts to sensitive fish and bird species.

Response 31I

The commenter expresses concerns about a number of 2005 General Plan actions and how they might affect the Harbor (items 11-19 in the Port District letter). While these comments do not pertain to the adequacy of the DEIR, the Port District's concerns are being addressed through discussions with City staff and as determined appropriate, will be incorporated into the final 2005 General Plan.

Letter 32

COMMENTER: McLoughlin Family Ranch

DATE: July 15, 2005

RESPONSE:

Response 32A

The commenter states an opinion that the 1.14% annual population growth rate assumed for Scenarios 2-6 is more realistic than the 0.88% growth rate assumed for Scenario 1. This opinion is noted. The growth rates used in the Draft EIR were directed by the City Council. These assumptions were used for analytical purposes. The actual growth rate in the City varies from year to year and is dependent upon a variety of factors.

Response 32B

The commenter states an opinion that, given the complications associated with intensification and reuse, the City should allow the opportunity to consider development of the expansion areas. The commenter also notes that the Draft EIR identifies limitations on available land under the Intensification/Reuse Only scenario.

Although City staff are recommending adoption of the land use map included in Scenario 1 (Intensification/Reuse Only), the City will continue to have the option of allowing development of one or more of the expansion areas. Any land use designation change for the expansion areas that are subject to the SOAR Ordinance, whether sought as part of the 2005 General Plan or as a future General Plan amendment application, would be subject to voter approval.

It is correct that the Draft EIR identifies limitations on available land for the development of schools and parks under the Intensification/Reuse Only scenario. Impacts relating to schools and parks are not significant under CEQA. However, as noted in the Draft EIR, the relative lack of available land may limit the ability to develop new large park facilities or schools.

Response 32C

The commenter points out several potential benefits associated with development of the Olivas expansion area. Some of the benefits noted by the commenter, including potential circulation improvements and restoration of the Arundell Barranca, are discussed in the Draft EIR. In addition, in Section 4.15, the Draft EIR notes that the Intensification/Reuse Only scenario may restrict the types of housing available as compared to Scenarios 2, 3, 4, and 6, emphasizing multi-family housing over single family housing.

Response 32D

The commenter notes that although development of the Olivas area may conflict with the California Coastal Act policy relating to Prime farmland conversion, it could implement other Coastal Act policies relating to coastal access and recreation and enhancement of water quality.

This is correct. As discussed in Section 4.14 of the Draft EIR, possible future development within the Olivas expansion area could be found to be consistent with several Coastal Act policies.

Response 32E

The commenter notes that earlier documents included the Olivas expansion area in a “staff recommended” or “City Council preferred” scenario and requests that the City Council include the Olivas area within its proposed Sphere of Influence (SOI) boundary. It is true that the City Council identified three expansion areas, including the Olivas area, in its “preferred scenario” in July/ August 2004. However, because the City’s desire to focus on intensification/reuse, staff are now recommended adoption of the Intensification/Reuse Only scenario. It should be noted that the City will not be seeking SOI boundary adjustments at this time. The Ventura LAFCO will, however, be performing an analysis of the SOI boundary within the next year that will likely result in adjustments that exclude areas not planned for development within the next five years (including areas subject to SOAR) from the SOI.

Ventura, CA 93001-0099

Sent by Email kgialketsis@ci.ventura.ca.us and Fax #(805) 653-0763

Re: City of San Buenaventura 2005 General Plan Draft EIR

Dear Ms. Gialketsis:

On behalf of the members of the McLoughlin Family, who own approximately 300 acres of land located along Olivas Park Drive, in the City of Ventura ("*McLoughlin Ranch*"), thank you for the opportunity to comment on the City of Ventura's proposed 2005 General Plan and its accompanying Draft Environmental Impact Report, dated June 2005.

The *McLoughlin Ranch* property is located within the 930 acre Olivas Potential Expansion Area ("*Olivas PEA*"), as described in the City's General Plan Update and accompanying documents. There are six additional families/entities that own parcels of various sizes within the *Olivas PEA*. While the McLoughlin Family has been in communication with the other *Olivas PEA* property owners, who have expressed a desire and willingness to work cooperatively on any potential future planning efforts for the Olivas PEA, it should be noted that the comments expressed in this letter are those of the McLoughlin Family, and we are not intending to speak for, or represent the views of the other *Olivas PEA* property owners.

It is our understanding that the new Draft General Plan sets forth an unambiguous emphasis regarding the City's desire to focus on accommodating future growth with infill, intensification, and re-use of sites within the currently urbanized areas of the City, prior to considering any potential expansion of the City. And yet, there is strong indication of a number of potentially significant benefits to the City, and its General Plan Goals, that could only be accommodated through future development in one or more of the Potential Expansion Areas ("*PEAs*");

"...the community has indicated that before the city expands any further, the first priority to achieving planning goals should be in the vacant and underutilized areas of the City. Yet even the most successful efforts to achieve community planning goals through infill may need to be supplemented at some point by expanding into areas outside the city limits. Such expansion may not only be necessary to fulfill development objectives; it may also be needed to provide open space, parklands and natural areas to be preserved and restored... These areas (PEAs) were identified because they embody opportunities for achieving a variety of community vision objectives that may not be feasible within existing city limits." (VGP-Attachment D-Long Term Potential Expansion Strategy)

We also understand that the City will, at a yet undefined future date, be considering and making a decision regarding a Long-Term Potential Expansion Strategy, which will include: a) Guidelines for Timing and Consideration of PEAs; b) Framework for Development of Expansion Areas; and c) Criteria and Process for Site Selection. We know that any future development of the PEAs will require the preparation and approval of a Specific Plan, including the necessary environmental review, and will ultimately require a SOAR vote, and approval of the development concept by Ventura's electorate. We are not seeking to address the details of those future deliberations and policy decisions at this time.

While we are aware that the City has chosen to position its Draft 2005 General Plan as an Intensification/Reuse Only strategy (Scenario 1), and that the decision regarding which, if any, of the potential expansion strategies (Scenarios 2-6) will be selected for future planning has been segregated from the approval and adoption process for the 2005 General Plan Update, there are a number of issues/comments that we would like to address in response to the DEIR analysis, which is being used as a basis for this decision. Please consider the following:

- 1) **Growth Rate:** The Intensification/Reuse Only Scenario assumes a citywide annual population growth rate for the planning time frame of the 2005 VGP (2005-2025) to be 0.88%, while all of the Scenarios that include PEAs are based on a projected annual growth rate of 1.14%. While the 0.88% annual rate reflects Ventura's actual growth rate for the past 10 years (1994-2004), we believe that this growth rate was restricted by a number of factors including: the national, regional and local economic recession of the 1990s; the loss of several major employers from the area (including Kinko's relocation of corporate offices from Ventura to Texas); and the limited supply of new housing units that were produced in Ventura during that time frame due to restrictions imposed by the City's Residential Growth Management Program (RGMP).

A

We believe that the 1.14% growth rate is a more realistic and prudent projection for the City to use in its planning efforts, because this represents the longer range historic view of Ventura's actual growth (1984-2004), and is also much closer to the Countywide growth rates, and the City's actual growth during the recent past from 2000 to 2005.

- 2) **City's Ability to Accommodate Projected Growth with Infill Only:** Scenario 1 proposes to meet all of the City's anticipated growth, as projected using the 0.88% growth rate through 2025 (which assumes 8,300 new residential dwelling units and nearly 4.9 million new square feet of commercial, office, and industrial space), through the intensification and reuse of land within currently urbanized areas. While we appreciate and support the community's desire to accommodate as much of its anticipated growth as possible, through infill development, we question the feasibility of actually being able to accommodate this much growth within areas defined in Scenario 1. The DEIR identifies the primary areas where this growth is expected to occur, including defined Planning Districts and Corridors, many of which are located in the Downtown, Westside, and Midtown communities.

B

However, infill development can be much more complicated and costly, and faces many challenges that do not affect "Greenfield" development. Meeting the City's growth needs through Scenario 1 will require significant private investment, cooperation with existing neighbors, and less restrictive zoning and land use regulations than those that currently exist in Ventura. Until the City has completed an update of its zoning ordinance, and adopts the proposed form-based codes, it may be virtually impossible to legally approve enough projects at the levels of density that would be required in order to meet the proposed level of development. It is our understanding that the City plans to begin re-writing its zoning and development codes after the General Plan Update is approved, and that the process of developing the form based codes could take as long as two additional years to complete.

Given the inherent limitations of infill development, combined with probable conflicts between 2005 General Plan Policies and the existing regulatory framework, we believe that it would be prudent for the City to keep its options open by allowing for the opportunity to consider future development of the PEAs. It should also be noted that due to the requirements for Specific Plans and SOAR votes, any future development in the PEAs would require a multi-year planning effort. If the City waits until it discovers that its infill strategy has not been successful in yielding the needed level of development, it may be too late to meet growth projections within the planning period (2005-2025) through development in one or more of the PEAs.

Furthermore, the DEIR clearly indicates that there is a shortage of available land in Scenario 1 to meet the increased demand for Public Services that would be generated under even this lower growth rate scenario. Of particular concern is the lack of available infill sites large enough to provide additional fire, police, schools, and recreational facilities. The DEIR further states that "...limited available land for new schools may necessitate condemnation of property for new school sites and/or more intensive use of existing facilities." (Impact PS-3), and "Large sites to accommodate citywide park facilities are also lacking under this scenario" (Impact PS-6). Future development in one or more of the PEAs will alleviate these issues, especially the Olivas PEA, which offers adequate land to mitigate any impacts of Olivas development and additionally to offset the unmet needs from Scenario 1.

- 3) **Constraints on Intensification/Reuse Only Strategy:** In addition to the acreage, social, and regulatory limitations of Scenario 1, as described above, there are numerous specific and significant potential constraints associated with this strategy which are identified throughout the DEIR, and particularly in Section 4. The Intensification/Reuse Scenario assumes that a large percentage of the City's future growth will be met within the Planning Districts and Corridors, as identified in the Draft General Plan Update, and that a significant amount of this growth would occur in the older urbanized areas of the City, including Downtown, Midtown and the Westside. However, these older areas of town present a myriad of development challenges, which could very likely limit the potential growth in those areas, and/or negatively impact the financial viability of infill development. Some of these areas of concern, as identified in Section 4, include: Cultural and Historic Resources; Geologic Hazards; Hazardous Materials; Hydrology and Water Quality; Public Services; and Utilities.

Section 4 details numerous deficiencies in existing water, sewer and storm water facilities, especially in the older parts of town, that will require extensive re-investment and upgrades to infrastructure. This could affect the cost, timing, and/or ultimate viability of infill development in some areas. Also, the downtown and Westside areas are ripe with identified and potential unidentified cultural and historic/prehistoric resources. Development in these areas may well conflict with other General Plan and Ventura Vision priorities regarding historic and cultural preservation. The Westside and portions of the Downtown communities also contain identified hazardous material issues. Any of these factors could severely limit the true development potential under Scenario 1.

- 4) **Benefits of Olivas Expansion Area:** While there are certainly some potential challenges associated with future development in the Olivas PEA, the DEIR also identifies numerous potential benefits to the City, which could be obtained through the future planning of a high quality, mixed-use, new urbanist village at this location. In addition to the benefits listed above, Olivas offers opportunities to improve, enhance, and/or mitigate numerous issues of community wide importance, and to fulfill several General Plan and Vision Goals/Priorities, including:
- a. Completion of critical multi-modal circulation linkages that will enhance and improve circulation between existing neighborhoods, and promote alternative modes of transportation, by: I) connecting the Olivas/Ventura Harbor area to midtown through the extension of Mills Road, II) enhancing the Arrundell Barranca Bike and Pedestrian Pathway to create a safer and more appealing alternate circulation corridor, III) possible creation of a multi-modal transit center along the railroad line on Olivas PEA. (GP Policies 4A, 4B, and 4C)
 - b. Enhancing the economic viability of both the Ventura Harbor and the Pacific View Mall, by improving access and visibility, and creating better connectivity between these two vital commercial/tourist attractions, thus generating higher sales tax revenue to the City. (Impact TC-2)
 - c. Development in the Olivas PEA could allow for the restoration of the Arrundell Barranca into a more natural state (Vision Goal), and the creation of a beautiful parkland and bio-filtration area surrounding the Barranca, which would help to alleviate the siltation problems that are negatively affecting the waterways of the Ventura Keys and the Harbor. This would help meet several environmental, Coastal Commission, Vision, and General Plan priorities by using BMPs to improve storm water quality, enhancing the viability of commercial fishing and recreational boating in the Harbor, and creating attractive recreational opportunities for all residents. (Impact HWQ-2 and HWQ-3, GP Action 5.2, and Action 1.10, among others)
 - d. Scenario 1 will produce mostly multi-family housing, do to the limited amount of land available, and the desire to intensify development in currently urbanized areas. Future development in Olivas will allow for a greater diversity of housing choices. (DEIR page 4.15-10)
- 5) **Coastal Commission Priorities:** While it is noted that the preservation of Prime Agricultural land in the Coastal Zone is a priority of the

C

D

California Coastal Commission, the DEIR also discusses several other priorities/policies of the California Coastal Act (CCA) that could be served by a development in the Olivas PEA which adheres to policies of the Act, with the potential benefits outweighing any loss associated with the conversion of agricultural land. These are located in Section 4.14 of the DEIR and include: Article 2-Public Access (connecting Harbor to other areas of town and enhanced bike/ped trails); Article 3-Recreation (opportunities for coastal-related recreational activities/facilities, and visitor-serving commercial uses); Article 4- Marine Environment (enhance water quality and protection of commercial fishing & recreational boating); Article 6-Land Resources (allows for conversion of prime farmland when would allow for concentration of development in close proximity to existing developed areas with adequate services); and Article 6- Development.

Finally, we would like to note that in the initial Notice of Preparation for this DEIR, which was issued in September 2004, the Olivas PEA was included in the Staff Recommended Scenario; and in the Revised NOP that the City issued in December 2004, Olivas was included in the City Council Preferred Scenario; but it has now been removed from a priority position in the DEIR. Given the numerous potential benefits from future development in the Olivas PEA, and the ability to realize numerous City Vision and General Plan Goals, we respectfully request that the City Council include the Olivas PEA in its proposed Sphere of Influence boundaries, in its application to LAFCO.

E

Thank you for your time and consideration of our comments.

Sincerely,

McLoughlin Family

RESPONSE:

Response 32A

The commenter states an opinion that the 1.14% annual population growth rate assumed for Scenarios 2-6 is more realistic than the 0.88% growth rate assumed for Scenario 1. This opinion is noted. The growth rates used in the Draft EIR were directed by the City Council. These assumptions were used for analytical purposes. The actual growth rate in the City varies from year to year and is dependent upon a variety of factors.

Response 32B

The commenter states an opinion that, given the complications associated with intensification and reuse, the City should allow the opportunity to consider development of the expansion areas. The commenter also notes that the Draft EIR identifies limitations on available land under the Intensification/Reuse Only scenario.

Although City staff are recommending adoption of the land use map included in Scenario 1 (Intensification/Reuse Only), the City will continue to have the option of allowing development of one or more of the expansion areas. Any land use designation change for the expansion areas that are subject to the SOAR Ordinance, whether sought as part of the 2005 General Plan or as a future General Plan amendment application, would be subject to voter approval.

It is correct that the Draft EIR identifies limitations on available land for the development of schools and parks under the Intensification/Reuse Only scenario. Impacts relating to schools and parks are not significant under CEQA. However, as noted in the Draft EIR, the relative lack of available land may limit the ability to develop new large park facilities or schools.

Response 32C

The commenter points out several potential benefits associated with development of the Olivas expansion area. Some of the benefits noted by the commenter, including potential circulation improvements and restoration of the Arundell Barranca, are discussed in the Draft EIR. In addition, in Section 4.15, the Draft EIR notes that the Intensification/Reuse Only scenario may restrict the types of housing available as compared to Scenarios 2, 3, 4, and 6, emphasizing multi-family housing over single family housing.

Response 32D

The commenter notes that although development of the Olivas area may conflict with the California Coastal Act policy relating to Prime farmland conversion, it could implement other

Coastal Act policies relating to coastal access and recreation and enhancement of water quality. This is correct. As discussed in Section 4.14 of the Draft EIR, possible future development within the Olivas expansion area could be found to be consistent with several Coastal Act policies.

Response 32E

The commenter notes that earlier documents included the Olivas expansion area in a “staff recommended” or “City Council preferred” scenario and requests that the City Council include the Olivas area within its proposed Sphere of Influence (SOI) boundary. It is true that the City Council identified three expansion areas, including the Olivas area, in its “preferred scenario” in July/August 2004. However, because the City’s desire to focus on intensification/reuse, staff are now recommended adoption of the Intensification/Reuse Only scenario. It should be noted that the City will not be seeking SOI boundary adjustments at this time. The Ventura LAFCO will, however, be performing an analysis of the SOI boundary within the next year that will likely result in adjustments that exclude areas not planned for development within the next five years (including areas subject to SOAR) from the SOI.

Appendix H

Mitigation Monitoring and Reporting Program

MITIGATION MONITORING AND REPORTING PROGRAM

CEQA requires that a reporting or monitoring program be adopted for the conditions of project approval that are necessary to mitigate or avoid significant effects on the environment (Public Resources Code 21081.6). The mitigation monitoring and reporting program is designed to ensure compliance with adopted mitigation measures during project implementation. For each mitigation measure recommended in the Environmental Impact Report, specifications are made herein that identify the action required and the monitoring that must occur. In addition, a responsible agency is identified for verifying compliance with individual conditions of approval contained in the Mitigation Monitoring and Reporting Program (MMRP).

The following table is a checklist to be used to verify compliance with the mitigation measures included in the Final EIR for the "Intensification/Reuse Only" scenario.

2005 Ventura General Plan EIR
 Mitigation Monitoring and Reporting Program

Mitigation Measure/Condition of Approval	Action Required	When Monitoring to Occur	Monitoring Frequency	Responsible Agency or Party
AIR QUALITY				
<p>AQ-2 Additional Air Quality Actions. The following actions should be added to the 2005 General Plan to address air quality impacts of future development on a case-by-case basis:</p> <ul style="list-style-type: none"> Require air quality analysis of individual development projects in accordance with the most current version of the Ventura County Air Pollution Control District Air Quality Assessment Guidelines and, when significant impacts are identified, require implementation of air pollutant mitigation measures determined to be feasible at the time of project approval. In accordance with Ordinance 93-37, continue to require payment of fees to fund regional transportation demand management (TDM) programs for all projects generating emissions in excess of Ventura County APCD thresholds. 	<p>Verification that actions are included in the final 2005 General Plan; review of individual projects over the life of the 2005 General Plan</p>	<p>Verification of inclusion of recommended actions prior to publication of the final 2005 General Plan; review and assessment of fees prior to issuance of building permits for individual development projects</p>	<p>Once prior to final 2005 General Plan publication; review of individual projects as needed over the life of the 2005 General Plan</p>	<p>Planning Department</p>
<p>AQ-3 Construction Mitigation. The following action should be added to the 2005 General Plan to address air quality impacts of future construction projects on a case-by-case basis:</p> <ul style="list-style-type: none"> Require individual construction contractors to implement the construction mitigation measures included in the most recent version of the Ventura County APCD's Ventura County Air Quality Assessment Guidelines and, when 	<p>Verification that the action is included in the final 2005 General Plan; verification that construction plans for individual projects include provisions that are consistent with APCD guidelines</p>	<p>Verification of inclusion of the recommended action prior to publication of the final 2005 General Plan; review and approval of construction plans prior to issuance of grading permits for individual development projects</p>	<p>Once prior to final 2005 General Plan publication; review of individual projects as needed over the life of the 2005 General Plan</p>	<p>Planning Department</p>

Mitigation Measure/Condition of Approval	Action Required	When Monitoring to Occur	Monitoring Frequency	Responsible Agency or Party
significant impacts are identified, require implementation of air pollutant mitigation measures determined to be feasible at the time of project approval.				
HYDROLOGY AND WATER QUALITY				
<p>HWQ-2 Additional Drainage Actions. The following actions shall be added to the 2005 General Plan to address existing storm drain system deficiencies:</p> <ul style="list-style-type: none"> • Develop a financing program for the replacement of failing corrugated metal storm drain pipes in the City. • Adopt assessment districts or other financing mechanisms to address storm drain system deficiencies in areas where new development is anticipated and deficiencies exist (e.g., Downtown district, Ventura Avenue corridor, and Harbor district). <p>The following actions are recommended to minimize the impact of future development on the local storm drain system and implement City goals regarding sustainable infrastructure:</p> <ul style="list-style-type: none"> • As feasible, require new developments to incorporate stormwater treatment practices that allow percolation to the underlying aquifer and minimize offsite surface runoff. Such methods may include, but are not limited to, (1) the use of pervious paving material within 	<p>Verification that actions are included in the final 2005 General Plan; inclusion of infrastructure plans in future development plans (e.g., specific plans, redevelopment plans) for areas where deficiencies exist</p>	<p>Verification of inclusion of recommended actions prior to publication of the final 2005 General Plan; verification that appropriate infrastructure plans are in place prior to approval of development plans for affected areas</p>	<p>Once prior to final 2005 General Plan publication; verification of infrastructure plans as needed over the life of the 2005 General Plan</p>	<p>Planning Department, Public Works Department, Planning Commission, City Council</p>

2005 VENTURA GENERAL PLAN

ADOPTED AUGUST 8, 2005

RESOLUTION NOS.2005-072 AND 2005-073

The following people contributed to the preparation of the 2005 Ventura General Plan:

CITY COUNCIL

Brian Brennan, Mayor
Carl E. Morehouse, Deputy Mayor
Neal Andrews, Council Member
Bill Fulton, Council Member
James L. Monahan, Council Member
Sandy E. Smith, Council Member
Christy Weir, Council Member

PLANNING COMMISSION

Carolyn Briggs, Chair
Curt Stiles, Vice Chair
Ronald Allen, Commissioner
Michael Faulconer, Commissioner
Martel Fraser, Commissioner
Bill Growdon, Commissioner
John Hecht, Commissioner

GENERAL PLAN COMMITTEE

Carolyn Briggs, Planning Commission Chair
Michael Faulconer, Commissioner
Bill Fulton, Council Member
John Hecht, Commissioner
Sandy E. Smith, Council Member
Christy Weir, Council Member

"The building of cities is one of man's greatest achievements. The form of his city always has been and always will be a pitiless indicator of the state of his civilization. This form is determined by the multiplicity of decisions made by the people who live in it."

— Edmund N. Bacon
Design of Cities, 1967

We, the people of Ventura, in order to ensure that our City remains a great place for us to live ...

. . . establish these goals for our community's future:

OUR NATURAL COMMUNITY

Our goal is to be a model for other communities of environmental responsibility, living in balance with our natural setting of coastline, rivers, and hillside ecosystems.

OUR PROSPEROUS COMMUNITY

Our goal is to attract and retain enterprises that provide high-value, high wage jobs; to diversify the local economy; to increase the local tax base; and to anticipate our economic future in order to strengthen our economy and help fund vital public services.

OUR WELL-PLANNED COMMUNITY

Our goal is to protect our hillsides, farmlands, and open spaces; enhance Ventura's historic and cultural resources; respect our diverse neighborhoods; reinvest in older areas of our community; and make great places by insisting on the highest standards of quality in architecture, landscaping and urban design.

OUR ACCESSIBLE COMMUNITY

Our goal is to provide residents with more transportation choices by strengthening and balancing bicycle, pedestrian and transit connections in the City and surrounding region.

OUR SUSTAINABLE INFRASTRUCTURE

Our goal is to safeguard public health, well being and prosperity by providing and maintaining facilities that enable the community to live in balance with natural systems.

OUR ACTIVE COMMUNITY

Our goal is to add to and enhance our parks and open spaces to provide enriching recreation options for the entire community.

OUR HEALTHY AND SAFE COMMUNITY

Our goal is to build effective community partnerships that protect and improve the social well being and security of all our citizens.

OUR EDUCATED COMMUNITY

Our goal is to encourage academic excellence and life-long learning resources to promote a highly-educated citizenry.

OUR CREATIVE COMMUNITY

Our goal is to become a vibrant cultural center by weaving the arts and local heritage into everyday life.

OUR INVOLVED COMMUNITY

Our goal is to strive to work together as a community to achieve the Ventura Vision through civic engagement, partnerships, and volunteer service.

State law requires each California city to adopt a comprehensive, long-term General Plan for the physical development of the community that guides local decision-making by expressing community goals about the future distribution and character of land uses and activities. The plan should be comprehensive by both covering the City's entire planning area and addressing the broad range of issues facing the community, including physical, social, aesthetic and economic concerns. The plan must be internally consistent and serve as a long-term guide, establishing policies for day-to-day land use decisions over an approximately 20-year period.

Introduction and Background

“To remain successful, Ventura must periodically renew itself, re-examine its goals and create a shared vision to guide the community into the future.”

With these opening words, the citizens of our community proclaimed the **Ventura Vision**, which was unanimously accepted by the City Council in March 2000. That landmark report captured the results of “a partnership encompassing city government, non-profit organizations, community groups, businesses, schools and individual residents to chart the community’s future through a process of visioning.”

Building on that shared vision, the City embarked on an effort to revise the 1989 Comprehensive Plan that served as the General Plan that all cities are required by State law to use to guide land use, transportation and other important policy decisions. This new General Plan is the culmination of that effort to translate the Ventura Vision into a coherent and comprehensive implementation plan to guide future development and preservation.

Throughout the visioning process and at the ballot box, Ventura residents have made clear we want a well-planned approach to managing growth. We don’t want continued suburban sprawl paving over farm land and sensitive hillside areas. Instead, we want vacant or run-down properties to be improved with high quality “infill” to provide new jobs, new homes and new stores and services.

Managing growth to improve our quality of life and standard of living is the smart thing to do.

Ventura residents don’t want uncontrolled growth and suburban sprawl. We also don’t want traffic gridlock, more “cookie cutter” tract houses or housing prices that make Ventura unaffordable for working families. By targeting new development to areas that would benefit from reinvestment – and by respecting our historic character and sense of place – “smart growth” is a better alternative.

Our vision is for a prosperous and well-planned community.

Smart Growth emphasizes reusing existing buildings and land, revitalizing our historic downtown and neighborhoods, and protecting the environment for future generations. Smart Growth channels new businesses and homes into appropriate areas. It also provides options for public transportation, creates neighborhoods where homes are in walking distance of local services and ensures green space for public use.

We seek to protect and enhance our unique “sense of place”

that builds on our pride in Ventura’s history and natural setting. Instead of new development that looks like everywhere else, our vision is for interesting, unique neighborhoods and districts, which reflect our values and heritage. The policies for pursuing these goals are spelled out in this new General Plan.

The Ventura General Plan

The *2005 Ventura General Plan* is the second in a series of three connected documents that will guide future conservation and change in the city. The *Ventura Vision* set the stage for this plan and enumerated four overarching principles that were affirmed by the community to guide Ventura into the future:

- Reach broadly and deeply into the community.
- Build on existing cultural, natural, and economic assets.
- Emphasize and encourage connections within the community.
- Work proactively and collaboratively to achieve the community's shared vision.

The final piece of the trilogy is a form-based *Development Code*. This code represents a new approach to zoning that prioritizes the appearance of development, while still ensuring that neighboring land uses are compatible and appropriate.

The *General Plan* will be put into action through the *Development Code* and a variety of other mechanisms, such as a mobility plan, specific plans, community plans, and capital improvement projects that will together shape the future of Ventura. The *General Plan* purposefully anticipates the *Code* focusing on the districts, corridors, and neighborhood centers where future change will be most pronounced.

The following vision statements reflect a high level of community consensus about a desired future for Ventura.

In the future, Ventura is a community that...

Environment

- Seeks sustainability by simultaneously promoting ecological health, economic vitality, and social well-being for current and future generations.
- Acts as an environmentally responsible model for other coastal areas.
- Protects and restores the natural character of its beaches, ocean views, hillsides, barrancas, and rivers as a scenic backdrop for its high quality urban environment.

Economy

- Develops a flourishing and balanced economy by encouraging a broad range of high quality employment and entrepreneurial opportunities.
- Encourages private economic development that supports public services and amenities associated with high quality of life.
- Has a vital, prosperous, and stable economy while maintaining its small-town feel.
- Is noted for private and public sector cooperation that enhances economic vitality.
- Actively participates in regional economic development efforts.

Planning, Design, and Circulation

- Retains its character as an attractive coastal town by growing slowly and sustainably, and by emphasizing its history, diversity, and natural environment.
- Cherishes its distinctive, diverse, and eclectic neighborhoods, and preserves their character.
- Has safe, accessible, and balanced transportation that promotes multiple modes of travel to local and regional destinations.

Social Activity

- Is known as an inclusive, diverse, and tolerant place that welcomes and celebrates all people.
- Provides all residents access to quality and affordable health and social services.
- Recognizes the importance of children and seniors by providing exceptional cultural, educational, and social support programs.
- Offers a diverse range of active and passive recreation for residents and visitors of all ages and abilities.
- Is dedicated to educational excellence and an emphasis on lifelong learning.
- Celebrates and is enriched by the arts and diverse cultural opportunities.

Collaboration

- Encourages residents to collaborate with each other and City government in an informed, active, and constructive manner to assess and resolve common issues.

Building on the Vision

Following adoption of the *Ventura Vision*, the City Council established a 19-member Comprehensive Plan Advisory Committee (CPAC) to shape the *Vision* concepts into issues and priorities for revision of the 1989 Comprehensive Plan. The CPAC included representatives of varied interests, including neighborhoods, agriculture, seniors and schools, as well as one member from the Planning Commission and one from the City Council. The committee met more than 30 times over almost three years. During that effort, the City published the August 2002 *Comprehensive Plan Update Background Report*, which provides a highly detailed account and analysis of opportunities and constraints that affect planning and land use in Ventura. This ultimately led to their findings, contained in the September 2003 *CPAC Issues & Alternatives Report*.

CPAC endeavored to create strategies to resolve planning and land use issues in Ventura utilizing the smart growth principles formulated by the U.S. Environmental Protection Agency:

- Mix land uses.
- Achieve compact building design.
- Provide a range of housing opportunities.
- Create walkable neighborhoods.
- Foster distinctive, attractive communities with a strong sense of place.
- Preserve open space, farmland, natural beauty, and critical environmental areas.
- Strengthen and direct development toward existing communities.

- Provide a variety of transportation choices.
- Make development decisions predictable, fair, and cost effective.
- Encourage community collaboration in planning decisions.

The recommendations of the CPAC were presented to the Planning Commission and City Council. After several months of reviewing the CPAC recommendations, the Planning Commission in December 2003 made some modifications to the CPAC's recommended land use scenario.

The City Council met 11 times from February through August 2004 to consider the CPAC and Planning Commission recommendations, review relevant data, and formulate broad goals, policies, and a diagram to guide growth and change in the City until 2025. In September 2004, the City Council established an ad-hoc General Plan Committee consisting of three Planning Commissioners and three City Council members to work with City staff and consultants to ensure that the *General Plan* would be completed expeditiously and with ample public participation, and to ensure open communication, transparency, and coordination among all parties interested in the creation of the *Plan*. All of the CPAC, Planning Commission, City Council, and General Plan Committee workshops, meetings, and hearings were open to the public and included significant, meaningful, and often extensive citizen input and participation.

Goals summarize how conservation, development, and future growth should occur by identifying physical, economic and social ends that the community wishes to achieve.

Policies establish basic courses of action for the Planning Commission and City Council to follow in working to achieve community goals, by directly guiding the response of elected and appointed officials to development proposals and related community actions.

Actions need to be undertaken by the City to implement policies.

Plan Format

The comprehensive and involved process of creating what is really a totally new (not just updated) *General Plan* – based on a new community vision and smart growth principles – resulted in a new set of goals, policies, and actions to guide future decision-making in Ventura that truly reflect the planning objectives of the community. These policy directives are organized by subject area in *General Plan* Chapters 1 through 10, which follow the organizational framework established in the *Ventura Vision* (see Table 1). Each topic is introduced with an overarching goal that carries forward the *Vision*, a description of issues needing resolution and methods for remedying them, and finally measurable policies and actions to achieve those solutions. Each of the policies contained within the Plan are intended to be understood and read with the following preface: “It is the intent of the City of San Buenaventura to...”. All of the actions are summarized in table form in Appendix A, along with the City department or division responsible for implementing each action and timeframe for completion. Also included in the Plan are the legally binding Appendices B through E. Attachment A is provided as a reference, while Attachment B is provided to serve as guidelines for future development until an update to the Zoning Ordinance is completed.

**Table 1
General Plan Organization**

Vision/General Plan Chapter	Required/<i>Optional</i> Elements	Examples of Topics Covered
1. Our Natural Community	Conservation Open Space	Open space, hillsides, watersheds, riparian areas, sensitive plants and animals
2. Our Prosperous Community	<i>Economic Development</i>	Commercial and industrial growth, economic diversification, job opportunities, tourism
3. Our Well-Planned and Designed Community	Land Use/ <i>Design</i> Housing <i>Park & Recreation</i>	Development patterns, neighborhoods, visual character, urban design, streetscapes, demographics, housing needs, affordability, constraints on production
4. Our Accessible Community	Circulation	Traffic, street network, parking, transit services, bike routes
5. Our Sustainable Infrastructure	Land Use	Water supply, wastewater treatment, drainage
6. Our Active Community	Land Use <i>Park & Recreation</i>	Park and recreation facilities, youth and senior programs
7. Our Healthy and Safe Community	Safety Noise Land Use	Development in hazardous areas, hazardous waste management, seismicity, flood control, water quality, brownfields, noise, police, fire, air quality
8. Our Educated Community	Land Use	Schools and libraries
9. Our Creative Community	<i>Culture</i>	Arts, events, community programs, cultural and historic resources
10. Our Involved Community	<i>Citizen Input</i>	Participation in governance

The format of the *General Plan* satisfies the State requirement that every general plan include policies for seven “elements,” as follows:

Land use – establishes the general distribution and intensity of land uses, including housing, commerce, industry, open space, education, and public facilities.

Circulation – identifies the location and type of existing and proposed highways, arterial and collector roadways, bicycle routes, and other transportation facilities.

Conservation – addresses treatment of natural and cultural resources, including watersheds, wetlands, trees, rivers and barrancas, and cultural and historic landmarks.

Housing – assesses current and projected housing needs of all segments of the community and identifies land to provide adequate housing to meet those needs. Although the City’s Housing Element and Technical Report is contained in a separate document to facilitate the frequent updating required by the State, the goals, policies and programs of the Housing Element must be and are consistent with the goals, policies, and actions of the *2005 Ventura General Plan*. (See Chapter 3, page 3-28, for 2004 Housing Element Goals and Policies.)

Noise – appraises noise sources in the community and develops means to mitigate nuisances.

Open Space – details techniques for preserving open space areas for natural resources, outdoor recreation, public health and safety, and agricultural activities.

Safety – establishes policies to protect the community from risks associated with seismic, geologic, flood, fire, and other hazards.

The *General Plan* also contains a number of special elements that aren’t required by State law but are integral to the unique identity of Ventura. These cover a range of topics including education, recreation, arts and culture, and community involvement in local government. Another chapter treats the very important subject of the local economy, providing guidance to citizens, City staff and policy makers regarding strategies and priorities for economic development in Ventura.

California Coastal Act

The *General Plan* also satisfies State requirements for the City's **Local Coastal Program** in accordance with the California Coastal Act (*Public Resources Code § 30000 et seq.*). Actions in the *General Plan* that affect coastal resources are intended to become part of the Land Use Plan of the Local Coastal Program, which will be accomplished through specific or community plans for those areas. These actions are identified with the logo of the California Coastal Commission (which oversees all Local Coastal Programs). The basic goals of the State for the coastal zone are to:

- Protect, maintain, and where feasible, enhance and restore the overall quality of the coastal zone environment and its natural and artificial resources.
- Assure orderly, balanced utilization and conservation of coastal zone resources taking into account the social and economic needs of the people of the state.
- Maximize public access to and along the coast and maximize public recreational opportunities in the coastal zone consistent with sound resources conservation principles and constitutionally protected rights of the private property owners.

- Assure priority for coastal-dependent and coastal-related development over other development on the coast.
- Encourage state and local initiatives and cooperation in preparing procedures to implement coordinated planning and development for mutually beneficial uses, including educational uses, in the coastal zone.
(*Public Resources Code § 30001.5*)

"As age comes on, one source of enjoyment after another is closed, but Nature's sources never fail. Like a generous host, she offers her brimming cups in endless variety, served in a grand hall, the sky its ceiling, the mountains its walls, decorated with glorious paintings and enlivened with bands of music ever playing."

— John Muir
20th Century Naturalist

CITY OF
VENTURA

OUR NATURAL COMMUNITY
ventura's general plan

1. OUR NATURAL COMMUNITY

Our goal is to be a model for other communities of environmental responsibility, living in balance with our natural setting of coastline, rivers, and hillside ecosystems.

Natural Context

Ventura's natural setting is one of its greatest assets, and preserving the environment is a top community priority. Situated between the ocean, hills, and two rivers, the city affords its residents and visitors with a significant amount of accessible, beautiful, and biologically diverse open space. Although a number of programs are in place to protect coastal and watershed ecosystems and to maintain and preserve existing open lands, some natural features in and around the city have been compromised by the impacts of human activity.

As in many communities across the nation, concern is growing in Ventura about human impacts on natural resources. The historic spread of local development has given rise to grassroots efforts aimed at preserving Ventura's viable agricultural land, open space, and hillsides. The 1995 Save Our Agricultural Resources initiative (see Appendix B) and the 2001 Hillside Voter Participation Area (Appendix C) measure require voter approval before the city can expand into open space areas. The Ventura Hillsides Conservancy formed in 2003 seeks to preserve local hillsides, canyons, and open space.

Ventura, Oxnard, Ventura County, and the County Local Agency Formation Commission have adopted agreements to preserve agricultural and open space land located between the cities. A change that amends these greenbelts requires the approval of all signatories.

Protecting Ventura's fragile natural resources is a fundamental focus of the *2005 Ventura General Plan*. Policies and actions in this chapter intend to ensure that coastal, hillside, and watershed features are preserved, remain visible and accessible, and demarcate boundaries for urban development to define and enhance the city's identity.

The community cherishes the shoreline as one of Ventura's best features. Coastal facilities in the city include:

- Emma Wood State Beach
- Ventura Seaside Park and Fairgrounds
- Surfers Point at Seaside Park
- Beachfront Promenade Park
- San Buenaventura State Beach
- Pierpont Community Beach
- Marina Beach/Cove Port District Beach
- Channel Islands National Park Headquarters
- Surfers Knoll
- Santa Clara River Mouth

Coastal Resources

Ventura boasts seven miles of beautiful sand beaches and valuable shoreline habitat. This “string of pearls” has long been identified by the community as one of the city’s most prized features. At its eastern end, the Ventura Harbor offers opportunities for residents and visitors to explore the local marine environment, including the Channel Islands National Park and Marine Sanctuary. Elsewhere along the coast, shoreline and dune habitat provide nesting, feeding, and mating grounds for a wide variety of wildlife, including threatened or endangered species such as the western snowy plover and the least tern.

Shoreline conservation programs underway include the Surfers Point Managed Shoreline Retreat, San Buenaventura State Beach restoration, Ventura Harbor wetland rehabilitation, and coastline water quality monitoring. The City will continue to invest in restoration to enhance the shoreline ecosystem, with the actions in this chapter augmenting current efforts.

Hillsides

The hills of the Transverse Range rise 1,200 feet above Ventura, providing an important visual backdrop that frames the City. Not only do these hills provide residents and visitors with scenic vistas, they are also part of a larger integrated ecosystem comprised by the hillsides, coastal areas, rivers and barrancas that together provide a rich habitat for many species. It is vital to the community that these hillsides that lie outside the city limits (with a County land use designation of either Open Space or Agriculture), are protected and preserved.

These hillsides, by definition, are coterminous with the Hillside Voter Participation Area, and comprise the Hillside Open Space community as depicted on the General Plan Diagram (page 3-22). Because the Hillside Voter Participation Area measure prohibits the extension of City urban services to the hillsides through 2030 without voter approval, the General Plan Diagram identifies the hillsides affected by the measure with a Planning Designation of Open Space. The full text and map of the Hillside Voter Participation Area appears in Appendix C (as required by the act). This chapter calls working with land conservation organizations to establish a Ventura hillsides preserve, and Chapter 6, *Our Active Community*, contains actions to work with the County to create public trails in the hillsides.

Definitions for “Hillside Open Space,” “Hillside Area,” “hillsides,” and “Hillside Voter Participation Area” can be found in the Glossary (Attachment A).

Rivers and Barrancas

The Ventura River flows south to the Pacific Ocean along the western edge of the city, and the Santa Clara River bisects the Oxnard coastal plain south of Ventura. A series of seasonal watercourses called barrancas traverse the city in narrow incised drainage channels running down from the hillsides. The rivers and barrancas and their larger watersheds provide undeveloped open space, riparian vegetation, wildlife habitat and corridors, recreational opportunities, and aesthetic beauty.

Where local watercourses have not been channelized, riparian trees and shrubs grow in fringing woodlands and thickets. Several sensitive bird species breed in these areas, including the least Bell's vireo, willow flycatcher, yellow warbler, and yellow-breasted chat. Steelhead and rainbow trout seasonally inhabit both the Ventura and Santa Clara Rivers.

Riparian and freshwater marsh areas in Ventura represent only a remnant of pre-human coverage, but the City has initiated conservation and restoration efforts such as the Ventura River Estuary Program to help reverse this trend. The estuaries at the mouths of the Ventura and Santa Clara Rivers serve as breeding grounds and feeding areas for migratory and resident shorebirds and waterfowl, as well as home to many terrestrial animals, fish, and free-swimming invertebrates.

Actions in this chapter – such as maintaining adequate buffers from watercourses, requiring

restoration of natural drainage features, and prohibiting the placement of manmade materials in drainages – can protect and improve water and habitat quality in local watersheds. The bolder action of removing concrete channel structures would further enhance natural functions and aesthetics.

Resource Conservation

As Ventura continues to grow, conserving resources, increasing energy efficiency, and achieving environmental sustainability become ever more important. The City desires to incorporate green building measures into the design, construction, and maintenance of public and private buildings which can result in significant cost savings and promote overall health and productivity of residents, workers, and visitors to the city. Raising conservation awareness can help minimize waste and pollution released into the natural environment. Improving energy efficiency in buildings, expanding recycling programs, and reducing transportation-related energy consumption will make the city a greener place. The policies and actions in this chapter provide clear direction to guide conservation, green practices, and responsible use of resources.

Policy 1A: Reduce beach and hillside erosion and threats to coastal ecosystem health.

Action 1.1: Adhere to the policies and directives of the California Coastal Act in reviewing and permitting any proposed development in the Coastal Zone. 

Action 1.2: Prohibit non-coastal-dependent energy facilities within the Coastal Zone, and require any coastal-dependent facilities including pipelines and public utility structures to avoid coastal resources (including recreation, habitat, and archaeological areas) to the extent feasible, or to minimize any impacts if development in such areas is unavoidable. 

Action 1.3: Work with the State Department of Parks and Recreation, Ventura County Watershed Protection Agency, and the Ventura Port District to determine and carry out appropriate methods for protecting and restoring coastal resources, including by supplying sand at beaches under the Beach Erosion Authority for Control Operations and Nourishment (BEACON) South Central Coast Beach Enhancement program. 

Action 1.4: Require new coastal development to provide non-structural shoreline protection that avoids adverse impacts to coastal processes and nearby beaches. 

Action 1.5: Collect suitable material from dredging and development, and add it to beaches as needed and feasible. 

Action 1.6: Support continued efforts to decommission Matilija Dam to improve the sand supply to local beaches. 

Action 1.7: Update the Hillside Management Program to address and be consistent with the Planning Designations as defined and depicted on the General Plan Diagram.

Policy 1B: Increase the area of open space protected from development impacts.

Action 1.8: Buffer barrancas and creeks that retain natural soil slopes from development according to State and Federal guidelines. 

Action 1.9: Prohibit placement of material in watercourses other than native plants and required flood control structures, and remove debris periodically. 

Action 1.10: Remove concrete channel structures as funding allows, and where doing so will fit the context of the surrounding area and not create unacceptable flood or erosion potential. 

Action 1.11: Require that sensitive wetland and coastal areas be preserved as undeveloped open space wherever feasible and that future developments result in no net loss of wetlands or “natural” coastal areas. 

Action 1.12: Update the provisions of the Hillside Management Program as necessary to ensure protection of open space lands.

Action 1.13: Recommend that the City's Sphere of Influence boundary be coterminous with the existing City limits in the hillsides in order to preserve the hillsides as open space.

Action 1.14: Work with established land conservation organizations toward establishing a Ventura hillsides preserve.

Action 1.15: Actively seek local, State, and federal funding sources to achieve preservation of the hillsides.

Policy 1C: Improve protection for native plants and animals.

Action 1.16: Comply with directives from regulatory authorities to update and enforce stormwater quality and watershed protection measures that limit impacts to aquatic ecosystems and that preserve and restore the beneficial uses of natural watercourses and wetlands in the city. 

Action 1.17: Require development to mitigate its impacts on wildlife through the development review process. 

Action 1.18: Require new development adjacent to rivers, creeks, and barrancas to use native or non-invasive plant species, preferably drought tolerant, for landscaping. 

Action 1.19: Require projects near watercourses, shoreline areas, and other sensitive habitat areas to include surveys for State and/or federally listed sensitive species and to provide appropriate

buffers and other mitigation necessary to protect habitat for listed species. 

Action 1.20: Conduct coastal dredging in accordance with the U.S. Army Corps of Engineers and California Department of Fish and Game requirements in order to avoid impacts to sensitive fish and bird species. 

Action 1.21: Work with State Parks on restoring the Alessandro Lagoon and pursue funding cooperatively. 

Action 1.22: Adopt development code provisions to protect mature trees, as defined by minimum height, canopy, and/or trunk diameter. 

Action 1.23: Require, where appropriate, the preservation of healthy tree windrows associated with current and former agricultural uses, and incorporate trees into the design of new developments. 

Action 1.24: Require new development to maintain all indigenous tree species or provide adequately sized replacement native trees on a 3:1 basis. 

Policy 1D: Expand the use of green practices.

Action 1.25: Purchase and use recycled materials and alternative and renewable energy sources as feasible in City operations.

Action 1.26: Reduce pesticide use in City operations. 

Action 1.27: Utilize green waste as biomass/compost in City operations.

Action 1.28: Purchase low-emission City vehicles, and convert existing gasoline-powered fleet vehicles to cleaner fuels as technology becomes available.

Action 1.29: Require all City funded projects that enter design and construction after January 1, 2006 to meet a design construction standard equivalent to the minimum U.S. Green Building Council LEED™ Certified rating in accordance with the City's Green Building Standards for Private and Municipal Construction Projects. 

Action 1.30: Provide information to businesses about how to reduce waste and pollution and conserve resources.

Action 1.31: Provide incentives for green building projects in both the public and private sectors to comply with either the LEED™ Rating System, California Green Builder, or the Residential Built Green program and to pursue registration and certification; incentives include “Head-of-the-Line” discretionary processing and “Head-of-the-Line” building permit processing. 

Action 1.32: Apply for grants, rebates, and other funding to install solar panels on all City-owned structures to provide at least half of their electric energy requirements. 

Action 1.33: Publicly acknowledge individuals and businesses that implement green construction and building practices.

"Every increment of construction should be done in such a way as to heal the city."

— Christopher Alexander
Author of *A Pattern Language*, 1977

CITY OF
VENTURA

OUR PROSPEROUS COMMUNITY
ventura's general plan

2. OUR PROSPEROUS COMMUNITY

Our goal is to attract and retain enterprises that provide high-value, high wage jobs; to diversify the local economy; to increase the local tax base; and to anticipate our economic future in order to strengthen our economy and help fund vital public services.

Adapting in the 21st Century

Great communities are prosperous communities. A successful city brings people, institutions, ideas, and capital together in creative ways that enrich the lives of those who live and work there. In today's global economy, high-wage high-value jobs are the foundation of the prosperity that instills a city with the financial resources necessary to provide high quality of life and excellent community amenities.

Ventura has been blessed with a history of prosperity, thanks in large part to success in harnessing the area's natural assets for economic benefit. For most of the 20th Century, Ventura was sustained largely by its role as the hub of the region's oil and agriculture industries. These two sectors not only provided a stable source of jobs and business opportunities, but also helped to shape Ventura's role as the legal, governmental, and cultural center of the County.

In the 21st Century, however, Venturans can't take continued prosperity for granted. Competition occurs regionally, nationally, and globally for innovative businesses, top talent, and

good jobs. The community must build on its resources and constantly be on the lookout for new economic opportunities.

County government will likely remain the city's largest employer, providing an important element of economic stability, but government employment is not likely to grow significantly. Oil and agriculture will continue to be important, but their roles are diminishing. While Ventura is a regional center for healthcare, that industry will continue to face intense pressures to reduce costs. Still, the City of Ventura is positioned to move into an era dominated by innovation and reliant on emerging technologies. Cities and regions that excel in the "New Economy" promote high tech industries and boast a high quality of life. Likewise, to remain competitive, Ventura must continue to support economic development, but also create a more attractive living environment, including by providing appropriate housing for all segments of the local workforce. Efforts to boost economic development must be supported by a high quality of life, including a thriving cultural arts scene, award winning schools, and an engaged community. Tourism is also a strong market for Ventura. The beaches, museums, downtown, harbor and the nearby Channel Islands National Park attract more than 1.5 million visitors a year.

The policies and actions in this chapter seek to identify business niches that can thrive locally to diversify the economic base and ensure future community prosperity.

Economic Challenges

Ventura faces a variety of interrelated challenges to continued economic vitality, including:

1. Capturing a share of high-value job markets, such as biotechnology, computer software, communications, entertainment, multimedia, education, and business and financial services.
2. Diversifying the local economy to reduce dependence on the service, retail, and government sectors.
3. Building on the success of the tourism, manufacturing, business, and financial services sectors through marketing and job training programs that will ensure retention and attraction of these enterprises.
4. Finding appropriate locations for commercial and industrial land, including through revitalization opportunities in the Westside and Downtown and possibly via annexations of sites in the North Ventura Avenue and 101 Business Corridor areas.
5. Expanding the retail base, because sales tax represents a major City revenue source.
6. Providing housing for the full range of workforce households at all income levels.
7. Providing adequate infrastructure and financing resources.

Meeting all of these challenges in an integrated, strategic manner will be necessary to achieve long-term economic stability and success. The City must endeavor to identify the businesses most likely to remain and grow in an area that has very high costs – especially for housing – but also has outstanding community amenities, including good weather, a spectacular natural setting, and a safe and desirable community fabric.

The *Ventura Vision* calls for targeting industries that demonstrate the greatest promise for long-term community prosperity by:

- Providing high-wage, high skilled jobs,
- Possessing a local competitive advantage in the global economy,
- Being committed to local responsibility,
- Growing from local ownership, control or management,
- Practicing environmental leadership in their markets, and
- Strengthening the community's creative, cultural identity.

The *Vision* also offers principles for the City to pursue in charting future strategies for economic development:

- Encourage a broad range of high-quality employment and entrepreneurial opportunities.
- Encourage private economic prosperity that can support public services and quality-of-life amenities.

- Develop a vital, prosperous, and stable economy while maintaining a “small-town” flavor.
- Encourage the public and private sectors to work together to achieve prosperity.
- Participate constructively in regional economic development efforts.

Implementing these strategies will not be simple or easy. For one reason, California’s current tax system contains provisions that result in some of the lowest-paying economic sectors providing the city with the most tax revenue, and vice versa.

Pillars for Prosperity

Community prosperity is not something that a city government can create by itself. Any successful economic development effort requires the participation of many partners, including community-based business organizations, educational and training institutions, venture capitalists, individual entrepreneurs and business owners, networks of suppliers, and other government agencies that have a mission to enhance prosperity.

Together, the City and its economic partners must ensure that the building blocks for community prosperity are in place. These foundations include organizations and institutions that can coordinate local economic development efforts, as well as land and other economic infrastructure required to make Ventura an attractive business location.

This organizational infrastructure is evolving in Ventura. Business groups such as the Chamber of Commerce and the Ventura County Economic Development Association (a countywide group) are already active, but a wider network is needed to assemble the resources and capacity of entrepreneurs, venture capitalists, educators, and other stakeholders in building a healthy business climate. Greater synergy is needed among the area’s higher education institutions – including California State University Channel Islands, Ventura College, Brooks Institute, and satellite campuses of other colleges and universities.

Appropriate and sufficient land will also be necessary to ensure continued economic prosperity over the next 20 years, even as we seek to protect open space and combat sprawl. Demand for land to support retail and office development is likely to outstrip current supply unless allowable building intensities are significantly increased. While some increased density is likely, and some older industrial land may be recycled for new business uses, the City must take care to reserve sufficient land for these purposes – especially in an environment where short-term pressure is likely to encourage conversion of land to commuter housing.

Thus, the strategy for community prosperity must be coordinated with area-specific planning efforts, especially on the Westside (where industrial land is likely to be recycled), Downtown (which must stress office, studio, and retail business growth as well as an emerging residential component), and in the 101 Corridor between Mills Road and

Johnson Drive (where most of the city's business activity now takes place). The City will advance on a set of defined focused areas:

Auto Center – efforts over the short term will focus on making the area a regional retail destination. The City will strengthen its partnership with Auto Center dealers to realize beautification projects and facilitate land use entitlements for additional dealerships.

McGrath Property – the 76-acre site provides Ventura with the very best opportunity to attract new industry with high-value, high-wage jobs. The City and property owners will work on securing project entitlement approvals and recruiting desired tenants. The objective is to attract targeted industries and provide the impetus for initial site development over the short-term.

Westside – the feasibility of establishing a redevelopment project area will be considered by the City and Westside citizens. Such legal designation would provide the resources needed to leverage and implement planned initiatives in various Westside plans. Brownfield reuse efforts will also continue to secure funding for much needed site assessment and remediation activities.

Upper North Avenue – the objective is to transform this area from an oilfield industrial area to a dynamic economic engine. Development efforts will address reuse of the former USA Petroleum site, including and evaluation of the

site's potential to emerge as a component of a campus expansion opportunity for Brooks Institute. Keys to this effort are site remediation, compatibility issues, and future annexation to the City.

Downtown – proposed initiatives include well defined design standards in the updated Downtown Specific Plan, enhanced efforts to market the Downtown Cultural District, formation of a downtown management entity, and attracting uses that create “around-the-clock” activity.

Anticipating Our Economic Future – Ventura's economic growth is built on a foundation of concerted efforts that fuel innovation, collaboration, and continuous learning. The focus will be on attracting high technology and knowledge-based businesses including biotechnology, non-durable manufacturing, and business and financial services. Continuous learning opportunities for job seekers, workers, and employers will acknowledge demographic pressures and rapidly changing skill needs. Through specific strategies, the community will develop leaders for tomorrow, and attract and retain new graduates and skilled employees. Critical players will include the Workforce Investment Board, Ventura College, California State Channel Islands, and the Brooks Institute.

The policies and actions in this chapter attempt to provide the means to support these targeted efforts to achieve a stable and balanced economic base.

Policy 2A: Establish a clear economic strategy.

Action 2.1: Track economic indicators for changes that may affect City land resources, tax base, or employment base, such as terms and conditions of sale or lease of available office, retail, and manufacturing space.

Action 2.2: Prepare an economic base analysis that identifies opportunities to capture retail sales in sectors where resident purchasing has leaked to other jurisdictions.

Action 2.3: Maintain and update an Economic Development Strategy to implement City economic goals and objectives.

Policy 2B: Make the local economic climate more supportive of businesses investment.

Action 2.4: Map priority locations for commercial and industrial development and revitalization, including a range of parcel sizes targeted for high-technology, non-durables manufacturing, finance, business services, tourism, and retail uses. 

Action 2.5: Share economic and demographic information with organizations that may refer businesses to Ventura.

Action 2.6: Encourage intensification and diversification of uses and properties in districts, corridors, and neighborhood centers, including through assembly of vacant and underutilized parcels. 

Action 2.7: Partner with local commerce groups to recruit companies and pursue funding for business development and land re-utilization.

Action 2.8: Carry out Housing Element programs that provide housing to all segments of the local workforce.

Action 2.9: Expedite review for childcare facilities that will provide support to local employees.

Policy 2C: Encourage niche industries.

Action 2.10: Expedite review of the entitlement process for installation of infrastructure necessary to support high technology and multimedia companies.

Action 2.11: Allow mixed-use development in commercial and industrial districts as appropriate. 

Action 2.12: Allow uses such as conference centers with resort amenities on appropriately sized and located parcels. 

Action 2.13: Market the city to businesses that link agriculture with high technology, such as biotechnology enterprises.

Action 2.14: Partner with local farms to promote farmers markets and high quality locally grown food. 

Policy 2D: Expand tourism opportunities.

Action 2.15: Provide incentives for use of waterfront parcels for recreation, visitor-serving commerce, restaurant, marina, and fishing uses. 

Action 2.16: Work with the State to create year-round commercial opportunities at the fairgrounds. 

Action 2.17: Partner with the Harbor District and National Park Service to promote Channel Islands tours and develop a marine learning center. 

Action 2.18: Prioritize uses within the Harbor master plan area as follows: (1) coastal dependent, (2) commercial fishing, (3) coastal access, and (4) visitor serving commercial and recreational uses. 

Action 2.19: Partner with hotels and the Chamber of Commerce to promote city golf courses. 

Action 2.20: Promote outdoor recreation as part of an enhanced visitor opportunities strategy. 

"Communities should be designed to serve the cycle of the day and the cycle of the lifetime."

— Andres Duany
Architect & Town Planner

3. OUR WELL PLANNED & DESIGNED COMMUNITY

Our goal is to protect our hillsides, farmlands and open spaces; enhance Ventura's historic and cultural resources; respect our diverse neighborhoods; reinvest in older areas of our community; and make great places by insisting on the highest standards of quality in architecture, landscaping and urban design.

Our City

Ventura is a unique coastal community, proud of our heritage and dedicated to being a national model for effectively managing growth to protect our natural environment and continue to be a great place for us to live.

It is our public responsibility to plan and shape the physical realm to achieve these goals. Past policies, particularly the 1989 Comprehensive Plan, reined in rapid outward suburban sprawl. The 1992 Downtown Specific Plan set the direction for revitalization of the historic heart of our community. Voter-approved measures clearly underscored a mandate to protect agricultural resources and open space, particularly in our hillsides.

Guided by the Ventura Vision of 2000, the centerpiece for this General Plan is creating a "well-planned and designed community." The policies build on the foundation of the past.

This plan also represents an historic commitment to *smart* growth:

1. Mix land uses
2. Take advantage of compact building design
3. Create a range of housing opportunities and choices
4. Create walkable communities
5. Foster distinctive, attractive communities with a strong sense of place
6. Preserve open space, farmland, natural beauty, and critical environmental areas
7. Strengthen and direct development toward existing communities
8. Provide a variety of transportation choices
9. Make development decisions predictable, fair, and cost effective
10. Encourage community and stakeholder collaboration in development decisions

Source: U.S. Environmental Protection Agency

Infill First

Ventura today is the product of decades of earlier growth and development. These patterns have largely established our community's character and will continue to do so in the future. The passage of SOAR, the Hillside Voter Protection Area, and other land-use constraints, along with natural boundaries, such as the ocean and the rivers, make it abundantly clear that before we expand outward any further, we must pursue an "Infill First" strategy. Such a strategy will help avoid sacrificing farmland and sensitive areas in our hillsides and along our rivers.

"Smart growth is about being good stewards of our communities and of our rural lands, parks, and forests. It is about ensuring that the best of the past is preserved, while creating new communities that are attractive, vital, and enduring."
--Michael Leavitt, EPA Administrator

Our “Infill First” strategy for Ventura means avoiding suburban sprawl by directing new development to vacant land in the City and Sphere of Influence (with the exception of SOAR land), and by focusing new public and private investment in carefully selected districts, corridors, and neighborhood centers where concentrated development and adaptive reuse will improve the standard of living and quality of life for the entire community.

Recognizing that the rate of future population growth is not subject to City control, this plan has been analyzed (in the accompanying Environmental Impact Report) on the basis of estimates of what new homes and other development might be expected to take place over the next twenty years (see Table 3-2). Looking at the rate of growth over the past decade and recognizing the challenges to “infill” development compared to “greenfield” expansion, a projection of roughly 8,300 additional housing units and approximately 5 million square feet of non-residential development has been used for the plan’s 20 year planning horizon. Table 3-2 provides estimates of the amount of development that could reasonably be expected to occur in the City and Sphere of Influence.

The actual distribution of future growth in the City may vary based on market forces and other factors. The districts, corridors, and neighborhood center areas, shown on Figure 3-1 Infill Areas, could accommodate more development and/or a different mix of

development than shown in Table 3-2. To demonstrate this, Table 3-1 shows the potential development based on the overall carrying capacity of the land.

Distribution of growth in the districts and corridors is based on the following general assumptions:

- Development in the Downtown and Harbor Districts will conform to the plans for those areas,
- The Downtown area and, to a lesser extent, the Ventura Avenue corridor will be the focus of future residential and commercial growth, and
- The Arundell, North Avenue, and Upper North Avenue areas will be the focus of future economic growth, potential expansion of the Brooks Institute, with some residential uses.

Table 3-1. Potential Development Based on Carrying Capacity of Land Area

Planning Designation	Allowed Density (du/acre)	Existing Development 2004					General Plan Capacity			
		Single Family Units	Multi Family Units	Comm./Ind. Sq. Ft.	Parcels	Acres	Vacant		Additional Potential ³	
							Parcels	Acres	Units	Sq. Ft.
Neighborhood Low	0-8	19,425	3,335	49,386	22,511	4,629	108	426	1,221	
Neighborhood Medium	9-20	1,163	8,965	149,513	4,414	1,061	32	116	4,859	
Neighborhood High	21-54	814	2,468	194,143	1,634	303	8	16	8,477	
Commerce ¹		257	490	4,995,248	1,366	808	95	108	7,892	22,328,276
Industry ²		29	31	8,299,840	1,037	1,401	89	392	4,724	34,215,483
Public & Institutional		4	0	54,422	66	571				
Park & Open Space		6	0	15,491	264	11,693				
Agriculture		4	0	19,550	154	6,857				
Downtown Specific Plan	21-54	332	1,543	1,795,401	1,174	307	45	20	2,500	450,000
Harbor District		0	310	350,160	10	254	1	21	300	876,100
Total		22,034	17,142	15,923,154	32,630	27,884	378	1099	29,910	57,869,859

1. Commerce residential unit capacity is for property within a Corridor, District, or Neighborhood Center and assumes buildout to the maximum FAR and that 25% of floor area would be commercial (with the remainder residential).
 2. Industry residential unit capacity is for property within a Corridor, District, or Neighborhood Center and assumes buildout to the maximum FAR and that 75% of floor area would be industrial (with the remainder residential).
 3. "Additional Potential" assumes a historic buildout rate of 70% for both residential and non-residential.

Figure 3-1
Infill Areas

Footnotes for Table 3-2:

Growth estimates for the Arundell community consider the likely development of the 75-acre McGrath property with a mix of uses and development of other vacant lands. Growth estimates for the North Bank area consider the possibility of a large retailer in that area. Estimates of growth in the SOI/Other Infill sites are based on the following general assumptions: (a) 101/126 Orchard site will develop similarly to a project recently proposed for that site; (b) Wells/Saticoy sites will develop in accordance with ongoing planning efforts for those areas; (c) the Pierpont area will develop generally in accordance with a conceptual project recently considered by the City; (d) Second Units will be added at a rate of 15/year; (e) roughly half of underutilized lands identified in the Housing Element will be re-developed over the next 20 years; (f) all vacant lands outside the districts and corridors will be developed in accordance with the proposed planning designations. Planned and Pending Developments based upon the City's 2004 Pending Projects list. Building areas do not include self storage facilities.

The following potential projects not included in the 2004 Planned and Pending Developments list have been included in the future development totals: (1) 150,000 square feet of industrial development in the North Bank area; (2) 165,000 square feet of retail development along Wells Road in the Saticoy area; (3) 50,000 square feet of office development on a 3.5-acre site along Ralston Drive. The Auto Center industrial project is included in the North Bank district; the other two projects are included in the "vacant" category. The square footage associated with these projects has been added to the projections of future growth to provide a conservative analysis of possible future impacts.

Together Table 3-2 and Figure 3-1, Infill Areas, offer a sense of how much growth Ventura might experience by 2025, and a picture of where such change is likely to occur. Precisely how and when development happens and what resources are conserved will be determined by the actions presented in the ten chapters of the *General Plan*, and by the specific land development standards. This plan is one of many tools the City will use to control where and how any future development takes place.

21st Century Tool Kit

The City has a wide array of tools at its disposal to achieve our “Infill First” strategy in ways that respect Ventura’s heritage and result in beautiful buildings, blocks, streetscapes, and public places that enhance and enrich quality of life for the entire community. Shaping the City’s physical form in the 21st Century will be achieved most effectively and aesthetically by combining Planning Designations with a transect-based approach, and with a new form-based Development Code. Together these can strongly influence the design and functioning of Ventura’s distinct and unique neighborhoods, districts, and corridors.

The policies and actions in this chapter seek to enrich Ventura’s urban fabric through appropriate design that showcases the attractive features of neighborhoods, districts, and corridors. To promote high-quality infill, the policies and actions encourage neighborhood centers, pedestrian access, established and desirable building types, and dynamic, neighborhood-serving nodes of mixed-use development along primary streets and corridors. This chapter specifically calls for detailed attention to community design through a form-based approach.

Neighborhoods: The Basic Building Blocks of Community

Like any great city, Ventura has grown around the basic unit of the neighborhood. A true neighborhood is not a subdivision of similar

houses disconnected from surrounding places. Instead it is an identifiable area containing a neighborhood center with a pedestrian-friendly mix of uses and a palette of housing types for people in all stages of their lives. Neighborhoods are often defined by a quarter-mile “pedestrian shed” (see Figure 3-2), in which most residents’ daily needs can be met within a five-minute walk. The organic nature of neighborhoods and their interdependency is what makes them viable for generations. Neighborhoods are not static places that resist change, but rather evolve naturally through periods of transformation to accommodate new residents’ needs and desires.

“In a neighborhood, everything that is needed is there and everything that is there is needed.”
- Anonymous

This map is a product of the City of San Buenaventura, California. Although reasonable efforts have been made to ensure the accuracy of this map, the City of San Buenaventura cannot guarantee its accuracy.

The City is rich in a variety of neighborhoods, most of which are within one of Ventura's distinct communities. A total of 17 communities were identified in the 1989 Comprehensive Plan and have been carried forward, with some modifications to allow for a more detailed approach to describe Ventura's geography. Figure 3-3 illustrates 19 distinct communities, some of which are composed of a group of neighborhoods, each boasting their own unique attractions and potential. The oldest settled area is nearest the ocean, with newer areas found eastward, with the exception of Saticoy. Some of Ventura's communities have neighborhood centers established around parks, community gathering places, or civic buildings, and contain or are near services they share with surrounding areas, such as schools, libraries, post offices, and specialty shopping.

Ventura also has residential subdivisions and commercial and industrial districts that could evolve into true neighborhoods. A long-term strategy should be developed to gradually transform these areas that do not yet follow the neighborhood pattern. Existing subdivisions could be linked by pedestrian routes to new small-scale retail and service centers. Congested commercial areas could be redesigned as mixed-use centers on a grid of streets with walkable blocks that connect with surrounding neighborhoods and central plazas. These streets could be lined with buildings containing upper level housing and lower level commercial, office, and civic spaces that hide internal parking structures. Industrial sites that are fast converting

to light industry, high tech manufacturing, and assembly could become factory villages with green space, multiple types of housing, small-scale retail to serve workers, and spin-off businesses.

Ventura's 19 communities (Figure 3-3) can each be enriched by using the *transect* (see discussion page 3-10) as a lens to understanding the ways in which it functions and by applying form-based development controls to respect and enhance its character to ensure that, where appropriate, each community provides one, if not more, walkable neighborhoods.

Figure 3-3
 Planning Communities

This map is a product of the City of San Buenaventura, California. Although reasonable efforts have been made to ensure the accuracy of this map, the City of San Buenaventura cannot guarantee its accuracy.

Taylor Ranch

This area is essentially undeveloped, with agriculture as the primary activity. Taylor Ranch is within the City's Planning Area, including a portion within the Coastal Zone Boundary.

Ventura River

This area includes the Ventura River Basin, is within the Coastal Zone Boundary, and with Emma Wood State Beach Park, its major activity is recreation offering day use and overnight camping. Opportunities exist for passive recreation and nature study.

Hillside Open Space

Within the City's Planning Area, is undeveloped, and designated Open Space. Plant communities include chaparral, riparian willow forest, and oak woodland. This area has tremendous potential for passive recreation including scenic trails with panoramic views. This area is coterminous with the Hillside Voter Participation Area or "HVPA" (see Chapter 1 and Appendix C).

North Avenue

Within the City's Planning Area. Historically, largely oilfield industrial. Includes both the Upper North Avenue and North Avenue districts, and is home to the Brooks Institute, which is world renown for its professional photographic and motion picture education. Opportunities exist to strengthen the economy of this area and provide for the expansion of the Brooks Institute into a campus-village including spin-off businesses with a mix of housing types and transit options for all ages.

Westside

Includes the Ventura Avenue corridor and is home to several neighborhood centers that are surrounded by well-connected neighborhood blocks. Opportunities exist to realize the potential of neighborhood improvements initiated in ongoing and past grassroots efforts, such as the Westside Revitalization Plan. This community includes "Hillside Areas" (see definition in Attachment A), which are subject to the Hillside Management Program that provides necessary development criteria in order to retain the natural qualities and minimize potential hazards.

Downtown

The area is regulated by the Downtown Specific Plan. This community is both an urban core with opportunity to grow economically stronger, and the historic center of the City. Civic uses include City Hall, Seaside Park, Grant Park, the Ventura County Museum, San Buenaventura Mission, and is home to a number of historic sites and landmarks. Additional opportunity to enhance the area's already strong cultural climate, including art, cookery, music, performance, and entertainment. Tremendous potential to create "around-the-clock activity" leading to increased vitality. This community includes "Hillside Areas".

Midtown

Includes the Main, Thompson, and Loma Vista corridors, a portion of the Telegraph corridor, as well as the Seaward/Alessandro neighborhood center. Home to the Pacific View Mall, the City's Bus Transfer Center, Ventura High School. Blanche Reynolds Park, Ocean Avenue Park,

and Memorial Park. Includes a small amount of agriculture. Opportunities exist to realize potential improvements initiated in ongoing and past grassroots efforts, such as Midtown by Design, and more recently the Midtown Urban Design Charrette. This community includes “Hillside Areas”.

Pierpont

Within the Coastal Zone Boundary, a unique-beach oriented predominantly residential community, with high-quality beachfront homes. Includes the Harbor district and the Pierpont neighborhood center. Home to the Ventura Harbor, Seaward Elementary School, a mobile home park, and Marina Park. Currently offers highway retail such as motels, hotels, and fast food, but opportunity exists to offer residents and visitors with more attractive and improved neighborhood and coastal oriented services and to develop a specific plan for the Harbor district.

College

Includes a portion of the Telegraph corridor, and the College/Day neighborhood center. Major civic uses are Arroyo Verde and Camino Real Park, Ventura Community College and Buena High School. This community includes “Hillside Areas”.

Thille

Includes the Gateway neighborhood center and shares the Victoria corridor with Montalvo to the east. Contains mix of housing types built mostly between 1960 and 1980, with some newer development in the 1990’s and early 2000’s. Its

primary civic use is the County Square Linear Park

Arundell

This community contains the main industrial and warehouse district of Ventura, but also has mixed-use areas with retail, restaurants, and offices within walking distance of many workers. Callens Road, the historic center of this community, has great potential to expand and increase the mix of uses it contains, including residential. A significant vacant parcel, the 75-acre McGrath property, offers great economic opportunity to attract new industry that provides high value, high wage jobs to the City.

Olivas

Predominantly agricultural. Its major civic use is the Olivas Park Golf Course and is home to the Olivas Adobe. Contains some commercial and industrial.

North Bank

This community contains a portion regulated by the Auto Center Specific Plan. Its major civic use the Buenaventura Golf Course. Predominantly industrial, with some agriculture. Opportunity to enhance the area as a regional retail destination, while providing workforce serving retail uses.

Poinsettia

Includes the Victoria Plaza neighborhood center. Its primary civic uses include elementary and middle schools. Predominantly residential, with some housing in the Hillside Area, and a significant amount of agricultural operations.

Montalvo

Includes the Johnson Drive corridor, Bristol neighborhood center, and shares the Victoria corridor with Thille to the west. Its major civic use is the County Government Center (equal size to 12 downtown blocks), but also the Rancho Ventura Linear Park and the Barranca Vista Park. Contains mix of housing types and is home to the Metrolink Station.

and a mix of housing types at various intensities. Its major civic uses are the Fritz Huntsinger Youth Sports Complex, Saticoy Regional Golf Course and the Saticoy neighborhood park.

Serra

Includes the Telephone/Petit neighborhood center, and is home to the City's newest civic use – the Community Park, set to open Fall 2005. Also includes the Chumash Park, Junipero Serra Park, North Bank Linear Park, and Bristol Bay Linear Park. Contains a significant amount of agricultural land.

Juanamaria

Includes the Kimball/Telegraph neighborhood center. Primary civic use is Hobert Park; this community contains some agricultural land.

Wells

Includes the Wells corridor. The Brown Barranca runs through the northerly portion of this area. Contains agricultural land.

Saticoy

Includes the Telephone/Cachuma and Saticoy neighborhood centers and the Saticoy district. Developed originally as a rural town in the late 1800s, Saticoy has the full range of transect characteristics: from the Santa Clara river and the rural eastern edge, to its neighborhood centers,

Planning Designations and Transect Zones

Land in the City's Planning Area is divided into eight basic Planning Designations on the General Plan Diagram (page 3-22). Each acknowledges a particular predominant development pattern that exhibits certain desirable characteristics, such as building types and functions that can be measured and described.

The wide range of building forms in Ventura offers great potential for compatible infill and viable mixed-use projects in existing neighborhoods, districts, corridors, and neighborhood centers. The wealth of building types includes attached and detached housing, duplexes, courtyard bungalows, second units (often over garages), lofts (some live-work), urban villas, neighborhood shopfronts, concentrated retail developments, and civic buildings. Public buildings retain special importance by serving as prominent landmarks that shape the visual character of the city.

Streetscapes set the tone for quality of life in Ventura by providing the shared outdoor living space of the community. Although the city's distinct neighborhoods, commercial and industrial districts, and agricultural areas are linked by corridors that have evolved primarily to accommodate motor vehicles, opportunities abound to make those streets more livable and to focus activities in neighborhood centers that emphasize walking, biking, and public gathering, and thereby ease traffic and reinforce community vitality. Accordingly, new development needs to

be high quality, compact, and walkable, and it should incorporate design diversity that increases lifestyle choices and bolsters commerce and industry.

Determining which building types are most appropriate in specific locations requires shifting away from conventional zoning that emphasizes use toward a form-based approach that prioritizes function, appearance, and compatibility with surrounding context. A powerful tool for understanding this context is the *Transect*, which depicts the continuum from rural to urban conditions (see Figure 3-4).

The transect is a tool that can be used by the community to understand and describe the full range of unique environmental and built characteristics within each of Ventura's neighborhoods. Using the six parenthetical transect zones to better understand the broad Planning Designations of the General Plan Diagram, a finer-grained (site specific) set of development standards can be created to ensure that new development is in keeping with local preferences for building.

This new Development Code will better accommodate the diversity of lifestyles Ventura desires – from the *rural* farm to the *sub-urban* house and yard to the *urban core* with apartments above shops – and will contribute to the identity and character desired by the community. Common elements that the transect will help measure and describe, and that the Development Code will prescribe, include the types and

arrangements of buildings, their “intensity” of lot coverage, height and mass, the details of streets, public and private frontages and the requirements for and character of open spaces. In general it will prescribe individual neighborhood preferences for urban design and building characteristics, including standards.

In many cases, area specific codes, applying the Planning Designations including districts, corridors, and neighborhood centers, will be developed as part of community or specific plans that establish a detailed strategy for public and private investment and policies to promote the appropriate preservation and development of community desired character.

The following descriptions of the Planning Designations include a parenthetical reference to the transect zones they encompass that will be used as guidance in interpreting the planning designations while drafting detailed plans and codes:

"A **transect** is a geographical cross-section of a region used to reveal a sequence of environments. For human environments, this cross-section can be used to identify a set of habitats that vary by their level and intensity of urban character, a continuum that ranges from rural to urban. In transect planning, this range of environments is the basis for organizing the components of the built world: building, lot, land use, street, and all of the other physical elements of the human habitat."
 --SmartCode, Volume 6.5, 2005

"All architecture should be beautiful. All towns should be beautiful. Beauty nurtures the soul and the spirit. It makes life worth living."
 -Camillo Sitte

- **Neighborhood Low – (T3 Sub-Urban and T4 General Urban)**
 emphasizes detached houses with some attached units in a small mix of building types from 0 up to 8 dwelling units per acre. Predominantly residential, with opportunity for limited home occupation and neighborhood services sensitively located along corridors and at intersections.
- **Neighborhood Medium – (T3 Sub-Urban, T4 General Urban and T5 Urban Center)**
 anticipates a mixture of detached and attached dwellings and higher building types at approximately 9 to 20 dwelling units per acre. Predominantly residential with small scale commercial at key locations, primarily at intersections and adjacent to corridors.
- **Neighborhood High – (T3 Sub-Urban through T6 Urban Core)**
 accommodates a broader mix of building types, primarily attached, from 21 to 54 dwelling units per acre; A mix of residential, commercial, office, and entertainment that includes mixed-use buildings.
- **Commerce – (T4 General Urban through T6 Urban Core, neighborhood center downtown, regional center, town center or village center)**
 encourages a wide range of building types of anywhere from two to six stories (depending on neighborhood characteristics) that house a mix of functions, including commercial, entertainment, office and housing.
- **Industry – (T2 Rural through T6 Urban Core)**
 encourages intensive manufacturing,

processing, warehousing and similar uses, as well as light, clean industries and support offices; also encourages workplace-serving retail functions and work-live residences where such secondary functions would complement and be compatible with industrial uses. Primarily large-scale buildings. Also can be developed as Transit Oriented Development, employment center or working village with a mix of uses.

- **Public and Institutional – (T1 Preserve through T6 Urban Core)**
 accommodates civic functions such as government offices, hospitals, libraries, schools and public green space.
- **Agriculture – (T2 Rural)**
 predominantly commercial cultivation of food and plants and raising of animals.
Pursuant to SOAR: The Agricultural use (not to be considered until after the Year 2030) category identifies those lands that are designated for agricultural use on the General Plan Diagram. The target date of 2030 associated with the Agricultural Use designation indicates a review date after which agriculturally designated lands may be reconsidered for urban uses. However, during the life of this Plan as amended by initiative, it is intended that only agricultural uses are permitted on these lands, except as such lands may be appropriate to public open space and recreational usage. Furthermore, any updates to this Plan are not intended to imply that development would necessarily be appropriate at that time.
- **Parks and Open Space – (T1 Preserve through T6 Urban Core)**
 designate lands to public recreation and leisure and visual resources, and can range from neighborhood tot lots and pocket parks to urban squares and plazas and playgrounds to large regional parks and natural preserves.

The General Plan Diagram (page 3-22) also depicts the Downtown, Auto Center, and Saticoy Village Specific Plan areas, which are subject to detailed standards for form and use. In addition, the Diagram identifies Districts, Corridors, and Neighborhood Centers – where the development of housing alongside commercial uses is specifically encouraged. These Districts, Corridors, and Neighborhood Centers make up the growth priority areas as the City’s “Infill First” strategy (See Figure 3-1 Infill Areas).

Districts, Corridors, and Neighborhood Centers

One of the primary objectives for infill in Ventura is to produce mixed-use development that places most people’s daily needs within walking distance of their dwellings. This may include encouraging “flex space” where a single building functions as both living and working area for the owner, combining housing and commercial uses in the same structures, or sensitively integrating small-scale retail, service, and entertainment within convenient distance of residential areas. Mixed-use places inherently reduce automobile trips and improve the pedestrian experience, resulting in safer neighborhoods, healthier citizens, and better access to everyday needs. The City’s corridors and districts already encompass significant mixed-use development. Opportunities exist to augment those areas in ways that complement and enhance existing urban form and streetscapes to better serve Ventura’s residents.

Districts

Districts consist of streets or areas emphasizing specific types of activities and exhibiting distinct characteristics. A neighborhood or parts of neighborhoods can form a district. A thoroughfare may also be a district, such as when a major shopping avenue runs between adjoining neighborhoods. The following nine districts are depicted on the General Plan Diagram:

1. Upper North Avenue – home to a mix of industrial uses, including an abandoned oil refinery and Brooks Institute. Tremendous opportunities exist for the remediation and reuse of the former USA Petroleum site, as well as for the expansion of the Brooks Institute as a campus village, surrounded by a green edge to define the upper limits of Ventura.
2. North Avenue – an area with oilfield, industrial, and residential development, which has potential to fully develop into a more balanced mix of building types and uses with unique character, to serve as a major neighborhood anchor for northwest Ventura.
3. Downtown – the most intensely developed area of the city and its urban core. The Downtown Specific Plan regulates this area. Proposed initiatives include well-defined design standards via the Downtown Specific Plan update; enhanced efforts to market the Downtown Cultural District; formation of a

downtown management entity; and attracting uses that create “around-the-clock” activity.

4. Pacific View Mall – an enclosed shopping center and adjacent commercial uses. Large expanses of surface parking paired with significant building mass offer opportunity for the reintroduction of the block pattern and a reinvention of single-use retail into a much more sustainable mix of high intensity uses.
5. Harbor – an area with visitor serving uses, marine facilities, boating and commercial and recreational fishing activities, as well mixed-use places. A specific plan (based on the draft Harbor Master Plan) is being prepared for the Harbor District that will ensure a mix of uses, including residential, and highly defined public frontages and shared civic space for increased accessibility to ocean-front amenities.
6. Arundell – is currently an industrial center with a mix of small-scale industrial uses, business park development, and limited retail services. The McGrath Property – is a 76-acre site of undeveloped land that could provide the catalyst for Ventura’s redefinition of 21st Century light industry, manufacturing, research and development, and technological innovation. It is centrally located in the Arundell area, which is ripe for redevelopment into a new form of community plan and building that incorporates large-scale employment, workforce housing and neighborhood commercial in an economically diverse setting.
7. North Bank – a combination of automobile retail, regulated by the Auto Center Specific Plan, and industrial/business park uses. Auto Center – efforts over the short term will focus on making the area a regional retail destination. The City will strengthen its partnership with Auto Center dealers to realize beautification projects and facilitate land use entitlements for additional dealerships, as well as nurture creative partnerships to discover potential for unique attractions of regional interest.
8. Montalvo – an area of industrial and heavier commercial uses, and currently home to the Metrolink Station. Because of the strategic location of this area between east and west Ventura and its transportation-rich infrastructure, it needs a strong plan for connectivity and a strategic mix of uses for evolution that is economically sustainable.
9. Saticoy – a mix of homes, older industrial and agricultural operations, and the planned site for the County maintenance yard. The Saticoy Village Specific Plan governs a small portion of this area. A larger effort should ensure Saticoy’s seamless connection with adjacent areas, including a greenspace and circulation plan.

Corridors

Corridors, which can be natural or urban, often form boundaries, as well as connections, between neighborhoods and/or districts. Natural corridors can be those such as streams, barrancas, canyons, or green parkways. Urban corridors can be transportation thoroughfares that frequently encompass major access routes, especially ones with commercial destinations, including transit routes and rail lines. The following eight urban corridors are depicted on the General Plan Diagram. Each has the potential to evolve into a vibrant mixed-use City street with a distinct character borrowed from the neighborhoods that share it:

- A. Ventura Avenue – a mix of older, small-scale commercial, industrial, and residential uses, with potential to grow even more vibrant by building on existing strengths, including its historic role as a major “working center.” Using the warehouse model and diversity of building materials as a cue, “The Avenue” could harness cultural expression and become an eclectic center for the emerging arts and manufacturing crafts.
- B. Main Street – currently a commerce-oriented area with a limited amount of mixed use development, this corridor displays the broadest range of architectural types and styles in the city, as well as the widest spectrum of transect characteristics. It has the most potential for increased mixed use and housing with improved streetscape and pedestrian enhancement to slow traffic.
- C. Thompson Boulevard – a commercial thoroughfare in need of streetscape improvements and pedestrian amenities, this corridor is much like Main Street in that it boasts tremendous history as a “gateway to Ventura” and epitomizes a beach town character. It is a natural for a major transit or streetcar corridor, where nodes of mixed-use development and pedestrian and bike enhancement could support parallel neighborhoods and increase access to the ocean.
- D. Loma Vista Road – a mix of commercial and residential development at varying scales, with a high concentration of medical facilities, this is the ideal place for Ventura to focus on creating a concentration of medical and research-centered business, with a high intensity of workforce housing and services housed in large-scale mixed-use buildings of high-tech character and serviced by increased transit.
- E. Telegraph Road – a sub-urban-scale commercial area with some detached homes and multifamily buildings. The City’s bus transfer station is located along this corridor, creating the perfect opportunity for a multi-modal connection with an intense node of housing and employment. The streetscape could change character along its length, with a mixture of intensities of development.
- F. Victoria Avenue – currently a wide artery with high traffic volumes and shopping centers, Victoria needs effective traffic management

and pedestrian and streetscape improvements with strong attention to additional mobility options. Actions in this General Plan, along with the new Development Code, will call for revitalizing this corridor by redesigning the current array of single-use shopping centers and retail parcels with a mix of building types, uses, and public and private frontages. By eliminating "big box", mega-block, auto-oriented strip development, and the traffic patterns it generates, Victoria Avenue could create tremendous opportunity for healthy economic investment in walkable blocks, connected to better serve surrounding neighborhoods. Creative solutions, including dedicating transit or streetcar lanes, wider sidewalks, and bike lanes could transform Victoria's image into a regional thoroughfare of great and sophisticated diversity. All new commercial development within the Victoria Avenue corridor must follow this approach.

- G. Johnson Drive – a connector between eastern Ventura and Highway 101 with sub-urban scale retail. Opportunities exist for high-quality, mixed-uses (such as child-care, restaurants, offices, light industrial, and housing) with ground floor commercial space to strengthen its economic presence and provide a visual gateway.
- H. Wells Road – a mix of older industrial uses and newer sub-urban commercial and residential development. Well's Road should be returned to the neighborhoods it serves, so that new development can

emulate the country charm that existed prior to its widening. Traffic calming in appropriate locations would encourage neighborhood connectivity, and end the current trend toward walls and buildings that turn their back to the street. This would also encourage redevelopment of the old neighborhood centers.

Neighborhood Centers

Community evolves from individual conversations and the best places to grow community are in individual neighborhoods. Every neighborhood should have at least one center where people can meet by chance at a local coffee shop, market, bookstore, diner, or even hardware store. *Our Involved Community* needs places to gather to have meaningful conversations and share civic information. Ventura's existing neighborhood centers have the opportunity to become such places. The General Plan Diagram identifies 10 neighborhood centers – where the development of housing alongside commercial uses is specifically encouraged. These centers include:

- (1) Pierpont, (2) Seaward/Alessandro, (3) College/Day, (4) Gateway Plaza, (5) Victoria Plaza, (6) Bristol, (7) Kimball/Telegraph, (8) Petit/Telephone, (9) Telephone/Cachuma, and (10) Saticoy.

Note: Areas prone to flooding are shown on Figure 7-1 in Chapter 7.

Special Topics

Agricultural Lands

During the 20th Century, the value of agricultural land in Ventura became secondary to that for development. However, this pattern is not irreversible, and protecting green land to save the aesthetic beauty of open space, preserve the cultural landscape of the community's heritage, and conserve land for environmental quality are high priorities in Ventura. In fact, the land's historic role for food production may soon be more highly valued once again, as prime agricultural areas continue to disappear to development at an astounding rate.

Ventura is fortunate to retain much of its rural landscape. Agriculture still plays an important role in the economy of the City and County of Ventura. Significant yields are made possible by the presence of high quality soils, adequate water supply, favorable climate, long growing season, and level topography. Mechanisms such as the California Land Conservation Act (more popularly known as the Williamson Act), the Save Our Agricultural Resources (SOAR) initiative (see Appendix B), and greenbelt agreements with neighboring jurisdictions continue to help maintain a balance between urban growth and agricultural preservation. The SOAR initiative that was adopted by the voters in 1995, and that, by its own terms, remains in full legal effect until 2030, refers to specific policies from the 1989 Comprehensive Plan that are still in effect and, as such, have been carried forward into this Plan under Policy 3D and Action 3.20 in addition to

being incorporated in this General Plan as set forth in Appendix B.

A primary agricultural concern is the potential conflict with adjacent urban uses over pesticides, dust, odors, noise, and the visual impact of large greenhouses. Other issues of importance to agricultural producers include restrictions on farm-related activities, access to water, and provision of farmworker housing. Paralleling these concerns is a community interest in sustainability, the ability to provide for the needs of future generations. The policies and actions in this chapter intend to sustain viable farm operations in areas designated for agricultural use.

Growth Management

Growth management seeks to preserve public good, improve social equity, and minimize adverse impacts of development while still accommodating new housing and business attraction. The effects of growth management policies on housing prices are complex due to the idiosyncrasies of local real estate markets. Properly designed, growth management programs can plan for all development needs, such as open space, access to public transportation, and walkable neighborhoods.

The City's Residential Growth Management Program (originally established in 1979 to ensure that housing development would not outpace needed infrastructure) has not always contributed to housing affordability or quality design. This General Plan calls for revising the Residential

Subsequent to the adoption of the **SOAR** initiative, there have been two general plan amendments, which redesignated individual agricultural properties through a vote of the electorate as required by SOAR. These remain in full legal effect and have been carried forward into this Plan. These include the new Community Park at Kimball Road and the southeast corner of Montgomery and Bristol (see Appendix E and F).

Growth Management Program with an integrated set of growth management tools. Such tools not only include the adoption of a new form-based Development Code, but also community or specific plans based on availability of infrastructure and resources.

Long Term Potential Expansion Strategy

Indeed, the community has indicated that before the City expands any further, the first priority for achieving planning goals should be in the vacant and underutilized areas of the City. Yet, even the most successful effort to achieve community planning goals through infill may need to be supplemented at some point by expanding into areas outside the city limits. Such expansion may not only be necessary to fulfill development objectives; it also may be needed to provide open space, parklands, and natural areas to be preserved and restored. To address this, citizens discussed during the preparation of this General Plan which areas, if any, should be possible expansion areas. These areas were identified because they embody opportunities for achieving a variety of community vision objectives that may not be feasible within existing city limits. The community further went on to agree upon a set of rules about how these areas should be planned. These areas were analyzed in the environmental impact report prepared for this General Plan, and a “long term potential expansion strategy” will be formulated to guide the process of prioritizing any potential future expansion areas to fulfill General Plan objectives that may not be able to be achieved by our “Infill First” approach. Should

any areas be selected for future planning, a specific plan, a public vote (if required pursuant to SOAR), and an amendment with the regulatory planning framework would have to occur.

The policies and actions in this chapter call for measured and appropriate growth in Ventura by prioritizing areas appropriate for additional development based on community values and infrastructure potential.

Policy 3A: Sustain and complement cherished community characteristics.

Action 3.1: Preserve the stock of existing homes by carrying out Housing Element programs. 

Action 3.2: Enhance the appearance of districts, corridors, and gateways (including views from highways) through controls on building placement, design elements, and signage. 

Action 3.3: Require preservation of public view sheds and solar access. 

Action: 3.4 Require all shoreline development (including anti-erosion or other protective structures) to provide public access to and along the coast, unless it would duplicate adequate access existing nearby, adversely affect agriculture, or be inconsistent with public safety, military security, or protection of fragile coastal resources. 

Action 3.5: Establish land development incentives to upgrade the appearance of poorly maintained or otherwise unattractive sites, and enforce existing land maintenance regulations. 

Action 3.6: Expand and maintain the City's urban forest and thoroughfare landscaping, using native species, in accordance with the City's Park and Development Guidelines and Irrigation and Landscape Guidelines. 

Action 3.7: Evaluate whether lot coverage standards should be changed based on neighborhood characteristics.

Policy 3B: Integrate uses in building forms that increase choice and encourage community vitality.

Action 3.8: Adopt new development code provisions that designate neighborhood centers, as depicted on the General Plan Diagram, for a mixture of residences and small-scale, local-serving businesses. 

Action 3.9: Adopt new development code provisions that designate areas within districts and corridors for mixed-use development that combines businesses with housing, and focuses on the redesign of single-use shopping centers and retils parcels into walkable, well connected blocks, with a mix of building types, uses, and public and private frontages. 

Action 3.10: Allow intensification of commercial areas through conversion of surface parking to building area under a district-wide parking management strategy in the Downtown Specific Plan. 

Action 3.11: Expand the downtown redevelopment area to include parcels around future transit areas and along freeway frontage. 

Action 3.12: The City will work with the hospitals on the new Development Code treatment for the Loma Vista corridor, which includes both hospitals.

Action 3.13: Assess whether the City's Affordable Housing Programs respond to current needs, and modify them as necessary within State mandated Housing Element updates.

Specific Plan Requirements

Specific Plans must include a statement of its relationship to the General Plan and specify all of the following:

1. distribution, location, and extent of uses
2. distribution, location, extent, and intensity of public and private transportation, sewage, water, drainage, solid waste disposal, energy
3. standards and criteria by which development will proceed and standards for conservation, development, and utilization of natural resources
4. program of implementation measures, including regulations, programs, public works projects, and financing
5. any other subjects that are necessary

(§65450-65452)

Policy 3C: Maximize use of land in the city before considering expansion.

Action 3.14: Utilize infill, to the extent possible, development to accommodate the targeted number and type of housing units described in the Housing Element.

Action 3.15: Adopt new development code provisions that ensure compliance with Housing Element objectives.

Action 3.16: Renew and modify greenbelt agreements as necessary to direct development to already urbanized areas. 

Action 3.17: Continue to support the Guidelines for Orderly Development as a means of implementing the General Plan, and encourage adherence to these Guidelines by all the cities, the County of Ventura, and the Local Agency Formation Commission (LAFCO); and work with other nearby cities and agencies to avoid urban sprawl and preserve the rural character in areas outside the urban edge. 

Action 3.18: Complete community or specific plans, subject to funding, for areas such as Westside, Midtown, Downtown, Wells, Saticoy, Pierpont, Harbor, Loma Vista/Medical District, Victoria Corridor, and others as appropriate. These plans will set clear development standards for public and private investments, foster neighborhood partnerships, and be updated as needed. 

Action 3.19: Preparation of the new Development Code will take into account existing or proposed

community or specific plans to ensure efficient use of City resources and ample citizen input. 

Policy 3D: Continue to preserve agricultural and other open space lands within the City's Planning Area.

Action 3.20: Pursuant to SOAR, adopt development code provisions to "preserve agricultural and open space lands as a desirable means of shaping the City's internal and external form and size, and of serving the needs of the residents.

Action 3.21: Adopt performance standards for non-farm activities in agricultural areas that protect and support farm operations, including requiring non-farm uses to provide all appropriate buffers as determined by the Agriculture Commissioner's Office. 

Action 3.22: Offer incentives for agricultural production operations to develop systems of raw product and product processing locally. 

Policy 3E: Ensure the appropriateness of urban form through modified development review.

Action 3.23: Develop and adopt a form-based Development Code that emphasizes pedestrian orientation, integration of land uses, treatment of streetscapes as community living space, and environmentally sensitive building design and operation. 

Action 3.24: Revise the Residential Growth Management Program (RGMP) with an integrated set of growth management tools including:

- community or specific plans and development codes based on availability of infrastructure and transit that regulate community form and character by directing new residential development to appropriate locations and in ways that integrate with and enhance existing neighborhoods, districts and corridors;
- appropriate mechanisms to ensure that new residential development produces high-quality designs and a range of housing types across all income levels; and,
- numeric limitations linked to the implementation of community or specific plans and development codes and the availability of appropriate infrastructure and resources; within those limitations, the RGMP should provide greater flexibility for timing new residential development.

Action 3.25: Establish first priority growth areas to include the districts, corridors, and neighborhood centers as identified on the General Plan Diagram; and second priority areas to include vacant undeveloped land when a community plan has been prepared for such (within the City limits). 

Action 3.26: Establish and administer a system for the gradual growth of the City through identification of areas set aside for long-term preservation, for controlled growth, and for encouraged growth. 

Action 3.27: Require the use of techniques such as digital simulation and modeling to assist in project review.

Action 3.28: Revise the planning processes to be more user-friendly to both applicants and neighborhood residents in order to implement City policies more efficiently.

Policies and actions related to the preservation of **historic architecture and resources** are contained in Chapter 9.

2000-2006 HOUSING ELEMENT GOALS AND POLICIES, City Council Adopted Resolution 2004-014. Adopted April 12, 2004

Goal 1

Maintain and improve the quality of existing housing and residential neighborhoods in Ventura.

Policy 1.1 Encourage citizen involvement in addressing the maintenance and improvement of the housing stock and neighborhood quality.

Policy 1.2 Continue to preserve and maintain the City's historical and architecturally significant buildings and neighborhoods.

Policy 1.3 Encourage homeowners and landlords to maintain properties in sound condition through the City's residential rehabilitation assistance programs and code enforcement efforts.

Policy 1.4 Cooperate with housing providers in the acquisition, rehabilitation, and maintenance of older residential properties as long-term affordable housing.

Policy 1.5 Permit the conversion of apartments to condominiums only when such conversion would not

adversely affect the overall supply and availability of rental units, particularly units occupied by lower- and moderate-income households.

Policy 1.6 Continue to support the provision of rental assistance to lower-income households, and encourage property owners to list units with the Housing Authority.

Policy 1.7 Continue to preserve the affordability of mobile homes through the Rent Stabilization Ordinance. Support the acquisition and ownership of mobile home parks by non-profit housing providers and resident organizations.

Policy 1.8 Preserve the existing stock of affordable housing, including mobilehomes, through City regulations, as well as financial and other forms of assistance.

Goal 2

Facilitate the provision of a range of housing types to meet the diverse needs of the community.

Policy 2.1 Provide high quality housing for current and future residents with a diverse range of income levels.

- | | | | |
|-------------------|--|--------------------|--|
| Policy 2.2 | <p>Promote housing that is developed under modern sustainable community standards.</p> <p>Provide expanded housing opportunities for the City's workforce. Promote the City's affordable housing programs with employers in Ventura.</p> | Policy 2.6 | <p>Support a variety of housing types to address the needs of agricultural workers, including affordable rentals, mobilehome parks, single room occupancy hotels (SROs), and group housing for migrant laborers.</p> |
| Policy 2.3 | <p>Continue to offer and promote homeownership assistance programs to lower- and moderate-income households to purchase both new and existing housing. Pursue participation in other homeownership programs available in the private market.</p> | Policy 2.7 | <p>Facilitate the provision of housing to address Ventura's growing senior population, including senior housing with supportive services, assisted living facilities, and second units.</p> |
| Policy 2.4 | <p>Continue to provide financial and regulatory incentives to non-profits, private housing developers, and public agencies for the construction of the types of housing required to meet identified needs.</p> | Policy 2.8 | <p>Encourage the provision of housing adaptable to the physically disabled through integration of universal design features in new development, and compliance with Title 24 of the California Health and Safety Code.</p> |
| Policy 2.5 | <p>Support the provision of quality rental housing with three or more bedrooms to accommodate large families, and encourage room additions in the existing housing stock to address household overcrowding.</p> | Policy 2.9 | <p>Encourage the provision of supportive housing for persons with mental illness to address the severe shortage of housing for this special needs population.</p> |
| | | Policy 2.10 | <p>Support efforts by non-profits to expand transitional and emergency housing in Ventura, including support of grant applications and assistance in identification of suitable sites.</p> |

Policy 2.11 Evaluate adoption of an inclusionary housing ordinance as a means of integrating affordable units within new residential development: 1) Require affordable units to be provided on or off-site, with allowance for payment of an in-lieu fee at the discretion of the City; 2) Evaluate the financial impact of inclusionary requirements on development, and assess incentive-based alternative strategies for provision of affordable housing.

Policy 2.12 Facilitate the provision of second units as a means of providing affordable rental housing in existing neighborhoods. Ensure compatibility with the primary unit and surrounding neighborhood.

Policy 2.13 Encourage the production of housing that meets the needs of all economic segments, including lower, moderate, and above moderate-income households, to achieve a balanced community.

Policy 2.14 Promote and facilitate non-traditional housing types and options, including co-housing, assisted living facilities, live-work spaces, and artist lofts.

Policy 2.15 Direct City-controlled housing funds towards programs that address the needs of very low- and low-income households.

Policy 2.16 Prioritize affordable housing opportunities and assistance for public service employees.

Policy 2.17 Annually monitor the City's progress in meeting its housing needs for all income levels.

Goal 3

Provide adequate housing sites through appropriate land use and zoning designations to accommodate the City's share of the regional housing needs.

Policy 3.1 Maintain an up-to-date inventory of vacant and underutilized parcels and provide to interested developers in conjunction with information on available development incentives. Within redevelopment project areas, provide assistance in land assembly in support of affordable housing.

Policy 3.2 Implement smart growth principles by rewarding quality infill projects that utilize existing infrastructure.

Policy 3.3 Encourage efficient utilization of the City’s limited land resources by encouraging development at the upper end of the permitted Zoning Code/Comprehensive Plan density.

Policy 3.4 Utilize the Urban Infill Overlay Zone and Downtown Specific Plan as a tool to facilitate higher density residential and mixed-use development.

Policy 3.5 Explore residential reuse opportunities on obsolete commercial properties, such as older motels and underutilized historic structures.

Policy 3.6 Pursue use of publicly owned land, such as public parking lots, for development of affordable housing.

Policy 3.7 Identify opportunities for housing development that achieves other community goals such as neighborhood improvement, recreation opportunities, and the preservation of sensitive lands and neighborhood character.

Policy 3.8 Facilitate the development of mixed-use projects in appropriate commercial areas, including stand-alone residential developments

(horizontal mixed-use) and housing above ground floor commercial uses (vertical mixed-use).

Policy 3.9 Promote higher density housing as part of mixed-use developments along parts of Thompson Boulevard and Main Street in Midtown Ventura, as well as other areas such as Westside, Downtown and East Ventura.

Policy 3.10 Promote mixed-use developments on the Westside of Ventura.

Policy 3.11 Ensure that the updated Land Use Element designates adequate sites for housing for executives to enhance the City’s ability to attract businesses with higher paying jobs.

Goal 4

Mitigate or remove any potential governmental constraints to housing production and affordability.

Policy 4.1 Provide regulatory and/or financial incentives, where appropriate, to offset or reduce the costs of affordable housing development, including density bonuses and flexibility in site development standards.

Policy 4.2 Utilize the Affordable Housing Program to provide incentives for production of affordable units, including streamlined permit processing, reduced fees and exemption from the required competition for RGMP allocations.

Policy 4.3 Amend the City's Residential Growth Management Plan (RGMP) to better facilitate housing production, while discouraging sprawl and maintaining quality of life goals.

Policy 4.4 Undertake a comprehensive review of the City's residential development project review procedures and establish modified procedures as appropriate to streamline processing times, while maintaining adequate levels of public review.

Policy 4.5 Provide flexibility in development standards to accommodate new models and approaches to providing affordable housing, such as co-housing, live/work units and assisted living facilities.

Goal 5

Promote equal opportunity for all residents to reside in the housing of their choice.

Policy 5.1 Continue to enforce fair housing laws prohibiting arbitrary discrimination in the building, financing, selling or renting of housing on the basis of race, religion, family status, national origin, physical or mental disability, or other such factors.

Policy 5.2 Continue to support organizations that offer fair housing and mediation services to Ventura residents.

Policy 5.3 Promote housing that meets the special needs of large families, elderly persons, agricultural workers, and the disabled.

Policy 5.4 Continue to enforce notification and provide relocation assistance for lower-income persons displaced due to demolition, reuse, condominium conversion, or rehabilitation as a result of code enforcement.

OUR WELL PLANNED AND DESIGNED COMMUNITY

"Restore human legs as a means of travel.
Pedestrians rely on food for fuel and need no
special parking facilities."

— Lewis Mumford
Author of *The City in History*, 1961

4. OUR ACCESSIBLE COMMUNITY

Our goal is to provide residents with more transportation choices by strengthening and balancing bicycle, pedestrian and transit opportunities in the City and surrounding region.

An Integrated Mobility System

Central to the well-being of Ventura's citizens and visitors is *mobility*, the ability to get from one place to another. Mobility depends on the range, efficiency, and connectivity of the various components that comprise the transportation network – sidewalks, bicycle routes, and thoroughfares, as well as transit services – and that enable people to access the things they need, from the most basic to the extraordinary (See Figures 4-1 Bicycle Facilities, 4-2 Bus and Rail Routes, and 4-3 Roadway Classification Plan). Ventura is a community that recognizes that thoroughfares serve a variety of functions and are not simply conduits for automobile traffic.

Balancing automobile use with other means of travel is essential to maintaining social and physical health. Safe and enjoyable routes for pedestrians and bicyclists should connect every part of the city, and neighborhoods need to be linked by ample and convenient transit service along corridors. Ventura also must be connected to the larger region by a variety of transportation modes.

Thoroughfares have a tremendous effect on neighborhood character and therefore quality of life for both residents and visitors.

Thoroughfares are essentially the stage of public life where a diversity of citizens interact. They can create places of remembrance, chance encounters, and discovery. Ensuring that Ventura thoroughfares are *great places* requires improving design and quality as well as connectivity. In some cases, city thoroughfares are over-engineered to accommodate the worst-case scenario.

Slowing down automobiles, especially in residential neighborhoods, is a desire shared by many residents. Vehicle travel should be directed toward routes that minimize congestion, avoid conflicts with walkers and bicyclists, and keep residential neighborhoods free of excessive cut-through traffic. Additionally, in some areas of the city, suburban patterns have resulted in less connectivity than is desired by the community. Transportation modes and land uses in the city need to be distributed so that residents have close and easy access to meet their basic needs and travel destinations.

Traffic congestion is a major concern among Ventura residents. Although traffic on local roads is generally free-flowing, a few key intersections and road segments experience congestion during peak traffic hours. Simply widening roads to add lanes will not solve traffic congestion. Instead, the system needs integrated solutions that improve mobility for all

The essential qualities of a properly functioning mobility system are:

1. Well connected, interesting components
2. Convenient accessibility
3. Integrated linkage of all modes
4. Comfort and safety
5. Design reflecting natural and urban context

means of travel. While walking, biking, and transit use are already popular, these alternative modes need to be enhanced and better linked. For example, bus and rail systems serve Ventura, but not thoroughly enough to provide a reasonable alternative to auto use for most travelers. And while pedestrian access exists in most areas of Ventura, the network lacks continuous routes in some key locations.

As expressed in the *Ventura Vision*, a top community priority is to minimize automobile use through a fully integrated multi-modal transportation system. The policies and actions in this chapter aim to achieve this objective.

Travel Modes

Walking

Sidewalks are arguably the most important component of the city's mobility system. As with circulation in general, the utility of pedestrian systems is inextricably linked to land use patterns. Combined with urban design elements, land use patterns influence how much walking can safely and effectively occur in the community. Circulation systems that are designed with pedestrians in mind tend to increase outdoor activity and community interaction, while those oriented toward motor vehicles tend to create disincentives to walking.

Ventura's pedestrian system consists of sidewalks, access ramps, crosswalks, linear park paths, and overpasses and tunnels. Special corridors such as the Beachfront Promenade, California Plaza, and Figueroa Plaza have been designated especially for pedestrians. The pedestrian system also includes neighborhood and park path systems, and dedicated trail facilities that are shared with bicyclists and other users.

Pedestrian paths need to be interesting, enjoyable, and lead to a destination, from the most simple – such as a pocket park – to more grand points of arrival, such as major civic spaces. Creating a network of paths that connect key features such as parks, schools, civic facilities, shops, and services is vital to the success of reducing dependence on the

automobile. Those most in need of pedestrian access include children, teenagers, and the elderly, as well as those who cannot afford a car or choose not to drive.

The main deficiency of Ventura's pedestrian system is its discontinuity. Some sections of thoroughfares lack sidewalks, and pedestrian connections between some key use areas are in need of repair. Crosswalks are prohibited along some corridors, and pedestrian signal phases are not always long enough for all walkers. Traffic-calming measures also are needed to improve walkability in many neighborhoods. Citizens have placed a high emphasis on improving the pedestrian network, recommending specific improvements such as:

- narrowing selected thoroughfare segments,
- improving sidewalks and road crossings,
- lengthening pedestrian signal phases,
- adding marked crossings at key intersections,
- developing safe and attractive walkways from Downtown and Midtown to the beach,
- ensuring that new development provides ample pedestrian access,
- creating trails along watercourses and through the hillsides, and
- improving pedestrian facilities near schools.

Figure 4-1 illustrates the three State defined classes of bikeway facilities:

- Bike Path (Class I) – Class I bike paths are separated from roads by distance or barriers, and cross-traffic by motor vehicles is minimized.
- Bike Lane (Class II) – Class II bikeways are roadway lanes reserved for bicycles. These lanes are painted with pavement lines and markings and are signed.
- Bike Route (Class III) – Class III bike routes share existing roads and provide continuity to other bikeways or designated preferred routes through high traffic areas. There are no separate lanes, and bike routes are established by placing signs that direct cyclists and warn drivers of the presence of bicyclists.

Policies and actions in this chapter intend to improve pedestrian access through this range of methods.

Biking

Because bicycles are an integral component of the city’s mobility system, they are allowed on *all* city thoroughfares. The City has adopted a General Bikeway Plan intended to create a safe, accessible, and interconnected network of bike paths, lanes, and routes that will ensure Ventura becomes and remains a truly bicycle-friendly community. The General Bikeway Plan is a flexible, comprehensive, and long-range guide for bicycle transportation and recreation planning, design, and budget decision-making. Accordingly, it is designed to:

- refine and implement City bicycle-related policies,
- establish bikeway design standards,
- enhance bicycle safety and education programs,
- set priorities and phasing for improvements and amenities depicted on the Select System of Bikeways map, and
- identify funding means and opportunities for interagency cooperation.

The City places high emphasis on improving the local bicycle network by following the recommendations of the General Bikeway Plan, which include:

- connecting schools, parks, activity areas, housing areas, and employment centers with bike paths and lanes, particularly in areas without thoroughfares,
- constructing additional Class I or Class II bikeways in a number of locations, including along the Santa Clara River and the coast to connect to the Ventura River Trail,
- installing bicycle racks,
- updating bicycle facility standards to ensure proper design and maintenance,
- constructing improvements to resolve bicycle/automobile conflicts,
- establishing a highly visible route identification and signage program that fits the character of the community, and
- mitigating impacts on bicyclists from new development and during and following construction of roadway projects.

Policies and actions in this chapter seek to improve bicycle access and safety by carrying out these recommendations.

Public Transit – Bus & Rail

Transit service in Ventura includes bus and rail operations (see Figure 4-2). South Coast Area Transit (SCAT) provides local bus service, Ventura Intercity Transit Authority (VISTA) runs regional routes, and Greyhound offers statewide and national connections. Metrolink provides rail service to and from Los Angeles – although on a very limited schedule, while Amtrak trains that stop in Ventura run between San Luis Obispo and San Diego.

Although local bus routes connect most activity centers, the East End is not well served, and more frequent service is needed to key destinations such as the beach and downtown. Metrolink and Amtrak need to be linked to each other and accessed by local bus routes. An agreement between the City and the Ventura County Transportation Commission calls for identifying a permanent Metrolink site, and the best way to integrate all of these services is with a major multi-modal transit center that also accommodates potential additional future alternative transportation modes.

SCAT buses are equipped with wheelchair lifts and adjustable steps to ensure access for all riders. SCAT also offers discounted fares for seniors and disabled riders, as well as dial-a-ride service. However, seniors and mobility-impaired persons also desire frequent fixed-route service in smaller vehicles, and all riders need upgraded amenities at a number of stops. Bus routes also need increased frequency and

stops to make transit a viable alternative to driving.

Other transit system needs include:

- reduced-emission vehicles,
- continued use of schedule synchronization to accommodate route transfers, and
- service to regional destinations such as California State University Channel Islands and airports.

Policies and actions in this Chapter aim to improve transit efficiency, encourage ridesharing, and preserve long-term transit options.

The Automobile and Types of Roadways

The most basic component of the mobility system is the *thoroughfare*, used not only by people who drive, but also by people who ride the bus, bike and walk. Thoroughfares encompass sidewalks, bicycle lanes, travel lanes, and are the most utilized means of travel in Ventura. This system is organized into the following classifications: local thoroughfares, collectors, and arterials (see Figure 4-3, Roadway Classification Plan – also known as “Circulation Plan”).

Local Thoroughfares

Local thoroughfares provide mobility within neighborhoods and are generally not shown on the Roadway Classification Plan. Local thoroughfares include *alleys*, *lanes*, and “*yield*” *streets*.

Collectors

Collectors serve as links between local thoroughfares. Collectors may front residential and neighborhood-serving commercial uses. Collectors can be configured as *boulevards*, *avenues*, *streets*, and *main streets*.

Arterials

Arterials are the primary mechanism for cross-town travel and serve the major centers of activity. These roads typically carry a high proportion of the total urban area travel. Arterials can be configured as *boulevards*, *avenues*, and *streets*.

Collector and arterial thoroughfare segments in the City are characterized in two ways that describe their physical features: *design* classification and *functional* classification. Design Classification defines the number of travel lanes using the following categories: Primary Arterial (6 lanes or more), Secondary Arterial (4 lanes), and Collector (2 lanes), as shown on the Roadway Classification Plan, Figure 4-3. Functional Classification describes how a thoroughfare is used: essentially as a *boulevard*, *avenue*, *street*, or *main street*.

Functional Classification also identifies whether roadways have medians, parking, bike lanes, and other streetscape attributes needed to achieve objectives other than just moving traffic, such as accommodating pedestrians, bicycles, and adjoining land uses and public spaces. Table 4-1 shows the design and functional classifications for thoroughfares in the City.

Ventura is mainly connected by 2-lane and 4-lane thoroughfares. The classification for each type of road segment represents a balance between vehicle capacity, pedestrian and bicycle access, parking requirements, streetscape character, and right-of-way limitations.

Boulevard

A multi-lane and generally urban corridor with a central, planted median.

Avenue

Avenues are typically multi-lane, short distance connectors, with a painted median, used in both residential and commercial areas, and often terminate at prominent buildings or plazas.

Table 4-1 Thoroughfare Sizes and Types

	Street Sizes (Engineering Design Classification)		
	Primary Arterial (6 or more lane roadway)	Secondary Arterial (4 lane roadway)	Collector (2 lane roadway)
Existing			
Future Widening			
Future Extension			
	Thoroughfare Types (Functional Classification)		
	Boulevard	Boulevard	Boulevard
	Avenue	Avenue	Avenue
		Street	Street
			Main Street

Source: Definitions for Design Classifications are the City's modifications to the American Association of State Highway and Transportation Officials (AASHTO) standards. Definitions for Functional Classifications are the City's modifications to the Traditional Neighborhood Development Street Design Guidelines.

Street

Street typically allows two way travel and may be multi-lane and does not have a central median and generally provides access to predominantly residential areas.

Main Street

Main streets have 2 vehicle lanes. Their main purpose is to provide low-speed access to commercial, mixed-uses, and higher density neighborhoods.

Consistency between the design and functional classifications is determined based on the number of through lanes. Temporary improvements, such as restriping to change the number of lanes are allowed, however a permanent improvement that moves the curbs and changes the number of lanes would require an amendment to this plan.

The *Ventura Vision* offers several key recommendations to improve the city thoroughfare system:

- add or enhance north-south arterials;
- consider an additional Santa Clara River bridge, Portola Avenue overcrossing of U.S. 101, and Johnson Drive overcrossing of Route 126; and
- soften the barrier impact of U.S. 101 by working with Caltrans to improve signage, aesthetics, undercrossings, and overcrossings.

Policies, actions, and the Roadway Classification Plan work together to address these recommendations. To improve the safety and functioning of the thoroughfare network and to maintain its compatibility with the character of the community, the policies and actions in this

chapter also call for upgrading problem thoroughfares and intersections, improving and constructing freeway ramps, and connecting unfinished roadways. Additional actions intend to protect views from scenic routes, including State-designated scenic highways.

Policy 4A: Ensure that the transportation system is safe and easily accessible to all travelers.

Action 4.1: Direct city transportation investment to efforts that improve user safety and keep the circulation system structurally sound and adequately maintained. First priority for capital funding will go to our pavement management program to return Ventura streets to excellent condition.

Action 4.2: Develop a prioritized list of projects needed to improve safety for all travel modes and provide needed connections and multiple route options.

Action 4.3: Provide transportation services that meet the special mobility needs of the community including youth, elderly, and disabled persons.

Action 4.4: Combine education with enforcement to instill safe and courteous use of the shared public roadway.

Action 4.5: Utilize existing roadways to meet mobility needs, and only consider additional travel lanes when other alternatives are not feasible. 

Action 4.6: Require new development to be designed with interconnected transportation modes and routes to complete a grid network.

Action 4.7: Update the traffic mitigation fee program to fund necessary citywide circulation system and mobility improvements needed in conjunction with new development. 

Action 4.8: Implement the City's Neighborhood Traffic Management Program and update as necessary to improve livability in residential areas.

Action 4.9: Identify, designate, and enforce truck routes to minimize the impact of truck traffic on residential neighborhoods. 

Action 4.10: Modify traffic signal timing to ensure safety and minimize delay for all users.

Action 4.11: Refine level of service standards to encourage use of alternative modes of transportation while meeting state and regional mandates.

Action 4.12: Design roadway improvements and facility modifications to minimize the potential for conflict between pedestrians, bicycles, and automobiles. 

Action 4.13: Require project proponents to analyze traffic impacts and provide adequate mitigation in the form of needed improvements, in-lieu fee, or a combination thereof. 

Policy 4B: Help reduce dependence on the automobile.

Action 4.14: Provide development incentives to encourage projects that reduce automobile trips. 

Action 4.15: Encourage the placement of facilities that house or serve elderly, disabled, or socioeconomically disadvantaged persons in areas with existing public transportation services and pedestrian and bicycle amenities.

Action 4.16: Install roadway, transit, and alternative transportation improvements along existing or planned multi-modal corridors, including primary bike and transit routes, and at land use intensity nodes. 

Action 4.17: Prepare and periodically update a Mobility Plan that integrates a variety of travel alternatives to minimize reliance on any single mode. 

Action 4.18: Promote the development and use of recreational trails as transportation routes to connect housing with services, entertainment, and employment. 

Action 4.19: Adopt new development code provisions that establish vehicle trip reduction requirements for all development. 

Action 4.20: Develop a transportation demand management program to shift travel behavior toward alternative modes and services.

Action 4.21: Require new development to provide pedestrian and bicycle access and

facilities as appropriate, including connected paths along the shoreline and watercourses. 

Action 4.22: Update the General Bikeway Plan as needed to encourage bicycle use as a viable transportation alternative to the automobile and include the bikeway plan as part of a new Mobility Plan. 

Action 4.23: Upgrade and add bicycle lanes when conducting roadway maintenance as feasible. 

Action 4.24: Require sidewalks wide enough to encourage walking that include ramps and other features needed to ensure access for mobility-impaired persons. 

Action 4.25: Adopt new development code provisions that require the construction of sidewalks in all future projects. 

Action 4.26: Establish a parking management program to protect the livability of residential neighborhoods, as needed.

Action 4.27: Extend stubbed-end streets through future developments, where appropriate, to provide necessary circulation within a developing area and for adequate internal circulation within and between neighborhoods. Require new developments in the North Avenue area, where applicable, to extend Norway Drive and Floral Drive to connect to Canada Larga Road; and connect the existing segments of Floral Drive. Designate

the extension of Cedar Street between Warner Street and south of Franklin Lane and the linking of the Cameron Street segments in the Westside community as high priority projects.

Policy 4C: Increase transit efficiency and options.

Action 4.28: Require all new development to provide for citywide improvements to transit stops that have sufficient quality and amenities, including shelters and benches, to encourage ridership. 

Action 4.29: Develop incentives to encourage City employees and local employers to use transit, rideshare, walk, or bike.

Action 4.30: Work with public transit agencies to provide information to riders at transit stops, libraries, lodging, and event facilities.

Action 4.31: Work with public and private transit providers to enhance public transit service.

Action 4.32: Coordinate with public transit systems for the provision of additional routes as demand and funding allow. 

Action 4.33: Work with Amtrak, Metrolink, and Union Pacific to maximize efficiency of passenger and freight rail service to the City and to integrate and coordinate passenger rail service with other transportation modes. 

Action 4.34: Lobby for additional transportation funding and changes to Federal, State, and regional transportation policy that support local decision-making.

Action 4.35: The City shall pursue funding and site location for a multi-modal transit facility in coordination with VCTC, SCAT, U.P.R.R., Metrolink, Greyhound Bus Lines, and other forms of transportation.

Policy 4D: Protect views along scenic routes.

Action 4.36: Require development along the following roadways – including noise mitigation, landscaping, and advertising – to respect and preserve views of the community and its natural context. 

- State Route 33
- U.S. HWY 101
- Anchors Way
- Brakey Road
- Fairgrounds Loop
- Ferro Drive
- Figueroa Street
- Harbor Boulevard
- Main Street
- Navigator Drive
- North Bank Drive
- Poli Street/Foothill Road
- Olivas Park Drive
- Schooner Drive
- Spinnaker Drive
- Summit Drive

- Telegraph Road – east of Victoria Avenue
- Victoria Avenue – south of U.S. 101
- Wells Road

Action 4.37: Request that State Route 126 and 33, and U.S. HWY 101 be designated as State Scenic Highways.

Action 4.38: Continue to work with Caltrans to soften the barrier impact of U.S. HWY 101 by improving signage, aesthetics and undercrossings and overcrossings. 

Action 4.39: Maintain street trees along scenic thoroughfares, and replace unhealthy or missing trees along arterials and collectors throughout the City. 

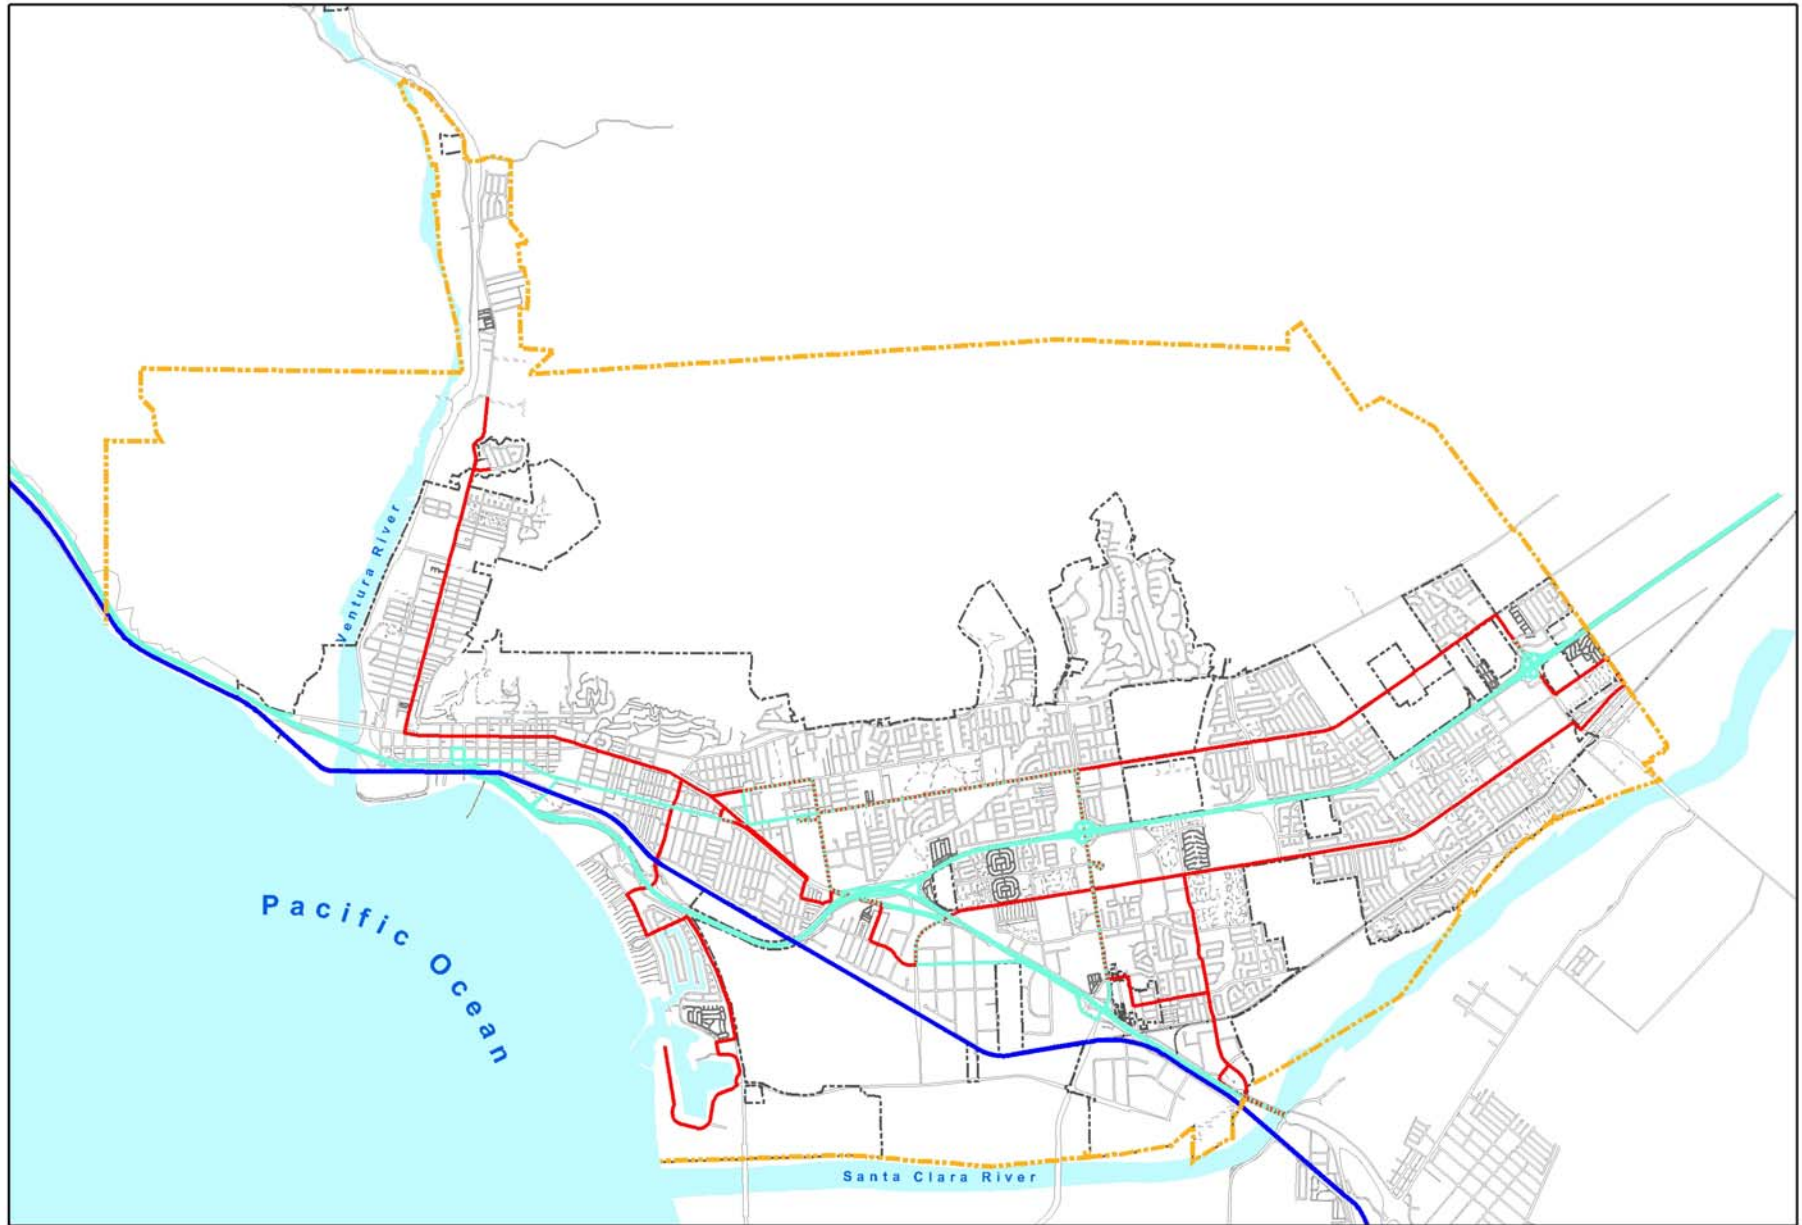

Note: Bike facilities shown on this figure are taken from the 1999 General Bikeway Plan and may change as updates to the General Bikeway Plan are completed.

Figure 4-1
Bicycle Facilities

Figure 4-3
Roadway Classification Plan

"Now, I truly believe, that we in this generation, must come to terms with nature, and I think we're challenged as mankind has never been challenged before to prove our maturity and our mastery, not of nature, but of ourselves."

— Rachel Carson
Biologist, Writer, Ecologist 1907-1964

5. OUR SUSTAINABLE INFRASTRUCTURE

Our goal is to safeguard public health, well-being and prosperity by providing and maintaining facilities that enable the community to live in balance with natural systems.

Essential Support Systems

Infrastructure is an extremely important though largely unnoticed foundation of quality of life in Ventura. Efficient water supply, wastewater treatment, and drainage systems are vital to most daily activities. These facilities on which the community depends need regular maintenance, and they frequently require upgrading both to meet the demands of a growing population and to be sensitive to environmental resources.

To ensure that citizens get high-quality drinking water, the City owns and operates a State-certified laboratory where water quality is tested continuously. Each City treatment plant is also run by State-certified operators who monitor water quality. As a result, City water exceeds State and federal water quality requirements.

The City employs conservation measures and emerging technology in its effort to achieve a high standard for wastewater treatment while protecting natural systems. As a result, treatment capability historically has outpaced community needs, with even peak flows typically reaching only 75 percent of plant capacity. Even so, further expanding the use of reclaimed water and

reducing water consumption will be vital to maintaining long-term water supplies.

Much of the storm drain system is aging and in need of repair or replacement, especially corrugated metal pipes in some of the older areas of Ventura. Collecting adequate fees that truly reflect the cost of serving development can help support City efforts to preclude additional deficiencies, and relying on and complementing natural drainage features can both help avoid the need for expensive and environmentally damaging channelization and improve the functioning of the overall drainage system.

Water Supply

The City provides drinking water, and water for fire protection, to households and businesses in Ventura through a complex system with more than 500 miles of distribution mains, 3 water treatment plants, 22 booster pump stations, 25 treated water reservoirs, and 13 wells. Five distinct sources provide surface and ground water to the City supply system:

- Casitas Municipal Water District
- Ventura River surface water intake, subsurface water and wells (Foster Park)
- Mound groundwater basin
- Oxnard Plain groundwater basin (Fox Canyon Aquifer)
- Santa Paula groundwater basin

The City also holds a State Water Project entitlement of 10,000 acre-feet per year;

however, new facilities would need to be constructed to transport this water to the City. The City updates its Urban Water Management Plan every two years (instead of every five years as required by State law) as part of its ongoing effort to ensure that City-managed water supplies will continue to accommodate demand in Ventura.

Meeting future water demands requires saving and reusing every drop possible. The City utilizes recycled water from its reclamation facility (a tertiary wastewater treatment plant) near the Harbor to augment the municipal water supply. Recycled water is used to irrigate City and private landscaping in the area and the Buenaventura and Olivas Park municipal golf courses. The remaining effluent is discharged to the Santa Clara River Estuary.

Largely as a result of conservation efforts, water consumption per city resident has generally declined (see Table 5-1). Projections anticipate that the City will continue to be able to meet consumer needs. Policies and actions in this chapter seek to refine demand management practices and conservation programs to further reduce per capita water use so that Ventura can sustain water resources for many more generations.

**Table 5-1
Historic and Projected Water Production (Acre Feet)**

Year	Estimated Population Served	Per Capita Use ¹	Treated Water Production	Raw Water Production	Total Water Production
Historic					
1980	73,774	0.236	17,381	4,766	22,147

2015	122,447	0.179	21,918	1,000	22,918
2020	129,504	0.179	23,181	1,000	24,181

Sources: City of Ventura Urban Water Management Plan, Dec. 2000, City of Ventura 2004 Biennial Water Supply Report, as amended, September 2004.

¹ Per Capita use excludes raw water.

Wastewater Treatment

Ventura residents generate millions of gallons of wastewater each day, which is carried by more than 450 miles of sewer mains and 12 lift stations to the water reclamation facility in the Harbor area near the mouth of the Santa Clara River. While most residents receive sewer service directly from the City, three other sanitary sewer agencies with their own treatment facilities provide service to some citizens in the Montalvo, Saticoy, and North Ventura Avenue areas. As shown in Table 5-2, all local treatment facilities operate well below capacity.

About two-thirds of the wastewater treated locally is discharged to the Santa Clara River Estuary, as allowed by the Regional Water Quality Control Board. The remaining effluent is either transferred to recycling ponds, where some is delivered as reclaimed water, or it percolates to underground aquifers or evaporates. The policies and actions in this chapter call for improving treatment system efficiency to reclaim and reuse as much water as possible.

Table 5-2 Treatment Facilities

Treatment Facilities	Treatment Type	Capacity	Average Daily Flow
Ventura Water Reclamation Facility	Tertiary	14 MGD	9.0 MGD (68% capacity)
Montalvo Municipal Improvement District Treatment Plant	Secondary	0.36 MGD	0.242 MGD (67% capacity)
Saticoy Sanitary District Treatment Plant	Secondary ²	0.25 MGD	0.16 MGD (64% capacity)
Ojai Valley Sanitary District Treatment Plant	Tertiary	3 MGD	2.0 MGD (71% capacity)

² Includes nutrient removal prior to percolation.
Source: Individual agencies listed

Storm Drainage

Storm runoff travels from the hills above Ventura through the City until it is absorbed into the ground or reaches the Ventura River, the Santa Clara River, or the Pacific Ocean. To convey the occasional high flows associated with storms, the Ventura County Flood Control District oversees about 20 natural or concrete lined barrancas that serve as the major drainage courses for local watersheds. The City has about 20 miles of off-street drain system designed to convey runoff from all but the most severe of storms, in which case water also runs off via city streets.

Maintaining the barrancas and other watercourses that are not already lined with concrete as natural flood channels can help reduce peak flows by limiting water velocity. Incorporating natural features into drainage systems rather than hard treatment devices also can improve water quality and reduce maintenance costs. The policies and actions in this chapter seek to prevent increases in future storm water impacts by incorporating natural drainage and flood control features such as wildlife ponds and wetlands – instead of cement retention basins – into the storm drain system where possible. Such less intensive approaches not only cost less, but they also preserve environmental resources and protect water quality.

Policy 5A: Follow an approach that contributes to resource conservation.

Action 5.1: Require low flow fixtures, leak repair, and drought tolerant landscaping (native species if possible), plus emerging water conservation techniques, such as reclamation, as they become available. 

Action 5.2: Use natural features such as bioswales, wildlife ponds, and wetlands for flood control and water quality treatment when feasible. 

Action 5.3: Demonstrate low water use techniques at community gardens and city-owned facilities.

Action 5.4: Update the Urban Water Management plan as necessary in compliance with the State 1983 Urban Water Management Planning Act.

Action 5.5: Provide incentives for new residences and businesses to incorporate recycling and waste diversion practices, pursuant to guidelines provided by the Environmental Services Office. 

Policy 5B: Improve services in ways that respect and even benefit the environment.

Action 5.6: Require project proponents to conduct sewer collection system analyses to determine if downstream facilities are adequate to handle the proposed development. 

Action 5.7: Require project proponents to conduct evaluations of the existing water distribution system, pump station, and storage

requirements in order to determine if there are any system deficiencies or needed improvements for the proposed development. 

Action 5.8: Locate new development in or close to developed areas with adequate public services, where it will not have significant adverse effects, either individually or cumulatively, on coastal resources. 

Action 5.9: Update development fee and assessment district requirements as appropriate to cover the true costs associated with development. 

Action 5.10: Utilize existing waste source reduction requirements, and continue to expand and improve composting and recycling options. 

Action 5.11: Increase emergency water supply capacity through cooperative tie-ins with neighboring suppliers.

Action 5.12: Apply new technologies to increase the efficiency of the wastewater treatment system. 

Action 5.13: Increase frequency of city street sweeping, and post schedules at key points within each neighborhood. 

Action 5.14: Develop a financing program for the replacement of failing corrugated metal storm drain pipes in the City. 

Action 5.15: Establish assessment districts or other financing mechanisms to address storm drain system deficiencies in areas where new development is anticipated and deficiencies exist. 

Action 5.16: Require new developments to incorporate stormwater treatment practices that allow percolation to the underlying aquifer and minimize offsite surface runoff utilizing methods such as pervious paving material for parking and other paved areas to facilitate rainwater percolation and retention/detention basins that limit runoff to pre-development levels. 

Action 5.17: Require stormwater treatment measures within new development to reduce the amount of urban pollutant runoff in the Ventura and Santa Clara Rivers and other watercourses. 

Action 5.18: Work with the Ventura Regional Sanitation District and the County to expand the capacity of existing landfills, site new landfills, and/or develop alternative means of disposal that will provide sufficient capacity for solid waste generated in the City.

"Leave all the afternoon for exercise and recreation, which are as necessary as reading. I will rather say more necessary because health is worth more than learning."

— Thomas Jefferson
3rd President of the United States
1801-1809

CITY OF
VENTURA

OUR ACTIVE COMMUNITY
ventura's general plan

6. OUR ACTIVE COMMUNITY

Our goal is to add to and enhance our parks and open spaces to provide enriching recreation options for the entire community.

Higher Standards

For many people, spending time outdoors and participating in recreational activities represent some of life’s most cherished rewards. Ventura’s superb public park, open space, and recreation system offers a myriad of ways to partake in these privileges. The city offers 34 developed parks, 45 miles of linear park and trail network, stellar beaches, specialized play and sports facilities and programs, communitywide events, senior and youth activities, and two 18-hole tournament class public golf courses. Figure 6-1 at the end of this chapter shows the locations of various public facilities in the city.

The City is committed to ensuring that its citizens have ample access to high quality spaces for leisure and active recreation. The City’s adopted standard of 10 acres per 1,000 residents has created far more park area than would be possible under the basic State level of 3 acres per 1,000, and also tops the more ambitious National Park and Recreation Association benchmarks for specific park types (see Table 6-1). The City continues to create customized facilities like the Community Park (approved by the voters pursuant to SOAR) to expand opportunities for local residents to enjoy healthy, active lifestyles.

Park Type	Standards	
	City of Ventura	National Park & Recreation Association
Neighborhood	2 acres	1.5 acres
Community	3 acres	2.5 acres
Citywide	5 acres	5 acres
Total	10 acres	9 acres

Sources: City of Ventura, www.nrpa.org.

City Parks and Open Space

The public park and open space system in Ventura includes neighborhood, community, citywide, and linear parks. As shown in Table 6-2, the City oversees nearly 600 acres of developed park facilities, plus the linear park network, which provides important connections among watersheds for both people and wildlife.

As the City continually strives to improve the quality of leisure and recreation opportunities for everyone in the community, it must address a number of challenges such as:

- modernizing existing facilities,
- finding appropriate land for new facilities,
- developing useful and enjoyable public spaces, such as plazas and mini-parks in urban settings,
- formalizing shared use arrangements for non-City facilities like school playfields,
- meeting increasing demand for athletic courts, fields and pools,
- provide opportunities for passive recreation, and
- providing services needed by youth, seniors, and residents with special needs.

Neighborhood Parks

Typically less than 8 acres each, these smaller parks primarily serve specific residential areas in the community. The 18 neighborhood parks in Ventura cover about 73 total acres. Any future development outside the current city limits will have to provide new neighborhood parks to serve the added population.

Community Parks

These parks are designed to offer specialized opportunities and facilities to residents of more than one neighborhood. Amenities in community parks may include formal athletic fields, courts, recreation buildings, preschool and youth play structures, group and individual picnic areas, and landscaped areas for informal activity or leisure.

Citywide Parks

These parks feature recreational opportunities that draw a wide range of age and interest groups from throughout the city. They offer a variety of attractive amenities, such as large open spaces, unique natural resources, interpretive centers, cultural amenities, group picnic areas, sports facilities, and equestrian, bicycling, and hiking trails. The Ventura Community Park also serves some citywide park functions and attracts visitors from outside the city with its high-quality playing fields and aquatic center.

Linear Parks

Ventura's unique linear park network intersperses trails and picnic areas among a mostly undeveloped web of barranca and riverbanks that provide valuable wildlife habitat and migration corridors. The linear parks also merge with a number of neighborhood and community parks, complementing developed recreation areas with natural riparian qualities. Extending trails through the linear park network can create additional opportunities for low-impact contact with nature, and in some cases even provide pleasant non-automobile commuting options.

Table 6-2 City Park Facilities

Park	Park Size (in acres)				
	Neighborhood Parks	Community Parks	Citywide Parks	Special Use Facilities	Total

Seaside Wilderness Park ^{1, 2}				24.0	24.0
Surfers Point at Seaside Park ¹				3.4	3.4
Ventura Community Park		100.0			100.0
Westpark	1.5	5.8			7.3
Total	60.8	142.7	275.8	97.8	577.1

Sources: City of Ventura, 2004. Note: several parks serve functions in more than one category.
¹ Acreage varies with ocean high levels.
² Acreage varies with fluctuations in Ventura River level.

As with most parks in the city, resources for linear park system improvements typically come through conditions placed on adjacent development. City regulations establish standards for park width, landscaping, fencing, lighting, and tree rows that apply specifically along barrancas, freeways, rivers, the shoreline, harbor, hillsides, and utility rights-of-way.

Recreation Programs

The City operates four neighborhood centers where recreation programs and senior services are available: the Ventura Avenue Adult Center, Senior Recreation Center, Barranca Vista Center, and Westpark Community Center. The City also offers a wide range of sports programs, including youth and adult sports programs, classes, aquatics, and corporate games. Other City-sponsored recreational activities include arts and environmental education, community gardening, recreation programs for special needs residents, and after-school activities and summer camps.

A variety of other recreation opportunities are available in Ventura in addition to City programs. Foremost among these are all of the activities possible at State beaches and developed waterfront areas. Other local non-City facilities include the County Fairgrounds and local golf courses. In addition, joint-use agreements allow city residents to use sports fields, pools, and gymnasiums during certain times at public schools and Ventura College.

The policies and actions in this chapter seek to further expand local park and recreation choices by:

- identifying sites for new parks,
- increasing public access to open space, including via linear park trails,
- collaborating with schools and other local agencies and organizations,
- ensuring universal and equal access to parks and recreation facilities, and
- allowing appropriate revenue-generating activities at City parks.

Policy 6A: Expand the park and trail network to link shoreline, hillside, and watershed areas.

Action 6.1: Develop new neighborhood parks, pocket parks, and community gardens as feasible and appropriate to meet citizen needs, and require them in new development. 

Action 6.2: Require higher density development to provide pocket parks, tot lots, seating plazas, and other aesthetic green spaces. 

Action 6.3: Work with the County to plan and develop trails that link the City with surrounding open space and natural areas, and require development projects to include trails when appropriate. 

Action 6.4: Request Flood Control District approval of public access along unchannelized watercourses for hiking. 

Action 6.5: Seek landowner permission to allow public access on properties adjacent to open space where needed to connect trails. 

Action 6.6: Update plans for and complete the linear park system as resources allow. 

Action 6.7: Work with the County of Ventura to initiate efforts to create public trails in the hillsides.

Action 6.8: Update and require periodic reviews of the Park and Recreation Workbook as necessary to reflect City objectives and community needs.

Action 6.9: Require dedication of land identified as part of the City's Linear Park System in conjunction with new development. 

Action 6.10: Evaluate and incorporate, as feasible, linear park segments in the General Bikeway Plan.

Action 6.11: Update standards for citywide public parks and open space to include an expanded menu of shared park types, and identify locations and potential funding sources for acquiring new facilities in existing neighborhoods.

Action 6.12: Update and carry out the Grant Park Master Plan.

Action 6.13: Foster the partnership between the City and Fair Board to improve Seaside Park. 

Policy 6B: Ensure equal access to facilities and programs.

Action 6.14: Improve facilities at City parks to respond to the requirements of special needs groups.

Action 6.15: Adjust and subsidize fees to ensure that all residents have the opportunity to participate in recreation programs.

Action 6.16: Update the project fee schedule as necessary to ensure that development provides its fair share of park and recreation facilities.

Policy 6C: Provide additional gathering spaces and recreation opportunities.

Action 6.17: Update and create new agreements for joint use of school and City recreational and park facilities.

Action 6.18: Offer programs that highlight natural assets, such as surfing, sailing, kayaking, climbing, gardening, and bird watching. 

Action 6.19: Provide additional boating and swimming access as feasible. 

Action 6.20: Earmark funds for adequate maintenance and rehabilitation of existing skatepark facilities, and identify locations and funding for new development of advanced level skatepark facilities.

Policy 6D: Increase funding and support for park and recreation programs.

Action 6.21: Promote the use of City facilities for special events, such as festivals, tournaments, and races.

Action 6.22: Enter into concession or service agreements where appropriate to supplement City services.

Public Facilities

This map is a product of the City of San Buenaventura, California. Although reasonable efforts have been made to ensure the accuracy of this map, the City of San Buenaventura cannot guarantee its accuracy.

"A city, like a living thing, is a united and continuous whole."

— Plutarch
ca. 50-120 AD, author of *Moralia*

7. OUR HEALTHY AND SAFE COMMUNITY

Our goal is to build effective community partnerships that protect and improve the social well-being and security of all our citizens.

Community Wellness

Keeping the small town feel of Ventura depends on working together as a community to look out for the well being of all residents, especially those most at risk. Community wellness requires comprehensive preventative care, as well as careful preparation for and response to dangers within the built environment and to risks posed by natural processes (see Figure 7-1).

Adequate shelter, sufficient medical services, walkable neighborhoods, and proper nutrition create an essential foundation for a healthy community. Reducing as much as possible the threat to people and property from earthquakes, landslides, floods, and fires further enhance the collective wellness of the city. In addition, a healthy Ventura community requires thorough protection from crime, and freedom from pollution, unwanted noise, and the threat of hazardous materials.

Alquist-Priolo designation requires a geologic investigation prior to the approval of a development permit to determine if a specific site within the zone is threatened by surface displacement from future fault movement.

Geologic and Flood Hazards

Ventura lies in an active geologic region and is therefore subject to a variety of seismic hazards, including ground shaking, liquefaction, and slope failure. State law requires the City to regulate development in mapped seismic hazard zones. Major faults in the city include the Ventura-Foothill (a State-designated Alquist-Priolo Earthquake Fault Zone), Oak Ridge, McGrath, Red Mountain and Country Club Faults. Areas closest to these faults are most likely to experience ground shaking or rupture in the event of an earthquake. Liquefaction during an earthquake is most likely to occur in areas with loose, granular soils where the water table lies within 50 feet of the surface. As the soil liquefies, buildings and other objects may tilt or sink.

Hillside stability varies based on slope, soil, rock type and groundwater depth. The hills north of Poli Street/Foothill Road have experienced many historic landslides and are prone to future movement. The City Hillside Management Program limits development in the area to minimize dangers from landsliding, erosion, flooding, and fire, and to retain natural and scenic character.

The Federal Emergency Management Agency regulates development along watercourses based on the likelihood of flooding: the basic benchmark – the 100-year flood – has a one percent chance of occurring in any given year. Although the mapped 100-year flood hazard areas for local rivers and barrancas are fairly limited in size, the largest recorded flood events along the Ventura

and Santa Clara Rivers, both following heavy rains in 1969, exceeded the 100-year flood zone. The policies and actions in this Chapter intend to limit harm from geologic and flood events by requiring detailed risk analyses and mitigation prior to development of sites in hazard prone areas.

Fire and Emergency Response

The Ventura Fire Department responds to fire, medical, and disaster calls from six stations in the city. The Department's goal is to reach the scene within 4 minutes 90% of the time. The Department has a reciprocal agreement with the County Fire Protection District to ensure that Ventura residents receive the swiftest service possible. The Department also has a responsibility to provide disaster preparedness for the City. Particular fire department concerns in the City include:

- the need for reliable and sustainable source of fire service revenue,
- lengthy response times to areas farthest from existing stations (See Figure 7-2),
- firefighter and support staffing levels that are far below the .98 firefighter per 1,000 population averages of other municipal fire departments with comparable city size, age, and population,
- the threat of wildland fire entering urban area, and
- the lack of fire protection systems in older structures.

The policies and actions in this Chapter aim to optimize firefighting and emergency response capabilities through oversight of new development, improved facilities, and added staff.

Police Protection

Ventura Police response to crimes in progress or alarm soundings averages less than six minutes, and less than sixteen minutes for most other calls. While the local crime rate is slightly higher than State average, the Department hopes to better engage the community in policing efforts to lower crime levels. As part of a Strategic Planning Process, the Department has established the following goals:

- reduce crime and the fear of crime
- improve the quality of life in neighborhoods
- enhance community and police partnerships
- develop personnel
- continued accountability

One-time grant funding has helped add officers dedicated to community crime prevention, gang control, and youth mentoring programs. As these grants end the City must face the challenge of funding these services. Actions in this Chapter seek to improve the full range of police services to maximize community safety by increasing staffing, outreach efforts, and public access to police services.

Noise

Noise is generally defined as unwanted sound. Its effects can range from annoyance to nuisances to health problems. State law requires the City to identify and address noise sources and establish projected noise levels for roadways, railroads, industrial uses, and other significant generators. The Noise Contours map (Figure 7-3) is used to help guide land use in a way that minimizes exposure of residents to excessive noise.

Vehicle traffic is by far the greatest source of noise affecting Ventura residents. Other sources include the Seaside Park raceway, the Grant Park shooting range, and railroad, commercial, and industrial activity. Homes, schools, hotels, and hospitals are considered sensitive receptors where excessive noise can interfere with normal activities.

Noise intensity is customarily measured on the decibel scale, an index of loudness. Sounds as faint as 10 decibels (dB) are barely audible, while noise over 120 dB can be painful or damaging to hearing (Table 7-1 shows some typical noise levels). A sound 10 dB higher than another is perceived as about twice as loud. A 5 dB change is readily noticeable, but a 3 dB difference is barely perceptible.

As shown in Table 7-2, normally acceptable outdoor noise in residential areas may reach 65 decibels. The Ldn label in the table indicates that sound is averaged over time to account for the fact that sources like traffic or aircraft may cause fluctuations of more than 20 dB over a few

seconds. CNEL refers to the fact that 5 dB is added to noise after 7 p.m. and 10 dB added from 10 p.m. to 7 a.m., when quieter conditions make sound more noticeable.

The State Building Code requires an acoustical study whenever outdoor noise would exceed 60 decibels at a proposed duplex, multifamily residence, hotel, motel or other attached dwelling. The study must show that the proposed project design would result in interior noise levels of 45 dB or less.

Although future increases in traffic are not expected to produce a significant change in perceived noise levels, other specific sound generators have been identified as problems in the community. The policies and actions in this chapter look to reduce the exposure of people in Ventura to these noise sources.

Table 7-1. Typical Noise Levels

Type of Noise or Environment	Decibels
Recording Studio	20
Soft Whisper; Quiet Bedroom	30
Busy Open-plan Office	55
Normal Conversation	60-65
Automobile at 20 mph 25 ft. away	65
Vacuum Cleaner 10 ft. away	70
Dump Truck at 50 mph 50 ft. away	90
Train Horn 100 ft. away	105
Claw Hammer; Jet Takeoff 200 ft. away	120
Shotgun at shooter's ear	140

**Table 7-2
Acceptable Noise Levels**

LAND USE CATEGORY	COMMUNITY NOISE EXPOSURE Ldn or CNEL, dBA						
	55	60	65	70	75	80	85
RESIDENTIAL - LOW DENSITY SINGLE FAMILY, DUPLEX, MOBILE HOMES	[Yellow bar from 55 to 60]		[Cyan bar from 60 to 70]		[Dark teal bar from 70 to 75]		[Black bar from 75 to 80]
RESIDENTIAL - MULTI-FAMILY	[Yellow bar from 55 to 60]		[Cyan bar from 60 to 70]		[Dark teal bar from 70 to 75]		[Black bar from 75 to 80]
TRANSIENT LODGING - MOTELS, HOTELS	[Yellow bar from 55 to 60]		[Cyan bar from 60 to 70]		[Dark teal bar from 70 to 75]		[Black bar from 75 to 80]
SCHOOLS, LIBRARIES, CHURCHES, HOSPITALS, NURSING HOMES	[Yellow bar from 55 to 60]		[Cyan bar from 60 to 70]		[Dark teal bar from 70 to 75]		[Black bar from 75 to 80]
AUDITORIUMS, CONCERT HALLS, AMPHITHEATRES	[Yellow bar from 55 to 60]		[Cyan bar from 60 to 70]		[Dark teal bar from 70 to 75]		[Black bar from 75 to 80]
SPORTS ARENA, OUTDOOR SPECTATOR SPORTS	[Yellow bar from 55 to 60]		[Cyan bar from 60 to 70]		[Dark teal bar from 70 to 75]		[Black bar from 75 to 80]
PLAYGROUNDS, NEIGHBORHOOD PARKS	[Yellow bar from 55 to 60]		[Cyan bar from 60 to 70]		[Dark teal bar from 70 to 75]		[Black bar from 75 to 80]
GOLF COURSES, RIDING STABLES, WATER RECREATION, CEMETERIES	[Yellow bar from 55 to 60]		[Cyan bar from 60 to 70]		[Dark teal bar from 70 to 75]		[Black bar from 75 to 80]
OFFICE BUILDINGS, BUSINESS COMMERCIAL AND PROFESSIONAL	[Yellow bar from 55 to 60]		[Cyan bar from 60 to 70]		[Dark teal bar from 70 to 75]		[Black bar from 75 to 80]
INDUSTRIAL, MANUFACTURING, UTILITIES, AGRICULTURE	[Yellow bar from 55 to 60]		[Cyan bar from 60 to 70]		[Dark teal bar from 70 to 75]		[Black bar from 75 to 80]

NORMALLY ACCEPTABLE
Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction, without any special noise insulation requirements.

CONDITIONALLY ACCEPTABLE
New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning will normally suffice.

NORMALLY UNACCEPTABLE
New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.

CLEARLY UNACCEPTABLE
New construction or development should generally not be undertaken.

Hazardous Materials

Hazardous materials include medical and industrial wastes, pesticides, herbicides, radioactive materials, and combustible fuels. Improper use, storage, transport, or disposal of these materials may result in harm to humans, surface or ground water degradation, air pollution, fire, or explosion. Most of the several hundred facilities in Ventura that use or store hazardous materials lie along Ventura Avenue or in the Arundell industrial district.

The Fire Department maintains a team specially trained and equipped to respond to hazardous materials emergencies. Additional equipment and personnel for large-scale hazardous materials incidents is available from the County Fire Protection District, the City of Oxnard, and the U.S. Naval Construction Battalion Center in Port Hueneme.

The Westside and North Avenue neighborhoods include about 30 brownfields: sites that may possess contaminated soils but also have potential for reuse. Cleanup of these sites will make them more attractive for redevelopment that can improve the neighborhoods and generate employment and tax revenue. The City has established a Brownfield Assessment Demonstration Pilot Program to fund site assessments and initiate remediation. The policies and actions in this chapter intend to minimize the risk of adverse health effects of hazardous materials by regulating their location and seeking funding for cleanup of brownfield sites to encourage their reuse.

Policy 7A: Encourage wellness through care and prevention.

Action 7.1: Work with interested parties to identify appropriate locations for assisted-living, hospice, and other care-provision facilities.

Action 7.2: Provide technical assistance to local organizations that deliver health and social services to seniors, homeless persons, low-income citizens, and other groups with special needs.

Action 7.3: Participate in school and agency programs to:

- provide healthy meals,
- combat tobacco, alcohol, and drug dependency,
- distribute city park and recreation materials through the schools, and
- distribute information about the benefits of proper nutrition and exercise.

Action 7.4: Enhance or create ordinances which increase control over ABC licensed premises.

Action 7.5: Investigate the creation of new land use fees to enhance funding of alcohol related enforcement, prevention and training efforts.

Policy 7B: Minimize risks from geologic and flood hazards.

Action 7.6: Adopt updated editions of the California Construction Codes and International Codes as published by the State of California and the International Code Council respectively. 

Action 7.7: Require project proponents to perform geotechnical evaluations and implement mitigation prior to development of any site: 

- with slopes greater than 10 percent or that otherwise have potential for landsliding,
- along bluffs, dunes, beaches, or other coastal features
- in an Alquist-Priolo earthquake fault zone or within 100 feet of an identified active or potentially active fault,
- in areas mapped as having moderate or high risk of liquefaction, subsidence, or expansive soils,
- in areas within 100-year flood zones, in conformance with all Federal Emergency Management Agency regulations.

Action 7.8: To the extent feasible, require new critical facilities (hospital, police, fire, and emergency service facilities, and utility “lifeline” facilities) to be located outside of fault and tsunami hazard zones, and require critical facilities within hazard zones to incorporate construction principles that resist damage and facilitate evacuation on short notice. 

Action 7.9: Maintain and implement the Standardized Emergency Management System (SEMS) Multihazard Functional Response Plan.

Action 7.10: Require proponents of any new developments within the 100-year floodplain to implement measures, as identified in the Flood Plain Ordinance, to protect structures from 100-year flood hazards (e.g., by raising the finished floor elevation outside the floodplain). 

Action 7.11: Prohibit grading for vehicle access and parking or operation of vehicles within any floodway. 

Policy 7C: Optimize firefighting and emergency response capabilities.

Action 7.12: Refer development plans to the Fire Department to assure adequacy of structural fire protection, access for firefighting, water supply, and vegetation clearance. 

Action 7.13: Resolve extended response time problems by: 

- adding a fire station at the Pierpont/Harbor area,
- relocating Fire Station #4 to the Community Park site,
- increasing firefighting and support staff resources,
- reviewing and conditioning annexations and development applications, and
- require the funding of new services from fees, assessments, or taxes as new subdivisions are developed.

Action 7.14: Educate and reinforce City staff understanding of the Standardized Emergency Management System for the State of California.

Policy 7D: Improve community safety through enhanced police service.

Action 7.15: Increase public access to police services by:

- increasing police staffing to coincide with increasing population, development, and calls for service,
- increasing community participation by creating a Volunteers in Policing Program, and,
- require the funding of new services from fees, assessments, or taxes as new subdivisions are developed.

Action 7.16: Provide education about specific safety concerns such as gang activity, senior-targeted fraud, and property crimes.

Action: 7.17: Establish a nexus between police department resources and increased demands associated with new development.

Action 7.18: Continue to operate the Downtown police storefront. 

Action 7.19: Expand Police Department headquarters as necessary to accommodate staff growth.

Policy 7D: Minimize exposure to air pollution and hazardous substances.

Action 7.20: Require air pollution point sources to be located at safe distances from sensitive sites such as homes and schools. 

Action 7.21: Require analysis of individual development projects in accordance with the most current version of the Ventura County Air Pollution Control District Air Quality Assessment Guidelines and, when significant impacts are

identified, require implementation of air pollutant mitigation measures determined to be feasible at the time of project approval. 

Action 7.22: In accordance with Ordinance 93-37, require payment of fees to fund regional transportation demand management (TDM) programs for all projects generating emissions in excess of Ventura County Air Pollution Control District adopted levels. 

Action 7.23: Require individual contractors to implement the construction mitigation measures included in the most recent version of the Ventura County Air Pollution Control District Air Quality Assessment Guidelines. 

Action 7.24: Only approve projects involving sensitive land uses (such as residences, schools, daycare centers, playgrounds, medical facilities) within or adjacent to industrially designated areas if an analysis provided by the proponent demonstrates that the health risk will not be significant.

Action 7.25: Adopt new development code provisions that ensure uses in mixed-use projects do not pose significant health effects.

Action 7.26: Seek funding for cleanup of sites within the Brownfield Assessment Demonstration Pilot Program and other contaminated areas in West Ventura.

Action 7.27: Require proponents of projects on or immediately adjacent to lands in industrial,

commercial, or agricultural use to perform soil and groundwater contamination assessments in accordance with American Society for Testing and Materials standards, and if contamination exceeds regulatory action levels, require the proponent to undertake remediation procedures prior to grading and development under the supervision of the County Environmental Health Division, County Department of Toxic Substances Control, or Regional Water Quality Control Board (depending upon the nature of any identified contamination). 

Action 7.28: Educate residents and businesses about how to reduce or eliminate the use of hazardous materials, including by using safer non-toxic equivalents.

Action 7.29: Require non-agricultural development to provide all necessary buffers, as determined by the Agriculture Commissioner's Office, from agricultural operations to minimize the potential for pesticide drift. 

Action 7.30: Require all users, producers, and transporters of hazardous materials and wastes to clearly identify the materials that they store, use, or transport, and to notify the appropriate City, County, State and Federal agencies in the event of a violation. 

Action 7.31: Work toward voluntary reduction or elimination of aerial and synthetic chemical application in cooperation with local agricultural interests and the Ventura County agricultural commissioner. 

Policy 7E: Minimize the harmful effects of noise.

Action 7.32: Require acoustical analyses for new residential developments within the mapped 60 decibel (dBA) CNEL contour, or within any area designated for commercial or industrial use, and require mitigation necessary to ensure that: 

- Exterior noise in exterior spaces of new residences and other noise sensitive uses that are used for recreation (such as patios and gardens) does not exceed 65 dBA CNEL, and
- Interior noise in habitable rooms of new residences does not exceed 45 dBA CNEL with all windows closed.

Action 7.33: As funding becomes available, construct sound walls along U.S. 101, SR 126, and SR 33 in areas where existing residences are exposed to exterior noise exceeding 65 dBA CNEL. 

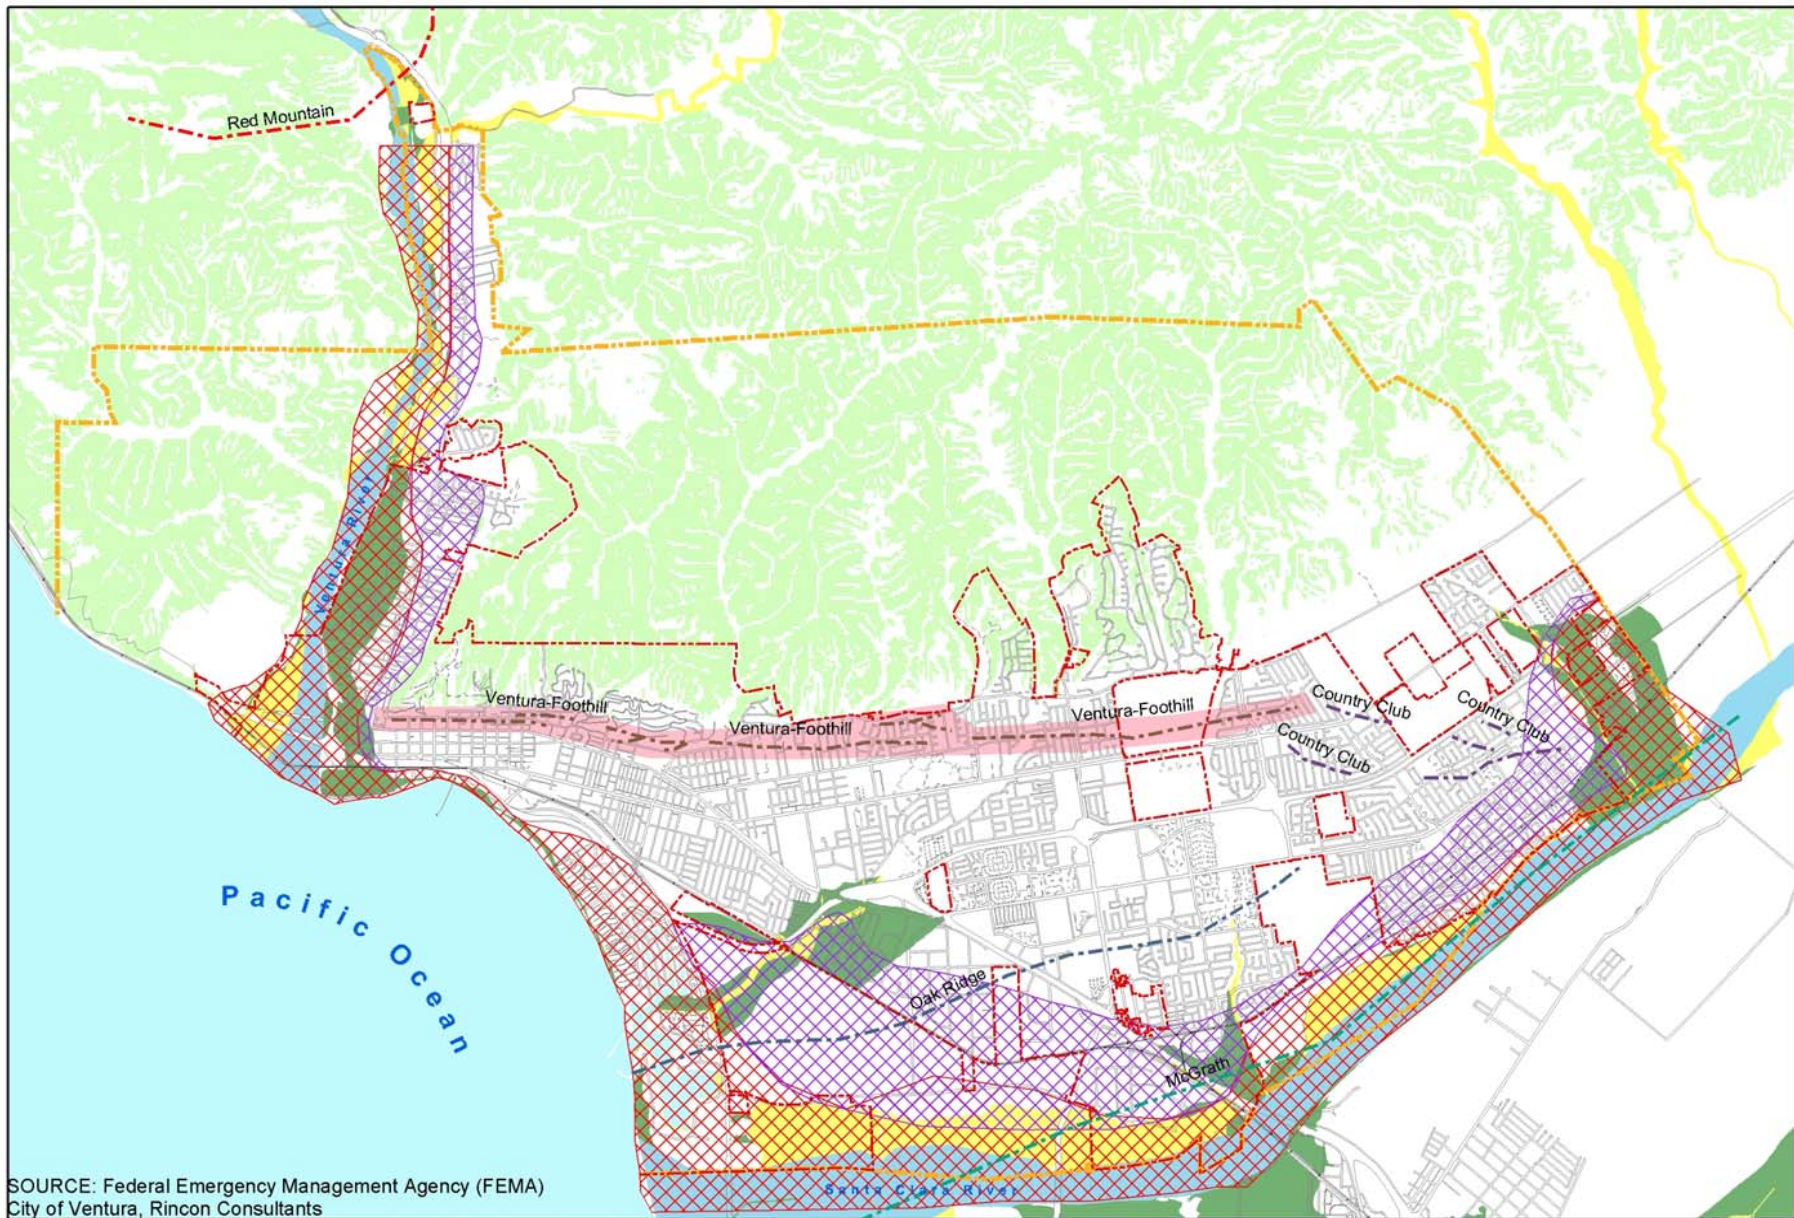

Action 7.34: Request that sound levels associated with concerts at the County Fairgrounds be limited to 70 dBA at the eastern edge of that property. 

Action 7.35: Request the termination of auto racing at the County fairgrounds. 

Action 7.36: Amend the noise ordinance to restrict leaf blowing, amplified music, trash collection, and other activities that generate complaints. 

Action 7.37: Use rubberized asphalt or other sound reducing material for paving and re-paving of City streets. 

Action 7.38: Update the Noise Ordinance to provide standards for residential projects and residential components of mixed-use projects within commercial and industrial districts.

"A vigorous culture capable of making corrective, stabilizing changes depends heavily on its educated people, and especially upon their critical capacities and depth of understanding."

— Jane Jacobs
Dark Age Ahead

8. OUR EDUCATED COMMUNITY

Our goal is to encourage academic excellence and life-long learning resources to promote a highly-educated citizenry.

Lifelong Learning

Education is more important than ever before as the foundation for the vitality of informed community participation in Ventura. The *Ventura Vision* calls for the city to be “a community dedicated to educational excellence and an emphasis on lifelong learning.” A truly educated community is key to achieving most of the goals in this General Plan because:

- In the 21st Century information economy a highly educated and skilled workforce is vital to community prosperity,
- Education and the institutions that provide it are critical to achieving environmental and cultural leadership, and
- An educated and informed citizenry is essential to sound planning and decision-making.

While Ventura has a comparatively well-educated population (see Table 8-1), the high costs of doing business and finding housing in the city will force even greater emphasis on businesses and jobs that require ever-higher levels of skill. The need and desire for lifelong learning will require relentlessly expanding educational resources and access to them in the years ahead. Plus, the assets that strong educational institutions provide

are necessary to bring a rich cultural life to the community as well.

Ventura can build on an impressive base of well-regarded public schools, array of private alternatives, major community college, satellite university campuses, expanding media-training institute, law school, and three branch libraries, among other educational resources. The key to becoming renowned as a local “learning community” lies in creating stronger linkages between these existing resources and integrating them into the physical and social landscape of our community.

Leveraging our Assets

Excellence in public education is the top priority for the Ventura Unified School District (whose boundaries extend beyond the city). In Ventura, the District manages 16 elementary schools, four middle schools, three high schools, and one continuation high school, plus independent study and adult education programs.

In addition to District schools, the city also is home to more than a dozen private schools (see Table 8-2), serving 13 percent of elementary and high school students living in Ventura, according to the 2000 Census. Figure 6-1 shows school locations in the city.

**Table 8-1
Education Level**

Schooling Completed	Percent of Population
High School	21.7
Some College	28.2
Associate Degree only	9.6
Bachelors Degree only	15.4
Graduate Degree	9.3
High School Diploma & Above	84.1
Associate Degree & Above	34.2

Ventura County Christian	K-12
Hill Road Montessori Preschool	K-3
Wells Road Baptist Academy	K-12

Most public schools operate at or near capacity (see Table 8-3), and continuing growth in Ventura requires the District to search for sites for new schools (see Table 8-4). Developers of new projects are required to dedicate land or pay fees for school purposes, and any major annexation of land outside the city is likely to have to provide a school site to serve new resident children. Still, the scarcity and cost of suitable sites means that greater thought will need to be given to shared facility use and other non-traditional approaches to expanding capacity.

High	2,000	1	40
TOTAL		6	100

1. Assumes 10 acres for elementary schools, 20 acres for middle schools, and 40 acres for high schools.

Source: Ventura Unified School District, 2003

Ventura is increasingly becoming recognized as a center for higher education. Ventura College is a highly respected two-year school with more than 12,000 students, providing everything from a

distinguished transfer opportunity for the University of California to certificates and associates degrees in important fields such as manufacturing and nursing. Students also can obtain four-year degrees in certain fields at the UCSB Ventura Center. Brooks Institute of Photography provides education in photojournalism, filmmaking, and related fields, providing the city with a significant cultural asset. Residents can earn graduate degrees in law, public policy, and education at the Ventura campuses of California Lutheran University, Azusa Pacific University, the Ventura College of Law, and the Southern California Institute of Law. The opening of the nearby California State University Channel Islands has drawn many students and faculty to live in Ventura, especially those in creative fields.

Combined, these institutions of higher learning provide Ventura with tremendous educational assets. Through the policies and actions in this chapter, the City is committed to nurturing these institutions, creating synergy among them, and instilling both cultural and economic opportunities.

Libraries of the Future

The County public library system in Ventura currently operates three branch libraries that serve about 200,000 visits annually (see Table 8-5). But in a digital age where more and more content is available online, the traditional book borrowing function is becoming outmoded. Library administrators and staff, the City’s Library Advisory Commission, and patrons have all pointed to needs for adding library space, extending operating hours, and updating and expanding learning resources.

At a more fundamental level, the ideas of what constitutes a library and how it fits the patterns of a learning community need to be reexamined. Integration with school libraries, including the Ventura College Learning Center, is a top priority for this reevaluation, as embodied in the policies and actions in this chapter.

City and Community Programs

Traditional classroom settings alone cannot provide the complete set of educational skills and experience needed by people of all ages. The City provides a variety of learning opportunities, including youth and adult art programs, environmental education, adaptive recreation programs, youth after-school activities, and summer camps. Community organizations also provide a range of classes and experiences, including tours, museums, lectures, and hands-on activities. Expanding venues for such activities and promoting participation in them are key challenges.

Policies and actions in this chapter seek to expand lifelong learning opportunities for everyone in the community.

Table 8-5. Local Libraries

Library	Card-Holders	2003-2004 Patronage	Hours Open Weekly	Facility Size (sq. ft.)
E. P. Foster	48,195	366,134	54	31,000
H. P. Wright			39	12,000
Avenue			25	3,000

Source: Ventura County Library Administration, 2005

Policy 8A: Reach out to institutions and educators to advance lifelong learning.

Action 8.1: Work closely with schools, colleges, and libraries to provide input into site and facility planning.

Action 8.2: Organize a regional education summit to generate interest in and ideas about learning opportunities.

Action 8.3: Adopt joint-use agreements with libraries, schools, and other institutions to maximize use of educational facilities.

Action 8.4: Distribute information about local educational programs.

Policy 8B: Increase the availability and diversity of learning resources.

Action 8.5: Install infrastructure for wireless technology and computer networking in City facilities.

Action 8.6: Establish educational centers at City parks. 

Action 8.7: Work with the State Parks Department to establish a marine learning center at the Harbor. 

Action 8.8: Work with the Ventura Unified School District to ensure that school facilities can be provided to serve new development.

Policy 8C: Reshape public libraries as 21st Century learning centers.

Action 8.9: Complete a new analysis of community needs, rethinking the role of public libraries in light of the ongoing advances in information technology and the changing ways that individuals and families seek out information and life-long learning opportunities.

Action 8.10: Reassess the formal and informal relationships between our current three branch public libraries and school libraries – including the new Ventura College Learning Resource Center – as well as joint use of facilities for a broader range or compatible public, cultural, and educational uses.

Action 8.11: Develop a Master Plan for Facilities, Programs, and Partnerships to create an accessible, robust, and vibrant library for the 21st Century system, taking into consideration that circulation of books is no longer the dominant function but will continue to be an important part of a linked network of learning centers.

Action 8.12: Develop formal partnerships, funding, capital strategies, and joint use agreements to implement the new libraries Master Plan.

"Whatever you can do, or dream you can,
begin it. Boldness has genius, power and
magic in it."

— Johann Wolfgang von Goethe

CITY OF
VENTURA

OUR CREATIVE COMMUNITY
ventura's general plan

9. OUR CREATIVE COMMUNITY

Our goal is to become a vibrant cultural center by weaving the arts and local heritage into everyday life.

A Rich Foundation

Local history, artistic expression, and cultural diversity play vital roles in making Ventura a vibrant and interesting place. The heritage of Chumash civilization, which developed over the course of about 9,000 years, and influences of Mexican settlement establish a rich tableau for the modern development of the city. Art in museums, galleries, and public places, as well as space and energy devoted to the creation of artwork and crafts connect the community in complex and fundamental ways. Cultural expression in the form of festivals and informal gatherings provide additional and essential bonds that strengthen the community.

Historic Context

Abundant food and water, temperate climate, and ample material for tool manufacturing attracted early local inhabitants. Chumash peoples were living in a string of coastal villages when Spanish explorers arrived in 1542. Shisholop village (at the south end of present-day Figueroa Street) was a thriving Chumash provincial capital at the time of the Spanish arrival. Other Chumash villages and burial sites have been found in what are now the North Avenue and Saticoy neighborhoods, as well as north of the Ventura River. Mexican settlers began to arrive in earnest

**Table 9-1
Key Historical and Cultural Sites**

Site	Description
Albinger Museum	Artifacts spanning 3,500 years excavated from a site next to the Mission are on display in this former adobe at 113 East Main Street.
Downtown	Downtown Ventura is home to a variety of 19 th Century buildings that house restaurants and retail establishments in a small-town setting with a variety of cultural amenities.
Olivas Adobe Park	Completed in 1849 for the Raymundo ranching family, the well-preserved hacienda at 4200 Olivas Park Road is utilized as concert and banquet facility.
Ortega Adobe	Built in 1857, the adobe is only remaining example of the middle class homes that once lined West Main Street. The building has since been used as a police station and restaurant.
San Buenaventura Mission	Built in 1782, the Mission anchors the western part of the downtown area and is still used for regular Catholic services.
Santa Gertrudis Chapel	The Chapel was originally completed around 1809. The site is located along Highway 33 near Foster Park.
San Miguel Chapel	The site is located at Thompson Boulevard and Palm Street. The original chapel dated back to the early 1800s.
Ventura County Museum of History and Art	The museum at 100 East Main Street houses exhibits featuring local artists and historical artifacts. Expansion plans include a 200-seat auditorium and a gallery with touring exhibits.

Source: City of Ventura

after the founding of Mission San Buenaventura in 1782.

More than 90 historic sites have been identified in the planning area (which includes areas outside the city). Notable ones include the Mission, the Ortega and Olivas Adobes, and the locations of the Santa Gertrudis and San Miguel Chapels (See Table 9-1 and Figure 9-1). Many of the existing buildings in Ventura were constructed between 1880 and 1940, a period that coincided with development of the railroads and harbor. City

Hall (formerly the County Courthouse) and the Mission aqueduct are listed as landmarks on the National Register of Historic Places, and structures in the following historic districts are protected by City architectural controls:

- the grounds within the Mission District,
- the Mitchell block (south of Thompson Boulevard between Chestnut and Fir Streets),
- the Selwyn Shaw block (north of Poli Street between Ann and Hemlock Streets), and
- the Simpson Tract (west of Ventura Avenue between Simpson and Prospect Streets).

Arts and Culture

When the City first adopted a Community Cultural Plan in 1992, Ventura's creative community was in its fledgling stage. Few of the now-thriving professional art and cultural organizations existed (see Table 9-2). A burgeoning visual artist community had made the city its home, but was fairly invisible except to the more intrepid arts supporters and collectors.

Since completion of that plan, the City has either implemented or initiated all of its recommendations, which were developed through extensive public involvement. As a result, the growth of the cultural community has been extraordinary. Now Ventura is home to a wealth of active artists and arts organizations. From 1994-2004, the budgets of arts organizations in Downtown Ventura alone increased from \$500,000 to more than \$4 million.

Ventura also now has a complement of major cultural institutions unique for a city of its size, including the Ventura Music Festival, the Rubicon Theatre Company, the Ventura County Museum of History and Art, and Focus on the Masters. The individual artists who live and work in the city continue to comprise a major part of its cultural fabric, and are highlighted in popular cultural events like the Downtown ArtWalks.

A strong focus of the City's general is to build the arts infrastructure of Ventura. A strong cultural infrastructure is the foundation of a healthy arts

ecosystem: this includes *places* (for arts creation, sales, exhibition, performance, rehearsal, living), *people* (artists, audiences, patrons), and *organizations* (production, support, and presentation).

In keeping with the community's respect for its roots, the Ventura arts scene remains authentic, no small feat in today's competitive environment. While many communities focus on importing Broadway shows or big-name art exhibits to increase their profile, Ventura successfully continues to highlight local artists, architecture, culture, history, and the environment – the unique threads that together comprise the rich tapestry of the Ventura community. Policies and actions in this chapter call for continuing to build the cultural foundations of the community by involving everyone in the production, support, and presentation of art and cultural programs, installing art in public places, providing working and display space for local artists, and identifying a site for an arts and cultural center.

**Table 9-2
Art and Cultural Institutions**

Name	Description	Years in Operation	Annual Patronage
Buenaventura Arts Association	Fine art gallery in downtown Ventura.	50	5,000
Channelaire Chorus	Women's chorus	42	2,500
City of Ventura Cultural Affairs Division	Supports local arts organizations; produces cultural programs (ArtWalks, Street Fairs, Music Under the Stars, Arts Education classes, grants, public art, etc.)	13	132,000
Focus on the Masters	Documentation of extraordinary artists (photographs, audio and video interviews)	10	15,000
Kids' Art	Ongoing, free kids' creative arts programs	12	350
Music 4 Kids	After school music instruction at Boys & Girls Clubs	4	800
Plexus Dance Theater	Professional modern dance performances	20	1,400
Rubicon Theater	Regional theater – classic and contemporary	6	37,000
San Buenaventura Foundation for the Arts	Arts umbrella organization - supports development of the Cultural Center and produces Arts Explosion	5	5,900
Ventura Area Theater Sports	Live improvisational theater in downtown Ventura	15	5,000
Ventura Artists' Union	Art gallery and weekly arts shows on California Plaza	15	17,000
Ventura College Opera Workshop	Opera and theater company at Ventura College	21	4,500
Ventura County Ballet	Ballet school with twice annual performances	6	11,000
Ventura County Master Chorale	Professional vocal music ensemble	23	6,000
Ventura County Museum of History and Art	Museum featuring exhibits on the history and art of Ventura County	26	55,000
Ventura Music Festival	Annual concert festival presenting international and local performers	11	9,000

Policy 9A: Increase public art and cultural expression throughout the community.

Action 9.1: Require works of art in public spaces per the City’s Public Art Program Ordinance.

Action 9.2: Sponsor and organize local art exhibits, performances, festivals, cultural events, and forums for local arts organizations and artists. 

Action 9.3: Expand outreach and publicity by: 

- promoting locally produced art and local cultural programs
- publishing a monthly calendar of local art and cultural features,
- distributing the *State of the Arts* quarterly report, and
- offering free or subsidized tickets to events.

Action 9.4: Support the creative sector through training and other professional development opportunities.

Action 9.5: Work with the schools to integrate arts education into the core curriculum.

Action 9.6: Promote the cultural and artistic expressions of Ventura’s underrepresented cultural groups.

Action 9.7: Offer ticket subsidy and distribution programs and facilitate transportation to cultural offerings.

Policy 9B: Meet diverse needs for performance, exhibition, and workspace.

Action 9.8: Increase the amount of live-work development, and allow its use for production, display, and sale of art.

Action 9.9: Work with community groups to locate sites for venues for theater, dance, music, and children’s programming.

Policy 9C: Integrate local history and heritage into urban form and daily life.

Action 9.10: Provide incentives for preserving structures and sites that are representative of the various periods of the city’s social and physical development. 

Action 9.11: Organize and promote multi-cultural programs and events that celebrate local history and diversity.

Action 9.12: Allow adaptive reuse of historic buildings. 

Action 9.13: Work with community groups to identify locations for facilities that celebrate local cultural heritage, such as a living history Chumash village and an agricultural history museum. 

Policy 9D: Ensure proper treatment of archeological and historic resources.

Action 9.14: Require archaeological assessments for projects proposed in the Coastal Zone and other areas where cultural resources are likely to be located. 

Action 9.15: Suspend development activity when archaeological resources are discovered, and require the developer to retain a qualified archaeologist to oversee handling of the resources in coordination with the Ventura County Archaeological Society and local Native American organizations as appropriate. 

Action 9.16: Pursue funding to preserve historic resources. 

Action 9.17: Provide incentives to owners of eligible structures to seek historic landmark status and invest in restoration efforts. 

Action 9.18: Require that modifications to historically-designated buildings maintain their character. 

Action 9.19: For any project in a historic district or that would affect any potential historic resource or structure more than 40 years old, require an assessment of eligibility for State and federal register and landmark status and appropriate mitigation to protect the resource. 

Action 9.20: Seek input from the City's Historic Preservation Commission on any proposed

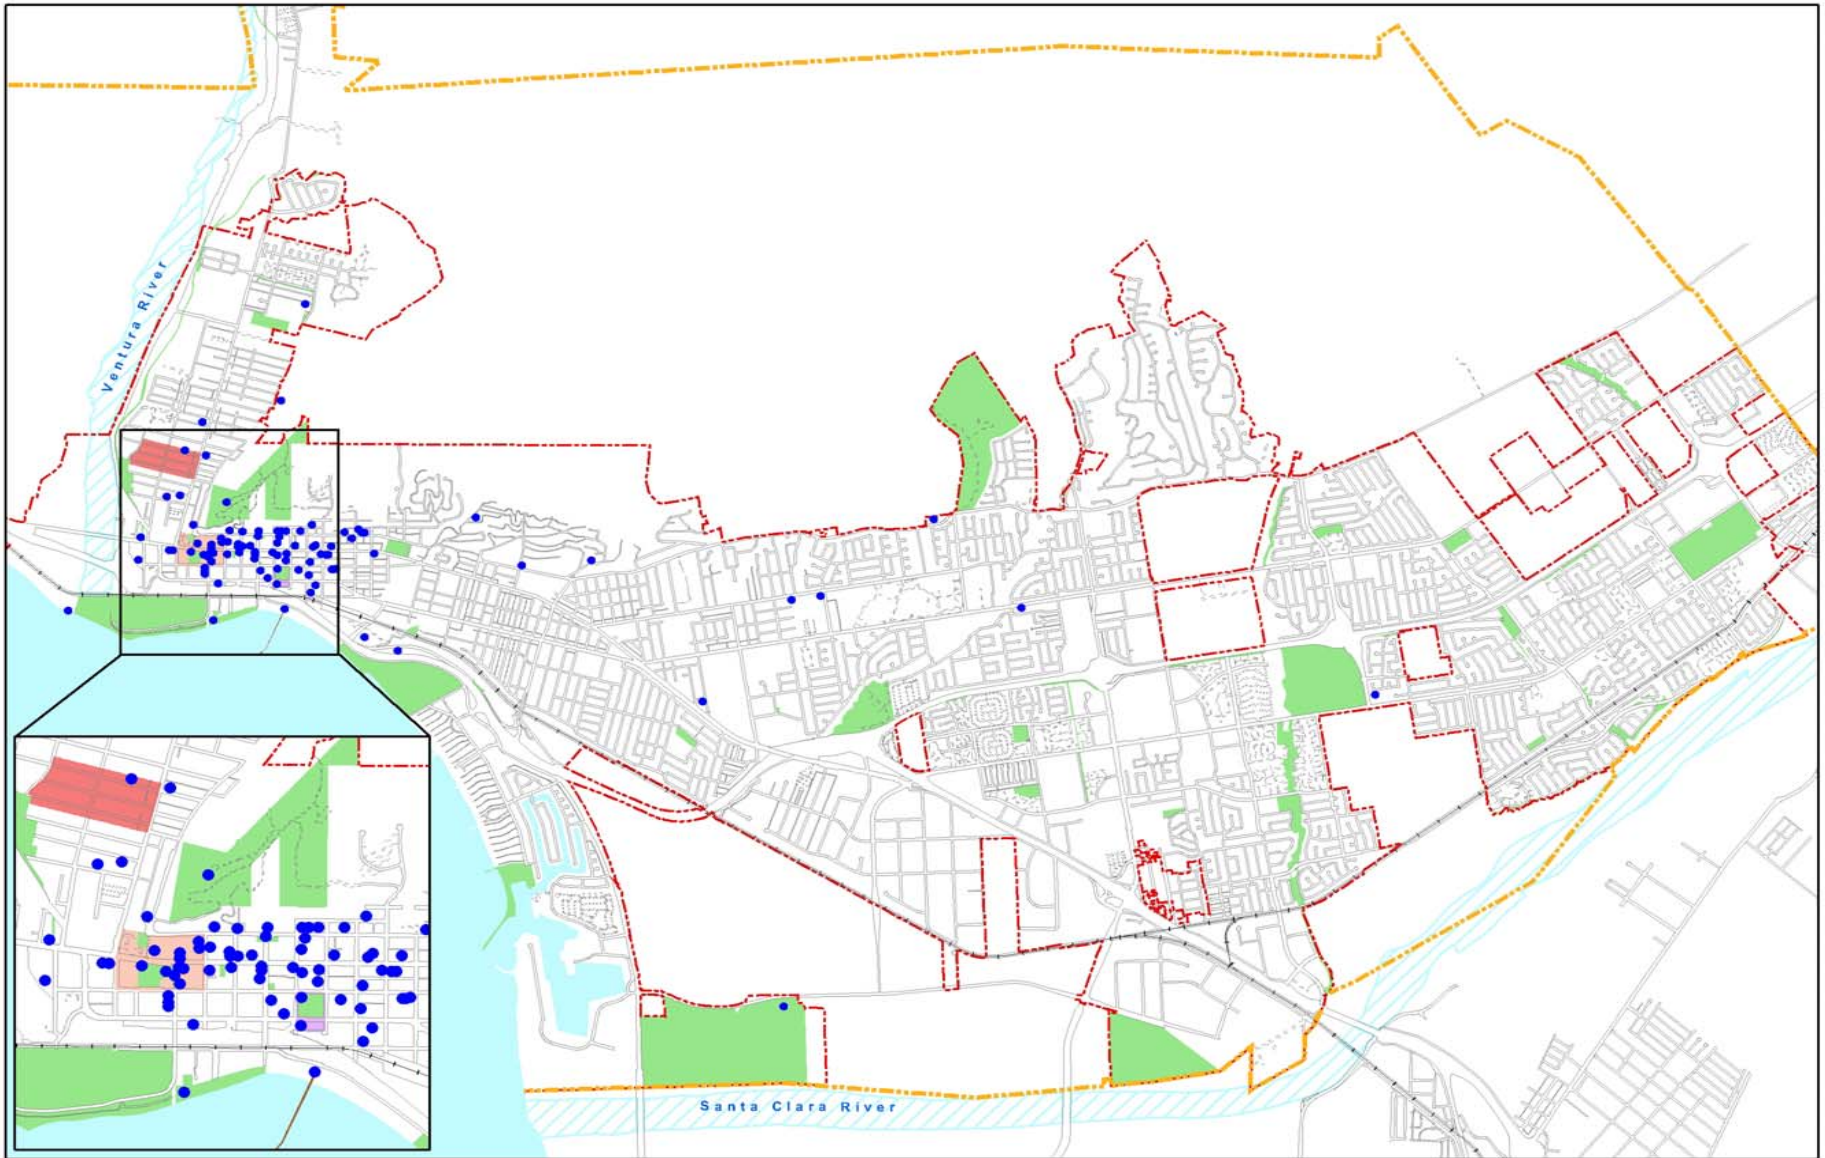

development that may affect any designated or potential landmark. 

Action 9.21: Update the inventory of historic properties. 

Action 9.22: Create a set of guidelines and/or policies directing staff, private property owners, developers, and the public regarding treatment of historic resources that will be readily available at the counter. 

Action 9.23: Complete and maintain historic resource surveys containing all the present and future components of the historic fabric within the built, natural, and cultural environments. 

Action 9.24: Create a historic preservation element.

"Never believe that a few caring people can't change the world. For indeed, that's all who ever have."

— Margaret Mead
Renowned Anthropologist

10. OUR INVOLVED COMMUNITY

Our goal is to strive to work together as a community to achieve the Ventura Vision through civic engagement, partnerships, and volunteer service.

Civic Engagement

It is not enough to have a vision of smart growth for Ventura. Achieving that vision requires the active and ongoing participation of an engaged and active community. Fortunately, Ventura builds on a strong foundation: thousands of Ventura citizens are involved in their schools and places of worship and give their time to civic, cultural, and charitable organizations. City Commissions, the Community Councils, the Chamber of Commerce and other well-established avenues provide opportunities for community leadership.

This is what Alexis De Toqueville celebrated in his famous book, *Democracy in America*, calling our nation, “the one country in the world, day in and day out, that makes use of an unlimited freedom of association.” Yet today in Ventura, as all across America, there is concern about the health of our democracy. Sociologist Robert Putnam gained national attention with his research showing that “by almost every measure, Americans’ direct engagement in politics and government has fallen steadily and sharply over the last generation.”

Among the symptoms in Ventura have been a decline in voter turnout in recent local elections – (a 36% drop from 1995 through 2003.) Over those years, the ability to build consensus about future development has been undermined by sharply polarized divisions, showdowns at the ballot box, and often rancorous public hearings. The complaint often recurs that planning decisions are made without adequate notice or consideration of the views of those affected. Many citizens criticize the City decision-making process as convoluted and counterproductive.

Moreover, ongoing participation of an engaged community requires civic places where citizens can come together. It is not insignificant that a decline in public participation and the quality of civic discourse has paralleled the loss of civic places in our cities. Historically, governments provided open spaces and buildings that were at the center of a community, physically and symbolically. Town squares and plazas, often faced by a hall for formal gathering and civic engagement, have all but disappeared. The poverty of American public places was apparent after the Columbine High School shooting in Colorado, when citizens gathered to mourn, not in a shared place for people, but in a parking lot.

Nearly everyone agrees we can and should do better. The best model for doing this was the citywide effort to craft the *Ventura Vision*. Thousands participated in a year-long partnership encompassing City government, non-profit organizations, community groups, business,

schools and individual residents to chart the community's future.

The vision of an “involved community” was described in the *Ventura Vision* report as: seeking “broad community collaboration; more widely publicizing city government services, planning processes and policies; better involvement of typically under-represented groups such as youth, seniors and ethnic minorities in community planning; and developing public parks, plazas, neighborhood greenways and other spaces that promote civic interaction and events.”

Since that vision was adopted by the City Council in 2000, the City has worked to implement it, building on existing community assets and strengthening the linkages and interconnections that already exist among people, organizations, and shared community goals. A remarkable example of broad community collaboration earned attention throughout Southern California in late 2004. Facing the prospect of winter flooding, the City undertook to evacuate homeless people living in the channel of the Ventura River. This was accomplished by a partnership involving non-profit social service agencies, faith-based organizations, City staff, business leaders, community volunteers and the affected homeless population.

There are many more models of successful community collaboration in Ventura, including: the restoration of the pier, the community's rich array of after-school programs, the implementation of the 1992 Cultural Plan, the 2004 Downtown

Charrette, the 2005 Midtown Design Charrette and the establishment of conservancies to preserve the Grant Park cross and Ventura's cherished hillsides.

City government has learned from these efforts to reach broadly and deeply into the community. Civic engagement and trust are built when City representatives actively seek to involve everyone in positive and transparent partnerships. That goal requires a continually evolving effort to promote participation:

- through proactive and interactive media outreach in the press, on the web, on radio and television,
- by striving to include everyone in decision making and making it convenient for them to participate by seeking them out in their neighborhoods and gathering places like schools, houses of worship and public spaces, and
- through community dialogues, workshops, charrettes, town hall forums, and community councils, in addition to formal public hearings.

More effort needs to be put into building consensus about future growth and change upfront through community planning, rather than waiting until specific development projects are proposed. That effort will continue with the work to craft a citywide “form-based code” and concentrated planning efforts for specific neighborhoods and districts.

Focused attention should be paid to making our public decision-making processes easier to understand and participate in. Citizens have little time or patience for complicated planning and entitlement processes that drag on for years. By establishing clearer rules and public processes for applying them, the policies and actions in this chapter will enable more citizens to feel that they will be heard and their contributions valued. By involving a wider range of the community in clearly setting Ventura's planning goals and standards of quality, we can devote more time to achieving those goals and less time wrangling over specific proposals.

Ventura also needs to reestablish places for civic discourse. While the City will continue to encourage the use of our beautiful City Hall for its historic role of government by and for the people, we also need a hierarchy of civic spaces citywide that are strategically located in neighborhood centers and accessible by pedestrians (see Chapter Three, Action 3.8). Every neighborhood should have access to a physical location designated for public gathering and civic purposes.

Our long-range vision is to build an ethic and a fabric of robust civic engagement – what De Toqueville called “the habits of the heart.” His phrase evokes what the Ventura Vision called “direct engagement in public affairs” through “participation, hard work and collaboration . . . sustaining Ventura as an exceptional place.” The policies and actions in this chapter aim to do just that.

Policy 10A: Work collaboratively to increase citizen participation in public affairs.

Action 10.1: Conduct focused outreach efforts to encourage all members of the community – including youth, seniors, special needs groups, and non-English speakers – to participate in City activities.

Action 10.2: Obtain public participation by seeking out citizens in their neighborhoods and gathering places such as schools, houses of worship and public spaces.

Action 10.3: Invite civic, neighborhood, and non-profit groups to assist with City project and program planning and implementation.

Action 10.4: Provide incentives for City staff to participate in community and volunteer activities.

Action 10.5: Invite seniors to mentor youth and serve as guides at historical sites.

Action 10.6: Offer internships in City governance, and include youth representatives on public bodies.

Action 10.7: Continue to offer the Ambassadors program to obtain citizens assistance with City projects.

Policy 10B: Raise awareness of City operations and be clear about City objectives.

Action 10.8: Utilize the City website as a key source of information and expand it to serve as a tool for civic engagement.

Action 10.9: Publish an annual report that evaluates City performance in such areas as conservation, housing, and economic development.

Action 10.10: Continue to improve the user-friendliness of the media that communicate information about the City,

including the website, cable channels, newsletters, kiosks, and water billing statements.

Policy 10 C: Work at the neighborhood level to promote citizen engagement.

Action 10.11: Establish a clear policy toward the scope, role, boundaries, and jurisdiction of neighborhood Community Councils citywide, with the objectives of strengthening their roles in decision-making.

Action 10.12: Establish stronger partnerships with neighborhood Community Councils to set area priorities for capital investment, community policing, City services, commercial investment, physical planning, education, and other concerns, to guide both City policies and day-to-day cooperation and problem-solving. 

Action 10.13: Recognizing that neighborhood empowerment must be balanced and sustained by overall City policies and citywide vision and resources – establish a citywide Neighborhood Community Congress where local neighborhood Community Councils can collaborate and learn from each other. 

Action 10.14: Establish clear liaison relationships to foster communication, training, and involvement efforts between the City, neighborhood Community Councils and other community partners, including the Ventura Unified School District and business, civic, cultural and religious groups.

ORDINANCE NO. 95-33

AN ORDINANCE OF THE PEOPLE OF THE CITY OF SAN BUENAVENTURA ADOPTING AN ORDINANCE AMENDING THE COMPREHENSIVE PLAN WITH RESPECT TO THE PRESERVATION OF AGRICULTURAL LANDS.

The people of the City of San Buenaventura do hereby ordain as follows:

Section 1. Findings and Purpose.

A. The protection of existing agricultural and watershed lands is of critical importance to present and future residents of the City of San Buenaventura (City of Ventura). Agriculture has been and remains the major contributor to the economy of the City and County of Ventura, creating employment for many people, directly and indirectly, and generating substantial tax revenues for the City.

B. In particular, the City of Ventura and surrounding area, with its unique combination of soils, micro-climate and hydrology, has become one of the finest growing regions in the world. Vegetable and fruit production from the County of Ventura and in particular production from the soils and silt from the Santa Clara and Ventura rivers have achieved international acclaim, enhancing the City's economy and reputation.

C. Uncontrolled urban encroachment into agricultural and watershed areas will impair agriculture and threaten the public health, safety and welfare by causing increased traffic congestion, associated air pollution, and potentially serious water problems, such as pollution, depletion, and sedimentation of available water resources. Such urban encroachment would eventually result in both the unnecessary, expensive extension of public services and facilities and inevitable conflicts between urban and agricultural uses.

D. The unique character of the City of Ventura and quality of life of City residents depend on the protection of a substantial amount of open space lands. The protection of such lands not only ensures the continued viability of agriculture, but also protects the available water supply and contributes to flood control and the protection of wildlife, environmentally sensitive areas, and irreplaceable natural resources.

E. The Resolution by which the City of Ventura adopted its Comprehensive Plan on August 28, 1989, Resolution No. 89-103, at page 4, contains in part the following “mitigation measures” in recognition of the importance of preserving agriculture resources:

“Any potential significant adverse impacts are mitigated by substantially limiting the amount of agricultural land converted from an agricultural land use designation limiting the amount of prime farmland converted, and by making the various agricultural land areas designated for potential development subject to conditions which narrowly limit the possible land use.”

F. The Comprehensive Plan sets out as Objective 4 (at II-9) the desire to:

“Continue to preserve agricultural and other open space lands within the City’s Planning Area.”

And, the Comprehensive Plan describes as the first Goal of its Resource Element (at II-3) the objective to:

“Preserve agricultural and open space lands as a desirable means of shaping the City’s internal and external form and size, and of serving the needs of residents.”

G. The purpose of this initiative is to ensure that the Goals and Objectives of the Comprehensive Plan are inviolable by transitory short-term political decisions and that agricultural, watershed and open space lands are not prematurely or unnecessarily converted to other non-agricultural or non-open space uses without public debate and a vote of the people. Accordingly, the initiative ensures that until December 31, 2030, the general plan provisions governing agricultural land use designation and intent may not be change except by vote of the people. In addition, the initiative provides that any lands designated as “Agriculture Use”, referring to both “Agricultural Use (not to be reconsidered until after the Year 2010” and Agricultural/Institutional” on the City of Ventura’s General Plan “Land Use Plan Map” adopted by the City Council by Resolution 89-103 on August 28, 1989, as amended through February 1, 1995, will remain designated as Agricultural Use until December 31, 2030, unless the land is redesignated to another land use category by vote of the people, or redesignated by the City Council for the City of San Buenaventura pursuant to the procedures set forth in this initiative.

H. This initiative allows the City Council to redesignate agriculture lands only if certain findings can be made, including (among other things) that the land is proven to be unsuitable for any form of agriculture and redesignation is necessary to avoid an unconstitutional taking of property without just compensation.

Section 2. General Plan Amendment.

The Agricultural Lands Preservation Initiative hereby reaffirms and readopts until December 31, 2030, The “Agricultural Use” designations as defined in the City of San Buenaventura Comprehensive Plan adopted August 28, 1989, as amended through February 1, 1995, at pages III-25 and III-26, with the modification that the “target date” is extended from 2010 until after December 31, 2030.

The following terminology shall replace the current “Agricultural Use” designation defined at page III-25 of The Plan:

Agricultural Use

The Agricultural Use (not to be reconsidered until after the Year 2030) category identifies those lands that are designated for agricultural use on the Land Use Plan Map.

The target date of 2030 associated with the Agricultural Use designation indicates a review date after which agriculturally designated lands may be reconsidered for urban uses. However, during the life of this plan as amended by initiative, it is intended that only agricultural uses are permitted on these lands, except as such lands may be appropriate to public open space and recreational usage. Furthermore, any updates to this Plan are not intended to imply that development would necessarily be appropriate at that time.

In addition, the initiative hereby reaffirms and readopts until December 31, 2030, the “Agricultural” designations set forth on the of the City of Ventura Comprehensive Plan “Land Use Plan Map” adopted by the City Council on August 28, 1989, as amended through February 1, 1995, which map is incorporated herein by reference, modified, as appropriate, to delete the reference year 2010 and replace it with the reference year 2030.

Finally, the text of the Amendment Procedures of the City of Ventura Comprehensive Plan adopted August 28, 1989, as amended through February 1, 1995, (at XI-I) shall be amended to add a new subsection which provides:

Limitation on General Plan Amendments Relating to “Agricultural Use”

- a) Until December 31, 2030, the provisions and designations governing the intent for lands designated “Agricultural Use” of the Land Use Element and Resource Element adopted on August 28, 1989, as amended through February 1, 1995, shall not be amended unless such amendment is approved by vote of the people.
- b) All those lands designated as “Agricultural Use” in the City of Ventura Comprehensive Plan “Land Use Plan Map” adopted by the City Council on August 28, 1989 as amended through February 1, 1995, shall remain so designated until December 31, 2030 unless redesignated to another general plan land use category by vote of the people, or redesignated by the City Council pursuant to the procedures set forth in subsections c) or d), below.
- c) Except as provided in subsection d), below, land designated as “Agricultural Use” may be redesignated by the City Council to a land use other than “Agricultural Use” as defined by the Comprehensive Plan adopted by the City Council on August 28, 1989, as amended through February 1, 1995, only if the City Council makes all of the following findings supported by the evidence:
 - i) The land is immediately adjacent to areas developed in a manner comparable to the proposed use;
 - ii) Adequate public services and facilities are available and have the capacity and capability to accommodate the proposed use;
 - iii) The proposed use is compatible with agricultural uses, does not interfere with accepted agricultural practices, and does not adversely affect the stability of land use patterns in the area;
 - iv) The land proposed for redesignation has not been used for agricultural purposes in the past 2 years and is unusable for agriculture due to its topography, drainage, flooding, adverse soil conditions or other physical reasons; and

- v) The land proposed for redesignation pursuant to this subsection (c) does not exceed 40 acres for any one landowner in any calendar year, and one landowner may not obtain redesignation in the Comprehensive Plan of “Agricultural Use” land pursuant to this subsection (c) more often than every other year. Landowners with any unity of interest are considered one landowner for purposes of this limitation.
- d) Land designated as “Agricultural Use” on the Land Use Plan Map may be redesignated to another land use category by the City Council if each of the following conditions are satisfied:
 - i) The City Council makes a finding that the application of the provisions of Section 2 (a) would constitute an unconstitutional taking of the landowners’ property; and
 - ii) In permitting the redesignation, the City Council allows additional land uses only to the extent necessary to avoid said unconstitutional taking of the landowner’s property.
- e) Approval by a vote of the people is accomplished when a Comprehensive Plan amendment is placed on the ballot through any procedure provided for in the Election Code, and a majority of the voters vote in favor of it. Whenever the City Council adopts an amendment requiring approval by a vote of the people pursuant to the provisions of this subsection, the City Council’s action shall have no effect until after such a vote is held and a majority of the voters vote in favor of it. The City Council shall follow the provisions of the Election Code in all matters pertaining to such an election.

Section 3. Implementation.

A. Upon the effective date of this initiative, the initiative shall be deemed inserted in the City of Ventura’s Comprehensive Plan as an amendment thereof; except, that if the four amendments of the mandatory elements of the general plan permitted by state law for any given calendar year have already been utilized in 1995, prior to the effective date of this initiative, this Comprehensive Plan amendment shall be deemed inserted in the City’s General Plan on January 1, 1996. At such time as this Comprehensive Plan amendment is deemed inserted in the City’s Comprehensive Plan (hereinafter, the “insertion date”) any provisions of the City’s Zoning Ordinance inconsistent with that amendment shall not be enforced to the extent of the inconsistency. Within 180 days of the insertion date, the City shall complete

such revisions of its Comprehensive Plan, including, but not limited to, the Comprehensive Plan Land Use Plan Map adopted by the City Council on August 28, 1989, (as amended through February 1, 1995) and accompanying test, as are necessary to achieve consistency with all provisions of this initiative. Also, within 180 days of the insertion date, the City Council shall complete such revisions of its Zoning Ordinance and other land use regulations as are necessary to conform to and be consistent with all provisions of this initiative.

B. The provisions of this initiative shall prevail over any revisions to the City of Ventura's Comprehensive Plan as amended through February 1, 1995, or to the City of Ventura's Land Use Plan Map as amended through February 1, 1995 which conflict with the initiative. Except as provided in Section 4 below, upon the specific plans, tentative or final subdivision maps, parcel maps, conditional use permits, building permits or other ministerial or discretionary entitlements for use not yet approved or issued shall not be approved or issued unless consistent with the policies and provisions of this initiative.

Section 4. Exemptions for Certain Projects.

This initiative shall not apply to or affect any property owner whose property has acquired any of the following prior to its effective date:

- A. A vested right pursuant to state law;
- B. A validly approved and fully executed development agreement with the City; or
- C. Approval of a vesting tentative map.

Section 5. Severability.

If any portion of this initiative is declared invalid by a court, the remaining portions are to be considered valid.

Section 6. Amendment or Repeal.

This initiative may be amended or repealed only by the voters at a general election.

STATE OF CALIFORNIA)
COUNTY OF VENTURA) ss
CITY OF SAN BUENAVENTURA)

I, BARBARA J. KAM, City Clerk of the City of San Buenaventura, California, do hereby certify that the foregoing Ordinance was adopted by the voters of the City of San Buenaventura at the General Municipal Election held on November 7, 1995 and subsequently declared adopted by the City Council of the City of San Buenaventura on November 27, 1995. The Ordinance shall take effect December 7, 1995. This ordinance shall not be repealed or amended except by a vote of the people, unless provision is otherwise made in the original ordinance.

Dated this 30th day of November, 1995.

Barbara J. Kam, CMC
City Clerk

Ventura Hillside Voter Participation Measure

The people of the City of San Buenaventura do ordain as follows:

Section 1. Title

This measure shall be known as the Ventura Hillside Voter Participation Measure.

Section 2. Purpose

The overall purpose of this measure is to allow City voters to participate in the review process relating to non-exempt development projects that may be proposed in a certain portion of the “Hillside Area” of the City as defined in the City’s Comprehensive Plan Update to the Year 2010 (hereafter the “Comprehensive Plan”). The portion of the Hillside Area under consideration lies generally north of the City, constitutes an area approximately 9108 acres in size, and is further depicted as the “Hillside Voter Participation Area” indicated in Exhibit “A” attached hereto and made a part hereof. The proposed Hillside Voter Participation Area (also referred to from time to time hereafter as “HVP Area” or “HVPA”) is outside the Ventura City limits, but it is within the “Planning Area” of the City of San Buenaventura as further indicated on Exhibit “A.” The Comprehensive Plan Land Use Map currently designates the properties within the proposed Hillside Voter Participation Area as “Hillside Planned Residential” or “HPR” rather than “Agricultural” and, therefore, these properties are not subject to the Save Our Agricultural Resources (“SOAR”) Initiative adopted by the voters in 1995.

In the recent past, some property owners within the proposed Hillside Voter Participation Area have publicly presented initial proposals to develop those properties with a combination of residential uses and open space and recreational areas proposed to include, among other things, hiking and equestrian trails for use by the public. In the course of public meetings and informational workshops discussing these proposals, it has become apparent that there is a high level of public concern over potential issues of scenic resource protection, open space and recreational opportunities, infrastructure needs, traffic circulation, and other development-related issues arising from any proposed changes in the use of this important part of the City’s Planning Area. This measure, in recognition of this heightened public concern, is intended to provide the electorate of the City of San Buenaventura with an opportunity to vote on the approval of any such development proposals or any similar proposals to extend urban services to the Hillside Voter Participation Area or develop property in the Hillside Voter Participation Area with urbanized land uses.

More particularly, this measure proposes to amend the Comprehensive Plan of the City of San Buenaventura by adding a requirement that approvals for extensions of “urban services” (defined in the City’s Hillside Management Program as the provision of domestic water and sewers) or any proposed “urbanized uses of land” (as defined herein) in the Hillside Voter Participation Area cannot be granted without prior approval by a majority vote of the electorate.

Section 3. Comprehensive Plan Amendment

The following text shall be inserted into the Land Use Element of the Comprehensive Plan at page 111-8 thereof:

Hillside Voter Participation Area

The electorate of the City of Ventura has adopted a Hillside Voter Participation Area (Ventura HVP Area). Its purpose, principles, implementation procedures, and methodologies for amendment are set forth in this Comprehensive Plan amendment.

A. PURPOSE

The City of Ventura Hillside Area, with its unique topography, viewsheds, watershed lands; its unique microclimate and hydrology, and its diversity of plant and wildlife resources, is one of the finest scenic resources in the Southern California region. The Comprehensive Plan recognizes the unique and important qualities and potential of the Hillside Area in, among other provisions, the declaration of specialized Objectives and Policies for the Hillside Area in the Resources Element of the Plan and the Plan’s requirements for continuing operation of, and compliance with, the City’s Hillside Management Program.

This Comprehensive Plan amendment is intended to provide for an increased level of public awareness and participation in the development review process applicable to that portion of the Hillside Area described and depicted in Exhibit “A” as the “Hillside Voter Participation Area.” It is further intended to provide assurance to the public that any proposed development in the Hillside Voter Participation Area appropriately takes into account the Area’s unique combination of viewshed, watershed, open space, scenic area, and environmentally sensitive habitat, and that agricultural, viewshed, watershed, and open space lands in the Hillside Voter Participation Area are not converted to urban or other non-open space uses without public discussion and a vote of the people. Increasing citizen participation in the development review process through the establishment of a Hillside Voter Participation Area enhances the City’s sense of community, allows for development unique to the City of Ventura, and promotes the efficient use of the City’s infrastructure.

More specifically, this Comprehensive Plan amendment is intended to provide an opportunity for the public to be involved in insuring that any development projects proposed in the Hillside Voter Participation Area, shall, at a minimum:

1. Maintain the scenic character of the hillsides in areas of future development, by preserving significant natural landmarks and scenic ridgelines and slopes.
2. Provide increased recreational opportunities for existing and future hillside and other City residents, by improving access to existing parks and establishing additional parks or open, non-developed areas in conjunction with future hillside development.
3. Maximize public access to hillside open space and recreation areas, by establishing a system of linear parks and hiking trails along scenic ridges and barrancas.
4. Minimize the impact of hillside development on sensitive natural habitats and historical or archaeological resources.

B. PRINCIPLES

Inappropriate urban encroachment into Hillside open space, viewshed, watershed, scenic areas, and biological resource areas would have the potential to impact sensitive environmental areas, unwarrantedly intrude on open space, diminish the quality of life and threaten the public health, safety and welfare by leading to increased traffic congestion, associated air pollution, erosion, alteration of sensitive lands in watershed areas and causing potentially serious water problems, such as pollution, depletion and sedimentation of available water resources not only for the City of Ventura, but for its jurisdictional neighbors. Inappropriate urban encroachment could further result in the unwarranted extension of public services and facilities into sensitive areas.

The unique character of the City of Ventura and quality of life of City residents depends on the appropriate protection of the Hillside Area's substantial amount of open space, viewshed, watershed, scenic resources, and biological resources. The increased public awareness and involvement in the fate of such lands through the implementation of this Comprehensive Plan amendment will provide the public a special opportunity to assure that future generations of Ventura citizens will not be deprived of the benefits of access to a viable water supply, flood and erosion control, protection of viewsheds, wildlife, environmentally sensitive areas, open space and recreational areas, and irreplaceable natural resources.

C. IMPLEMENTATION

(1) There is hereby established a Ventura Hillside Voter Participation Area (Ventura HVP Area). The Ventura HVP Area is that portion of the Hillside Area delineated and depicted in Exhibit “A” of this Comprehensive Plan amendment (hereafter, the “HVP Area Map”). As shown on the HVP Area Map, the southern boundary of the HVP Area generally follows the northern segment of the City’s incorporated limit as established by the Local Agency Formation Commission for the City of Ventura, except as the HVP boundary line runs northerly of some small residential lots on or near Foothill Road west of Arroyo Verde Park as further depicted on Exhibit “A.” East of Harmon Barranca, the HVP Area boundary generally follows the alignment of Foothill Road eastward to the boundary of the City’s Planning Area. The northerly boundary of the HVP Area continues, generally, as the northern boundary of the City’s Planning Area. The westerly boundary of the HVP Area alternately follows the City limit boundary or Sphere of Influence boundary easterly of the North Avenue area. The foregoing narrative description is intended to be general in nature and all of the foregoing is more particularly depicted and described in Exhibit “A’

Insofar as the HVP Area boundary described and depicted in this Comprehensive Plan amendment, including Exhibit “A” hereto, is said or shown to be coterminous with either the City’s incorporated limit or the City’s Sphere of Influence boundary, or with the boundary of the City’s Planning Area, such references are intended to be, and shall be construed to be, the location of the City limit boundary or Sphere of Influence boundary or boundary of the City’s Planning Area. as applicable, as each of those boundaries are established for the City of Ventura as of January 1, 2001. Although the HVP Area boundary is established, in part, in generally the same location as the City limit boundary, or in some instances, the Sphere of Influence boundary, the establishment of the HVP Area boundary is not intended to and shall in no way inhibit the Local Agency Formation Commission from changing or altering the City limit boundary or Sphere of Influence boundary in accordance with State law. The boundary of the HVP Area, although incidentally coterminous as of one point in time with the City limit boundary or Sphere of Influence boundary or boundary of the City’s Planning Area, is independent from these boundaries in legal significance and purpose. While the City limit boundary or Sphere of Influence boundary may be, from time to time, altered by the Local Agency Formation Commission, or the boundary of the City’s Planning Area may be changed, the HVP Area boundary shall not be changed except as provided herein.

(2) Until December 31, 2030, the City of Ventura shall not extend urban services into, and shall not authorize urbanized uses of land within, the Ventura Hillside Voter Participation Area unless otherwise authorized by a vote of the people, except for the purpose of construction of public potable water facilities, public parks or other city government facilities or as otherwise provided or excepted herein. Upon the effective date of this Hillside Voter Participation Area Comprehensive

Plan amendment, the City and its departments, boards, commissions, officers and employees shall not grant, or by inaction allow to be approved by operation of law, any Comprehensive Plan amendment, rezoning, specific plan, subdivision map, conditional use permit, building permit or any other ministerial or discretionary entitlement, which is inconsistent with the purposes of this Comprehensive Plan amendment, unless in accordance with the amendment procedures of Section 4 of this Comprehensive Plan amendment.

(3) “Urbanized uses of land” shall mean any development that would require the establishment of new community sewer systems or the significant expansion of existing community sewer systems; or, would result in the creation of residential densities greater than one primary residential unit per 40 acres in area; or, would result in the establishment of commercial or industrial uses that are neither agriculturally-related nor related to the production of mineral resources.

(4) The Land Use Map is amended to reflect the existence of the Ventura Hillside Voter Participation Area as generally described in paragraph (1) above and as depicted in Exhibit “A,” attached hereto.

(5) The Hillside Voter Participation Area, as defined herein, may not be amended, altered, revoked or otherwise changed prior to December 31, 2030, except by vote of the people or by the City Council pursuant to the procedures set forth in Section 4 of this Comprehensive Plan amendment. For purposes of this Ordinance, approval by a vote of the people is accomplished when a Comprehensive Plan amendment is placed on the ballot through any procedure provided for in the Election Code, and a majority of the voters vote in favor of it. Whenever the City Council adopts an amendment requiring approval by a vote of the people pursuant to the provisions of this subsection, the City Council’s action shall have no effect until after such a vote is held and a majority of the voters vote in favor of it. The City Council shall follow the provisions of the Election Code in all matters pertaining to such an election.

Section 4. Changes to Area: Procedures.

Until December 31, 2030, the foregoing Purposes, Principles and Implementation provisions of this Comprehensive Plan amendment, and the Hillside Voter Participation Area may be amended only by a vote of the people commenced pursuant to the initiative process by the public, or pursuant to the procedures set forth below:

A. The City Council may amend the boundary of the Hillside Voter Participation Area depicted on Exhibit “A” if it finds such amendment to be in the public interest, provided that the amended boundary enlarges said Hillside Voter Participation Area established by this Comprehensive Plan amendment.

B. The City Council, following at least one public hearing for presentation by an applicant and the public, and after compliance with the California Environmental Quality Act, may amend the Hillside Voter Participation Area described herein, based on substantial evidence in the record, if the City Council makes each of the following findings:

- (1) Application of the provisions of subsections (A) or (B) of the amendment procedures set forth in this Section 4 are unworkable and failure to amend the Hillside Voter Participation Area would constitute an unconstitutional taking of a landowner's property for which compensation would be required or would deprive the landowner of a vested right; and
- (2) The amendment and associated land use designations will allow additional land uses only to the minimum extent necessary to avoid said unconstitutional taking of the landowner's property or to give effect to the vested right.

C. The City Council, following at least one public hearing for presentations by an applicant and the public, and after compliance with the California Environmental Quality Act, may place any amendment to the Hillside Voter Participation Area or the provisions of this Comprehensive Plan amendment on the ballot pursuant to the mechanisms provided by state law.

D. The Comprehensive Plan may be reorganized and individual provisions, including the provisions of this ordinance, maybe renumbered or reordered in the course of ongoing updates of the Comprehensive Plan in accordance with the requirements of state law.

Section 5. No Changes to Save Our Agricultural Resources Initiative

Any restrictions imposed upon the City of San Buenaventura limiting the City's ability to redesignate, or allow development of, property designated "Agricultural" that are in effect as a result of the "SOAR" initiative approved by the voters in 1995 and adopted by the City Council as Ordinance No. 95-33 shall remain in full force and effect and shall not be amended, modified, altered, or abridged by the adoption of this ordinance.

Section 6. Exemptions:

The provisions of this ordinance do not apply to:

A. Construction or reconstruction of, or related to, public potable water facilities, public parks or other city government facilities; or

B. Construction or reconstruction of no more than one residential dwelling unit, and incidental uses or structures related thereto, on an individual parcel of land that is lawfully established of record as of the effective date of this Comprehensive Plan amendment and that is contiguous to the City's incorporation boundary but only to the extent that such a legally established parcel is developed with, or proposed to be developed with, no more than one residential dwelling unit; or

C. Any development that would result in the creation of residential densities equal to or less than one primary residential unit per 40 acres in area; or, would result in the establishment of commercial or industrial uses that are agriculturally-related or related to the production of mineral resources; or

D. Any development project that has obtained, as of the effective date of this Comprehensive Plan amendment, a vested right pursuant to state or local law; or

E. Uses that are "incidental" (as the City's Zoning Ordinance defines "incidental uses") to uses lawfully established as of the effective date of this Comprehensive Plan amendment.

Section 7. Interpretation

This ordinance shall be broadly construed in order to achieve the purposes stated in this ordinance. It is the intent of the voters that the provisions of this measure shall be interpreted by the City and others in a manner that promotes public participation in decision-making relating to future development proposals within in the Hillside Voter Participation Area.

Section 8. Insertion Date

A. Upon the effective date of this ordinance, Sections 3, 4, 5, 6, and 7 of this ordinance shall be deemed inserted in the Comprehensive Plan and the Land Use Map referred to in Part C of Section 3 shall be deemed amended even though the reprinting may not occur until it can be carried out by the staff of the City of San Buenaventura.

B. The Comprehensive Plan in effect at the time the City Council decided to place this measure on the ballot, and the Comprehensive Plan as amended by this ordinance, comprise an integrated, internally consistent and compatible statement of policies for the City of San Buenaventura. In order to ensure that the Comprehensive Plan remains an integrated, internally consistent and compatible statement of policies and to ensure that the actions of the voters in enacting this ordinance are given effect, any provision of the Comprehensive Plan that is adopted between July 23, 2001 and the effective date of this ordinance, to the extent that such provision is inconsistent with this ordinance, shall be amended as soon as possible and in the manner and time required by state law to ensure consistency between such provision and Section 3 of this ordinance. In the alternative, such interim-enacted inconsistent provisions shall be repealed.

Section 9. Amendment or Repeal

This ordinance may be amended or repealed only by the voters of the City of San Buenaventura at an election held in accordance with state law, except as expressly provided by Section 4 herein.

The people of the City of San Buenaventura do ordain as follows:

Section 1. Title

This measure shall be known as the Ventura Community Park SOAR Amendment.

Section 2. Purpose

The purpose of this measure is to allow the City to develop a Community Park on a parcel of property located at the northwest corner of the intersection of Kimball Road and Telephone Road. The subject property, which is approximately 100 acres in size, is further described in Exhibit "A," attached hereto and made a part hereof, and is hereafter referred to as the "Property." Most of the Property is outside the Ventura City limits but within the "Planning Area" of the City of San Buenaventura and therefore covered by the City's Comprehensive Plan Update to the Year 2010 (hereafter the "Comprehensive Plan"). The Property is currently designated "Agricultural" under the Comprehensive Plan and, therefore, also subject to the 1995 Save Our Agricultural Resources ("SOAR") Initiative.

The City is proposing to develop the Property with community-oriented public park facilities that may include, among other things, athletic fields, an aquatic facility, a community center and other related buildings and structures for use by the public. If this measure is approved, the City may also construct and operate a fire station on a portion of the Property.

This initiative proposes to amend the Comprehensive Plan of the City of San Buenaventura, by changing the designation of the Property in the Comprehensive Plan Land Use Plan Map from "Agricultural" (or "A") to "Parks" (or "P"). This will allow the City of San Buenaventura to potentially develop the Property with a Community Park without being restricted by the SOAR Initiative.

Section 3. Comprehensive Plan Amendment

Part A.

The following paragraph titled “Parks Uses” is hereby added to the Land Use Element of the Comprehensive Plan, more particularly, to the provisions of the Serra Community Intent and Rationale Statement on page III-96, to read as follows:

“Parks Uses: The Parks Land Use Plan designation is applied to an approximately 100-acre site at the northwest corner of Kimball Road and Telephone Road for the purpose of developing a multi-purpose community-oriented public park on this site. It is further intended that this site should be zoned to the “P” (Parks) zone if and when it is annexed to the City. Design Review should be carried out by the City's Planning Commission prior to the development of any Recreation Services use types on the site to assure that the range of community park uses potentially permitted on the site by the "P" zone are well integrated on the site and compatible with adjacent land uses.”

Part B.

The Property is deleted from the discussion of “Agricultural Uses” in the Serra Community provisions of the Land Use Element of the Comprehensive Plan. To that end, the final paragraph with the heading “Agricultural Use” beginning at the bottom of page III-95 and ending at the top of page III-96 is hereby revised to read as follows:

“Agricultural Use: A 297-acre area between Telephone Road and the Southern Pacific Railroad and a 172-acre area between Bristol Road and the Santa Clara River are designated Agricultural Use, not to be reconsidered until after the Year 2010, to preserve their existing agricultural character.”

Part C.

The Land Use Plan Map incorporated in the Comprehensive Plan is hereby amended, and official copies thereof shall be revised by City staff, to reflect the foregoing amendments to the text of the Land Use Element.

Section 4. Zoning

Upon annexation to the City of San Buenaventura, the zoning classification for the Property shall be “P” (Parks) and the Official Zoning District Map incorporated in the Zoning Ordinance shall, by this Measure, be amended, and official copies thereof shall be revised by City staff, to reflect the foregoing zone change to the Property.

Section 5. Save Open-Space and Agricultural Resources

Any restrictions imposed upon the City of San Buenaventura limiting the City’s ability to redesignate, or allow development of, property designated “Agricultural” that are in effect on the day that this Initiative is approved by the voters shall remain in full force and effect except as to the Property. The City of San Buenaventura may allow development of a community park on the Property in accordance with this ordinance.

Section 6. Interpretation

This ordinance shall be broadly construed in order to achieve the purposes stated in this ordinance. It is the intent of the voters that the provisions of this ordinance shall be interpreted by the City of San Buenaventura and others in a manner that facilitates the development of a community park on the Property in accordance with the purposes of this ordinance.

Section 7. Insertion Date

Part A. Upon the effective date of this ordinance, Part A and Part B of Section 3 of this ordinance shall be deemed inserted in the Comprehensive Plan and the Land Use Map referred to in Part C of Section 3 shall be deemed amended even though the reprinting may not occur until it can be carried out by the staff of the City of San Buenaventura.

Part B. The Comprehensive Plan in effect at the time the City Council decided to place this measure on the ballot, and the Comprehensive Plan as amended by this ordinance, comprise an integrated, internally consistent and compatible statement of policies for the City of San Buenaventura.

V E N T U R A C O M M U N I T Y P A R K S O A R A M E N D M E N T

In order to ensure that the Comprehensive Plan remains an integrated, internally consistent and compatible statement of policies and to ensure that the actions of the voters in enacting this ordinance are given effect, any provision of the Comprehensive Plan that is adopted between [the date the City Council decided to place this measure on the ballot] and the effective date of this ordinance, to the extent that such provision is inconsistent with this ordinance, shall be amended as soon as possible and in the manner and time required by state law to ensure consistency between such provision and Section 3 of this ordinance. In the alternative, such interim-enacted inconsistent provisions shall be repealed.

Section 8. Amendment or Repeal

Section 3 and Section 4 of this ordinance may be amended or repealed only by the voters of the City of San Buenaventura at an election held in accordance with state law.

The people of the City of San Buenaventura do ordain as follows:

Section 1. Title

This ordinance shall be known as the First Assembly of God Land Initiative.

Section 2. Purpose

The purpose of this ordinance is to allow the First Assembly of God (hereafter “Church”) to develop a property located at the northwest corner of the intersection of Montgomery Avenue and Northbank Drive. Such property is 25.59 acres and is further described in Exhibit A, attached hereto and made a part hereof, and is hereafter referred to as “Property”. The Church wishes to develop the Property in accordance with City of San Buenaventura Ordinance No 95-33 (commonly known as “SOAR”) guidelines for a sanctuary, related Church buildings, and athletic fields for use by the community of San Buenaventura.

Since the Property is within the sphere of influence of the City of San Buenaventura, this ordinance (1) amends the Comprehensive Plan Update to the Year 2010 (hereafter the “General Plan”) of the City of San Buenaventura, and (2) rezones the Property to the R-1 Single Family zone with a subzone of R-1-1AC. This will allow the City of San Buenaventura to annex the Property with a restricted land use that is compatible with the Church’s development of the Property.

Section 3. General Plan Amendment

Part A.

The second paragraph under the heading “Residential Uses” appearing on page III-94 of the General Plan describes the areas that may be used for low-density, single family homes in the Serra Community area of the City of San Buenaventura. The single family use (designated as SF in the General Plan) is the most restrictive land use that will allow the Church to build a sanctuary, related church buildings, and athletic fields. Section 4 of this initiative will further restrict the Property by pre-zoning the Property and requiring a minimum of one acre for each parcel. This will make the Property unattractive for single family development but still acceptable for the Church sanctuary, related Church buildings, and athletic fields. This ordinance adds the Church’s 25.59 acre parcel to the SF land use.

The second paragraph under the heading “Residential Uses” appearing on page III-94 of the General Plan is hereby amended to read as follows:

“The SF category is applied to an approximately 3-acre site at the southeast corner of Henderson and Petit Avenue, a 1.7-acre site southerly of Darling Road extended, and a 25.59-acre site located at the northwest corner of Montgomery Avenue and Northbank Drive.”

Part B.

The final paragraph with the heading “Agricultural Use” beginning at the bottom of page III-95 and ending at the top of page III-96 of the General Plan describes that portion of the Serra Community area of the City of San Buenaventura which may only be used for agricultural uses. This ordinance deletes the Church’s 25.59 acre parcel from the agricultural use category.

The final paragraph with the heading “Agricultural Use” beginning at the bottom of page III-95 and ending at the top of page III-96 of the General Plan is hereby amended to read as follows:

“Agricultural Use: A 100-acre site at the northwest corner of Kimball Road and Telephone, a 297-acre area between Telephone Road and the Southern Pacific Railroad except for the 25.59-acre site located at the northwest corner of Montgomery Avenue and Northbank Drive, and a 172-acre area between Bristol Road and the Santa Clara River are designated Agricultural Use, not to be reconsidered until after the Year 2010, to preserve their existing agricultural character.”

Part C.

The map of the Land Use Plan contained in the General Plan shall be redrafted to reflect the foregoing amendments.

Section 4. Zoning

The most restrictive zoning in the City of San Buenaventura which will allow the Church to build a sanctuary, related Church buildings, and athletic fields on the Property is an R-1 Single Family zone with a subzone of R-1-1AC. The R-1-1AC subzone restricts the Property by requiring a minimum of one acre for each parcel. This will make the Property unattractive for single family development but still acceptable for the Church's sanctuary, related Church buildings, and athletic fields.

Therefore, upon annexation of the Property to the City of San Buenaventura the zoning designation for the Property shall be the R-1 Single Family zone with a subzone of R-1-1AC.

Section 5. Save Open-Space and Agricultural Resources

Any restrictions imposed upon the City of San Buenaventura limiting the City's ability to annex property and allow development of such property shall remain in full force and effect except as to the 25.59-acres of the Property.

Section 6. Construction

This ordinance shall be broadly construed in order to achieve the purposes stated in this ordinance. It is the intent of the voters that the provisions of this ordinance shall be interpreted by the City of San Buenaventura and others in a manner that facilitates the development of the Property in accordance with the purposes of this ordinance.

Section 7. Insertion Date

Part A. Upon the effective date of this ordinance, Part A and Part B of Section 3 of this ordinance shall be deemed inserted in the General Plan and the Land Use Map referred to in Part C of Section 3 shall be deemed amended even though the reprinting may not occur until deemed convenient by the City of San Buenaventura.

Part B. The General Plan in effect at the time the Notice of Intention to circulate this initiative was submitted to the City Clerk of the City of San Buenaventura, and the General Plan as amended by this ordinance, comprise an integrated, internally consistent and compatible statement of policies for the City of San Buenaventura. In order to ensure that the General Plan remains an integrated, internally consistent and compatible statement of policies and to ensure that the actions of the voters in enacting this ordinance are given effect, any provision of the General Plan that is adopted between the Notice of Intention and the effective date of this ordinance, to the extent that such provision is inconsistent with this ordinance, shall be amended as soon as possible and in the manner and time required by state law to ensure consistency between such provision and Section 3 of this ordinance. In the alternative, such interim-enacted inconsistent provisions shall be repealed.

Section 8. Amendment or Repeal

Section 3 and Section 4 of this ordinance may be amended or repealed only by the voters of the City of San Buenaventura at an election held in accordance with state law.

EXHIBIT "A"

PARCEL 1:

That portion of Subdivision 98 of Rancho Santa Paula y Saticoy, in the county of Ventura, state of California, as per map recorded in book "A" pag3 290 of Miscellaneous Records (Transcribed Records from Santa Barbara County), in the office of the county recorder of said county, described as follows:

Beginning at the point of intersection of the centerline of the right of way of the Southern Pacific Railroad and the boundary line between Subdivisions 98 and 99 of said Rancho Santa Paula y Saticoy; thence from said point of beginning,

1st: - North 10° 30' West 9.482 chains, more or less, to the southeast corner of that certain Parcel of land conveyed to Charles H. Fowler, by deed dated March 18, 1892, recorded in book 36 page 86 of Deeds; thence,

2nd: - South 79° 30' West 19.25 chains, along the south line of said lands of Charles H. Fowler, to the northeast corner of that certain Parcel of land as conveyed to Emma J. Tyler, by deed dated June 20, 1894, recorded in book 43 page 90 of Deeds; thence,

3rd: - South 10° 30' East 18.982 chains, more or less, along the east line of said lands of Emma J. Tyler, to a point in the centerline of the right of way of the Southern Pacific Railroad; thence along same,

4th: - North 53° 15' East 22.57 chains, more or less, to the point of beginning.

EXCEPT a strip of parcel of land 50 feet wide lying adjoining and immediately west of the east line of the above described land, conveyed to the County of Ventura, as a public highway, by deed recorded July 12, 1889, in book 28 page 338 of Deeds.

ALSO EXCEPT that portion thereof conveyed to the Southern Pacific Railroad Company by deed recorded January 27, 1887 in book 18 page 146 of Deeds.

RESERVING unto the grantor herein, all oil, gas and mineral rights in and to said land, without however, any right of surface entry in and to a depth of 500 feet.

PARCEL 3:

That certain parcel in Lot 99 of the Rancho Santa Paula y Saticoy, marked "not a part of this subdivision" on the map of Tract No. 1333-1, in the City of San Buenaventura, county of Ventura, state of California, as per map recorded in book 30 page 51 of Maps, in the office of the county recorder of said county, and lying northwesterly of the Southern Pacific Railroad right of way, easterly of Bristol Road and southwesterly of Montgomery Avenue, as shown on said map.

RESERVING unto the grantor herein, all oil, gas and mineral rights in and to said land, without however, any right of surface entry in and to a depth of 500 feet from the surface thereof.

"The desire for community is a constant of human nature."

ventura's general plan

21ST CENTURY TOOL KIT

Prelude

The 2005 Ventura General Plan envisions a new direction to protect and preserve its citizens' quality of life. This direction is based on the recognition that zoning and land development, as practiced for the past several decades, has not served our citizens, our city, or our environment as well as it should.

Currently, the two most successful movements created to alleviate this situation are "Smart Growth" and "New Urbanism." Smart Growth is a government initiated approach against sprawl that addresses underlying policy from the top-down, and is primarily marketed by government and similar agencies. New Urbanism is a grass roots, market response to outdated zoning and land use policy as it impacts development and the physical properties of the public realm. Its chief advocates are architects and town designers.

Smart Growth grew out of early New Urbanist work, and both are concerned with the real outcomes of the built environment and how it affects communities environmentally, economically, culturally, and socially.

The Ahwahnee Principles and the Charter for the New Urbanism, listed below, were created early on as "constitutions" that governed these movements. Both are valuable tools that Ventura would be wise to include in its 21st Century Tool Kit to understand and solve long-standing problems associated with growth and change.

AHWAHNEE PRINCIPLES**Preamble:**

Existing patterns of urban and suburban development seriously impair our quality of life. The symptoms are: more congestion and air pollution resulting from our increased dependence on automobiles, the loss of precious open space, the need for costly improvements to roads and public services, the inequitable distribution of economic resources, and the loss of a sense of community. By drawing upon the best from the past and the present, we can plan communities that will more successfully serve the needs of those who live and work within them. Such planning should adhere to certain fundamental principles.

Community Principles

1. All planning should be in the form of complete and integrated communities containing housing, shops, work places, schools, parks and civic facilities essential to the daily life of the residents.

2. Community size should be designed so that housing, jobs, daily needs and other activities are within easy walking distance of each other.
3. As many activities as possible should be located within easy walking distance of transit stops.
4. A community should contain a diversity of housing types to enable citizens from a wide range of economic levels and age groups to live within its boundaries.
5. Businesses within the community should provide a range of job types for the community's residents.
6. The location and character of the community should be consistent with a larger transit network.
7. The community should have a center focus that combines commercial, civic, cultural and recreational uses.
8. The community should contain an ample supply of specialized open space in the form of squares, greens and parks whose frequent use is encouraged through placement and design.
9. Public spaces should be designed to encourage the attention and presence of people at all hours of the day and night.
10. Each community or cluster of communities should have a well-defined edge, such as agricultural greenbelts or wildlife corridors, permanently protected from development.
11. Streets, pedestrian paths and bike paths should contribute to a system of fully-connected and interesting routes to all destinations. Their design should encourage pedestrian and bicycle use by being small and spatially defined by buildings, trees and lighting; and by discouraging high speed traffic.
12. Wherever possible, the natural terrain, drainage and vegetation of the community should be preserved with superior examples contained within parks or greenbelts.
13. The community design should help conserve resources and minimize waste.
14. Communities should provide for the efficient use of water through the use of natural drainage, drought tolerant landscaping and recycling.
15. The street orientation, the placement of buildings and the use of shading should contribute to the energy efficiency of the community.

Regional Principles

1. The regional land-use planning structure should be integrated within a larger transportation network built around transit rather than freeways.
2. Regions should be bounded by and provide a continuous system of greenbelt/wildlife corridors to be determined by natural conditions.
3. Regional institutions and services (government, stadiums, museums, etc.) should be located in the urban core.
4. Materials and methods of construction should be specific to the region, exhibiting a continuity of history and culture and compatibility with the climate to encourage the development of local character and community identity.

Implementation Principles

1. The general plan should be updated to incorporate the above principles.
2. Rather than allowing developer-initiated, piecemeal development, local governments should take charge of the planning process. General plans should designate where new growth, infill or redevelopment will be allowed to occur.

3. Prior to any development, a specific plan should be prepared based on these planning principles.
4. Plans should be developed through an open process and participants in the process should be provided visual models of all planning proposals.

CONGRESS FOR THE NEW URBANISM

THE CONGRESS FOR THE NEW URBANISM views disinvestment in central cities, the spread of placeless sprawl, increasing separation by race and income, environmental deterioration, loss of agricultural lands and wilderness, and the erosion of society's built heritage as one interrelated community building challenge.

WE STAND for the restoration of existing urban centers and towns within coherent metropolitan regions, the reconfiguration of sprawling suburbs into communities of real neighborhoods and diverse districts, the conservation of natural environments, and the preservation of our built legacy.

WE RECOGNIZE that physical solutions by themselves will not solve social and economic problems, but neither can economic vitality, community stability, and environmental health be sustained without a coherent supportive physical framework.

WE ADVOCATE the restructuring of public policy and development practices to support the following principles: neighborhoods should be diverse in use and population; communities should be designed for the pedestrian and transit as well as the car; cities and towns should be shaped by physically defined and universally accessible public spaces and community institutions; urban places should be framed by architecture and landscape design that celebrate local history, climate, ecology, and building practice.

WE REPRESENT a broad-based citizenry, composed of public and private sector leaders, community activists, and multidisciplinary professionals. We are committed to reestablishing the relationship between the art of building and the making of community, through citizen-based participatory planning and design.

WE DEDICATE ourselves to reclaiming our homes, blocks, streets, parks, neighborhoods, districts, towns, cities, regions, and environment.

We assert the following principles to guide public policy, development practice, urban planning, and design:

The region: Metropolis, city, and town

1. Metropolitan regions are finite places with geographic boundaries derived from topography, watersheds, coastlines, farmlands, regional parks, and river basins. The metropolis is made of multiple centers that are cities, towns, and villages, each with its own identifiable center and edges.
2. The metropolitan region is a fundamental economic unit of the contemporary world. Governmental cooperation, public policy, physical planning, and economic strategies must reflect this new reality.
3. The metropolis has a necessary and fragile relationship to its agrarian hinterland and natural landscapes. The relationship is environmental, economic, and cultural. Farmland and nature are as important to the metropolis as the garden is to the house.
4. Development patterns should not blur or eradicate the edges of the metropolis. Infill development within existing urban areas conserves environmental resources, economic investment, and social fabric, while reclaiming marginal and abandoned areas. Metropolitan regions should develop strategies to encourage such infill development over peripheral expansion.
5. Where appropriate, new development contiguous to urban boundaries should be organized as neighborhoods and districts, and be integrated with the existing urban pattern. Noncontiguous development should be organized as towns and villages with their own urban edges, and planned for a jobs/housing balance, not as bedroom suburbs.
6. The development and redevelopment of towns and cities should respect historical patterns, precedents, and boundaries.
7. Cities and towns should bring into proximity a broad spectrum of public and private uses to support a regional economy that benefits people of all incomes. Affordable housing should be distributed throughout the region to match job opportunities and to avoid concentrations of poverty.
8. The physical organization of the region should be supported by a framework of transportation alternatives. Transit, pedestrian, and bicycle systems should maximize access and mobility throughout the region while reducing dependence upon the automobile.
9. Revenues and resources can be shared more cooperatively among the municipalities and centers within regions to avoid destructive competition for tax base and to promote rational coordination of transportation, recreation, public services, housing, and community institutions.

The neighborhood, the district, and the corridor

1. The neighborhood, the district, and the corridor are the essential elements of development and redevelopment in the metropolis. They form identifiable areas that encourage citizens to take responsibility for their maintenance and evolution.
2. Neighborhoods should be compact, pedestrian-friendly, and mixed-use. Districts generally emphasize a special single use, and should follow the principles of neighborhood design when possible. Corridors are regional connectors of neighborhoods and districts; they range from boulevards and rail lines to rivers and parkways.
3. Many activities of daily living should occur within walking distance, allowing independence to those who do not drive, especially the elderly and the young. Interconnected networks of streets should be designed to encourage walking, reduce the number and length of automobile trips, and conserve energy.
4. Within neighborhoods, a broad range of housing types and price levels can bring people of diverse ages, races, and incomes into daily interaction, strengthening the personal and civic bonds essential to an authentic community.
5. Transit corridors, when properly planned and coordinated, can help organize metropolitan structure and revitalize urban centers. In contrast, highway corridors should not displace investment from existing centers.
6. Appropriate building densities and land uses should be within walking distance of transit stops, permitting public transit to become a viable alternative to the automobile.
7. Concentrations of civic, institutional, and commercial activity should be embedded in neighborhoods, and districts, not isolated in remote, single-use complexes. Schools should be sized and located to enable children to walk or bicycle to them.
8. The economic health and harmonious evolution of neighborhoods, districts, and corridors can be improved through graphic urban design codes that serve as predictable guides for change.
9. A range of parks, from tot-lots and village greens to ball fields and community gardens, should be distributed within neighborhoods. Conservation areas and open lands should be used to define and connect different neighborhoods and districts.

The block, the street, and the building

1. A primary task of all urban architecture and landscape design is the physical definition of streets and public spaces as places of shared use.
2. Individual architectural projects should be seamlessly linked to their surroundings. This issue transcends style.
3. The revitalization of urban places depends on safety and security. The design of streets and buildings should reinforce safe environments, but not at the expense of accessibility and openness.
4. In the contemporary metropolis, development must adequately accommodate automobiles. It should do so in ways that respect the pedestrian and the form of public space.
5. Streets and squares should be safe, comfortable, and interesting to the pedestrian. Properly configured, they encourage walking and enable neighbors to know each other and protect their communities.
6. Architecture and landscape design should grow from local climate, topography, history, and building practice.
7. Civic buildings and public gathering places require important sites to reinforce community identity and the culture of democracy. They deserve distinctive form, because their role is different from that of other buildings and places that constitute the fabric of the city.
8. All buildings should provide their inhabitants with a clear sense of location, weather and time. Natural methods of heating and cooling can be more resource-efficient than mechanical systems.
9. Preservation and renewal of historic buildings, districts, and landscapes affirm the continuity and evolution of urban society.

GLOSSARY OF TERMS IN THE 2005 VENTURA GENERAL PLAN

Abbreviations

ADT: Average number of vehicle trips per day
 CEQA: California Environmental Quality Act
 CIP: Capital Improvements Program
 CNEL: Community Noise Equivalent Level
 dB: Decibel
 DOF: California Department of Finance
 EIR: Environmental Impact Report
 FAR: Floor Area Ratio
 FEMA: Federal Emergency Management Agency
 LAFCo: Local Agency Formation Commission
 Ldn: Day and Night Average Sound Level
 Leq: Sound Energy Equivalent Level
 LOS: Traffic Intersection Level of Service
 RDA: City of Ventura Redevelopment Agency
 SCAG: Southern California Association of Governments
 SOI: Sphere of Influence
 TDM: Transportation Demand Management
 TOD: Transit-Oriented Development
 VCOG: Ventura County Council of Governments

Definitions

Acre: Approximately 43,560 square feet.

Acres, Gross: The entire acreage of a site calculated to the centerline of proposed bounding streets and to the edge of the right-of-way of existing or dedicated streets.

Acres, Net: The portion of a site that can actually be built upon. The following generally are not included in the net acreage of a site: public or private road rights-of-way, public open space, and flood ways.

Action: A strategy carried out in response to adopted policy to achieve a specific goal or objective. Policies and action statements establish the “who,” “how” and “when” for carrying out the “what” and “where” of goals and objectives.

Adaptive Reuse: The conversion of obsolescent or historic buildings from their original or most recent use to a new use; for example, the conversion of former hospital or school buildings to residential use, or the conversion of a historic single-family home to office use.

Affordable Housing: Housing capable of being purchased or rented by a household with very low, low, or moderate income, based on a household’s ability to make monthly payments necessary to obtain housing. Housing is considered affordable when a household pays less than 30 percent of its gross monthly income (GMI) for housing including utilities.

Alley: A narrow service way, either public or private, which provides a permanently reserved but secondary means of public access not intended for general traffic circulation. Alleys typically are located along rear property lines.

Ambient: Surrounding on all sides; used to describe measurements of existing conditions with respect to traffic, noise, air and other environments.

Annex, v: To incorporate a land area into an existing district or municipality, with a resulting change in the boundaries of the annexing jurisdiction.

Aquifer: An underground, water-bearing layer of earth, porous rock, sand, or gravel, through which water can seep or be held in natural storage. Aquifers generally hold sufficient water to be used as a water supply.

Arterial: Medium-speed (30-40 mph), medium-capacity (10,000-35,000 average daily trips) roadway that provides intra-community travel and access to the county-wide highway system. Access to community arterials should be provided at collector roads and local streets, but direct access from parcels to existing arterials is common.

Bicycle Lane (Class II): A corridor expressly reserved for bicycles, existing on a street or roadway in addition to any lanes for use by motorized vehicles.

Bicycle Path (Class I): A paved route not on a street or roadway and expressly reserved for bicycles traversing an otherwise unpaved area. Bicycle paths may parallel roads but typically are separated from them by landscaping.

Bicycle Route (Class III): A facility shared with motorists and identified only by signs, a bicycle route has no pavement markings or lane stripes.

Buffer: An area of land separating two distinct land uses that acts to soften or mitigate the effects of one land use on the other.

Building: Any structure used or intended for supporting or sheltering any use or occupancy.

Building Type: a structure category determined by function, disposition on the lot, and configuration, including frontage and height. For example, a rowhouse is a type, not a style.

Buildout: Development of land to its full potential or theoretical capacity as permitted under current or proposed planning or zoning designations.

California Environmental Quality Act (CEQA): Law requiring State and local agencies to regulate activities with consideration for environmental protection. If a proposed activity has the potential for a significant adverse environmental impact, an Environmental Impact Report (EIR) must be prepared and certified before taking action on the proposed project.

Capital Improvements Program (CIP): A program that schedules permanent City improvements at least five years ahead to fit projected fiscal capability. The CIP is reviewed annually.

Channelization: The straightening and/or deepening of a watercourse for purposes of runoff control or ease of navigation; often includes lining banks with retaining material such as concrete.

Character: Special physical characteristics of a structure or area that set it apart from its surroundings and contribute to its individuality.

Charrette: An interactive, multi-day public process in which the community works together with planning and design professionals and City staff and officials to create and support a feasible plan for a specific area of the City that will produce positive and transformative community change.

City: When capitalized, refers to the governmental entity; “city” refers to the geographic area.

Civic: the term defining not-for-profit organizations dedicated to the arts, culture, education, recreation, government, transit, and municipal parking.

Clustered Development: Buildings placed close together with the purpose of retaining open space area.

Co-housing: A residential development with dwelling units for grouped around a common kitchen, gathering room, and child-care facilities. Co-housing developments normally are organized as condominiums.

Collector: Relatively-low-speed (25-30 mph), relatively low-volume (5,000-10,000 average daily trips) street that provides circulation within and between neighborhoods. Collectors usually serve short trips and are intended for collecting trips from local streets and distributing them to the arterial network.

Commerce; Commercial: The buying and selling of commodities and services.

Community Noise Equivalent Level (CNEL): A 24-hour energy equivalent level derived from a variety of single-noise events, with weighting factors of 5 and 10 dBA applied to the evening (7 PM to 10 PM) and nighttime (10 PM to 7 AM) periods, respectively, to allow for the greater sensitivity to noise during these hours.

Community Park: Land with full public access intended to provide recreation opportunities beyond those supplied by neighborhood parks. Community parks are larger in scale than neighborhood parks but smaller than regional parks.

Corridor: Linear features that may form boundaries, as well as connections, between neighborhoods. Corridors frequently encompass major access routes, especially ones with commercial destinations. Corridors also can incorporate parks or natural features such as streams or canyons.

dB: Decibel; a unit used to express the relative intensity of a sound as it is heard by the human ear.

dBA: The "A-weighted" scale for measuring sound in decibels; weighs or reduces the effects of low and high frequencies in order to simulate human hearing. Every increase of 10 dBA doubles the perceived loudness though the noise is actually ten times more intense.

Dedication: The turning over by an owner or developer of private land for public use, and the acceptance of land for such use by the governmental agency having jurisdiction over the public function for which it will be used. Dedications for roads, parks, school sites, or other public uses often are made conditions for approval of a development by a city or county.

Density, Residential: The number of permanent residential dwelling units per gross acres of land.

Density Bonus: The allocation of development rights that allow a parcel to accommodate additional square footage or additional residential units beyond the maximum for which the parcel is zoned, usually in exchange for the provision or preservation of an amenity at the same site or at another location. Under California law, a housing development that provides 20 percent of its units for lower income households, or 10 percent of its units for very low-income households, or 50 percent of its units for seniors, is entitled to a density bonus.

Design Review: The comprehensive evaluation of a development and its impact on neighboring properties and the community as a whole, from the standpoint of site and landscape design, architecture, materials, colors, lighting, and signs, in accordance with a set of adopted criteria and standards.

Detention Basin: A structure constructed to retard flood runoff and minimize the effect of sudden floods. Water is temporarily stored and released through an outlet structure at a rate that will not exceed the carrying capacity of the channel downstream. Basins often are planted with grass and used for open space or recreation in periods of dry weather.

Developer: An individual or business that prepares raw land for the construction of buildings or causes to be built physical space for use primarily by others, and in which the preparation of the land or the creation of the building space is in itself a business and is not incidental to another business or activity.

Development: The physical extension and/or construction of urban land uses, including: subdivision of land; construction or alteration of structures, roads, utilities, and other facilities; installation of septic systems; grading; deposit of refuse, debris, or fill materials; and clearing of natural vegetative cover (with the exception of agricultural activities). Routine repair and maintenance activities are exempted.

Development Fee: (See "Impact Fee.")

District: An area of the city that has a unique character identifiable as different from surrounding areas because of distinctive architecture, streets, geographic features, culture, landmarks, activities, and/or land uses. A neighborhood or parts of neighborhoods can form a district. Districts consist of streets or areas emphasizing specific types of activities. A corridor may also be a district, as when a major shopping avenue runs between adjoining neighborhoods.

Dwelling Unit: A room or group of rooms (including sleeping, eating, cooking, and sanitation facilities, but not more than one kitchen), which constitutes an independent housekeeping unit, occupied or intended for occupancy by one household on a long-term basis.

Encourage, v: To stimulate or foster a particular condition through direct or indirect action by the private sector or government agencies.

Enhance, v: To improve existing conditions by increasing the quantity or quality of beneficial uses or features.

Environment: The existing physical conditions in an area that will be affected by a proposed project, including land, air, water, mineral, flora, fauna, noise, and objects of historic or aesthetic significance.

Environmental Impact Report (EIR): A report required by CEQA that assesses all the environmental characteristics of an area and determines what effects or impacts will result if the area is altered or disturbed by a proposed action.

Fault: A fracture in the earth's crust forming a boundary between rock masses that have shifted.

Flood, 100-Year: The magnitude of a flood expected to occur on the average every 100 years, based on historical data. The 100-year flood has a one percent chance of occurring in any given year.

Floodplain: The relatively level land area on either side of the banks of a stream regularly subject to flooding. That part of the flood plain subject to a one percent chance of flooding in any given year is designated as an "area of special flood hazard" by the Federal Insurance Administration.

Floodway: The channel of a river or other watercourse and the adjacent land areas that must be reserved in order to discharge the "base flood" without cumulatively increasing the water surface elevation more than one foot. No development is allowed in floodways.

General Plan: A compendium of city or county policies regarding its long-term development, in the form of maps and accompanying text. The General Plan is a legal document required by the State of California Government Code Section 65301 and adopted by the City Council.

Gateway: A point along the edge of a city at which a person gains a sense of having left the environs and entered the city.

Goal: A general, overall, and ultimate purpose, aim, or end toward which the City will direct effort.

Green: A whole-building and systems approach to siting, design, construction, and operation that employs techniques that minimize environmental impacts and reduce the energy consumption of buildings while contributing to the health and productivity of occupants.

Hazardous Material: Any substance that, because of its quantity, concentration, or physical or chemical characteristics, poses a significant present or potential hazard to human health and safety or to the environment if released into the workplace or the environment. The term includes, but is not limited to, hazardous substances and hazardous wastes.

Hillside Area: All that area north of Foothill and Poli Street, and east of Cedar Street and within City limits. This area is subject to the Hillside Management Program.

Hillside Open Space: One of the 19 distinct communities within the City’s Planning Area; coterminous with the Hillside Voter Participation Area; generally referred to as “hillsides”.

Hillside Voter Participation Area or HVPA: The area subject to the “Hillside Voter Participation Act” (also known as Measure “P”) as set forth in Appendix X and coterminous with the “Hillside Open Space” area depicted on the Land Use Diagram.

Hillsides: Synonymous and coterminous with HVPA and “Hillside Open Space”.

Historic: Noteworthy for significance in local, state, or national history or culture, architecture or design, or housing works of art, memorabilia, or artifacts.

Household: Persons who occupy a housing unit.

Housing Element: A separately published State-mandated general plan element that assesses existing and projected housing needs of all economic segments of the community, identifies potential sites adequate to provide the amount and kind of housing needed, and contains adopted goals, policies, and implementation programs for the preservation, improvement, and development of housing. The Housing Elements is updated every five years.

Housing Unit: A rooms or a rooms intended for occupancy, separate from any other living space, with direct access from outside or through a common area.

Impact: The direct or indirect effect of human action on existing physical, social, or economic conditions.

Impact or Development Fee: A fee levied on the developer of a project as compensation for otherwise-unmitigated impacts the project will produce, not to exceed the estimated reasonable cost of providing the service for which the fee is charged.

Industry/Industrial: The manufacture, production, and processing of consumer goods. Industrial is often divided into "heavy industrial" uses, such as construction yards, quarrying, and factories; and "light industrial" uses, such as research and development and less intensive warehousing and manufacturing.

Infill: Development of vacant and/or underutilized land within areas already largely developed with urban uses.

Infrastructure: Public services and facilities, such as sewage-disposal systems, water-supply systems, and other utilities.

In-lieu Fee: Payment that substitutes for required dedication of land or provision of structures or amenities.

Institutional: Uses such as hospitals, museums, schools, places of worship, and nonprofit activities of a welfare, educational, or philanthropic nature that cannot be considered residential, commercial, or industrial activities.

Landmark: (1) A building, site, object, structure, or significant tree, having historical, architectural, social, or cultural significance and marked for preservation by the local, state, or federal government. (2) A visually prominent or outstanding structure or natural feature that functions as a point of orientation or identification.

Ldn: Day-Night Average Sound Level. The A-weighted average sound level for a given area (measured in decibels) during a 24-hour period with a 10 dB weighting applied to night-time sound levels. The Ldn is approximately numerically equal to the CNEL for most environmental settings.

Leq: The energy equivalent level, defined as the average sound level on the basis of sound energy (or sound pressure squared). The Leq is a "dosage" type measure and is the basis for the descriptors used in current standards, such as the 24-hour CNEL used by the State of California.

Lease: A contractual agreement by which an owner of real property (the lessor) gives the right of possession to another (a lessee) for a specified period of time (term) and for a specified consideration (rent).

Level of Service, Intersection (LOS): A scale that measures the amount of traffic an intersection is capable of handling. Levels range from A, representing free-flow, to F corresponding to significant stoppage.

Liquefaction: The transformation of loose water-saturated granular materials (such as sand or silt) from a solid into a liquid state, which can lead to ground failure during an earthquake.

Live-Work: A dwelling unit that contains, to a limited extent, a commercial component. A live-work unit is a fee-simple unit on its own lot with the commercial component limited to the ground level. (see Work-Live)

Local Agency Formation Commission (LAFCo): A commission in each county that reviews and evaluates proposals for formation of special districts, incorporation of cities, annexation to special districts or cities, consolidation of districts, and merger of districts with cities. LAFCo members include two county supervisors, two city council members, and one member representing the general public.

Local Coastal Program (LCP): A combination of City land use plans, zoning regulations, and zoning district maps that control land use in the Coastal Zone established under the California Coastal Act of 1976.

Local Street: Relatively low-volume, low-speed streets (not shown on the Roadway Classifications map), whose primary purpose is to provide access to fronting properties.

Lot: A legally-recognized parcel with frontage on a public or City-approved private street.

Low Income: Households with annual income 80 percent of the County median or less.

Maintain: Keep in an existing state. (See "Preserve.")

Median: The dividing area between opposing lanes of traffic.

Mitigate: Alleviate or avoid to the extent feasible.

Mixed Use: Properties on which various uses, such as office, commercial, and institutional, are combined with residences in a single building or site in an integrated development project with significant functional interrelationships and a coherent physical design. A single site may include contiguous properties.

Neighborhood: The basic building blocks of a community that together comprise the city. Each neighborhood is limited in physical area, with a defined edge and a center. The size of a neighborhood is usually based on the distance that a person can walk in five minutes from the center to the edge – a quarter-mile. Neighborhoods have a fine-grained mix of land uses, providing places to live, work, shop, and be entertained.

Neighborhood Center: The focal point of a neighborhood, commonly featuring places for work, shopping, services, entertainment, leisure, recreation, and social and civic interaction.

Neighborhood Park: A facility intended to serve the recreation needs of people living or working within a one-half mile radius of the park.

Noise: Sound that is undesirable because it interferes with speech and hearing, is intense enough to damage hearing, or is otherwise annoying.

Noise Contour: A line connecting points of equal noise level as measured on the same scale. Noise levels greater than the 60 Ldn contour (measured in dBA) require mitigation in residential development.

Office: Professional or consulting services in fields such as accounting, architecture, design, engineering, finance, law, insurance, medicine, real estate, and similar types of work.

Open Space: An area of land or water that is essentially unimproved and devoted to outdoor recreation and/or the preservation of natural resources.

Outdoor Recreation: Recreation in an urbanized outdoor setting (active recreation) or open-space outdoor setting (passive recreation).

- (a) *Active outdoor recreation* includes participant sports or other activities conducted in open or partially enclosed or screened recreational activities facilities. Typical uses include driving ranges, miniature golf courses, golf courses, amusement parks, swimming pools, and tennis courts and usually rely on permanent above-ground improvements, including, but not limited to, playing fields or courts, restrooms, and tables.
- (b) *Passive outdoor recreation* includes recreational activities, usually of an individual or small group nature, such as sunbathing, walking, hiking, bird watching, or nature study, conducted in an open-space setting and which, generally, do not rely on the use of permanent aboveground improvements or involve motorized vehicle use.

Parcel: A lot, or contiguous group of lots, in single ownership or under single control, usually considered a unit for purposes of development.

Parks: Open space lands whose primary purpose is recreation.

Parkway: The area between curb and sidewalk, usually planted with ground cover and/or trees.

Pedestrian Shed: an area defined by the average distance that may be traversed at an easy walking pace from its edge to its center. This distance is applied to determine the size of a neighborhood or extent of a community. A standard Pedestrian Shed is one quarter of a mile radius or 1,320 feet. With transit available or proposed, a long Pedestrian Shed has an average walking distance of ½-mile or 2,640 feet. Pedestrian Sheds should be conceived as oriented toward a central destination containing one or more important intersections, meeting places, civic spaces, civic buildings, and the capacity to accommodate a T5 Transect Zone in the future. Sometimes called a Walkshed.

Planning Area: The land area addressed by the General Plan, which includes the City Limits, potentially annexable land in the Sphere of Influence, and neighboring open space and agricultural areas of Ventura County that the City desires to remain in rural condition.

Policy: A statement of principle that anticipates specific actions to be undertaken to meet City goals.

Pollution: The presence of matter or energy whose nature, location, or quantity produces undesired environmental effects.

Preserve: Keep intact and safe from destruction or decay.

Protect: Maintain and preserve beneficial uses in their present condition.

Public and Quasi-public Facilities: Institutional, academic, governmental and community service uses, either publicly owned or operated by non-profit organizations.

Public Art: Signs, other monuments, sculptures, murals, statues, fountains, and other artistic installations in spaces accessible to the general public that accentuate or draw attention to a particular place or feature of the city, provide a focal point for public gathering, and/or serve a specific function, such as to provide seating.

Recreation, Active: A type of recreation that requires organized play areas, such as softball, baseball, football and soccer fields, tennis and basketball courts and various forms of children's play equipment.

Recreation, Passive: Recreation that does not require organized play areas.

Recycling: The process of extracting and reusing materials from waste products.

Redevelop: To demolish existing buildings, or increase the overall floor area existing on a property, or both, irrespective of whether a change occurs in land use.

Redevelopment Agency: The City division created under California Redevelopment Law for the purpose of planning, developing, re-planning, redesigning, clearing, reconstructing, and/or rehabilitating all or part of a specified area with residential, commercial, industrial, and/or public (including recreational) structures and facilities.

Regional: Pertaining to activities or economies at a scale greater than that of a single jurisdiction and affecting a broad geographic area.

Regional Park: A park typically 150-500 acres in size focusing on activities and natural features not included in most other types of parks and often based on a specific scenic or recreational opportunity.

Restore: Renew, rebuild, or reconstruct to a former state.

Ridesharing: Vehicle travel other than driving alone.

Ridgeline: A line connecting the highest points along a ridge and separating drainage basins or small-scale drainage systems from one another.

Right-of-way: Land intended to be occupied by transportation and public use facilities such as roadways, railroads, and utility lines.

Riparian: Areas adjacent to perennial and intermittent streams delineated by the existence of plant species normally found near fresh water.

Runoff: The portion of precipitation that does not percolate into the ground.

Seismic: Caused by or subject to earthquakes or earth vibrations.

Sidewalk: the paved layer of the public frontage dedicated exclusively to pedestrian activity.

Specific Plan: A legal tool allowed by State Government Code Section 65450 et seq. that prescribes detailed regulations, conditions, programs, and/or proposed legislation for a defined area of the city.

Sphere of Influence: The probable ultimate physical boundaries and service area of the city, as determined by LAFCo.

Streetscape: the urban element that establishes the major part of the public realm. The streetscape is composed of thoroughfares (travel lanes for vehicles and bicycles, parking lanes for cars, and sidewalks or paths for pedestrians) as well as the visible private frontages (building facades and elevations, porches, yards, fences, awnings, etc.), and the amenities of the public frontages (street trees and plantings, benches, and streetlights, etc.).

Structure: Anything constructed or erected that requires location on the ground (excluding swimming pools, fences, and walls used as fences).

Subdivision: The division of a land into defined lots or condominiums that can be separately conveyed by sale or lease.

Sustainable: Meeting the needs of the present without compromising the ability of future generations to meet their needs, and successfully balancing economic, environmental, and social equity concerns.

Tourism: The business of providing services for persons traveling for pleasure.

Transect: a system of ordering human habitats in a range from the most natural to the most urban. Based upon six Transect Zones that describe the physical character of place at any scale, according to the density and intensity of land use and urbanism.

Transit-Oriented Development (TOD): Relatively high-density development located within an easy walk of a major transit stop, generally with a mix of residential, employment, and shopping designed primarily for pedestrians.

Transit, Public: A system of regularly-scheduled buses and/or trains available to the public on a fee-per-ride basis.

Transportation Demand Management (TDM): Strategies for reducing the number of vehicle trips by increasing ridesharing, transit use, walking, and biking.

Trip: A one-way journey that proceeds from an origin to a destination via a single mode of transportation.

Truck Route: A route required for all vehicles exceeding set weight or axle limits, which follows major arterials through commercial or industrial areas and avoids sensitive areas.

Underutilized: Non-vacant properties that have not been fully developed with improvements that reach the allowed density and/or floor area.

Urban Design: The attempt to give form, in terms of both beauty and function, to selected urban areas or to whole cities. Urban design is concerned with the location, mass, and design of various urban components and combines elements of urban planning, architecture, and landscape architecture.

Use Permit: The discretionary and conditional review of an activity or function or operation on a site or in a building or facility.

Very Low Income: Households with annual income 50 percent of the County median or less.

View Corridor: The line of sight of an observer looking toward an object of significance (e.g., ridgeline, river, historic building, etc.).

Viewshed: The area within view from a defined point.

Watercourse: Presently or once naturally perennially or intermittently flowing water, including rivers, streams, barrancas, and creeks. Includes waterways that have been channelized, but not ditches or underground drainage and sewage systems.

Watershed: The total area above a given point on a watercourse that contributes water to its flow; also, the entire region drained by a watercourse.

Wetlands: Transitional areas between terrestrial and aquatic systems where the water table is usually at or near the surface, or the land is covered by shallow water. Federal agencies establish hydrology, vegetation, and soil criteria to define wetlands.

Work-Live: A dwelling unit that contains a commercial component. A Work-Live unit is a fee-simple unit on a lot with the commercial component anywhere within the unit. (see Live-Work)

Yield Street: A street whereby by two vehicles, going in opposite directions, one car will often have to pull over slightly and yield to the other vehicle, depending on how many cars are parked on the street. A standard residential street.

Zoning: The regulation of building forms and land uses throughout the city.

<i>List of Tables</i>	<i>iv</i>
<i>List of Figures</i>	<i>vi</i>
<i>List of Appendices</i>	<i>vii</i>
<i>Executive Summary</i>	<i>ES-1</i>
Section 1: Introduction	1-1
Quote: A Vision for Ventura	1-1
1.1 Background	1-2
1.2 Study Area	1-2
1.3 Purpose and Scope.....	1-4
1.4 Authorization	1-4
1.5 Acknowledgements	1-4
1.6 Planning Studies	1-5
1.7 Abbreviations and Definitions.....	1-6
Section 2: Wastewater System Design Criteria	2-1
2.1 Study Area Land Uses	2-1
2.1.1 Existing Development.....	2-1
2.1.2 Near-Term Development.....	2-2
2.1.3 General Plan Development	2-2
2.2 Wastewater Flow Factors.....	2-10
2.3 Peaking Factors	2-11
2.4 Collection System Design Criteria.....	2-13
2.4.1 Lift Station Criteria.....	2-13
2.4.2 Forcemain Criteria.....	2-14
2.4.3 Gravity Main Criteria.....	2-14
Section 3: Wastewater Flow Projections	3-1
3.1 Existing Wastewater Flow	3-1
3.2 Near-Term Wastewater Flow	3-2
3.3 General Plan Horizon Wastewater Flow	3-3
3.4 Wastewater Flow Summary	3-4
Section 4: Wastewater Treatment Facility Process Evaluation and Improvement Plan	4-1
4.1 Introduction	4-1
4.1.1 NPDES Discharge Requirements.....	4-2
4.1.2 Existing and Projected Flows and Loadings.....	4-4
4.2 VWRP Assessment and Performance Evaluation for Continued Discharge to the Estuary and Production of Recycled Water	4-6

Table of Contents (cont'd)

4.2.1	Existing Treatment Facilities.....	4-6
4.2.2	Process Capacity and Redundancy Requirements	4-7
4.2.3	Liquid Treatment Processes.....	4-8
4.2.3.1	Headworks and Influent Pumping.....	4-8
4.2.3.2	Primary Clarifiers	4-9
4.2.3.3	Aeration Basins.....	4-12
4.2.3.4	Secondary Clarifiers.....	4-14
4.2.3.5	Mixed Media Filters.....	4-17
4.2.3.6	Disinfection Facilities	4-18
4.2.3.7	Effluent Pumping and Metering.....	4-20
4.2.4	Solids Handling Processes.....	4-21
4.2.4.1	Gravity Thickener.....	4-21
4.2.4.2	Dissolved Air Flotation Thickeners (DAFT).....	4-22
4.2.4.3	Anaerobic Digesters	4-23
4.2.4.4	Recessed Plate Filter Presses (RFPF).....	4-25
4.2.5	Summary of the Capacity Limitations of the Liquid Treatment and Solids Handling Facilities	4-26
4.2.6	Process Modeling.....	4-30
4.2.6.1	Model Calibration	4-30
4.2.6.2	Model Application	4-30
4.3	Alternatives for Identified Improvements for Continued Discharge to the Estuary and Production of Reclaimed Water	4-31
4.3.1	Headworks and Influent Pumping Station	4-32
4.3.1.1	Influent Flow Measurement Capacity.....	4-32
4.3.1.2	Grit Removal Redundancy.....	4-33
4.3.2	Primary Clarifiers.....	4-34
4.3.2.1	Primary Clarifier Redundancy	4-34
4.3.2.2	Primary Effluent Pumping Capacity	4-35
4.3.3	Mixed Media Filters	4-36
4.3.3.1	Mixed Media Filter Capacity.....	4-36
4.3.4	Disinfection.....	4-38
4.3.4.1	Disinfection Limitations	4-38
4.3.5	Effluent Pumping and Metering	4-42
4.3.5.1	Effluent Pumping Capacity	4-42
4.3.5.2	Effluent Metering Capacity and Redundancy.....	4-42
4.3.6	Anaerobic Digestion	4-43
4.3.6.1	Anaerobic Digestion Capacity.....	4-43
4.3.7	Comprehensive Replacement Plan	4-45
4.3.7.1	Conventional BNR	4-45
4.3.7.2	Integrated Fixed-film Activated Sludge (IFAS).....	4-45
4.3.7.3	Membrane Bioreactor (MBR).....	4-46
4.3.7.4	Comprehensive Replacement Costs	4-47

Table of Contents (cont'd)

4.3.8	Summary of Recommended Improvements and Conceptual Capital Costs for Continued Discharge to the Estuary	4-48
4.4	Long-Range Plan for Discharge Prohibitions to the Estuary	4-48
4.4.1	Increased Production of Reclaimed Water	4-48
4.4.2	Ocean Outfall.....	4-49
4.4.2.1	Typical Outfall NPDES Permit Limitations	4-49
4.4.2.2	Conceptual Plan for Construction of an Ocean Outfall	4-50
4.4.2.3	Headworks and Influent Pumping Station.....	4-50
4.4.2.4	Primary Clarifiers	4-50
4.4.2.5	Aeration Basins.....	4-50
4.4.2.6	Secondary Clarifiers.....	4-51
4.4.2.7	Mixed Media Filters.....	4-52
4.4.2.8	Chlorine Contact Tanks	4-53
4.4.2.9	Effluent Pumping and Flow Measurement.....	4-54
4.4.2.10	Solids Handling – Gravity Thickener, Dissolved Air Floatation, Anaerobic Digesters, and Filter Presses.....	4-54
4.4.2.11	Conceptual Capital Costs for an Ocean Outfall	4-54
4.4.2.12	Impact on the Continued Production of Recycled Water	4-54
4.5	Comparative Evaluation of Recommended Alternatives	4-54

Section 5: Sewer Collection System Evaluation and Improvement

	Plan	5-1
5.1	Existing Collection System.....	5-1
5.1.1	Collection System Facility Identification	5-2
5.1.2	Existing Collection System Maintenance.....	5-2

Preface: A Vision for Ventura

“Our vision is for a prosperous and well-planned community. We seek to protect and enhance our unique “sense of place” that builds on our pride in Ventura’s history and natural setting. Our vision is for interesting, unique neighborhoods and districts, which reflect our values and heritage.”

Excerpt from the City of San Buenaventura General Plan, 2000.

Executive Summary

Building on that shared vision for a well-planned community, the City has developed this Wastewater Master Plan to identify current and future wastewater infrastructure needs for the collection and treatment of its wastewater. Recent redevelopment efforts planned or underway within in the City limits, updates to the City's general plan, questions about available conveyance capacity of several trunk sewers, and recent changes to the City's permitted effluent discharge requirements have contributed to the need for a system-wide wastewater master plan. Such a plan encompassing both collection and treatment systems has not been prepared previously. Additionally, the most recent complete collection system study was prepared for the City in 1977. By preparing this Plan, the City is proactively addressing its infrastructure needs to further support the existing community and the anticipated revitalization and redevelopment efforts.

Purpose and Scope

This Plan addresses the City's key infrastructure needs resulting from increased wastewater flows and from changing discharge regulations. Issues addressed in this Master Plan include:

- Estimating wastewater flow for existing, near-term and ultimate (build out) conditions.
- Identifying improvements to the VWRF necessary to meet increased wastewater volumes and to meet future discharge requirements.
- Examining the impacts of current and proposed regulatory requirements on the Ventura Water Reclamation Facility (VWRF).
- Identifying collection system improvements for the existing community.
- Identifying collection system improvements to support near-term and ultimate development levels within the City.

Background

The City of San Buenaventura is located in the northwest portion of Ventura County. The City was incorporated in 1866, 84 years after the Mission San Buenaventura's founding in 1782. Currently, the City's population is over 105,000.

Through the Wastewater Division of its Public Works Department, the City provides wastewater service to approximately 98 percent of City residences as well as McGrath State Beach Park and the North Coast Communities.

Flows from the City's collection system are treated at the City's Ventura Water Reclamation Facility. The reclamation facility has a capacity of 14 MGD, with provisions to be expanded to an ultimate capacity of 16.8 MGD. Average annual flows to the treatment facility total about 9.3 MGD.

Study Area

The study area for this Wastewater Master Plan consists of the City's four wastewater service areas (East, Midtown, Downtown, and Westside) and the City's Ventura Water Reclamation Facility.

Wastewater Flow Projections

Wastewater flow projections have been developed for existing, near-term, and ultimate development levels. Table ES-1 summarizes the projected average dry weather flows for the study area and also includes existing and anticipated flows from McGrath State Beach Park, the North Coast Communities, the Montalvo Municipal Improvement District, and the Saticoy Sanitary District.

**TABLE ES-1
SUMMARY OF PROJECTED AVERAGE DRY WEATHER FLOWS**

Development Condition	Study Area Flow (mgd)	Other Tributary Areas (mgd)
Existing	9.3	0.1
Near Term	11.1	0.3
Ultimate	12.6	0.4

The projected average dry weather flows, peak dry weather flows, and peak wet weather flows are summarized in Table ES-2 for the study area and tributary areas.

**TABLE ES-2
PROJECTED WASTEWATER FLOWS**

Development Condition	Average Dry Weather Flow (mgd)	Peak Dry Weather Flow (mgd)	Peak Wet Weather Flow (mgd)
Existing	9.4	17.5	22.5
Near Term	11.4	21.1	26.3
Ultimate	13.0 ^(a)	24.0	29.3

Note: (a) This flow projection is based on information from and as described in Sections and Tables: 3.1, 3.2, and 3.3. Other planning documents may calculate Ultimate Flow projections as a percentage increase of current flows at the time those analyses are performed, which may result in similar but not significantly different values.

Water Reclamation Facility Evaluation

During the preparation of this Master Plan, the City's NPDES permit was in draft form (R4-2007-XXXX). With the discharge requirements uncertain, two improvement strategies were considered: (1) improvements that may be required for continued discharge to the Estuary, and (2) improvements that may be required for discharge through an ocean outfall. This Plan addresses the implications of these two discharge alternatives on the wastewater treatment facilities.

As the Master Plan approached completion, on March 6, 2008 the California Regional Water Quality Control Board (CRWQCB) adopted NPDES Permit No. CA0053651. This new permit represents a third split-discharge alternative which limits the effluent discharge to the Estuary to 9.0 MGD, changes the point of compliance from the wildlife ponds to the Effluent Transfer Station, and requires further studies to determine the impact of the VWRf effluent discharge on the Estuary. These studies are also intended to explore alternative effluent disposal options, including the construction of treatment wetlands and recycled water use. Upon completion of these studies, the adopted permit will be reopened for potential revision.

While this Master Plan does not address the specific discharge conditions required by the new NPDES permit, the Plan presents options to reduce discharge to the Estuary and the improvements that may be required to implement these options.

Water Reclamation Facility Recommended Capital Improvements/CIP

Historical data from 1997 to 2005 were analyzed and used to project future loadings. Potential limitations were identified in the liquid stream and solids handling processes based on these influent parameters.

Unit processes were evaluated using: 1) mathematical determinations based on known engineering principles and common practice, 2) stress testing, 3) information provided by the VWRf Staff, and 4) computer simulations. While Section 4 discusses in detail the operational parameters and potential constraints of each process, the following list summarizes these potential constraints.

- **Influent Flow Measurement.** The influent Parshall flumes appear undersized for projected flows. An undersized flume could lead to inaccurate flow measurement. To resolve this potential deficiency, it is recommended that a magnetic flow meter be installed on the common discharge header, or if redundancy is desired, a separate flow meter could be installed on each individual pump discharge. If hydraulic conditions in the discharge piping are not conducive to installation of magnetic flow meters, the existing flumes could be replaced with larger 48-inch flumes.
- **Grit Removal.** The VWRf does not have a redundant aerated grit chamber. While a redundant aerated grit chamber is not required, redundancy should be considered to protect downstream mechanical equipment if the grit chamber needs to be taken offline for maintenance or repair. Considering the infrequency with which the VWRf Staff has needed to take the aerated grit chamber offline for maintenance, at this time it is recommended to verify that mechanical redundancy is provided in the existing unit and to continue to bypass infrequently. If further reliability is desired, the City should evaluate the feasibility of subdividing the existing aerated grit chamber.
- **Primary Clarification.** The two existing primary clarifiers appear to have sufficient capacity to meet future operating conditions, provided both tanks are operating. If one primary clarifier is taken out of service, the remaining primary clarifier could be overloaded. It is recommended that a third primary clarifier be installed to allow operators more flexibility during maintenance without jeopardizing performance. Given the potential cost and space required for a third primary clarifier, it is also suggested that enhanced primary treatment (EPT) be pilot tested at the VWRf to explore the feasibility of using an EPT program for redundancy in lieu of installing a third clarifier. In addition, it is also recommended that a fourth primary effluent pump be installed along with larger primary effluent/flow equalization piping.
- **Aeration Basins.** Potential limitations were identified with the aeration blowers, the biological nutrient removal (BNR) pumps, and the capacity of the aeration tanks to maintain a long enough solids retention time (SRT) to achieve full nitrification. Improvements to address these limitations are discussed in Brown and Caldwell's Technical Memorandum No. 1.

- **Secondary Clarifiers.** Potential limitations were identified with the capacity of the return activated sludge (RAS) and waste activated sludge (WAS) pumps. Improvements to address these limitations are discussed in Brown and Caldwell's Technical Memorandum No. 1.
- **Tertiary Filtration.** The six existing low-pressure mixed-media filters lack sufficient total or firm capacity to treat the projected maximum day flow of 23.8 MGD. Given the higher operations and maintenance costs associated with conventional mixed-media filtration, it is recommended that the existing mixed-media filters be replaced with a cloth media filter system to achieve better operational efficiency and sufficient firm capacity to treat projected flows.
- **Disinfection.** Disinfection to meet Title 22 requirements would likely require that the VWRP carry a total chlorine residual between 3.4 to 5.0 mg/l in the CCTs for production of recycled water. Because the VWRP scales the dosage of ammonia with chlorine dosage, to prevent the formation of disinfection byproducts that are regulated by NPDES and recycled water permits, this additional residual ammonia may persist in the contact tank effluent following dechlorination and could exceed permitted limits. For this reason, it is recommended to replace the existing chlorine system with UV disinfection for both Estuary discharge and production of recycled water. If actual NPDES permit limits allow for higher effluent ammonia concentrations than assumed, these recommendations should be re-visited to assess the feasibility of continued chloramination as the primary method of disinfection.
- **Effluent Pumping and Metering.** Based on the projected equalized maximum daily flow of 23.8 MGD, replacement of the pumps or expansion of the effluent transfer station (ETS) will be required. It is recommended to expand the existing pump station by adding a wet well and two new 9.5 MGD pumps, connect this wet well to the ETS, rehabilitate the existing pumps, and modify the existing discharge piping as necessary. In addition, it is recommended that two magnetic flow meters be installed on the discharge piping of the effluent transfer pumps. Alternatively, two Parshall flumes could be installed, when retrofitting the chlorine contact tanks for UV disinfection, if hydraulic conditions are not conducive to the installation of magnetic flowmeters at the ETS.
- **Gravity Thickener.** Potential limitations were identified with the capacity of the gravity thickener. Improvements to address these limitations are discussed in Brown and Caldwell's Solids Thickening Technical Memorandum No. 3.

The existing mixed-media filters lack capacity to treat projected maximum day flows. A cloth media filter system is recommended to replace the existing tertiary filters.

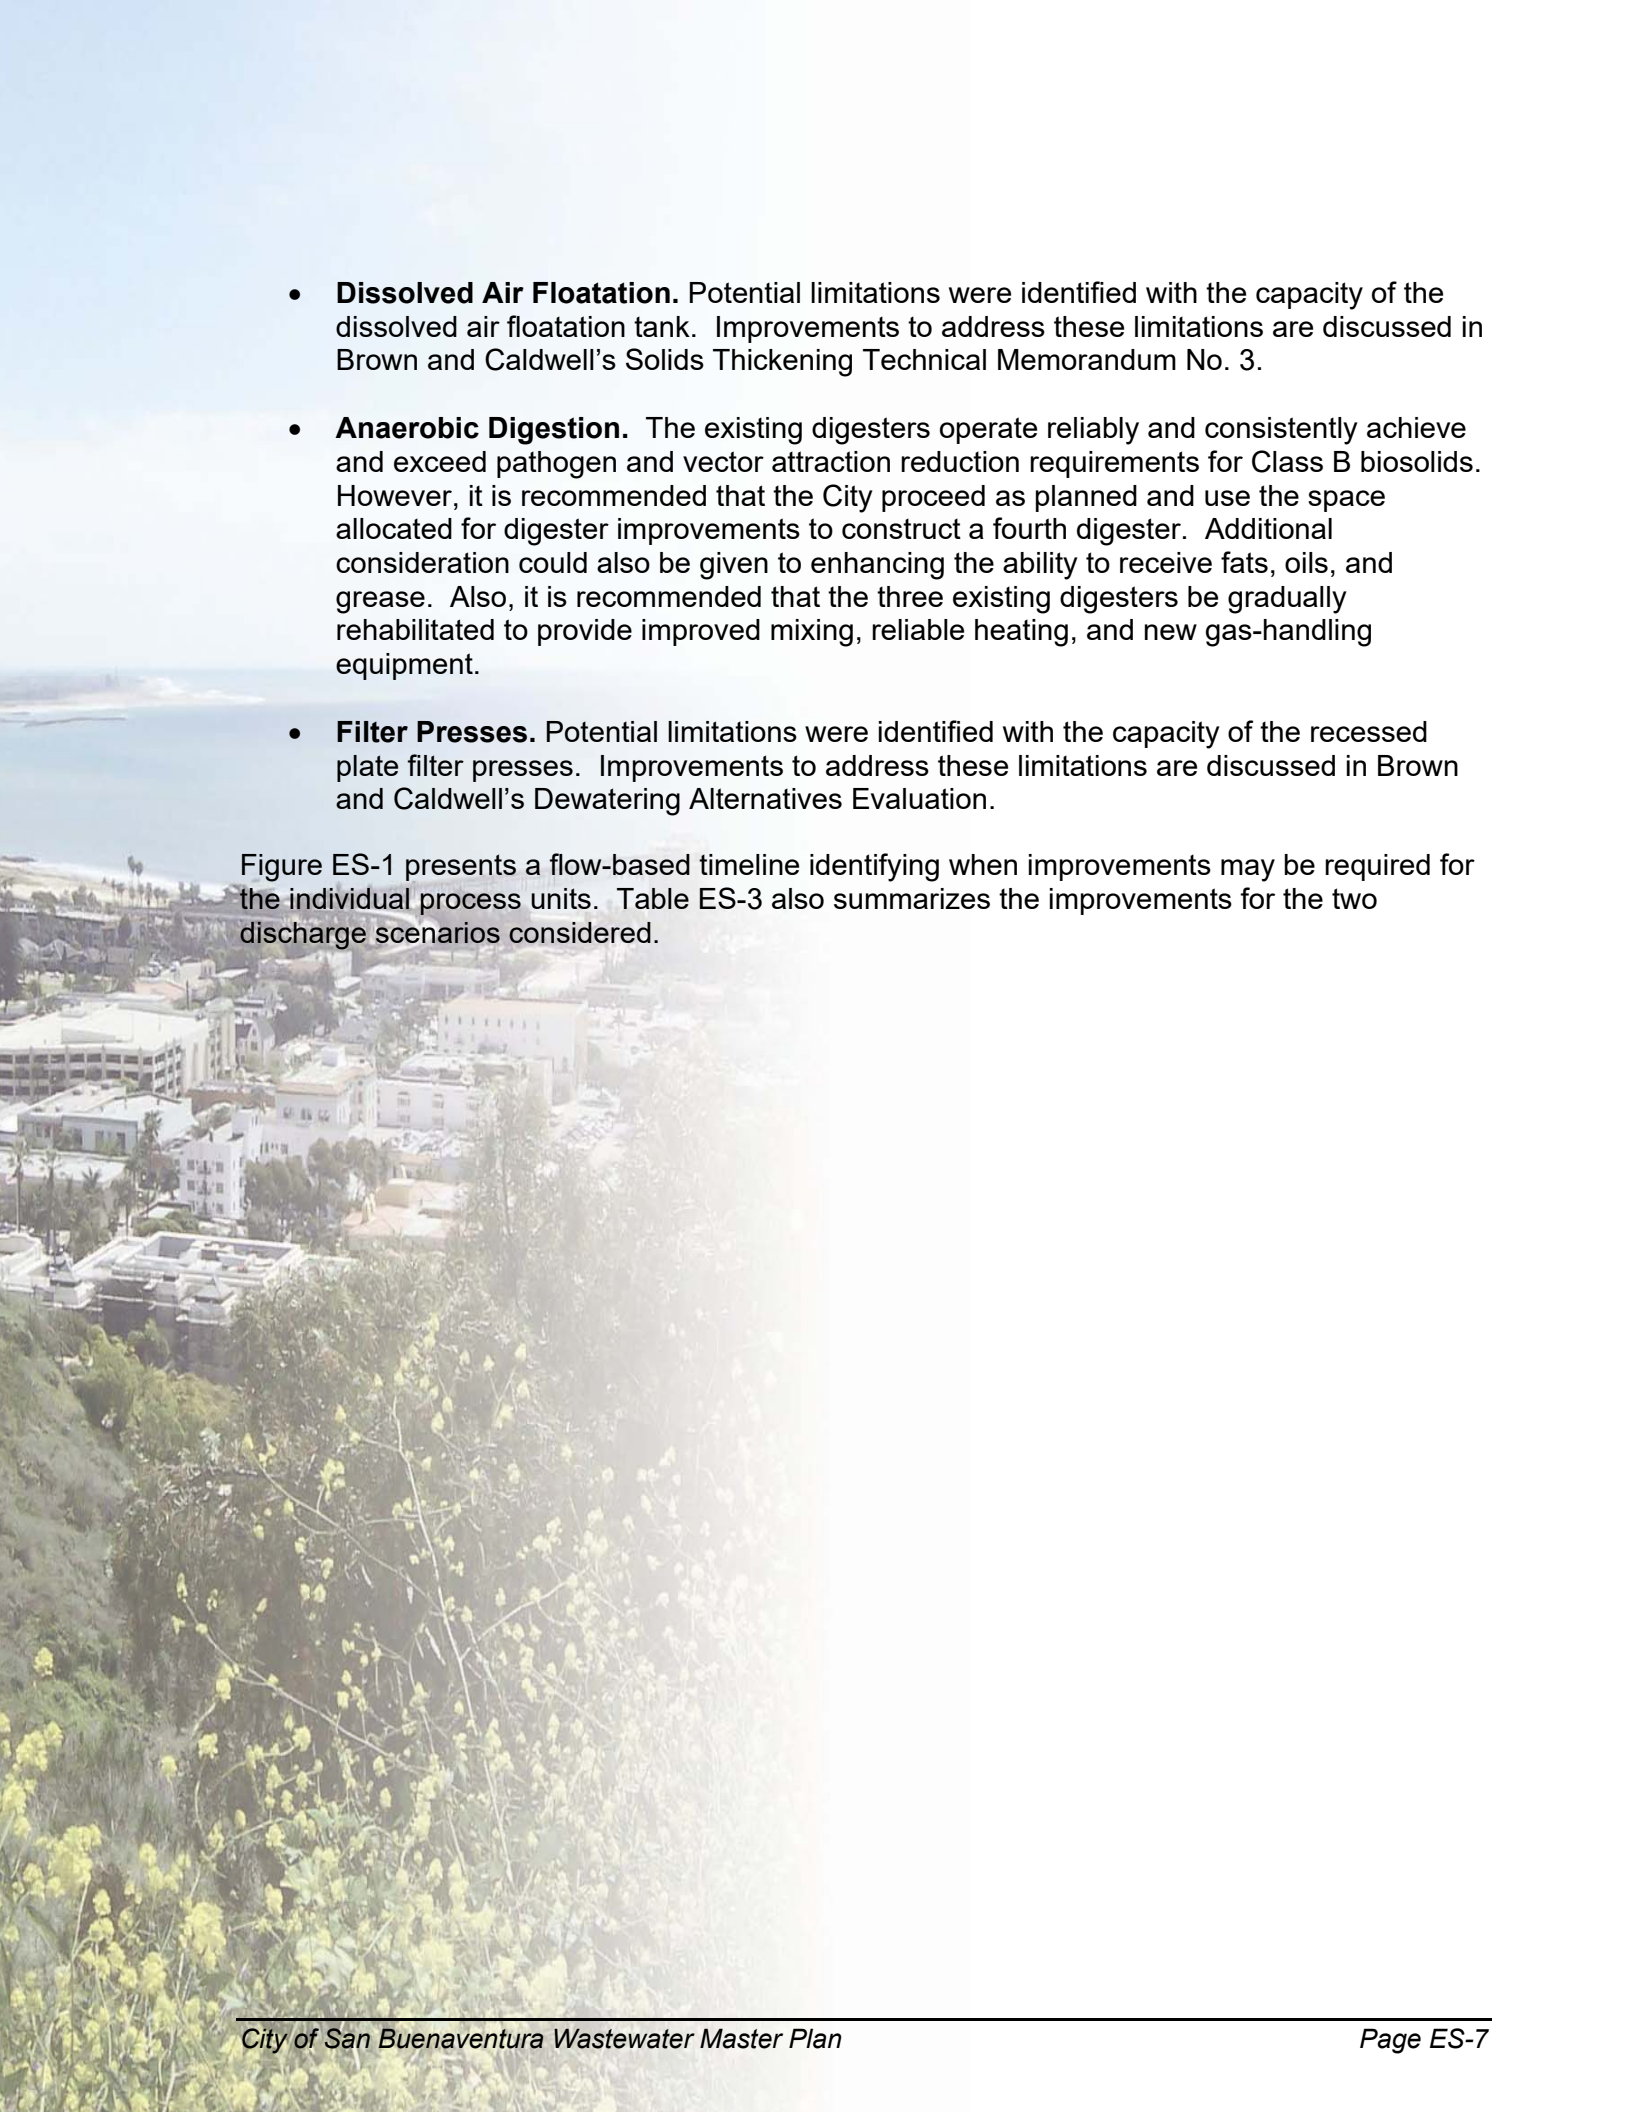

- 
- **Dissolved Air Floatation.** Potential limitations were identified with the capacity of the dissolved air floatation tank. Improvements to address these limitations are discussed in Brown and Caldwell's Solids Thickening Technical Memorandum No. 3.
 - **Anaerobic Digestion.** The existing digesters operate reliably and consistently achieve and exceed pathogen and vector attraction reduction requirements for Class B biosolids. However, it is recommended that the City proceed as planned and use the space allocated for digester improvements to construct a fourth digester. Additional consideration could also be given to enhancing the ability to receive fats, oils, and grease. Also, it is recommended that the three existing digesters be gradually rehabilitated to provide improved mixing, reliable heating, and new gas-handling equipment.
 - **Filter Presses.** Potential limitations were identified with the capacity of the recessed plate filter presses. Improvements to address these limitations are discussed in Brown and Caldwell's Dewatering Alternatives Evaluation.

Figure ES-1 presents a flow-based timeline identifying when improvements may be required for the individual process units. Table ES-3 also summarizes the improvements for the two discharge scenarios considered.

WRF COST MODEL FOR TWO DIFFERENT DISCHARGE SCENARIOS**

Unit Process	Expected Limitations ^(a)	Continued Estuary Discharge		Ocean Outfall Discharge		Related Existing Project Identified by City ^(c)
		Recommended Alternative	Capital Cost ^(b)	Recommended Alternative	Capital Cost ^(b)	
Headworks and Influent Pumping Station	Influent flow measurement capacity	Install magnetic flow meters on discharge piping of each influent pump	\$300,000	Install magnetic flow meters on discharge piping of each influent pump	\$300,000	
Primary Clarifiers	Primary effluent pump capacity. No clarifier redundancy.	Construct a third primary clarifier and addition of 4th pump	\$6,300,000	Construct a third primary clarifier and addition of 4th pump	\$6,300,000	
Aeration Basins and RAS/WAS Pumping	BNR pump capacity. Insufficient SRT for nitrification.	See Brown and Caldwell's TM No. 1 and the Preliminary Design Report for Ventura WRF Upgrade Project, Phase II (Brown and Caldwell, December 2006)	\$18,800,000 ^(d)	Construct additional aeration basin volume (similar to that required for Estuary Discharge, but without RAS pump and blower improvements).	\$16,100,000 ^(e)	Currently out to bid (#96855)
Aeration Blowers	Aeration capacity.	See Brown and Caldwell's TM No. 1 and the Preliminary Design Report for Ventura WRF Upgrade Project, Phase II (Brown and Caldwell, December 2006)	\$4,500,000 ^(f)	No improvements recommended	\$0	#96855
Mixed Media Filters	Hydraulic loading rate criteria	Replace existing mixed media system with a cloth media filtration system	\$8,500,000	Abandon existing mixed media filters; install 2 MGD cloth media filter system for RW production	\$3,200,000	#96874
Chlorine Contact Tanks	Chlorine residual limitations. "Nitrite Lock" during cold weather periods	Replace existing chlorine system with UV disinfection	\$11,200,000	No improvements recommended	\$0	#74026

Unit Process	Expected Limitations ^(a)	Continued Estuary Discharge		Ocean Outfall Discharge		Related Existing Project Identified by City ^(c)
		Recommended Alternative	Capital Cost ^(b)	Recommended Alternative	Capital Cost ^(b)	
Effluent Pumping and Flow Measurement	Effluent pump and flow metering capacity	Install two magnetic flow meters on the discharge piping of the effluent transfer pumps	\$1,200,000	Install two magnetic flow meters on the discharge piping of the effluent transfer pumps	\$1,200,000	#74027
Thickening	Solids loading rate criteria. No thickener redundancy.	See the Preliminary Design Report for Ventura WRF Upgrade Project, Phase II (Brown and Caldwell, December 2006)	\$2,900,000	See the Preliminary Design Report for Ventura WRF Upgrade Project, Phase II (Brown and Caldwell, December 2006)	\$2,900,000	Currently out to bid (#96855)
Anaerobic Digesters	Detention Time	Construct a fourth digester	\$3,900,000	Construct a fourth digester	\$3,900,000	#96878
Filter Press	Filter press capacity / availability of operational time	See Brown and Caldwell's Sludge Dewatering Alternatives Evaluation	\$12,800,000 ^(g)	See Brown and Caldwell's Sludge Dewatering Alternatives Evaluation	\$12,800,000 ^(g)	
Ocean Outfall		Not Applicable	\$0	Construct ocean outfall	\$26,300,000	
Engineers Estimate of Probable Cost of Construction			\$70,400,000			
				\$73,000,000		

Notes:

- (a) See Figure 4-2 for a flow-based timeline for the expected limitations.
- (b) Estimate accuracy is +50% to -30%.
- (c) Project similar to some recommended alternatives have been identified by the City in their 2008-2013 Capital Improvement Project Plan. The projects are identified by their Project ID's.
- (d) Capital costs were estimated from Brown and Caldwell's Preliminary Design Report for Ventura WRF Upgrade Project, Phase II and exclude blower improvements. Phase II had a total estimated cost of \$24 million. Costs were escalated from December 2006 to October 2008 using the ENR- Construction Cost Index for Los Angeles.
- (e) Capital costs assume the similar process basin expansion as that required for the Estuary Discharge (costs of which were estimated from Brown and Caldwell's Preliminary Design Report for Ventura WRF Upgrade Project, Phase II). Ocean outfall costs do not include RAS pump improvements.
- (f) Capital costs were estimated from Brown and Caldwell's Preliminary Design Report for Ventura WRF Upgrade Project, Phase II. Phase II had a total estimated cost of \$24 million, costs for the blowers were estimated from this total. Costs were escalated from December 2006 to October 2008 using the ENR- Construction Cost Index for Los Angeles.
- (g) Capital costs were presented in Brown and Caldwell's Sludge Dewatering Alternatives Evaluation. Cost was assumed for Alternative 10 (3 centrifuges, 7 shifts). Costs were escalated from April 2002 to October 2008 using the ENR- Construction Cost Index for Los Angeles.

Collection System Evaluation

The City's wastewater collection system consists of approximately 285 miles of gravity sewers ranging in size from 4 to 42 inches, approximately 5 miles of force mains, and 11 wastewater lift stations. The collection system sewers convey flows generally from east to west and north to south, culminating at the Ventura Water Reclamation Facility for treatment.

The City's collection system facilities were evaluated for the following time increments:

- At the time of flow metering (Year 2003-2005)
- Existing system (Year 2007)
- Near-term (2007-2012)
- Ultimate (build out)

Collection System Recommended Capital Improvements/CIP

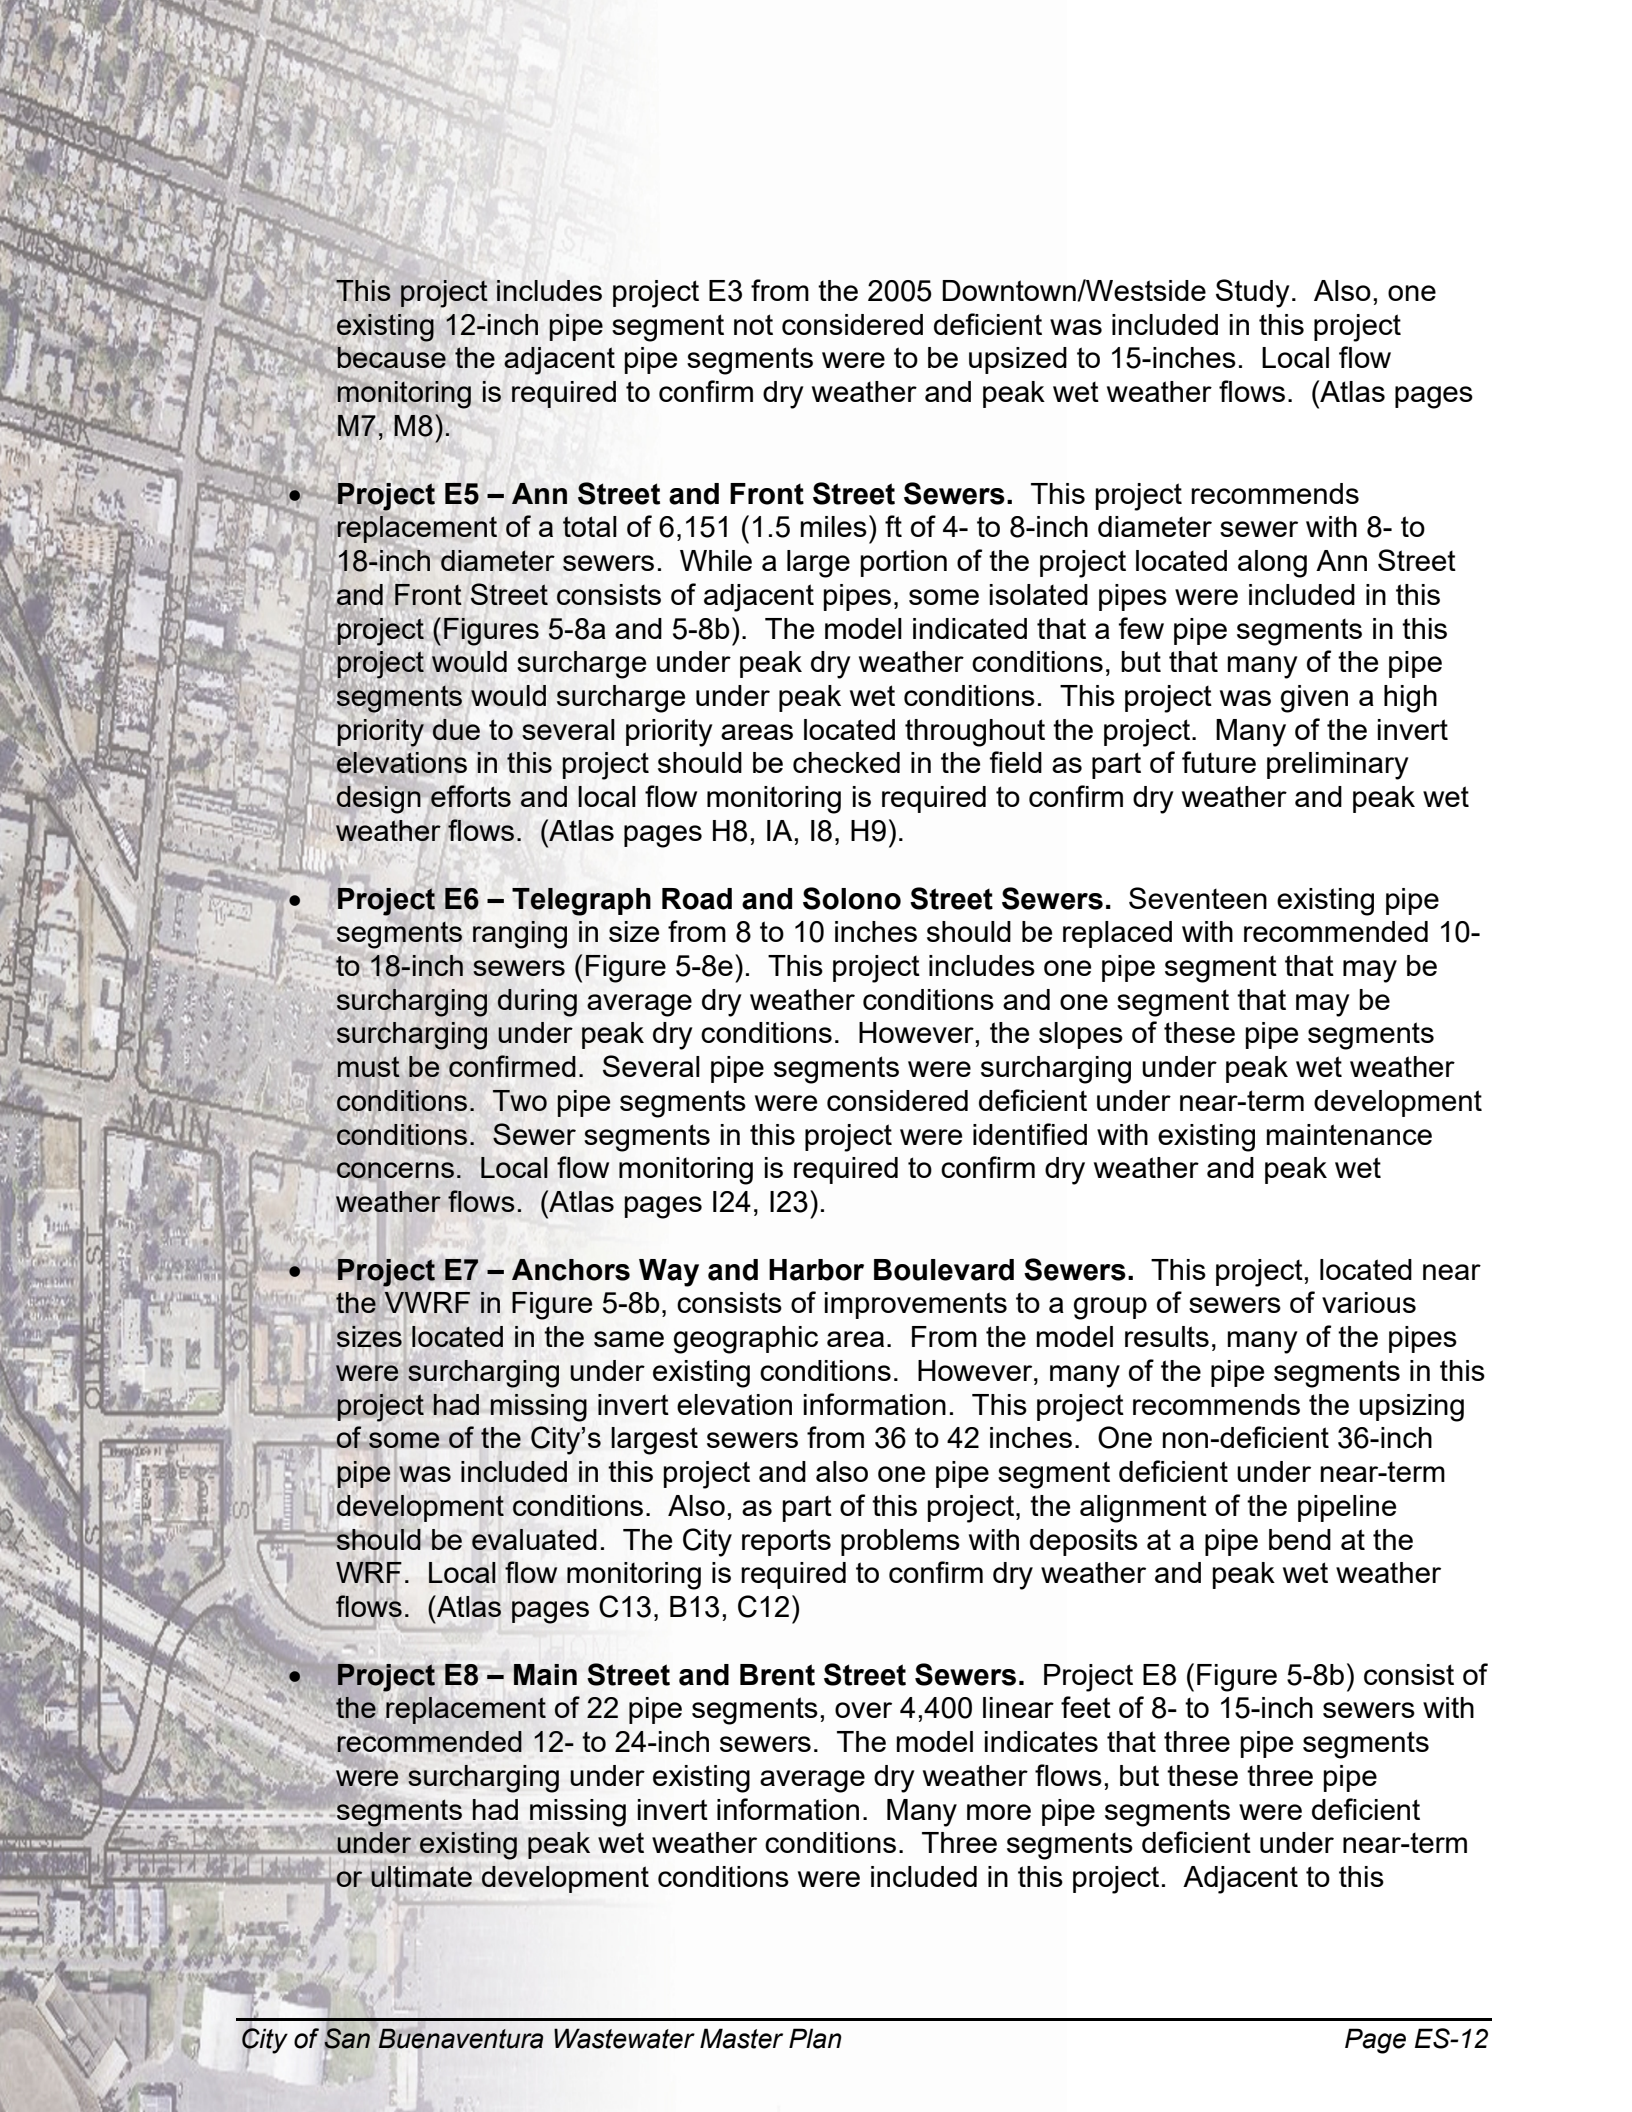

A total of 43 projects were identified for existing conditions, another 22 projects were identified with near-term developments in place, and another 37 projects were identified to address build-out conditions. The projects were then prioritized according to the modeled flow conditions versus capacity, noted deficiencies (such as root intrusions), maintenance history, and location with respect to environmentally sensitive areas. However, the exact timing of these recommended projects, particularly for the near-term and ultimate development conditions, is dependent upon the level of actual development in the City.

The recommended improvements encompass 51 miles of gravity sewers and force mains, and improvements to three lift stations. The engineer's estimate of probable cost for these improvements are summarized in Table ES-4. Section 5 of this Master Plan provides details related to the deficiencies identified in the collection system model and the recommended projects.

**TABLE ES-4
SUMMARY OF COLLECTION SYSTEM RECOMMENDATIONS**

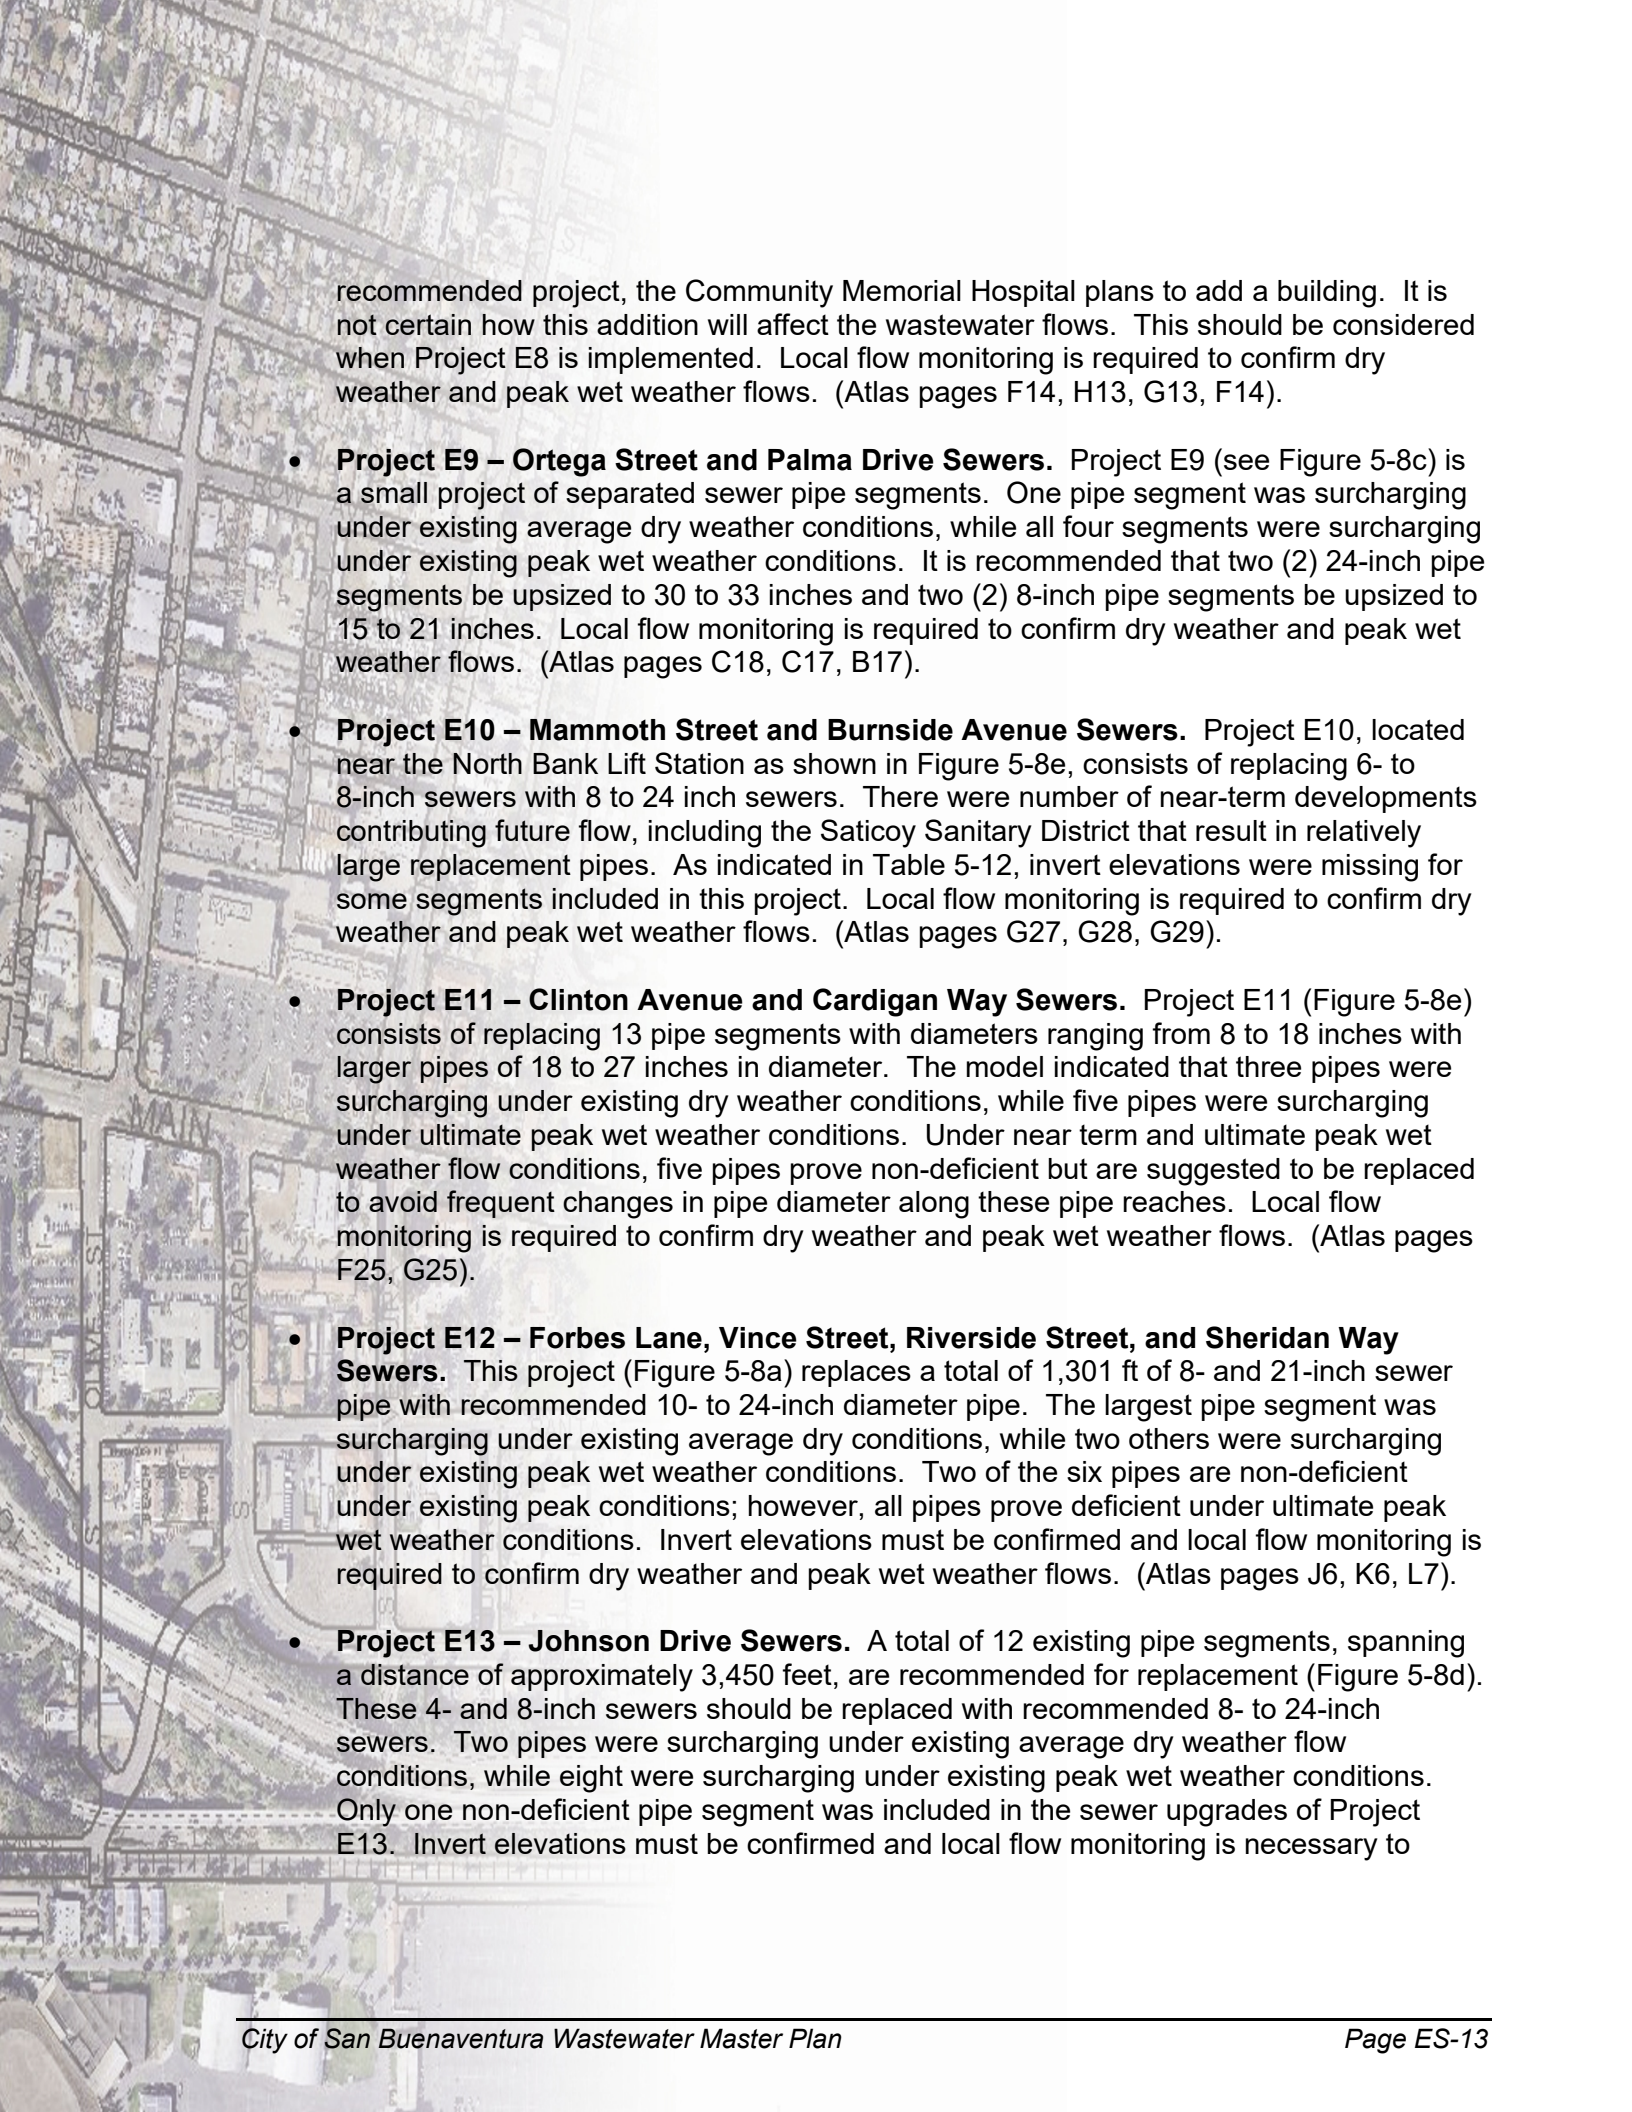

Project	Length (miles)	Total
Existing Projects	23.0	\$36,400,000
Near-Term Projects	12.5	\$16,400,000
Ultimate Projects	15.7	\$21,500,000
Total	52.5	\$74,300,000

The following identifies recommended collection system capital improvements to mitigate existing capacity deficiencies in accordance with the established evaluation criteria. These recommendations are presented individually on the Recommended CIP Project Sheets and include the following:

This project includes project E3 from the 2005 Downtown/Westside Study. Also, one existing 12-inch pipe segment not considered deficient was included in this project because the adjacent pipe segments were to be upsized to 15-inches. Local flow monitoring is required to confirm dry weather and peak wet weather flows. (Atlas pages M7, M8).

- **Project E5 – Ann Street and Front Street Sewers.** This project recommends replacement of a total of 6,151 (1.5 miles) ft of 4- to 8-inch diameter sewer with 8- to 18-inch diameter sewers. While a large portion of the project located along Ann Street and Front Street consists of adjacent pipes, some isolated pipes were included in this project (Figures 5-8a and 5-8b). The model indicated that a few pipe segments in this project would surcharge under peak dry weather conditions, but that many of the pipe segments would surcharge under peak wet conditions. This project was given a high priority due to several priority areas located throughout the project. Many of the invert elevations in this project should be checked in the field as part of future preliminary design efforts and local flow monitoring is required to confirm dry weather and peak wet weather flows. (Atlas pages H8, IA, I8, H9).
- **Project E6 – Telegraph Road and Solono Street Sewers.** Seventeen existing pipe segments ranging in size from 8 to 10 inches should be replaced with recommended 10- to 18-inch sewers (Figure 5-8e). This project includes one pipe segment that may be surcharging during average dry weather conditions and one segment that may be surcharging under peak dry conditions. However, the slopes of these pipe segments must be confirmed. Several pipe segments were surcharging under peak wet weather conditions. Two pipe segments were considered deficient under near-term development conditions. Sewer segments in this project were identified with existing maintenance concerns. Local flow monitoring is required to confirm dry weather and peak wet weather flows. (Atlas pages I24, I23).
- **Project E7 – Anchors Way and Harbor Boulevard Sewers.** This project, located near the VWRP in Figure 5-8b, consists of improvements to a group of sewers of various sizes located in the same geographic area. From the model results, many of the pipes were surcharging under existing conditions. However, many of the pipe segments in this project had missing invert elevation information. This project recommends the upsizing of some of the City's largest sewers from 36 to 42 inches. One non-deficient 36-inch pipe was included in this project and also one pipe segment deficient under near-term development conditions. Also, as part of this project, the alignment of the pipeline should be evaluated. The City reports problems with deposits at a pipe bend at the WRF. Local flow monitoring is required to confirm dry weather and peak wet weather flows. (Atlas pages C13, B13, C12)
- **Project E8 – Main Street and Brent Street Sewers.** Project E8 (Figure 5-8b) consist of the replacement of 22 pipe segments, over 4,400 linear feet of 8- to 15-inch sewers with recommended 12- to 24-inch sewers. The model indicates that three pipe segments were surcharging under existing average dry weather flows, but these three pipe segments had missing invert information. Many more pipe segments were deficient under existing peak wet weather conditions. Three segments deficient under near-term or ultimate development conditions were included in this project. Adjacent to this

An aerial photograph of a city grid, likely San Buenaventura, showing streets and building footprints. The map is overlaid with a semi-transparent grid and text labels for various streets including CAROLAN, MISSOURI, PARK, MAIN, GARDEN, and OLYMPIA. The text is in a light, semi-transparent font. The background shows a dense urban area with buildings and some green spaces.

recommended project, the Community Memorial Hospital plans to add a building. It is not certain how this addition will affect the wastewater flows. This should be considered when Project E8 is implemented. Local flow monitoring is required to confirm dry weather and peak wet weather flows. (Atlas pages F14, H13, G13, F14).

- **Project E9 – Ortega Street and Palma Drive Sewers.** Project E9 (see Figure 5-8c) is a small project of separated sewer pipe segments. One pipe segment was surcharging under existing average dry weather conditions, while all four segments were surcharging under existing peak wet weather conditions. It is recommended that two (2) 24-inch pipe segments be upsized to 30 to 33 inches and two (2) 8-inch pipe segments be upsized to 15 to 21 inches. Local flow monitoring is required to confirm dry weather and peak wet weather flows. (Atlas pages C18, C17, B17).
- **Project E10 – Mammoth Street and Burnside Avenue Sewers.** Project E10, located near the North Bank Lift Station as shown in Figure 5-8e, consists of replacing 6- to 8-inch sewers with 8 to 24 inch sewers. There were number of near-term developments contributing future flow, including the Saticoy Sanitary District that result in relatively large replacement pipes. As indicated in Table 5-12, invert elevations were missing for some segments included in this project. Local flow monitoring is required to confirm dry weather and peak wet weather flows. (Atlas pages G27, G28, G29).
- **Project E11 – Clinton Avenue and Cardigan Way Sewers.** Project E11 (Figure 5-8e) consists of replacing 13 pipe segments with diameters ranging from 8 to 18 inches with larger pipes of 18 to 27 inches in diameter. The model indicated that three pipes were surcharging under existing dry weather conditions, while five pipes were surcharging under ultimate peak wet weather conditions. Under near term and ultimate peak wet weather flow conditions, five pipes prove non-deficient but are suggested to be replaced to avoid frequent changes in pipe diameter along these pipe reaches. Local flow monitoring is required to confirm dry weather and peak wet weather flows. (Atlas pages F25, G25).
- **Project E12 – Forbes Lane, Vince Street, Riverside Street, and Sheridan Way Sewers.** This project (Figure 5-8a) replaces a total of 1,301 ft of 8- and 21-inch sewer pipe with recommended 10- to 24-inch diameter pipe. The largest pipe segment was surcharging under existing average dry conditions, while two others were surcharging under existing peak wet weather conditions. Two of the six pipes are non-deficient under existing peak conditions; however, all pipes prove deficient under ultimate peak wet weather conditions. Invert elevations must be confirmed and local flow monitoring is required to confirm dry weather and peak wet weather flows. (Atlas pages J6, K6, L7).
- **Project E13 – Johnson Drive Sewers.** A total of 12 existing pipe segments, spanning a distance of approximately 3,450 feet, are recommended for replacement (Figure 5-8d). These 4- and 8-inch sewers should be replaced with recommended 8- to 24-inch sewers. Two pipes were surcharging under existing average dry weather flow conditions, while eight were surcharging under existing peak wet weather conditions. Only one non-deficient pipe segment was included in the sewer upgrades of Project E13. Invert elevations must be confirmed and local flow monitoring is necessary to

confirm dry weather and peak wet weather flows. (Atlas pages D21, D22, E21, E22, F21).

- **Project E14 – Vista Del Mar Drive Sewers.** Project E14 consists of the replacement of six sewer pipe segments of varying size with larger, 18-inch diameter sewer pipes (Figure 5-8b). The model indicates that the two smallest pipes were surcharging under existing and near-term peak wet weather conditions. Three pipes were non-deficient under near-term development conditions, while all pipes may be deficient under ultimate peak wet weather flows. Local flow monitoring is necessary to confirm dry weather and peak wet weather flows. (Atlas pages F11, F12, H9).

Johnson Avenue looking south from Swan Street at Project E13.

- **Project E15 – Catalina Street, Hurst Avenue, and Thompson Boulevard Sewers.** Replace 20 sewer pipes of 6- to 15-inch diameters with recommended pipes ranging from 8- to 21-inches (Figure 5-8b). The suggested upgrades will replace over 6,085 feet (1.14 mi.) of adjacent sewer line in the area. The model indicated that a total of 12 sewer pipe segments were deficient under existing peak wet weather conditions with d/D ratios of 70 to 100 percent. Several other pipe segments were deficient only under near-term and ultimate development conditions. Invert elevations must be confirmed and local flow monitoring is necessary to confirm dry weather and peak wet weather flows. (Atlas page H10).
- **Project E16 – Main Street Sewers.** Project E16 involves the recommended replacement of 10-, 12- and 15-inch sewer pipe with 15-, 18-, and 21-inch pipe, spanning a total distance of over 4,739 ft (0.9 mi.). The model identified 11 pipe segments that were deficient under existing peak wet weather flows and several more that were deficient under near-term and ultimate development conditions. One pipe (K_F15_P-3908) was non-deficient under all conditions and is included in project E16 because the pipe segments upstream and downstream will be upsized. Invert elevations should be confirmed. In addition, local flow monitoring is recommended to confirm the dry weather and peak wet weather flows. (Atlas pages E16, E17, F16).
- **Project E17 – Main Street and Loma Vista Road Sewers.** Project E17 consists of the replacement of 17 pipe segments comprising 5,646 linear feet (1.1 mi.) of 6- to 12-inch pipe with recommended 8- to 15-inch pipe (Figure 5-8b). One pipe shows deficient performance during peak dry water flow and all pipes are deemed deficient with ultimate development flows. Invert elevations must be confirmed. In addition, three pipe segments were identified as priority areas. Local flow monitoring is necessary to confirm dry weather and peak wet weather flows. (Atlas pages H11, H12, H13).

- Project E18 – Golf Course Drive Sewers.** Replace two pipe segments of 6- and a 10-inch diameter with recommended 15- and 18-inch pipes (Figure 5-8d). Pipe P_B20_P-296 is 64.1 ft long and the model indicated that this pipe was surcharging during peak dry weather flow. The model also indicated that both were surcharging under existing wet weather conditions. Local flow monitoring is required to confirm dry weather and peak wet weather flows. (Atlas page B20).
- Project E19 – Channel Drive and Santa Cruz Street Sewers.** Project E19 includes the replacement of three pipes which have diameters ranging from 6- to 8-inches. The replacement pipelines are recommended to be 15 inches in diameter and will have a combined length of approximately 1,040 linear feet (Figure 5-8b). The model indicated that one pipe was surcharging under peak dry weather conditions, while a second pipe appeared to have limited capacity (d/D ratio of 74%). Invert elevations must be confirmed and local flow monitoring is required to confirm dry weather and peak wet weather flows. (Atlas pages G10, H10).
- Project E20 – Saratoga Avenue, Ralston Street, and Gaviota Lane Sewers.** This project includes the replacement of 9 existing sewer segments, spanning a distance of over 2,740 linear feet (0.52 mi.) and varying in size from 8 to 12 inches in diameter (Figures 5-8c and 5-8d). The model identified most of the 8-inch pipes may surcharge under peak wet weather flow conditions while the sole 12-inch pipe is non-deficient under possible project conditions, but was included because pipe segments on either side were recommended for improvements. These 9 pipes are recommended to be replaced with pipes ranging in size from 15- to 18-inches. Local flow monitoring is required to confirm dry weather and peak wet weather flows. (Atlas pages E18, E19, E20).
- Project E21 – Storke and Swan Street Sewers.** Project E21 includes the replacement of eight pipes, all of which are 8 inches in diameter (Figure 5-8d). The replacement pipelines are recommended to be 12 inches in diameter and will have a combined length of over 2,038 linear ft. All eight existing pipes prove satisfactory under average dry weather flow conditions, however, the model indicated that one pipe segment was surcharging when peak wet weather flow exists. All eight pipes are deficient at the ultimate flow conditions. Local flow monitoring is needed to confirm dry weather and peak wet weather flows. (Atlas pages E21, D21).
- Project E22 – Halifax Street and Petit Avenue Sewers.** Three 8-inch sewer pipe segments spanning a length of 971 feet are recommended to be replaced with pipes of 10, 12, and 15 inches in diameter (Figure 5-8e). Pipe U_G26_P-3150 shows deficiency in performance prior to the other sewer pipes by surcharging during peak dry weather

Project E19 replaces 1,040 linear feet of 6- and 8-inch sewers on Santa Cruz Street and Channel Drive.

flow conditions. One pipe segment is deficient due to near-term development, but has been included due to its proximity to the other two pipe segments. Invert elevations must be confirmed, as well as the dry weather and peak wet weather flows. (Atlas page G26).

- **Project E23 – Eisenhower Street and Polk Street Sewers.** Project E23 includes seven 8-inch pipes that are recommended to be replaced by larger pipes of sizes 10 to 18 inches (Figure 5-8d). Project E23 has a combined length of over 2,014 feet. The model indicated that one pipe segment was deficient under average dry weather flow conditions (with a d/D ratio of 77%) and four additional segments were deficient under existing peak wet weather conditions (with d/D ratios ranging between 69% and 100%). One pipe segment, found to be non-deficient with an ultimate depth to diameter ratio of 48.6 percent, was included in the scope of Project E23. Local flow monitoring is required to confirm the dry weather and peak wet weather flows. (Atlas pages G22, H22).

Maple Street looking east from College Avenue at Project E24.

- **Project E24 – Redwood Avenue, Maple Street, and College Drive Sewers.** Fifteen sewer pipes of diameters ranging from 6 to 8 inches are recommended to be replaced by pipes of 10, 12, and 18 inches in diameter (Figure 5-8c). Eight of the existing pipes do not have their invert elevations confirmed

and three of those are deemed non-deficient by the model. Only one pipe is surcharging at the peak dry weather flow conditions while 6 sewer pipes are surcharging during peak wet weather flows. Local flow monitoring is recommended to confirm dry weather and peak wet weather flows. (Atlas pages F15, G15, G16).

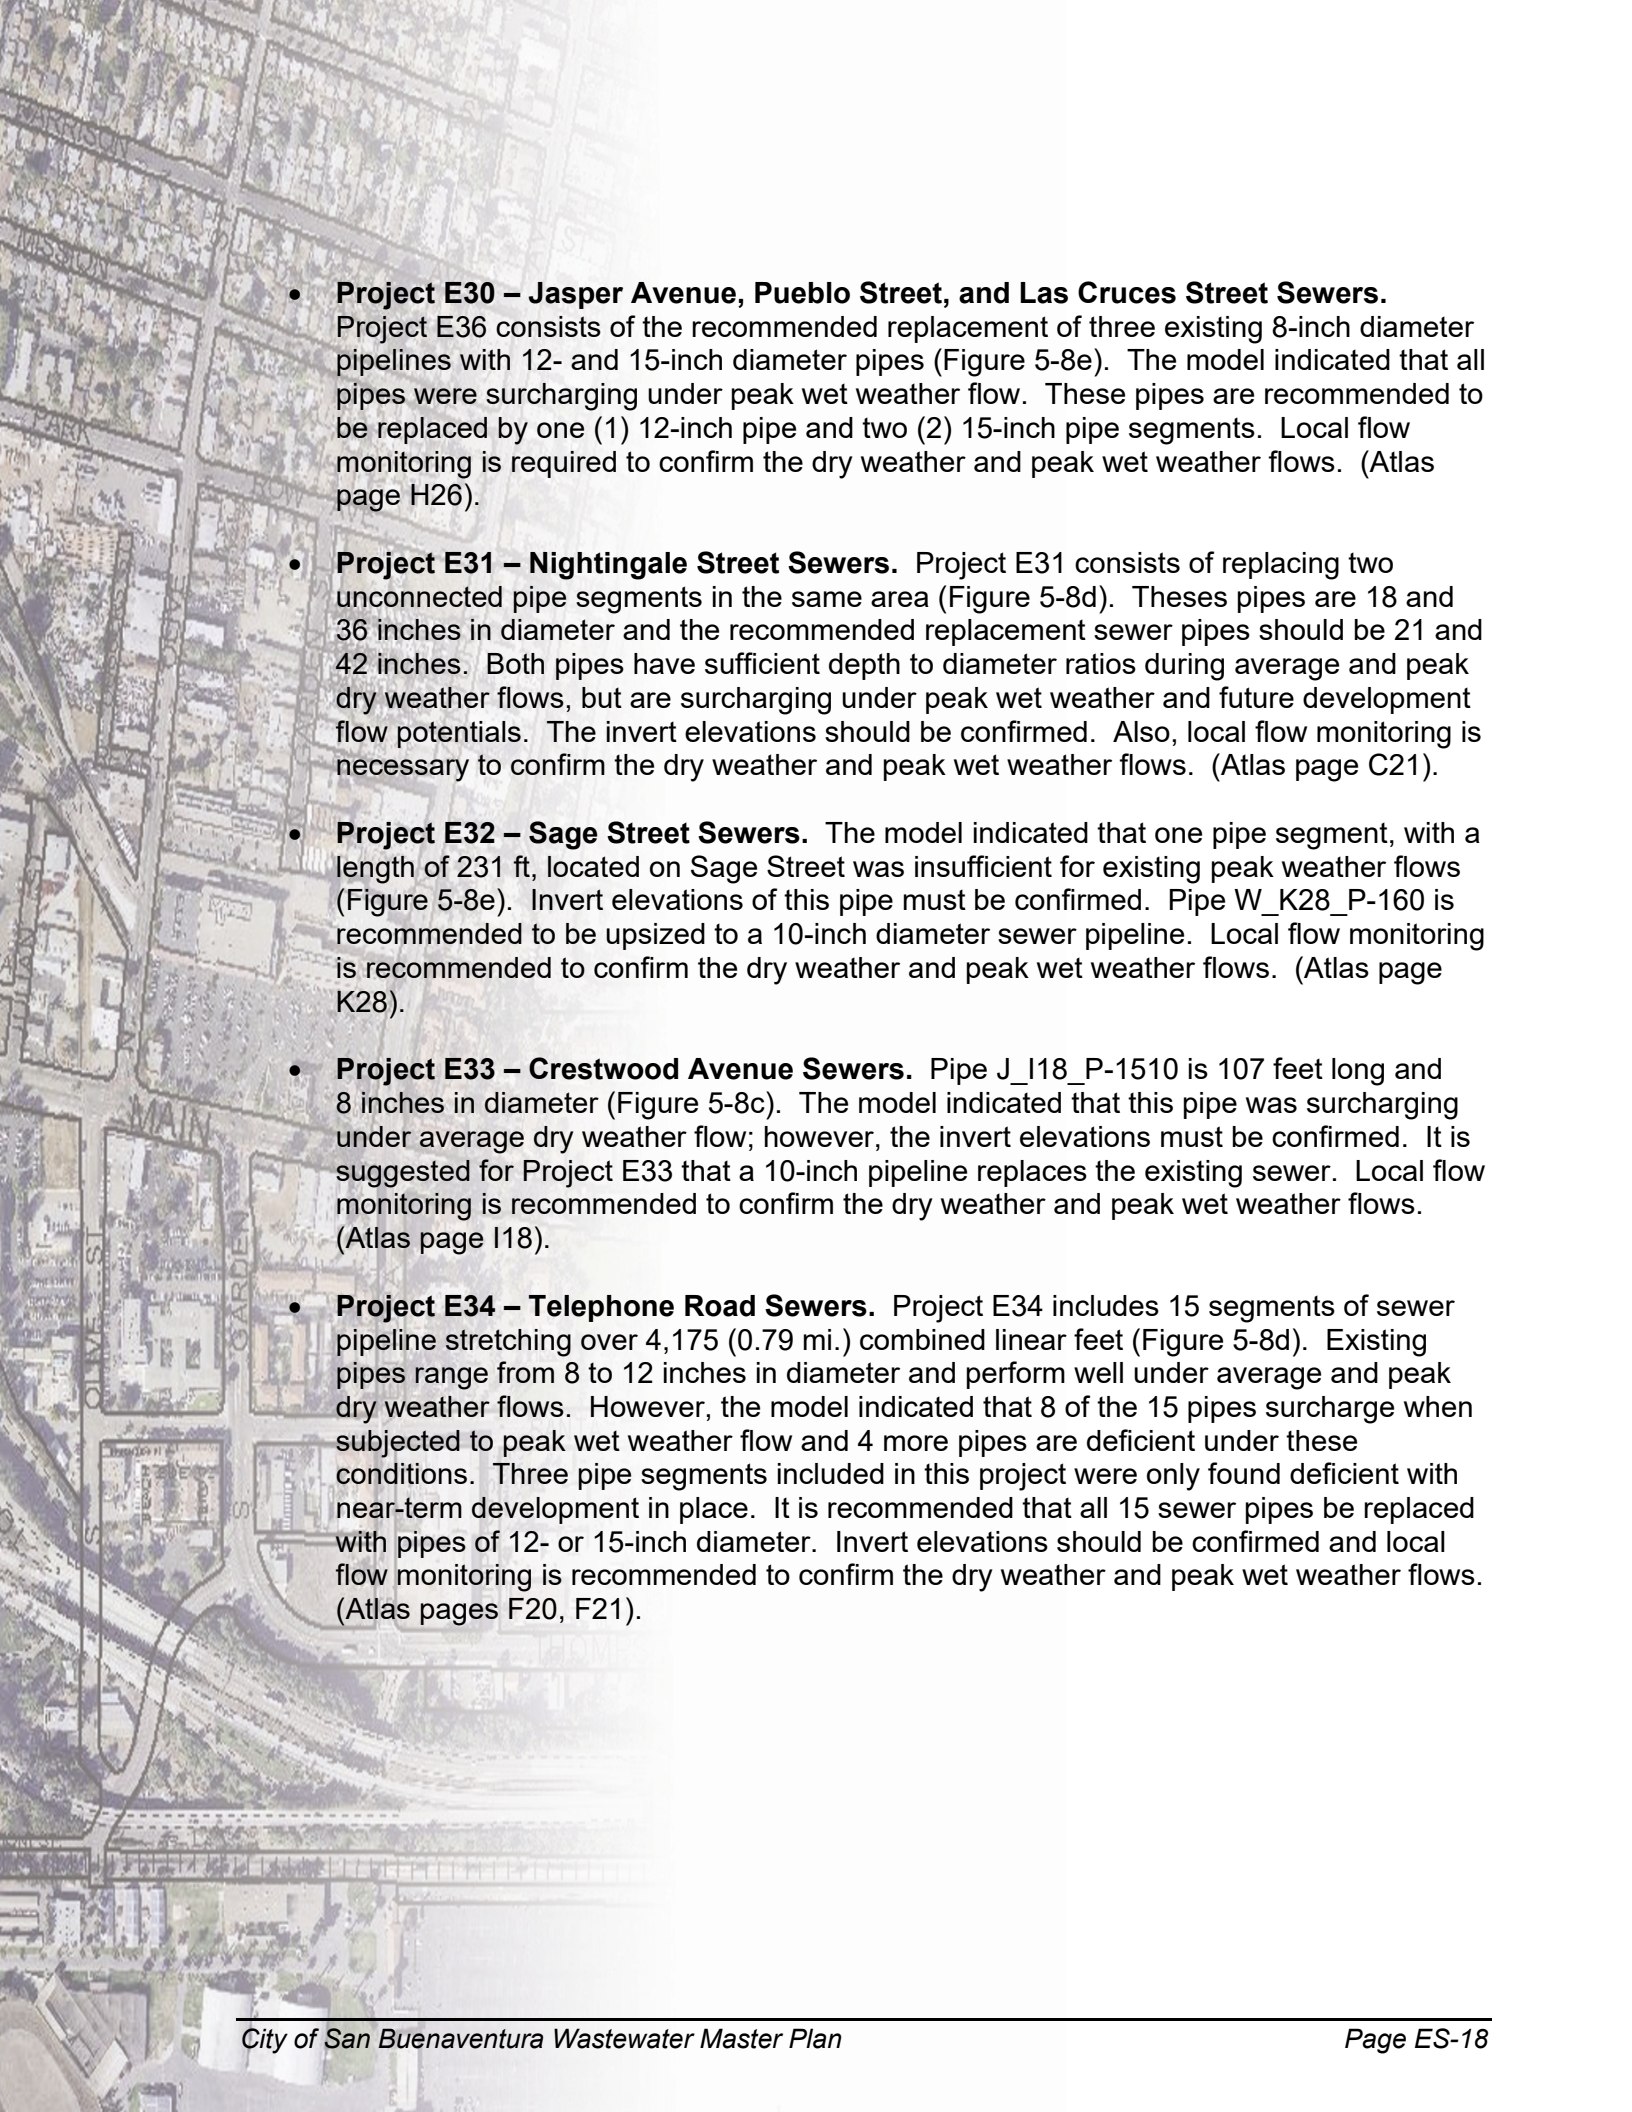

- **Project E25 – Channel Drive and Agricultural Area Sewers.** Three (3) 27-inch sewer pipes, one 10-inch pipe, and one 15-inch pipe, spanning a length of over 988 linear feet, are recommended for replacement (Figure 5-8b). Recommended replacement pipes range in diameter from 18- to 54-inches. The model indicated that one of the 27-inch pipe segments was flowing 61.9 percent full under existing dry weather conditions. All five pipe segments, including one under the 101 Freeway, were found deficient under existing peak wet weather conditions. Invert elevations must be confirmed and local flow monitoring is required to confirm the dry weather and peak wet weather flows. (Atlas page E14).
- **Project E26 – Poli Street, Evergreen Street, and Main Street Alley Sewers.** This project includes 11 segments of sewer pipe, each 6 inches in diameter, covering a combined length of 3,631 linear feet (Figure 5-8b). The model indicated that over half of the existing sewer pipe segments are surcharging under peak wet weather flow

conditions. Three of the pipe segments are deficient only when near-term developments are in place. It is recommended that the sewer pipes be replaced with 8- and 10-inch diameter pipes. One pipe segment in Project E26 was identified to have intruding roots. Invert elevations must be confirmed. Local flow monitoring is also necessary to confirm the dry weather and peak wet weather flows. (Atlas pages H12, H13).

- **Project E27 – Victoria Avenue Sewers.** Project E27 is a large project which includes 22 segments of sewer line extending over 6,267 feet (1.19 mi) with pipe diameters of 8-, 10-, and 12-inch (Figure 5-8d). The recommended replacement pipes range between 15 and 21 inches in diameter. Fifteen of the pipe segments are deficient under existing peak wet weather flows with d/D ratios ranging from 66 to 100 percent. When existing pipes are subjected to ultimate development peak wet weather flows, the model indicated that all 22 sewer pipe segments would be flowing greater than 50 percent full. This project includes one priority area. Invert elevations must be confirmed. Local flow monitoring is also required to confirm the dry weather and peak wet weather flows. (Atlas pages D20, E20, F19, F20, G20).
- **Project E28 – Shoreline Drive and Seaside Transfer Station Sewers.** Replace a total of four (4) 8-inch diameter adjacent sewer segments with a combined length of over 1,400 linear feet (Figure 5-8a). Recommended replacement pipes are 10- and 12-inch diameter. None of the five (5) pipes show deficient performance under existing average or peak dry flow conditions; however, two pipes are surcharging under peak wet weather conditions. There is one pipe which the model indicates to be non-deficient under ultimate development flow conditions. However, it is recommended that this pipe be replaced along with the other four (4) pipes. A priority area is located in this project. Local flow monitoring is recommended to confirm dry weather and peak wet weather flows. (Atlas page H7).
- **Project E29 – Callens Road, Donlon Street, and Eastman Avenue Sewers.** Project E29 includes the recommended replacement of four isolated 8-inch sewer pipelines, which the model identified as deficient, that span a collective distance of 1,097 linear feet. These pipelines offer adequate performance under average and peak dry weather flow conditions, but are all surcharging when subjected to peak wet weather conditions. Three 15-inch pipes and one 12-inch sewer pipe are recommended to replace the existing infrastructure. In addition, the City reports reduced capacity in the sewer along Callens Street, between Main and Transport. This reduced capacity is due to buildup of calcium deposits. It is assumed that 8-inch diameter replacement pipes would be sufficient. The invert elevations should be confirmed and flow monitoring is necessary to confirm the dry weather and peak wet weather flows. (Atlas pages D15, D16, D17, E15, E16).

Callens Drive looking north at Project E29.

- 
- An aerial photograph of a city street grid, likely San Buenaventura, showing various streets and building footprints. The map is overlaid with a semi-transparent grid and text labels for several streets: CAROLAN, MISSOURI, PARK, MAIN, GARDEN, and OLYMPIA. The text is in a light, sans-serif font. The map shows a dense urban layout with a mix of residential and commercial buildings.
- **Project E30 – Jasper Avenue, Pueblo Street, and Las Cruces Street Sewers.** Project E30 consists of the recommended replacement of three existing 8-inch diameter pipelines with 12- and 15-inch diameter pipes (Figure 5-8e). The model indicated that all pipes were surcharging under peak wet weather flow. These pipes are recommended to be replaced by one (1) 12-inch pipe and two (2) 15-inch pipe segments. Local flow monitoring is required to confirm the dry weather and peak wet weather flows. (Atlas page H26).
 - **Project E31 – Nightingale Street Sewers.** Project E31 consists of replacing two unconnected pipe segments in the same area (Figure 5-8d). These pipes are 18 and 36 inches in diameter and the recommended replacement sewer pipes should be 21 and 42 inches. Both pipes have sufficient depth to diameter ratios during average and peak dry weather flows, but are surcharging under peak wet weather and future development flow potentials. The invert elevations should be confirmed. Also, local flow monitoring is necessary to confirm the dry weather and peak wet weather flows. (Atlas page C21).
 - **Project E32 – Sage Street Sewers.** The model indicated that one pipe segment, with a length of 231 ft, located on Sage Street was insufficient for existing peak weather flows (Figure 5-8e). Invert elevations of this pipe must be confirmed. Pipe W_K28_P-160 is recommended to be upsized to a 10-inch diameter sewer pipeline. Local flow monitoring is recommended to confirm the dry weather and peak wet weather flows. (Atlas page K28).
 - **Project E33 – Crestwood Avenue Sewers.** Pipe J_I18_P-1510 is 107 feet long and 8 inches in diameter (Figure 5-8c). The model indicated that this pipe was surcharging under average dry weather flow; however, the invert elevations must be confirmed. It is suggested for Project E33 that a 10-inch pipeline replaces the existing sewer. Local flow monitoring is recommended to confirm the dry weather and peak wet weather flows. (Atlas page I18).
 - **Project E34 – Telephone Road Sewers.** Project E34 includes 15 segments of sewer pipeline stretching over 4,175 (0.79 mi.) combined linear feet (Figure 5-8d). Existing pipes range from 8 to 12 inches in diameter and perform well under average and peak dry weather flows. However, the model indicated that 8 of the 15 pipes surcharge when subjected to peak wet weather flow and 4 more pipes are deficient under these conditions. Three pipe segments included in this project were only found deficient with near-term development in place. It is recommended that all 15 sewer pipes be replaced with pipes of 12- or 15-inch diameter. Invert elevations should be confirmed and local flow monitoring is recommended to confirm the dry weather and peak wet weather flows. (Atlas pages F20, F21).

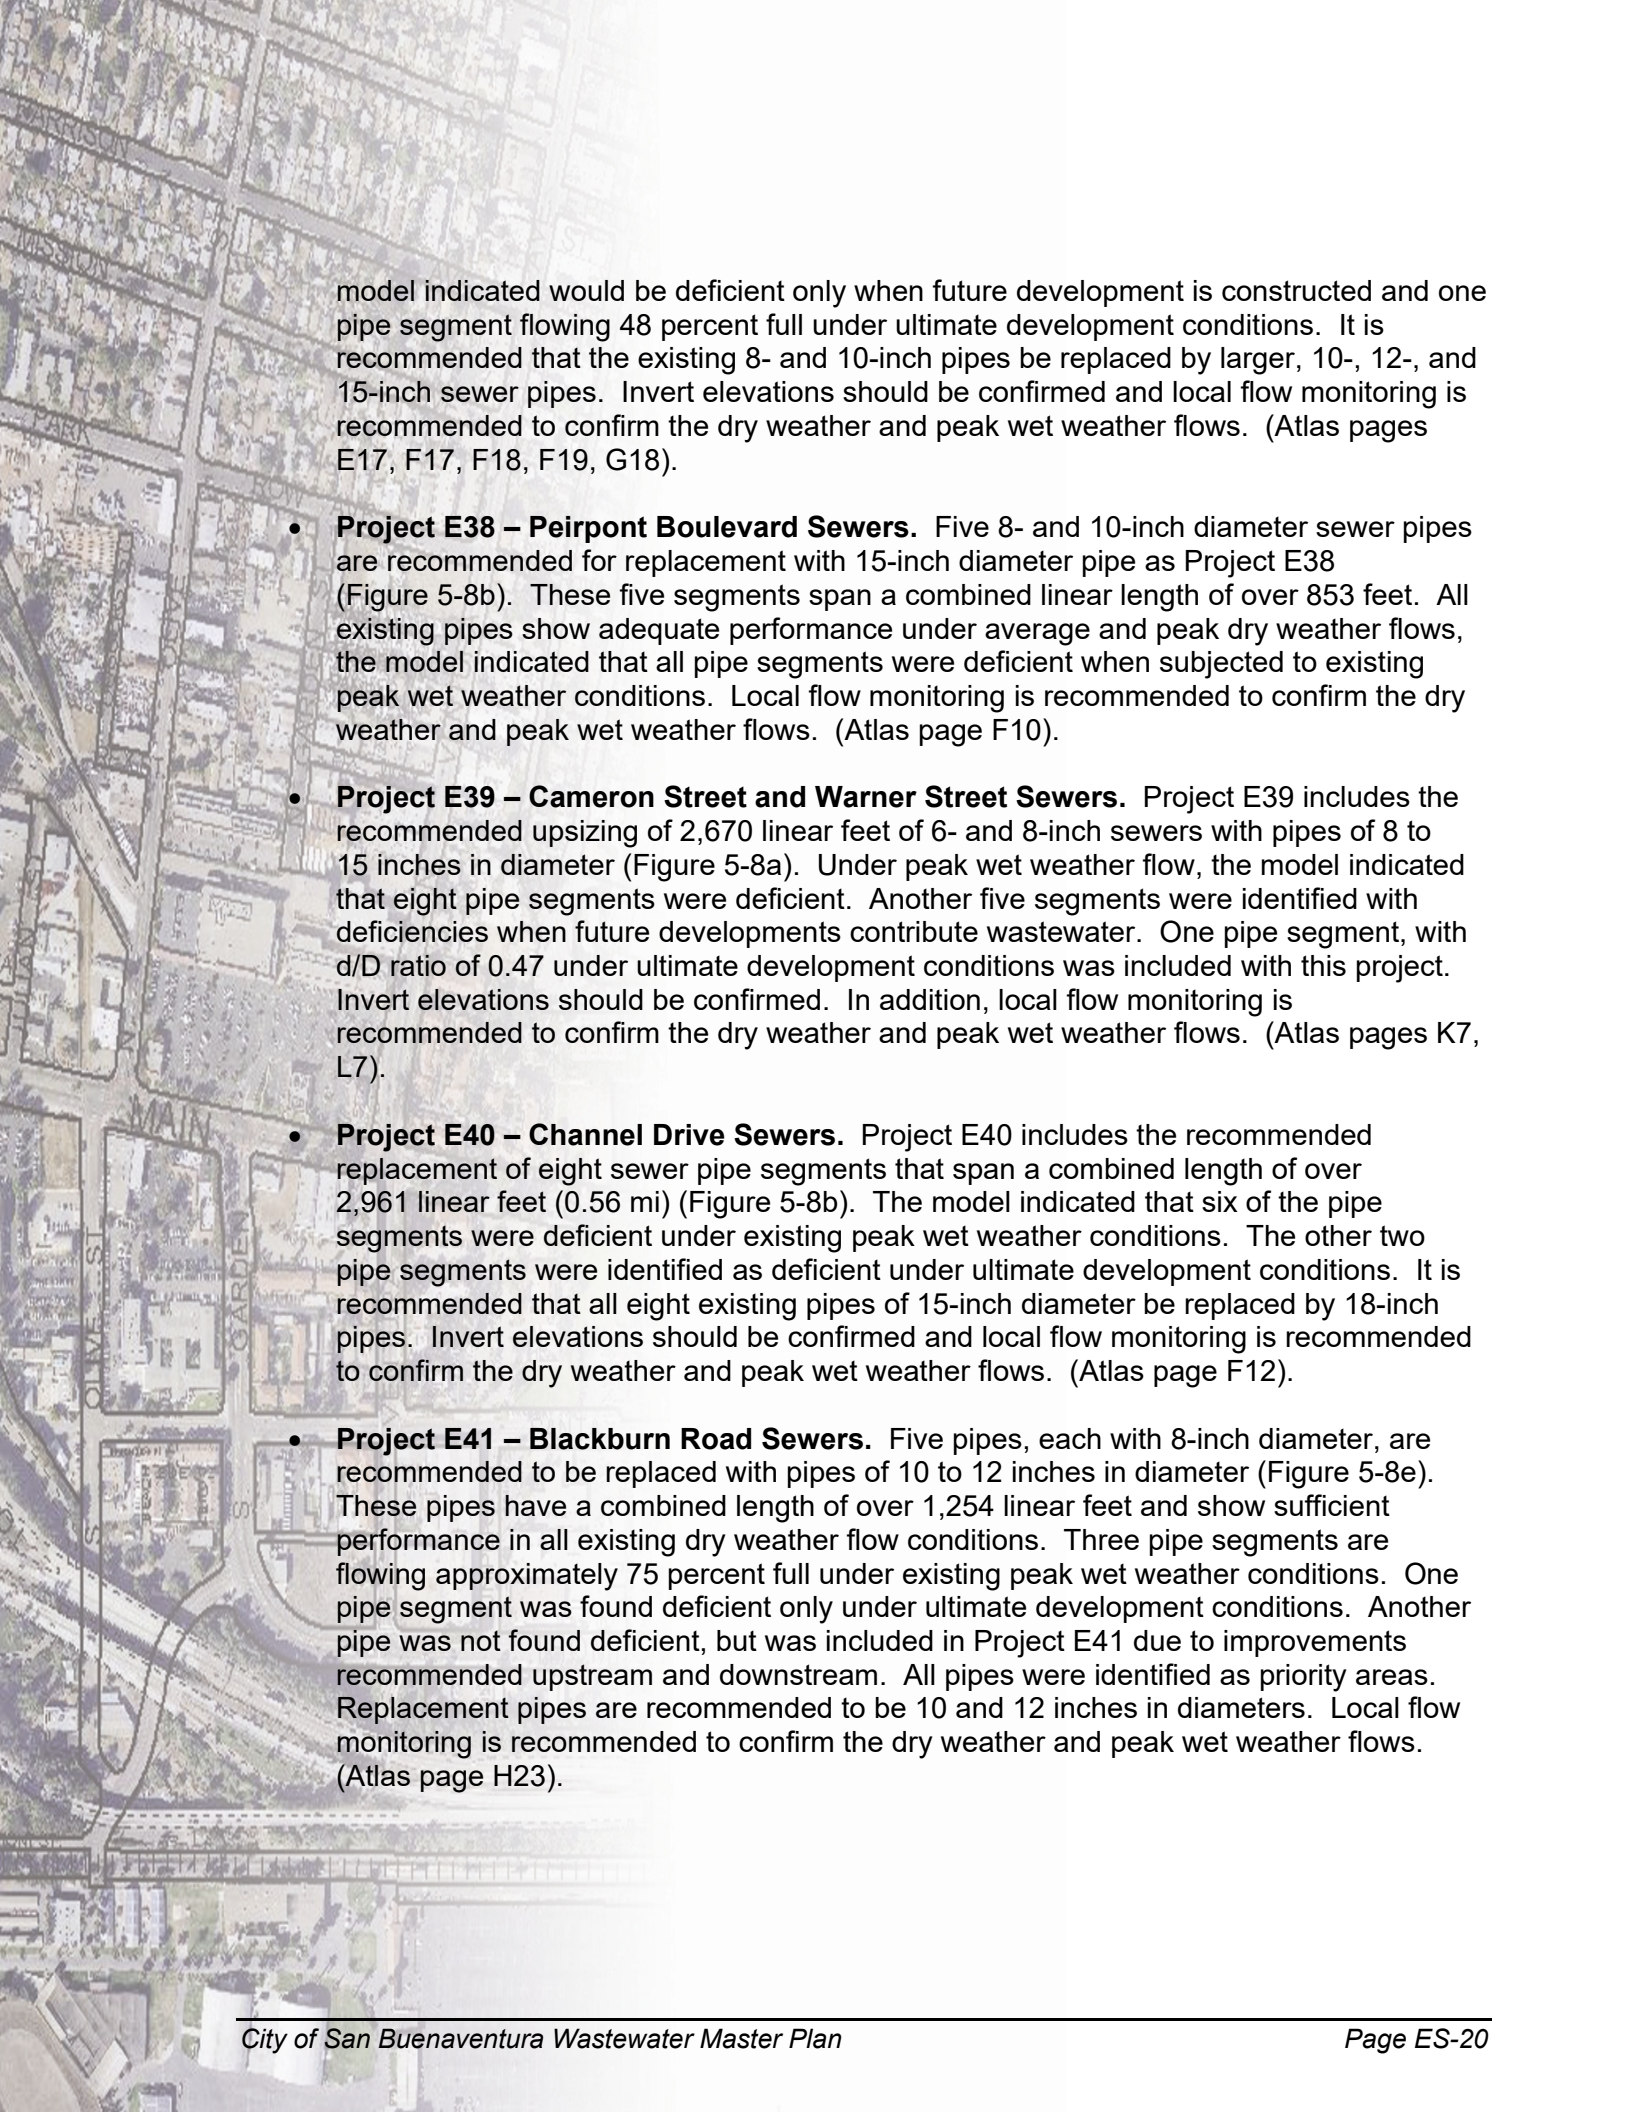

Project E34 provides sewer improvements along Telephone Road east of Victoria.

- Project E35 – Mills Road and 101 Freeway Sewers.** Project E35 includes six pipes, five of which are 18 inches in diameter and one that is 10 inches in size (Figures 5-8b, 5-8c). They have a combined reach of over 1,819 linear feet and will be upsized to pipes of 15, 21, or 24 inches in diameter. Under peak dry weather flow conditions, three of the six pipes were surcharging, while the remaining three were non-deficient under near-term development peak wet weather flows. However, all pipes were deficient when subjected to ultimate peak wet weather conditions. (Atlas pages E14, F14).
- Project E36 – Aurora Drive, Princeton Avenue, and Lafayette Street Sewers.** Project E36 includes the recommended replacement of 8- and 12-inch pipes totaling approximately 3,800 linear feet (Figure 5-8c). The model indicated that six pipes were surcharging under peak wet weather flow and other five were deficient under the same conditions. Five pipe segments were also found to be deficient under only future development conditions, and these pipes were included with this project. Recommended replacement pipes range in diameter from 10 to 18 inches. The invert elevations for pipes included in Project E36 should be confirmed. Additionally, local flow monitoring is recommended to confirm the dry weather and peak wet weather flows. (Atlas pages G17, H17, H18).
- Project E37 – Telephone Road, Thille Street, and Saratoga Avenue Sewers.** Project E37 consists of 20 segments of sewer pipeline with a combined reach of approximately 5,215 linear feet (0.99 mi) (Figure 5-8c). While none of the pipes were found deficient under existing dry weather flows, 13 of the pipe segments were deficient under existing peak wet weather conditions. Included in this recommended project are six pipe segments which the

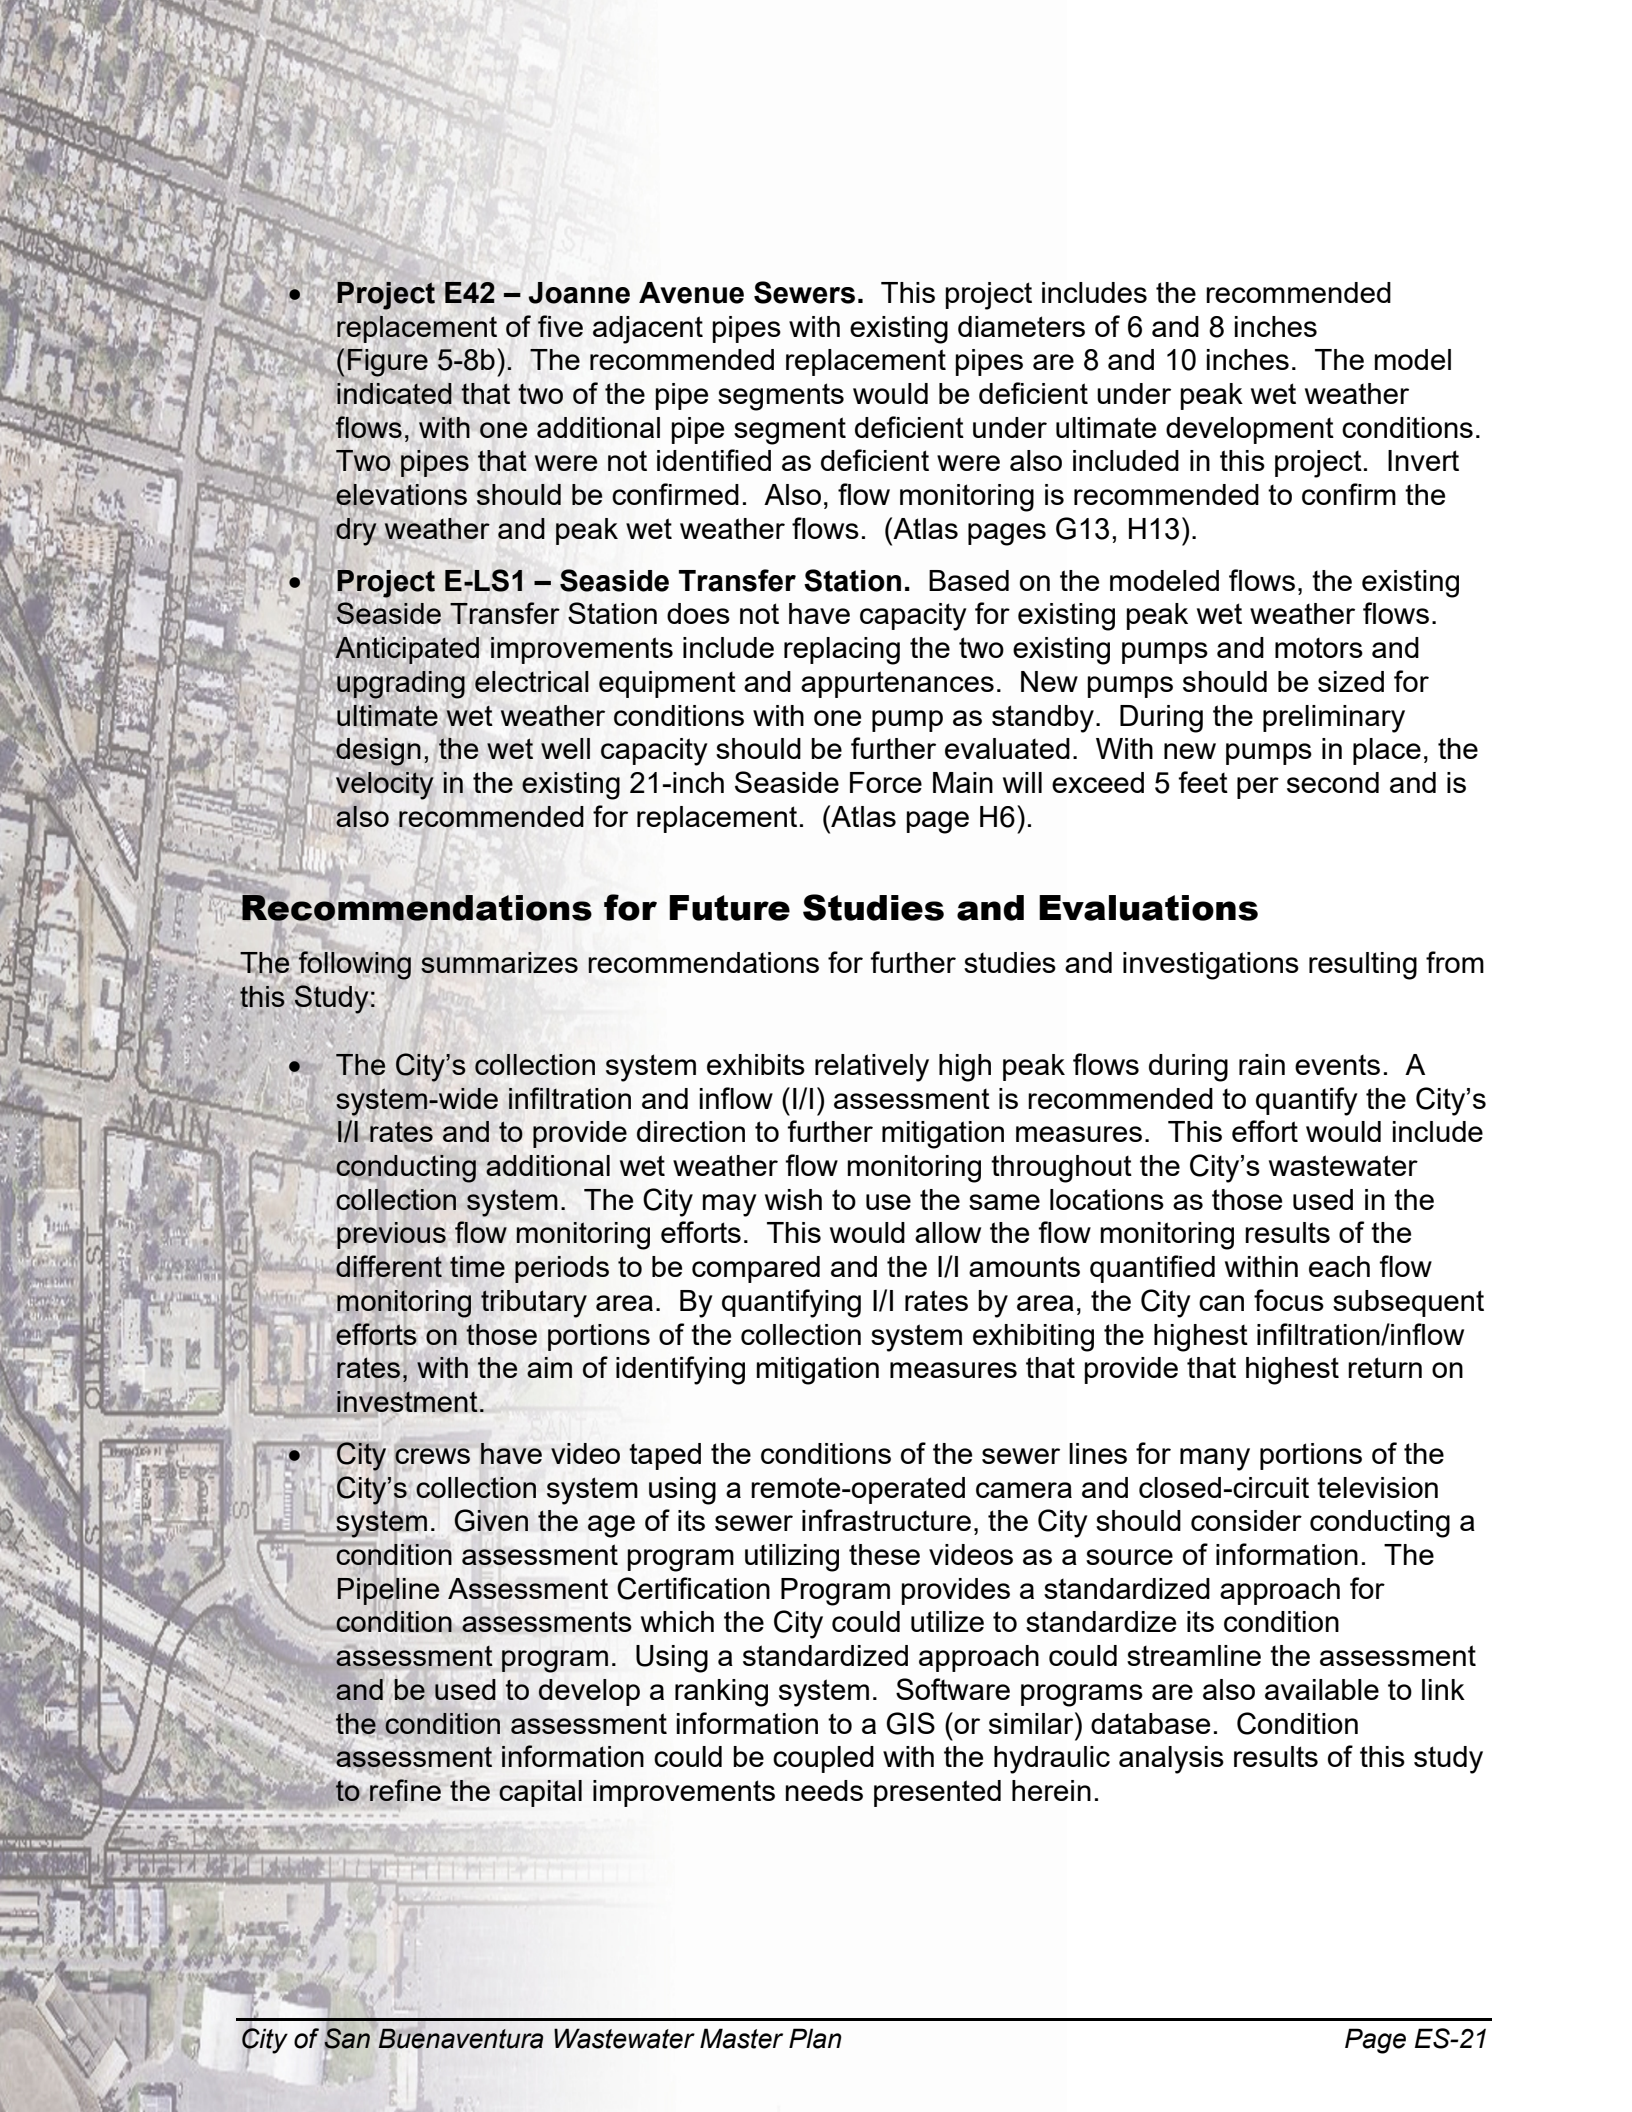

Saratoga Avenue looking north from Telephone Road at a portion of Project E37.

model indicated would be deficient only when future development is constructed and one pipe segment flowing 48 percent full under ultimate development conditions. It is recommended that the existing 8- and 10-inch pipes be replaced by larger, 10-, 12-, and 15-inch sewer pipes. Invert elevations should be confirmed and local flow monitoring is recommended to confirm the dry weather and peak wet weather flows. (Atlas pages E17, F17, F18, F19, G18).

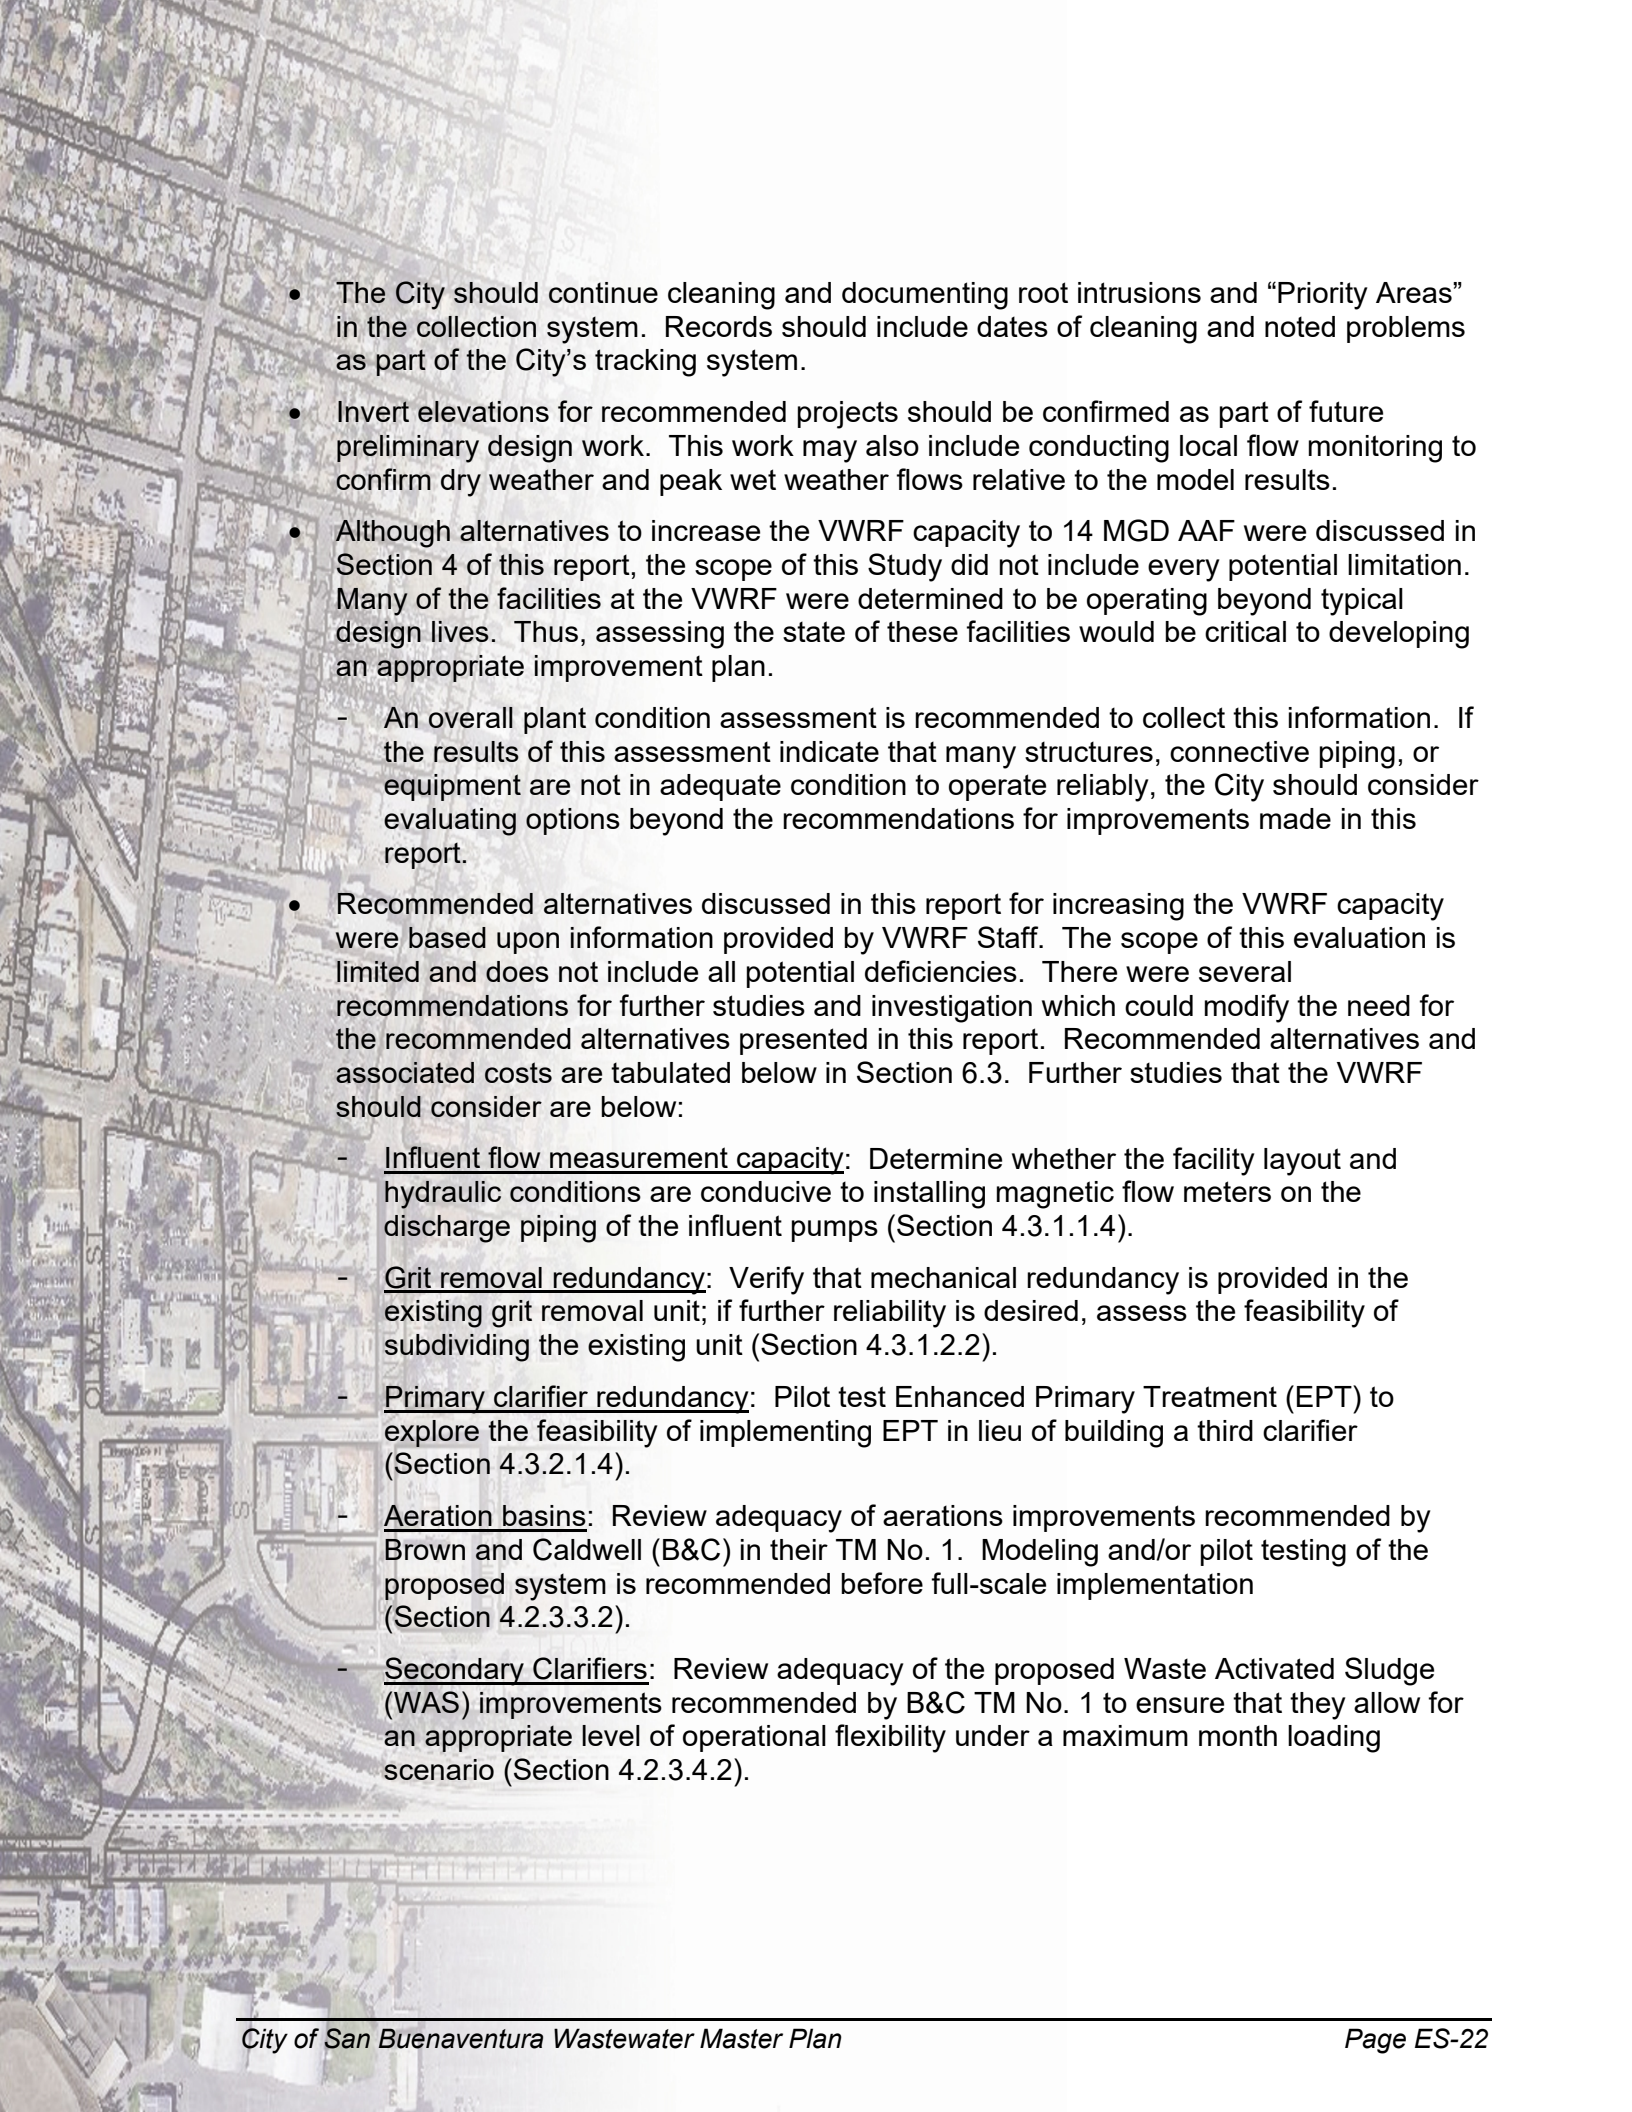

- **Project E38 – Peirpont Boulevard Sewers.** Five 8- and 10-inch diameter sewer pipes are recommended for replacement with 15-inch diameter pipe as Project E38 (Figure 5-8b). These five segments span a combined linear length of over 853 feet. All existing pipes show adequate performance under average and peak dry weather flows, the model indicated that all pipe segments were deficient when subjected to existing peak wet weather conditions. Local flow monitoring is recommended to confirm the dry weather and peak wet weather flows. (Atlas page F10).
- **Project E39 – Cameron Street and Warner Street Sewers.** Project E39 includes the recommended upsizing of 2,670 linear feet of 6- and 8-inch sewers with pipes of 8 to 15 inches in diameter (Figure 5-8a). Under peak wet weather flow, the model indicated that eight pipe segments were deficient. Another five segments were identified with deficiencies when future developments contribute wastewater. One pipe segment, with d/D ratio of 0.47 under ultimate development conditions was included with this project. Invert elevations should be confirmed. In addition, local flow monitoring is recommended to confirm the dry weather and peak wet weather flows. (Atlas pages K7, L7).
- **Project E40 – Channel Drive Sewers.** Project E40 includes the recommended replacement of eight sewer pipe segments that span a combined length of over 2,961 linear feet (0.56 mi) (Figure 5-8b). The model indicated that six of the pipe segments were deficient under existing peak wet weather conditions. The other two pipe segments were identified as deficient under ultimate development conditions. It is recommended that all eight existing pipes of 15-inch diameter be replaced by 18-inch pipes. Invert elevations should be confirmed and local flow monitoring is recommended to confirm the dry weather and peak wet weather flows. (Atlas page F12).
- **Project E41 – Blackburn Road Sewers.** Five pipes, each with 8-inch diameter, are recommended to be replaced with pipes of 10 to 12 inches in diameter (Figure 5-8e). These pipes have a combined length of over 1,254 linear feet and show sufficient performance in all existing dry weather flow conditions. Three pipe segments are flowing approximately 75 percent full under existing peak wet weather conditions. One pipe segment was found deficient only under ultimate development conditions. Another pipe was not found deficient, but was included in Project E41 due to improvements recommended upstream and downstream. All pipes were identified as priority areas. Replacement pipes are recommended to be 10 and 12 inches in diameters. Local flow monitoring is recommended to confirm the dry weather and peak wet weather flows. (Atlas page H23).

- 
- **Project E42 – Joanne Avenue Sewers.** This project includes the recommended replacement of five adjacent pipes with existing diameters of 6 and 8 inches (Figure 5-8b). The recommended replacement pipes are 8 and 10 inches. The model indicated that two of the pipe segments would be deficient under peak wet weather flows, with one additional pipe segment deficient under ultimate development conditions. Two pipes that were not identified as deficient were also included in this project. Invert elevations should be confirmed. Also, flow monitoring is recommended to confirm the dry weather and peak wet weather flows. (Atlas pages G13, H13).
 - **Project E-LS1 – Seaside Transfer Station.** Based on the modeled flows, the existing Seaside Transfer Station does not have capacity for existing peak wet weather flows. Anticipated improvements include replacing the two existing pumps and motors and upgrading electrical equipment and appurtenances. New pumps should be sized for ultimate wet weather conditions with one pump as standby. During the preliminary design, the wet well capacity should be further evaluated. With new pumps in place, the velocity in the existing 21-inch Seaside Force Main will exceed 5 feet per second and is also recommended for replacement. (Atlas page H6).

Recommendations for Future Studies and Evaluations

The following summarizes recommendations for further studies and investigations resulting from this Study:

- The City's collection system exhibits relatively high peak flows during rain events. A system-wide infiltration and inflow (I/I) assessment is recommended to quantify the City's I/I rates and to provide direction to further mitigation measures. This effort would include conducting additional wet weather flow monitoring throughout the City's wastewater collection system. The City may wish to use the same locations as those used in the previous flow monitoring efforts. This would allow the flow monitoring results of the different time periods to be compared and the I/I amounts quantified within each flow monitoring tributary area. By quantifying I/I rates by area, the City can focus subsequent efforts on those portions of the collection system exhibiting the highest infiltration/inflow rates, with the aim of identifying mitigation measures that provide that highest return on investment.
- City crews have video taped the conditions of the sewer lines for many portions of the City's collection system using a remote-operated camera and closed-circuit television system. Given the age of its sewer infrastructure, the City should consider conducting a condition assessment program utilizing these videos as a source of information. The Pipeline Assessment Certification Program provides a standardized approach for condition assessments which the City could utilize to standardize its condition assessment program. Using a standardized approach could streamline the assessment and be used to develop a ranking system. Software programs are also available to link the condition assessment information to a GIS (or similar) database. Condition assessment information could be coupled with the hydraulic analysis results of this study to refine the capital improvements needs presented herein.

- 
- The City should continue cleaning and documenting root intrusions and “Priority Areas” in the collection system. Records should include dates of cleaning and noted problems as part of the City’s tracking system.
 - Invert elevations for recommended projects should be confirmed as part of future preliminary design work. This work may also include conducting local flow monitoring to confirm dry weather and peak wet weather flows relative to the model results.
 - Although alternatives to increase the VWRF capacity to 14 MGD AAF were discussed in Section 4 of this report, the scope of this Study did not include every potential limitation. Many of the facilities at the VWRF were determined to be operating beyond typical design lives. Thus, assessing the state of these facilities would be critical to developing an appropriate improvement plan.
 - An overall plant condition assessment is recommended to collect this information. If the results of this assessment indicate that many structures, connective piping, or equipment are not in adequate condition to operate reliably, the City should consider evaluating options beyond the recommendations for improvements made in this report.
 - Recommended alternatives discussed in this report for increasing the VWRF capacity were based upon information provided by VWRF Staff. The scope of this evaluation is limited and does not include all potential deficiencies. There were several recommendations for further studies and investigation which could modify the need for the recommended alternatives presented in this report. Recommended alternatives and associated costs are tabulated below in Section 6.3. Further studies that the VWRF should consider are below:
 - Influent flow measurement capacity: Determine whether the facility layout and hydraulic conditions are conducive to installing magnetic flow meters on the discharge piping of the influent pumps (Section 4.3.1.1.4).
 - Grit removal redundancy: Verify that mechanical redundancy is provided in the existing grit removal unit; if further reliability is desired, assess the feasibility of subdividing the existing unit (Section 4.3.1.2.2).
 - Primary clarifier redundancy: Pilot test Enhanced Primary Treatment (EPT) to explore the feasibility of implementing EPT in lieu of building a third clarifier (Section 4.3.2.1.4).
 - Aeration basins: Review adequacy of aerations improvements recommended by Brown and Caldwell (B&C) in their TM No. 1. Modeling and/or pilot testing of the proposed system is recommended before full-scale implementation (Section 4.2.3.3.2).
 - Secondary Clarifiers: Review adequacy of the proposed Waste Activated Sludge (WAS) improvements recommended by B&C TM No. 1 to ensure that they allow for an appropriate level of operational flexibility under a maximum month loading scenario (Section 4.2.3.4.2).

- Anaerobic digestion capacity: Consider enhancing the ability to receive fats, oils, and grease (FOG) with the construction of a new digester (Section 4.3.6.1.4).
- In addition to the above recommended studies, the City should also work to complete the studies required by the Regional Water Quality Control Board related to the Estuary and recycled water.

Section 1: Introduction

Quote: A Vision for Ventura

“Our vision is for a prosperous and well-planned community. We seek to protect and enhance our unique “sense of place” that builds on our pride in Ventura’s history and natural setting. Our vision is for interesting, unique neighborhoods and districts, which reflect our values and heritage.”

Excerpt from the City of San Buenaventura General Plan, 2000.

Building on that shared vision, the City of San Buenaventura (City) embarked on an effort to revise its 1989 Comprehensive Plan that served as the General Plan used to guide land use, transportation and other important policy decisions. The 2000 General Plan is the culmination of that effort to translate the Ventura Vision into a coherent and comprehensive implementation plan to guide future development and preservation.

That landmark General Plan captured the results of “a partnership encompassing city government, non-profit organizations, community groups, businesses, schools and individual residents to chart the community’s future through a visioning process.”

Building from its vision for Ventura, the City has developed this Wastewater Master Plan to identify current needs and help guide future capital improvements. The City has completed numerous studies in the past concerning the wastewater collection and treatment system separately. However a comprehensive wastewater system study including both the collection system and treatment plant has not been completed.

One of the reasons that such a planning document has not been prepared is that the City is mostly built out and studies have been completed concentrating on different areas of the system, not as a whole. Without significant development pressures, there has been little need for collection system planning studies focused on identifying anticipated future flow rates and subsequent capital improvement needs for the overall system.

However, with revitalization and redevelopment efforts planned or underway, the City is proactively addressing its infrastructure needs to support the anticipated redevelopment efforts in keeping with the City’s vision for Ventura.

The following report summarizes the evaluation of the City’s wastewater collection and treatment systems, and the resulting capital improvement program recommendations.

1.1 Background

The City of San Buenaventura (City), also known as Ventura, was recently named one of America's most livable communities. The City is located in the South area of Ventura County, as shown on Figure 1-1. The City was incorporated in 1866, 84 years after the Mission San Buenaventura's founding in 1782. The City's current population is 105,000.

Through the Wastewater Division of its Public Works Department, the City provides wastewater service to approximately 98 percent of City residences as well as McGrath State Beach Park and the North Coast Communities (Ventura County Service Area 29).

The City's wastewater collection system is divided into four service areas known as the East, Midtown, Downtown, and Westside areas. The Eastside area extends from the City's easterly border to Kimball Road and Ramelli Avenue. The Midtown area is bounded by Kimball Road and Ramelli Avenue to the east and Laurel to the west, with the Downtown area extending westerly to Ventura Avenue. The Westside area generally represents the Ventura Avenue corridor to the City's westerly boundary. Figure 1-2 shows the four wastewater collection system service areas which represent the study area of this project.

Flows from the City's four wastewater service areas are treated at the City's Ventura Water Reclamation Facility, which provides primary, secondary, and tertiary levels of treatment to meet California Title 22 effluent water quality standards. The reclamation facility has a capacity of 14 MGD, with provisions for expansion up to 16.8 MGD. Average annual flows to the treatment facility total about 9.3 MGD.

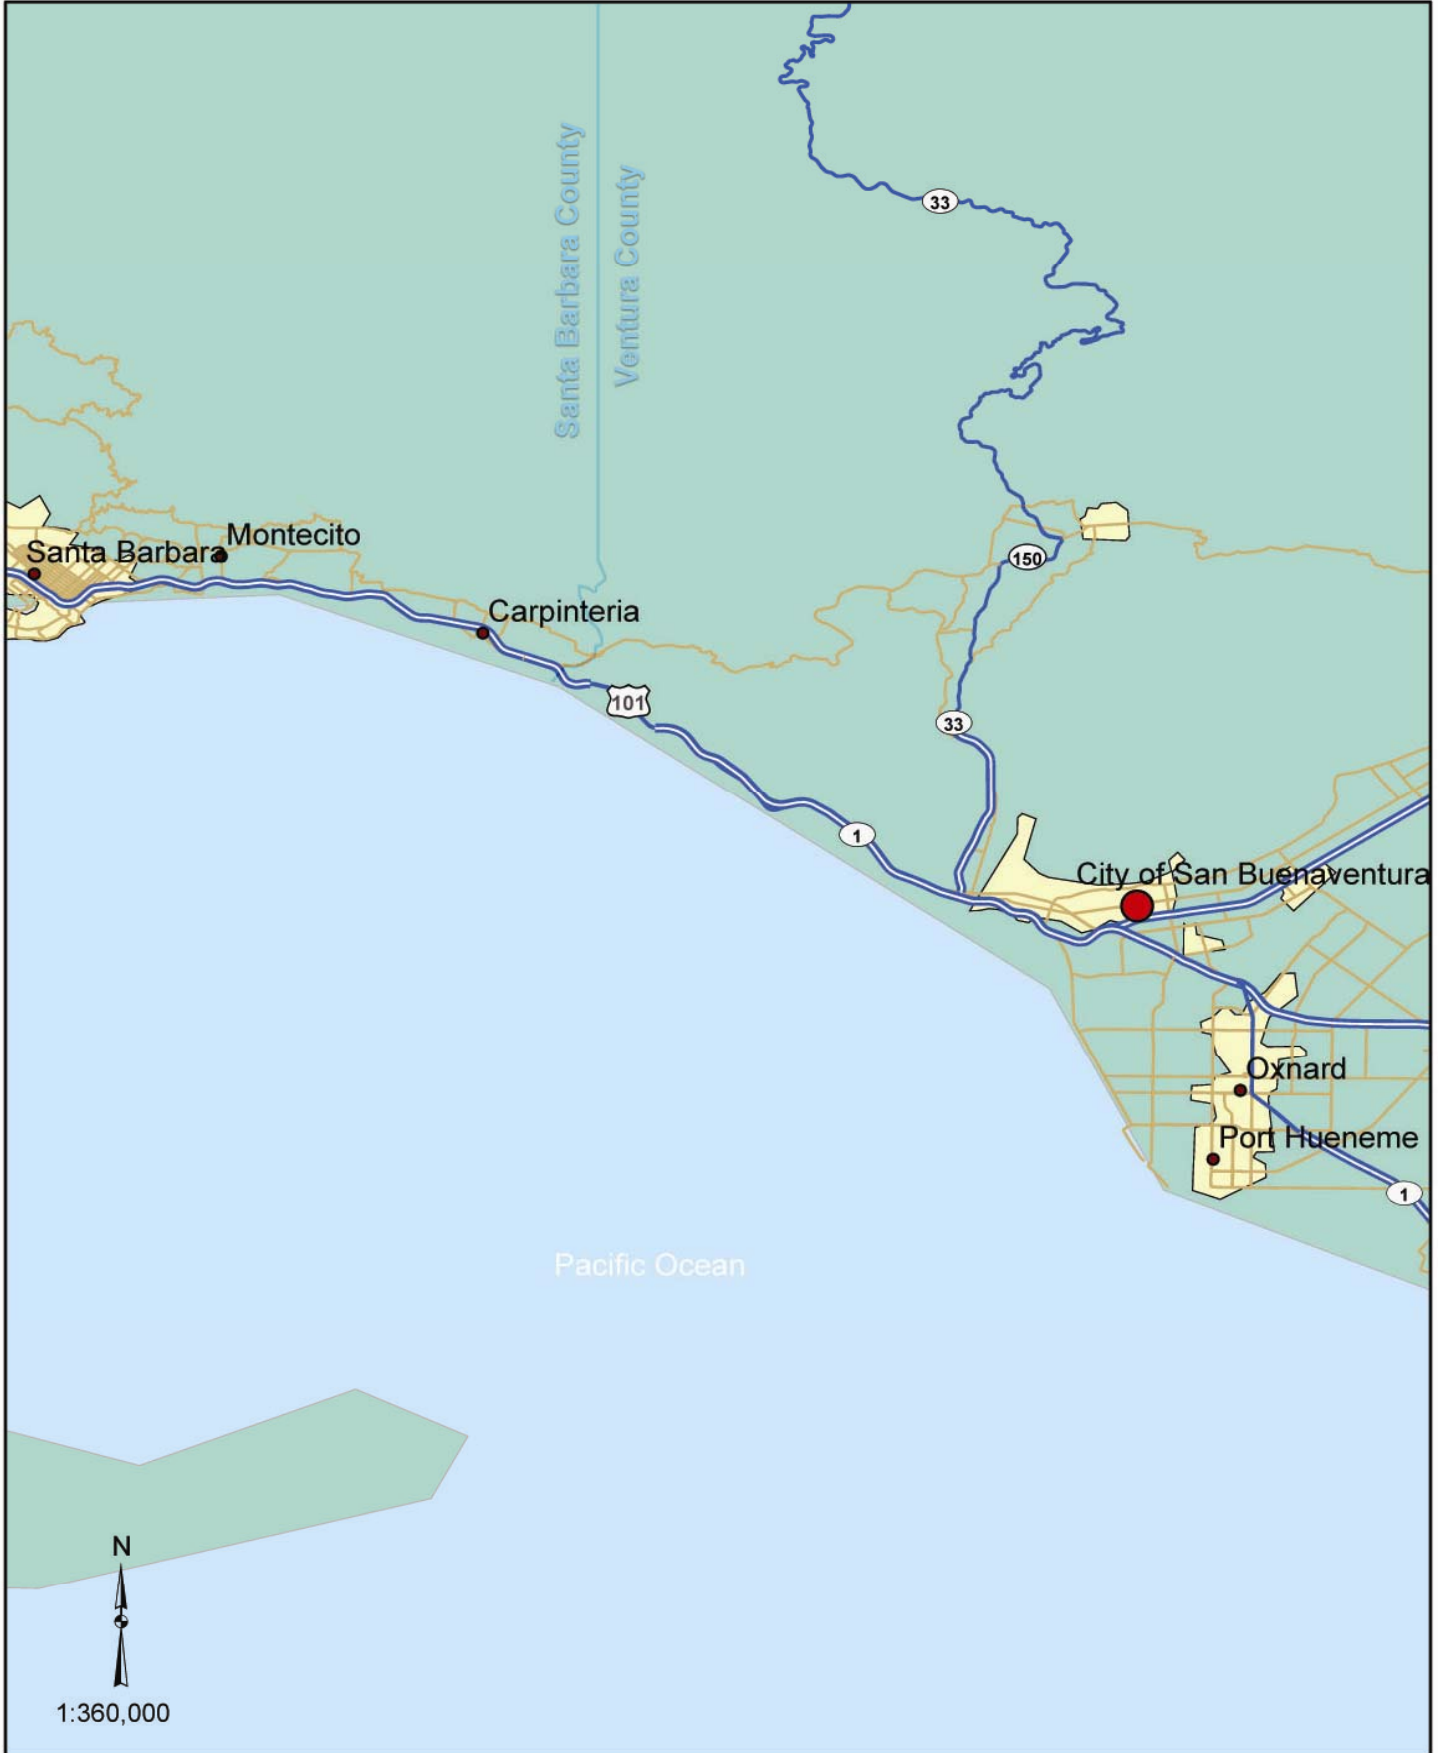

1.2 Study Area

Study area for this Wastewater Master Plan consists of the City's four (4) wastewater service areas and the City's Ventura Water Reclamation Facility as shown in Figure 1-2. This study area boundary defines the limits of the wastewater collection system facilities evaluated as part of this study.

The modeled wastewater collection system within this Wastewater Master Plan is comprised of the following:

- Approximately 285 miles of gravity sewers between 4 and 42 inches in diameter
- 5 miles of forcemain
- 11 wastewater lift stations

The collection system sewers convey flows generally from east to west and north to south, culminating at the Ventura Water Reclamation Facility.

1.3 Purpose and Scope

This study addressed the City's key collection system and wastewater treatment infrastructure needs through ultimate buildout. Development information used in the evaluation of the collection system needs was provided by the City's planning department. Collection system data, including the collection system GIS database, was provided by the City's Information Technology Department. Specific issues addressed in this study included the following:

- Estimation of wastewater flow for existing, near-term, and General Plan horizon (build out) conditions.
- Evaluation of existing and future wastewater treatment infrastructure needs.
- Identification of collection system improvements for the existing, near-term and ultimate development levels.

While focusing on the infrastructure needs of the collection and wastewater treatment systems, this study can also be used for developing budgets and financial planning. Scope of work for this project included the following seven major tasks:

- Development of a land use database (GIS).
- Development of unit wastewater flows.
- Development of wastewater flow projections.
- Evaluation of the Ventura Water Reclamation Facility.
- Development of a sewer hydraulic model using H2O Map Sewer.
- Evaluation of the wastewater collection system.
- Development of a wastewater system capital improvement program.

This study identified projects (including sizing, costs, time phasing, and location) that were conceptual in nature. As such, recommended facilities should undergo further evaluations based on conditions present at the time of project implementation to confirm the recommendations (including: size, alignment, length, hydraulics, material requirements, costs, etc.) of this study.

1.4 Authorization

Authorization for this project was provided through an engineering services agreement between the City of Ventura and Kennedy/Jenks Consultants (Kennedy/Jenks) and a notice to proceed dated November 21, 2005.

1.5 Acknowledgements

This study was prepared by Kennedy/Jenks with input, guidance and direction of individuals from the City of Ventura. City Staff contributing to this study include the following:

- Susan Rungren, Utilities Engineer
- Dan Pfeifer, Wastewater Superintendent
- Joe Santos, Wastewater Maintenance Supervisor
- Donald Burt, Wastewater Plant Supervisor

Without the contributions of these individuals, this Wastewater Master Plan would not have been possible.

Kennedy/Jenks greatly appreciates this opportunity to work with the City on this important project. The Kennedy/Jenks team involved in the preparation of this study included the following:

- Jeff Savard, P.E. – Project Manager
- Mike Joyce, P.E. – Project Engineer Treatment System Evaluations
- Patrick Huston, P.E. – Project Engineer Collection System Evaluations
- Susan Dahlhemier – Project Engineer, Hydraulic Modeling and Analysis

1.6 Planning Studies

A number of previous studies and investigations were reviewed as part of this study. The following list identifies the primary reports reviewed in the development of this Wastewater Master Plan:

- *City of San Buenaventura's Comprehensive Plan Update to the Year 2010*, City of San Buenaventura Planning Division, Community Development Department, adopted August 28, 1989. The document provided land use information for the tributary areas outside of the Downtown area of San Buenaventura.
- *City of San Buenaventura Ventura Water Renovation Facility Master Plan*, Montgomery Watson, September 1993. This document presented an evaluation of the existing plant facilities and provided recommendations for interim and long-term upgrades to the plant.
- *East Ventura Sanitary Sewer Collector Study*, Boyle Engineering Corporation, August 2, 1995. This study analyzed the wastewater collection system and facilities for the City of San Buenaventura's eastern service area. This document provided guidance and comparison value to the wastewater flow estimates developed in this Master Plan.
- *City of San Buenaventura, 1997 Design Standards*. This document provided design criteria for the hydraulic modeling portion of this Study.
- *City of San Buenaventura Water Renovation Facility Master Plan Update*, dated August 1997. This document investigated the impacts of the activated sludge structure's longer life due to structural rehabilitation.
- *City of San Buenaventura's Midtown/Westside Sewer System Study Dry Weather Temporary Flow Monitoring*, MGD Technologies, Incorporated, October 7, 2003. This

report summarizes dry weather wastewater flow monitoring from August 22, 2003 through September 4, 2003. This document provided calibration data and confirmation of existing system flows.

- *City of San Buenaventura's Midtown/Westside Sewer System Study Wet Weather Temporary Flow Monitoring*, MGD Technologies, Inc., May 10, 2004. This flow monitoring study covered the monitoring period from March 9, 2004 through April 4, 2004.
- *City of San Buenaventura Downtown/Westside Sewer System Study*, Kennedy/Jenks Consultants, August 2005. This study analyzed the Downtown and Westside portions of the collection system based on redevelopment information resulting from the City's Downtown Specific Plan.
- *City of San Buenaventura 2005 Ventura General Plan*. This plan was adopted August 8, 2005.
- *City of San Buenaventura's Sewer Flow Monitoring of Eastside Ventura Wastewater Flow* by Downstream services, Inc. dated November 2005.
- *City of San Buenaventura Final Draft Downtown Specific Plan*, December 2006. This plan was approved by the City's Planning Commission in February 2007.
- *City of San Buenaventura Flow Report* by MRC Technologies, Inc. dated December 2007.

1.7 Abbreviations and Definitions

The following lists and defines abbreviations often used in this study.

AAF	average annual flow	City	City of San Buenaventura
ac	acre	CRWQCB	California Regional Water Quality Control Board
ac-ft	acre-feet		
ADD	average daily demand	CT	contact time
ADWF	average dry weather flow	CWRC	California Water Recycling Criteria
APN	assessors parcel number		
AWWF	average wet weather flow	DAFT	dissolved air flotation thickeners
BAR	bioaugmentation reaeration	d/D	depth to diameter
BNR	biological nutrient removal	dia.	diameter
BOD	biochemical oxygen demand	DU	dwelling unit
CalARP	California Accidental Release Prevention Program	DU/ac	dwelling unit per acre
CCR	California Code of Regulations	EDU	equivalent dwelling unit
CCT	chlorine contact tank	ENR-CCI	Engineering News Record – construction cost index
CIP	capital improvement program	ETS	effluent transfer station

O&M	operation and maintenance		
OSHA	Occupational Safety and Health Administration		
PDWF	peak dry weather flow		
PWWF	peak wet weather flow		
psi	pounds per square inch		
RAS	return activated sludge		
RMP	risk management plan		

Section 2: Wastewater System Design Criteria

This section presents the wastewater system design criteria used in developing and evaluating facility requirements as part of the City's Wastewater Master Plan. The design criteria presented in this section includes the following:

- Delineation of the study area
- Land uses within the study area
- Collection system design criteria
- Wastewater peaking factors
- Collection system design criteria

These criteria will form the basis from which collection facilities will be evaluated.

2.1 Study Area Land Uses

Each parcel within the study area was assessed for existing, near-term, and General Plan development levels. A master land use database was created in GIS to aid in the production of this Wastewater Master Plan, as well as the development of the concurrent Water Master Plan being completed for the City. The development levels were assessed using the following land use planning data obtained from the City:

- Parcel polygons
- General Plan land use polygons
- City boundary
- Water meter locations and descriptions
- Historical water meter billing data
- Near-term development tables

2.1.1 Existing Development

Existing land use categories are based upon County Assessor data encoded in the City's parcel database in conjunction with water meter billing data. Water meter billing data was geocoded to parcels, matching each water meter within the study area to the nearest parcel. Only parcels within the City limits with recorded water use from billing data were included in the calculations for existing development. A list of water meters sewered by alternate agencies was also provided by the City for exclusion from existing development calculations. Parcels containing both sewered and non-sewered meters were not excluded from calculations for existing development.

The County Assessor data contained a break-down of 153 descriptive land uses included within eight (8) main categories. Kennedy/Jenks retained these eight (8) main categories, splitting the

industrial category into 3 separate levels for a total of 10 Master Plan land use categories. These 10 Master Plan land use categories were used when categorizing land use and wastewater flow data on the tables and figures that follow. The 153 descriptive land uses were summarized into 23 Master Plan land uses for the development of wastewater flow factors described later in this section.

Table 2-1 illustrates the 10 Master Plan land use categories developed for the Wastewater Master Plan and provides a description of the included land uses. Figure 2-1 displays existing City parcels consistent with the Master Plan land uses. Parcels displayed as having no existing water use include parcels with no water meter billing data. These parcels were fully developed by applying the appropriate duty factor for the comprehensive plan horizon. Parcels displayed as sewered by others include parcels containing only water meters designated as sewered by others according to City data.

2.1.2 Near-Term Development

A table of near-term development projects (pending projects January 2007) was provided by the City (found in Appendix A). The list contained project numbers, associated parcel numbers, project address, dwelling unit (DU) per addition (residential only), acre per addition, and population per addition. Near-term sewer flows for residential developments were calculated using a factor of 194 gpd/DU. This factor was confirmed through wastewater flow monitoring and is consistent with that used for the Downtown/Westside Sewer System Study. Wastewater flows for commercial, industrial and institutional developments were calculated using the appropriate duty factor for the land use. Figure 2-2 shows the location of each near-term development project identified by the City. These developments are specifically identified in Table 2-2 showing project numbers, names, and anticipated dwelling unit counts for each residential development. This list of anticipated developments is not inclusive of all future developments.

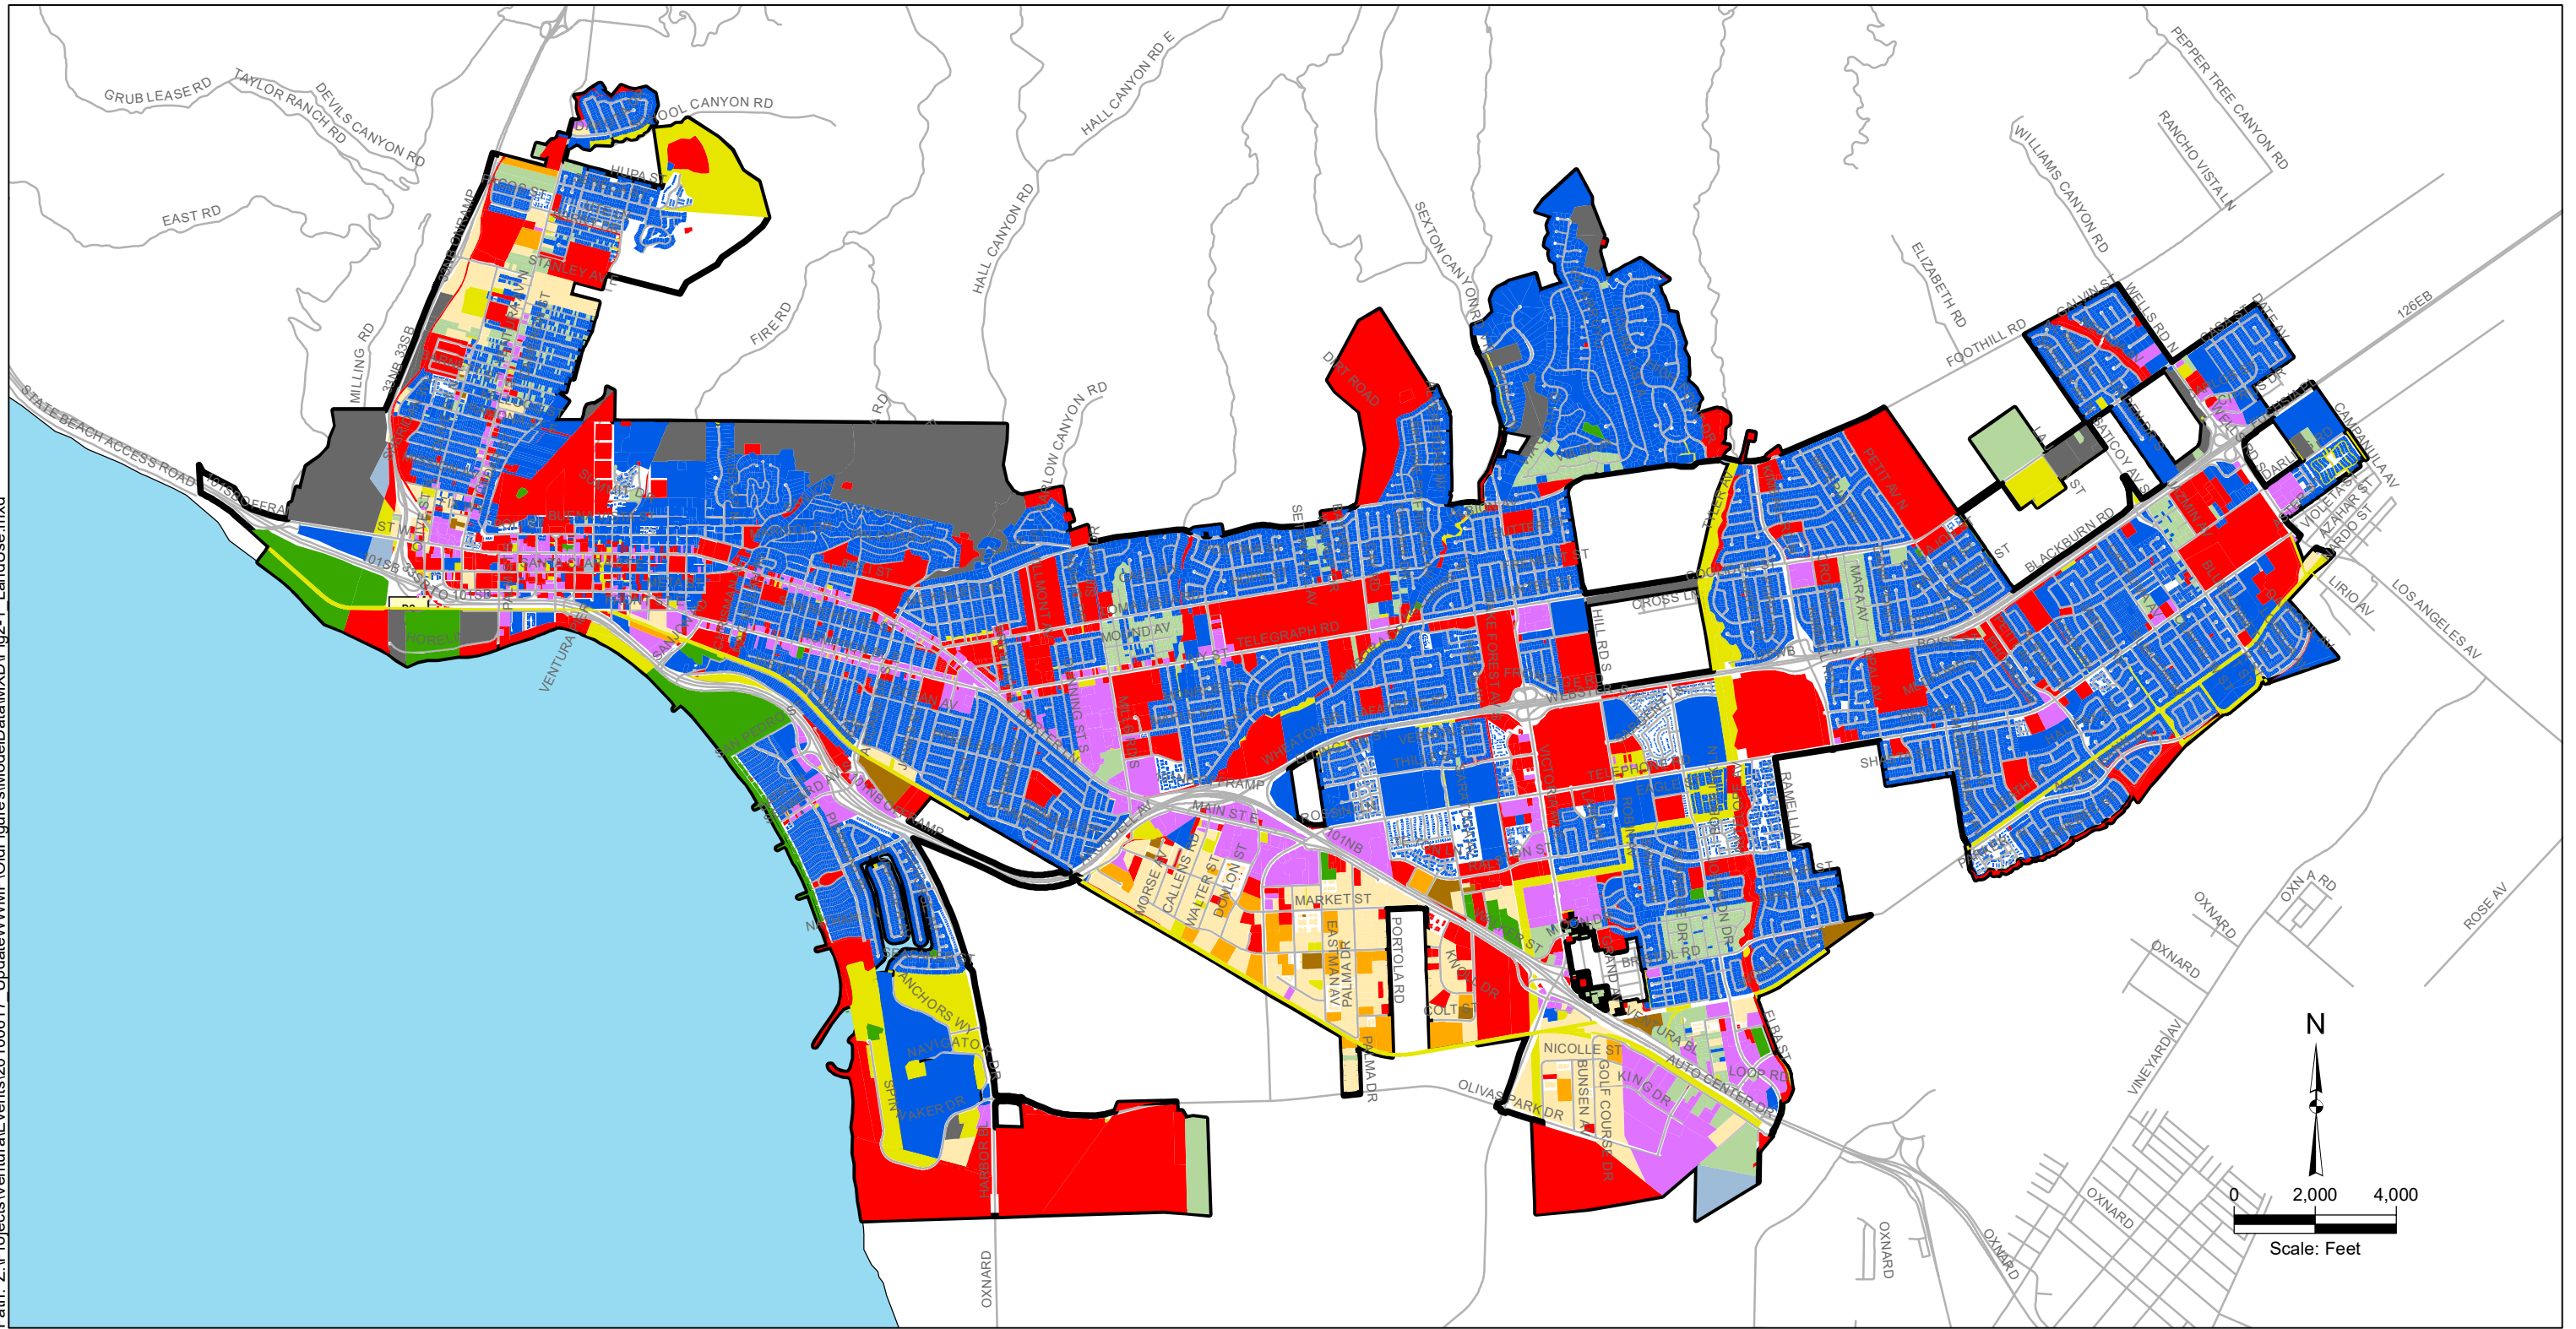

2.1.3 General Plan Development

General Plan development is based on allowable future redevelopment of all areas to General Plan limits. General Plan development assumes all vacant parcels will redevelop to the land use categories described in the General Plan. General Plan development also assumes 10 percent of existing parcels currently using less than General Plan allowance will redevelop to the General Plan allowance. Parcels currently using more than General Plan allowance were assumed to continue existing usage. General Plan allowance is calculated as the parcel area multiplied by the corresponding wastewater flow factor. Figure 2-3 displays ultimate land use by Master Plan category.

**TABLE 2-1
MASTER PLAN EXISTING LAND USE CATEGORIES**

Master Plan Category	Description
<i>Industrial 1</i>	Industrial/Manufacturing Usage Below 2,500 GPD
<i>Industrial 2</i>	Industrial/Manufacturing Usage Between 2,500 GPD and 7,500 GPD

2.2 Wastewater Flow Factors

Wastewater flow factors for the City's Wastewater Master Plan were developed using a combination of data, including:

- The City's landuse data base (described in Section 2.1)
- The City's water meter billing records
- Return-to-sewer ratio estimates

The City's water meter billing records were received for the time period of January 2004 to February 2006. The data from January 2004 to December 2005 was analyzed to compute water usage in gallons per day (gpd) for each meter. Each meter was then spatially assigned by parcel, and the total existing usage (gpd) was computed for each parcel.

The water billing database was used to estimate existing wastewater flows by utilizing return-to-sewer ratios for each Master Plan category. The return-to-sewer ratio for a given land use category is defined as the percentage of water demand that is returned to the sanitary sewer system for that land use category. Return-to-sewer ratios were used to develop wastewater flow factors, which were in turn used to estimate near-term and general plan flows. The return-to-sewer ratios for this Master Plan were calculated based on analysis of the parcel database in conjunction with flow monitoring studies conducted by MGD Technologies Inc. (MGD) and DownStream Services Inc. (DownStream), and flow monitoring data collected at the Seaside Transfer Station and Influent Pump Station by the City. Parcels were coded by basin and return-to-sewer ratios were developed to correspond with the basin flow monitoring information. Table 2-3 summarizes the return-to-sewer ratios used for the purpose of this study.

**TABLE 2-3
RETURN-TO-SEWER RATIOS**

No.	Land Use Category	Recommended Return-to-Sewer Ratio
1	Industrial Type 1 - Usage Below 2,500 GPD	80%
2	Industrial Type 2 - Usage Between 2,500 GPD and 7,500 GPD	77%
3	Industrial Type 3 - Usage Above 7,500 GPD	71%
4	Recreation	53%
5	Residential	69%
6	Resource Production	45%
7	Services	80%
8	Trade	79%
9	Transportation/Community/Utilities	81%
10	Undeveloped	0%

The return-to-sewer ratios shown in Table 2-3 were then applied by parcel to the water meter data provided by the City and a wastewater flow factor in gallons per day per acre was developed. Wastewater flow factors were developed for all 153 sub-categories. The sub-categories were analyzed and grouped into 23 Master Plan land use categories, shown in

Table 2-4. These flow factors and other analysis methods were utilized to estimate near-term and General Plan flow as needed.

**TABLE 2-4

2.3 Peaking Factors

Dry weather and wet weather peaking factors were developed for this study using a combination of flow data collected by the City, existing metering data at the City's Seaside Transfer Station, and Wastewater Treatment Plant Influent Pump Station, and data from prior studies.

The City contracted with both MGD and DownStream to conduct temporary sewer flow monitoring studies in the City during different times over the past five (5) years. MGD conducted two studies in the Downtown/Westside area during August and September 2003 and March 2004, respectively, of fourteen (14) and twenty-one (21) day durations, respectively. DownStream conducted a seven (7) day study in November 2005 for the Eastside area. All three flow monitoring studies took place during dry weather periods. Flow monitoring results from the March 2004 study were used to create a peak dry weather factor curve and equation,

because that study was of the longest duration and gave more conservative results than the other two studies. Recommended peak dry weather equation is shown below:

$$\text{Peak Dry Weather Factor} = 1.99 \times (\text{Average Dry Weather Flow Rate})^{-0.0295}$$

This peak dry weather equation corresponds well to the recommended peak dry weather curve equation for the City of Oxnard, which would be expected to have similar wastewater collection system characteristics.

MGD also conducted a wet weather flow monitoring study. Over a twenty-one (21) day period in March 2004. Measurements were taken at twelve (12) different sites in the Downtown/Westside area. However, no wet weather events occurred during this time frame. Without wet weather flow monitoring data, the peak wet weather curve and equation were determined from metered flows taken at the Seaside Transfer Station and the Influent Pump Station during wet weather events. This flow was adjusted using peaking curves from other recent studies in order to better represent peak flows for lower, average flow conditions. This method was also used to determine the peak wet weather curve and equation for the Downtown/Westside Sewer Study. This curve is recommended for use in this Master Plan as well. Recommended peak wet weather equation is shown below:

$$\text{Peak Wet Weather Factor} = 3.62 \times (\text{Average Dry Weather Flow Rate})^{-0.185}$$

It is recommended that the City conduct another wet weather flow monitoring study. Between late 2000 and late 2005, most rain events occurred between late November and mid-March. However, during the 2005/2006 rain season, most rain events occurred in the months of February, March, and April. Therefore, it appears that February and March provide the best opportunity for capturing a wet weather event. Peak wet and peak dry weather curves are shown in Figure 2-4.

**FIGURE 2-4
RECOMMENDED PEAKING FACTOR
CURVES**

2.4 Collection System Design Criteria

2.4.1 Lift Station Criteria

Lift Stations should be sized for peak wet weather flow with manufacturer’s recommended cycling times for pumping equipment and should be sized based upon the following criteria:

- Lift stations should be capable of meeting the criteria with the largest capacity pump serving as standby.
- Assume 60 percent pump except where other information is available.
- Assume 90 percent motor except where other information is available.
- Wetwell capacity to contain volume at peak flow for 4 hours and/or provide alternative sources of electrical power to operate lift station.

2.4.2 Forcemain Criteria

For the purposes of this study, the following design criteria are proposed for forcemains:

- Minimum forcemain size: 8-inch PVC designed for future loads, plus 25 percent
- Minimum velocity: 3 feet per second
- Maximum velocity: 5 feet per second
- Maximum allowable headloss: 10 ft per 1,000 ft of pipeline
- Maximum desirable headloss: 5 ft per 100 ft of pipeline
- Hazen-Williams C factor: 130

2.4.3 Gravity Main Criteria

For the purposes of this study, the following design criteria are proposed for gravity mains:

- Pipes 15 inches in diameter and smaller^(a): ½ full at peak flow
- Pipes greater than 15 inches in diameter^(b): ¾ full at peak flow
- Pipes constructed under freeways^(b): ½ full at peak flow
- Minimum velocity^(b): 2 feet per second
- Maximum velocity: 10 feet per second
- Manning's n for pipes: 0.013
- Dry Weather Flow peaking factor: $Q_{pk} = 1.99 * Q_{ave}^{-0.0295}$ (MGD)
- Wet Weather Flow peaking factor: $Q_{pk} = 3.62 * Q_{ave}^{-0.185}$ (MGD)
- Minimum Slope requirements: See Table 2-5

Notes:

- (a) The criteria to evaluate deficient pipes with a diameter 15 inches and smaller is different from the design criteria, as described in Section 5.
- (b) Per the *1997 Engineering Design Standards*, City of San Buenaventura.

**TABLE 2-5
MINIMUM SLOPE REQUIREMENTS**

Sewer Size (in)	Grade (%)
8	0.4 ^(a)
10	0.28
12	0.24
15	0.12
18	0.108
21	0.088
24	0.068
27	0.060
30	0.052
33	0.044
36	0.040
42	0.032

Note: (a) Per the *1997 Engineering Design Standards*, City of San Buenaventura.

These criteria were developed using the *1997 Engineering Design Standards*, City of San Buenaventura and recent project experience and will be used to evaluate collection system facilities and size proposed facilities as part of the forthcoming hydraulic modeling efforts.

Section 3: Wastewater Flow Projections

This section presents the wastewater flow projections used in evaluating the City's wastewater treatment and collection system, and in identifying facility requirements for the following development increments steps:

- Existing conditions
- Near-term conditions
- General Plan horizon

Wastewater flow projections have been developed utilizing the wastewater duty factors, peaking factors, and the existing, near-term, and ultimate land use designations described in Section 2.

3.1 Existing Wastewater Flow

Existing wastewater flows were calculated on a parcel-by-parcel basis by applying the return-to-sewer ratios to the geocoded water meter billing data. Land use flow values were checked using the results of wastewater flow monitoring efforts between 2004 and 2006 that were conducted for the purposes of this study and the Downtown/Westside Sewer System Study. Table 3-1 summarizes the calculation of the existing wastewater flows for a total flow of 9.3 MGD.

**TABLE 3-1

Total			9,340,000

3.2 Near-Term Wastewater Flow

Near-term wastewater flows were calculated using a combination of DU information and wastewater flow factors. Residential developments were calculated on a DU basis utilizing a factor of 194 gpd/DU. Industrial, commercial and institutional developments were calculated by applying the wastewater flow factor to the development area. Table 3-2 summarizes the calculation of the wastewater flows from near-term developments. When combined with the existing wastewater flow presented Table 3-1, total near-term wastewater flow is 11.1 MGD.

**TABLE 3-2
NEAR TERM WASTEWATER FLOW SUMMARY**

<i>Total Flow from Near-Term Developments</i>			<i>1,770,000</i>
<i>Total Existing Flow</i>			<i>9,340,000</i>
Total Flow			11,100,000

Notes:

- (a) Unit flows for residential properties are per dwelling unit and not per acre.
- (b) For residential properties the area served is the number of dwelling units.

3.3 General Plan Horizon Wastewater Flow

General Plan flows were calculated using the wastewater flow factors and land use database developed for this study. Both infill and densification were factors in development of General Plan flows. Wastewater duty factors were applied to parcels with no current water usage. A comparison was conducted between parcels with current water usage and their ultimate calculated water usage based on Master Plan category was made. Parcels currently using less than their calculated ultimate usage were assumed to have a 10 percent densification rate. Parcels using more than their calculated ultimate usage were assumed to continue existing usage. The combination of infill and densification produced an average dry weather flow increase of approximately 26 percent between existing and General Plan flow. Table 3-3 summarizes the calculation of the General Plan Horizon wastewater flows. As shown in Table 3-3, the total estimated wastewater flow for ultimate development conditions is 12.6 MGD.

**TABLE 3-3
GENERAL PLAN HORIZON WASTEWATER FLOW SUMMARY**

Note:

(a) Flows for residential properties include the additional flows from residential properties in the near-term development that were not based on land area.

3.4 Wastewater Flow Summary

Table 3-4 summarizes the projected average dry weather flows for the study area for existing, near-term, and general plan horizon time steps. In addition to the flows within the study area, there are four outside sources that are currently contributing flows, or may in the future. These other tributary areas are shown in Table 3-4 and are summarized further in Table 3-5. These four (4) sources are: the (1) McGrath State Beach Park, (2) the North Coast Communities (Ventura County Service Area No. 29), (3) the Montalvo Municipal Improvement District (MMID), and (4) the Saticoy Sanitary District (SSD).

**TABLE 3-4
SUMMARY OF PROJECTED AVERAGE DRY WEATHER FLOW**

Development Condition	Study Area Flow (MGD)	Other Tributary Areas (MGD)
Existing	9.3	0.1
Near Term	11.1	0.3
General Plan	12.6	0.4

**TABLE 3-5

General Plan	13.0	24.0	29.3

Section 4: Wastewater Treatment Facility Process Evaluation and Improvement Plan

4.1 Introduction

The City is completing a Wastewater Master Plan that includes the collection system and treatment plant. Part of the planning element is an evaluation of the existing Ventura Water Reclamation Facility (VWRF). This section provides information on the VWRF assessment and performance evaluation. Specifically, this section includes the following items:

- Consideration of the previous and anticipated National Pollutant Discharge Elimination System (NPDES) permit requirements.
- Projections of the future influent waste loads based on previously projected flows and measured historical data.
- Evaluations of the capacities of the various unit processes.
- Identification of the process bottlenecks that may develop as flow and load increase.
- Discussions of the alternatives for improvements to address these bottlenecks.
- Recommendations for an improvement plan to increase VWRF capacity to the permit rated capacity of 14 MGD annual average flow (AAF).

Although the projections from Section 3 indicate that the ultimate AAF may not reach the permit rated capacity of 14 MGD, this capacity was selected as a defensible basis for evaluation to provide a reasonable level of conservatism in the improvement plan.

During the preparation of this Master Plan, the City's updated NPDES permit was in draft form (R4-2007-XXXX, Appendix C). Therefore discharge requirements were uncertain and the following two discharge alternatives were considered: (1) continued discharge to the Estuary and (2) ocean outfall discharge. This section discusses in detail the implications of these two discharge alternatives on the wastewater treatment facilities.

As the Master Plan was approaching completion, on March 6, 2008 the California Regional Water Quality Control Board (CRWQCB) adopted NPDES Permit No. CA0053651 (Appendix D). This new permit requires a third discharge alternative not addressed in detail in this Master Plan. This third alternative limits the effluent discharge to the Estuary to 9.0 MGD. This permit also changes the point of compliance to the Effluent Transfer Station and requires further studies to determine the impact of the VWRF effluent discharge on the Estuary. In addition, these studies are to explore alternative effluent disposal options including the construction of treatment wetlands and recycled water use. Upon completion of these studies, the new Permit will be reopened for potential revision.

4.1.1 NPDES Discharge Requirements

NPDES Permit No. CA0053651, Order No. 00-143, was issued by the CRWQCB on December 10, 2000, and defined the previous requirements for discharge from the VWRF to the Santa Clara River and Estuary (Estuary). This permit was replaced by NPDES Permit No. CA00535, Order No. R4-2008-0011 adopted March 6, 2008.

In accordance with these permits, the rated capacity of the VWRF is 14 MGD AAF. At the time this report was prepared, the City of Ventura (City) was negotiating with the State Water Resources Control Board (SWRCB) regarding proposed effluent criteria, including criteria for some constituents that cannot be met with the existing secondary or tertiary treatment processes and the discharge volume to the Estuary. The City is interested in continuing to upgrade and improve the VWRF to promote NPDES compliance at the permitted capacity under a variety of circumstances anticipated by the draft NPDES permit (R4-2007-XXXX).

Previous effluent permit limits are summarized in Table 4-1a. The entire previous NPDES permit is included in Appendix B, which also contains many other permit limits for non-conventional pollutants.

**TABLE 4-1A
PREVIOUS NPDES PERMIT CA0053651 EFFLUENT REQUIREMENTS
(10 DECEMBER 2000)**

Requirements	Units	Average Monthly ^(a)	Average Weekly ^(a)	Maximum Daily ^(a)
<i>Effluent Requirements</i>				
BOD ^(b)	mg/l ^(c)	20	30	45
Total Suspended Solids	mg/l	15	40	45
Oil and Grease	mg/l	10	-	15
Settleable Solids	ml/l	0.1	-	0.3
Residual Chlorine	mg/l	-	-	0.1
<i>Receiving Water Requirements</i>				
pH	-	6.5 to 8.5, no change by more than 0.2 units		
Dissolved Oxygen	mg/l	7, no determination less than 5		
Total Coliform Organisms	MPN ^(d) /100 ml ^(e)	200		

Notes:

- (a) To be ascertained by a 24-hour composite.
- (b) 5-day, 20 degrees Celsius (°C) biochemical oxygen demand (BOD).
- (c) mg/l = milligrams per liter.
- (d) MPN = most probable member.
- (e) ml = milliliter.

The assessment of performance for the VWRf is based on the previous NPDES permit limits for BOD and total suspended solids (TSS). These effluent requirements remained unchanged in the Draft Permit Order No. R4-2007-XXXX and the newly adopted Permit Order No. R4-2008-0011. Effluent requirements from NPDES Permit No. CA0053651, Order No. R4-2007-XXXX, which was issued by the California Regional Water Quality Control Board (CRWQCB) on July 12, 2007 were considered in anticipation of future permit revisions. The adopted NPDES Permit No. CA0053561, Order No. R4-2008-0011 was consistent with the anticipated effluent quality requirements. In accordance with the revised permit, additional effluent quality limitations are summarized in Table 4-1b. The proposed and adopted NPDES permits are included in Appendices C and D, respectively.

From review of the draft effluent requirements that were available at the time of this evaluation, it seemed reasonably conservative to consider a design average effluent total ammonia limit of 1 mg/l and a design average effluent total inorganic nitrogen limit of 10 mg/l, in addition to the stipulations of the previous permit requirements (December 10, 2000).

Furthermore, the proposed revisions to the VWRf NPDES permit included a stepped reduction in discharge to the Santa Clara Estuary (Estuary), at a rate of 1 MGD per year beginning in 2008, such that discharge to the Estuary will be completely eliminated by 2018. However, consideration for this option was not given in this report. An alternative long-range plan is discussed in more detail in Sections 4.4 and 4.5 to address how the near-term recommended improvements for NPDES permit compliance may be impacted by a complete withdrawal of discharge to the Estuary and an alternative discharge point.

**TABLE 4-1B
NEW NPDES PERMIT CA0053651 EFFLUENT REQUIREMENTS
(6 MARCH 2008)**

Requirements	Units	Average Monthly ^(a)	Average Weekly ^(a)	Maximum Daily ^(a)
<i>Proposed Effluent Requirements</i>				
Summer Ammonia-N ^(b) (May to October)	mg/l	0.045	-	0.30
Summer Total Ammonia-N ^(c) (May to October)	mg/l	2.6	-	1.5
Winter Ammonia-N ^(b) (November to April)	mg/l	0.079	-	0.53
Winter Total Ammonia-N ^(d) (November to April)	mg/l	6.3	-	3.5
Nitrate + Nitrite as Nitrogen	mg/l	10	-	-
Nitrite as Nitrogen	mg/l	1	-	-

Notes:

- (a) To be ascertained by a 24-hour composite.
- (b) Interpreted from the revised permit to mean free, unionized ammonia.
- (c) Conversion from free, unionized ammonia to total ammonia assuming 25°C, 7.5 pH, and no salinity for Average Monthly conversion and 30°C, 8.5 pH, and no salinity for Maximum Daily conversion.
- (d) Conversion from free, unionized ammonia to total ammonia assuming 20°C, 7.5 pH, and no salinity for Average Monthly conversion and 25°C, 8.5 pH, and no salinity for Maximum Daily conversion.

In addition to discharging to the Estuary, the VWRP is permitted to produce recycled water for turf and landscape irrigation. The recycled water Permit Order No. 87-45, issued by the CRWQCB on March 23, 1987, defines reliability and effluent quality requirements for the production of recycled water at the VWRP. In accordance with this permit, the recycled water must meet more stringent requirements with regard to disinfection, effluent turbidity, and other non-conventional pollutants. The City is interested in improving the VWRP to promote recycled water compliance up to the capacity allowed under the NPDES permit for a variety of circumstances.

4.1.2 Existing and Projected Flows and Loadings

Historical data were analyzed and used to project future loadings for use in this evaluation. Data sets from January 2002 through December 2005 were specifically excluded from analysis, since this data was not considered representative of actual loadings. During this period, influent sampling may have included recycle streams for solids handling processes. A headworks improvement project and temporary relocation of the influent sampler would have exaggerated influent measurements.

Based on a history of relatively consistent influent loading prior to the temporary relocation of the influent sampler, data sets from January 1997 through December 2001 were used to estimate the current waste loads and loading projections. Current flow, peaking factors, and flow projections were estimated using data from January 1997 through December 2005, since

the flow measurements were not affected by relocation of the influent sampler. A summary of the existing and projected flows and loadings are provided in Table 4-2.

**TABLE 4-2
DESIGN FLOWS AND LOADS**

Criteria	Units	Current (1997-2001 Loads, 1997-2005 Flows)	General Plan (Ultimate)
Annual Average Flow (AAF)	MGD	9.5	14.0
Average Dry Weather Flow (ADWF)	MGD	9.3	13.0
Maximum Month Flow (MMF)	MGD	11.9	17.5
Maximum Day Flow (MDF)	MGD	16.2	23.8
Maximum Day Flow, Summer (MDFS)	MGD	12.8	18.9
Maximum Hour Flow (MHF)	MGD	25.7	37.8
Annual Average TSS	lbs/d ^(a)	18,700	26,750
Maximum Month TSS	lbs/d	24,040	34,300
Annual Average BOD	lbs/d	21,580	30,800
Maximum Month BOD	lbs/d	24,780	35,360
Annual Average COD ^(b)	lbs/d	43,100	61,520
Maximum Month COD	lbs/d	50,380	71,900
Annual Average Ammonia	lbs/d	2,010	2,870
Maximum Month Ammonia	lbs/d	2,330	3,320
Annual Average TKN ^(c)	lbs/d	3,330	4,750
Maximum Month TKN	lbs/d	3,850	5,490
Assumed Alkalinity, as CaCO ₃ ^(d)	mg/l	350	350
Assumed pH	-	7.2	7.2
Winter Wastewater Temperature	°C	16.6	16.6
Summer Wastewater Temperature	°C	23.0	23.0

Notes:

- (a) lbs/d = pounds per day.
- (b) COD = chemical oxygen demand.
- (c) TKN = total kjeldahl nitrogen.
- (d) CaCO₃ = calcium carbonate.

It should be noted that since completion of the headworks improvement project, influent sampling has returned to its permanent location and should not include any recycle streams. Influent sampling should be monitored carefully to validate the accuracy of these loading assumptions.

4.2 VWRF Assessment and Performance Evaluation for Continued Discharge to the Estuary and Production of Recycled Water

This evaluation assesses limitations of the existing VWRF to treat projected flows and loads in compliance with anticipated NPDES effluent permit limits for continued discharge to the Estuary and production of recycled water.

The following sections address each unit process within the liquid and the solids treatment streams. A long-range plan for an alternative discharge location, after permit regulated withdrawal from the Estuary, is discussed in more detail in Sections 4.4 and 4.5 of this chapter. Four methods were used to evaluate these unit processes: (1) mathematical determinations based on known engineering principles and common practice, (2) stress testing, (3) information provided by the VWRF Staff, and (4) computer simulations.

Each section includes the following:

- Technical data for each unit process.
- Predicted operational parameters at projected flows and loads.
- Current operational constraints and redundancy considerations.
- Identified needs for improvements.

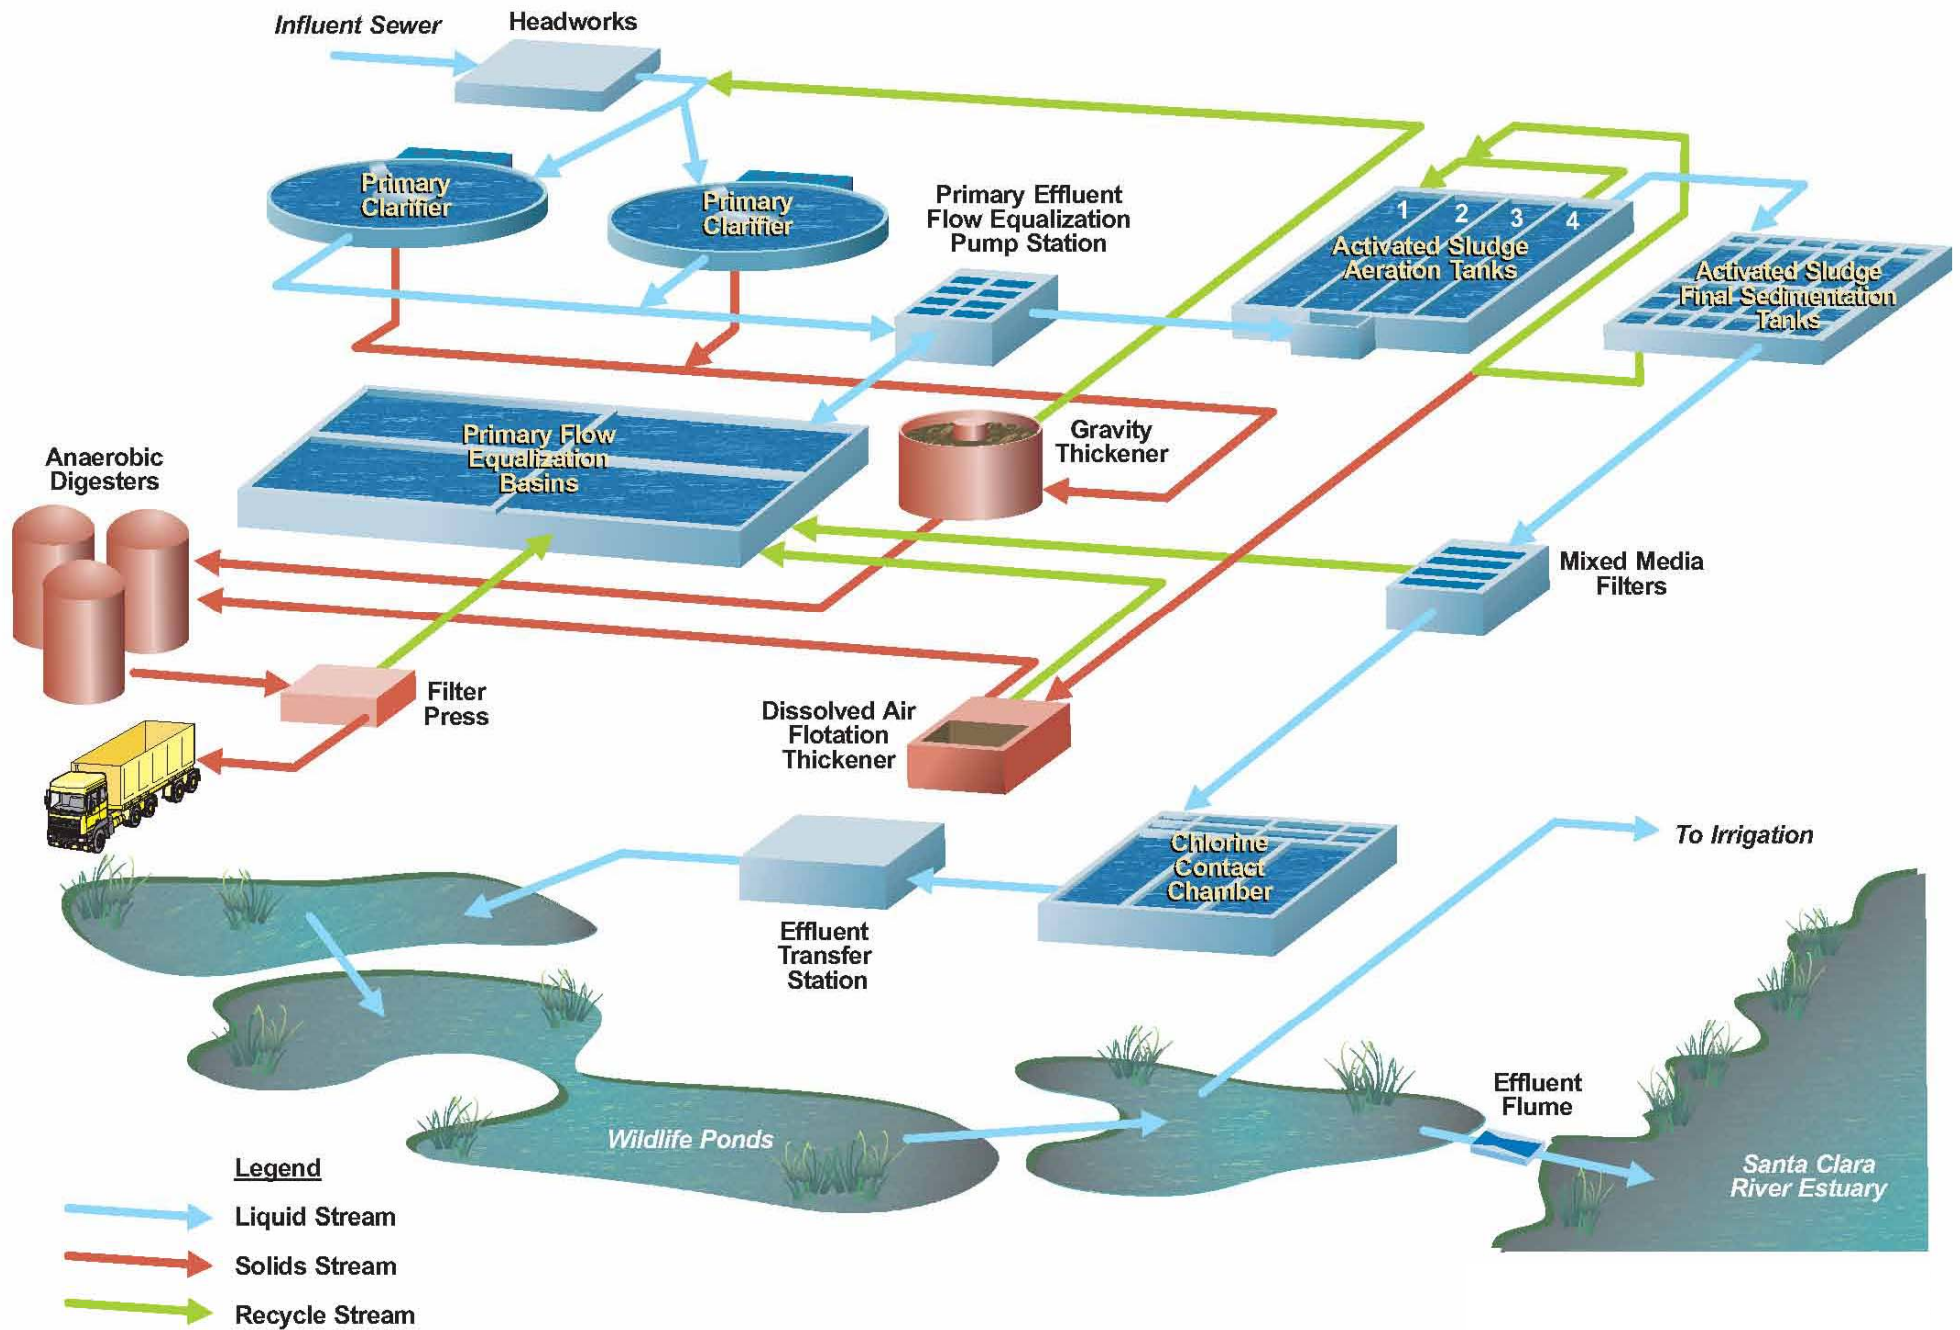

4.2.1 Existing Treatment Facilities

The VWRF is a tertiary treatment facility with primary clarification, equalization basins, an activated sludge process designed for biological nutrient removal, secondary clarification, tertiary filtration, and chlorination. The VWRF is currently required to discharge a minimum of 5.6 MGD to the Estuary, but it also produces recycled water for turf and landscape irrigation. The VWRF treats domestic, commercial, and industrial wastewater flows from the City.

More information on service population and industry is provided in Sections 2 and 3. A process schematic of the VWRF is attached as Figure 4-1. The assessment and performance evaluation addresses the following unit processes:

Liquid Treatment Processes

- Headworks (screening, influent pumping, grit removal, and influent flow measurement)
- Primary Clarifiers
- Aeration Tanks
- Secondary Clarifiers
- Mixed Media Filters
- Disinfection
- Effluent Pumping

Figure 4-1

Solids Handling Processes

- Gravity Thickener
- Dissolved Air Flotation
- Anaerobic Digestion
- Filter Presses

It should be noted that information for some components of the VWRF was unavailable or possibly out of date. This evaluation used the best information available from VWRF Staff. Further consideration should be given to performing a plant assessment to compile comprehensive, accurate, and up-to-date information on the facility.

It is critical to note that not all components of the VWRF were included in this evaluation. Components not considered in this evaluation included liquid and sludge process piping, chemical storage and metering equipment, equalization basins, process mixing requirements, and electrical equipment.

Based on previous hydraulic analyses of the equalization system, it is understood that the City is planning an improvement project to replace the forcemain between the primary effluent pump station and the aeration basins. The City is confident that this improvement will be sufficient to ensure adequate equalization capacity for 14 MGD AAF. However, if for some reason this improvement does not yield sufficient capacity, it is recommended that the City compile flow data at 15-minute intervals to allow for analysis of diurnal flow patterns in evaluating capacity at the equalization basins. For the purpose of this assessment, it is assumed the equalization basins have sufficient capacity to equalize the projected maximum day flow.

4.2.2 Process Capacity and Redundancy Requirements

Process capacity has been defined in different terms within this evaluation.

- Total Capacity: Defined as the capacity of a unit process with all tanks or units in operation.
- Firm Capacity: Defined as the capacity of a unit process when the largest single tank or a unit is taken out of service.

Because the VWRF produces recycled water, it is subject to both the water quality criteria and reliability requirements of Title 22 of the California Code of Regulations (CCR) as well as NPDES water quality criteria and reliability requirements. A stipulation of the CCR is that primary treatment, biological treatment, secondary clarification, coagulation, filtration, and disinfection have installed redundancy, replacement equipment available onsite with provisions for short-term storage, or provisions for long-term storage.

For the purposes of this assessment, all liquid treatment processes and associated equipment will be evaluated on the basis of firm capacity (i.e., maintaining NPDES and recycled water quality requirements with the largest single tank or unit out of service).

The solids handling facilities are not subject to the same redundancy requirements, but the VWRP does have an agreement with the San Joaquin Composting Facility (SJCF) that sludge being shipped to the SJCF will meet the USEPA 40 CFR Part 503 definition of Class B biosolids.

High dewatered solids concentration is preferred to facilitate hauling and disposal, but not required by the SJCF. The SJCF also has provisions to accept sludge that does not meet Class B standards. Therefore, the digesters and dewatering equipment will be evaluated on the basis of total capacity because the VWRP has alternative options for disposal. Other components of the solids handling facilities, including thickeners and ancillary pumping equipment, will be evaluated on the basis of firm capacity because the efficiency of these units can affect the performance of the liquid treatment processes.

4.2.3 Liquid Treatment Processes

4.2.3.1 Headworks and Influent Pumping

4.2.3.1.1 Technical Data

The headworks and influent pumping station, which includes influent pumping, screening, grit removal, and flow measurement, was recently upgraded and put into service in January 2005. Primary components and capacities of these facilities are summarized in Table 4-3.

**TABLE 4-3
HEADWORKS AND INFLUENT PUMPING STATION TECHNICAL DATA**

Technical Data	Number of Units	Type	Total Capacity MGD	Firm Capacity MGD
Influent Pumps	2 duty, 1 standby	Centrifugal	54.0	36.0
Influent Screens	1 duty, 1 standby	3/8-inch Cog Screen	90.0	45.0
Grit Removal	1	Aerated Grit Chamber	54.0 ^(a)	0.0
Flow Measurement	2	18-inch Parshall Flume	31.8	15.9

Note:

(a) The rated capacity is assumed to be the total capacity of the influent pumps. The rated capacity could not be determined with the available information, but typically aerated grit chambers are sized to provide a 2 to 5 minute detention time at the design flow (M&E, 4th Edition).

4.2.3.1.2 Capacity Assessment, Operational Limitations, Redundancy Considerations, and Identified Improvement Needs

Referring to the flow projections in Table 4-2, the headworks and influent pumping station must accommodate the projected maximum hourly flow of 37.8 MGD, because flow equalization does not occur until after the primary clarifiers. Additional observations include the following:

- **Influent Pumping:** Influent pumping consists of three (3) mixed-flow centrifugal pumps. The pumps were installed as a part of the headworks improvement project completed in 2005. The primary design capacity of each pump is 18 MGD; however, the pumps may have a higher actual capacity. Although influent pumping is a potential bottleneck, the

difference between the projected flows (37.8 MGD) and firm capacity (approximately 36 MGD) is small. This potential bottleneck may not exist if the actual capacity of the pumps is marginally higher than the design value.

Taking this into consideration, along with the fact that the pumps are newly installed, no improvements are recommended at this time.

- **Influent Screening:** Influent screen capacity is limited primarily by approach velocity [typically 3 feet per second (fps)] to prevent pushing the screenings through the bars. Approach velocity could be reduced, and firm capacity increased, by increasing the operating water surface level in the channel. However, the motor drives for the screens are not currently enclosed. Motor drives would need to be adequately protected from the wastewater to function at a higher operating level.

Since the capacity of the screen is greater than that of the projected maximum hourly flow, no improvements are recommended for influent screening at this time.

- **Grit Removal:** Grit removal is not limited in total capacity. However, the VWRP does not have a redundant unit for use when the existing grit chamber is out of service. In such an event, an existing bypass could be used to direct flow around the grit chamber while servicing the unit. Because the aerated grit system is relatively new, the unit has not been offline for maintenance. The recent headworks improvement design includes a gate to direct flow to a redundant grit chamber, but did not include installation of a redundant unit.

Improvement of grit removal is recommended to allow for maintenance without disruption to normal operations. Alternatives to address identified improvement needs are discussed in Section 4.3.

- **Flow Measurement:** Influent flow is recorded by two (2) 18-inch Parshall flumes after screening and grit removal. Flow is split prior to influent measurement, and is not combined again until after the primary clarifiers.

Based on the capacity determinations using the throat size of the flumes, replacement will be required for accurate monitoring at future flows. Alternatives to address identified improvement needs are discussed in Section 4.3.

4.2.3.2 Primary Clarifiers

4.2.3.2.1 Technical Data

The VWRP normally operates with two circular primary clarifiers in service and uses ferric chloride for hydrogen sulfide control. Screened and dewatered influent is split prior to influent flow measurement, passes through the clarifiers, and is recombined again before flowing into the flow equalization/primary effluent pump station (FE/PE).

Depending on the equalization flow control settings in the FE/PE, wastewater is either pumped up to the aeration tank inlet or pumped to the equalization basins for temporary storage. Two (2) centrifugal solids handling pumps draw settled solids from the clarifiers into a gravity thickener prior to anaerobic digestion. The pumps are valved such that either pump can draw from either clarifier utilizing a timed wasting mode. VWRP Staff has indicated that the system is

difficult to balance when one pump draw sludge from both clarifiers at the same time. Primary clarifier components are summarized in Table 4-4.

Sludge pumping normally occurs 24 hours a day. Flow monitoring indicates that the pump actually operates close to

The Ventura WRF has two circular primary clarifiers, each with a diameter of 115 feet.

500 gpm, which appears to be in excess of the rated capacity. Recently, VWRF Staff installed 1½-inch reducing fittings on the primary sludge piping to increase pumping head and reduce pump output. For capacity determinations, the rated pumping capabilities are assumed to be as listed in Table 4-4.

**TABLE 4-4
PRIMARY CLARIFIER TECHNICAL DATA**

Technical Data	Units	
Number of Tanks	-	2
Shape	-	Circular
Tank Diameter	ft	115
Area - Each	square feet (sf)	10,380

Total Area	sf	20,760
Total Volume	gallons	1,397,800
Number of Sludge Pumps	-	1 duty, 1 standby
Sludge Pump Capacity ^(a) , Total	MGD	0.58
Sludge Pump Capacity ^(a) , Firm	MGD	0.29
Number of Primary Effluent Pumps	-	2 duty, 1 standby
Primary Effluent Pump Capacity, Total	MGD	17.3
Primary Effluent Pump Capacity, Firm	MGD	11.5

Note:

(a) Rated capacity from review of VWRF design documents does not reflect measured pump output, which is considerably higher.

4.2.3.2.2 Capacity Assessment, Operational Limitations, Redundancy Considerations, and Identified Improvement Needs

Due to the issues with influent sampling from 2002 to 2005, insufficient operating data is available to characterize recent primary clarifier performance or project performance at increased flows and loadings. Therefore, conservative typical removal rates will be used. Projected operation is summarized in Table 4-5 and compared against typical design values.

**TABLE 4-5
PRIMARY CLARIFIER OPERATIONAL PARAMETERS**

Operations Parameters	Units	Projected Operation	Typical Range	Typical Design
Number of Operating Tanks	-	2	2 Minimum ^(a)	
Side Water Depth	ft	9	10-16	14
Maximum Day Flow, Summer	MGD	18.9		
Maximum Hour Flow	MGD	37.8		
Overflow Rate at Maximum Day Flow, Summer	gpd ^(b) /sf	910	800-1,200 ^(a)	1,000 ^(a)

Estimated Maximum Primary TSS Removal	%	65		
Estimated Maximum Primary TSS Removal	lb/d	22,295		
Estimated Primary Solids Concentration	%	2	4-12	
Estimated Maximum Primary Sludge Flow at 2% Solids	MGD	0.13		

Notes:

(a) Metcalf and Eddy guidelines, 2003.

(b) gpd = gallons per day.

(c) Unable to estimate due to issues with influent sampling location. Conservative values applied based on pilot testing data.

Based on a review of typical engineering design criteria, the primary clarifiers appear to be large enough to meet future operating conditions, provided that both tanks are in operation. A redundant unit would provide more flexibility for maintenance without jeopardizing performance. Because the existing tanks are relatively shallow compared to typical design standards, the Staff has established a goal of removing the blanket as fast as it accumulates.

For the purposes of estimating primary sludge percent solids at the projected condition, it was conservatively assumed that 2 percent solids can be achieved. Settled solids in conventional primary clarifiers typically range from 5 to 12 percent solids. Although each clarifier ideally would have a dedicated duty and redundant sludge pump, the present pumping operation appears to be sufficient for future flows and loads, because the pump should not run for much more than half a day at 2 percent solids. Improvements to the existing pump configuration and controls may be warranted to allow for better control of the sludge blanket and solids concentration.

Based upon an equalized maximum day flow of 23.8 MGD, primary effluent pumping appears to be a bottleneck. Although the primary effluent/equalization pump station was designed to allow for the addition of a fourth pump, it is unlikely that this improvement alone would provide enough firm capacity for the maximum day scenario. At most, installation of a fourth pump alone would allow for operation up to a firm capacity of 17.3 MGD.

The deficiency in primary effluent pumping capacity was addressed in Brown and Caldwell's Secondary Treatment Technical Memorandum No. 1 (B&C's TM No. 1; see Appendix E). This memorandum suggests that a portion of the flow be directed around the primary clarifiers to a new mixed liquor pumping system that would pump the influent, along with mixed liquor, back into the aeration tanks. Although the proposed split-stream treatment mode would be able to convey the maximum day flow, extended operation in this manner is not recommended. At a minimum, the primary effluent pump capacity should allow for conveyance of the projected maximum month flow to minimize loading on the secondary treatment processes.

Additional consideration should be given to further improvements such that split-stream treatment does not become a routine function during the maximum month period. Alternatives to address identified improvements are discussed in Section 4.3.

4.2.3.3 Aeration Basins

4.2.3.3.1 Technical Data

The aeration system consists of four tanks with fine-bubble diffusers operated in series. The process is operated in a modified Ludzack-Ettinger (mLE) configuration, with Tank 1 being operated in an anoxic mode and Tanks 2, 3, and 4 being aerated (see Figure 4-1). Equalized primary effluent, return activated sludge (RAS), and recycled mixed liquor flow into Tank 1 and proceeds sequentially through Tanks 2, 3, and 4 in series. Technical data for the aeration basins are summarized in Table 4-6.

**TABLE 4-6
AERATION BASINS TECHNICAL DATA**

Technical Data	Units

Notes:

- (a) scfm = standard cubic ft per minutes.
- (b) Based on assumed site-specific factors and operating efficiencies.
- (c) Based on estimate from VWRf Staff. No pump data available.

4.2.3.3.2 Capacity Assessment, Operational Limitations, Redundancy Considerations and Identified Improvement Needs

After a review of historical operating data, it was apparent that the VWRP does not completely nitrify during cold weather. Nitrifier growth, sensitive to both temperature and solids retention time (SRT), will likely be a limiting factor in meeting permitted effluent quality requirements in the future. Operation at projected flows and loads is summarized in Table 4-7 and compared against typical design values.

**TABLE 4-7
AERATION BASINS OPERATIONAL PARAMETERS**

Operational Parameters	Units	Projected	Typical Range ^(a)	Typical Design ^(a)
Number of Operating Tanks	-	4

Notes:

(a) Metcalf and Eddy (2003).

(b) MLSS = mixed liquor suspended solids.

(c) Estimated based on 30 percent COD and 25 percent BOD removal in the primary clarifiers.

(d) cf = cubic ft.

- (e) F/M = food to microorganism ratio.
- (f) O₂ = oxygen.
- (g) Assumed one aerobic basin out of service. If Tank 1 is out of service, then Tank 2 will be made anoxic.
- (h) No denitrification credit was allocated in the determination of the oxygen requirement because the VWRF currently does not consistently denitrify.
- (i) Assumes 1,400 mg/l MLSS.
- (j) Conservative estimate based on historical operating data.

BOD₅ = 5 day biochemical oxygen demand.
 WAS = waste activated sludge.
 VSS = volatile suspended solids.
 MLVSS = mixed liquor volatile suspended solids.

The Ventura WRF has four aeration basins operated in series.

The projected BNR recycle rate, organic loadings, detention times, SRT, F/M, and oxygen requirements were outside typical design values for one tank out of service, and also when all tanks were in service. Under this scenario, it is unlikely that the aeration system achieves sufficient nitrification, denitrification, or BOD removal for compliance with the anticipated NPDES effluent limits.

Based on review of recommended design criteria, improvements to the secondary treatment system will be critical for future compliance. These improvements were addressed in B&C's TM No. 1 including the following: addition of a bioaugmentation reaeration (BAR) basin, the addition of approximately 1.46 million gallon (MG) of aeration tank volume, replacement of the BNR pumping, RAS pumping, and aerator blowers, and a new mixed liquor waste (MLW) pumping system. Additionally, it is proposed that the existing four aeration basins be operated in parallel to relieve some of the hydraulic bottlenecks presently experienced at the plant.

The adequacy of these recommended improvements was not reviewed. However, the BAR process is a new technology with limited application at operating treatment facilities. Therefore, modeling and/or pilot testing of the proposed system is recommended before full-scale implementation.

If VWRF Staff desires to continue to operate the system at a low mixed liquor concentration, it is recommended that the City verify that the proposed system includes the operational flexibility to do so. In particular, MLW pump capacity and SRT should be verified at the preferred operational MLSS concentration. Also, process redundancy requirements should be confirmed under a maximum month loading scenario to ensure that the system will be robust enough to meet the more stringent effluent total ammonia requirements under a range of operational conditions.

No additional improvement needs beyond those addressed by Brown and Caldwell (B&C's TM No. 1).

4.2.3.4 Secondary Clarifiers

4.2.3.4.1 Technical Data

The VWRF has six rectangular secondary clarifiers. Operationally, VWRF Staff has experienced problems with sludge settleability while operating at mixed liquor concentrations

above 1,500 mg/l. Dissolved oxygen in the effluent mixed liquor has been maintained near saturation in an attempt to mitigate denitrification and floating sludge in the clarifiers. Technical data for the clarifiers are summarized in Table 4-8.

**TABLE 4-8
SECONDARY CLARIFIERS TECHNICAL DATA**

Technical Data	Units	
Number of Clarifiers	-	6
Shape	-	Rectangular
Length, each	ft	150
Width, each	ft	20

Number of RAS Pumps	-	2 duty, 1 standby
RAS Pump Capacity, Total	MGD	12.9
RAS Pump Capacity, Firm	MGD	8.6

Note:

(a) lf = lineal ft.

4.2.3.4.2 Capacity Assessment, Operational Limitations, Redundancy Considerations and Identified Improvement Needs

Data collected during stress testing and a state-point analysis (see Appendix F) indicated that the VVRF secondary clarifiers had sufficient size and capacity to adequately treat at least 16 MGD with only five clarifiers in service. Long term RAS and WAS pumping capabilities were not assessed during stress testing and required more evaluation. Due to operational constraints, the secondary clarifiers were unable to be loaded beyond the equivalent of 16 MGD to five clarifiers for a sustained period. Operation of the secondary clarifiers at projected flows and loads is summarized in Table 4-9, and compared with typical design values.

**TABLE 4-9
SECONDARY CLARIFIERS OPERATIONAL PARAMETERS**

Operational Parameters	Units	Projected Operation	Typical Range ^(a)	Typical Design ^(a)
Number of Operating Tanks	-	6	2 Minimum	
Side Water Depth	ft	10	12-20	16
Surface Area of Operating Tanks	sf	18,000		
Overflow Rate at Annual Average Flow	gpd/sf	778	400-700	550
Overflow Rate at Annual Average Flow, One Clarifier Out of Service	gpd/sf	934	400-700	550
Overflow Rate at Maximum Day Flow	gpd/sf	1,322	1,000-1,600	1,300

Estimated Maximum Month WAS ^(d)	lb/d	26,645		
Estimated WAS Concentration ^(b)	mg/l	4,000		
Estimated Maximum Month WAS Flow	MGD	0.8		

Notes:

- (a) Metcalf and Eddy.
- (b) Conservative estimate based on historical data.
- (c) Based on MLSS between 1,400 to 2,500 mg/l.
- (d) Calculated from Table 4-7.

Although projected overflow rates were outside of the recommended design values with all tanks in service and one tank out of service, the projected solids loading rates were well within typical design values due to the low mixed liquor concentration. This observation indicates that additional capacity may be available beyond the limitations of typical design values for overflow rates.

Despite the projected annual average hydraulic loading rate being outside the typical design range, stress testing data indicated that the VWRP secondary clarifiers have sufficient firm capacity to operate at the projected AAF. A maximum day flow scenario could not be reproduced during stress testing due to operational limitations with the equalization pumps. However, the equalized maximum day overflow rate was within the typical design range. Additionally, state-point analysis

One of the six rectangular secondary clarifiers.

indicated that the clarifiers could function adequately at the projected flows and loads.

Since the apparent firm capacity of the clarifiers was adequate, no improvements for this process are recommended at this time. However, it should be cautioned that tanks with depths less than 12 ft often have difficulty containing low density sludge, and low density sludge blankets are more easily disturbed by hydraulic fluctuations. Since the existing tanks are relatively shallow as compared to typical design standards, careful control of the sludge blanket and hydraulic loading will need to be maintained in the future to minimize solids carryover. Use of the equalization basins will help minimize hydraulic fluctuations.

Both RAS and WAS pumping capacities may limit the capacity of the process under a maximum month flow and loading scenario. RAS and WAS pumping capacity was addressed in B&C's TM No. 1, which proposed installation of two new dedicated RAS pumps for each clarifier and new mixed liquor wasting pumps. Adequacy of these improvements was not reviewed. Therefore, review of the proposed WAS improvements is recommended to ensure that they allow for a comfortable level of operational flexibility under a maximum month loading scenario.

No additional necessary improvements for the RAS or WAS systems are recommended, beyond those addressed by Brown and Caldwell (B&C's TM No. 1).

4.2.3.5 Mixed Media Filters

4.2.3.5.1 Technical Data

The VWRP operates six low-pressure, mixed media multi-media filters (MMF's) for effluent polishing. The filters are intermittently backwashed to remove accumulated solids with spent backwash water returned to the headworks. Aluminum sulfate is used as a coagulant to improve filtration performance and satisfy recycled water treatment requirements. Technical data for the MMF's are summarized in Table 4-10.

**TABLE 4-10
MIXED MEDIA FILTERS (MMF) TECHNICAL DATA**

Technical Data	Units	
Number of Filters	-	6
Type of Filter	-	Low Pressure, Mixed Media
Filter Area, Each	sf	380
Filter Area, Total	sf	2,280
Title 22 Requirements	gpm/sf	5
Filter Capacity, Total ^(a)	MGD	16.4
Filter Capacity, Firm ^(a)	MGD	13.7

Note:

(a) Assumes four (4) 10-minute backwashes per day.

4.2.3.5.2 Capacity Assessment, Operational Limitations, Redundancy Considerations, and Identified Improvement Needs

The California Water Recycling Criteria (CWRC) define Disinfected Tertiary Recycled Water as a wastewater that has been oxidized, coagulated, and passed through natural undisturbed soils

or a bed of filter media (maximum rate of 5 gpm/sf in mono, dual, or mixed media gravity or pressure filtration).

The CWRC criteria must be applied to all wastewater currently treated by the VWRP, because the existing system is configured such that disinfected tertiary recycled water commingles with Estuary discharge in the CCT's, effluent transfer station (ETS), and wildlife ponds. Even if recycled water was not commingled with plant effluent, filtration would be typically provided for secondary effluent since NPDES effluent quality requirements mandate consistently achieving an effluent TSS of 15 mg/l and below.

Six mixed-media filters are used for tertiary treatment.

Based upon the CWRC criteria, the existing MMF's have insufficient firm or total capacity to filter the projected maximum day flow while maintaining compliance with CWRC requirements. If the City desires continued beneficial reuse of tertiary recycled water, then the existing MMF's must be rehabilitated and expanded or replaced completely. Alternatives to address identified improvement needs are discussed in Section 4.3.

4.2.3.6 Disinfection Facilities

4.2.3.6.1 Technical Data

Treated and filtered wastewater is disinfected in a series of chlorine contact tanks (CCTs). Baffling divides each tank into two passes to encourage plug flow and prevent short-circuiting. Ammonia is injected before dosing a chlorine solution, and reacts to form a strong disinfectant called chloramine. Although chloramine is not as effective of a disinfectant as free chlorine, the VWRP re-introduces ammonia to prevent formation of trihalomethanes (THMs) and other disinfection byproducts prohibited by the facility's NPDES and recycled water permits. At the termination of the contact tanks, a sulfur dioxide solution is used to dechlorinate the effluent.

This evaluation focuses primarily on the CCTs and assumes sufficient dosing and mixing of chemicals is provided. CCT technical information is summarized in Table 4-11.

**TABLE 4-11
CCT TECHNICAL DATA**

Technical Data	Units	Tanks
Number of Basins	-	3
Volume, Per Basin	gallons	588,000
Total Volume	gallons	1,764,000

4.2.3.6.1 Capacity Assessment, Operational Limitations, Redundancy Considerations, and Identified Improvement Needs

Title 22 of the California Code of Regulations (Title 22) governs recycled water treatment in California. Title 22 requires that disinfection of recycled water must result in a minimum of 99.999 percent removal or inactivation of the plaque forming units of F-specific bacteriophage MS2, with polio virus inactivation as the standard. Inactivation can be achieved with chlorination following tertiary filtration if the product of the contact time and total chlorine residual is at least 450 milligram-minutes per liter (mg-min/L) with a contact time of at least 90 minutes at peak dry weather design flow.

Because the chlorine contact tanks provide a contact time of approximately 260 minutes at the current AAF, the VWRf is presently able to operate at a low total chlorine residual to achieve the required modal contact time (CT) of 450 mg-min/L required to produce recycled water in California. Operational parameters for the CCTs at projected flows and loads are summarized in Table 4-12.

As indicated in Table 4-12, the existing chlorine contact tanks provide hydraulic retention times within typical design guidelines with all tanks in service and with one tank out of service. To achieve the required modal contact time of 450 mg-min/L at the Maximum Day Summer Flow with all tanks in service and one tank out of service, the operating total chlorine residual would need to be approximately 3.4 to 5.0 mg/l.

Baffles located in the chlorine contact tanks prevent short-circuiting.

**TABLE 4-12
CCT OPERATIONAL PARAMETERS**

Operational Parameters	Units	Projected Operation	Typical Range^(a)	Typical Design
Number of Operating Tanks	-	3		
Detention Time at Annual Average Flow	Minutes	181	30-120	60 ^(a)
Detention Time at Annual Average Flow, One Tank Out of Service	Minutes	121	30-120	60 ^(a)
Detention Time at Maximum Day Summer Flow	Minutes	134	30-120	90 ^(b)
Detention Time at Maximum Day Summer Flow, One Tank out of Service	Minutes	90	30-120	90 ^(b)
Detention Time at Maximum Day Flow	Minutes	107	15-90	30 ^(b)
Detention Time at Maximum Day Flow, One Tank Out of Service	Minutes	71	15-90	30 ^(b)

Notes:

(a) Based on typical disinfection requirements from Metcalf and Eddy.

(b) Based on Title 22 disinfection requirements.

Although typical dechlorinating chemicals neutralize this total chlorine residual to meet effluent total chlorine limits prior to discharge, the ammonia added for chloramination remains in the

effluent. This is problematic since, based on interpretation of the proposed permit, a total effluent ammonia concentration of 1 mg/l and total nitrogen of 10 mg/l should be targeted to address the potential effluent nitrogen limitations under most foreseeable conditions. For these reasons, it appears that disinfection using chloramination may not be able to meet both the new effluent ammonia limitations and the Title 22 chlorine disinfection requirements in the future.

The disinfection process also occasionally experiences “nitrite lock,” which adversely impacts chlorine disinfection by significantly increasing the chlorine demand. Typically, the conversion of nitrite to nitrate in the biological process is not a rate-limiting step in wastewaters with temperatures consistently above 17°C. Since the projected winter wastewater temperature is below 17°C, it is possible during cold weather periods that some nitrite may accumulate in the secondary process and result in increased chlorine demand, although this cannot be confirmed with existing operational data.

Improvements to or reconfiguration of the disinfection system should be considered for the reasons stated above. Alternatives to address identified improvement needs are discussed in Section 4.3.

4.2.3.7 Effluent Pumping and Metering

4.2.3.7.1 Technical Data

Dechlorinated effluent is pumped to wildlife ponds at the VWRP as shown in Figure 4-1. From the wildlife ponds, flow proceeds to either the Estuary or is pumped out of the ponds and reused for turf and landscape irrigation. Effluent flow to the Estuary is metered at the termination of the wildlife ponds. Primary components and capacities of these facilities are summarized in Table 4-13.

**TABLE 4-13
EFFLUENT PUMPING AND METERING TECHNICAL DATA**

Technical Data	Number of Units	Type	Total Capacity (MGD)	Firm Capacity (MGD)
Effluent Pumps	2 duty, 1 standby	Vertical Turbine	14.2	9.5
Flow Measurement	1	24-inch Parshall Flume	21.4	-

4.2.3.7.1 Capacity Assessment, Operational Limitations, Redundancy Considerations, and Identified Improvement Needs

Referring to the flow projections in Table 4-2, effluent pumping will need to accommodate the projected equalized maximum daily flow of 23.8 MGD. It is also assumed that effluent metering will need to accommodate the projected equalized maximum daily flow, because recycled water demand may decrease during wet weather periods.

- **Effluent Pumping:** Effluent pumping consists of three vertical turbine pumps. Based on the rated capacity determinations, improvements to the ETS will be required to convey the projected maximum day flow. Alternatives to address identified improvement needs are discussed in Section 4.3.
- **Flow Measurement:** Based on the capacity determination using the throat size of the flume, improvements will be required for accurate monitoring at future flows and to address redundancy considerations. Alternatives to address identified improvement needs are discussed in Section 4.3.

4.2.4 Solids Handling Processes

4.2.4.1 Gravity Thickener

4.2.4.1.1 Technical Data

The gravity thickener (GT) receives settled solids from the primary clarifiers. GT underflow is routed to the anaerobic digesters, and the overflow returned to the headworks. Ferric chloride is used to improve thickener performance and solids capture and control sulfides. GT technical data is summarized in Table 4-14.

One gravity thickener is used to thicken the primary sludge.

**TABLE 4-14
GRAVITY THICKENER TECHNICAL DATA**

Technical Data	Units	
Number of Tanks	-	1
Shape	-	Circular
Diameter	ft	30
Side Water Depth	ft	10
Surface Area	sf	707
Depth	ft	12
Total Volume	gallons	52,850
Thickened Sludge Pumps	-	1 duty, 1 standby
Thickened Sludge Pump Capacity	MGD	0.216

4.2.4.1.2 Capacity Assessment, Operational Limitations, Redundancy Considerations, and Identified Improvement Needs

According to VWRP Staff, parts of the GT weir are missing. Although repairs are planned for the GT, Staff indicated that uncharacteristic performance may be expected from this process due to its poor condition. Operation of the GT based on projected flows and loads are summarized in Table 4-15.

**TABLE 4-15
GRAVITY THICKENER OPERATIONAL PARAMETERS**

Operational Parameters	Units	Projected Operation	Typical Design
Maximum Month Primary Solids ^(a)	lbs/d	22,295	
Maximum Month Primary Sludge Flow ^(b)	MGD	0.29	
Estimated Thickened Sludge Concentration	mg/l	50,000	
Estimated Thickened Sludge Flow	gpd	53,500	
GT Hydraulic Loading Rate	gpd/sf	410	390-780 ^(c)
GT Solids Loading Rate	lbs/sf/d	31.5	20-30 ^(c)

Notes:

- (a) Based on an estimated 65 percent solids removal efficiency with EPT in the primary clarifiers.
- (b) Based on rated capacity.
- (c) Manual of Practice (MOP) – MOP 11 (1998) guidelines for typical gravity thickener sizing criteria.

The calculated hydraulic and solids loading rates indicate that projected operational parameters exceed typical design values. Under this projected scenario, the GT may perform in a manner that results in reduced solids capture and reduced performance in the primary clarifiers. Although difficult to quantify the impact of a thickener's reduced performance, based on these projections and given the condition of the existing process, it is suggested that provisions be made to improve and expand this process. In addition, installation of a redundant unit would offer the operators more flexibility during maintenance without jeopardizing performance. Alternatives to address identified improvement needs are discussed in Section 4.3.

4.2.4.2 Dissolved Air Flotation Thickeners (DAFT)

4.2.4.2.1 Technical Data

The DAFT receives settled WAS from the secondary clarifiers. DAFT subnatant returns to the headworks or equalization basins, and supernatant is routed to the anaerobic digesters. Two (2) tanks are available, yet only one is used. This is due to the difficulty balancing the flow split in its current configuration. Polymer is added as a coagulant to improve DAFT performance and solids capture. DAFT technical information is summarized in Table 4-16.

**TABLE 4-16
DAFT TECHNICAL DATA**

Technical Data	Units	
Number of Tanks	-	2
Shape	-	Rectangular
Surface Area, each	sf	510

Pressurization Pump Pressure	psi ^(b)	65
Number of Subnatant Pumps	-	1 duty, 1 standby
Subnatant Pump Capacity, Firm	MGD	0.94
Supernatant Pumps	-	1 duty, 1 standby
Supernatant Pump Capacity, Firm	MGD	0.144

Notes:

- (a) ml/g = milliliters per gram.
- (b) psi = pounds per square inch.

4.2.4.2.2 Capacity Assessment, Operational Limitations, Redundancy Considerations, and Identified Improvement Needs

Operation of the DAFT at projected flows and loads is summarized in Table 4-17.

The calculated solids loading rate exceeds the typical maximum design values with one unit out of service. Under this projected scenario, the DAFT may perform in a manner that results in an increased underflow of solids and reduced performance in the secondary treatment system. Although difficult to quantify the impact of this projected scenario, it is suggested that provisions be made to improve and expand this process. Alternatives to address identified improvement needs are discussed in Section 4.3.

**TABLE 4-17
DAFT OPERATIONAL PARAMETERS**

Operational Parameters	Units	Projected Operation	Typical Design
Maximum Month WAS Flow	MGD	0.8 ^(a)	
Estimated Supernatant Concentration	mg/l	50,000 ^(b)

Solids Loading Rate	lbs/sf/d	26.1	48 ^(d)
Solids Loading Rate, One Tank Out of Service	lbs/sf/d	52.2	48 ^(d)

Notes:

- (a) Calculated in Table 4-9.
- (b) Estimate based on plant operating data.
- (c) ml/mg = milliliters per milligrams.
- (d) Metcalf & Eddy (2003), with polymer addition.
- (e) Manual of Practice – MOP 11 (1998).

4.2.4.3 Anaerobic Digesters

4.2.4.3.1 Technical Data

Three (3) anaerobic digesters currently operate in parallel, with the contents mixed by a combination of sludge recirculation and gas mixing. The digesters have operated reliably and consistently achieved and exceeded pathogen and vector attraction reduction requirements for Class B biosolids. Methane gas produced and recovered from the digesters has been used for cogeneration. Digester technical data is summarized in Table 4-18.

The Ventura WRF has three anaerobic digesters.

**TABLE 4-18
DIGESTER TECHNICAL DATA**

Technical Data	Units	
Number of Digesters	-	3
Operating Temperature	°F	95-98
Diameter	ft	55
Sidewall Depth	ft	28
Total Volume	gallons	1,500,000
Number of Digested Sludge Holding Tanks	-	2
Digested Sludge Holding Tank Volume, Total	gallons	92,300
Sludge Transfer Pumps	-	1 duty, 1 standby
Sludge Transfer Pump Capacity, Total	MGD	0.72
Sludge Transfer Pump Capacity, Firm	MGD	0.36

4.2.4.3.2 Capacity Assessment, Operational Limitations, Redundancy Considerations, and Identified Improvement Needs

Operation of the digesters at projected flows and loads is summarized in Table 4-19.

The sludge transfer pumps appear to have sufficient capacity, and projected loading to the digesters is within the typical design range. However, the calculated detention time and volatile solids loading rate for the digesters are outside typical design values. Under this projected scenario, it is possible that the digesters may not consistently achieve pathogen and vector attraction reduction as required for Class B biosolids.

**TABLE 4-19
DIGESTERS OPERATIONAL PARAMETERS**

Operational Parameters	Units	Projected Operation	Typical Design Range ^(a)	Typical Design ^(a)
Thickened Primary Sludge Flow	gpd	53,500

Digester Design Temperature	oF	95-98	95 - 98	95 - 98

Note:

(a) Metcalf and Eddy guidelines (2003).

The City anticipates the need for improvements to the WWRf digestion process and has already allocated space for an additional digester. Alternatives to address identified improvement needs are discussed in Section 4.3.

4.2.4.4 Recessed Plate Filter Presses (RPF)

4.2.4.4.1 Technical Data

The existing sludge handling facility contains two plate-and-frame filter presses that dewater anaerobically digested sludge. Digested solids are pumped into a flocculation tank, where polymer is added before the sludge is pumped into the press chambers. The presses are operated at high pressures to facilitate removal of excess water. Filtrate is returned to the equalization basins, and cake solids are hauled offsite and land applied. RPF technical information is summarized in Table 4-20.

**TABLE 4-20
RPF TECHNICAL DATA**

Technical Data	Units	
Number of Presses	-	2
Number of Plates/Press	-	75
Operating Pressure	psi	100
Plate Dimensions	m	1.5 x 2
Number of Digested Solids Feed Pumps	-	2 duty, 1 standby
Digested Solids Feed Pump Capacity, Total	gpm	600
Digested Solids Feed Pump Capacity, Firm	gpm	400

4.2.4.4.2 Capacity Assessment, Operational Limitations, Redundancy Considerations, and Identified Improvement Needs

The presses are over 20 years old and are usually operated for eight to ten 8-hour shifts per week. Spare parts for the units are difficult to obtain and require a long lead time, and the batched nature of the process requires full-time attention during operation. RPF operational parameters are summarized in Table 4-21.

**TABLE 4-21
RPF OPERATIONAL PARAMETERS**

Operational Parameters	Units	Projected Operation	Typical Design ^(a)
Weight of Wet Solids per Drop	lbs/chamber	140	
Sludge Percent Solids	%	18	
Weight of Dry Solids per Drop	lbs/chamber	25	
Dry Solids per Cycle	lbs/cycle/press	1,875	
Number of Presses in Operation	-	2	
Cycle Time	hours/cycle	2.5	2 - 2.5
Maximum Hours per Day	hours/day	16	
Maximum Hours per Week	hour/week	112	
Cycles per Day	cycle/day	12.8	
RPF Solids Capacity, Total	lb/day	24,000	
Digested Sludge Load ^(b)	lb/day	28,141	

Notes:

- (a) Metcalf and Eddy guidelines (2003).
- (b) Assumes 50 percent VS destruction in digesters.

Current operating procedures for these presses will not yield sufficient capacity to handle the projected sludge load. Process capacity will be limited by press capacity and the available time for VWRF Staff to dedicate to press operation.

The City is planning an improvements project for the filter presses. Following a life-cycle cost assessment, Brown and Caldwell in the Sludge Dewatering Alternatives Evaluation (Appendix G) recommended the installation of three centrifuges with a cake transfer/storage/loadout system to facilitate continuous operation and maximum flexibility. Adequacy of these recommended improvements was not reviewed. No additional improvements to the dewatering system were identified, beyond those addressed by Brown and Caldwell.

4.2.5 Summary of the Capacity Limitations of the Liquid Treatment and Solids Handling Facilities

Existing unit processes' firm and total capacities were estimated through a desktop evaluation using typical design criteria from literature (Metcalf & Eddy, 2003 and WEF Manual of Practice 11, 1998), stress testing, and VWRF Staff input. Process capacities were evaluated using the reliability requirements described in Section 4.2.2. Existing capacities are summarized in Table 4-22 in the following pages, and a flow-based timeline for the identified improvement needs is presented in Figure 4-2.

**TABLE 4-22
VWRF CAPACITY EVALUATION SUMMARY**

Notes:

- (a) Firm and total capacity limitations are translated to an average annual basis through dividing by the current AAF/MMF/MDFS/MDF and multiplying by the current AAF.
- (b) Capacities as presented in Table 4-3.
- (c) Capacities as presented in Table 4-4.
- (d) Estimate considered on the basis of not exceeding a typical design hydraulic loading rate of 1,000 gpd/sf.
- (e) Estimate considered on the basis of providing a minimum of 100 percent of the MMF as capacity for the BNR recycle.
- (f) Estimate considered on the basis of providing a minimum 5-day SRT. WAS assumptions (VSS/TSS, observed yield, etc) are as presented in Table 4-7.
- (g) Indicated capacities were estimated using maximum month load calculations. Maximum month load limitation is translated to annual average flow by dividing the maximum month load capacity by the current maximum month load and by the current AAF.
- (h) WAS assumptions (VSS/TSS, observed yield, etc) are as presented in Table 4-7.
- (i) Estimate considered on the basis of providing a minimum of 100 percent of the MMF as capacity for the RAS recycle.
- (j) Capacities as presented in Table 4-10.
- (k) Estimate considered on the basis of providing a CT value of 450 mg-min/L with a chloramine residual of 1 mg/l.
- (l) Capacities as presented in Table 4-13.
- (m) Estimate considered on the basis of not exceeding a typical design solids loading rate of 30 lbs/d/sf. Primary clarifier solids capture rate was assumed to be 80 percent.
- (n) Estimate considered on the basis of not exceeding a typical design solids loading rate of 48 lbs/d/sf. WAS assumptions (VSS/TSS, observed yield, etc) are as presented in Table 4-7.
- (o) Estimate considered on the basis of providing a typical air/solids design ratio of 0.005 ml/mg.
- (p) Estimate considered on the basis of providing a typical design detention time of 15 days.
- (q) Operational assumptions (cycles per day, digester volatile solids destruction rates, etc) are as presented in Table 4-21.
- (r) Oxygen requirement assumptions (denitrification credit, etc.) are as presented in Table 4-7.

Figure 4-2

4.2.6 Process Modeling

GPS-X 5.0, a process simulator developed by Hydromantis, was used to model VWRF performance. A model of the complete facility was developed and calibrated, including all major liquid and solids unit processes, to assist in identifying process bottlenecks at the design AAF of 14 MGD. Results from the process modeling were used to confirm the bottlenecks identified from desktop evaluation.

4.2.6.1 Model Calibration

Model calibration adjusts parameters until predictions match selected sets of performance data from the actual facility. The VWRF process model was calibrated using historical data from November 1, 2005 to December 31, 2005. However, as discussed previously, VWRF Staff indicated that influent data from this period was not representative due to the temporary relocation of the influent sampler. Therefore, influent and filter press filtrate characterization performed as a part of B&C's TM No. 1 was used for model calibration instead of the November to December 2005 data. The remaining 2005 performance data was assumed to be accurate

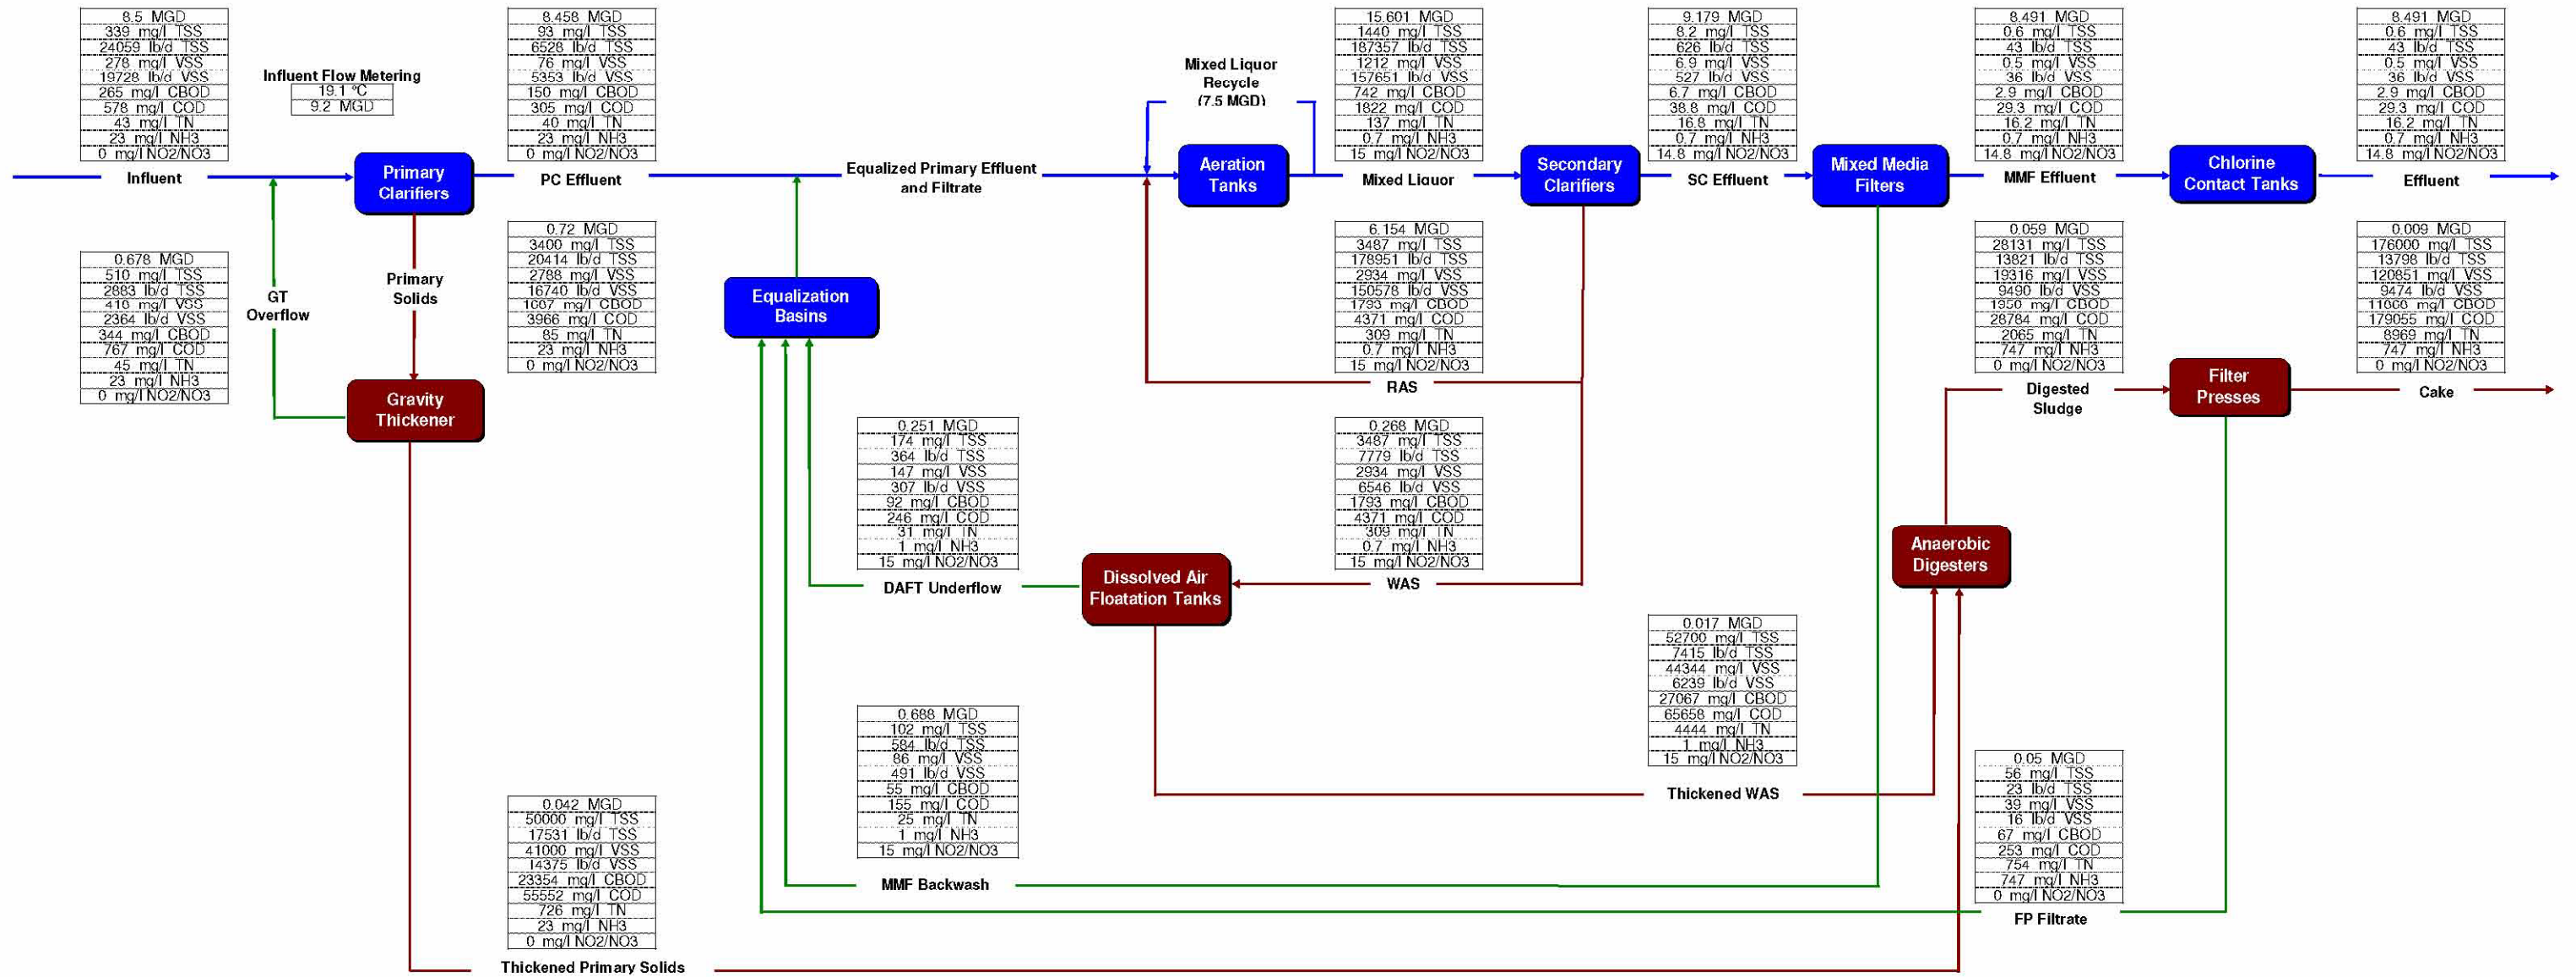

Calibration of a model minimizes the error between the model predictions and selected data sets with minimal change to model parameters. A perfect fit is rarely achieved. In steady-state simulations, modeled variables typically match within 5 to 20 percent of the actual values. During this process, modeling often encounters data that falls outside normal ranges or does not satisfy a mass balance.

Quite often, predicted WAS rates have greater than 20 percent difference in value compared to reported data, as was the case with the VWRF calibration. However, considering that the predicted primary solids production and dewatered solids production fit the actual data set closely, it appears that the calibrated model was reasonably accurate with respect to secondary solids production. Calibrated model results are presented as a mass balance in Figure 4-3 and compared against historical operating and additional characterization data in Table 4-21.

4.2.6.2 Model Application

Following model calibration, performance of the VWRF was simulated at the projected maximum month loading, maximum month flow, and winter wastewater temperature without improvements to the identified bottlenecks. Simulation assumed the following: (1) capture rates of the thickening processes (DAFT and GT) were reduced by 10 percent at the maximum month condition, (2) the units were operating outside of a typical design range, and (3) the filter presses were operated with additional shifts as required to handle the increased solids production.

Additionally, it was assumed that the ancillary solids and liquid conveyance equipment and process piping had enough capacity to convey the projected flows. However, the simulations identified limitations of the ancillary conveyance equipment. A mass balance sheet was developed for the simulation and used to confirm the identified deficiencies. Maximum month simulation results are presented in Figure 4-4.

Figure 4-4

4.2.6.2.1 Comparison of Simulation Results and Desktop Evaluation

It is apparent, from review of Figure 4-4, that the unimproved VWRF at the projected maximum month flow and load may not consistently achieve the performance requirements. The predicted effluent quality exceeds the anticipated permit limits for BOD, total nitrogen and ammonia. This observation reinforces the bottlenecks identified for the aeration tanks, RAS pumps, and BNR pumps. The predicted solids capture rate for the primary clarifiers was lower than assumed in the desktop evaluation, but still within an acceptable performance range for primary treatment. Predicted primary clarifier performance validated the observation that improvements to primary clarifier capacity may not be required, although redundancy considerations may be necessary. Loading to the GT was predicted to be above typical design values, indicating that improvements to the GT may be required.

Loading to the WAS pumps, DAFTs, anaerobic digesters, and RPFs were low as compared to desktop calculations. This was primarily due to the loading to these processes proportionate to the amount of COD removal predicted in the biological system. Since process simulation predicted that the existing aeration basins were unable to remove a significant portion of the COD at the maximum month condition, the simulation predicts lower loading to these ancillary processes. This observation does not indicate that bottlenecks for these processes do not exist. Rather, it indicates that those bottlenecks may not be encountered until improvements are implemented to address the deficiencies of the biological treatment system.

Identified bottlenecks for these ancillary processes cannot be confirmed without first simulating the recommended improvements to the biological treatment system. It is recommended that the identified bottlenecks for the WAS pumps, DAFTs, anaerobic digesters and RPFs be revisited after completion of the other improvements. However, that analysis is beyond the scope of this report.

4.3 Alternatives for Identified Improvements for Continued Discharge to the Estuary and Production of Reclaimed Water

The evaluation discussed in Section 4.2 assessed limitations of the existing VWRF to treat projected flows and loads in compliance with anticipated NPDES effluent permit limits for continued discharge to the Estuary and production of recycled water. Primarily, the evaluation identified capacity limitations of liquid and solids treatment processes.

The following paragraphs discuss alternatives to address these limitations to enable the entire VWRF to treat an AAF of 14.0 MGD. Additionally, a comprehensive replacement plan is presented as an alternative to the identified improvements to address some uncertainties regarding the general condition of the VWRF, loading projections, and regulatory considerations.

4.3.1 Headworks and Influent Pumping Station

4.3.1.1 Influent Flow Measurement Capacity

As mentioned previously, the existing influent Parshall flumes would be too small for projected flows, and redundancy would not be available. Flow restriction at an undersized flume could yield excessive headlosses that limit upstream process capacity, result in inaccurate flow measurement, and may even cause the flume to overflow. Therefore, expansion of the influent flow measurement is recommended. Several different types of flow measurement can be used to replace the existing equipment.

4.3.1.1.1 Larger Parshall Flumes

The existing influent Parshall flumes could be replaced with two new 48-inch flumes. Each flume would have a capacity of 43.8 MGD and each would accurately measure flows as low as 0.8 MGD. This larger flume would provide sufficient capacity to accurately gauge the projected peak hourly flow if the other flume was out of service without excessive surcharging and provide accurate measurements at low flows.

The primary advantages of Parshall flumes are that they have wide flow ranges and are relatively simple to calibrate. However, installation of a larger flume may require significant structural modification to the channels if they were not designed to facilitate expansion. Also, piping from the flumes to the primary clarifiers would need to be modified to address redundancy considerations.

Furthermore, Parshall flumes typically have a lower accuracy than ultrasonic or magnetic flow meters, though the accuracy is typically sufficient for this application. Alternatively, the existing flumes could be decommissioned and replaced with an ultrasonic or magnetic flow meter.

4.3.1.1.2 Ultrasonic Flow Meter

An ultrasonic flow meter is a non-intrusive device that operates using the Doppler Effect, in which the sound wave changes frequency when reflected by moving particles in a flowing liquid. Probes placed on the outside surface of a pipeline measure the frequency shift (Doppler Effect) of an ultrasonic signal when reflected by suspended particles in motion. The frequency shift is directly proportional to the rate of flow.

Current technologies generally require that the liquid contain 100 parts per million of suspended particles or bubbles, which is typically not an issue with wastewater streams. The primary advantages of ultrasonic flow meters are that they have low headloss. Chemical compatibility is not a concern because the ultrasonic probes are non-intrusive. The primary disadvantages are that the meters can be very sensitive to conditions of the installation and uniformity of flow.

4.3.1.1.3 Magnetic Flow Meter

Operation of a magnetic flow meter is based upon Faraday's Law, which states that the voltage induced across any conductor as it moves at right angles through a magnetic field is proportional to the velocity of that conductor. This principle requires that the fluid be electrically conductive.

Magnetic flow meters are typically constructed for installation as part of the pipeline. The liquid flows through the flow meter, where electrodes measure the voltage through the magnetic field. Like ultrasonic flow meters, magnetic flow meters have low headloss, low pressure drop, and are compatible with most all chemicals. The primary disadvantages of magnetic meters are that they require a straight run of pipe both upstream and downstream for accurate flow measurement and tend to be somewhat more expensive than either a Parshall flume or ultrasonic flow meter.

4.3.1.1.4 Recommended Alternative

If the facility layout and hydraulic conditions are conducive, it is recommended that one or more magnetic flow meters be installed on the discharge piping of the influent pumps. Either a single flow meter could be installed on the common discharge header, or if redundancy is desired, a separate flow meter could be installed on each individual pump discharge.

Although magnetic flow meters are more expensive, their costs are typically only marginally higher than ultrasonic flow metering and would likely be significantly less expensive than two Parshall flumes, factoring in the cost of the structural modifications. In addition, it is typical for magnetic flow meters to perform with better accuracy and consistency than ultrasonic flow meters thereby reducing installation and calibration issues.

If the facility layout and hydraulic conditions are not conducive to the installation of magnetic flow meters, the existing flumes should be replaced with larger 48-inch flumes.

4.3.1.2 Grit Removal Redundancy

As discussed previously, the VWRP does not have a redundant aerated grit chamber. If the existing aerated grit chamber needed to be taken offline for maintenance or repair, screened influent flow would be bypassed to the primary clarifiers without grit removal. It is probable that most of the grit in the bypassed wastewater would be captured by the primary clarifiers and sent to thickening and digestion.

4.3.1.2.1 Additional Aerated Grit Chamber Capacity

Although not required, the addition of a redundant aerated grit chamber is recommended because downstream mechanical equipment could be susceptible to excessive wear from the presence of grit. At the VWRP, increased wear on the primary sludge and thickened sludge pumps could be expected, as well as grit deposition in the anaerobic digesters and primary sludge piping. Adding a redundant aerated grit chamber could reduce maintenance on the anaerobic digesters and primary and thickened sludge pumps and piping.

Although other grit removal processes could be considered, such as vortex grit removal and horizontal-flow (velocity-controlled) channels, aerated grit chambers are recommended for grit removal. Implementation of aerated grit chambers will minimize the overall complexity by standardizing on one process type and will integrate well with the existing process, which is already configured for the addition of a second aerated grit chamber. Furthermore, VWRP Staff is already familiar with the operation and maintenance (O&M) of an aerated grit chamber.

Four (4) alternatives are available for expanding the existing grit removal process:

1. Add a second aerated grit chamber of equal size
2. Subdivide the existing aerated grit chamber into two units of equal size
3. Subdivide the existing aerated grit chamber into two units of equal size and add a third unit equal in size to the subdivided units
4. Verify that redundancy in mechanical equipment has been provided with the existing aerated grit chamber and bypass when the unit needs to be taken offline.

4.3.1.2.2 Recommended Alternative

Although constructing a second grit chamber of equal size or subdividing the existing unit and constructing a third, smaller unit could minimize the potential for excessive wear on downstream equipment, the additional capital and O&M costs associated with installing equipment for running and maintaining separate units could likely make these alternatives undesirable.

Considering the infrequency with which the VWRf Staff has needed to take the aerated grit chamber offline for maintenance since it first entered operation after completion of the headworks improvement project, it is recommended to verify that mechanical redundancy is provided in the existing unit and continue to bypass infrequently. If further reliability is desired, it is recommended to assess the feasibility of subdividing this unit such that one half can always remain operational.

4.3.2 Primary Clarifiers

4.3.2.1 Primary Clarifier Redundancy

4.3.2.1.1 Addition of a Third Primary Clarifier

The primary clarifiers appear to be large enough to meet future operating conditions, provided that both tanks are operating. However, if one primary clarifier is taken out of service, the remaining primary clarifier could be overloaded. The addition of a third primary clarifier of equal size for redundancy could give the operators more flexibility during maintenance without jeopardizing performance of the VWRf.

4.3.2.1.2 No Primary Clarifier Improvements

Alternatively, the entire influent flow could be treated through a single primary clarifier while the second clarifier is out of service, resulting in reduced TSS and BOD removal efficiencies. The biological system would need to be designed with enough capacity to handle this increased loading.

4.3.2.1.3 Enhanced Primary Treatment (EPT)

Another option is to implement EPT by improving upon the existing chemical feed system. Currently, ferric chloride is dosed at low concentrations in the headworks for odor control.

Stepping up the dosing concentration could improve the settling characteristics of the raw influent and, consequently, result in higher removal rates in the primary clarifiers.

Based on pilot testing data from the South Bayside System Authority (SBSA) and San Elijo wastewater treatment facilities, it may be possible to nearly double the hydraulic loading on a primary clarifier using EPT without a significant decrease in performance. It may be feasible to implement such an EPT program to help mitigate the loading on the downstream biological process with one clarifier out of service and a single clarifier treating the entire influent flow. In addition, polymer could be added to supplement the ferric and reduce the overall chemical requirements and cost of the program. This program would require a more sophisticated flow-paced chemical metering and mixing system than the VWRf currently uses.

4.3.2.1.4 Recommended Alternative

It does not appear feasible to take one clarifier out of service at any time during the year without risking a substantial increase in loading to the secondary process. Based on a projected MDFS of 18.9 MGD and a projected ADWF of 13.0 MGD, the SOR with one clarifier in service would be 1,820 gpd/sf and 1,280 gpd/sf respectively. Both of these SOR's are above typical design rates. The primary bypass proposed by B&C's TM No. 1 could also be utilized in conjunction with taking a clarifier out of service to reduce primary loadings. However, designing a more robust biological treatment system to handle a long-term increase in loadings in lieu of implementing improvements to the primary clarifiers is likely a less cost effective solution long-term.

Additionally, although pilot studies at San Elijo and SBSA with EPT have been promising and indicated good TSS and CBOD removal rates at SOR's well above recommended design parameters, conservative design practice suggests that EPT performance is highly variable from facility to facility.

It is therefore recommended that a third primary clarifier be installed to ensure operational flexibility in the future under a range of flow and loading conditions. However, considering the potential cost and land allocation involved in construction of a new clarifier, it is also suggested that EPT be pilot tested at the VWRf to explore the feasibility of implementing this option in lieu of building a third clarifier.

4.3.2.2 Primary Effluent Pumping Capacity

Some improvements to primary effluent pumping could be addressed by utilizing the split stream treatment strategy proposed in B&C's TM No. 1. With this treatment strategy, a portion of the influent flow bypasses the primary clarifiers. The bypassed influent is then conveyed to a new mixed liquor pumping system that pumps the bypassed influent, along with recycled mixed liquor, into the aeration basins. Although this treatment strategy could allow the maximum day flow to be conveyed to the aeration basins with no improvements to the primary clarifiers or primary effluent pumping, extended operation in this mode of treatment is not recommended. For this reason, other improvements are also considered such that utilization of split stream treatment does not become a routine function.

Based upon an equalized maximum day flow of 23.8 MGD, the existing primary effluent pumping system lacks sufficient capacity. The primary effluent wet well has been designed

such that it can facilitate the addition of a fourth pump. At most, addition of a fourth pump would provide a total capacity of 23.0 MGD and a firm capacity of 17.3 MGD. Influent flows exceeding the available pumping capacity could be handled using the split stream treatment strategy discussed above.

Alternatively, a firm pumping capacity equal to or greater than 23.8 MGD could be provided by:

1. Replacing the existing pumps with higher capacity pumps.
2. Upgrading the existing pumps and adding a fourth pump.
3. Adding a fourth pump and enlarging the discharge piping to the aeration basins to allow the pumps to operate at a higher capacity.

The existing vertical turbine primary effluent pumps could be upgraded by installing larger impellers, larger motors, and/or additional stages. The pump upgrades could yield a total capacity equal to or greater than the projected maximum day flow of 23.8 MGD, but they may or may not yield a firm capacity meeting that criterion. It is also uncertain as to whether or not sufficient space exists for installing higher capacity pumps or upgrading the existing pumps. Either option for increasing primary effluent pumping capacity by replacing or improving the pumps may also require improvements to the discharge pipelines to prevent excessive headloss at the higher flow rates.

4.3.2.2.1 Recommended Alternative

An evaluation of the system hydraulics summarized by B&C's TM No. 1 indicated that the discharge piping velocity may be excessive under high flow conditions. It was recommended to replace the existing discharge piping to the aeration basins with a larger pipe. Additionally, after review of the PE/FE pump station and discussion with the VWRf Staff, it was clear that the facility could be unable to accommodate larger equipment without significant modification. The City is confident that, after addition of a fourth pump and enlargement of the discharge piping, the VWRf could convey the projected flows under normal operating conditions. In addition, the VWRf would rely on split-treatment operation only during wet-weather events.

Considering this, it is recommended that a fourth pump be added and the PE/FE discharge piping be enlarged as planned. If these improvements are not sufficient to convey the projected maximum day flow, further expansion of the PE/FE pump station may be required.

4.3.3 Mixed Media Filters

4.3.3.1 Mixed Media Filter Capacity

4.3.3.1.1 Additional Mixed Media Filters

The six (6) existing low pressure mixed media filters lack sufficient total or firm capacity to treat the projected maximum day flow of 23.8 MGD. Furthermore, the VWRf Staff observed decreased filter performance over the past few years. Observed issues include, but are not limited to, shorter filter runtimes (resulting in an increase of filter backwashing procedures), and loss of filter media.

Rehabilitation of the six (6) existing filters and the addition of at least four new filters of equal size would be necessary to achieve operational efficiency and firm capacity to treat projected flows.

Alternatively, the filtration process could be changed to a surface, rather than granular media, filtration process. Surface filtration is a system that achieves particle removal by straining the liquid through a thin fabric or membrane. Particles are rejected when larger than the nominal size of the surface opening. Interception, adhesion, and adsorption may also become significant removal mechanisms as particles accumulate on the surface of the fabric or membrane. The surface must be intermittently purged of accumulated particles by backwashing in order to minimize headloss through the system.

4.3.3.1.2 Cloth Disc Filters

The most common fabric filtration system for tertiary treatment is a cloth disc filter with a typical nominal pore size of 10 microns. The cloth fabric is supported by a series of discs that are mounted vertically inside a tank. The discs are connected on their axes by a common effluent tube. Water enters the tank, passes through the cloth fabric, and then leaves the process through the common effluent tube.

The fabric is completely submerged during normal operation. When a backwash cycle is initiated, suction heads on both sides of the discs vacuum solids off the exterior of the cloth fabric while the discs rotate. The vacuuming draws filtered water back through the cloth fabric, which helps to remove particles trapped within the cloth.

The primary advantage of cloth disc filters over conventional mixed media filters is a reduction in energy usage. In addition, the modularity of cloth disc filter equipment is conducive to relatively easy expansion of the facility.

4.3.3.1.3 Membrane Tertiary Filtration

Membrane filtration is a second alternative to mixed media filters. Membranes with a very small (typically 0.1 micron) pore size serve as a physical barrier to essentially all solids, and permeate is consistently of very high quality. Two (2) main types of membrane filtration are available:

1. submerged membranes
2. pressure cartridge membranes.

Submerged membranes are installed in a tank and use permeate pumps to apply a vacuum to the interior of the membranes to draw water through. Pressure cartridge membranes are installed inside pressure vessels and use feed pumps to apply pressure, forcing water through the membranes. The existing filter tanks could possibly be modified for installation of submerged membranes. For a tertiary filtration application, pressure cartridge membranes are typically the most cost effective.

Alternatively, using a smaller packaged membrane system to scalp directly from the aeration tanks could reduce loading on the tertiary filters to acceptable limits. A membrane system could also reduce loading on the secondary clarifiers. Secondary sedimentation would not precede

the membranes in this application, so the operating flux rate could be lower than if membranes were used only for tertiary filtration. Since the flux rate could be lower, more membranes could be required for an equivalent capacity. A higher capital investment could be required also. Although the firm capacity of the secondary clarifiers appears adequate, the investment in additional membranes may be worthwhile since the hydraulic loading rate on the secondary clarifiers exceeds a typical design rate and a low design conservatism exists for this process.

4.3.3.1.4 Recommended Alternative

The following alternatives are recommended for consideration:

1. Rehabilitation of the existing filters and the addition of four new mixed media filters.
2. Installation of cloth disc filters.
3. Installation of a pressure cartridge membrane system for tertiary filtration.
4. Installation of a submerged membrane system for scalping from the aeration tanks.

Although conversion to an MBR process (Alternative No. 4) is much more expensive than the other three alternatives, consideration should be given to the savings resulting from other recommended improvements that would no longer be necessary.

Due to the high operations and maintenance cost of conventional mixed media filtration, along with the disinfection limitations posed for recycled water production (discussed in Section 4.3.4), it is recommended that the existing mixed media filters be replaced with a cloth media filter system. A cloth media system with a capacity of 24 MGD typically consists of seven individual 12-disk units.

4.3.4 Disinfection

4.3.4.1 Disinfection Limitations

The issue of nitrite “lock” could be addressed by adding a bioaugmentation reaeration basin, as proposed by Brown and Caldwell (B&C’s TM No. 1). This modification should provide complete nitrification year-round, which would eliminate the occurrence of nitrite “lock” in the disinfection process. Therefore, the alternatives discussed below focus on ensuring compliance with the effluent ammonia and total chlorine residual permit limits while providing the minimum CT value required for disinfected tertiary recycled water.

4.3.4.1.1 Disinfect Recycled Water Separately and Continue Chlorination and Dechlorination for Discharge to Estuary

As mentioned previously, chloramination is used for disinfection to prevent the formation of THMs and other disinfection byproducts prohibited by the NPDES and recycled water permits. However, it appears that disinfection using chloramination may not be able to satisfy both the effluent nitrogen limitations and the Title 22 required CT value for production of recycled water at the projected flows. It may be feasible, however, to disinfect recycled water and estuary discharge separately while maintaining compliance with NPDES and Title 22 regulations.

For disinfection of Estuary discharge, a dosage of between 6 to 12 mg/l of chlorine with a 30 minute contact time is typically applied to filtered nitrified effluent to meet an effluent total coliform standard of 200 MPN/100 ml (Metcalf & Eddy, 2003, Table 12-13). To achieve the equivalent CT value of 180 to 360 mg-min/L with a 90-minute contact time, as the estimated HRT at the future maximum day dry weather flow, could require a chloramine residual between 2.0 to 4.0 mg/l. Although the higher residual ammonia concentrations following dechlorination would seem prohibitive to this operational strategy, improvements for continued chloramination of discharge to the Estuary are discussed below due to the uncertainty in the interpretation of the proposed NPDES effluent requirements regarding total ammonia and total nitrogen.

Control of the chlorine dose could be improved by having two or more locations available for dosing chlorine. This could allow for more precision dosing at the first location, then adjusted based upon feedback from the effluent flow meter and chlorine residual analyzer. Dosing at the subsequent locations could be necessary only if the measured chlorine residual was below the specified setpoint. A second chlorine analyzer could be used to determine the chlorine residual upstream of a dechlorination zone. Location of the analyzer could be such that at the Maximum Day Flow, the effluent may not reach the dechlorination zone from the time of sample collection to the time the results of the analysis were reported.

To improve dosing efficiency of sulfur dioxide and ensure compliance with the chlorine residual permit limit, two locations should be available for dosing sulfur dioxide. The measured chlorine residual just upstream of the dechlorination zone could be used to determine an appropriate initial sulfur dioxide dose for dechlorination. Just downstream of the first dechlorination dose, an analyzer could measure the chlorine residual. If a residual is detected, more sulfur dioxide could be dosed at the second location. The location of the analyzer could be such that at the Maximum Day Flow, the effluent may not reach the second sulfur dioxide dosing location from the time of sample collection to the time the results of the analysis were reported. A final chlorine analyzer could be located at the end of the dechlorination zone and contact tanks to provide the chlorine residual measurements for permit compliance. Based on typical design criteria, the existing chlorine contact tanks appear to have abundant capacity and creating a dechlorination zone in the third contact tank may be feasible.

In 1997, California implemented the California Accidental Release Prevention Program (CalARP). CalARP issues regulations that call for the publishing of Risk Management Plans (RMP) for facilities that store or handle toxic chemicals such as chlorine and sulfur dioxide above specific quantities. As a facility with more than the threshold quantity for both of these regulated substances, the VWRf must evaluate and determine the potential for and impacts of accidental releases for these substances. After implementation of this program, many wastewater treatment facilities moved away from these regulated substances to not only avoid the potential hazards of working with these toxic chemicals, but also to avoid the RMP process. If the VWRf continues to disinfect with chlorine, consideration should be given to alternative methods of chlorination and dechlorination that present less risk to the operations Staff and surrounding community as well as facilitate regulatory compliance with CalARP.

Liquid sodium hypochlorite (NaOCl) contains chlorine that can be utilized for disinfection. Sodium hypochlorite is not a regulated substance under CalARP. Thus the city is not required to prepare an RMP for sodium hypochlorite. Liquid sodium hypochlorite is used at wastewater treatment facilities with a number of advantages over chlorine gas (most notably, increased public safety, since the chemical can be easily contained in liquid form). Liquid sodium

hypochlorite has a high degradation rate at higher solution strengths and higher temperatures. The typical 12.5 percent trade strength sodium hypochlorite solution could be diluted onsite with potable water to increase longevity of the product, but this could increase storage requirements.

Liquid sodium hypochlorite could also be generated onsite. Onsite generation of liquid sodium hypochlorite is becoming increasingly popular as an alternative to conventional delivery and storage of sodium hypochlorite. The major advantage includes eliminating the risks associated with transportation and transfer of the chemical to the facility and storage tanks. In addition, onsite generation produces sodium hypochlorite at 0.8 percent concentration. At this solution strength, the chemical is classified as non-hazardous. In addition, this concentration does not require secondary containment, and operators do not require HAZMAT training. Off-gassing of chlorine is significantly reduced, with less wear on the chemical delivery and containment systems due to lower corrosivity. The cost feasibility of onsite generation is highly dependent on the local cost of power. A life-cycle cost assessment is recommended if the City considers this alternative for implementation.

Since the VWRF uses a CalARP regulated substance for dechlorination, alternatives should also be considered for the sulfur dioxide system. Sodium bisulfite is a widely used dechlorination agent in the wastewater industry. The chemical is classified as hazardous and susceptible to crystallization and off-gassing of sulfur dioxide at higher concentrations and temperatures. Calcium thiosulphate is not as widely used. However, it possesses major advantage over sodium bisulfite in that it is non-toxic, non-corrosive, and does not break down or crystallize over long periods of time. However, calcium thiosulphate also requires a longer contact time than sodium bisulfite. These chemicals are not regulated under CalARP. The City is not required to prepare a RMP for storage and handling.

For production of recycled water, chloramination is a feasible method of disinfection because Title 22 does not limit ammonia or total nitrogen for production of tertiary disinfected recycled water. If this option is considered, it may be most cost-effective to use one of the existing CCTs or construct a smaller sidestream CCT operating at a higher residual chloramine concentration to achieve the target CT value of 450 mg-min/L. At the minimum required contact time of 90 minutes at Maximum Day Summer Flow, the operating chloramine residual could be approximately 5.0 mg/l. Other disinfectants and dechlorinating agents could also be utilized, as discussed previously.

Alternatively, ultraviolet (UV) disinfection could be provided for production of recycled water or for disinfection of Estuary discharge. UV disinfection is described in more depth in the following section.

4.3.4.1.2 UV Disinfection

UV is widely accepted in the wastewater treatment industry as a viable alternative to chlorine disinfection. Major advantages cited include the elimination of chlorine residuals and byproducts, elimination of health risks and maintenance problems associated with onsite storage and handling of chlorine, and easier compliance with the CalRMP and Occupational Safety and Health Administration (OSHA) regulations. In addition, UV disinfection is not affected by nitrite accumulation in the effluent. The primary disadvantages of UV systems are high capital cost when compared to a facility with adequate contact tank capacity, higher power consumption, and lamp replacement costs. Although some smaller installations rely on manual

cleaning of lamps, most UV systems are equipped with automated cleaning systems. In addition, UV systems monitor lamp status and notify the operator when one or more lamps require replacement.

UV systems can be installed as an open channel gravity flow configuration or as an in-pipe configuration. Selection of the UV system configuration could depend on upstream and downstream hydraulic conditions. An open channel system could be most applicable when preceded by a gravity filtration system such as the existing mixed media filters or cloth media filters. It is possible that a portion of the existing chlorine contact tanks could be retrofitted as an open channel for UV banks. Other modifications, such as installing level control weirs, could be required to ensure that the UV lamps stay submerged during low flows.

An in-pipe UV system could be most applicable if preceded by membrane filtration. The permeate pumps or feed pumps could provide sufficient pressure to convey the effluent through the UV system. UV disinfection may not be the most cost-effective alternative, unless substantially more CCT volume is required to meet the recycled water CT value without increasing the chloramine residual concentration. The cost-effectiveness of UV disinfection is often improved when used with membrane filtration, since the high clarity of effluent from membrane filtration improves the effectiveness of UV radiation as a disinfectant. This reduces the number of lamps required and amount of energy consumed.

If sidestream disinfection of recycled water were provided by chloramination, UV disinfection could be utilized for disinfection of Estuary discharge. However, the incremental cost of additional UV capacity to include disinfection of recycled water is likely marginal when compared to the overall cost of implementing UV disinfection for Estuary discharge only. Therefore, if the City considers this option for implementation, it is recommended that UV facilities be designed for disinfection of both recycled water and Estuary discharge.

4.3.4.1.3 Recommended Alternative

As indicated previously, disinfection to meet Title 22 requirements would likely require that the VWRP carry a total chlorine residual between 3.4 to 5.0 mg/l in the CCTs for production of recycled water. NPDES disinfection requirements would likely require that the VWRP carry a total chlorine residual between 2.0 and 4.0 mg/l in the CCTs for Estuary discharge. The VWRP scales the dosage of ammonia with chlorine dosage to prevent the formation of disinfection byproducts that are regulated by NPDES and recycled water permits. This additional residual ammonia persists in the CCT effluent following dechlorination and could exceed permitted limits.

For these reasons, it is recommended to replace the existing chlorine system with UV disinfection for both Estuary discharge and production of recycled water. If actual NPDES permit limits allow for higher effluent ammonia concentrations than assumed, these recommendations should be re-visited to assess the feasibility of continued chloramination as the primary method of disinfection.

4.3.5 Effluent Pumping and Metering

4.3.5.1 Effluent Pumping Capacity

4.3.5.1.1 Complete Pump Replacement

The existing effluent pumps consist of three vertical turbine pumps (two [2] duty, one [1] standby) with a firm capacity of 9.5 MGD. Based on the projected equalized maximum daily flow of 23.8 MGD, replacement of the pumps or expansion of the ETS will be required. Replacement of the pumps with three 11.9 MGD vertical turbine pumps would be feasible, provided the size and hydraulic characteristics of the existing effluent pump station structure are sufficient.

4.3.5.1.2 Pump Upgrade and Expansion

An alternative to replacing the existing pumps is to upgrade the existing pumps to operate at a higher capacity and expand the ETS to add more pumps, if necessary. The existing vertical turbine pumps could be upgraded by installing larger impellers, larger motors, and/or additional stages. Either option for increasing effluent pumping capacity may require improvements to the discharge pipelines to avoid excessive headloss at the higher flow rates. The system hydraulics should be evaluated to determine the need for enlarging the discharge piping and the feasibility of upgrading the existing pumps.

4.3.5.1.3 Elimination of Effluent Pumping with Membrane Filtration

If membrane filtration is implemented, another alternative is to use the head generated by the permeate or feed pumps to convey effluent to the wildlife ponds. This option is feasible only if an in-pipe UV system is used for disinfection.

4.3.5.1.4 Recommended Alternative

After discussion with VWRP Staff, the most feasible alternative contains the following components:

- Expand the existing pump station by adding a new wet well with two new 9.5 MGD pumps.
- Connect the new wet well to the existing ETS wet well.
- Rehabilitate the existing pumps.
- Make modifications to the existing discharge piping.

4.3.5.2 Effluent Metering Capacity and Redundancy

The new NPDES Permit, Order No. R4-2008-0011, indicates on page E-7 that the VWRP shall monitor effluent flow at the ETS. As mentioned previously, the VWRP currently measures effluent flow to the Estuary at the termination of the wildlife ponds. Due to the limitations identified with the capacity and redundancy of the existing flume and also the proposed relocation of monitoring, improvements are considered to effluent flow monitoring below.

4.3.5.2.1 New Parshall Flume

Two (2) new 36-inch Parshall flumes, each with a capacity of up to 32.5 MGD, could be installed near the ETS. This larger flume could provide sufficient capacity to accurately gauge the projected maximum day flow without excessive surcharging and also provide accurate measurements at low flows. A flume would need to be installed in an easily accessible location on the upstream side of the ETS. Since a flume is an open-channel measurement device it requires access for calibration and visual observation. Also, installation of a flume could require significant structural modification if existing structures are not designed to accommodate the addition.

4.3.5.2.2 Magnetic Flow Meter

Alternatively, two (2) magnetic flow meters could be installed on the discharge header from the ETS. A magnetic flowmeter would need to be installed in an easily accessible location, since the flowmeter requires access for calibration and maintenance. Additionally, the meter would require a straight run of pipe both upstream and downstream and the discharge piping at the meter would always need to be full for accurate flow measurement. Installation of a magnetic flowmeter could require some piping modification if the ETS discharge piping is not configured for the addition.

4.3.5.2.2 Recommended Alternative

If the piping layout and hydraulic conditions are conducive, it is recommended that two magnetic flow meters be installed on the discharge piping of the effluent transfer pumps. If piping modifications are not significant, magnetic flow meters could be significantly less expensive than two Parshall flumes, after factoring in the cost of the structural modifications.

If the facility layout and hydraulic conditions are not conducive to the installation of magnetic flow meters at the effluent transfer, it is recommended to assess the feasibility of installing two (2) 36-inch Parshall flumes at the CCT. If the disinfection system is converted to UV, then extra space within the existing footprint of the CCT may accommodate the addition of new flumes.

4.3.6 Anaerobic Digestion

4.3.6.1 Anaerobic Digestion Capacity

As discussed in Paragraph 4.2.2 above, it is understood that the VRWF could dispose of solids on an occasional and temporary basis with one (1) digester out of service. Therefore, firm capacity is assumed to be equal to the total process capacity.

The three existing digesters could be severely overloaded before the AAF reaches the 14 MGD design flow. Considering both key anaerobic digestion design criteria (volatile solids loading and detention time), the digester volume must be increased from the existing 1.5 MG to a total of 2.0 MG.

The existing mesophilic anaerobic digestion offers the following key advantages:

- Production of Class B biosolids through effective stabilization of the sludges.
- Volatile solids reduction through conversion into a renewable fuel for power production.
- Stable, low-cost operation.

The existing three digesters should be gradually rehabilitated to provide improved mixing, reliable heating, and new gas-handling equipment. For each mesophilic digestion alternative described below, it is assumed that the existing three (3) digesters could be rehabilitated unless otherwise noted.

The following are some alternatives for expanding the capacity of the anaerobic digestion facilities.

4.3.6.1.1 Add a Fourth Digester with Provisions for Alternative Disposal Options

The least-cost alternative for addressing the digester bottleneck includes the addition of a single, new 0.5 MG, pump-mixed, mesophilic digester.

4.3.6.1.2 Abandon Existing Digestion Facilities, Dewater Sludge, and Haul to Regional Biosolids Facility

This alternative would involve centrifuge dewatering of raw sludge for trucking to the proposed regional biosolids facility in Ventura County. The existing digestion, dewatering and co-generation facilities would be abandoned.

4.3.6.1.3 Produce Class A Biosolids Using Pasteurization

This alternative would involve the addition of lime, pre-thickening, dewatering in a screw press, and heating with steam to meet EPA pathogen reduction requirements.

4.3.6.1.4 Recommended Alternative

The digesters operate reliably and consistently achieve and exceed pathogen and vector attraction reduction requirements for Class B biosolids. Also, the City already anticipated the need for improvements to the VWRP digestion process and allocated space for a fourth digester. Considering this, it is recommended to continue with the planned addition of the fourth mesophilic digester. The project could bring the projected SRT and volatile solids loading rates within typical design standards.

Additional consideration may also be given to enhancing the ability to receive fats, oils, and grease (FOG) with the construction of the new digester. In order to appropriately digest FOG, the new digester would need to be equipped with a pump mixing system that is specifically designed to keep the FOG mixed into the digester biomass. However, the FOG could be a substantial source of both revenue and savings for the VWRP. It is estimated that FOG received from the VWRP service area could yield approximately \$50,000 in tipping fees and produce sufficient digester gas to generate approximately \$50,000 worth of power in a cogeneration facility.

4.3.7 Comprehensive Replacement Plan

Alternatives to increase VWRP capacity to 14 MGD AAF were discussed in previous sections. However, the scope of this evaluation could not encompass every potential limitation. Many of the facilities at the VWRP are operating beyond a typical design life, and the condition of these facilities was not assessed within the scope of this project.

Considering the age of some components of the VWRP, assessing the state of these facilities is critical to developing an appropriate improvement plan. A condition assessment is recommended to collect this information. If the results of this assessment indicate that many structures, connective piping, or equipment are not in adequate condition to operate reliably, then implementation of a comprehensive replacement plan could be considered in place of the previously recommended improvements. Other considerations for implementation of a comprehensive replacement plan include the following:

1. Confirm loading projections used for the capacity assessment with recent historical operating data
2. Reevaluate several components of the VWRP that approach the limits of conventional design such as the filters, thickeners, and digesters
3. Determine whether or not the proposed alternatives will address all of the possible SWRCB permit requirements and the unpredictable regulatory climate.

The comprehensive replacement plan will facilitate the expansion of the VWRP to serve 14 MGD AAF, and also addresses some of these uncertainties. Replacement options are presented in the following sections.

4.3.7.1 Conventional BNR

One option for a comprehensive replacement plan is application of a conventional activated sludge BNR system. The BAR system that Brown and Caldwell (B&C's TM No. 1) recommended, could potentially integrate with the existing aeration tanks depending on the results of the condition assessment. The process could be designed to facilitate nitrification and denitrification like the existing mLE process, or could be expanded to incorporate phosphorus removal as well. The benefit of such a system is the low cost and operational flexibility and familiarity. Since the City is already familiar with BNR processes and innovative variations such as the BAR, this option will not be discussed in more depth.

Additional consideration would be required for improvements to address other limitations including the following: influent and effluent flow measurement, primary clarifier redundancy, primary effluent pumping, RAS pumping, WAS pumping, tertiary filtration, disinfection, gravity thickening, dissolved air floatation, digestion, dewatering, and the need for repair to older facilities.

4.3.7.2 Integrated Fixed-film Activated Sludge (IFAS)

Another option to replace secondary treatment would be to apply an integrated fixed-film activated sludge (IFAS) technology. An IFAS system provides the benefits of attached growth

biological systems to the suspended growth activated sludge process. Biomass accumulation on media added to a typical activated sludge system provides a higher SRT without increasing solids loading on the clarifiers, since much of the biomass is retained with the media in the reactors.

Media can be mounted in the tank and fixed in place, or introduced as loose pieces that are suspended and circulated throughout the tank. Select types of media have been shown to achieve some degree of denitrification, in addition to nitrification, within one aerobic reactor.

The effective SRT of this system is higher than a typical activated sludge system. Thus the process is less susceptible to shock loads or large fluctuations in influent quality. This could allow a greater margin of safety if more recent plant loadings did not confirm the loading projections based on older historical data. Also, in the event of a hydraulic upset, the system is much less susceptible to washout. Much of the biomass is attached to fixed film media which remains in the tanks regardless of the flow condition.

Depending on the results of the condition assessment, the existing aeration tanks may be able to be retrofitted with IFAS. Modifications to the diffusers, air piping and blowers could be required to accommodate the new system. Also, additional consideration would be required for improvements to address other limitations including the following: influent and effluent flow measurement, primary clarifier redundancy, primary effluent pumping, RAS pumping, WAS pumping, tertiary filtration, disinfection, gravity thickening, dissolved air floatation, digestion, dewatering, and the need for repair to older facilities.

If the City considers this technology favorable, then it is recommended to pilot test or model the IFAS system. The pilot testing, or modeling, could verify the degree of treatment to be expected. Various manufacturers of the IFAS system offer trailer mounted pilot installations.

4.3.7.3 Membrane Bioreactor (MBR)

Membranes could also be applied to a membrane bioreactor (MBR) process that would replace or supplement the existing activated sludge process, rather than using membranes to filter secondary effluent as discussed in Section 4.3.3.

Completely converting to an MBR process could eliminate the need for improvements to the aging secondary clarifiers and capacity-limited mixed media filters, because the membranes could provide liquid-solids separation at a tertiary level of treatment. Additionally, if reinforced membranes already replaced the MMF's, these same membranes could be repackaged and reused in the MBR process. The identified RAS pumping improvements would not be necessary, because the MBR process contains the biomass (except when wasted).

In addition, improvements to address redundancy or the aging condition of the primary clarifiers may not be necessary, because an MBR process operates at high mixed liquor concentrations (typically around 10,000 mg/l). This high mixed liquor concentration provides greater capacity to treat organic waste, yields a longer SRT, and improves the stability of the process when experiencing shock loads or large fluctuations in influent quality. This would also allow a greater margin of safety if more recent plant loadings did not confirm the loading projections based on older historical data.

If the City upgrades or expands the secondary treatment process with membranes, the requirements for fine screening associated with protecting the membranes could also be used to provide satisfactory grit removal. This could eliminate the need for expansion of the existing grit removal process to address redundancy considerations. Hollow fiber membrane manufacturers typically require at least a 2 mm fine screen and often prefer a 1 mm unit when membrane modules are more tightly packed than in a typical cassette. Flat plate membrane manufacturers typically require a 3 mm fine screen. Given that relatively limited grit quantities would pass through fine screens with 1 to 3 mm openings, additional grit removal may not be necessary with installed fine screens.

An in-pipe UV system would be the most applicable alternative if proceeded by membrane treatment, since the UV would eliminate concerns with chlorine residual and disinfection byproducts. The membrane permeate pumps could then also replace the effluent transfer pumps. Additionally, reverse osmosis (RO) could be implemented more easily if an MBR system was already in place. RO could be used to achieve greater removal of metals and other non-conventional pollutants required by future regulatory permits.

Additional consideration would be required for improvements to address other limitations including the following: influent and effluent flow measurement, primary effluent pumping, WAS pumping, gravity thickening, dissolved air floatation, digestion, dewatering, and the need for repair to older facilities.

Although conversion to an MBR process is more expensive than the previously recommended alternatives, consideration must be given to the savings resulting from eliminating other process improvements due to the installation of an MBR. Also, if the cost of membranes continues to decline, as experienced over the last few years, membrane technology may become a very cost-effective alternative in the future.

Other factors that may make membranes more feasible are permitting pressures to expand the recycled water system and the value of high quality water in Southern California. As regulatory limits become increasingly stringent and as water becomes more valuable in this region, the benefit of and potential to attract customers and sell recycled water also improves.

If the City considers this technology favorable, then it is suggested to first evaluate the adequacy of the post equalization basins as described previously in this section. Ensuring that enough volume is available to equalize the maximum day flow will reduce the required design conservativeness and the overall cost of implementing an MBR.

4.3.7.4 Comprehensive Replacement Costs

As stated above, if the results of an overall plant assessment indicate that many components of the plant are not in adequate condition to operate reliably, then implementation of a comprehensive replacement plan could be considered in place of the improvements recommended in Section 4.3.

While it is difficult to estimate the costs for such a comprehensive plan, typical capital costs for the construction of wastewater treatment facilities range from \$15 to \$20 per gallon capacity. For a 14 MGD facility, the comprehensive replacement costs could range from approximately \$210 to \$480 million dollars.

4.3.8 Summary of Recommended Improvements and Conceptual Capital Costs for Continued Discharge to the Estuary

The previous paragraphs discussed alternatives to address the process limitations in Section 4.2 to enable the entire VWRP to treat an AAF of 14.0 MGD. Additionally, a comprehensive replacement plan was presented as an alternative to the identified improvements to address some uncertainties having to do with the general condition of the VWRP, loading projections, and regulatory considerations.

A summary of recommendations, with associated capital costs for continued discharge to the estuary, is summarized in Section 4.5 (Table 4-24). Also, as mentioned previously, a flow-based timeline for the identified improvement needs is presented in Figure 4-2.

4.4 Long-Range Plan for Discharge Prohibitions to the Estuary

In accordance with NPDES Permit No. CA0053651, Order No. R4-2007-XXXX, Paragraphs III.A and B:

“the discharge of treated wastewater to the Estuary is prohibited after December 31, 2018, unless there has been a determination from responsible resource agencies that sustenance flow is required to support endangered species habitat...The discharge to the Estuary must be removed as early as practicable, and to facilitate this, it is required that an incremental decrease of 1 MGD occurs per year, beginning in 2008.”

In consideration of the proposed stepped reduction in discharge to the Estuary, this section explores the options for future discharge of wastewater at other permitted or permissible locations. In addition, this section addresses the impacts of an alternative discharge point on the previously recommended improvements for NPDES permit compliance.

4.4.1 Increased Production of Reclaimed Water

Paragraph II.A of the proposed NPDES permit suggests that the requirement of the previously mandated maintenance flows to the Estuary may be lifted such that water recycling can be increased. In the interest of promoting beneficial reuse and expanding their recycled water system, the City contracted Kennedy/Jenks to perform a Recycled Water Market Assessment (Assessment) to evaluate the potential for recycled water markets within the city and estimate the potential for recycled water usage.

After review of the water usage and land-use information within the city, the Assessment suggested that there is a potential to increase recycled water usage from 0.6 MGD to about 1.9 MGD, on an average annual flow basis, if the system were expanded to include all the potential irrigation customers. Based on this evaluation, and considering that recycled water demand varies seasonally, it does not appear that increased production of recycled water will completely address the proposed discharge prohibition to the Estuary.

4.4.2 Ocean Outfall

Another potential alternative to address the discharge prohibition to the Estuary includes construction, permitting, and discharge of treated effluent through an ocean outfall. Since effluent quality requirements for ocean outfalls are typically less stringent than the proposed effluent performance goals outlined in the City's proposed NPDES and recycled water permits, effluent discharge through an ocean outfall could address some of the process limitations identified in Section 4.2.

Discussion in this section includes the following items:

- Consideration of typical NPDES permit requirements for an ocean outfall.
- A conceptual plan for construction of an ocean outfall.
- Discussions of how different effluent quality and redundancy requirements may impact the recommended improvements on a process-by-process basis.
- A conceptual capital and operation and maintenance cost estimate.
- A discussion of the impact on continued production of recycled water.

4.4.2.1 Typical Outfall NPDES Permit Limitations

The San Elijo Water Reclamation Facility (SEWRF) in the City of Cardiff, California, is located approximately 30 miles north of San Diego on the Pacific coast. The SEWRF discharges treated wastewater through an ocean outfall pipe where it commingles with discharges from the City of Escondido before entering the Pacific Ocean. NPDES Permit No. CA0107999, Order No. R9-2005-0100, defines requirements for discharge from the SEWRF to the Pacific Ocean for conventional pollutants as indicated in Table 4-23.

**TABLE 4-23
NPDES PERMIT CA0107999 EFFLUENT REQUIREMENTS (11 MAY 2005)**

Requirements	Units	Average Monthly	Average Weekly	Instantaneous
<i>Effluent Requirements</i>				
BOD	mg/l	25	40	-
Total Suspended Solids	mg/l	30	45	-
Oil and Grease	mg/l	25	40	75
Settleable Solids	ml/l	1	1.5	3.0
Turbidity	NTU ^(a)	75	100	225
pH	-	-	-	6.0-9.0
Total Residual Chlorine	mg/l	480 ^(c)	-	14,000
Total Coliform Organisms ^(b)	MPN/100 ml	70	-	230

Notes:

- (a) Nephelometric Turbidity Unit.
 (b) Conservative determination based on median coliform density requirements in areas where shellfish may be harvested for human consumption.
 (c) Six month median value.

For the purposes of considering permit requirements for an ocean outfall at the VWRP, it is assumed that effluent limitations and performance goals would be similar to that of the SEWRP for discharges to the Pacific Ocean.

4.4.2.2 Conceptual Plan for Construction of an Ocean Outfall

A conceptual plan for a 30-inch ocean outfall was prepared and is included in Appendix H. The conceptual alignment for the outfall originates near the beach approximately 2,000 ft from the VWRP and runs westerly approximately 1 mile out into the ocean to a water depth of roughly 15 ft. The location and profile for the outfall, construction considerations, and estimated costs are included in the referenced Appendix.

4.4.2.3 Headworks and Influent Pumping Station

Limitations identified with the headworks and influent pumping station were hydraulic in nature or pertained to process redundancy. Therefore, these limitations would exist regardless of a change in effluent discharge requirements, and the previous recommendations discussed in Section 4.3 are applicable.

4.4.2.4 Primary Clarifiers

Limitations identified with the primary clarifiers and PE/FE pumps were hydraulic in nature or pertained to process redundancy. Therefore, these limitations would exist regardless of a change in effluent discharge requirements, and the previous recommendations discussed in Section 4.3 are applicable.

4.4.2.5 Aeration Basins

Capacity limitations identified with the aeration basins in Section 4.2 were based on typical process requirements for achieving the nitrification and denitrification required by the proposed effluent limitations in the revised NPDES permit. As seen in the San Elijo permit, NPDES requirements for ocean outfalls do not typically include effluent limits for ammonia, nitrate, or nitrite. Considering that nitrification and nitrogen removal may not be required with an ocean outfall, operating the biological system at a low SRT for BOD removal only may be a feasible treatment strategy that would reduce the amount of improvements expected for permit compliance.

In some wastewater treatment facilities (Seattle, San Francisco), an anaerobic selector was used before the aeration tank in low SRT activated sludge systems designed for BOD removal, even though phosphorus removal was not required. The process involves placing an anaerobic contact zone ahead of an aerobic zone in an activated sludge treatment system.

Solids separation is one of the most important aspects of biological wastewater treatment. Frequently, a biological selector is incorporated in the design to limit the growth of organisms that do not settle well. The concept of a selector is the use of a specific bioreactor design that favors the growth of floc-forming bacteria instead of filamentous bacteria to provide an activated sludge with better settling and thickening properties. The goal in the selector is to have most of the readily biodegradable (soluble) substrate consumed by the floc-forming bacteria, which then translates to an advantage in the aerated zones.

Anaerobic metabolic conditions used in an activated sludge process favors the growth of the floc-forming bacteria since the filamentous bacteria do not store polyphosphates and cannot consume acetate in the anaerobic contact zone, thus giving an advantage for substrate uptake and growth to the floc-forming phosphorus-storing bacteria. Improved sludge settling characteristics, and in many cases, minimal filamentous bacteria growth has been observed with anaerobic selector-based systems. For high F/M anaerobic selectors, the resultant mixed liquor SVI typically ranges from 65 to 90 mL/mg. Additionally, anaerobic treatment processes are known to have a lower biomass yield, which may result in a lower net solids production and may help alleviate some of the projected bottlenecks with the solids handling systems.

Anaerobic contact detention times are typically 30 to 60 minutes and the zone is mixed to provide contact between mixed liquor and influent wastewater. Aerobic detention time generally ranges between 1 to 3 hours at typical design mixed liquor concentrations. A low operating SRT is used to prevent the initiation of nitrification, with desirable SRT's ranging from 2 to 3 days at 20⁰C, and 4 to 5 days at 10⁰C. RAS recycle is typically 25 to 100 percent of the influent flow without the requirement for internal recycle. Anaerobic and aerobic reactors are typically compartmentalized to promote plug flow and reduce short circuiting.

Comparing these typical design values against the projected operation in Table 4-7 in Section 4.2, it appears that some improvements to the secondary treatment system could be necessary. Under this scenario, if the VWRP continued to operate at a low mixed liquor concentration, the projected SRT will be below typical design values and the VWRP may not be able to consistently achieve compliance with typical NPDES effluent limits for an ocean outfall. An approximate doubling of solids inventory would be required to bring the projected SRT back within typical design range. This could be achieved by doubling the process volume, doubling the operating mixed liquor concentration, or some combination therein.

Since a low SRT system would not induce nitrification, the projected oxygen requirements could be reduced significantly and the aeration blower improvements may not be required. Also, since nitrogen removal may not be required by permit, and would not be required to prevent floating sludge in the clarifiers, the BNR pump improvements may not be needed either. Additional improvements such as baffling to compartmentalize the reactors, mixers for the anaerobic zones, and restructuring of flow routing to prevent hydraulic bottlenecks could be required.

It is recommended that this alternative be reevaluated if it is determined that an ocean outfall is viable. Pilot testing of this process may be beneficial to assess the feasibility of implementation at the VWRP, specifically to gauge the impact of an anaerobic selector on sludge settleability and solids production, and also to assess the viability of operating at higher mixed liquor concentrations in lieu of installing additional process volume.

4.4.2.6 Secondary Clarifiers

Capacity limitations with both the RAS and WAS pumping systems were identified in Section 4.2. The method used in Section 4.2 to evaluate WAS production incorporated simple calculation methods that were independent of the SRT in the biological system. Consequently, the results of the desktop evaluation with regards to WAS production in Section 4.2 are reasonably conservative and applicable to the secondary clarifiers if the City implements a low SRT treatment system. Therefore, if the City determines that a low SRT biological system is

feasible, WAS pumping capacity may limit the capacity of the process under a maximum month loading scenario. Applying typical RAS design ratios for a low SRT treatment system, as mentioned in Section 4.4.2.5, to the projected annual average flow in Section 4.2, it also appears that RAS improvements may still be necessary.

Alternatives and recommendations to improve the WAS and RAS systems, based on continued discharge to the Estuary, were addressed by Brown & Caldwell in B&C's TM No. 1. It was recommended in this memorandum that improvements to the RAS system include the installation of twelve RAS pumps, two per clarifier, to provide a total RAS flow of 16 MGD. Based on typical RAS ratios, this appears to be sufficient for a low-SRT biological system. It was also recommended that the improvements to the WAS system include the installation of a waste pumping system that would draw mixed liquor from the channel connecting the aeration basins and secondary clarifiers.

The primary benefit cited for wasting mixed liquor, instead of RAS, is the operational simplicity in controlling SRT since WAS flow would be set based on a fixed tank volume rather than a variable RAS concentration. The drawback of a mixed liquor waste (MLW) system is increased energy consumption, since the MLW pumps would need to pump approximately three times the flow of a RAS pump to waste the same amount of solids.

Considering the operational importance of SRT control and also that waste pumping is a relatively small component of total energy usage at the VWRf, it appears that the recommendation to install an MLW system remains applicable when considering construction of an ocean outfall. If VWRf Staff desires to continue to operate the system at a low mixed liquor concentration, it would be prudent to verify that the proposed MLW system has the operational flexibility to do so. More specifically, MLW pump capacity should be verified at the preferred operational MLSS concentration, minimum operating SRT, and maximum month loading scenario. This verification would ensure that the system is robust enough to function under a range of feasible operating scenarios. Based on the projected maximum month WAS of 26,645 lbs/d and an operating MLSS concentration of 1,400 mg/l, approximately 1,600 gpm of MLW pump capacity would be required to maintain a fixed solids inventory. No additional improvement needs for the RAS or WAS system were identified, beyond those already addressed by Brown and Caldwell in B&C's TM No. 1.

4.4.2.7 Mixed Media Filters

Improvements to the mixed media filters were identified in Section 4.2 based on limiting the filtration rate to 5 gpm/sf for a MDF of 23.8 MGD, in order to comply with the CWRC criteria for production of disinfected tertiary recycled water. The CWRC criteria must currently be applied to all wastewater treated by the VWRf, because the disinfected tertiary recycled water is commingled with Estuary discharge in the CCT's, ETS, and wildlife ponds.

If recycled water was not commingled with plant effluent, however, filtration may not be needed for secondary effluent prior to discharge if filtration is not needed to consistently achieve NPDES effluent TSS requirements. Based on the SEWRf permitted effluent TSS limit for an ocean outfall in Table 4-23, it could be possible to consistently achieve an average effluent TSS of 30 mg/l at the VWRf without tertiary filtration with an adequate biological treatment and sludge collection/wasting system. If tertiary filtration were not required for NPDES compliance, it could

be more economically feasible to treat recycled water separately from plant effluent to avoid the extensive rehabilitation or complete replacement of the existing MMF's.

For example, based on CWRC criteria for production of recycled water and the findings of the Recycled Water Market Assessment, only two (one duty, one redundant) of the six existing MMF's would need to be replaced or rehabilitated for recycled water production presently and after the recycled water system is expanded to include all potential customers. The remaining four mixed media filters could potentially be decommissioned if separate disinfection and conveyance were provided for the recycled water.

Cloth disc filters or membranes could also be used for filtration, as an alternative to MMF's, as discussed in Section 4.3.3.

Alternatively, a small packaged membrane system scalping directly from the aeration tanks could produce recycled water and also have the benefit of reducing loading on the secondary clarifiers as discussed in Section 4.3.3. Since no secondary sedimentation would precede the membranes in this application, the operating flux rate would be lower than if membranes were used only for tertiary filtration. Since the flux rate would be lower, more membranes would be required for an equivalent capacity, and a higher capital investment would be required. Although the firm capacity of the secondary clarifiers appears adequate, the investment in additional membranes could be worthwhile since the hydraulic loading rate on the secondary clarifiers is above a typical design rate and includes a low design conservatism.

4.4.2.8 Chlorine Contact Tanks

Although not limited in capacity, improvements to the disinfection system at the VWRP were recommended in Section 4.3 based on a combination of the following: low effluent chlorine residual limitations, more stringent effluent ammonia limitations, NPDES mandated relocation of the chlorine residual compliance point to a more restrictive location, and the Title 22 regulated CT value for production of recycled water that requires a minimum chlorine residual and potential addition of ammonia above the permitted effluent limits.

Reviewing the San Elijo coliform and chlorine residual limits in Table 4-23, it is apparent that an ocean discharge may be less restrictive with regards to chlorine disinfection than continued discharge to the Estuary. A discharge permit for an ocean outfall would not likely regulate effluent ammonia. Thus, the re-introduction of ammonia to prevent the formation of trihalomethanes would not be necessary because ammonia would not be converted to nitrite or nitrate by a low-SRT biological system. "Nitrite lock" would also no longer be an issue because nitrification would be inhibited by maintaining a low SRT. Additionally, since the permitted chlorine effluent limits are typically much less restrictive for ocean outfalls. Thus, improvement to the chlorine dosing control could be unnecessary since discharging a higher residual in the effluent may not be an issue.

For these reasons, it is anticipated that no major improvements to the existing disinfection system would be required if the VWRP discharged treated effluent through an ocean outfall. It is recommended that consideration be given to alternative chemicals for disinfection and dechlorination, to simplify compliance with reporting requirements, if the City pursues discharge via an ocean outfall. Specifically, a life-cycle cost assessment is recommended for disinfection with liquid sodium hypochlorite and dechlorination with sodium bisulfite or calcium thiosulfate.

4.4.2.9 Effluent Pumping and Flow Measurement

Limitations identified with effluent pumping and flow measurement were hydraulic in nature or pertained to process redundancy. Therefore, these limitations would exist regardless of a change in effluent discharge requirements, and the previous recommendations discussed in Section 4.3 remain applicable.

4.4.2.10 Solids Handling – Gravity Thickener, Dissolved Air Floatation, Anaerobic Digesters, and Filter Presses

The capacity limitations identified for the solids handling systems were not discussed in depth in this evaluation, since most of these limitations were already addressed by B&C in technical memorandums and planned improvement projects. The method used in this evaluation to determine projected loading rates to these solids handling processes incorporated simple calculation methods that were independent of the SRT in the biological system. Consequently, the results of the desktop evaluation in Section 4.2 and the recommendations for improvements to anaerobic digestion in Section 4.3 were reasonably conservative and applicable if the City implements a low SRT treatment system.

Alternatives proposed by B&C to address GT, DAF, and RFPF limitations were not reviewed in detail. Thus, it is uncertain as to whether or not implementing an anaerobic selector proceeding a low SRT treatment system could increase loading rates to these solids handling processes beyond the intended design capacities proposed in the B&C technical evaluations.

A detailed review of the B&C technical evaluations is beyond the scope of this analysis. Thus, it is recommended to reevaluate sludge production projections if the City further pursues a low SRT biological system. This evaluation would confirm the design criteria proposed for those solids handling processes.

4.4.2.11 Conceptual Capital Costs for an Ocean Outfall

Conceptual capital costs for the construction of an ocean outfall were developed for this evaluation and are included in the comparative cost evaluation in Section 4.5 (Table 4-24).

4.4.2.12 Impact on the Continued Production of Recycled Water

As discussed in Section 4.4.2.7, if tertiary filtration were not required for NPDES compliance, it could be more economically feasible to treat recycled water separately from plant effluent to avoid the extensive rehabilitation or complete replacement of the existing MMF's.

This could be accomplished through the rehabilitation of two of the existing MMF's, or the installation of a cloth media filtration system.

4.5 Comparative Evaluation of Recommended Alternatives

The objectives of Sections 4.1 through 4.4 have been to identify potential treatment plant limitations due to anticipated flow and load increases, discuss alternatives for improvements to address the limitations, and provide recommendations for an improvement plan to increase the

VWRF capacity. Recommendations for two separate discharge scenarios, in addition to a comprehensive replacement plan scenario, were presented in Sections 4.3 and 4.4.

Table 4-24 summarizes those recommendations and presents a comparative costs evaluation between a continued discharge to the Estuary and ocean outfall scenarios. These costs have an assumed level of accuracy for conceptual-level design of +50 percent to -30 percent. The estimates of probable cost assume March 2008 construction costs and incorporate a 20 percent allowance for project contingencies.

**TABLE 4-24
WRF COMPARATIVE COST MODEL FOR TWO DIFFERENT DISCHARGE SCENARIOS**

Unit Process	Expected Limitations ^(a)	Continued Estuary Discharge		Ocean Outfall Discharge		Cost Differential ^(c)	Existing Project Identified by City ^(d)
		Recommended Alternative	Capital Cost ^(b)	Recommended Alternative	Capital Cost ^(b)		
Headworks and Influent Pumping Station	Influent flow measurement capacity	Install magnetic flow meters on discharge piping of each influent pump	\$300,000	Install magnetic flow meters on discharge piping of each influent pump	\$300,000	\$0	
Primary Clarifiers	Primary effluent pump capacity. No clarifier redundancy.	Construct a third primary clarifier and addition of 4th pump	\$6,300,000	Construct a third primary clarifier and addition of 4th pump	\$6,300,000	\$0	
Aeration Basins and RAS/WAS Pumping	BNR pump capacity. Insufficient SRT for nitrification.	See Brown and Caldwell's TM No. 1 and the Preliminary Design Report for Ventura WRF Upgrade Project, Phase II (Brown and Caldwell, December 2006)	\$18,800,000 ^(e)	Construct additional aeration basin volume (similar to that required for Estuary Discharge, but without RAS pump and blower improvements).	\$16,100,000 ^(f)	-\$2,700,000	Currently out to bid (#96855)
Aeration Blowers	Aeration capacity.	See Brown and Caldwell's TM No. 1 and the Preliminary Design Report for Ventura WRF Upgrade Project, Phase II (Brown and Caldwell, December 2006)	\$4,500,000 ^(e)	No improvements recommended	\$0	-\$4,500,000	#96855
Mixed Media Filters	Hydraulic loading rate criteria	Replace existing mixed media system with a cloth media filtration system	\$8,500,000	Abandon existing mixed media filters; install 2 MGD cloth media filter system for RW production	\$3,200,000	-\$5,300,000	#96874
Chlorine Contact Tanks	Chlorine residual limitations. "Nitrite Lock" during cold weather periods	Replace existing chlorine system with UV disinfection	\$11,200,000	Not Applicable	\$0	-\$11,200,000	#74026

Unit Process	Expected Limitations ^(a)	Continued Estuary Discharge		Ocean Outfall Discharge		Cost Differential ^(c)	Existing Project Identified by City ^(d)
		Recommended Alternative	Capital Cost ^(b)	Recommended Alternative	Capital Cost ^(b)		
Effluent Pumping and Flow Measurement	Effluent pump and flow metering capacity	Install two magnetic flow meters on the discharge piping of the effluent transfer pumps	\$1,200,000	Install two magnetic flow meters on the discharge piping of the effluent transfer pumps	\$1,200,000	\$0	#74027
Thickening	Solids loading rate criteria. No thickener redundancy.	See the Preliminary Design Report for Ventura WRF Upgrade Project, Phase II (Brown and Caldwell, December 2006)	\$2,900,000	See the Preliminary Design Report for Ventura WRF Upgrade Project, Phase II (Brown and Caldwell, December 2006)	\$2,900,000	\$0	Currently out to bid (#96855)
Anaerobic Digesters	Detention Time	Construct a fourth digester	\$3,900,000	Construct a fourth digester	\$3,900,000	\$0	#96878
Filter Press	Filter press capacity / availability of operational time	See Brown and Caldwell's Sludge Dewatering Alternatives Evaluation	\$12,800,000 ^(g)	See Brown and Caldwell's Sludge Dewatering Alternatives Evaluation	\$12,800,000 ^(g)	\$0	
Ocean Outfall		Not Applicable	\$0	Construct ocean outfall	\$26,300,000	\$26,300,000	
Engineers Estimate of Probable Cost of Construction			\$70,400,000		\$73,000,000	\$2,600,000	

Notes:

- (a) See Figure 4-2 for a flow-based timeline for the expected limitations.
- (b) Estimate accuracy is +50% to -30%.
- (c) Difference in cost between two alternatives (Ocean outfall - Estuary).
- (d) Project similar to some recommended alternatives have been identified by the City in their 2008-2013 Capital Improvement Project Plan. The projects are identified by their Project ID's.
- (e) Capital costs were estimated from Brown and Caldwell's Preliminary Design Report for Ventura WRF Upgrade Project, Phase II. Costs were escalated from December 2006 to October 2008 using the ENR-Construction Cost Index for Los Angeles.
- (f) Capital costs assume the same improvements for Estuary discharge, but exclude pumps.
- (g) Capital costs were presented in Brown and Caldwell's Sludge Dewatering Alternatives Evaluation. Cost was assumed for Alternative 10 (3 centrifuges, 7 shifts). Costs were escalated from April 2002 to October 2008 using the ENR- Construction Cost Index for Los Angeles.

The cost evaluation in Table 4-24 above results in an approximate cost differential of \$11,000,000 more for the ocean outfall versus the Estuary discharge scenario. Given the level of accuracy for the estimate, this differential is not significant enough to conclude that one alternative holds a considerable capital costs advantage over another.

Furthermore, it should be noted that the recommended alternatives presented for each scenario for increasing VWRP capacity are based upon information provided VWRP Staff. However, because this evaluation is limited and does not include all potential deficiencies, there are several recommendations for further studies and investigations which may modify the need for the recommended alternatives shown in Table 4-24. Due to limited information, these costs modifications could not have been quantified at the time that this report was prepared. However, further studies that the VWRP may want to consider are described below.

- Influent flow measurement capacity: Determine whether the facility layout and hydraulic conditions are conducive to installing magnetic flow meters on the discharge piping of the influent pumps (Section 4.3.1.1.4).
- Grit removal redundancy: Verify that mechanical redundancy is provided in the existing grit removal unit; if further reliability is desired, assess the feasibility of subdividing the existing unit (Section 4.3.1.2.2).
- Primary clarifier redundancy: Pilot test Enhanced Primary Treatment (EPT) to explore the feasibility of implementing EPT in lieu of building a third clarifier (Section 4.3.2.1.4).
- Aeration basins: Review adequacy of aerations improvements recommended by Brown and Caldwell (B&C) in their TM No. 1. Modeling and/or pilot testing of the proposed system is recommended before full-scale implementation (Section 4.2.3.3.2).
- Secondary Clarifiers: Review adequacy of the proposed Waste Activated Sludge (WAS) improvements recommended by B&C TM No. 1 to ensure that they allow for a comfortable level of operational flexibility under a maximum month loading scenario (Section 4.2.3.4.2).
- Anaerobic digestion capacity: Consider enhancing the ability to receive fats, oils, and grease (FOG) with the construction of a new digester (Section 4.3.6.1.4).

This comparison of alternatives presented in Table 4-24 considered only two discharge scenarios: (1) continued discharge to the Estuary and (2) an ocean outfall discharge location. The recently adopted NPDES permit Order No. R4-2008-0011, presents a third discharge alternative where the effluent discharge to the Estuary is capped at 9.0 MGD. In addition to the further studies described above, as a condition of this new permit, the City must conduct the following three studies:

- Estuary Subwatershed Study: This study requires an Estuary water balance and continued monitoring of the Estuary with the goal of determining what effluent discharge volume will prevent negative impacts to the Estuary and simultaneously protect the beneficial uses (including those related to sensitive, endangered, and threatened species) within the Estuary system.

- Recycled Water Market Study: The purpose of this study is to identify, research, and evaluate the feasibility of alternatives for increasing effluent reuse throughout the City and nearby areas.
- Treatment Wetlands Feasibility Study: This study will result in the preliminary design of treatment wetlands to provide further treatment of the VWRF effluent and to enhance wildlife use of the wetlands.

Upon completion of these studies, the CRWQCB will reopen the Permit to consider permit revisions. Varying discharge volumes to the Estuary, which is a possible recommendation of the above studies, may lead to increased recycled water use. The effluent quality required for recycled water use will be dependent upon the recycled water uses (i.e., landscape irrigation, agricultural irrigation, industrial use, application to spreading grounds, etc). Therefore, the improvements to the VWRF recommended in Table 4-24 must be reevaluated in conjunction with an overall recycled water master plan, which builds from the Recycled Water Market Study.

Section 5: Sewer Collection System Evaluation and Improvement Plan

The City wastewater collection system consists of 4- to 42-inch gravity sewers, several lift stations, and forcemains. As previously described, the system is generally divided into four drainage areas: Eastside, Midtown, Downtown, and Westside. The flows from these four sewer regions flow to the Ventura Wastewater Reclamation Facility (WRF) for treatment.

This section presents the evaluation of the City's existing collection system and the recommended improvements to the system. Specifically, this section addresses the following:

- Collection system hydraulic model development and calibration.
- Hydraulic deficiencies within the collection system for existing, near-term, and ultimate development conditions.
- Collection system capital improvement recommendations and associated costs for identified projects for existing, near-term, and ultimate development conditions.

5.1 Existing Collection System

The City's wastewater collection system, shown in Figure 5-1, is comprised of approximately 285 miles of gravity sewers ranging in size from 4 to 42 inches. These sewers serve approximately 98 percent of City residences. There are approximately 6,050 pipe segments in the collection system and approximately 5,900 manholes.

The City's wastewater collection system includes 11 operating lift stations (plus one at the WRF headworks). Table 5-1 summarizes the lift stations and their firm capacities (capacity with one pump out of service). Figure 5-1 displays the locations of the lift stations. The City has a total of approximately 27,700 ft (5.25 miles) of active forcemains ranging in size from 6 to 21 inches.

**TABLE 5-1
LIFT STATION SUMMARY**

Lift Station	No. Pumps	Pump HP	Head (ft)	Firm Capacity (gpm) ^(a)	Forcemain Size (in)
Harper	2	5	32	160	6
Topaz	2	10	37	271	6
North Bank	3	40	85	2,083 ^(b)	15
Spinnaker	2		36	450	12
Marina	2	5	20	275	12
Beachmont	2	3	31	100	8
Seaview	2	3	19	200	8
Seaside Transfer	2	200	110	4,200	21 ^(c)
Pierpoint	2	60	68	2,400	12
State Beach	2	7.5	-	260-385	6

Lift Station	No. Pumps	Pump HP	Head (ft)	Firm Capacity (gpm) ^(a)	Forcemain Size (in)
Headworks	3	~125	28.5	25,000 ^(d)	24
Parking Structure	2	7.5	-	-	4

Notes:

- (a) Firm capacity, 1 unit out of service. HP and head specified PER individual pump in station.
- (b) The Preliminary Design Report for the North Bank Lift Station (Brown and Caldwell, 2001) in Appendix I provided the lift station capacity with two pumps operating. The lift station is expandable to 3,035 gpm with the addition of a fourth pump.
- (c) Seaside Transfer Station has two parallel 21-inch forcemains.
- (d) Individual pump capacity is 18 MGD (12,500 gpm). The lifting distance is short (approximately 30 ft) and, therefore, minor head losses will not be considerable. Lift station capacity with two pumps operating in parallel was determined neglecting minor losses.

5.1.1 Collection System Facility Identification

The wastewater collection system has been divided into 24 sewersheds, as shown in Figure 5-2. Each sewershed is identified with a letter designation. In addition, the City utilizes an alphanumeric grid system to identify and locate water distribution and wastewater collection system facilities through its atlas maps. These sewershed designations and alphanumeric grid locations were incorporated into the identification system used for this Master Plan, as follows:

Sewershed_Grid_Facility ID

The facility ID refers to gravity sewers, forcemains, manholes, pumps, and wetwells in the collection system. Gravity sewers and forcemains were designated “P,” with manholes designated as “MH.” In instances where the facility was not shown in the original data and added for connectivity, the Facility ID was designated “PC” or “MHC.” For example, a collection system gravity sewer may have the following identification:

X_H28_P-597

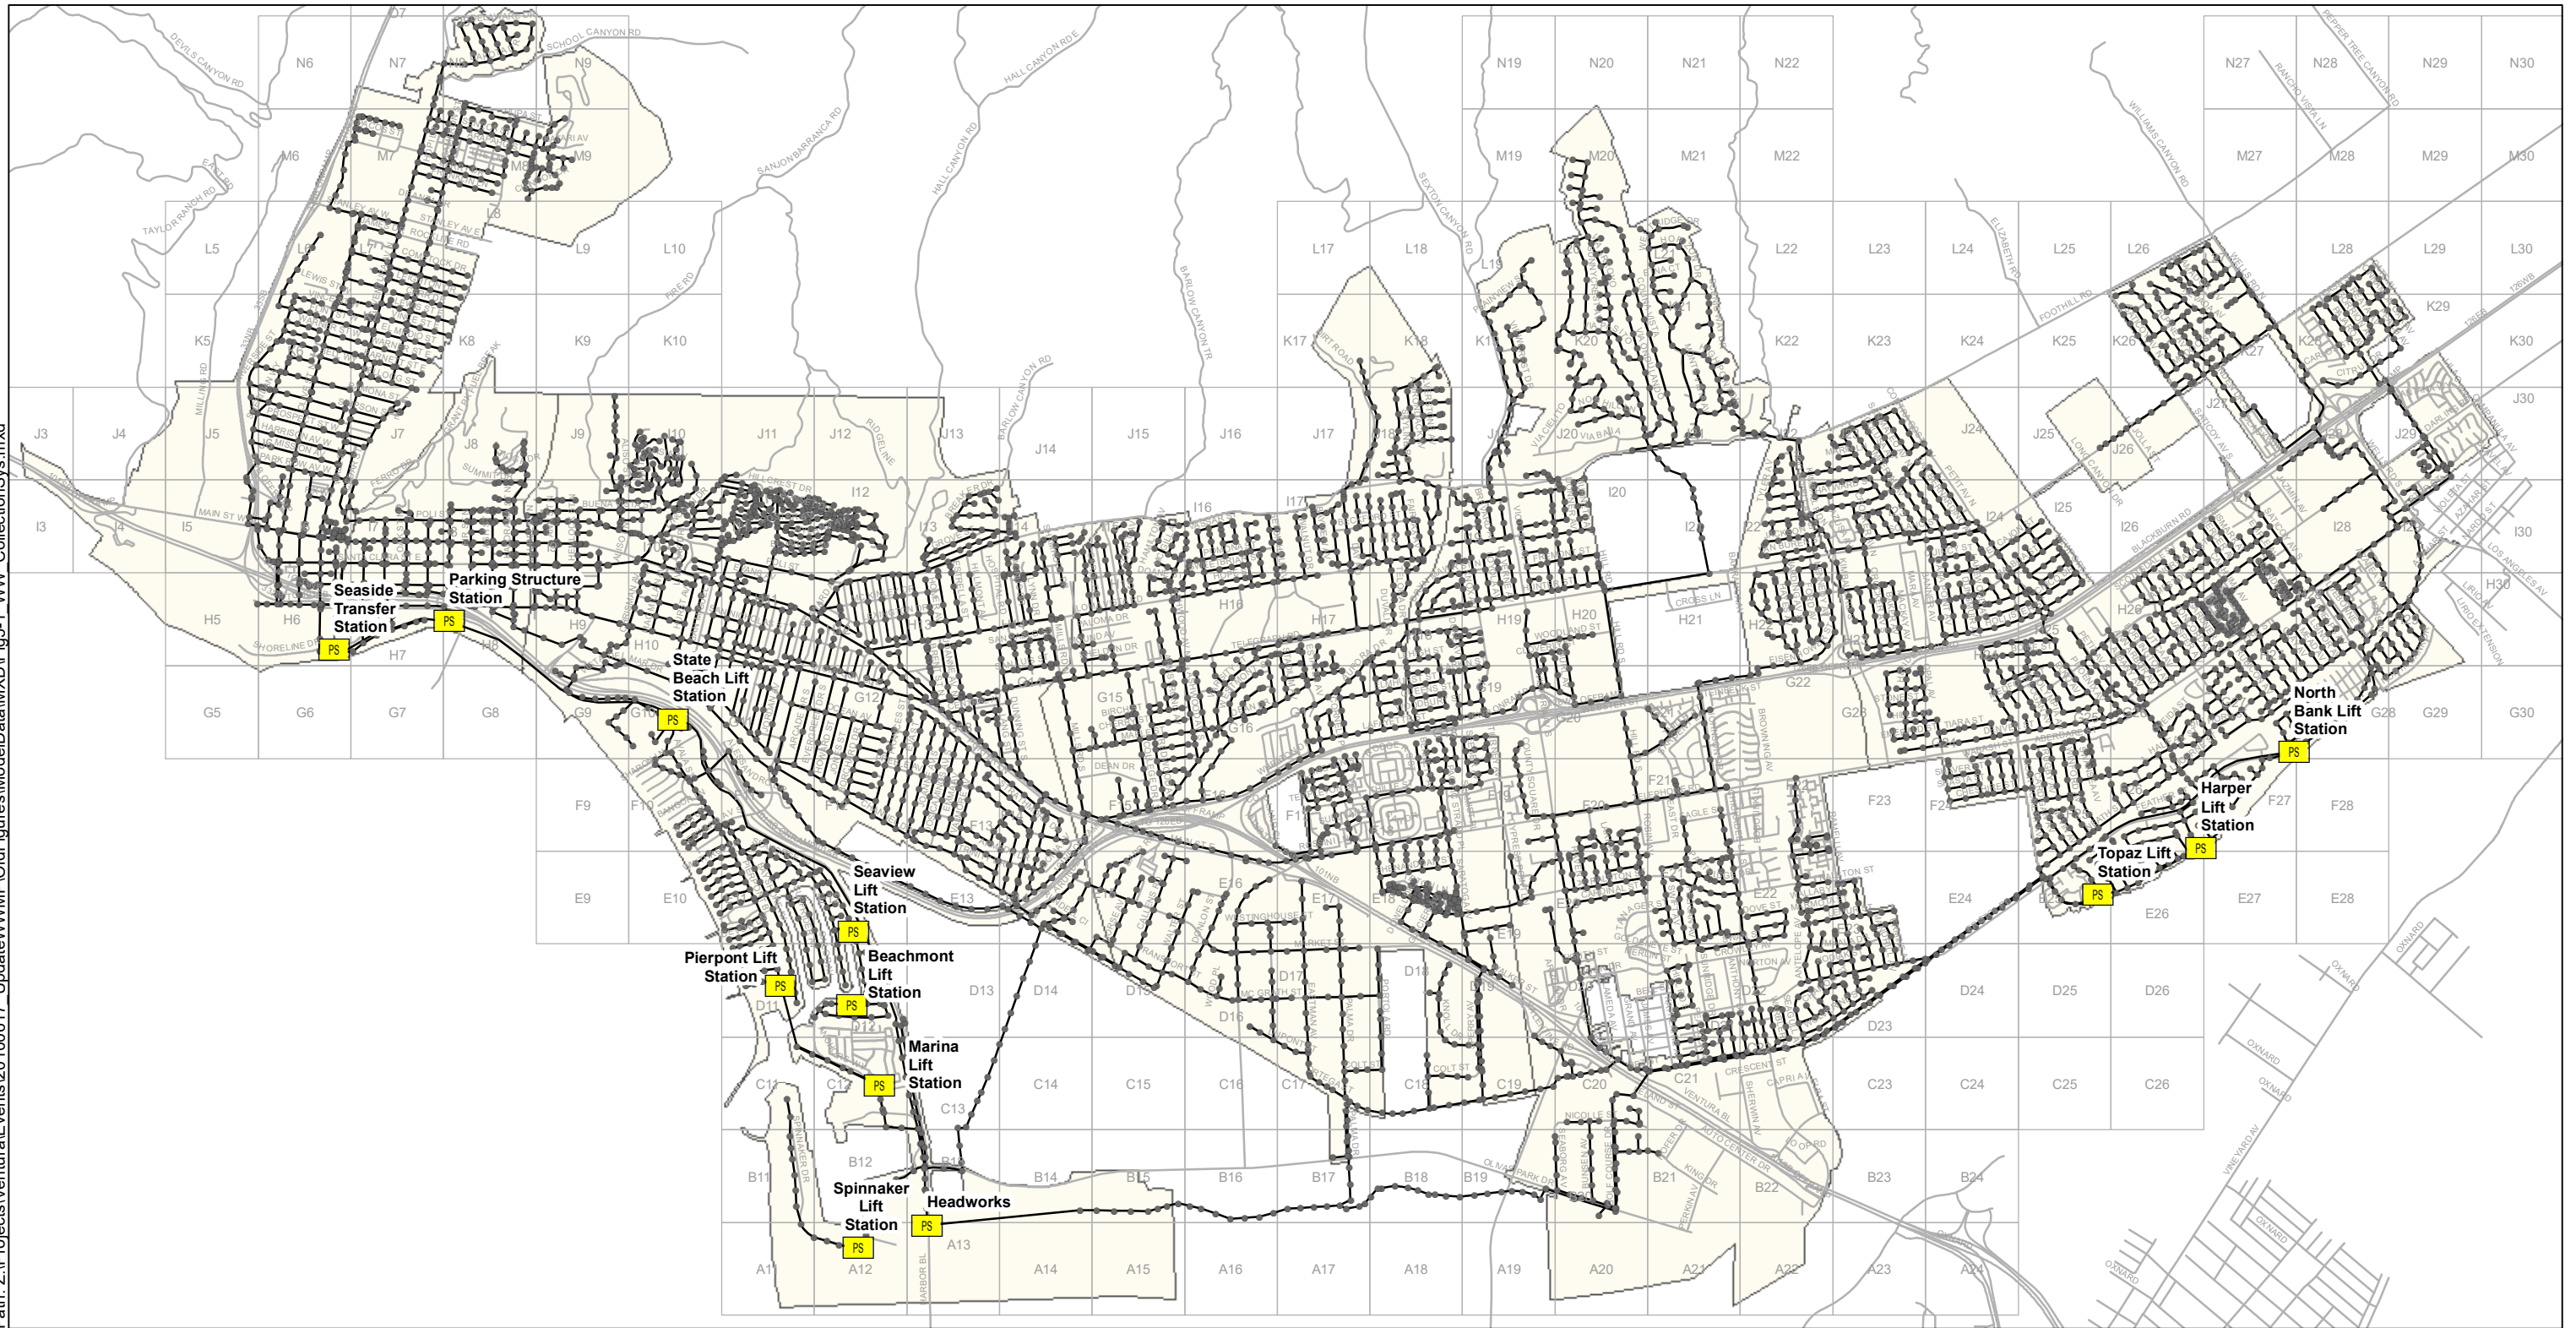

Pumps and wetwells have Facility IDs referring to their respective lift stations.

5.1.2 Existing Collection System Maintenance

The City routinely cleans and inspects its collection system and notes problem areas. These existing problem areas are presented by region in Figures 5-3a to 5-3e and for the City as a whole in Exhibit 1. These figures locate the areas where roots are found in the sewers, areas with grease concerns, and other priority areas. These priority areas often require routine cleaning due to grease build up. Appendix K also presents these priority areas and includes details related to the noted problems. It is recommended that the City continue to update this table and also make note of dates as part of its Sewer System Management Plan (SSMP) reporting program.

In addition to providing a maintenance tool, the existing problem areas were considered in the prioritization of capital improvement needs, as discussed further in this section.

5.2 Collection System Model Development

The City's sewer system facilities were evaluated through the development and use of a hydraulic model. H2OMAP Sewer version 8.0, a product of MWH Soft, Inc., was selected for use on this project.

The H2OMAP Sewer hydraulic model was used to evaluate the City's collection system service areas, identify any deficiencies, and determine any corrective measures needed in keeping with the City's collection system design criteria. This model evaluation was performed for the following development increments:

- Time of flow metering (Year 2003-2005), used for calibration.
- Existing (Year 2007), to determine existing deficiencies.
- Near-term (2007-2012), to likely determine deficiencies based on anticipated near-term developments.
- Ultimate (buildout), to determine likely deficiencies based on future development and allowing for 10 percent redevelopment within the City.

Three (3) different scenarios: (1) ADWF, (2) PDWF, and (3) PWWF (defined below), were developed to model the City's wastewater collection facilities for the existing system, while two (2) scenarios: (1) ADWF and (2) PWWF scenarios were developed to model the near-term and ultimate development conditions.

1. Average Dry Weather Flow (ADWF) – A steady-state scenario where the wastewater flows in each pipe were not peaked.
2. Peak Dry Weather Flow (PDWF) – A steady-state scenario where the wastewater flows in each gravity sewer were peaked according to the PDWF curve presented in Section 2.3.
3. Peak Wet Weather Flow (PWWF) – A steady-state scenario where the wastewater flows in each gravity sewer were peaked according to the PWWF curve presented in Section 2.3.

The PDWF scenario was modeled for the existing system to aid in prioritizing the capital improvement needs for the existing system. Likewise, the ADWF was modeled for the near-term and ultimate development conditions to aid in prioritizing the capital improvement needs for these development conditions.

The hydraulic model was set up utilizing manhole invert elevations, pipe lengths, materials, and diameters provided through the City's sewer atlas maps for all sewers in the study area. This information was supplemented with additional clarifications and additions provided by the City throughout the course of the project.

As discussed in Section 2 flow data was entered into the hydraulic model based on wastewater flow estimates for each parcel in the wastewater service area, and for each of the three (3)

development increments. These data were loaded at the parcel level, and assigned to the nearest upstream sewer manhole utilizing GIS algorithms.

5.2.1 Model Calibration

The hydraulic model was calibrated using flow monitoring data collected from the four (4) flow monitoring efforts between 2003 and 2007. The flow monitoring data was provided by MGD Technologies, Downstream, and MRC Technologies (all working under separate authorizations from the City). MGD provided metering data from their August 22, 2003 and March 11, 2004 flow monitoring efforts. Downstream Services provided metering data from their November 17, 2005 flow monitoring efforts. MRC provided metering data from their December 2007 flow monitoring efforts. The flow monitoring included 25 metering devices at 23 different locations within the City's service area. Figure 5-2 displays the meter locations used to calibrate the model and also shows the sewershed upstream of each meter.

The present-day wastewater collection system utilizes the North Bank Lift Station in lieu of the Wells Road Lift Station, which was replaced in 2006. To account for the changes in flow conditions caused by this capital improvement project, as well as other developments in the City's collection system, the hydraulic model was calibrated against the system flows using the collection system configurations that existed at the time of the flow monitoring.

Of the 25 flow meters installed as part of the City's 2003 to 2007 flow monitoring efforts, 21 of the meters were used for calibration purposes. The data from four (4) meter devices were not used for the following reasons:

- The metering location was intentionally duplicated.
 - Meter data from M_11 was used over data from Meter V_08 as these meters were placed in the same location. The two meters were within 10 percent of each other, and M_11 corresponded with the model data slightly better than Meter V_08.
 - Meter data from M_5 was used instead of data from Meter V_09. While the flow monitoring records suggest that the meters were installed in the same location, their recorded flows suggest that Meter V_09 was installed in another location. Secondly, the pipe size reported for Meter V_09 was questionable. For these reasons, the flow data from Meter V_09 was not used in the calibration process.
- The Meter V_03 appears to have been placed in the wrong location. Data from this meter was not used for model calibration.
- The accuracy of Meter V_02 is questionable because the flow through the meter (0.379 MGD) appears too high for the relatively small area upstream of the meter. Data from Meter V_02 was not used for calibration.

In addition to the temporary flow meters installed for the purposes of this study, pump station flow data from the Seaside Transfer Station and the Influent Pump Station added two (2) points of calibration.

Model calibration accuracy represents the difference between the flows measured through the flow meters and the flows represented in the hydraulic model. The calibration goal for the wastewater collection system hydraulic model was plus or minus 10 percent. Where the measured flows and the modeled flows varied by more than 10 percent, the modeled flows were adjusted by adjusting the manhole loadings in order to provide a better correlation.

5.2.2 Model Calibration Results

By adjusting the return-to-sewer ratios and wastewater flow loadings in the hydraulic model, 22 of the 23 meter locations calibrated to within 10 percent, and 8 locations calibrated within 5 percent of the metering data. The one meter location (M-2) with modeled flows not within 10 percent of the meter data was within 10.2 percent. The calibration results are summarized in Table 5-2.

**TABLE 5-2
WASTEWATER COLLECTION SYSTEM CALIBRATION RESULTS**

Notes:

- (a) From Downstream Services, Inc. November 2005 Flow Monitoring. Meters V_02, V_03, V_08 and V_09 were not used.
- (b) From MGD Technologies, Inc. August 22, 2003 – September 4, 2003 Flow Monitoring.
- (c) From MGD Technologies, Inc. March 2004 Flow Monitoring.
- (d) From MGD Technologies, Inc. December 2007 Flow Monitoring.

The model calibration process resulted in a hydraulic model representing the City's wastewater collection system with sufficient accuracy to evaluate the hydraulic capacities of the collection system's gravity sewers, forcemains, and lift stations. By considering future wastewater loads representing near-term and ultimate development levels, the collection system model can also be used to identify future infrastructure needs to meet these development levels.

5.3 Gravity Sewer Collection System Evaluation

The ADWF, PDWF, and PWWF scenarios were analyzed based on the design criteria outlined in Section 2.4. For the basis of evaluating system deficiencies, the flow depth to pipe diameter (d/D) ratios defining a deficient pipe were as follows:

- For pipes 15 inches and smaller, the allowable d/D was 66 percent for existing system flows and 50 percent when receiving additional flows from near-term and ultimate developments.
- For pipes greater than 15 inches, the allowable d/D was 75 percent.
- For pipes passing under a freeway the allowable d/D was 50 percent.

In some instances data related to the pipe size or pipe invert elevations were not known. Any assumptions made were based on available information, including data from adjacent sewers. An effort was made to identify locations where invert elevations were unknown or slopes were questioned in the presentation of the capital improvement projects later in this section.

5.3.1 Existing System Hydraulic Evaluation

5.3.1.1 Capacity Evaluation

The existing system included some modifications and additions to the sewer system that were not present during the time of the 2003 to 2005 flow monitoring. These modifications and additions included:

- North Bank Lift Station was active and the Wells Road Lift Station and forcemain were abandoned.
- Saticoy development was contributing flow.
- A connection near Petit Avenue was in place.

Tables 5-3, 5-4, and 5-5 provide a summary of the sewer pipe deficiencies noted in the existing system based on the d/D ratios observed in the hydraulic model for ADWF, PDWF and PWWF scenarios, respectively. As presented later, these sewer deficiencies in the existing system were grouped based on proximity and assigned project numbers. Project numbers were included in these tables for reference.

The existing system deficiencies are graphically presented in Figures 5-4a to 5-4e (Exhibit 2 presents the existing deficiencies for the entire collection system). A total of 339 pipe segments totaling approximately 86,500 ft were identified as deficient under existing conditions.

Figure 5-4e

Often areas requiring regular maintenance are associated with pipes having inadequate velocities. Velocities too high and too low have the potential to cause problems within a gravity collection system. Low velocities allow build-up of grease and sediments. Low velocities during average flow conditions may not be problematic if peak flow velocities scour the build-up. However, pipes with velocities that regularly exceed design criteria can cause scour and damage the pipes. The City's design criteria for gravity sewers, as presented in Section 2.4, includes a minimum design velocity of 2 fps and a maximum design velocity of 10 fps.

5.3.1.2 Identification of Potential Future Maintenance Concerns

Figure 5-5 identifies the pipes with insufficient velocities, based on the design criteria above. Pipes with velocities less than 2 fps under peak wet weather conditions were highlighted. For these pipes, the peak flow velocities were not significant enough to occasionally clean the pipes of sediment and grease. Also highlighted were pipes in which the velocities exceed 10 fps under average dry weather conditions. These pipes may warrant early replacement due to scour. It is recommended that these pipes be included in the internal video inspection schedule for the City's collection system.

5.3.2 Near-Term System Hydraulic Evaluation

The near-term development condition reflects the change in wastewater flows resulting from the proposed Near-Term Development projects presented in Section 2.1.2.

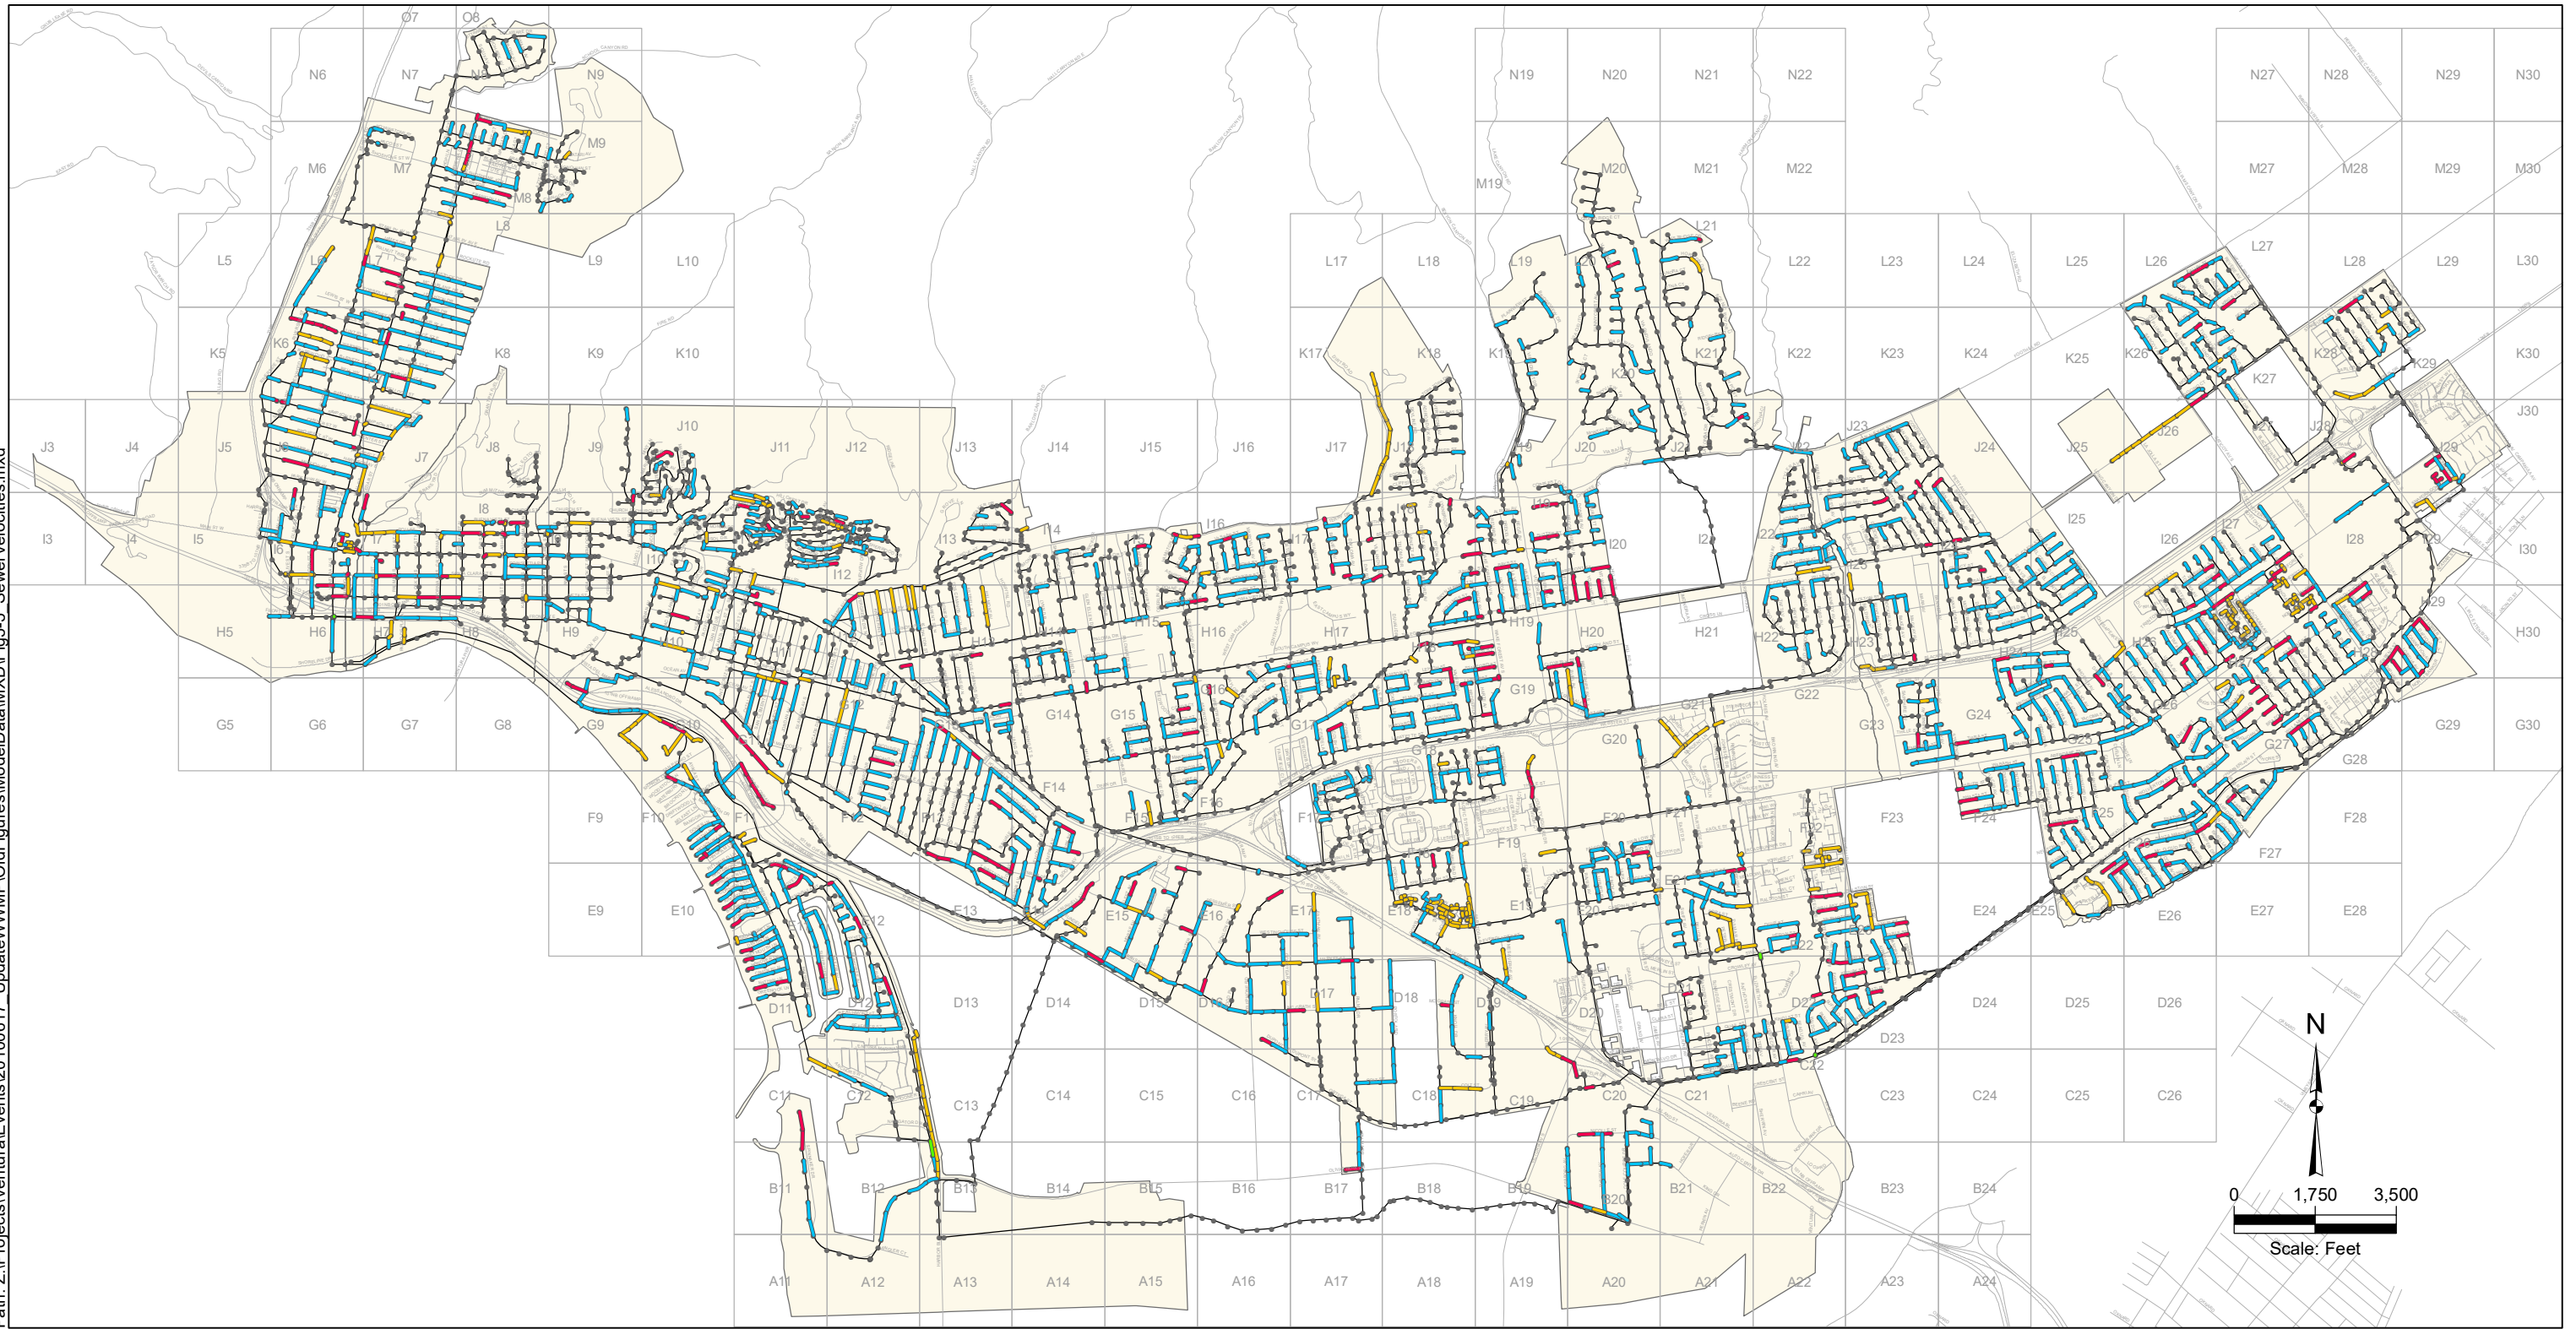

Table 5-6 summarizes the sewer deficiencies noted for the near-term development condition. These deficiencies were identified based on the d/D ratios resulting from the hydraulic model for PWWF conditions. A total of 233 pipe segments totaling approximately 61,760 ft were identified as deficient in the near-term condition. These deficiencies noted in Table 5-6 are shown by region in Figures 5-6a to 5-6e and are grouped into capital improvement projects later in this section. Exhibit 3 presents the near-term deficiencies for the entire collections system.

5.3.3 Ultimate System Hydraulic Evaluation

The ultimate development condition accounts for all vacant parcels within the tributary area developing into land uses designated by the *City of San Buenaventura's Comprehensive Plan* and consistent with the City's *Downtown Specific Plan*. The approach used to determine ultimate system loads was described in Section 2.1.3.

Table 5-7 summarizes the sewer deficiencies noted for the ultimate development increment. These deficiencies were identified based on the d/D ratios resulting from the hydraulic model for PWWF conditions. A total of 318 pipe segments totaling 81,800 ft were identified as deficient in the ultimate condition. These deficiencies noted in Table 5-7 are shown in Figures 5-7a to 5-7e (also in Exhibit 4) and are grouped into capital improvement projects later in this section. Table 5-7 also includes the d/D ratio for each sewer under the existing and near-term conditions.

5.4 Lift Station and Force Main Hydraulic Evaluation

Information regarding the lift stations within the collection system is presented in Table 5-1. Capacity of each of lift station is presented again in Table 5-8 with the peak wet weather flows from the three development conditions (existing, near-term, and ultimate) as determined in the model. Design criteria for lift stations, presented in Section 2.4, requires lift stations to be sized for peak wet weather flow with the largest capacity pump serving as standby.

The Parking Structure Lift Station serves just a few commercial developments and sees very little change in flows under the different development conditions. Also, the lift station conveys wastewater a short distance, and there was limited information was available related to the capacity of the lift station. Thus the Parking Structure Lift Station was not represented in the hydraulic model as a lift station, but rather as a load to a gravity sewer, and was not included in the evaluation in this section.

Based on the information in Table 5-8, the Seaside Transfer Station could require larger capacity pumps to handle peak wet weather flows under the existing condition. The evaluation of the Seaview Lift Station indicates that the pumps may need to be upsized for existing conditions. However, variable frequency drives (VFDs) were recently installed on the pump motors and field observations indicate that this lift station has sufficient capacity. Also, due to the limited anticipated growth in the area served by the Seaview Lift Station, the Seaview Lift Station is not recommended for future improvements.

The North Bank Lift Station could require improvements with near-term developments in place. Currently, the North Bank Lift Station has three pumps with space to install a fourth pump. It was assumed that improvements to the North Bank Lift Station include only the material, electrical, and installation costs for a single pump and motor.

Improvements were recommended for the Topaz Lift Station for ultimate development. The ultimate wet weather flow at the Harper Lift Station was slightly over the design capacity. Improvements were not recommended for the Harper Lift Station.

Each lift station conveys the wastewater from the wet well to a gravity pipe via a forcemain in the collection system. Table 5-9 summarizes the information available regarding the forcemains. Design criteria for forcemains was presented in Section 2.4.2. Collection system forcemains were evaluated based on the following design criteria:

- Maximum velocity at 5 fps
- Maximum allowable headloss at 10 ft per 1,000 ft of pipeline (HL per 1,000 ft)

Table 5-9 presents the velocities and headlosses in the existing forcemains with the existing pumps in each pump station and any recommended pump improvements. Velocities were calculated based on existing and recommended firm capacities for each lift station and the existing forcemain diameter. Headlosses were calculated assuming a Hazen-Williams C factor of 130 and the firm capacity of the lift station.

Forcemains exceeding the criteria stated above, with exceedances shown in bold font in Table 5-9, are summarized below.

- **North Bank Lift Station Forcemain.** The existing forcemain is sufficient for the flows if two pumps operate at once. According to the Preliminary Design Report for the North Bank Lift Station (Brown and Caldwell, 2001 Appendix I), the ultimate capacity of the lift station is 3,035 gpm (4.4 MGD). With this flow rate, the existing 15-inch forcemain will be flowing with an estimated velocity of 5.5 fps. This forcemain is not recommended for improvements. The projected flow of 3,035 gpm is larger than the ultimate peak wet weather flow modeled in this study, as this study did not include flows from the Harper and Topaz Lift Stations. Also it is uncertain whether the ultimate capacity of 4.4 MGD has one pump operating as standby.
- **Seaside Transfer Station Forcemain.** The Seaside Transfer Station forcemain appears deficient due to high velocities and headlosses for a future condition when larger pumps are installed to handle the peak flows. The Condition Assessment Report for the Seaside Transfer Station (Appendix J) reports that there are two parallel forcemains in one area. The Report also identifies areas requiring imminent improvements due to corrosion. It is recommended that the forcemain size be increased to the next available pipe diameter for any repair work to ensure capacity when the pumps are replaced.
- **Pierpont Lift Station Forcemain.** The velocity in the existing 12-inch forcemain at the Pierpont Lift Station, with one existing pump operating at maximum capacity, exceeds the 5 fps design criteria. However, because the pump motors have VFDs, the pumps are likely not operating at maximum capacity and no improvements are recommended.

**TABLE 5-8
SUMMARY OF LIFT STATION CAPACITY EVALUATION**

Station Name	No. Pumps	Pump HP	Head (ft)	Firm Capacity (gpm) ^(a)	Model Data Flow			Comments
					Existing PWWF (gpm)	Near Term PWWF (gpm)	Ultimate PWWF (gpm)

Influent	3	~125	28.5	25,000	15,083.3	18,048.6	20,465.3	

Notes:

- (a) Standby capacity, 1 unit out of service. HP and head specified PER individual pump in station.
- (b) Lift station controls were recently upgraded to include variable frequency drives (VFD's) for the pump motors.
- (c) VFD's are installed on the pump motors.

**TABLE 5-9
SUMMARY OF FORCE MAIN CAPACITY EVALUATIONS**

Station Name	Forcemain Diameter (in)	Estimated Forcemain Length (ft)		Existing Maximum	Maximum After Improvements	Comments
Harper	6	1,206	velocity (fps)	1.82	NA	
			HL/1,000 ft (ft)	2.51	NA	
Topaz	6	1,430	velocity (fps)	3.08	3.69	
			HL/1,000 ft (ft)	6.65	9.28	
North Bank ^(a)	15	5,200	velocity (fps)	3.78	5.51	Forcemain replacement is not recommended
			HL/1,000 ft (ft)	3.35	6.73	
Spinnaker	12	20	velocity (fps)	1.28	NA	
			HL/1,000 ft (ft)	0.58	NA	
Marina	12	25	velocity (fps)	0.78	NA	
			HL/1,000 ft (ft)	0.23	NA	
Beachmont	8	30	velocity (fps)	0.64	NA	
			HL/1,000 ft (ft)	0.26	NA	
Seaview	8	75	velocity (fps)	1.28	1.60	
			HL/1,000 ft (ft)	0.94	1.41	
Seaside Transfer	21	16,619	velocity (fps)	3.89	5.89	Forcemain replacement is recommended for existing improvements (as a result of the recommended pump replacement).
			HL/1,000 ft (ft)	2.39	5.13	
Pierpont ^(b)	12	3,312	velocity (fps)	6.81	4.40	No improvements are recommended because VFD's are installed
			HL/1,000 ft (ft)	12.90	5.75	
State Beach	6	500	velocity (fps)	2.95	NA	
			HL/1,000 ft (ft)	6.16	NA	
Influent	24	30	velocity (fps)	8.87	NA	
			HL/1,000 ft (ft)	9.37	NA	

Notes:

- (a) Existing flows with three (3) pumps operating together and future flows assuming a fourth pump is in place were from the Preliminary Design Report for the North Bank Lift Station (Brown and Caldwell, 2001)
- (b) Existing pump motors have variable frequency drives (VFD's) installed.

5.5 Collection System Capital Improvement Recommendations

Results of the hydraulic model, as presented in Figures 5-4 through 5-7 and Tables 5-4 to 5-9, formed the basis for the recommendations discussed in this section. Individual deficiencies were grouped into projects and the estimated costs to implement each project were determined.

5.5.1 Collection System Unit Costs

Capital cost estimates presented in this study were based on gravity sewer unit cost data, as shown in Table 5-10. These planning-level unit costs include pipe materials (assumed to be vitrified clay pipe), sewer manholes (assumed to be pre-cast reinforced concrete), excavation, bedding and backfill, bypass pumping and traffic control during construction, pavement replacement (assumed to be concrete pavement), lateral reconnection, and allowances for miscellaneous site work. The unit costs do not include right-of-way acquisition or lateral replacement. The unit costs also include allowance for engineering, administration, and project contingencies as a percentage of the estimated construction costs. A factor of 20 percent of construction cost was used to account for engineering and administrative costs, including the following:

- Planning and preliminary design
- Surveying and geotechnical investigations
- CEQA compliance and permitting
- Final design
- Construction administration and inspection

**TABLE 5-10
GRAVITY SEWER UNIT COSTS**

Pipe Diameter (in)	Pipe Unit Cost ^(a)
6	\$170
8	\$200
10	\$210
12	\$230
15	\$260
18	\$290
21	\$330
24	\$380
27	\$410
30	\$460
33	\$530
36	\$580
39	\$670
42	\$740
54	\$1,050
60	\$1,170

Note:

- (a) Costs represent March 2008 dollar values, ENR-CCI –LA 9200.

Gravity sewer unit costs presented in Table 5-10 are supplemented with the unit costs presented in Table 5-11 for jack and bore installation. These additional costs are necessary to install those proposed sewers which cross under Highways 101, 126, or 33. These costs assume that construction includes a steel casing pipe, casing spacers, and end seals, with casing voids filled with sand. Unit costs include allowances for Caltrans permitting, and also take into consideration the relatively high costs of mobilization given the size of the projects recommended in this study.

**TABLE 5-11
JACK AND BORE UNIT COSTS**

Pipe Diameter (in)	Jack and Bore Unit Cost
10	\$280
12	\$310
15	\$330
18	\$390
21	\$440
24	\$530
27	\$670

Improvements to the lift stations will involve replacing the existing pumps with larger capacity pumps and, perhaps, adjusting the wet well pump operation set points. It was assumed that the existing wet wells have sufficient capacity and require no significant improvements. This assumption must be further reviewed for each wet well in the preliminary design phase. Replacement pumps were sized for ultimate peak wet weather flows and an approximation of the total head. Construction cost estimates for lift station improvements were based on manufacturer-provided estimates for the specific pump and motor units (material costs). It was also assumed that:

- Costs for installation of the pumps and motors were 50 percent of the material costs.
- Costs for electrical equipment and appurtenances were 25 percent of the material costs.

In addition to this, a factor of 20 percent of the construction cost was used to account for engineering and administrative costs.

Costs presented in this study were based on the Engineering New Record Construction Cost Index for Los Angeles, California area (ENR-CCI-LA). The ENR-CCI is an inflation index used to adjust prices from one time period to another. Estimates of probable cost presented in this study represent March 2008 costs, consistent with an ENR-CCI of 9200. Costs estimated herein for recommended facilities should be adjusted in the future either by making new estimates or comparing the future ENR-CCI index to 9200. Costs provided in this collection system improvement plan are not definitive values of project cost. At all levels of design, from the conceptual stage to the design stage, there was an assumed accuracy for any estimate of probable cost. For this evaluation, the estimates of probable cost included an accuracy range of +50 percent to -30 percent. This range of values was consistent with the level of accuracy developed by the Association for Advancement of Cost Engineering (AACE) for the conceptual level of design.

5.5.2 Collection System Capital Improvement Recommendations

This section presents recommended collection system capital improvements necessary to mitigate capacity deficiencies in the existing system, and to meet projected wastewater flows for near-term and ultimate development conditions in accordance with the established criteria.

The identified capital improvement project recommendations were based on meeting peak wet weather flow conditions, with proposed sewers sized to meet ultimate wet weather flow conditions. All proposed sewers were assumed to replace the existing sewer with a larger pipe of the same slope. These assumptions should be evaluated at the preliminary design stage for each project. In some instances it may be economically beneficial to parallel a sewer, rather than replace it. In other instances it may be beneficial from an operations standpoint to modify the grade of the pipe to obtain sufficient velocities.

It is also recommended that the City confirm manhole invert elevations for those locations where manhole elevations in the model were interpolated from upstream and downstream manhole data as part of future preliminary design work. This work may also include conducting local flow monitoring to confirm dry weather and peak wet weather flows relative to the model results.

5.5.2.1 Project Grouping

Capital improvement projects presented in this section represent deficient sewer reaches, which were grouped together based on their proximity to form a “project.” These projects were further grouped according to development condition. In most cases those projects identified as “existing” remedy existing system deficiencies, with “near-term” projects addressing near-term deficiencies, etc. However, in instances where adjacent pipelines were found to be deficient at different development conditions (for example, near-term and ultimate development conditions), these deficiencies were proposed to be corrected through a single capital improvement project to improve efficiencies and lessen community impacts during construction.

In some cases, near-term or ultimate development deficiencies were grouped with existing deficiencies in an existing project. In other cases, existing deficiencies were grouped with near-term and ultimate deficiencies in near-term and ultimate projects. To account for the portion of project costs necessitated by existing versus future developments, the costs presented in this section were divided into the following: 1) costs which the existing users should bear because the deficiency

Example of a location where a near-term deficiency was grouped with adjacent pipes in an existing project.

was due to an existing deficiency and 2) costs which future users should bear because the deficiency was due to future development.

In a few locations, replacing a deficient pipeline with a larger pipeline would result in a “bottleneck” as the new pipeline connects back to the existing smaller-diameter pipeline. In many of these instances, the downstream pipeline is recommended for replacement with the upstream pipelines to avoid creating a pipe diameter “bottleneck,” even though the existing downstream pipeline has sufficient hydraulic capacity. Specifically, upsizing of the downstream pipeline was recommended where the following occur:

- Affected downstream pipeline represented one sewer reach.
- Affected downstream pipeline(s) were less than two standard pipe sizes smaller than the upstream replacement sewer.

Recommendations based on the above conditions were noted in the cost tables. Costs associated with these specific improvements were assigned to existing system capital costs if included in an existing project and to future system capital costs if included in a near-term or ultimate project. These recommendations should be further reviewed by the City during the preliminary design of these sewer replacement projects.

5.5.2.2 Project Timing

Exact timing of these recommended projects, particularly for the near-term and ultimate development conditions, is dependent upon the level of actual development in the City. Capital improvement projects presented in this section should be considered as development occurs. If growth occurs faster or slower than assumed in this study, then the facility improvement projects should be accelerated or delayed, accordingly.

5.5.2.3 Project Prioritization

Identified capital improvement projects were each assigned an identification number, as follows:

- Existing projects are denoted with a label of E1 to E42.
- Near-term projects are denoted with a label of N101 to N121.
- Ultimate projects are denoted with a label of U201 to U235.

Project identification number correlates to the projects’ degree of deficiency, or priority, relative to the other project recommendations. The lower numbered projects represent the higher priority due to their flow conditions versus capacity, noted deficiencies (such as root intrusions), and maintenance history. However, as described above, the implementation of near-term and ultimate projects will be dependent upon development. Thus, a single development built in the near future may trigger the needs for an improvement project regardless of the project category (existing, near-term, or ultimate) and regardless of that project’s identification number.

The following further describes the factors considered in the prioritization of the recommended sewer replacement projects:

- Deficiencies under dry conditions: Existing system sewers that failed to meet the study's design criteria under average dry weather flow conditions were given the highest priority, followed by those sewers failing to meet the design criteria under peak dry weather flow conditions, and lastly those failing to convey peak wet weather flows in accordance with the design criteria.
- Severity of the deficiency: Severity of the deficiency was also considered. A pipe flowing with a d/D of 100 percent presents a greater potential for a sewer system overflow (SSO) event versus a pipe with a d/D ratio of say 80 percent. Therefore, projects containing pipes that flow full were given priority over projects with pipes that have remaining capacity.
- Maintenance Concerns: Prioritization also considered areas where maintenance concerns were identified. These locations are presented in Figures 5-3a to 5-3e. Projects were considered "Priority Area" locations and pipes with roots were given higher priority.
- Location relative to environmentally sensitive areas: Lastly, the location of the pipe was considered. If the project was located near the ocean or a park it was given a higher priority.

There were other factors not considered here, but for which the City may want to consider as these recommended capital improvement projects move from the conceptual stage to the preliminary design stage. These other factors may include: condition of the pipe, age of the pipe, pipe material, timing of roadway and other municipal improvements, and location of the pipe relative to areas of tourism, businesses, etc.

5.5.3 Existing Collection System Improvement Recommendations

The existing system capital improvement recommendations were based on the results of the system evaluation and hydraulic analysis as described in Section 5.3. Information related to these capital improvement recommendations are provided in several locations.

- Table 5-12 summarizes all recommended sewer replacement projects. This table includes the pipe information (identifier labels, lengths, diameters), the model depth-to-diameter ratios for the different flow conditions, estimates of probable cost, and other information, such as whether the pipe is in a priority area or invert elevations were uncertain.
- Table 5-13 summarizes the existing recommended lift station improvements.
- Figures 5-8a to 5-8e identify the locations of the existing recommended projects with the pipe identifiers and recommended replacement diameters.
- Exhibit 5 presents the recommendations for the entire collection system in one figure.
- The Recommended CIP Project Sheets, located after Section 7, briefly summarizes each of the recommended existing projects with a figure showing the area recommended for improvement. The format of these project sheets allows the City to incorporate the projects into their CIP.

Notes:

- (a) Pipe was not found deficient.
- (b) Modeled assuming improvements from 2005 Study were implemented. Actual existing diameter is in parenthesis. Existing d/D ratio is assumed to be 66% for D<15" and 75% for D>15".
- (c) Not found deficient, but was in the 2005 Study. Pipe should be evaluated for improvements. d/D ratio is assumed to be 66% for D<15" and 75% for D>15".
- (d) City Staff indicate that permanent deposits have reduced the pipeline capacity; pipe should be considered for improvement.

The existing Seaside Transfer Station does not have capacity for existing peak wet weather flows. Estimated cost for improving this lift station is presented in Table 5-13. Anticipated improvements include replacing the two existing pumps and motors and upgrading electrical equipment and appurtenances. The estimated cost assumes that the new pumps could be sized for ultimate wet weather conditions with one pump as standby. During the preliminary design, the wet well capacity should be further evaluated.

**TABLE 5-13
RECOMMENDED EXISTING LIFT STATION AND FORCE MAIN CAPITAL
IMPROVEMENTS AND ESTIMATES OF PROBABLE COST**

Name	Existing Firm Capacity (gpm)	Future Firm Capacity (gpm)	Estimated Cost
Seaside Transfer Station	4,200	6,350	\$315,000
Seaside Transfer Station Force Main	5,400	7,050	\$6,300,000

With the recommended improvements to the Seaside Transfer Station, the existing Seaside Transfer Station force main will not have sufficient capacity to maintain velocities below 5 fps. This improvement is not necessary until new pumps are installed. However, given the reported condition of the force main, any repair activities should consider upsizing the current 21-inch diameter force main. The total estimated cost to install this pipeline is approximately \$6.3 million (assuming a 24-inch replacement pipeline).

5.5.4 Near-term Collection System Improvement Recommendations

The capital improvement recommendations for the near-term development condition were based on the results of the system evaluation and hydraulic analysis as described in Section 5.3. These capital improvement recommendations for the sewer pipelines are summarized in Table 5-14 and displayed in Figures 5-8a to 5-8e. Exhibit 5 presents the recommendations for the entire collection system. Table 5-14 provides a cost summary for all near-term sewer pipeline projects. Prior to implementing any near-term projects it is recommended that local flow monitoring be conducted to confirm the dry weather and peak wet weather flows.

In addition to sewer pipeline improvements, the existing North Bank Lift Station may not have capacity for near-term peak wet weather flows. Estimated cost for installing a fourth pump and motor, including electrical, is approximately \$63,000. Anticipated improvements include the materials and installation of the new pump and motor.

Notes:

- (a) Pipe was not found deficient.
- (b) Modeled assuming improvements from 2005 Study were implemented. Actual existing diameter is in parenthesis. Existing d/D ratio is assumed to be 50% for D<15" and 75% for D>15".
- (c) Not found deficient, but was in the 2005 Study. Pipe should be evaluated for improvements. d/D ratio is assumed to be 50% for D<15" and 75% for D>15".
- (d) City Staff indicate that permanent deposits have reduced the pipeline capacity; pipe should be considered for improvement.

5.5.5 Ultimate Collection System Improvement Recommendations

The ultimate development condition capital improvement recommendations were based on the results of the system evaluation and hydraulic analysis as described in Section 5.3. These capital improvement recommendations are identified in Table 5-15 and are shown in Figures 5-8a to 5-8e. Exhibit 5 presents the recommendations for the entire collection system. Table 5-15 provides a cost summary for all sewer pipeline ultimate projects. Prior to implementing any near-term projects it is recommended that local flow monitoring be conducted to confirm the dry weather and peak wet weather flows.

In addition to sewer pipeline improvement, the existing Topaz Lift Station was identified as having insufficient pumping capacity for ultimate peak wet weather flows. The estimated cost for replacing the existing pumps and motors with larger capacity pumps and motors was approximately \$31,500. Anticipated improvements include replacing the two existing pumps and motors and upgrading electrical equipment and appurtenances. The new pumps would be sized for ultimate peak wet weather flows, assuming one pump operates on standby.

5.5.6 Collection System Recommendations in Perspective

The previous sections summarized the recommended improvements to the City's collection system. While these recommendations collectively encompass significant improvements, they are only a portion of the total collection system. Table 5-16 summarizes the recommended improvements in terms of length and estimated probable cost.

**TABLE 5-16
SUMMARY OF COLLECTION SYSTEM RECOMMENDATIONS**

Project	Length (miles)	Total
Existing Projects	23.0	\$36,400,000
Near-Term Projects	12.5	\$16,400,000
Ultimate Projects	15.7	\$21,500,000
TOTAL	51.2	\$74,300,000

The collection system recommendations consist of improvements to approximately 50 miles of collection system pipelines. In perspective, this represents approximately 18 percent of the City's total collection system. However, roughly half of the improvements are recommended due to future development.

The total value of the existing assets is difficult to obtain. The value is a function of the buried asset parameters (ex., pipeline diameter), but also of the typical lifespan of the asset and its age. Specific information related to age and material for all pipes was not available and, therefore, the total value of the existing assets was not determined. However, based on the estimated unit costs presented in Section 5.5.1, the recommended improvements represent approximately 18 percent of the replacement value of the existing collection system (pipes and manholes). These are very broad estimates and more information is needed to fully put these improvements into perspective.

Section 6: Wastewater System Recommendations and Capital Improvement Program

This section presents a summary of recommendations resulting from this study of the wastewater collection and treatment systems, including a suggested capital improvement program.

6.1 Recommended Further Studies and Investigations

The following summarizes recommendations for further studies and investigations resulting from this Study:

- The City's collection system exhibits relatively high peak flows during rain events. A system-wide infiltration and inflow (I/I) assessment is recommended to quantify the City's I/I rates and to provide direction to further mitigation measures. This effort would include conducting additional wet weather flow monitoring throughout the City's wastewater collection system. The City may wish to use the same locations as those used in the previous flow monitoring efforts. This would allow the flow monitoring results of the different time periods to be compared and the I/I amounts quantified within each flow monitoring tributary area. By quantifying I/I rates by area, the City can focus subsequent efforts on those portions of the collection system exhibiting the highest infiltration/inflow rates, with the aim of identifying mitigation measures that provide that highest return on investment.
- City crews have video taped the conditions of the sewer lines for many portions of the City's collection system using a remote-operated camera and closed-circuit television system. Given the age of its sewer infrastructure, the City should consider conducting a condition assessment program utilizing these videos as a source of information. The Pipeline Assessment Certification Program provides a standardized approach for condition assessments which the City could utilize to standardize its condition assessment program. Using a standardized approach could streamline the assessment and be used to develop a ranking system. Software programs are also available to link the condition assessment information to a GIS (or similar) database. Condition assessment information could be coupled with the hydraulic analysis results of this study to refine the capital improvements needs presented herein.
- The City should continue cleaning and documenting root intrusions and "Priority Areas" in the collection system. Records should include dates of cleaning and noted problems as part of the City's tracking system.
- Invert elevations for recommended projects should be confirmed as part of future preliminary design work. This work may also include conducting local flow monitoring to confirm dry weather and peak wet weather flows relative to the model results.

- Although alternatives to increase the VWRF capacity to 14 MGD AAF were discussed in Section 4 of this report, the scope of this Study did not include every potential limitation. Many of the facilities at the VWRF were determined to be operating beyond typical design lives. Thus, assessing the state of these facilities would be critical to developing an appropriate improvement plan.
 - An overall plant condition assessment is recommended to collect this information. If the results of this assessment indicate that many structures, connective piping, or equipment are not in adequate condition to operate reliably, the City should consider evaluating options beyond the recommendations for improvements made in this report.
- Recommended alternatives discussed in this report for increasing the VWRF capacity were based upon information provided by VWRF Staff. The scope of this evaluation is limited and does not include all potential deficiencies. There were several recommendations for further studies and investigation which could modify the need for the recommended alternatives presented in this report. Recommended alternatives and associated costs are tabulated below in Section 6.3. Further studies that the VWRF should consider are below:
 - Influent flow measurement capacity: Determine whether the facility layout and hydraulic conditions are conducive to installing magnetic flow meters on the discharge piping of the influent pumps (Section 4.3.1.1.4).
 - Grit removal redundancy: Verify that mechanical redundancy is provided in the existing grit removal unit; if further reliability is desired, assess the feasibility of subdividing the existing unit (Section 4.3.1.2.2).
 - Primary clarifier redundancy: Pilot test Enhanced Primary Treatment (EPT) to explore the feasibility of implementing EPT in lieu of building a third clarifier (Section 4.3.2.1.4).
 - Aeration basins: Review adequacy of aerations improvements recommended by Brown and Caldwell (B&C) in their TM No. 1. Modeling and/or pilot testing of the proposed system is recommended before full-scale implementation (Section 4.2.3.3.2).
 - Secondary Clarifiers: Review adequacy of the proposed Waste Activated Sludge (WAS) improvements recommended by B&C TM No. 1 to ensure that they allow for a comfortable level of operational flexibility under a maximum month loading scenario (Section 4.2.3.4.2).
 - Anaerobic digestion capacity: Consider enhancing the ability to receive fats, oils, and grease (FOG) with the construction of a new digester (Section 4.3.6.1.4).
- In addition to the above recommended studies, the City should also work to complete the studies required by the Regional Water Quality Control Board related to the Estuary and recycled water.

6.2 Collection System Improvements

The following sections summarize the costs associated with the recommended improvements to the City's collection system for the existing, near-term, and ultimate development conditions. As presented in Section 5, these costs have an assumed level of accuracy for conceptual-level design of +50 percent to -30 percent. Estimates of probable cost reflect March 2008 construction costs and incorporate a 20 percent allowance for engineering, administration, and project contingencies.

Timing of the project implementation may be dependent upon development within the City. Existing projects are assumed to be the most critical, until near-term and future development/redevelopment occurs. Should the anticipated near-term or ultimate development not occur, the City should consider improvements to existing deficiencies that have been grouped with near-term or ultimate projects. Prior to preliminary design, recommended facilities should undergo further evaluations to confirm the flow, connectivity, invert elevations, length, material requirements, costs, etc.

6.2.1 Existing Collection System Improvement Recommendations

Hydraulic analysis of the existing collection system under existing average dry, peak dry, and peak wet weather conditions resulted in the recommendation of 42 gravity sewer projects and three (3) lift station projects. These projects, presented in detail in Section 5 are summarized in Table 6-1. Table 6-1 assigns the costs to either existing system users or future system users depending on whether the need for the improvement was due to an existing or future deficiency.

**TABLE 6-1
SUMMARY OF ESTIMATES OF PROBABLE COST FOR EXISTING PROJECTS**

Project	Length (ft)	Existing System Capital Cost	Future System Capital Cost	Total
Sewerline E1	4,570	\$1,319,261	\$0	\$1,319,000
Sewerline E2	2,294	\$633,674	\$81,977	\$716,000
Sewerline E3	311	\$19,750	\$0	\$20,000
Sewerline E4	1,668	\$254,304	\$137,555	\$392,000
Sewerline E5	6,151	\$1,377,266	\$13,134	\$1,390,000
Sewerline E6	3,876	\$882,418	\$52,260	\$935,000
Sewerline E7	3,184	\$1,424,412	\$269,977	\$1,694,000
Sewerline E8	4,460	\$1,020,861	\$170,534	\$1,191,000
Sewerline E9	893	\$358,064	\$0	\$358,000
Sewerline E10	1,245	\$190,550	\$110,502	\$301,000
Sewerline E11	3,217	\$809,912	\$243,325	\$1,053,000
Sewerline E12	1,301	\$204,827	\$92,370	\$297,000
Sewerline E13	3,449	\$804,998	\$110,304	\$915,000
Sewerline E14	1,739	\$266,705	\$237,668	\$504,000
Sewerline E15	6,085	\$999,685	\$492,232	\$1,492,000
Sewerline E16	4,739	\$1,465,857	\$357,666	\$1,824,000
Sewerline E17	5,646	\$947,141	\$379,086	\$1,326,000

Project	Length (ft)	Existing System Capital Cost	Future System Capital Cost	Total
Sewerline E18	346	\$91,917	\$0	\$92,000
Sewerline E19	1,041	\$270,645	\$0	\$271,000
Sewerline E20	2,741	\$721,315	\$0	\$721,000
Sewerline E21	2,038	\$378,576	\$90,103	\$469,000

Total	121,309	\$30,698,399	\$5,736,660	\$36,440,000

6.2.2 Near Term Collection System Improvement Recommendations

The near-term development condition is a modification of the existing condition where specific near-term developments are contributing flow, as presented in Section 2. Hydraulic analysis of the near-term development condition under peak wet weather conditions resulted in the recommendation of the 21 gravity sewer projects and one lift station project. These projects, presented in detail in Section 5, are summarized in Table 6-2. Table 6-2 assigns the costs to existing system users for improvements due to existing deficiencies and to future system users for improvements necessary due to future development.

**TABLE 6-2
SUMMARY OF ESTIMATES OF PROBABLE COST FOR NEAR TERM PROJECTS**

Project	Length (ft)	Existing System Capital Cost	Future System Capital Cost	Total
Sewerline N101	2,893	\$112,124	\$578,916	\$691,000
Sewerline N102	4,665	\$13,674	\$1,287,135	\$1,301,000
Sewerline N103	6,106	\$263,714	\$1,044,448	\$1,308,000
Sewerline N104	2,825	\$0	\$805,377	\$805,000
Sewerline N105	1,882	\$0	\$376,426	\$376,000
Sewerline N106	746	\$0	\$156,647	\$157,000
Sewerline N107	6,416	\$125,449	\$1,561,897	\$1,687,000
Sewerline N108	1,253	\$0	\$250,561	\$251,000
Sewerline N109	2,115	\$0	\$571,414	\$571,000
Sewerline N110	3,257	\$0	\$1,073,177	\$1,073,000
Sewerline N111	7,382	\$0	\$1,850,307	\$1,850,000
Sewerline N112	4,054	\$10,751	\$1,056,663	\$1,067,000
Sewerline N113	6,601	\$119,015	\$1,442,734	\$1,562,000
Sewerline N114	1,996	\$0	\$419,252	\$419,000
Sewerline N115	714	\$0	\$149,985	\$150,000
Sewerline N116	1,748	\$55,842	\$332,968	\$389,000
Sewerline N117	3,299	\$0	\$956,667	\$957,000
Sewerline N118	2,988	\$45,379	\$574,082	\$619,000
Sewerline N119	819	\$0	\$215,601	\$216,000
Sewerline N120	3,022	\$0	\$644,648	\$645,000
Sewerline N121	1,062	\$0	\$223,009	\$223,000
North Bank Lift Station			\$0	\$63,000
Total	65,843	\$745,947	\$15,634,910	\$16,380,000

6.2.3 Ultimate Collection System Improvement Recommendations

The ultimate development condition assumes vacant parcels develop to the land-use designation of the *City of San Buenaventura's Comprehensive Plan* and consistent with the *City's Downtown Specific Plan* and assumes 10 percent redevelopment within the City. Hydraulic analysis of the ultimate development condition resulted in the recommendation of 35 gravity sewer projects and one lift station project, summarized in Table 6-3. Table 6-3 assigns the costs to existing system users for improvements due to existing deficiencies and to future system users for improvements necessary due to future development.

**TABLE 6-3
SUMMARY OF ESTIMATES OF PROBABLE COST FOR ULTIMATE PROJECTS**

Project	Length (ft)	Existing System Capital Cost	Future System Capital Cost	Total
Sewerline U201	5,285	\$177,529	\$1,074,636	\$1,252,000
Sewerline U202	4,503	\$82,731	\$868,324	\$951,000
Sewerline U203	5,122	\$473,757	\$957,206	\$1,431,000
Sewerline U204	3,151	\$48,981	\$668,473	\$717,000
Sewerline U205	1,075	\$0	\$252,348	\$252,000
Sewerline U206	834	\$11,727	\$158,291	\$170,000
Sewerline U207	2,098	\$0	\$425,536	\$426,000
Sewerline U208	817	\$0	\$473,811	\$474,000
Sewerline U209	1,867	\$32,238	\$392,120	\$424,000
Sewerline U210	4,245	\$0	\$1,022,844	\$1,023,000
Sewerline U211	1,404	\$71,572	\$223,247	\$295,000
Sewerline U212	1,369	\$0	\$287,456	\$287,000
Sewerline U213	2,767	\$66,673	\$575,023	\$642,000
Sewerline U214	2,424	\$18,048	\$491,454	\$510,000
Sewerline U215	3,641	\$376,190	\$1,835,266	\$2,211,000
Sewerline U216	5,567	\$120,031	\$1,377,848	\$1,498,000
Sewerline U217	4,857	\$64,569	\$1,103,020	\$1,168,000
Sewerline U218	2,180	\$211,085	\$297,700	\$509,000
Sewerline U219	3,434	\$133,728	\$1,017,065	\$1,151,000
Sewerline U220	996	\$14,308	\$201,176	\$215,000
Sewerline U221	1,653	\$0	\$330,581	\$331,000
Sewerline U222	1,440	\$0	\$287,957	\$288,000
Sewerline U223	687	\$0	\$144,268	\$144,000
Sewerline U224	1,250	\$0	\$262,479	\$262,000
Sewerline U225	841	\$0	\$338,975	\$339,000
Sewerline U226	3,004	\$52,449	\$593,224	\$646,000
Sewerline U227	2,012	\$0	\$443,656	\$444,000
Sewerline U228	1,499	\$0	\$314,780	\$315,000
Sewerline U229	1,444	\$0	\$303,333	\$303,000
Sewerline U230	1,470	\$0	\$334,398	\$334,000
Sewerline U231	4,089	\$0	\$922,273	\$922,000
Sewerline U232	3,295	\$0	\$820,368	\$820,000
Sewerline U233	363	\$0	\$76,188	\$76,000
Sewerline U234	687	\$0	\$144,314	\$144,000
Sewerline U235	637	\$0	\$133,728	\$134,000
Sewerline U236	918	\$0	\$341,944	\$342,000
Topaz Lift Station			\$31,500	\$32,000
Total	82,925	\$1,955,616	\$19,526,808	\$21,480,000

6.3 Treatment Facility Improvements

This section summarizes the costs associated with the recommended improvements to the VWRf. As presented in Section 4, these costs have an assumed level of accuracy for conceptual-level design of +50 percent to -30 percent. Estimates of probable cost assume March 2008 construction costs and incorporate a 20 percent allowance for project contingencies.

6.3.1 Treatment Facility Improvement Recommendations

The evaluation outlined in Section 4 was intended to assess limitations of the existing VWRf to treat projected flows and loads in compliance with anticipated NPDES effluent permit limits for continued discharge to the Estuary and production of recycled water.

Additionally, in consideration of a proposed stepped reduction in discharge to the Estuary (NPDES No. CA0053651, Order No. R4-2007-XXXX, Paragraphs III.A and B), options were explored for future discharge of wastewater at other permitted or permissible locations. Specifically, one feasible potential alternative to address the discharge prohibition to the Estuary includes construction, permitting, and discharge of treated effluent through an ocean outfall.

Table 6-4 summarizes estimates of probable costs of construction for two scenarios, specifically continued discharge to the Estuary and an ocean outfall discharge. Table 6-4 also provides the cost differential between the two (2) scenarios.

**TABLE 6-4
WRF COMPARATIVE COST MODEL FOR TWO DIFFERENT DISCHARGE SCENARIOS**

Unit Process	Expected Limitations ^(a)	Continued Estuary Discharge		Ocean Outfall Discharge	
		Recommended Alternative	Capital Cost ^(b)	Recommended Alternative	Capital Cost ^(b)
Headworks and Influent Pumping Station	Influent flow measurement capacity	Install magnetic flow meters on discharge piping of each influent pump	\$300,000	Install magnetic flow meters on discharge piping of each influent pump	\$300,000
Primary Clarifiers	Primary effluent pump capacity. No clarifier redundancy.	Construct a third primary clarifier and addition of 4th pump	\$6,300,000	Construct a third primary clarifier and addition of 4th pump	\$6,300,000
Aeration Basins and RAS/WAS Pumping	BNR pump capacity. Insufficient SRT for nitrification.	See Brown and Caldwell's TM No. 1 and the Preliminary Design Report for Ventura WRF Upgrade Project, Phase II (Brown and Caldwell, December 2006)	\$18,800,000 ^(c)	Construct additional aeration basin volume (similar to that required for Estuary Discharge, but without RAS pump and blower improvements).	\$16,100,000 ^(d)

Unit Process	Expected Limitations ^(a)	Continued Estuary Discharge		Ocean Outfall Discharge	
		Recommended Alternative	Capital Cost ^(b)	Recommended Alternative	Capital Cost ^(b)
Aeration Blowers	Aeration capacity.	See Brown and Caldwell's TM No. 1 and the Preliminary Design Report for Ventura WRF Upgrade Project, Phase II (Brown and Caldwell, December 2006)	\$4,500,000 ^(e)	No improvements recommended	\$0
Mixed Media Filters	Hydraulic loading rate criteria	Replace existing mixed media system with a cloth media filtration system	\$8,500,000	Abandon existing mixed media filters; install 2 MGD cloth media filter system for RW production	\$3,200,000
Chlorine Contact Tanks	Chlorine residual limitations. "Nitrite Lock" during cold weather periods	Replace existing chlorine system with UV disinfection	\$11,200,000	No improvements recommended	\$0
Effluent Pumping and Flow Measurement	Effluent pump and flow metering capacity	Install two magnetic flow meters on the discharge piping of the effluent transfer pumps	\$1,200,000	Install two magnetic flow meters on the discharge piping of the effluent transfer pumps	\$1,200,000
Thickening	Solids loading rate criteria. No thickener redundancy.	See the Preliminary Design Report for Ventura WRF Upgrade Project, Phase II (Brown and Caldwell, December 2006)	\$2,900,000	See the Preliminary Design Report for Ventura WRF Upgrade Project, Phase II (Brown and Caldwell, December 2006)	\$2,900,000
Anaerobic Digesters	Detention Time	Construct a fourth digester	\$3,900,000	Construct a fourth digester	\$3,900,000
Filter Press	Filter press capacity / availability of operational time	See Brown and Caldwell's Sludge Dewatering Alternatives Evaluation	\$12,800,000 ^(f)	See Brown and Caldwell's Sludge Dewatering Alternatives Evaluation	\$12,800,000 ^(f)
Ocean Outfall		Not Applicable	\$0	Construct ocean outfall	\$26,300,000
Engineers Estimate of Probable Cost of Construction			\$70,400,000		\$73,000,000

Notes:

- (a) See Figure 4-2 for a flow-based timeline for the expected limitations.
- (b) Estimate accuracy is +50% to -30%.
- (c) Capital costs were estimated from Brown and Caldwell's Preliminary Design Report for Ventura WRF Upgrade Project, Phase II and exclude blower improvements. Phase II had a total estimated cost of \$24 million. Costs were escalated from December 2006 to October 2008 using the ENR- Construction Cost Index for Los Angeles.
- (d) Capital costs assume the similar process basin expansion as that required for the Estuary Discharge (costs of which were estimated from Brown and Caldwell's Preliminary Design Report for Ventura WRF Upgrade Project, Phase II). Ocean outfall costs do not include RAS pump improvements.
- (e) Capital costs were estimated from Brown and Caldwell's Preliminary Design Report for Ventura WRF Upgrade Project, Phase II. Phase II had a total estimated cost of \$24 million, costs for the blowers were estimated from this total. Costs were escalated from December 2006 to October 2008 using the ENR- Construction Cost Index for Los Angeles.
- (f) Capital costs were presented in Brown and Caldwell's Sludge Dewatering Alternatives Evaluation. Cost was assumed for Alternative 10 (3 centrifuges, 7 shifts). Costs were escalated from April 2002 to October 2008 using the ENR- Construction Cost Index for Los Angeles.

¹ Project status between January 2005 to December 2005

*Totals do not include completed units.

Pending Project Report
Prepared by the City of San Buenaventura

DEFINITIONS OF APPROVAL STATUS CATEGORIES

- Step 1:** "IN PLANNING PROCESS" - Project application has been filed for one or more discretionary planning approvals (Planned Development Permit, Change of Zone, Tentative Tract Map, etc.). Residential projects of fewer than four units are not included unless Planning Commission approval is required, nor are non-residential projects that do not result in new development (e.g., new church use in an existing building).
- Step 2:** "ALL PLANNING APPROVALS" - The project has received all major discretionary and planning approvals from the City, with no appeals pending.
- Step 3:** "IN PLAN CHECK" - The project has received all planning approvals; final plans have been submitted to the Inspection Services Division.
- Step 4:** "BUILDING PERMITS ISSUED" - The project has received all planning approvals; final plans approved; building and other permits have been issued; may be under construction.

POPULATION IS CALCULATED AT 2.5 PERSONS PER UNIT UNDER THE CITY'S RESIDENTIAL GROWTH MANAGEMENT PROGRAM

NOTE: Information contained in this report is intended to provide general information to the City Council, Planning Commission, and public on the types of development being processed. This report is not intended for commercial use. Information on "Approval Status" is based on the best available information, and shall in no way be construed to affect approval status or legal requirements of any project.

In compliance with the Americans with Disabilities Act, if any individual needs special assistance in understanding this document, please contact the Planning Division office at (805) 654-7893 or through the (TDD), California Relay Service. Notification in advance will enable the City to make reasonable arrangements to accommodate your needs.

¹ Project status between July 2006 to December 2006

Pending Project Report
Prepared by the City of San Buenaventura

DEFINITIONS OF APPROVAL STATUS CATEGORIES

- Step 1:** "IN PLANNING PROCESS" - Project application has been filed for one or more discretionary planning approvals (Planned Development Permit, Change of Zone, Tentative Tract Map, etc.). Residential projects of fewer than four units are not included unless Planning Commission approval is required, nor are non-residential projects that do not result in new development (e.g., new church use in an existing building).
- Step 2:** "ALL PLANNING APPROVALS" - The project has received all major discretionary and planning approvals from the City, with no appeals pending.
- Step 3:** "IN PLAN CHECK" - The project has received all planning approvals; final plans have been submitted to the Inspection Services Division.
- Step 4:** "BUILDING PERMITS ISSUED" - The project has received all planning approvals; final plans approved; building and other permits have been issued; may be under construction.

NOTE: Population is calculated at 2.5 persons per unit as established by the City's 2005 General Plan information. Report provides general information to the City Council, Planning Commission, and public on the types of development being processed. This report is not intended for commercial use. Information on "Approval Status" is based on the best available information, and shall in no way be construed to affect approval status or legal requirements of any project.

In compliance with the Americans with Disabilities Act, if any individual needs special assistance in understanding this document, please contact the Planning Division office at (805) 654-7893 or through the (TDD), California Relay Service. Notification in advance will enable the City to make reasonable arrangements to accommodate your needs.

Appendix B

Previous NPDES Permit

**State of California
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
LOS ANGELES REGION**

**ORDER NO. 00-143
NPDES NO. CA0053651**

**WASTE DISCHARGE REQUIREMENTS
FOR
CITY OF SAN BUENAVENTURA
(Ventura Water Reclamation Facility)**

The California Regional Water Quality Control Board, Los Angeles Region, (hereinafter Regional Board) finds:

BACKGROUND

1. The City of San Buenaventura (City or Discharger) discharges wastes from its Ventura Water Reclamation Facility under waste discharge requirements contained in Order No. 95-074 adopted by this Regional Board on June 12, 1995. This Order also serves as the National Pollutant Discharge Elimination System (NPDES) permit (CA0053651).
2. The City has filed a report of waste discharge and has applied for renewal of its waste discharge requirements and NPDES permit.

DESCRIPTION OF FACILITY

3. The City operates the Ventura Water Reclamation Facility, a publicly owned tertiary wastewater treatment facility with a design capacity of 14 million gallons per day (mgd). The facility is located at 1400 Spinnaker Drive, San Buenaventura, Ventura County, California (Figure 1 shows the location of the plant). The facility treats municipal wastewater from domestic, commercial, and industrial sources. The treated wastewater is discharged into the Santa Clara River Estuary, a water of the United States, at latitude 34° 14' 11", and longitude 119° 15' 31" (Discharge Serial No. 001). The facility is responsible for 375 miles of sewer mains and 12 lift stations in addition to the treatment plant.
4. The City is in the process of renovating and upgrading the existing aeration system and secondary sedimentation tanks of the activated sludge process. The City anticipates that all major structural upgrades which impact the operation of the treatment process will be complete by October 1, 2000.

5. Upon completion of the upgrade, treatment at the facility will consist of grit removal, primary sedimentation, flow equalization, roughing filters, activated sludge, tertiary filters, chlorination / dechlorination, primary sludge thickener, DAF secondary sludge thickener, anaerobic digestion, plate press, and land application or landfill as the final destination. During the completion of the upgrade, the treatment at the facility consists of grit removal, primary sedimentation, flow equalization, activated sludge, tertiary filters, chlorination / dechlorination, primary sludge thickener, anaerobic digestion, plate press, and land application or landfill as the final destination.

Sludge is thickened, anaerobically digested, and dewatered (using filter presses). A portion of the dewatered sludge is composted (Class B), and hauled to various users in Ventura County. The rest of the dewatered sludge is disposed of in the Simi Valley and Chiquita Canyon landfills.

Figures 2 and 3 show the schematic of the current wastewater flow and the wastewater flow upon completion of the construction upgrade.

DESCRIPTION OF WASTE DISCHARGE AND OUTFALL

6. The volume and characteristics of the treated wastewater, based on discharge monitoring reports from January 1995 through December 1999, are as follows:

Annual Average Influent Flow	8.89 mgd
Annual Average Flow to Santa Clara River	7.76 mgd
Highest Monthly Average Flow to Santa Clara River	15.05 mgd

<u>Constituents</u>	<u>Unit</u>	<u>Annual Average Value</u>
BOD ₅ 20°C	mg/L	2.8
Total chlorine residual	mg/L	<0.1
Total dissolved solids	mg/L	1396
Total suspended solids	mg/L	1.74
Settleable solids	ml/L	<0.1
Ammonia (as N)	mg/L	3.34
Nitrate (as N)	mg/L	13.7
Kjeldahl nitrogen	mg/L	4.26

7. The U.S. Environmental Protection Agency (USEPA) and the Regional Board have classified the discharge from the Ventura Water Renovation Facility as a major discharge.
8. The treated wastewater is discharged into the Santa Clara River Estuary, a water of the United State, at latitude 34° 14' 11", and longitude 119° 15' 31" (Discharge Serial No. 001).

The mouth of the Santa Clara River is sometimes closed off by a sand bar so that a shallow lagoon is created. However, at times when the sand bar is breached, either by floodwaters or by mechanical means, the lagoon empties directly into the Pacific Ocean. The Pacific Ocean is about 2,000 feet west from Discharge Serial No. 001.

The State of California Department of Parks and Recreation has declared McGrath State Beach and the surrounding 160 acres a natural preserve. The preserve includes the main channel of the Santa Clara River and adjacent natural lands of riparian shrubland and saltwater marsh. The purpose of the natural preserve is to protect and perpetuate the river ecosystem at the mouth of the Santa Clara River. Resource values of particular significance include: estuarine waters, which are used extensively by a wide variety of waterfowl and other water-associated birds; nesting habitat of the endangered California least tern; and riparian shrubland and saltwater marsh communities.

The effluent limits were derived based on the salinity of the receiving waters. The CTR specifies that fresh water criteria apply at locations where the salinity is 1 part per thousand (ppt) or less 95% or more of the time, and marine water criteria apply at locations where the salinity is 10 ppt or more 95% or more of the time. At locations where salinities fall between 1 and 10 ppt, the more stringent of either fresh or marine waters apply. The Santa Clara River Estuary typically experiences more tidal influence during winter and spring when the sand bar is open, while during the summer and fall the bar is closed and less tidal influence occurs. Data obtained from U.S. Fish and Wildlife Service demonstrate that the discharge point is classified as in-between freshwater and saltwater according to the definitions in the CTR.

In order to protect the beneficial uses, the limits for both fresh and salt water were compared, and the more stringent of the two was used to set each effluent limit within this permit. In this manner, the Regional Board is protecting the most sensitive environmental beneficial use.

9. A small portion of the treated wastewater is reused for turf and landscape irrigation. Approximately 1.0 MGD of the treated wastewater percolates into groundwater from the ponds on site at the treatment facility. The reuse of the treated wastewater and the percolation to groundwater are regulated under water reclamation requirements which are contained in a separate order (Order No. 87-45), adopted by this Board on April 27, 1987.
10. In September 1978, the City of San Buenaventura submitted a facilities plan for effluent utilization which included a demonstration of enhancement to the Santa Clara River Estuary based on an average minimum effluent flow of 5.6 mgd. The Regional Board concurred with the findings in the facilities plan that this discharge is not degrading the beneficial uses of the Estuary, and in fact, some of the beneficial uses, such as fish and wildlife habitat and non-contact water recreation, are enhanced by the presence of the discharge.

HISTORY OF DISCHARGE

11. On June 12, 1995, the Regional Board last issued waste discharge requirements for the Ventura Water Reclamation Facility. At that time, it was understood that there were some pollutant limits that the VWRF would not be able to meet. Interim limits were included in the permit until such time as the City completed its study to determine the source of the pollutants, implemented process changes that would minimize the presence of the problem pollutants, determined how to achieve these limits, and completed a characterization of the estuary. The City believed that the estuary is predominantly fresh water and that the effluent limits, if calculated using fresh receiving water data instead of salt water receiving criteria, would be achievable.

12. In May of 1996, the City submitted Phase 1 of the NPDES Limit Achievability Study which identified which new permit limits could not be currently complied with, and to determine if source control actions applied to controllable discharges could be expected to reduce discharge concentrations below effluent limits contained in the permit. The study indicated the City was in compliance with most limits, however, the following pollutants were problematic: Bis(2-ethylhexyl)phthalate, Dichlorobromomethane, copper, lead, nickel, and zinc.

Zinc appeared to be the only problem pollutant that could be reduced in concentration by source control actions. Zinc orthophosphate was used as a corrosion control additive in the water supply and the substitution of another chemical compound proved successful. The application of source control methods would not decrease the concentrations found in the effluent for copper, lead, nickel, and Bis(2-ethylhexyl)phthalate because current removal efficiencies were unable to meet the limits established in the permit. Dichlorobromomethane results from the addition of chlorine used in the disinfection process and cannot be reduced in concentration with the current treatment process.

13. On March 5, 1998, the City submitted Phase 2 of the NPDES Limit Achievability Study which addressed the achievability of permit limits through treatment process modifications. The City reviewed the USEPA Bibliographic Database and found no full-scale information on processes that would achieve compliance with their NPDES permit limits. Processes examined include reverse osmosis, addition of lime, alternative disinfection processes, activated carbon adsorption and air stripping. Either the process would not aid in VWRF's achieving compliance or there were other adverse effects that needed to be further analyzed.

14. On November 12, 1999, the City submitted Phase 3 of the NPDES Limit Achievability Study which addressed the results of the receiving water study and determined the appropriate standards for calculating water quality objectives for the Santa Clara River Estuary. The City's interpretation of the results of this study are summarized below:

- a. Most of the designated beneficial uses are supported and enhanced by the City's discharge. The discharge provides make-up water from that lost upstream due to diversion and pumping;
- b. The estuary is primarily a freshwater ecosystem, which should allow for consideration of water hardness in recalculating the discharge limits for metals;
- c. State regulations prohibit fishing and shellfish collection in the estuary and low numbers of suitably sized species are present, therefore the human consumption of seafood from the estuary is much lower than assumed in standard risk models. The study proposes that site specific information be used in calculating water quality objectives for the organic pollutants and concludes that adjusting the permit limits using site specific information will still be protective of the beneficial uses of the estuary;
- d. Adjusting the permit limits by incorporating site-specific information will not impair or harm the beneficial uses of the estuary;
- e. The criteria for determining the site specific objectives are met; and,
- f. Monitoring studies of the Santa Clara River and Estuary show that ambient concentrations of the six pollutants are comparable to the concentrations found in the effluent. Effluent concentrations and ambient concentrations exceed the NPDES permit limits with similar frequency for all pollutants except copper.

APPLICABLE PLANS, POLICIES, AND REGULATIONS

15. This discharge is subject to USEPA's regulations promulgated pursuant to Section 304(1) of the Clean Water Act and to implement USEPA's "Policy for the Development of Water Quality-based Permit Limitations for Toxic Pollutants" (49 FR 9016, dated March 9, 1984). These regulations prescribe biological and other laboratory testing procedures and toxicity limits, particularly for chronic toxicity.
16. Pursuant to 40 CFR Part 403, the City developed and implements an approved industrial wastewater pretreatment program.
17. To implement Section 405(d) of the Clean Water Act, USEPA promulgated 40 CFR Part 503 on February 19, 1993, to regulate the use and disposal of municipal sewage sludge. This Order implements these regulations and it is the responsibility of the Discharger to comply with said regulations, which are enforceable by USEPA.
18. Effluent limitations, national standards of performance, toxic and pretreatment effluent standards, test procedure guidelines, regulations, requirements, and/or guidelines established pursuant to Sections 208(b), 301, 302, 303(d), 304, 306, 307, and 405 of the Clean Water Act and amendments thereto are applicable to this discharge.
19. Pursuant to Section 402(p) of the Clean Water Act and 40 CFR Parts 122, 123, and 124, the State Water Resources Control Board (State Board) adopted general NPDES permits to regulate stormwater discharges associated with industrial activity (State Board Order

No. 91-13-DWQ adopted in November 1991, amended by Order No. 92-12-DWQ adopted in September 1992). The requirements of this general permit are incorporated into this permit.

20. On July 23, 1997, the State Water Resources Control Board (State Board) adopted the revised *Water Quality Control Plan for the Ocean Waters of California* (Ocean Plan). The Ocean Plan contains water quality objectives for the coastal waters of California. This Order includes effluent and receiving water limitations, prohibitions, and provisions which implement the objectives of the Ocean Plan.
21. On May 18, 1972 (amended on September 18, 1975), the State Board adopted a *Water Quality Control Plan for Control of Temperature in the Coastal and Interstate Waters and Enclosed Bays and Estuaries of California* (Thermal Plan). The Thermal Plan contains temperature objectives for the Pacific Ocean.
22. On October 28, 1968, the State Board adopted Resolution No. 68-16, "Maintaining High Quality Water" which established an antidegradation policy for State and Regional Boards.
23. On June 13, 1994, the Regional Board adopted a revised *Water Quality Control Plan for the Los Angeles Region: Basin Plan for the Coastal Watershed of Los Angeles and Ventura Counties* (Basin Plan). The Basin Plan incorporates by reference the Ocean Plan, the Thermal Plan, and the antidegradation policy. The Basin Plan also identifies water quality objectives and beneficial uses for surface waters of Ventura.
24. The beneficial uses of the receiving waters are:
 - a. Santa Clara River Estuary

Navigation, water contact recreation, noncontact water recreation, commercial and sport fishing, estuarine habitat, marine habitat, wildlife habitat, rare, threatened, or endangered species, migration of aquatic organisms, spawning, and wetland habitat.
 - b. Pacific Ocean, Nearshore*

Industrial service supply, navigation, water contact recreation, noncontact water recreation, commercial and sport fishing, marine habitat, wildlife habitat, preservation of biological habitats, rare, threatened, or endangered species, migration of aquatic organisms, spawning, and shellfish harvesting.

*Nearshore is defined as the zone bounded by the shoreline and a line 1,000 feet from the shoreline or the 30-foot depth contours, whichever is further from the shoreline.

25. On May 18, 2000, the United States Environmental Protection Agency (USEPA) promulgated numeric criteria for priority toxic pollutants for the state of California [known as the California Toxics Rule (CTR) and codified as 40 CFR part 131.38]. On March 2, 2000, State Board adopted the *Policy for Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays, and Estuaries of California* (Order No. 2000-015). Toxic pollutant limits are prescribed in this Order to implement the CTR. On April 26, 2000, State Board adopted the *Amending Resolution No. 2000-15 Regarding Adoption of the Policy for the Implementation of Toxic Standards for Inland Surface Waters, Enclosed Bays, and Estuaries of California* (Order No. 2000-030).
26. There is public contact in the downstream areas; hence, the quality of wastewater discharged to the Santa Clara River must be such that no health hazard is created.
27. The requirements contained in this Order are derived using best professional judgement and are based on the Basin Plan, Federal and State plans, policies, guidelines, and plant performance; and as they are met, will be in conformance with the goals of the aforementioned water quality control plans, water quality criteria, and will protect and maintain the existing beneficial uses of the receiving water.

WATER QUALITY ASSESSMENT

28. On May 12, 1999, the USEPA approved the State Water Resources Control Board's (SWRCB) Water Quality Assessment (WQA). The SWRCB prepared their WQA, or 303(d) List, in accordance with section 303(d) of the federal Clean Water Act, which calls for the identification of specific water bodies that do not meet or are not expected to meet water quality standards, even after the implementation of technology-based effluent limitations are applied to point source discharges.

The Santa Clara River Estuary is on the 1998 303(d) list of impaired waterbodies for coliform, and a portion of the river upstream of the estuary is listed for ammonia and coliform. Portions of the river have chloride exceedances. The Estuary is also listed for DDT in fish tissue, Chem A which is the sum of the chemicals aldrin, dieldrin, chlordane, endrin, heptachlor, heptachlor epoxide, HCH (including lindane), endosulfan, and toxaphene and also for toxaphene alone. Total Maximum Daily Load (TMDL) development for coliforms for the Santa Clara River Estuary is scheduled to begin in the fiscal year 2001/2002.

REASONABLE POTENTIAL ANALYSIS

29. 40 CFR122.44 (d)(1)(ii) requires that a Reasonable Potential Analysis (RPA) be performed for each toxic pollutant to determine whether a discharge causes, has the reasonable potential to cause, or contributes to an excursion of a receiving water quality objective. In performing the RPA, the permitting authority uses procedures that account for existing controls on point and nonpoint sources of pollution, the variability of the pollutant or

pollutant parameter in the effluent, and the sensitivity of the species to toxicity testing (when evaluating whole effluent toxicity). Because of effluent variability, there is always some degree of uncertainty in determining an effluent's impact on the receiving water. The State Board's *Policy for Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays, and Estuaries of California* (SIP) addresses this issue by suggesting the use of a statistical approach.

For a toxic constituent with sufficient data to perform a RPA, effluent limitations are imposed if the maximum effluent concentration is greater than the most stringent criteria, if the lowest non-detected value is greater than the most stringent criteria, or if the background concentration is greater than the criteria.

For some constituents, a complete RPA cannot be performed on a discharger's effluent because there is insufficient ambient data upstream from the facility to determine if an effluent limitation is needed, or to calculate a final effluent limitation. In accordance with the SIP, such a discharger shall obtain ambient water samples for the priority pollutants upstream from the facility. After the ambient information is gathered, the RPA will be performed and the permit reopened to include additional numerical limitations, if necessary.

Insufficient data may also prevent completion of the RPA if there is insufficient receiving water data or effluent data. The steps above apply here as well.

30. For some pollutants including Aldrin, Alpha-BHC, Chlordane, DDT, Dieldrin, Endrin, Heptachlor, Heptachlor Epoxide, Hexachlorobenzene, PAHs, PCB total, Toxaphene, and TCDD Equivalents (2,3,7,8-tetrachlorodibenzo-p-dioxin), the applicable water quality objectives are below the levels that current analytical techniques can measure. Because the actual presence and loads of these pollutants are unknown for the treatment plant, it is reasonably cautious to conclude that the reasonable potential exists for each of these pollutants.
31. Water quality objectives specified in the Basin Plan were used to set the limits for toxic pollutants that are believed to be present in the effluent and have reasonable potential to cause or contribute to an excursion of a receiving water quality objective. Other pollutants are to be monitored only to gather data for reasonable potential analysis in future permit renewals. If there is no specific numerical water quality objective for the priority pollutant available in the Basin Plan, the appropriate water quality criterion in the California Toxics Rule or the National Toxics Rule are considered. The more stringent criterion will be incorporated into this Order.
32. No numerical limit is prescribed for any toxic constituent that is consistently not detected in the effluent and where it has been determined that there is a very low probability of causing or contributing to excursions in water quality standards. A narrative limit to comply with all water quality objectives is provided in lieu of such numerical limits.

33. The issuance of waste discharge requirements for this discharge is exempt from the provisions of Chapter 3 (commencing with Section 21100) of Division 13 of the Public Resources Code (California Environmental Quality Act) in accordance with Water Code Section 13389.

NOTIFICATION

The Regional Board has notified the Discharger and interested agencies and persons of its intent to issue waste discharge requirements for this discharge and has provided them with an opportunity to submit their written views and recommendations.

The Regional Board, in a public hearing, heard and considered all comments pertaining to the discharge and to the tentative requirements.

This Order shall serve as a National Pollutant Discharge Elimination System permit pursuant to Section 402 of the Federal Clean Water Act, or amendments thereto, and shall take effect ten days from the date of its adoption, provided the USEPA Regional Administrator has no objections.

Pursuant to California Water Code Section 13320, any aggrieved party may seek review of this Order by filing a petition with the State Board. A petition must be sent to the State Water Resources Control Board, P.O. Box 100, Sacramento, California, 95812, within 30 days of adoption of the Order.

IT IS HEREBY ORDERED that the City of San Buenaventura, in order to meet the provisions contained in Division 7 of the California Water Code and regulations adopted thereunder, and the provisions of the Clean Water Act and regulations and guidelines adopted thereunder, shall comply with the following:

I. DISCHARGE REQUIREMENTS

A. FLOW REQUIREMENT

The running 30-day average volume of treated wastewater discharged to the Santa Clara River shall not be less than 5.6 mgd.

B. EFFLUENT LIMITATIONS

1. Wastes discharged shall be limited to tertiary treated municipal and industrial wastewater only, as proposed.
2. The arithmetic mean of BOD₅20°C and suspended solids values, by weight, for effluent samples collected during a period of 30 consecutive calendar days shall not exceed 15 percent of the arithmetic mean of values, by

weight, for influent samples collected at approximately the same time during the same period.

3. The discharge of an effluent from Discharge Serial No. 001 with pollutants in excess of the following limits is prohibited:

a. Conventional and Nonconventional Pollutants:

<u>Constituent</u>	<u>Units</u>	<u>DISCHARGE LIMITATIONS</u>

	lbs/day	---	0.76

- 1/ As defined in Standard Provisions, Attachment N.
- 2/ The daily maximum effluent concentration limits apply to both flow weighted 24-hour composite samples and grab samples, as specified in the Monitoring and Reporting Program (Attachment T).
- 3/ The daily mass emission limits are based on the plant design flow rate of 14 mgd.
- 4/ Based on total recoverable metals. These limits may be converted to total dissolved upon request by the Discharger only after conducting a study, approved by the Executive Officer, on the Water Effect Ratio (WER) according to the USEPA guidance document (and/or State protocols, if available).
- 5/ The Discharger has the option to meet the hexavalent chromium limitations with a total chromium analysis. However, if the total chromium level exceeds the hexavalent chromium limitation, it will be considered a violation unless an analysis has been made for hexavalent chromium in a replicate sample and the results are in compliance with hexavalent chromium limits.
- 6/ PCBs (polychlorinated biphenyls) shall mean the sum of chlorinated biphenyls whose analytical characteristics resemble those of Aroclor-1016, Aroclor-1221, Aroclor-1232, Aroclor-1242, Aroclor-1248, Aroclor-1254, and Aroclor-1260.

4. Radioactivity of the wastes discharged shall not exceed limits specified in Title 22, Chapter 15, Article 5, Section 64443, of the California Code of Regulations, or subsequent revisions thereof.
5. The wastes discharged to water courses shall at all times be adequately disinfected. For the purpose of this requirement, the wastes shall be considered adequately disinfected if the median number of coliform organisms at some point in the treatment process does not exceed 2.2 per 100 milliliters, and the number of coliform organisms does not exceed 23 per 100 milliliters in more than one sample within any 30-day period. The median value shall be determined from the bacteriological results of the last seven (7) days for which analyses have been completed. Samples shall be collected at a time when wastewater flow and characteristics are most demanding on treatment facilities and disinfection processes.
6. The wastes discharged to water courses shall have received treatment equivalent to that of filtered wastewater. Filtered wastewater means oxidized and coagulated wastewater which has been passed through natural undisturbed soils or filter media, such as sand or diatomaceous earth, so that the turbidity of the filtered wastewater does not exceed any of the following: (a) a daily average of 2 Nephelometric turbidity units (NTUs); (b) 5 NTUs more than 5 percent of the time during the 24 hour period for which the daily average is calculated; and (c) 10 NTUs at any time.

"Oxidized wastewater" means wastewater in which the organic matter has been stabilized, is nonputrescible, and contains dissolved oxygen.

"Coagulated wastewater" means oxidized wastewater in which colloidal and finely divided suspended matter have been destabilized and agglomerated upstream of a filter by the addition of suitable floc-forming chemicals.

"NTU" means a measurement of turbidity as determined by ratio of the intensity of light scattered by the sample to the intensity of incident light using approved laboratory methods.

7. Toxicity Limitations:
 - a. The acute toxicity of the effluent shall be such that the average survival in the undiluted effluent for any three (3) consecutive 96-hour static or continuous flow bioassay tests shall be at least 90%, with no single test producing less than 70% survival.

- b. The chronic toxicity of the effluent shall be expressed and reported as toxic units, where:

$$TU_c = 100/NOEC$$

The No Observable Effect Concentration (NOEC) is expressed as the maximum percent effluent/receiving water that causes no observable effect on test organisms, as determined by the results of a critical life stage toxicity test. The chronic toxicity of the effluent shall not exceed 1.0 TU_c in a critical life stage test. If the chronic toxicity of the effluent exceeds 1.0 TU_c , the test must be redone immediately.

- c. If either toxicity limitation is violated, the Discharger shall repeat the toxicity test immediately. If either toxicity limitation is consistently violated, the Discharger shall begin a toxicity reduction evaluation (TRE) study and resume toxicity testing at the interval required by the Monitoring and Reporting Program.
- d. If either toxicity limitation is violated consecutively three or more times, the Discharger shall conduct a toxicity reduction evaluation (TRE) study. The TRE study shall include all reasonable steps to identify the sources of toxicity. Once the sources of toxicity are identified, the Discharger shall evaluate the effect of toxicity control options and the Discharger shall take all reasonable steps necessary to reduce toxicity to the required level.

C. RECEIVING WATER REQUIREMENTS AND LIMITATIONS

1. The maximum temperature of wastes discharged shall not exceed the natural receiving water temperature by more than 20°F. The elevated temperature of wastes discharged, either individually or combined with other discharges, shall not create a zone, defined by water temperatures of more than 1°F above natural receiving water temperature, which exceeds 25 percent of the cross-sectional area of the main river channel at any point. The wastes discharged shall not cause a surface water temperature rise greater than 4°F above the natural temperature of the receiving waters at any time or place.
2. The pH of the receiving water shall not be depressed below 6.5 or raised above 8.5 as a result of wastes discharged. Ambient pH levels shall not be changed more than 0.2 units from natural conditions. If such natural conditions exist, they must be reported in the monthly report.

3. At a minimum, the mean annual dissolved oxygen concentration of all waters shall be greater than 7.0 mg/L, and no single determination shall be less than 5.0 mg/L, except when natural conditions cause lesser concentrations.
4. The fecal coliform concentration shall not exceed a log mean of 200/100 ml (based on a minimum of not less than four samples for any 30-day period), nor shall more than 10% of total samples during any 30-day period exceed 400/100 ml.
5. The wastes discharged shall not contain toxic pollutants at levels that will bioaccumulate in aquatic life to levels which are harmful to aquatic life or human health.
6. The wastes discharged shall not contain substances that result in increases in the BOD which adversely affects beneficial uses of the receiving water.
7. The wastes discharged shall not contain biostimulatory substances in concentrations that promote aquatic growth to the extent that such growth causes nuisance or adversely affects the beneficial uses of the receiving water.
8. The wastes discharged shall not cause the receiving water to contain any substance in a concentration that adversely affects any designated beneficial use.
9. The wastes discharged shall not alter the color of the receiving waters; create a visual contrast with the natural appearance of the water; nor cause aesthetically undesirable discoloration of the receiving waters.
10. The wastes discharged shall not degrade surface water communities and populations including vertebrate, invertebrate, and plant species.
11. The wastes discharged shall not result in problems due to breeding of mosquitoes, gnats, black flies, midges, or other pests.
12. Floating particulates, foams, or oil and grease shall not be visible in the receiving waters as a result of the wastes discharged.
13. The wastes discharged shall not contain any individual pesticide or combination of pesticides in concentrations that adversely affect the beneficial uses of the receiving waters. There shall be no increase in pesticide concentrations found in bottom sediments or aquatic life.

14. The wastes discharged shall not alter the natural taste, odor, and color of fish, shellfish, or other surface water resources used for human consumption.
15. The wastes discharged shall not increase the turbidity of the receiving waters to the extent that causes a nuisance or adversely affects beneficial uses.
16. The dissolved sulfide concentration of waters in and near sediments shall not be significantly increased above that present under natural conditions as a result of wastes discharged.
17. The wastes discharged shall not cause objectionable aquatic growths or degrade indigenous biota.
18. The concentration of organic materials in marine sediments shall not be increased above that which would degrade marine life as result of wastes discharged.
19. The concentration of organic materials in fish, shellfish or other marine resources used for human consumption shall not bioaccumulate to levels that are harmful to human health as a result of wastes discharged.
20. The wastes discharged shall not cause the receiving waters to contain any substance in concentrations toxic to human, animal, plant, or fish life.
21. No physical evidence of wastes discharged shall be visible at any time in the water or on beaches, shores, rocks, or structures.
22. Exotic vegetation shall not be introduced around stream courses to the extent that such growth causes nuisance or adversely affects beneficial uses.
23. The natural hydrologic conditions necessary to support the physical, chemical, and biological characteristics present in wetlands shall be protected to prevent significant adverse effects on: (a) natural temperature, pH, dissolved oxygen, and other natural physical and chemical conditions; (b) movement of aquatic fauna; (c) survival and reproduction of aquatic flora and fauna; and (d) water levels.

24. The existing habitats and associated populations of wetlands fauna and flora shall be maintained by: (a) maintaining substrate characteristics necessary to support flora and fauna which would be present naturally; (b) protecting food supplies for fish and wildlife; (c) protecting reproductive and nursery areas; and (d) protecting wildlife corridors.

D. RECEIVING WATER OBJECTIVES

1. In order to protect aquatic life, ammonia in receiving waters shall not exceed concentrations specified in Tables 3-2 and 3-4 of the Basin Plan (Attachment 2) as a result of the wastes discharged.
2. To protect underlying groundwater basins, ammonia shall not be present in the wastes discharged at levels that when oxidized to nitrate will pose a threat to ground water.
3. There shall be no chronic toxicity in ambient waters as a result of wastes discharged.

If the chronic toxicity in the receiving water downstream of the discharge point consistently exceeds 1.0 TU_c in a critical life stage test, the Discharger shall determine if the cause of the exceedance is the wastes discharged. If it is determined that the wastes discharged caused the exceedance, the Discharger shall conduct a toxicity reduction evaluation (TRE). The TRE shall include all reasonable steps to identify the sources of toxicity. Once the sources are identified, the Discharger shall take all reasonable steps to reduce toxicity to meet the objective.

II. SLUDGE REQUIREMENTS

For biosolids/sludge management, the City must comply with all requirements of 40 CFR Parts 257, 258, 501, and 503, including all monitoring, record keeping, and reporting requirements. Specific requirements are listed in Attachment B.

Since the State of California, hence the Regional Board, has not been delegated the authority to implement the sludge program, enforcement of the sludge requirements contained in this Order shall be the sole responsibility of USEPA. However, any reports submitted to USEPA shall also be furnished to the Regional Board.

III. PRETREATMENT REQUIREMENTS

- A. This Order includes the Discharger's pretreatment program as previously submitted to this Regional Board. Any change to the program shall be reported to the Regional Board and USEPA in writing and shall not become effective until approved by the Executive Officer and the USEPA Regional Administrator.
- B. The Discharger shall implement and enforce its approved pretreatment program. The Discharger shall be responsible and liable for the performance of all Control Authority pretreatment requirements contained 40 CFR Part 403 including subsequent regulatory revisions thereof. Where 40 CFR Part 403 or subsequent revisions thereof require mandatory actions by the Discharger as Control Authority but does not specify a timetable for completion of the actions, the Discharger shall complete the required actions within six months from the issuance date of this Order or the effective date of the Part 403 revisions, whichever comes later. For violations of pretreatment requirements, the Discharger shall be subject to enforcement actions, penalties, fines, and other remedies by the Regional Board, or other appropriate parties, as provided in the Clean Water Act. The Regional Board may initiate enforcement action against an industrial user for noncompliance with applicable standards and requirements as provided in the Clean Water Act and/or the California Water Code.
- C. The Discharger shall update its pretreatment local limits to meet the requirements of this Order. Within 60 days of the effective date of this Order, the Discharger shall submit the plan and schedule for updating the local limits for approval of the Executive Officer.
- D. The Discharger shall enforce the requirements promulgated under Sections 307(b), 3079(c), 307(d), and 402(b) of the Clean Water Act with timely, appropriate, and effective enforcement actions. The City shall cause industrial users subject to the Federal Categorical Standards to achieve compliance no later than the date specified in those requirements or, in the case of a new industrial user, upon commencement of the discharge.
- E. The Discharger shall perform the pretreatment functions as required in 40 CFR Part 403 including, but not be limited to:
 - 1. Implement the necessary legal authorities as provided in 40 CFR 403.8(f)(1);
 - 2. Enforce the pretreatment requirements under 40 CFR 403.5 and 403.6;
 - 3. Implement the programmatic functions as provided in 40 CFR 403.8(f)(2); and
 - 4. Provide the requisite funding and personnel to implement the pretreatment program as provided in 40 CFR 403.8(f)(3).

- F. The Discharger shall submit quarterly and annual reports to the Regional Board, State Board, and USEPA, Region 9, describing the Discharger's pretreatment activities over the period. If the Discharger is not in compliance with any conditions or requirements of this Order, the Discharger shall include the reasons for noncompliance and shall state how and when the Discharger will comply with such conditions and requirements. The annual and quarterly reports shall contain, but not be limited to, the information required in the attached *Pretreatment Reporting Requirements* (Attachment P), or an approved revised version thereof.

IV. OTHER REQUIREMENTS AND PROVISIONS

- A. The Discharger shall comply with all applicable water quality objectives for the receiving waters, including the toxic criteria in 40 CFR Part 131.36.
- B. This Order includes the attached *Standard Provisions and General Monitoring and Reporting Requirements* (Standard Provisions, Attachment N). If there is any conflict between provisions stated herein and said "Standard Provisions", those provisions stated herein prevail.
- C. This Order includes the attached *Monitoring and Reporting Program CI-1822* (Attachment T). If there is any conflict between provisions stated in the Monitoring and Reporting Program and the Standard Provisions, those provisions stated in the former prevail.
- D. This Order includes the requirements of the State Board's General NPDES permits for discharges of storm water associated with industrial activity (Order No. 97-03-DWQ).

The Discharger must submit within 90 days of the effective date of this Order for the Executive Officers approval an updated Storm Water Pollution Prevention Plan (SWPPP) in accordance with Attachment A (Storm Water Pollution Prevention Plan). The Discharger shall implement the revised SWPPP within 10 days of the approval by the Executive Officer.

- E. The Discharger shall provide standby or emergency power facilities and/or storage capacity or other means so that in the event of plant upset or outage due to power failure or other causes, the discharge of raw or inadequately treated sewage does not occur.
- F. The Discharger shall protect the facility from inundation which could occur as a result of a flood having a predicted frequency of once in 100 years.

- G. The Discharger shall comply with all applicable effluent limitations, national standards, and all federal regulations established pursuant to Sections 301, 302, 303(d), 304, 306, 307, 316, and 405 of the Clean Water Act and amendments thereto.
- H. This Order may be modified, in accordance with the provisions set forth in 40 CFR Parts 122 and 124, to include requirements for the implementation of the watershed protection management approach.
- I. The Board may modify, or revoke and reissue, this Order if present or future investigations demonstrate that the discharge(s) governed by this Order will cause, have the potential to cause, or will contribute to adverse impacts on water quality and/or beneficial uses of the receiving waters.
- J. This Order may also be modified, revoked, and reissued or terminated in accordance with the provisions of 40 CFR Parts 122.44, 122.62 to 122.64, 125.62, and 125.64. Causes for taking such actions include, but are not limited to, failure to comply with any condition of this Order, endangerment to human health or the environment resulting from the permitted activity, or acquisition of newly obtained information which would have justified the application of different conditions if known at the time of Order adoption. The filing of a request by the City for an Order modification, revocation and issuance or termination, or a notification of planned changes or anticipated noncompliance does not stay any condition of this Order.

V. EXPIRATION DATE

This Order expires on September 10, 2005.

The Discharger must file a Report of Waste Discharge in accordance with Title 23, California Code of Regulations, not later than 180 days in advance of the expiration date as application for issuance of new waste discharge requirements.

VI. RESCISSION

Order No. 95-074 adopted by this Board on June 12, 1995, is hereby rescinded, except for purposes of enforcement.

I, Dennis A. Dickerson, Executive Officer, do hereby certify that the foregoing is a full, true and correct copy of an Order adopted by the California Regional Water Quality Control Board, Los Angeles Region on October 12, 2000.

Dennis A. Dickerson
Executive Officer

ORDER NO. R4-2007-XXXX
NPDES NO. CA0053651

**WASTE DISCHARGE REQUIREMENTS FOR THE
CITY OF SAN BUENAVENTURA
VENTURA WATER RECLAMATION FACILITY
DISCHARGE TO THE SANTA CLARA RIVER ESTUARY VIA DISCHARGE OUTFALL NO. 001**

The following Discharger is subject to waste discharge requirements as set forth in this Order:

Table 1. Discharger Information

Discharger	City of San Buenaventura
Name of Facility	Ventura Water Reclamation Facility
Facility Address	1400 Spinnaker Drive
	Ventura, CA 93002-0099
	Ventura County
The U.S. Environmental Protection Agency (USEPA) and the Regional Water Quality Control Board have classified this discharge as a major discharge.	

The discharge by the City of San Buenaventura from the discharge point identified below is subject to waste discharge requirements as set forth in this Order:

Table 2. Discharge Location

Discharge Point	Effluent Description	Discharge Point Latitude	Discharge Point Longitude	Receiving Water
001	Tertiary treated wastewater	34 °, 14', 22.46" N	119 °, 15', 58.84" W	Santa Clara River Estuary via Wildlife Ponds

Table 3. Administrative Information

This Order was adopted by the Regional Water Quality Control Board on:	July 12, 2007
This Order shall become effective on:	September 1, 2007
This Order shall expire on:	June 11, 2012
The Discharger shall file a Report of Waste Discharge in accordance with title 23, California Code of Regulations, as application for issuance of new waste discharge requirements no later than:	180 days prior to the Order expiration date

IT IS HEREBY ORDERED, that Order No. 00-143 is rescinded upon the effective date of this Order except for enforcement purposes, and, in order to meet the provisions contained in division 7 of the Water Code (commencing with section 13000) and regulations adopted thereunder, and the provisions of the federal Clean Water Act (CWA) and regulations and guidelines adopted thereunder, the Discharger shall comply with the requirements in this Order.

I, Deborah J. Smith, Interim Executive Officer, do hereby certify that this Order with all attachments is a full, true, and correct copy of an Order adopted by the California Regional Water Quality Control Board, Los Angeles Region, on July 12, 2007.

Deborah J. Smith, Interim Executive Officer

I. FACILITY INFORMATION

The following Discharger is subject to waste discharge requirements as set forth in this Order:

Table 4. Facility Information

Discharger	City of San Buenaventura
Name of Facility	Ventura Water Reclamation Facility
Facility Address	1400 Spinnaker Drive
	Ventura, CA 93002-0099
	Ventura County
Facility Contact, Title, and Phone	Donald Burt, Interim Wastewater Superintendent, (805) 677-4131
Mailing Address	P.O. Box 99
	Ventura, CA 93002-0099
	Ventura County
Type of Facility	Publicly Owned Treatment Works
Facility Design Flow	14 Million Gallons per Day (MGD)

II. FINDINGS

The California Regional Water Quality Control Board, Los Angeles Region (hereinafter Regional Water Board), finds:

- A. Background.** The City of San Buenaventura (hereinafter Discharger) is currently discharging pursuant to Order No. 00-143 and National Pollutant Discharge Elimination System (hereinafter NPDES) Permit No. CA0053651. The Discharger submitted a Report of Waste Discharge (ROWD), dated April 18, 2005, and applied for an NPDES permit renewal to discharge up to 14 millions gallons per day (MGD) of tertiary treated wastewater from Ventura Water Reclamation Facility, hereinafter Facility. The application was deemed complete on March 14, 2007.

For the purposes of this Order, references to the “discharger” or “permittee” in applicable federal and state laws, regulations, plans, or policy are held to be equivalent to references to the Discharger herein.

The Water Quality Control Policy for the Enclosed Bays and Estuaries of California (Enclosed Bay and Estuaries Policy), adopted by the State Water Resources Control Board as Resolution No. 95-84 on November 16, 1995, states that:

“It is the policy of the State Board that the discharge of municipal wastewaters and industrial process waters (exclusive of cooling water discharges) to enclosed bays and estuaries, other than the San Francisco Bay-Delta system, shall be phased out at the earliest practicable date. Exceptions to this provision may be granted by a Regional Board only when the Regional Board finds that the wastewater in question would consistently be treated and discharged in such a manner that it would enhance the quality of receiving waters above that which would occur in the absence of the discharge.”

Section I.A. of Order No. 00-143 states that “The running 30-day average volume of treated wastewater discharged to the Santa Clara River Shall not be less than 5.6 mgd.” The minimal discharge of 5.6 mgd was based upon results of the 1976 Enhancement Study conducted by the Discharger and accepted by this Regional Water Board in 1977. However, there has not been a consensus among stakeholders of whether the treated wastewater discharge into the Santa Clara River Estuary (Estuary) is beneficial and enhances the Estuary, or has adverse impacts to the Estuary. A Time Schedule Order (No. R4-2006-0093) adopted by the Regional Water Board on December 14, 2006, required the Discharger to evaluate the possible impact(s) on the Estuary through the studies of an increase in the reclamation program and an incremental decrease of discharge to the Estuary.

This NPDES renewal proposes to lift the requirement of maintenance flows of 5.6 mgd to the Estuary so that reclamation can be increased and discharged to the Estuary incrementally decreased by 1 mgd per year. Monitoring will ensure that

endangered species residing in the Estuary are not adversely impacted by the incremental decrease in flow.

Regional Water Board staff met with the Discharger, Resource Agencies and other Interested Parties to review the results of the Updated Enhancement Study (May 2005) performed by Nautilus Environmental hired by the Discharger (meetings held at the Facility on March 27, 2006 and June 12, 2006). The conclusions of the Study were largely inconclusive. However, there was concern expressed that a swift reduction in the volume of fresh wastewater to the Estuary could result in loss of habitat and adverse impacts on the Tidewater Goby. In addition, the resource agencies requested that the effluent should be monitored for emerging, endocrine disrupting, and pharmaceutical chemicals in order to determine the possible impact(s) of these chemicals on the aquatic life, particularly, the Tidewater Goby.

B. Facility Description. The Discharger owns and operates the Facility. The treatment system consists of grit removal, primary sedimentation, flow equalization, roughing filters, activated sludge nitrification and denitrification¹ (NDN), tertiary filters, chlorination and dechlorination, primary sludge thickener, dissolved air flotation (DAF) secondary sludge thickener, anaerobically digested, and dewatered (using filter presses). A portion of the dewatered sludge is composted (Class B), and hauled to various users in Ventura County. The remainder of the dewatered sludge is disposed of in the Simi Valley and Chiquita Canyon Landfills. The Facility is also responsible for 375 miles of sewer mains and 12 lift stations. Treated wastewater is discharged from Discharge Point No. 001 (Outfall) to a system of Wildlife Ponds with a combined capacity of 34 million gallons providing approximately 4 days of detention, based on an average daily flow rate of 9.5 MGD and approximately 1.0 MGD of the treated wastewater percolating into groundwater from the Wildlife Ponds. This treated wastewater is then discharged to the Estuary, a water of the United States, within the Santa Clara River Watershed. Attachment B provides a map of the area surrounding the Facility. Attachment C provides a flow schematic of the Facility.

¹ For the nitrification process, there are two steps for ammonia being oxidized into nitrate.

Step 1: Ammonia → Nitrite

Step 2: Nitrite → Nitrate

For the denitrification process, nitrate is through a redox reaction and becomes nitrogen.

Nitrate → Nitrogen

The Facility currently does not have a full NDN process (full nitrification and partial denitrification). The effluent data between February 2003 and December 2006 did show the high effluent nitrate concentration (10.1 – 18.6 mg/L, average: 14.6 mg/L) and very low effluent nitrite concentration (always less than 0.4 mg/L, which is the detection limit). However, the nitrite effluent concentrations may exceed 1 mg/L of water quality objective specified in the Basin Plan based on the Best Professional Judgement, if the oxidation process of the nitrification is not complete. Therefore, a final nitrite limitation of 1 mg/L has been added to the Order No. R4-2007-XXXX and the Discharger may request to have interim nitrite effluent limitations in the future. In addition, once the full NDN is on line, the effluent nitrate concentration shall be further reduced.

The City of Ventura installed temporary facilities for improved primary clarifier performance in the First Quarter of 2003. The addition of iron salt improved removal of copper (18.0 µg/L to 26.5 µg/L), nickel (9.7 µg/L to 7.1 µg/L), and zinc (69.0 µg/L to 57.1 µg/L) since November 2005. The effluent concentration of zinc (57.1 µg/L to 18.5 µg/L) was further reduced between February 2006 and August 2006. Neither copper (reported detection limit: 6 µg/L) nor nickel (reported detection limit: 10 µg/L) was detected between February 2006 and August 2006. Permanent facilities for iron salt addition will be completed in November 2007. The final effluent concentrations of these three metals are expected to be further reduced. Due to the major upgrade on the primary clarifier in 2003, the effluent data collected after January 2003 were used to calculate the final effluent limitations for nonconventional and priority pollutants.

To date, the City has invested \$29.5 million for Upgrades and a new Influent Headworks Projects (Phase I). The Capacity Upgrades (Phase II) projected budget is currently \$22 million. Phase II, which is expected to be completed in 2009, constructs an additional secondary treatment plant capacity up to 4 MGD in order to accommodate current and future flow to the Facility.

- C. Legal Authorities.** This Order is issued pursuant to section 402 of the federal Clean Water Act (CWA) and implementing regulations adopted by the U.S. Environmental Protection Agency (USEPA) and chapter 5.5, division 7 of the California Water Code (commencing with section 13370). It shall serve as an NPDES permit for point source discharges from this facility to surface waters. This Order also serves as Waste Discharge Requirements (WDRs) pursuant to article 4, chapter 4, division 7 of the Water Code (commencing with section 13260).
- D. Background and Rationale for Requirements.** The Regional Water Board developed the requirements in this Order based on information submitted as part of the ROWD and application, through Monitoring and Reporting Programs, and other available information. The Fact Sheet (Attachment F), which contains background information and rationale for Order requirements, is hereby incorporated into this Order and constitutes part of the Findings for this Order. Attachments A through O are also incorporated into this Order.
- E. California Environmental Quality Act (CEQA).** Under Water Code section 13389, this action to adopt an NPDES permit is exempt from the provisions of CEQA, Public Resources Code sections 21100-21177.
- F. Technology-Based Effluent Limitations.** Section 301(b) of the CWA and implementing USEPA permit regulations at section 122.44, title 40 of the Code of Federal Regulations², require that permits include conditions meeting applicable technology-based requirements at a minimum, and any more stringent effluent limitations necessary to meet applicable water quality standards. The discharge authorized by this Order must meet minimum federal technology-based

² All further statutory references are to title 40 of the Code of Federal Regulations unless otherwise indicated.

requirements based on Secondary Treatment Standards at Part 133 and Best Professional Judgment (BPJ) in accordance with Part 125, section 125.3. A detailed discussion of the technology-based effluent limitations development is included in the Fact Sheet.

- G. Water Quality-Based Effluent Limitations.** Section 301(b) of the CWA and section 122.44(d) require that permits include limitations more stringent than applicable federal technology-based requirements where necessary to achieve applicable water quality standards. This Order contains requirements, expressed as a technology equivalence requirement, more stringent than secondary treatment requirements that are necessary to meet applicable water quality standards. The rationale for these requirements, which consist of tertiary treatment or equivalent requirements or other provisions, is discussed in Section IV.C.2 of the Fact Sheet.

Section 122.44(d)(1)(i) mandates that permits include effluent limitations for all pollutants that are or may be discharged at levels that have the reasonable potential to cause or contribute to an exceedance of a water quality standard, including numeric and narrative objectives within a standard. Where reasonable potential has been established for a pollutant, but there is no numeric criterion or objective for the pollutant, water quality-based effluent limitations (WQBELs) must be established using: (1) USEPA criteria guidance under CWA section 304(a), supplemented where necessary by other relevant information; (2) an indicator parameter for the pollutant of concern; or (3) a calculated numeric water quality criterion, such as a proposed state criterion or policy interpreting the state's narrative criterion, supplemented with other relevant information, as provided in section 122.44(d)(1)(vi).

- H. Water Quality Control Plans.** The Regional Water Board adopted a Water Quality Control Plan for the Los Angeles Region (hereinafter Basin Plan) on June 13, 1994 that designates beneficial uses, establishes water quality objectives, and contains implementation programs and policies to achieve those objectives for all waters addressed through the plan. In addition, the Basin Plan implements State Water Resources Control Board (State Water Board) Resolution No. 88-63, which established state policy that all waters, with certain exceptions, should be considered suitable or potentially suitable for municipal or domestic supply. Beneficial uses applicable to the Estuary are as follows:

Table 5. Basin Plan Beneficial Uses

Discharge Point	Receiving Water Name	Beneficial Use(s)
002	Santa Clara River Estuary	<u>Existing:</u> Navigation (NAV), water contact recreation (REC-1), non-contact water recreation (REC-2), commercial and sport fishing (COMM), estuarine habitat (EST), marine habitat (MAR), wildlife habitat (WILD), rare, threatened, or endangered species (RARE), migration of aquatic organisms (MIGR), spawning, reproduction, and/or early development (SPWN), and wet land (WET).
	Pacific Ocean, Nearshore ³	<u>Existing:</u> Industrial service supply (IND), navigation (NAV), water contact recreation (REC-1), non-contact water recreation (REC-2), commercial and sport fishing (COMM), marine habitat (MAR), wildlife habitat (WILD), Preservation of Biological Habitats (BIOL), rare, threatened, or endangered species (RARE), migration of aquatic organisms (MIGR), spawning, reproduction, and/or early development (SPWN), and shellfish harvesting (SHELL).

Requirements of this Order specifically implement the Basin Plan.

The 1994 Basin Plan provided water quality objectives for ammonia to protect aquatic life, in Tables 3-1 through Tables 3-4. However, those ammonia objectives were revised, based upon freshwater and saltwater criteria.

1. **Freshwater Ammonia Water Objective** – On April 25, 2002, the Regional Water Board adopted the Resolution No. 2002-011, *Amendment to the Water Quality Control Plan for the Los Angeles Region to Update the Ammonia Objectives for Inland Surface Waters (Including Enclosed Bays, Estuaries and Wetlands) with Beneficial Use Designations for Protection of Aquatic Life*. The ammonia Basin Plan amendment was approved by the State Water Board, the Office of Administrative Law, and USEPA on April 30, 2003, June 5, 2003, and June 19, 2003, respectively. Although the revised ammonia water quality objectives may be less stringent than those contained in the 1994 Basin Plan, they are still protective of aquatic life and are consistent with USEPA’s 1999 ammonia criteria update.
2. **Saltwater Ammonia Water Objective** – On March 4, 2004, the Regional Water Board adopted the Resolution No. 2004-022, *Amendment to the Water Quality Control Plan for the Los Angeles Region to Update the Ammonia Objectives for Inland Surface Waters Not Charatistic of Freshwater (Including Enclosed Bays, Estuaries and Wetlands) with Beneficial Use Designations for Protection of Aquatic Life*. The ammonia Basin Plan amendment is consistent with the U.S. EPA "Ambient Water Quality Criteria for Ammonia (Saltwater)-

³ Nearshore is defined as the zone bounded by the shoreline and a line 1,000 feet from the shoreline or the 30-foot depth contours, whichever is further from the shoreline.

1989." The amendment revised the regulatory provisions of the Basin Plan by adding language to Chapter 3 "Water Quality Objectives."

For inland surface waters not characteristic of freshwater (including enclosed bays, estuaries, and wetlands), the proposed objectives are a 4-day average concentration of unionized ammonia of 0.035 mg/L, and a one-hour average concentration of unionized ammonia of 0.233 mg/L. The proposed objectives are fixed concentrations of unionized ammonia, independent of pH, temperature, or salinity. The proposed amendment includes an implementation procedure to convert un-ionized ammonia objectives to total ammonia effluent limits. The proposed amendment also simplifies the implementation procedures for translating ammonia objectives into effluent limits in situations where a mixing zone has been authorized by the Regional Water Board. Finally, the proposed amendment revises the implementation procedure for determining saltwater, brackish or freshwater conditions, to be consistent with the proposed objectives. The proposed objectives will apply only to inland surface waters not characteristic of freshwater (including enclosed bays, estuaries and wetlands) and do not impact the Ammonia Water Quality Objectives for ocean waters contained in the California Ocean Plan.

If salinity sampled at a particular receiving water station indicates brackish conditions, then the more stringent of the freshwater or saltwater objectives shall apply except where the Regional Water Board, by adoption of a resolution, approves the use of either freshwater or saltwater objectives per Implementation Provision 1(3)(a). **However, based on the beneficial uses of the Basin Plan, the freshwater ammonia water objective is not applicable in the Santa Clara River Estuary. Therefore, the saltwater ammonia water objectives will be used to calculate the final ammonia effluent limitations for the Facility (See Section IV.C.2.i.(iii)(iv) in the accompanying Attachment F, and Attachment M).**

The saltwater ammonia Basin Plan amendment was approved by the State Water Board, the Office of Administrative Law, and USEPA on July 22, 2004, September 14, 2004, and May 19, 2005, respectively.

The State Water Board adopted the *Water Quality Control Plan for Control of Temperature in the Coastal and Interstate Water and Enclosed Bays and Estuaries of California* (Thermal Plan) on May 18, 1972, and amended this plan on September 18, 1975. This plan contains temperature objectives for surface waters. Requirements of this Order implement the Thermal Plan.

The 2006 303(d) listings for the Estuary are Chem A based on an unknown source and coliform bacteria and toxaphene based on nonpoint sources. The Total Daily Maximum Loads (TMDLs) for these pollutants in the Estuary have not been established.

- I. **National Toxics Rule (NTR) and California Toxics Rule (CTR).** USEPA adopted the NTR on December 22, 1992, and later amended it on May 4, 1995 and November 9, 1999. About forty criteria in the NTR applied in California. On May 18,

2000, USEPA adopted the CTR. The CTR promulgated new toxics criteria for California and, in addition, incorporated the previously adopted NTR criteria that were applicable in the state. The CTR was amended on February 13, 2001. These rules contain water quality criteria for priority pollutants.

- J. State Implementation Policy.** On March 2, 2000, the State Water Board adopted the *Policy for Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays, and Estuaries of California* (State Implementation Policy or SIP). The SIP became effective on April 28, 2000 with respect to the priority pollutant criteria promulgated for California by the USEPA through the NTR and to the priority pollutant objectives established by the Regional Water Board in the Basin Plan. The SIP became effective on May 18, 2000 with respect to the priority pollutant criteria promulgated by the USEPA through the CTR. The State Water Board adopted amendments to the SIP on February 24, 2005 that became effective on July 13, 2005. The SIP establishes implementation provisions for priority pollutant criteria and objectives and provisions for chronic toxicity control. Requirements of this Order implement the SIP.
- K. Compliance Schedules and Interim Requirements.** Section 2.1 of the SIP provides that, based on a Discharger's request and demonstration that it is infeasible for an existing Discharger to achieve immediate compliance with an effluent limitation derived from a CTR criterion, compliance schedules may be allowed in an NPDES permit. Unless an exception has been granted under section 5.3 of the SIP, a compliance schedule may not exceed 5 years from the date that the permit is issued or reissued, nor may it extend beyond 10 years from the effective date of the SIP (or May 18, 2010) to establish and comply with CTR criterion-based effluent limitations. Where a compliance schedule for a final effluent limitation exceeds 1 year, the Order must include interim numeric limitations for that constituent or parameter. Where allowed by the Basin Plan, compliance schedules and interim effluent limitations or discharge specifications may also be granted to allow time to implement a new or revised water quality objective. This Order does include compliance schedules and interim effluent limitations. A detailed discussion of the basis for the compliance schedule(s) and interim effluent limitation(s) is included in the Fact Sheet.
- L. Alaska Rule.** On March 30, 2000, USEPA revised its regulation that specifies when new and revised state and tribal water quality standards (WQS) become effective for CWA purposes. (40 C.F.R. § 131.21; 65 Fed. Reg. 24641 (April 27, 2000).) Under the revised regulation (also known as the Alaska rule), new and revised standards submitted to USEPA after May 30, 2000, must be approved by USEPA before being used for CWA purposes. The final rule also provides that standards already in effect and submitted to USEPA by May 30, 2000 may be used for CWA purposes, whether or not approved by USEPA.
- M. Stringency of Requirements for Individual Pollutants.** This Order contains both technology-based and water quality-based effluent limitations for individual pollutants. The technology-based effluent limitations consist of restrictions on

Biochemical Oxygen Demand (BOD₅), Total Suspended Solids (TSS), and pH. Restrictions on BOD₅, TSS, and pH are discussed in the Fact Sheet. This Order's technology-based pollutant restrictions implement the minimum, applicable federal technology-based requirements.

This Order contains pollutant restrictions that are more stringent than applicable federal requirements and standards. Specifically, this Order includes effluent limitations for BOD and TSS that are more stringent than applicable federal standards, but that are nonetheless necessary to meet numeric objectives or protect beneficial uses. The rationale for including these limitations is explained in Section IV.B. of the Fact Sheet.

Water quality-based effluent limitations have been scientifically derived to implement water quality objectives that protect beneficial uses. Both the beneficial uses and the water quality objectives have been approved pursuant to federal law and are the applicable federal water quality standards. To the extent that toxic pollutant water quality-based effluent limitations were derived from the CTR, the CTR is the applicable standard pursuant to section 131.38. The scientific procedures for calculating the individual water quality-based effluent limitations for priority pollutants are based on the CTR-SIP, which was approved by USEPA on May 18, 2000. All beneficial uses and water quality objectives contained in the Basin Plan were approved under state law and submitted to and approved by USEPA prior to May 30, 2000. Any water quality objectives and beneficial uses submitted to USEPA prior to May 30, 2000, but not approved by USEPA before that date, are nonetheless "applicable water quality standards for purposes of the CWA" pursuant to section 131.21(c)(1).

- N. Antidegradation Policy.** Section 131.12 requires that the state water quality standards include an antidegradation policy consistent with the federal policy. The State Water Board established California's antidegradation policy in State Water Board Resolution No. 68-16. Resolution No. 68-16 incorporates the federal antidegradation policy where the federal policy applies under federal law. Resolution No. 68-16 requires that existing quality of waters be maintained unless degradation is justified based on specific findings. The Regional Water Board's Basin Plan implements, and incorporates by reference, both the state and federal antidegradation policies. As discussed in detail in the Fact Sheet the permitted discharge is consistent with the antidegradation provision of section 131.12 and State Water Board Resolution No. 68-16.
- O. Anti-Backsliding Requirements.** Sections 402(o)(2) and 303(d)(4) of the CWA and federal regulations at title 40, Code of Federal Regulations section 122.44(l) prohibit backsliding in NPDES permits. These anti-backsliding provisions require effluent limitations in a reissued permit to be as stringent as those in the previous permit, with some exceptions where limitations may be relaxed. Some effluent limitations in this Order are less stringent than those in the previous Order. As discussed in detail in the Fact Sheet this relaxation of effluent limitations is consistent with the anti-backsliding requirements of the CWA and federal

regulations.

- P. Endangered Species Act.** This Order does not authorize any act that results in the taking of a threatened or endangered species or any act that is now prohibited, or becomes prohibited in the future, under either the California Endangered Species Act (Fish and Game Code sections 2050 to 2097) or the Federal Endangered Species Act (16 U.S.C.A. sections 1531 to 1544). This Order requires compliance with effluent limits, receiving water limits, and other requirements to protect the beneficial uses of waters of the state. The discharger is responsible for meeting all requirements of the applicable Endangered Species Act.
- Q. Monitoring and Reporting.** Section 122.48 requires that all NPDES permits specify requirements for recording and reporting monitoring results. Water Code sections 13267 and 13383 authorizes the Regional Water Board to require technical and monitoring reports. The Monitoring and Reporting Program establishes monitoring and reporting requirements to implement federal and State requirements. This Monitoring and Reporting Program (MRP) is provided in Attachment E.
- Time Schedule Order (TSO) No. R4-2006-0093 adopted on December 14, 2006 requested the Discharger to monitor the possible impacts of incrementally decreasing discharge on the ecosystem of the Estuary. This TSO will expire on December 31, 2007. However, these special studies required by the TSO will take years to complete. Therefore, this Order requires monitoring as specified in the TSO, which will be used to determine the possible impacts to the Estuary as a result of incrementally decreasing the discharge volume of wastewater to the Estuary. The detailed monitoring requirements are contained in the accompanying MRP.
- R. Standard and Special Provisions.** Standard Provisions, which apply to all NPDES permits in accordance with section 122.41, and additional conditions applicable to specified categories of permits in accordance with section 122.42, are provided in Attachment D. The discharger must comply with all standard provisions and with those additional conditions that are applicable under section 122.42. The Regional Water Board has also included in this Order special provisions applicable to the Discharger. A rationale for the special provisions contained in this Order is provided in the attached Fact Sheet.
- S. Provisions and Requirements Implementing State Law.** The provisions/requirements in subsections IV.B, IV.C, V.B, and VI.C of this Order are included to implement state law only. These provisions/requirements are not required or authorized under the federal CWA; consequently, violations of these provisions/requirements are not subject to the enforcement remedies that are available for NPDES violations.
- T. Notification of Interested Parties.** The Regional Water Board has notified the Discharger and interested agencies and persons of its intent to prescribe Waste Discharge Requirements for the discharge and has provided them with an

opportunity to submit their written comments and recommendations. Details of notification are provided in the Fact Sheet of this Order.

- U. Consideration of Public Comment.** The Regional Water Board, in a public meeting, heard and considered all comments pertaining to the discharge. Details of the Public Hearing are provided in the Fact Sheet of this Order.

III. DISCHARGE PROHIBITIONS

- A. Pursuant to Chapter I, Part A of the Enclosed Bays and Estuaries Policy, the discharge of treated wastewater to the Estuary is prohibited after December 31, 2018, unless there has been a determination from responsible resource agencies that sustenance flow is required to support endangered species habitat.
- B. The discharge to the Estuary must be removed as early as practicable, and to facilitate this, it is required that an incremental decrease of 1 mgd occurs per year, beginning in 2008.
- C. Discharge of wastewater at a location different from that described in this Order is prohibited.
- D. The bypass or overflow of untreated wastewater or wastes to surface waters or surface water drainage courses is prohibited, except as allowed in Standard Provision I.G. of Attachment D, Standard Provisions.
- E. The maximum daily flow of influent from the collection system to the headworks of the Reclamation Facility shall not exceed the design capacity of 14 MGD.
- F. The Discharger shall not cause degradation of any water supply.
- G. The treatment or disposal of wastes from the facility shall not cause pollution or nuisance as defined in section 13050, subdivision (l) and (m) of the CWC.
- H. The discharge of any substances in concentrations toxic to animal or plant is prohibited.
- I. The discharge of any radiological, chemical, or biological warfare agent or high level radiological waste is prohibited.

IV. EFFLUENT LIMITATIONS AND DISCHARGE SPECIFICATIONS

A. Effluent Limitations

1. Final Effluent Limitations – Effluent Transfer Station

- a. The Discharger shall maintain compliance with the following effluent limitations with compliance measured at the Effluent Transfer Station as described in the attached MRP:

Table 6. Effluent Limitations

Parameter	Units	Effluent Limitations				
		Average Monthly	Average Weekly	Maximum Daily	Instantaneous Minimum	Instantaneous Maximum
BOD ₅ 20°C	mg/L	20	30	45	--	--
	lbs/day	2,300	3,500	5,300	--	--
Total Suspended Solids (TSS)	mg/L	15	40	45	--	--

	lbs/day	0.69	--	1.4	--	--

- b. **Percent Removal:** The average monthly removal of BOD 5-day 20°C and total suspended solids shall not be less than 85 percent.
- c. The temperature of wastes discharged shall not exceed 86°F.
- d. Radionuclides shall not be present in concentrations that are deleterious to human, plant, animal, or aquatic life or that result in accumulation of radionuclides in the food web to an extent that presents a hazard to human, plant, animal, or aquatic life.
- e. The wastes discharged to water courses shall at all times be adequately disinfected. For the purpose of this requirement, the wastes shall be considered adequately disinfected if the median number of coliform organisms at some point in the treatment process does not exceed 2.2 per 100 milliliters, and the number of coliform organisms does not exceed 23 per 100 milliliters in more than one sample within any 30-day period. The median value shall be determined from the bacteriological results of the last seven (7) days for which an analysis has been completed. Samples shall be collected at a time when wastewater flow and characteristics are most demanding on treatment facilities and disinfection processes.
- f. For the protection of the water contact recreation beneficial use, the wastes discharged to water courses shall have received adequate treatment, so that the turbidity of the wastewater does not exceed any of the following: (a) an average of 2 Nephelometric turbidity units (NTUs)

within a 24-hour period; (b) 5 NTUs more than 5 percent of the time (72 minutes) within a 24-hour period; and (c) 10 NTU at any time.

g. To protect the underlying ground water basins, pollutants shall not be present in the wastes discharged at concentrations that pose a threat to ground water quality.

h. Acute Toxicity Limitation:

i. The acute toxicity of the effluent shall be such that:

(i). the average survival in the undiluted effluent for any three (3) consecutive 96-hour static or continuous flow bioassay tests shall be at least 90%, and,

(ii). no single test producing less than 70% survival.

ii. If either of the above requirements IV.A.1.h.i.(i) or IV.A.1.h.i.(ii) is not met, the Discharger shall conduct six additional tests, approximately every two weeks, over a 12-week period. The Discharger shall ensure that results of a failing acute toxicity test are received by the Discharger within 24 hours of completion of the test and the additional tests shall begin within 5 business days of receipt of the result. If the additional tests indicate compliance with acute toxicity limitation, the Discharger may resume regular testing. However, if the results of any two of the six accelerated tests are less than 90% survival, then the Discharger shall begin a Toxicity Identification Evaluation (TIE). The TIE shall include all reasonable steps to identify the sources of toxicity. Once the sources are identified, the Discharger shall take all reasonable steps to reduce toxicity to meet the objective.

iii. If the initial test and any of the additional six acute toxicity bioassay tests results are less than 70% survival, the Discharger shall immediately implement Initial Investigation Toxicity Reduction Evaluation (TIE) Workplan.

iv. The Discharger shall conduct acute toxicity monitoring as specified in Attachment E - Monitoring and Reporting Program (MRP).

i. Chronic Toxicity Trigger and Requirements:

i. The chronic toxicity of the effluent shall be expressed and reported in toxic units, where:

$$TU_c = \frac{100}{NOEC}$$

The No Observable Effect Concentration (NOEC) is expressed as the maximum percent effluent concentration that causes no observable effect on test organisms, as determined by the results of a critical life stage toxicity test.

- ii. There shall be no chronic toxicity in the effluent discharge.
- iii. If the chronic toxicity of the effluent exceeds the monthly trigger median of 1.0 TU_c, the Discharger shall immediately implement accelerated chronic toxicity testing according to Attachment E - MRP, Section V.B.3. If any three out of the initial test and the six accelerated tests results exceed 1.0 TU_c, the Discharger shall initiate a TIE and implement the Initial Investigation TRE Workplan, as specified in Attachment E – MRP, Section V.D.
- iv. The Discharger shall conduct chronic toxicity monitoring as specified in Attachment E – MRP.

2. Interim Effluent Limitations

- a. During the period from September 1, 2007 to August 31, 2010, the Discharger shall maintain compliance with the following interim limitations at Discharge Point 001, with compliance measured at the Monitoring Location of Effluent Transfer Station as described in the attached MRP. These interim effluent limitations shall apply in lieu of the corresponding final effluent limitations specified for the same parameters during the time period indicated in this provision.

Table 7. Interim Effluent Limitations

Parameter	Units	Effluent Limitations			
		Average Monthly	Maximum Daily	Instantaneous Minimum	Instantaneous Maximum
Copper	µg/L	--	17	--	--
	lbs/day	--	2.0	--	--
Mercury	µg/L	0.43	0.69	--	--
	lbs/day	0.050	0.081	--	--
Silver	µg/L	5.1	9.3	--	--
	lbs/day	0.60	1.1	--	--
Zinc	µg/L	145	183	--	--
	lbs/day	17	21	--	--
Cyanide	µg/L	--	8	--	--
	lbs/day	--	0.94	--	--
Chlorodibromomethane	µg/L	--	43.3	--	--
	lbs/day	--	5.1	--	--

Parameter	Units	Effluent Limitations			
		Average Monthly	Maximum Daily	Instantaneous Minimum	Instantaneous Maximum
Dichlorobromomethane	µg/L	--	92	--	--
	lbs/day	--	11	--	--
Bis(2-ethylhexyl)phthalate	µg/L	--	37	--	--
	lbs/day	--	4.3	--	--

- b. The interim effluent limits were based upon effluent performance data, provided by the Discharger, collected between February 2003 and December 2006, and calculated by the *Minitab* program.
- c. The Discharger shall submit quarterly progress reports (February 15, May 15, August 15, and November 15) to describe the progress of studies and/or actions undertaken to reduce copper, mercury, silver, cyanide, chlorodibromomethane, dichlorobromomethane, and bis(2-ethylhexyl)phthalate in the effluent, and to achieve compliance with the limits in this Order by the above-mentioned deadline. The first progress report shall be received at the Regional Water Board by November 15, 2007, beginning with the July to September 2007 quarter.

B. Land Discharge Specifications

Not Applicable.

C. Reclamation Specifications

The reuse of the reclaimed water is regulated under a separate Waste Discharge Requirements and Water Recycling Requirements for City of San Buenaventura, Order No. 87-45, CI No. 6190.

V. RECEIVING WATER LIMITATIONS

A. Surface Water Limitations

Receiving water limitations are based on water quality objectives contained in the Basin Plan and are a required part of this Order. The discharge shall not cause the following in the Estuary:

1. For waters designated with a warm freshwater habitat (WARM) beneficial use, the temperature of the receiving water at any time or place and within any given 24-hour period shall not be altered by more than 5⁰F above the natural temperature (or above 70⁰F if the ambient receiving water temperature is less than 60⁰F) due to the discharge of effluent at the receiving water station located downstream of the discharge. Natural conditions shall be determined on a case-by-case basis.
2. The pH of inland surface waters shall not be depressed below 6.5 or raised above 8.5 as a result of wastes discharged. Ambient pH levels shall not be changed more than 0.5 units from natural conditions as a result of wastes discharged. Natural conditions shall be determined on a case-by-case basis.
3. The dissolved oxygen in the receiving water shall not be depressed below 5 mg/L as a result of the wastes discharged.
4. The fecal coliform concentration in the receiving water shall not exceed the following, as a result of wastes discharged:
 - a. Geometric Mean Limits
 - i. E.coli density shall not exceed 126/100 mL.
 - ii. Fecal coliform density shall not exceed 200/100 mL.
 - b. Single Sample Limits
 - i. E.coli density shall not exceed 235/100 mL.
 - ii. Fecal coliform density shall not exceed 400/100 mL.
5. Waters shall be free of changes in turbidity that cause nuisance or adversely affect beneficial uses. Increases in natural turbidity attributable to controllable water quality factors shall not exceed the following limits, as a result of wastes discharged:
 - a. Where natural turbidity is between 0 and 50 NTU, increases shall not exceed 20%; and,

- b. Where natural turbidity is greater than 50 NTU, increases shall not exceed 10%.
6. The wastes discharged shall not produce concentrations of toxic substances in the receiving water that are toxic to or cause detrimental physiological responses in human, animal, or aquatic life.
7. The wastes discharged shall not cause concentrations of contaminants to occur at levels that are harmful to human health in waters which are existing or potential sources of drinking water.
8. The concentrations of toxic pollutants in the water column, sediments, or biota shall not adversely affect beneficial uses as a result of the wastes discharged.
9. The wastes discharged shall not contain substances that result in increases in BOD, which adversely affect the beneficial uses of the receiving waters.
10. Waters shall not contain biostimulatory substances in concentrations that promote aquatic growth to the extent that such growth causes nuisance or adversely affects beneficial uses.
11. The wastes discharged shall not cause the receiving waters to contain any substance in concentrations that adversely affect any designated beneficial use.
12. The wastes discharged shall not alter the natural taste, odor, and color of fish, shellfish, or other surface water resources used for human consumption.
13. The wastes discharged shall not result in problems due to breeding of mosquitoes, gnats, black flies, midges, or other pests.
14. The wastes discharged shall not result in visible floating particulates, foams, and oil and grease in the receiving waters.
15. The wastes discharged shall not alter the color of the receiving waters; create a visual contrast with the natural appearance of the water; nor cause aesthetically undesirable discoloration of the receiving waters.
16. The wastes discharged shall not contain any individual pesticide or combination of pesticides in concentrations that adversely affect beneficial uses of the receiving waters. There shall be no increase in pesticide concentrations found in bottom sediments or aquatic life as a result of the wastes discharged.
17. Acute Toxicity Receiving Water Quality Objective
 - a. There shall be no acute toxicity in ambient waters as a result of wastes discharged.

- b. Receiving water and effluent toxicity testing shall be performed on the same day as close to concurrently as possible.
- c. The acute toxicity of the receiving water, at the Stations R-005 and R-003 located upstream and downstream, respectively, of the discharge, shall be such that: (i) the average survival in the undiluted receiving water for any three (3) consecutive 96-hour static, static-renewal, or continuous flow bioassay tests shall be at least 90%, and (ii) no single test producing less than 70% survival. Static-renewal bioassay tests may be used, as allowed by the most current USEPA test method for measuring acute toxicity.
- d. If the upstream acute toxicity of the receiving water is greater than the downstream acute toxicity but the effluent acute toxicity is in compliance, the acute toxicity accelerated monitoring in the receiving water specified in MRP Section V.A.2.d does not apply.

18. Chronic Toxicity Receiving Water Quality Objective

- a. There shall be no chronic toxicity in ambient waters as a result of wastes discharged.
- b. Receiving water and effluent toxicity testing shall be performed on the same day as close to concurrently as possible.
- c. If the chronic toxicity in the receiving water at the monitoring station(s) immediately downstream of the discharge, exceeds the monthly median of 1.0 TU_c trigger in a critical life stage test and the toxicity cannot be attributed to upstream toxicity, as assessed by the Discharger, then the Discharger shall immediately implement an accelerated chronic toxicity testing according to Monitoring and Reporting Program CI 1822, section V.B.3. If two of the six tests exceed a monthly median of 1.0 TU_c trigger, the Discharger shall initiate a TIE and implement the Initial Investigation TRE Workplan.
- d. If the chronic toxicity of the receiving water upstream of the discharge is greater than the downstream and the TU_c of the effluent chronic toxicity test is less than or equal to a monthly median of 1 TU_c trigger, then accelerated monitoring need not be implemented.

B. Groundwater Limitations

The discharge shall not cause the underlying groundwater to be degraded, to exceed water quality objectives, unreasonably affect beneficial uses, or cause a condition of pollution or nuisance.

VI. PROVISIONS

A. Standard Provisions

1. The Discharger shall comply with all Standard Provisions included in Attachment D of this Order.
2. The Discharger shall comply with the Regional Water Board-specific Standard Provisions as follows:
 - a. Neither the treatment nor the discharge of pollutants shall create a pollution, contamination, or nuisance as defined by Section 13050 of the California Water Code.
 - b. Odors, vectors, and other nuisances of sewage or sludge origin beyond the limits of the treatment plant site or the sewage collection system due to improper operation of facilities, as determined by the Regional Water Board, are prohibited.
 - c. All facilities used for collection, transport, treatment, or disposal of "wastes" shall be adequately protected against damage resulting from overflow, washout, or inundation from a storm or flood having a recurrence interval of once in 100 years.
 - d. Collection, treatment, and disposal systems shall be operated in a manner that precludes public contact with wastewater.
 - e. Collected screenings, sludges, and other solids removed from liquid wastes shall be disposed of in a manner approved by the Executive Officer of the Regional Water Board.
 - f. The provisions of this order are severable. If any provision of this order is found invalid, the remainder of this Order shall not be affected.
 - g. Nothing in this permit shall be construed to preclude the institution of any legal action or relieve the discharger from any responsibilities, liabilities or penalties established pursuant to any applicable State law or regulation under authority preserved by Section 510 of the CWA.
 - h. Nothing in this permit shall be construed to preclude the institution of any legal action or relieve the discharger from any responsibilities, liabilities or penalties to which the discharger is or may be subject to under Section 311 of the CWA.
 - i. The Discharger must comply with the lawful requirements of municipalities, counties, drainage districts, and other local agencies regarding discharges of storm water to storm drain systems or other water

- courses under their jurisdiction; including applicable requirements in municipal storm water management program developed to comply with NPDES permits issued by the Regional Water Board to local agencies.
- j. Discharge of wastes to any point other than specifically described in this Order is prohibited, and constitutes a violation thereof.
 - k. The Discharger shall comply with all applicable effluent limitations, national standards of performance, toxic effluent standards, and all federal regulations established pursuant to Sections 301, 302, 303(d), 304, 306, 307, 316, 403, and 405 of the Federal CWA and amendments thereto.
 - l. These requirements do not exempt the operator of the waste disposal facility from compliance with any other laws, regulations, or ordinances which may be applicable; they do not legalize this waste disposal facility, and they leave unaffected any further restraints on the disposal of wastes at this site which may be contained in other statutes or required by other agencies.
 - m. Oil or oily material, chemicals, refuse, or other pollutionable materials shall not be stored or deposited in areas where they may be picked up by rainfall and carried off of the property and/or discharged to surface waters. Any such spill of such materials shall be contained and removed immediately.
 - n. A copy of these waste discharge specifications shall be maintained at the discharge facility so as to be available at all times to operating personnel.
 - o. If there is any storage of hazardous or toxic materials or hydrocarbons at this facility and if the facility is not manned at all times, a 24-hour emergency response telephone number shall be prominently posted where it can easily be read from the outside.
 - p. The Discharger shall file with the Regional Water Board a Report of Waste Discharge at least 120 days before making any material change or proposed change in the character, location or volume of the discharge.
 - q. In the event of any change in name, ownership, or control of these waste disposal facilities, the discharger shall notify the Regional Water Board of such change and shall notify the succeeding owner or operator of the existence of this Order by letter, copy of which shall be forwarded to the Regional Water Board.
 - r. The CWC provides that any person who violates a waste discharge requirement or a provision of the CWC is subject to civil penalties of up to \$5,000 per day, \$10,000 per day, or \$25,000 per day of violation, or when the violation involves the discharge of pollutants, is subject to civil

penalties of up to \$10 per gallon per day or \$25 per gallon per day of violation; or some combination thereof, depending on the violation, or upon the combination of violations. Violation of any of the provisions of the NPDES program or of any of the provisions of this Order may subject the violator to any of the penalties described herein, or any combination thereof, at the discretion of the prosecuting authority; except that only one kind of penalty may be applied for each kind of violation.

- s. Under CWC 13387, any person who knowingly makes any false statement, representation, or certification in any record or other document submitted or required to be maintained under this order, including monitoring reports or reports of compliance or noncompliance, or who knowingly falsifies, tampers with, or renders inaccurate any monitoring device or method required to be maintained in this order and is subject to a fine of not more than \$25,000 or imprisonment of not more than two years, or both. For a second conviction, such a person shall be punished by a fine of not more than \$25,000 per day of violation, or by imprisonment of not more than four years, or by both.
- t. The discharge of any waste resulting from the combustion of toxic or hazardous wastes to any waste stream that ultimately discharges to waters of the United States is prohibited, unless specifically authorized elsewhere in this permit.
- u. The Discharger shall notify the Executive Officer in writing no later than 6 months prior to planned discharge of any chemical, other than the products previously reported to the Executive Officer, which may be toxic to aquatic life. Such notification shall include:
 - i. Name and general composition of the chemical;
 - ii. Frequency of use;
 - iii. Quantities to be used;
 - iv. Proposed discharge concentrations; and,
 - v. USEPA registration number, if applicable.
- v. In the event the Discharger does not comply or will be unable to comply for any reason, with any prohibition, maximum daily effluent limitation, or receiving water limitation of this Order, the Discharger shall notify David Hung at the Regional Water Board by telephone (213) 576-6664 within 24 hours of having knowledge of such noncompliance, and shall confirm this notification in writing within five days, unless the Regional Water Board waives confirmation. The written notification shall state the nature, time, duration, and cause of noncompliance, and shall describe the measures

being taken to remedy the current noncompliance and, prevent recurrence including, where applicable, a schedule of implementation. Other noncompliance requires written notification as above at the time of the normal monitoring report.

B. Monitoring and Reporting Program (MRP) Requirements

The Discharger shall comply with the MRP, and future revisions thereto, in Attachment E of this Order.

C. Special Provisions

1. Reopener Provisions

- a. This Order may be modified, revoked and reissued, or terminated for cause, including, but not limited to:
 - i. Violation of any term or condition contained in this Order;
 - ii. Obtaining this Order by misrepresentation, or by failure to disclose fully all relevant facts; and,
 - iii. A change in any condition that requires either a temporary or permanent reduction or elimination of the authorized discharge.

The filing of a request by the Discharger for an Order modification, revocation, and issuance or termination, or a notification of planned changes or anticipated noncompliances does not stay any condition of this Order.

- b. This Order may be reopened for modification, or revocation and reissuance, as a result of the detection of a reportable priority pollutant generated by special conditions included in this Order. These special conditions may be, but are not limited to, fish tissue sampling, whole effluent toxicity, monitoring requirements on internal waste stream(s), and monitoring for surrogate parameters. Additional requirements may be included in this Order as a result of the special condition monitoring data.
- c. This Order may be modified, in accordance with the provisions set forth in 40 CFR, Parts 122 and 124 to include requirements for the implementation of the watershed protection management approach.
- d. The Board may modify, or revoke and reissue this Order if present or future investigations demonstrate that the discharge(s) governed by this Order will cause, have the potential to cause, or will contribute to adverse impacts on water quality and/or beneficial uses of the receiving waters.

- e. This Order may also be modified, revoked, and reissued or terminated in accordance with the provisions of 40 CFR, Parts 122.44, 122.62 to 122.64, 125.62, and 125.64. Causes for taking such actions include, but are not limited to, failure to comply with any condition of this Order, endangerment to human health or the environment resulting from the permitted activity, or acquisition of newly obtained information which would have justified the application of different conditions if known at the time of Order adoption. The filing of a request by the District for an Order modification, revocation and issuance or termination, or a notification of planned changes or anticipated noncompliance does not stay any condition of this Order.
- f. This Order may be modified, in accordance with the provisions set forth in 40 CFR, Parts 122 to 124, to include new MLs.
- g. This Order may be reopened and modified, to revise effluent limitations as a result of future Basin Plan Amendments, such as an update of a water quality objective, or the adoption of a TMDL for the Santa Clara River Estuary.
- h. This Order may be reopened and modified, to revise effluent limitations as a result of the delisting of a pollutant from the 303(d) list.
- i. This Order may be reopened and modified to revise the chronic toxicity effluent limitation, to the extent necessary, to be consistent with State Board precedential decisions, new policies, new laws, or new regulations.
- j. This Order may be reopened to modify final effluent limits, if at the conclusion of necessary studies conducted by the Discharger, the Regional Water Board determines that dilution credits, attenuation factors, water effects ratio, or metal translators are warranted.
- k. This Order may be reopened to include a provision for sustenance flow if the responsible resource agencies direct so. If future studies demonstrate that the discharge enhances the Estuary, this Order will be reopened.

2. Special Studies, Technical Reports and Additional Monitoring Requirements

a. Special Studies

- i. There were several special studies, which have been conducted since 2001. These studies were all associated with the influences of the discharge on the Estuary and included the *Salinity Study*, *Residence Species Study*, *Metal Translator Study*, and *Updated Enhancement Study*. The results were highly inconclusive on whether the discharge is beneficial to the Estuary, or if there was enhancement.
- ii. In order to detect any negative impacts from reduced maintenance flows to the Santa Clara Estuary, the Discharger has been required to provide a Work Plan (required by TSO No. R4-2006-0093), which will be used to determine the minimum sustenance flow in the Estuary needed, if any, to protect the habitat of endangered species in the Estuary. The monitoring aspects of this Work Plan should cover the following:
 - (a). The level of impact on the tidewater goby's population as a result of an incremental decrease in the discharge from the Facility of 1 mgd per year;
 - (b). The population and number trends from the "Fish Survey";
 - (c). The influences of groundwater on the Estuary; and,
 - (d). Evaluations of different discharge volume scenarios, which may affect breaching frequency, groundwater influence, and water quality.

The monitoring frequency is based on that proposed in the Discharger's Work Plan. The results shall be reported with the regular annual reports.

b. Toxicity Reduction Requirements

The Discharger shall prepare and submit a copy of the Discharger's initial investigation Toxicity Reduction Evaluation (TRE) workplan to the Executive Officer of the Regional Water Board for approval within 90 days of the effective date of this permit. If the Executive Officer does not disapprove the workplan within 60 days from the date in which it was received, the workplan shall become effective. The Discharger shall use USEPA manual EPA/833B-99/002 (municipal) as guidance, or most current version. At a minimum, the initial investigation TRE workplan must

contain the provisions in Attachment E. This workplan shall describe the steps the Discharger intends to follow if toxicity is detected, and should include, at a minimum:

- i. A description of the investigation and evaluation techniques that will be used to identify potential causes and sources of toxicity, effluent variability, and treatment system efficiency.
- ii. A description of the facility's methods of maximizing in-house treatment efficiency and good housekeeping practices, and a list of all chemicals used in the operation of the facility; and,
- iii. If a toxicity identification evaluation (TIE) is necessary, an indication of the person who would conduct the TIEs (i.e., an in-house expert or an outside contractor).

If the effluent toxicity test result exceeds the limitation, then the Discharger shall immediately implement accelerated toxicity testing that consists of six additional tests, approximately every two weeks, over a 12-week period. Effluent sampling for the first test of the six additional tests shall commence within 3 days of receipt of the test results exceeding the toxicity limitation.

If the results of any two of the six tests (any two tests in a 12-week period) exceed the limitation, the Discharger shall initiate a Toxicity Reduction Evaluation (TRE).

If results of the implementation of the facility's initial investigation TRE workplan (as described above) indicate the need to continue the TRE/TIE, the Discharger shall expeditiously develop a more detailed TRE workplan for submittal to the Executive Officer within 15 days of completion of the initial investigation TRE.

Detailed toxicity testing and reporting requirements are contained in Section V of the MRP, (Attachment E).

c. Treatment Plant Capacity

The Discharger shall submit a written report to the Executive Officer of the Regional Water Board within 90 days after the "30-day (monthly) average" daily dry-weather flow equals or exceeds 75 percent of the design capacity of waste treatment and/or disposal facilities. The Discharger's senior administrative officer shall sign a letter, which transmits that report and certifies that the discharger's policy-making body is adequately informed of the report's contents. The report shall include the following:

- i. The average daily flow for the month, the date on which the peak flow occurred, the rate of that peak flow, and the total flow for the day;
- ii. The best estimate of when the monthly average daily dry-weather flow rate will equal or exceed the design capacity of the facilities; and,
- iii. A schedule for studies, design, and other steps needed to provide additional capacity for waste treatment and/or disposal facilities before the waste flow rate equals the capacity of present units.

This requirement is applicable to those facilities which have not reached 75 percent of capacity as of the effective date of this Order. For those facilities that have reached 75 percent of capacity by that date but for which no such report has been previously submitted, such report shall be filed within 90 days of the issuance of this Order.

3. Best Management Practices and Pollution Prevention

a. Storm Water Pollution Prevention Plan (SWPPP)

Within 90 days of the effective date of this Order the Discharger shall submit an updated SWPPP that describes site-specific management practices for minimizing contamination of storm water runoff and for preventing contaminated storm water runoff from being discharged directly to waters of the State to the Regional Water Board. The SWPPP shall be developed in accordance with the requirements in *Storm Water Pollution Prevention Plan Requirements (Attachment H)*. If all storm water is captured and treated on-site and no storm water is discharged or allowed to run off-site from the Facility, the Discharge shall provide certification with descriptions of on-site storm water management to the Regional Water Board.

b. Spill Contingency Plan (SCP)

Within ninety days, the Discharger is required to submit an interim Spill Clean-up Contingency Plan, which describes the activities and protocols, to address clean-up of spills, overflows, and bypasses of untreated or partially treated wastewater from the Discharger's collection system or treatment facilities, that reach water bodies, including dry channels and beach sands. At a minimum, the interim Plan shall include sections on spill clean-up and containment measures, public notification, and monitoring. The Discharger shall review and amend the Plan as appropriate after each spill from the facility or in the service area of the facility. The Discharger shall include a discussion in the annual summary report of any modifications to the Plan and the application of the Plan to all spills during the year.

c. Pollutant Minimization Program

Reporting protocols in the Monitoring and Reporting Program, Attachment E, Section X.B.4 describe sample results that are to be reported as Detected but Not Quantified (DNQ) or Not Detected (ND). Definitions for a Reported Minimum Level (RML) and Method Detection Limit (MDL) are provided in Attachment A. These reporting protocols and definitions are used in determining the need to conduct a Pollution Minimization Program (PMP) as follows:

The Discharger shall develop a Pollutant Minimization Program (PMP) as further described below when there is evidence (e.g., sample results reported as DNQ when the effluent limitation is less than the MDL, sample results from analytical methods more sensitive than those methods required by this Order, presence of whole effluent toxicity, health advisories for fish consumption, results of benthic or aquatic organism tissue sampling) that a priority pollutant is present in the effluent above an effluent limitation and either:

- (1). The concentration of the pollutant is reported as DNQ and the effluent limitation is less than the reported ML; or,
- (2). The concentration of the pollutant is reported as ND and the effluent limitation is less than the MDL.

The goal of the PMP shall be to reduce all potential sources of a pollutant through pollutant minimization (control) strategies, including pollution prevention measures as appropriate, to maintain the effluent concentration at or below the effluent limitation. Pollution prevention measures may be particularly appropriate for persistent bioaccumulative priority pollutants where there is evidence that beneficial uses are being impacted. The Regional Water Board may consider cost-effectiveness when establishing the requirements of a PMP. The completion and implementation of a Pollution Prevention Plan, if required pursuant to CWC Section 13263.3(d), shall be considered to fulfill the PMP requirements.

The PMP shall include, but not be limited to, the following actions and submittals acceptable to the Regional Water Board:

- (1). An annual review and semi-annual monitoring of potential sources of the reportable priority pollutant(s), which may include fish tissue monitoring and other bio-uptake sampling;
- (2). Quarterly monitoring for the reportable priority pollutant(s) in the influent to the wastewater treatment system;
- (3). Submittal of a control strategy designed to proceed toward the goal of maintaining concentrations of the reportable priority pollutant(s) in the effluent at or below the effluent limitation;

- (4). Implementation of appropriate cost-effective control measures for the reportable priority pollutant(s), consistent with the control strategy; and,
- (5). An annual status report that shall be sent to the Regional Water Board including:
 - i. All PMP monitoring results for the previous year;
 - ii. A list of potential sources of the reportable priority pollutant(s);
 - iii. A summary of all actions undertaken pursuant to the control strategy; and,
 - iv. A description of actions to be taken in the following year.

4. Construction, Operation and Maintenance Specifications

- a. Wastewater treatment facilities subject to this Order shall be supervised and operated by persons possessing certificates of appropriate grade pursuant to Chapter 3, Subchapter 14, Title 23 of the California Code of Regulations (Section 13625 of the California Water Code).
- b. The Discharger shall maintain in good working order a sufficient alternate power source for operating the wastewater treatment and disposal facilities. All equipment shall be located to minimize failure due to moisture, liquid spray, flooding, and other physical phenomena. The alternate power source shall be designed to permit inspection and maintenance and shall provide for periodic testing. If such alternate power source is not in existence, the discharger shall halt, reduce, or otherwise control all discharges upon the reduction, loss, or failure of the primary source of power.

5. Special Provisions for Municipal Facilities (POTWs Only)

a. Sludge Disposal Requirements

- (1) All sludge generated at the wastewater treatment plant will be disposed of, treat, or applied to land in accordance with Federal Regulations 40 CFR Part 503. These requirements are enforceable by USEPA.
- (2) The Discharger shall ensure compliance with the requirements in SWRCB Order No. 2004-10-DWQ, General Waste Discharge Requirements for the Discharge of Biosolids to Land for Use as a Soil Amendment in Agricultural, Silvicultural, Horticultural and Land Reclamation Activities” for those sites receiving the Discharger’s biosolids which a Regional Water Quality Control Board has placed under this general order, and with the requirements in individual

Waste Discharge Requirements (WDRs) issued by a Regional Water Board for sites receiving the Discharger's biosolids.

- (3) The Discharger shall comply, if applicable, with WDRs issued by other Regional Water Boards to which jurisdiction the biosolids are transported and applied.
- (4) The Discharger shall furnish this Regional Water Board with a copy of any report submitted to USEPA, State Board or other Regional Water Board, with respect to municipal sludge or biosolids.

b. Pretreatment Requirements

- (1) This Order includes the Discharger's Pretreatment Program as previously submitted to this Regional Water Board. Any change to the Program shall be reported to the Regional Water Board in writing and shall not become effective until approved by the Executive Officer in accordance with procedures established in 40 CFR, 403.18.
- (2) The Discharger shall enforce the requirements promulgated under Sections 307(b), 307(c), 307(d), and 402(b) of the Federal Clean Water Act with timely, appropriate, and effective enforcement actions. The Discharger shall require industrial users to comply with Federal Categorical Standards and shall initiate enforcement actions against those users who do not comply with the standards. The Discharger shall require industrial users subject to the Federal Categorical Standards to achieve compliance no later than the date specified in those requirements or, in the case of a new industrial user, upon commencement of the discharge.
- (3) The Discharger shall perform the pretreatment functions as required in Federal Regulations 40 CFR, Part 403 including, but not limited to:
 - i. Implement the necessary legal authorities as provided in 40 CFR 403.8(f)(1);
 - ii. Enforce the pretreatment requirements under 40 CFR 403.5 and 403.6;
 - iii. Implement the programmatic functions as provided in 40 CFR 403.8(f)(2); and,
 - iv. Provide the requisite funding of personnel to implement the Pretreatment Program as provided in 40 CFR 403.8(f)(3).
- (4) The Discharger shall submit semiannual and annual reports to the Regional Water Board, with copies to the State Board, and USEPA

Region 9, describing the Discharger's pretreatment activities over the period. The annual and semiannual reports shall contain, but not be limited to, the information required in the attached *Pretreatment Reporting Requirements* (Attachment P), or an approved revised version thereof. If the Discharger is not in compliance with any conditions or requirements of this Order, the Discharger shall include the reasons for noncompliance and shall state how and when the Discharger will comply with such conditions and requirements.

- (5) The Discharger shall be responsible and liable for the performance of all control authority pretreatment requirements contained in 40 CFR, Part 403, including subsequent regulatory revisions thereof. Where Part 403 or subsequent revision places mandatory actions upon the Discharger as Control Authority but does not specify a timetable for completion of the actions, the Discharger shall complete the required actions within six months from the effective date of this Order or the effective date of Part 403 revisions, whichever comes later. For violations of pretreatment requirements, the Discharger shall be subject to enforcement actions, penalties, fines, and other remedies by the Regional Water Board, USEPA, or other appropriate parties, as provided in the Federal Clean Water Act. The Regional Water Board or USEPA may initiate enforcement action against an industrial user for noncompliance with acceptable standards and requirements as provided in the Federal Clean Water Act and/or the California Water Code.
- c. The Discharger's collection system is part of the system that is subject to this Order. As such, the Discharger must properly operate and maintain its collection system (40 C.F.R. § 122.41(e)). The Discharger must report any non-compliance (40 C.F.R. § 122.41(l)(6) and (7)) and mitigate any discharge from the collection system in violation of this Order (40 C.F.R. § 122.41(d)). See the Order at Attachment D, subsections I.D, V.E, V.H, and I.C.

6. Spill Reporting Requirements

- a. **Notification** – For certain spills, overflows and bypasses, the Discharger shall make notifications as required below:
 - (1). For any spills or overflows of any volume, discharged where they are, or will probably be discharged, to waters of the State, the Discharger shall immediately notify the local health agency in accordance with the California Health and Safety Code section 5411.5. This notification shall occur no later than two hours after the knowledge of the incident.

- (2). For any spills or overflows of 1000 gallons or more discharged where they are, or probably be discharged to waters of the State, the Discharger shall immediately notify the State Office of Emergency Services pursuant to Water Code section 13271. This notification shall occur no later than two hours after the knowledge of the incident.
 - (3). For spills, overflows or bypasses of any volume that flowed to receiving waters or entered a shallow ground water aquifer or has public exposure, the Discharger shall notify such spills to the Regional Water Board, by telephone or electronically as soon as possible but not later than two hours of knowledge of the incident. The following information shall be included in the initial notification: location; date and time of spill; volume and nature of the spill; cause(s) of the spill; mitigation measures implemented.
- b. **Monitoring** – For certain spills, overflows and bypasses, the Discharger shall monitor as required below:
- (1). To define the geographical extent of spill's impact the Discharger shall obtain grab samples for spills, overflows or bypasses of any volume that reach receiving waters. The Discharger shall analyze the samples for total and fecal coliforms or E. coli, and enterococcus, and relevant pollutants of concern, upstream and downstream of the point of entry of the spill (if feasible, accessible and safe). This monitoring shall be done on a daily basis from time the spill is known until the results of two consecutive sets of bacteriological monitoring indicate the return to the background level or the County Department of Health Services authorizes cessation of monitoring.
 - (2). The Discharger shall obtain a grab sample for spills, overflows or bypasses of any volume that flowed to receiving waters or entered a shallow ground water aquifer, and all spills, overflows and bypasses of 1,000 gallons or more. The Discharger shall analyze the sample for total and fecal coliforms or E. coli, and enterococcus, and relevant pollutants of concern depending on the area and nature of spills or overflows if feasible, accessible and safe.
- c. **Reporting** – The Regional Water Board initial notification shall be followed by:
- (1). A written preliminary report five working days after disclosure of the incident. Within 30 days after submitting the preliminary report, the Discharger shall submit the final written report to this Regional Water Board. (A copy of the final written report, for a given incident, already submitted pursuant to a Statewide General Waste Discharge Requirements for Wastewater Collection System Agencies, may be

submitted to the Regional Water Board to satisfy this requirement.) The written report shall document the information required in paragraph D. below, monitoring results and any other information required in provisions of the Standard Provisions document including corrective measures implemented or proposed to be implemented to prevent/minimize future occurrences. The Executive Officer for just cause can grant an extension for submittal of the final written report.

- (2). The Discharger shall include a certification in the annual summary report (due according to the schedule in the Monitoring and Reporting Program) that states—the sewer system emergency equipment, including alarm systems, backup pumps, standby power generators, and other critical emergency pump station components were maintained and tested in accordance with the Discharger’s Preventative Maintenance Plan. Any deviations from or modifications to the Plan shall be discussed.
- d. **Records** – The Discharger shall develop and maintain a record of all spills, overflows or bypasses of raw or partially treated sewage from its collection system or treatment plant. This record shall be made available to the Regional Water Board upon request and a spill summary shall be included in the annual summary report. The records shall contain:
- (1). the date and time of each spill, overflow or bypass;
 - (2). the location of each spill, overflow or bypass;
 - (3). the estimated volume of each spill, overflow or bypass including gross volume, amount recovered and amount not recovered, monitoring results;
 - (4). the cause of each spill, overflow or bypass;
 - (5). whether each spill, overflow or bypass entered a receiving water and, if so, the name of the water body and whether it entered via storm drains or other man-made conveyances;
 - (6). mitigation measures implemented; and,
 - (7). corrective measures implemented or proposed to be implemented to prevent/minimize future occurrences.
- e. **Activities Coordination** – In addition, Regional Water Board expects that the municipal departments that have responsibilities to implement: (i) this NPDES permit, including the Pretreatment Program, (ii) a MS4 NPDES permit that may contain spill prevention, sewer maintenance, reporting

requirements and (iii) the SSO WDR will coordinate their compliance activities for consistency and efficiency.

- f. **Consistency with Sanitary Sewer Overflows WDRs** – The Clean Water Act prohibits the discharge of pollutants from point sources to surface waters of the United States unless authorized under a NPDES permit. (33 U.S.C. §§1311, 1342). The State Board adopted General Waste Discharge Requirements (WDRs) for Sanitary Sewer Systems, (WQ Order No. 2006-0003) on May 2, 2006, to provide a consistent, statewide regulatory approach to address Sanitary Sewer Overflows (SSOs). The SSOs WDR requires public agencies that own or operate sanitary sewer systems to develop and implement sewer system management plans and report all SSOs to the State Water Board’s online SSO database.

The requirements contained in this Order in Sections VI.C.3.b. (Spill Contingency Plan Section), VI.C.4. (Construction, Operation and Maintenance Specifications Section), and VI.C.6. (Spill Reporting Requirements) are intended to be consistent with the requirements of the SSO WDR. The Regional Board recognizes that there may be some overlap between the NPDES permit provisions and SSO WDR requirements. The requirements of the SSO WDR are considered the minimum thresholds (see Finding 11 of WQ Order No. 2006-0003). The Regional Board will accept the documentation prepared by the Permittees under the SSO WDR for compliance purposes, as satisfying the requirements in Sections VI.C.3.b., VI.C.4., and VI.C.6. provided any more specific or stringent provisions enumerated in this Order, have also been addressed.

- g. The Discharger shall provide standby or emergency power facilities and/or storage capacity or other means so that in the event of plant upset or outage due to power failure or other cause, discharge of raw or inadequately treated sewage does not occur.

7. Compliance Schedules

The Discharger shall submit quarterly progress reports specified in the above-mentioned section to describe the progress of studies and/or actions undertaken to reduce copper, mercury, silver, cyanide, chlorodibromomethane, dichlorobromomethane, and bis(2-ethylhexyl)phthalate, ammonia as nitrogen, nitrate as nitrogen, and nitrite plus nitrate as nitrogen in the effluent, and to achieve compliance by July 26, 2010. However, the compliance provisions for ammonia as nitrogen, nitrate as nitrogen, and nitrite plus nitrate as nitrogen are contained in the accompanying Time Schedule Order No. R4-2007-YYYY, because the final effluent limitations for these constituents are not CTR-based.

VII. COMPLIANCE DETERMINATION

Compliance with the effluent limitations contained in section IV of this Order will be determined as specified below:

A. General.

Compliance with effluent limitations for priority pollutants shall be determined using sample reporting protocols defined in the MRP and Attachment A of this Order. For purposes of reporting and administrative enforcement by the Regional and State Water Boards, the Discharger shall be deemed out of compliance with effluent limitations if the concentration of the priority pollutant in the monitoring sample is greater than the effluent limitation and greater than or equal to the reporting level (RL).

B. Multiple Sample Data.

When determining compliance with an AMEL, for priority pollutants and more than one sample result is available, the Discharger shall compute the arithmetic mean unless the data set contains one or more reported determinations of "Detected, but Not Quantified" (DNQ) or "Not Detected" (ND). In those cases, the Discharger shall compute the median in place of the arithmetic mean in accordance with the following procedure:

1. The data set shall be ranked from low to high, ranking the reported ND determinations lowest, DNQ determinations next, followed by quantified values (if any). The order of the individual ND or DNQ determinations is unimportant.
2. The median value of the data set shall be determined. If the data set has an odd number of data points, then the median is the middle value. If the data set has an even number of data points, then the median is the average of the two values around the middle unless one or both of the points are ND or DNQ, in which case the median value shall be the lower of the two data points where DNQ is lower than a value and ND is lower than DNQ.

C. Average Monthly Effluent Limitation (AMEL).

If the average (or when applicable, the median determined by subsection B above for multiple sample data) of daily discharges over a calendar month exceeds the AMEL for a given parameter, this will represent a single violation, though the Discharger may be considered out of compliance for each day of that month for that parameter (e.g., resulting in 31 days of non-compliance in a 31-day month). If only a single sample is taken during the calendar month and the analytical result for that sample exceeds the AMEL, the Discharger will be considered out of compliance for that calendar month. The Discharger will only be considered out of compliance for days when the discharge occurs. For any one calendar month during which no sample (daily discharge) is taken, no compliance determination can be made for that calendar month.

If the analytical result of a single sample, monitored monthly, quarterly, semiannually, or annually, does not exceed the AMEL for a given parameter, the Discharger will have demonstrated compliance with the AMEL for each day of that month for that parameter.

If the analytical result of any single sample, monitored monthly, quarterly, semiannually, or annually, exceeds the AMEL for any parameter, the Discharger shall collect up to four additional samples within the same calendar month. All analytical results shall be reported in the monitoring report for that month. The concentration of pollutant (an arithmetic mean or a median) in these samples estimated from the "Multiple Sample Data Reduction" Section above, will be used for compliance determination.

In the event of noncompliance with an AMEL, the sampling frequency for that parameter shall be increased to weekly and shall continue at this level until compliance with the AMEL has been demonstrated

D. Average Weekly Effluent Limitation (AWEL).

If the average (or when applicable, the median determined by subsection B above for multiple sample data) of daily discharges over a calendar week exceeds the AWEL for a given parameter, this will represent a single violation, though the Discharger may be considered out of compliance for each day of that week for that parameter, resulting in 7 days of non-compliance. If only a single sample is taken during the calendar week and the analytical result for that sample exceeds the AWEL, the Discharger will be considered out of compliance for that calendar week. The Discharger will only be considered out of compliance for days when the discharge occurs. For any one calendar week during which no sample (daily discharge) is taken, no compliance determination can be made for that calendar week.

E. Maximum Daily Effluent Limitation (MDEL).

If a daily discharge exceeds the MDEL for a given parameter, the Discharger may be considered out of compliance for that parameter for that 1 day only within the reporting period. For any 1 day during which no sample is taken, no compliance determination can be made for that day.

F. Instantaneous Minimum Effluent Limitation.

If the analytical result of a single grab sample is lower than the instantaneous minimum effluent limitation for a parameter, the Discharger may be considered out of compliance for that parameter for that single sample. Non-compliance for each sample will be considered separately (e.g., the results of two grab samples taken within a calendar day that both are lower than the instantaneous minimum effluent limitation would result in two instances of non-compliance with the instantaneous minimum effluent limitation).

G. Instantaneous Maximum Effluent Limitation.

If the analytical result of a single grab sample is higher than the instantaneous maximum effluent limitation for a parameter, the Discharger may be considered out of compliance for that parameter for that single sample. Non-compliance for each sample will be considered separately (e.g., the results of two grab samples taken within a calendar day that both exceed the instantaneous maximum effluent limitation would result in two instances of non-compliance with the instantaneous maximum effluent limitation).

H. Percent Removal.

The average monthly percent removal is the removal efficiency expressed in percentage across a treatment plant for a given pollutant parameter, as determined from the 30-day average values of pollutant concentrations (C in mg/L) of influent and effluent samples collected at about the same time using the following equation:

$$\text{Percent Removal (\%)} = [1 - (\text{CEffluent}/\text{CInfluent})] \times 100 \%$$

When preferred, the Discharger may substitute mass loadings and mass emissions for the concentrations.

I. Mass and Concentration Limitations

Compliance with mass and concentration effluent limitations for the same parameter shall be determined separately with their respective limitations. When the concentration of a constituent in an effluent sample is determined to be ND or DNQ, the corresponding mass emission rate determined from that sample concentration shall also be reported as ND or DNQ.

J. Compliance with Single Constituent Effluent Limitations

Dischargers may be considered out of compliance with the effluent limitation if the concentration of the pollutant (see Section B "Multiple Sample Data Reduction" above) in the monitoring sample is greater than the effluent limitation and greater than or equal to the Reporting Level (RL).

K. Compliance with Effluent Limitations Expressed as a Sum of Several Constituents

Dischargers may be considered out of compliance with an effluent limitation which applies to the sum of a group of chemicals (e.g., PCB's) if the sum of the individual pollutant concentrations is greater than the effluent limitation. Individual pollutants of the group will be considered to have a concentration of zero if the constituent is reported as ND or DNQ.

L. Mass Emission Rate.

The mass emission rate shall be obtained from the following calculation for any calendar day:

$$\text{Mass emission rate (lb/day)} = \frac{8.34}{N} \sum_{i=1}^N Q_i C_i$$

$$\text{Mass emission rate (kg/day)} = \frac{3.79}{N} \sum_{i=1}^N Q_i C_i$$

in which 'N' is the number of samples analyzed in any calendar day. 'Qi' and 'Ci' are the flow rate (MGD) and the constituent concentration (mg/L), respectively, which are associated with each of the 'N' grab samples, which may be taken in any calendar day. If a composite sample is taken, 'Ci' is the concentration measured in the composite sample and 'Qi' is the average flow rate occurring during the period over which samples are composited.

The daily concentration of all constituents shall be determined from the flow-weighted average of the same constituents in the combined waste streams as follows:

$$\text{Daily concentration} = \frac{1}{Q_t} \sum_{i=1}^N Q_i C_i$$

in which 'N' is the number of component waste streams. 'Qi' and 'Ci' are the flow rate (MGD) and the constituent concentration (mg/L), respectively, which are associated with each of the 'N' waste streams. 'Qt' is the total flow rate of the combined waste streams.

M. Bacterial Standards and Analysis.

1. The geometric mean used for determining compliance with bacterial standards is calculated with the following equation:

$$\text{Geometric Mean} = (C_1 \times C_2 \times \dots \times C_n)^{1/n}$$

where n is the number of days samples were collected during the period and C is the concentration of bacteria (MPN/100 mL or CFU/100 mL) found on each day of sampling.

2. For bacterial analyses, sample dilutions should be performed so the expected range of values is bracketed (for example, with multiple tube fermentation method or membrane filtration method, 2 to 16,000 per 100 ml for total and

fecal coliform, at a minimum, and 1 to 1000 per 100 ml for enterococcus). The detection methods used for each analysis shall be reported with the results of the analyses.

3. Detection methods used for coliforms (total and fecal) shall be those presented in Table 1A of 40 CFR 136 (revised March 12, 2007), unless alternate methods have been approved by USEPA pursuant to 40 CFR 136, or improved methods have been determined by the Executive Officer and/or USEPA.
4. Detection methods used for enterococcus shall be those presented in the USEPA publication EPA 600/4-85/076, *Test Methods for Escherichia coli and Enterococci in Water By Membrane Filter Procedure* or any improved method determined by the Executive Officer and/or USEPA to be appropriate.

N. Single Operational Upset

A single operational upset (SOU) that leads to simultaneous violations of more than one pollutant parameter shall be treated as a single violation and limits the Discharger's liability in accordance with the following conditions:

1. A single operational upset is broadly defined as a single unusual event that temporarily disrupts the usually satisfactory operation of a system in such a way that it results in violation of multiple pollutant parameters.
2. A Discharger may assert SOU to limit liability only for those violations which the Discharger submitted notice of the upset as required in Provision V.E.2(b) of Attachment D – Standard Provisions.
3. For purpose outside of CWC Section 13385 (h) and (i), determination of compliance and civil liability (including any more specific definition of SOU, the requirements for Dischargers to assert the SOU limitation of liability, and the manner of counting violations) shall be in accordance with USEPA Memorandum "Issuance of Guidance Interpreting Single Operational Upset" (September 27, 1989).
4. For purpose of CWC Section 13385 (h) and (i), determination of compliance and civil liability (including any more specific definition of SOU, the requirements for Dischargers to assert the SOU limitation of liability, and the manner of counting violations) shall be in accordance with CWC Section 13385 (f)(2).

ATTACHMENT A – DEFINITIONS

Arithmetic Mean (μ), also called the average, is the sum of measured values divided by the number of samples. For ambient water concentrations, the arithmetic mean is calculated as follows:

Arithmetic mean = $\mu = \Sigma x / n$ where: Σx is the sum of the measured ambient water concentrations, and n is the number of samples.

Average Monthly Effluent Limitation (AMEL): the highest allowable average of daily discharges over a calendar month, calculated as the sum of all daily discharges measured during a calendar month divided by the number of daily discharges measured during that month.

Average Weekly Effluent Limitation (AWEL): the highest allowable average of daily discharges over a calendar week (Sunday through Saturday), calculated as the sum of all daily discharges measured during a calendar week divided by the number of daily discharges measured during that week.

Bioaccumulative pollutants are those substances taken up by an organism from its surrounding medium through gill membranes, epithelial tissue, or from food and subsequently concentrated and retained in the body of the organism.

Carcinogenic pollutants are substances that are known to cause cancer in living organisms.

Coefficient of Variation (CV) is a measure of the data variability and is calculated as the estimated standard deviation divided by the arithmetic mean of the observed values.

Daily Discharge: Daily Discharge is defined as either: (1) the total mass of the constituent discharged over the calendar day (12:00 am through 11:59 pm) or any 24-hour period that reasonably represents a calendar day for purposes of sampling (as specified in the permit), for a constituent with limitations expressed in units of mass or; (2) the unweighted arithmetic mean measurement of the constituent over the day for a constituent with limitations expressed in other units of measurement (e.g., concentration).

The daily discharge may be determined by the analytical results of a composite sample taken over the course of one day (a calendar day or other 24-hour period defined as a day) or by the arithmetic mean of analytical results from one or more grab samples taken over the course of the day.

For composite sampling, if 1 day is defined as a 24-hour period other than a calendar day, the analytical result for the 24-hour period will be considered as the result for the calendar day in which the 24-hour period ends.

Detected, but Not Quantified (DNQ) are those sample results less than the RL, but greater than or equal to the laboratory's MDL.

Dilution Credit is the amount of dilution granted to a discharge in the calculation of a water quality-based effluent limitation, based on the allowance of a specified mixing zone. It is calculated from the dilution ratio or determined through conducting a mixing zone study or modeling of the discharge and receiving water.

Effluent Concentration Allowance (ECA) is a value derived from the water quality criterion/objective, dilution credit, and ambient background concentration that is used, in conjunction with the coefficient of variation for the effluent monitoring data, to calculate a long-term average (LTA) discharge concentration. The ECA has the same meaning as waste load allocation (WLA) as used in USEPA guidance (Technical Support Document For Water Quality-based Toxics Control, March 1991, second printing, EPA/505/2-90-001).

Enclosed Bays means indentations along the coast that enclose an area of oceanic water within distinct headlands or harbor works. Enclosed bays include all bays where the narrowest distance between the headlands or outermost harbor works is less than 75 percent of the greatest dimension of the enclosed portion of the bay. Enclosed bays include, but are not limited to, Humboldt Bay, Bodega Harbor, Tomales Bay, Drake's Estero, San Francisco Bay, Morro Bay, Los Angeles-Long Beach Harbor, Upper and Lower Newport Bay, Mission Bay, and San Diego Bay. Enclosed bays do not include inland surface waters or ocean waters.

Estimated Chemical Concentration is the estimated chemical concentration that results from the confirmed detection of the substance by the analytical method below the ML value.

Estuaries means waters, including coastal lagoons, located at the mouths of streams that serve as areas of mixing for fresh and ocean waters. Coastal lagoons and mouths of streams that are temporarily separated from the ocean by sandbars shall be considered estuaries. Estuarine waters shall be considered to extend from a bay or the open ocean to a point upstream where there is no significant mixing of fresh water and seawater. Estuarine waters included, but are not limited to, the Sacramento-San Joaquin Delta, as defined in Water Code section 12220, Suisun Bay, Carquinez Strait downstream to the Carquinez Bridge, and appropriate areas of the Smith, Mad, Eel, Noyo, Russian, Klamath, San Diego, and Otay rivers. Estuaries do not include inland surface waters or ocean waters.

Inland Surface Waters are all surface waters of the State that do not include the ocean, enclosed bays, or estuaries.

Instantaneous Maximum Effluent Limitation: the highest allowable value for any single grab sample or aliquot (i.e., each grab sample or aliquot is independently compared to the instantaneous maximum limitation).

Instantaneous Minimum Effluent Limitation: the lowest allowable value for any single grab sample or aliquot (i.e., each grab sample or aliquot is independently compared to the instantaneous minimum limitation).

Maximum Daily Effluent Limitation (MDEL) means the highest allowable daily discharge of a pollutant, over a calendar day (or 24-hour period). For pollutants with limitations expressed in units of mass, the daily discharge is calculated as the total mass of the pollutant discharged

over the day. For pollutants with limitations expressed in other units of measurement, the daily discharge is calculated as the arithmetic mean measurement of the pollutant over the day.

Median is the middle measurement in a set of data. The median of a set of data is found by first arranging the measurements in order of magnitude (either increasing or decreasing order). If the number of measurements (n) is odd, then the median = $X_{(n+1)/2}$. If n is even, then the median = $(X_{n/2} + X_{(n/2)+1})/2$ (i.e., the midpoint between the $n/2$ and $n/2+1$).

Method Detection Limit (MDL) is the minimum concentration of a substance that can be measured and reported with 99 percent confidence that the analyte concentration is greater than zero, as defined in title 40 of the Code of Federal Regulations, Part 136, Attachment B, revised as of July 3, 1999.

Minimum Level (ML) is the concentration at which the entire analytical system must give a recognizable signal and acceptable calibration point. The ML is the concentration in a sample that is equivalent to the concentration of the lowest calibration standard analyzed by a specific analytical procedure, assuming that all the method specified sample weights, volumes, and processing steps have been followed.

Mixing Zone is a limited volume of receiving water that is allocated for mixing with a wastewater discharge where water quality criteria can be exceeded without causing adverse effects to the overall water body.

Not Detected (ND) are those sample results less than the laboratory's MDL.

Ocean Waters are the territorial marine waters of the State as defined by California law to the extent these waters are outside of enclosed bays, estuaries, and coastal lagoons. Discharges to ocean waters are regulated in accordance with the State Water Board's California Ocean Plan.

Persistent pollutants are substances for which degradation or decomposition in the environment is nonexistent or very slow.

Pollutant Minimization Program (PMP) means waste minimization and pollution prevention actions that include, but are not limited to, product substitution, waste stream recycling, alternative waste management methods, and education of the public and businesses. The goal of the PMP shall be to reduce all potential sources of a priority pollutant(s) through pollutant minimization (control) strategies, including pollution prevention measures as appropriate, to maintain the effluent concentration at or below the water quality-based effluent limitation. Pollution prevention measures may be particularly appropriate for persistent bioaccumulative priority pollutants where there is evidence that beneficial uses are being impacted. The Regional Water Board may consider cost effectiveness when establishing the requirements of a PMP. The completion and implementation of a Pollution Prevention Plan, if required pursuant to Water Code section 13263.3(d), shall be considered to fulfill the PMP requirements.

Pollution Prevention means any action that causes a net reduction in the use or generation of a hazardous substance or other pollutant that is discharged into water and includes, but is not limited to, input change, operational improvement, production process change, and product reformulation (as defined in Water Code section 13263.3). Pollution prevention does not include actions that merely shift a pollutant in wastewater from one environmental medium to another environmental medium, unless clear environmental benefits of such an approach are identified to the satisfaction of the State or Regional Water Board.

Reporting Level (RL) is the ML (and its associated analytical method) chosen by the Discharger for reporting and compliance determination from the MLs included in this Order. The MLs included in this Order correspond to approved analytical methods for reporting a sample result that are selected by the Regional Water Board either from Appendix 4 of the SIP in accordance with section 2.4.2 of the SIP or established in accordance with section 2.4.3 of the SIP. The ML is based on the proper application of method-based analytical procedures for sample preparation and the absence of any matrix interferences. Other factors may be applied to the ML depending on the specific sample preparation steps employed. For example, the treatment typically applied in cases where there are matrix-effects is to dilute the sample or sample aliquot by a factor of ten. In such cases, this additional factor must be applied to the ML in the computation of the RL.

Satellite Collection System is the portion, if any, of a sanitary sewer system owned or operated by a different public agency than the agency that owns and operates the wastewater treatment facility that a sanitary sewer system is tributary to.

Source of Drinking Water is any water designated as municipal or domestic supply (MUN) in a Regional Water Board Basin Plan.

Standard Deviation (σ) is a measure of variability that is calculated as follows:

$$\sigma = (\sum[(x - \mu)^2]/(n - 1))^{0.5}$$

where:

x is the observed value;

μ is the arithmetic mean of the observed values; and

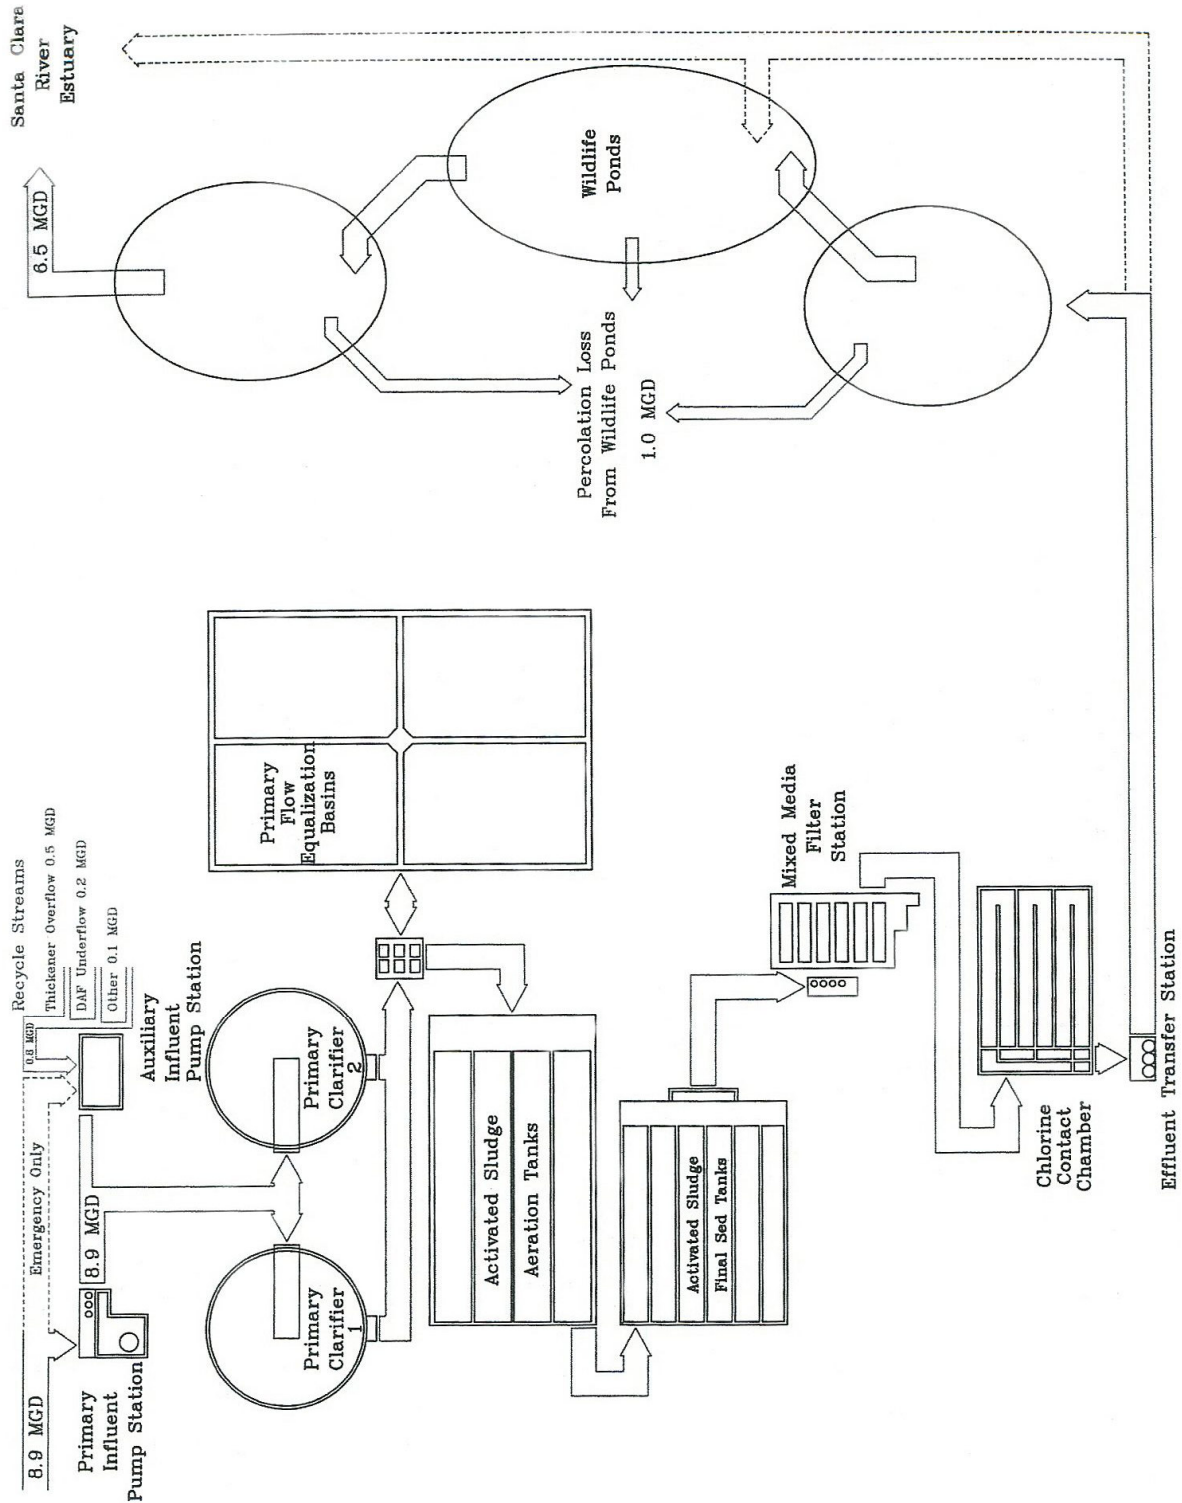

n is the number of samples.

Toxicity Reduction Evaluation (TRE) is a study conducted in a step-wise process designed to identify the causative agents of effluent or ambient toxicity, isolate the sources of toxicity, evaluate the effectiveness of toxicity control options, and then confirm the reduction in toxicity. The first steps of the TRE consist of the collection of data relevant to the toxicity, including additional toxicity testing, and an evaluation of facility operations and maintenance practices, and best management practices. A Toxicity Identification Evaluation (TIE) may be required as part of the TRE, if appropriate. (A TIE is a set of procedures to identify the specific chemical(s) responsible for toxicity. These procedures are performed in three phases (characterization, identification, and confirmation) using aquatic organism toxicity tests.)

ATTACHMENT B – MAP

Not applicable temporarily!

ATTACHMENT C – FLOW SCHEMATIC

ATTACHMENT D –STANDARD PROVISIONS

I. STANDARD PROVISIONS – PERMIT COMPLIANCE

A. Duty to Comply

1. The Discharger must comply with all of the conditions of this Order. Any noncompliance constitutes a violation of the Clean Water Act (CWA) and the California Water Code and is grounds for enforcement action, for permit termination, revocation and reissuance, or modification; or denial of a permit renewal application. (40 C.F.R. § 122.41(a).)
2. The Discharger shall comply with effluent standards or prohibitions established under Section 307(a) of the CWA for toxic pollutants and with standards for sewage sludge use or disposal established under Section 405(d) of the CWA within the time provided in the regulations that establish these standards or prohibitions, even if this Order has not yet been modified to incorporate the requirement. (40 C.F.R. § 122.41(a)(1).)

B. Need to Halt or Reduce Activity Not a Defense

It shall not be a defense for a Discharger in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this Order. (40 C.F.R. § 122.41(c).)

C. Duty to Mitigate

The Discharger shall take all reasonable steps to minimize or prevent any discharge or sludge use or disposal in violation of this Order that has a reasonable likelihood of adversely affecting human health or the environment. (40 C.F.R. § 122.41(d).)

D. Proper Operation and Maintenance

The Discharger shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the Discharger to achieve compliance with the conditions of this Order. Proper operation and maintenance also includes adequate laboratory controls and appropriate quality assurance procedures. This provision requires the operation of backup or auxiliary facilities or similar systems that are installed by a Discharger only when necessary to achieve compliance with the conditions of this Order. (40 C.F.R. § 122.41(e).)

E. Property Rights

1. This Order does not convey any property rights of any sort or any exclusive privileges. (40 C.F.R. § 122.41(g).)

2. The issuance of this Order does not authorize any injury to persons or property or invasion of other private rights, or any infringement of state or local law or regulations. (40 C.F.R. § 122.5(c).)

F. Inspection and Entry

The Discharger shall allow the Regional Water Board, State Water Board, United States Environmental Protection Agency (USEPA), and/or their authorized representatives (including an authorized contractor acting as their representative), upon the presentation of credentials and other documents, as may be required by law, to (40 C.F.R. § 122.41(i); Wat. Code, § 13383):

1. Enter upon the Discharger's premises where a regulated facility or activity is located or conducted, or where records are kept under the conditions of this Order (40 C.F.R. § 122.41(i)(1));
2. Have access to and copy, at reasonable times, any records that must be kept under the conditions of this Order (40 C.F.R. § 122.41(i)(2));
3. Inspect and photograph, at reasonable times, any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this Order (40 C.F.R. § 122.41(i)(3)); and
4. Sample or monitor, at reasonable times, for the purposes of assuring Order compliance or as otherwise authorized by the CWA or the Water Code, any substances or parameters at any location. (40 C.F.R. § 122.41(i)(4).)

G. Bypass

1. Definitions
 - a. "Bypass" means the intentional diversion of waste streams from any portion of a treatment facility. (40 C.F.R. § 122.41(m)(1)(i).)
 - b. "Severe property damage" means substantial physical damage to property, damage to the treatment facilities, which causes them to become inoperable, or substantial and permanent loss of natural resources that can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production. (40 C.F.R. § 122.41(m)(1)(ii).)
2. Bypass not exceeding limitations. The Discharger may allow any bypass to occur which does not cause exceedances of effluent limitations, but only if it is for essential maintenance to assure efficient operation. These bypasses are not subject to the provisions listed in Standard Provisions – Permit Compliance I.G.3, I.G.4, and I.G.5 below. (40 C.F.R. § 122.41(m)(2).)

3. Prohibition of bypass. Bypass is prohibited, and the Regional Water Board may take enforcement action against a Discharger for bypass, unless (40 C.F.R. § 122.41(m)(4)(i)):
 - a. Bypass was unavoidable to prevent loss of life, personal injury, or severe property damage (40 C.F.R. § 122.41(m)(4)(i)(A));
 - b. There were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal periods of equipment downtime. This condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass that occurred during normal periods of equipment downtime or preventive maintenance (40 C.F.R. § 122.41(m)(4)(i)(B)); and
 - c. The Discharger submitted notice to the Regional Water Board as required under Standard Provisions – Permit Compliance I.G.5 below. (40 C.F.R. § 122.41(m)(4)(i)(C).)
4. The Regional Water Board may approve an anticipated bypass, after considering its adverse effects, if the Regional Water Board determines that it will meet the three conditions listed in Standard Provisions – Permit Compliance I.G.3 above. (40 C.F.R. § 122.41(m)(4)(ii).)
5. Notice
 - a. Anticipated bypass. If the Discharger knows in advance of the need for a bypass, it shall submit a notice, if possible at least 10 days before the date of the bypass. (40 C.F.R. § 122.41(m)(3)(i).)
 - b. Unanticipated bypass. The Discharger shall submit notice of an unanticipated bypass as required in Standard Provisions - Reporting V.E below (24-hour notice). (40 C.F.R. § 122.41(m)(3)(ii).)

H. Upset

Upset means an exceptional incident in which there is unintentional and temporary noncompliance with technology based permit effluent limitations because of factors beyond the reasonable control of the Discharger. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation. (40 C.F.R. § 122.41(n)(1).)

1. Effect of an upset. An upset constitutes an affirmative defense to an action brought for noncompliance with such technology based permit effluent limitations if the requirements of Standard Provisions – Permit Compliance I.H.2 below are met. No determination made during administrative review of claims that noncompliance was caused by upset, and before an action for

noncompliance, is final administrative action subject to judicial review. (40 C.F.R. § 122.41(n)(2).)

2. Conditions necessary for a demonstration of upset. A Discharger who wishes to establish the affirmative defense of upset shall demonstrate, through properly signed, contemporaneous operating logs or other relevant evidence that (40 C.F.R. § 122.41(n)(3)):
 - a. An upset occurred and that the Discharger can identify the cause(s) of the upset (40 C.F.R. § 122.41(n)(3)(i));
 - b. The permitted facility was, at the time, being properly operated (40 C.F.R. § 122.41(n)(3)(ii));
 - c. The Discharger submitted notice of the upset as required in Standard Provisions – Reporting V.E.2.b below (24-hour notice) (40 C.F.R. § 122.41(n)(3)(iii)); and
 - d. The Discharger complied with any remedial measures required under Standard Provisions – Permit Compliance I.C above. (40 C.F.R. § 122.41(n)(3)(iv).)
3. Burden of proof. In any enforcement proceeding, the Discharger seeking to establish the occurrence of an upset has the burden of proof. (40 C.F.R. § 122.41(n)(4).)

II. STANDARD PROVISIONS – PERMIT ACTION

A. General

This Order may be modified, revoked and reissued, or terminated for cause. The filing of a request by the Discharger for modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance does not stay any Order condition. (40 C.F.R. § 122.41(f).)

B. Duty to Reapply

If the Discharger wishes to continue an activity regulated by this Order after the expiration date of this Order, the Discharger must apply for and obtain a new permit. (40 C.F.R. § 122.41(b).)

C. Transfers

This Order is not transferable to any person except after notice to the Regional Water Board. The Regional Water Board may require modification or revocation and reissuance of the Order to change the name of the Discharger and incorporate such other requirements as may be necessary under the CWA and the Water Code. (40 C.F.R. § 122.41(l)(3); § 122.61.)

III. STANDARD PROVISIONS – MONITORING

- A.** Samples and measurements taken for the purpose of monitoring shall be representative of the monitored activity. (40 C.F.R. § 122.41(j)(1).)
- B.** Monitoring results must be conducted according to test procedures under Part 136 or, in the case of sludge use or disposal, approved under Part 136 unless otherwise specified in Part 503 unless other test procedures have been specified in this Order. (40 C.F.R. § 122.41(j)(4); § 122.44(i)(1)(iv).)

IV. STANDARD PROVISIONS – RECORDS

- A.** Except for records of monitoring information required by this Order related to the Discharger's sewage sludge use and disposal activities, which shall be retained for a period of at least five years (or longer as required by Part 503), the Discharger shall retain records of all monitoring information, including all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation, copies of all reports required by this Order, and records of all data used to complete the application for this Order, for a period of at least three (3) years from the date of the sample, measurement, report or application. This period may be extended by request of the Regional Water Board Executive Officer at any time. (40 C.F.R. § 122.41(j)(2).)
- B. Records of monitoring information shall include:**
 - 1. The date, exact place, and time of sampling or measurements (40 C.F.R. § 122.41(j)(3)(i));
 - 2. The individual(s) who performed the sampling or measurements (40 C.F.R. § 122.41(j)(3)(ii));
 - 3. The date(s) analyses were performed (40 C.F.R. § 122.41(j)(3)(iii));
 - 4. The individual(s) who performed the analyses (40 C.F.R. § 122.41(j)(3)(iv));
 - 5. The analytical techniques or methods used (40 C.F.R. § 122.41(j)(3)(v)); and
 - 6. The results of such analyses. (40 C.F.R. § 122.41(j)(3)(vi).)
- C. Claims of confidentiality for the following information will be denied (40 C.F.R. § 122.7(b)):**
 - 1. The name and address of any permit applicant or Discharger (40 C.F.R. § 122.7(b)(1)); and
 - 2. Permit applications and attachments, permits and effluent data. (40 C.F.R. § 122.7(b)(2).)

V. STANDARD PROVISIONS – REPORTING

A. Duty to Provide Information

The Discharger shall furnish to the Regional Water Board, State Water Board, or USEPA within a reasonable time, any information which the Regional Water Board, State Water Board, or USEPA may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this Order or to determine compliance with this Order. Upon request, the Discharger shall also furnish to the Regional Water Board, State Water Board, or USEPA copies of records required to be kept by this Order. (40 C.F.R. § 122.41(h); Wat. Code, § 13267.)

B. Signatory and Certification Requirements

1. All applications, reports, or information submitted to the Regional Water Board, State Water Board, and/or USEPA shall be signed and certified in accordance with Standard Provisions – Reporting V.B.2, V.B.3, V.B.4, and V.B.5 below. (40 C.F.R. § 122.41(k).)
2. All permit applications shall be signed by either a principal executive officer or ranking elected official. For purposes of this provision, a principal executive officer of a federal agency includes: (i) the chief executive officer of the agency, or (ii) a senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., Regional Administrators of USEPA). (40 C.F.R. § 122.22(a)(3).)
3. All reports required by this Order and other information requested by the Regional Water Board, State Water Board, or USEPA shall be signed by a person described in Standard Provisions – Reporting V.B.2 above, or by a duly authorized representative of that person. A person is a duly authorized representative only if:
 - a. The authorization is made in writing by a person described in Standard Provisions – Reporting V.B.2 above (40 C.F.R. § 122.22(b)(1));
 - b. The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity such as the position of plant manager, operator of a well or a well field, superintendent, position of equivalent responsibility, or an individual or position having overall responsibility for environmental matters for the company. (A duly authorized representative may thus be either a named individual or any individual occupying a named position.) (40 C.F.R. § 122.22(b)(2)); and
 - c. The written authorization is submitted to the Regional Water Board and State Water Board. (40 C.F.R. § 122.22(b)(3).)

4. If an authorization under Standard Provisions – Reporting V.B.3 above is no longer accurate because a different individual or position has responsibility for the overall operation of the facility, a new authorization satisfying the requirements of Standard Provisions – Reporting V.B.3 above must be submitted to the Regional Water Board and State Water Board prior to or together with any reports, information, or applications, to be signed by an authorized representative. (40 C.F.R. § 122.22(c).)
5. Any person signing a document under Standard Provisions – Reporting V.B.2 or V.B.3 above shall make the following certification:

“I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.” (40 C.F.R. § 122.22(d).)

C. Monitoring Reports

1. Monitoring results shall be reported at the intervals specified in the Monitoring and Reporting Program (Attachment E) in this Order. (40 C.F.R. § 122.22(l)(4).)
2. Monitoring results must be reported on a Discharge Monitoring Report (DMR) form or forms provided or specified by the Regional Water Board or State Water Board for reporting results of monitoring of sludge use or disposal practices. (40 C.F.R. § 122.41(l)(4)(i).)
3. If the Discharger monitors any pollutant more frequently than required by this Order using test procedures approved under Part 136 or, in the case of sludge use or disposal, approved under Part 136 unless otherwise specified in Part 503, or as specified in this Order, the results of this monitoring shall be included in the calculation and reporting of the data submitted in the DMR or sludge reporting form specified by the Regional Water Board. (40 C.F.R. § 122.41(l)(4)(ii).)
4. Calculations for all limitations, which require averaging of measurements, shall utilize an arithmetic mean unless otherwise specified in this Order. (40 C.F.R. § 122.41(l)(4)(iii).)

D. Compliance Schedules

Reports of compliance or noncompliance with, or any progress reports on, interim and final requirements contained in any compliance schedule of this Order, shall be

submitted no later than 14 days following each schedule date. (40 C.F.R. § 122.41(l)(5).)

E. Twenty-Four Hour Reporting

1. The Discharger shall report any noncompliance that may endanger health or the environment. Any information shall be provided orally within 24 hours from the time the Discharger becomes aware of the circumstances. A written submission shall also be provided within five (5) days of the time the Discharger becomes aware of the circumstances. The written submission shall contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and times, and if the noncompliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance. (40 C.F.R. § 122.41(l)(6)(i).)
2. The following shall be included as information that must be reported within 24 hours under this paragraph (40 C.F.R. § 122.41(l)(6)(ii)):
 - a. Any unanticipated bypass that exceeds any effluent limitation in this Order. (40 C.F.R. § 122.41(l)(6)(ii)(A).)
 - b. Any upset that exceeds any effluent limitation in this Order. (40 C.F.R. § 122.41(l)(6)(ii)(B).)
3. The Regional Water Board may waive the above-required written report under this provision on a case-by-case basis if an oral report has been received within 24 hours. (40 C.F.R. § 122.41(l)(6)(iii).)

F. Planned Changes

The Discharger shall give notice to the Regional Water Board as soon as possible of any planned physical alterations or additions to the permitted facility. Notice is required under this provision only when (40 C.F.R. § 122.41(l)(1)):

1. The alteration or addition to a permitted facility may meet one of the criteria for determining whether a facility is a new source in section 122.29(b) (40 C.F.R. § 122.41(l)(1)(i)); or
2. The alteration or addition could significantly change the nature or increase the quantity of pollutants discharged. This notification applies to pollutants that are not subject to effluent limitations in this Order. (40 C.F.R. § 122.41(l)(1)(ii).)
3. The alteration or addition results in a significant change in the Discharger's sludge use or disposal practices, and such alteration, addition, or change may justify the application of permit conditions that are different from or absent in the existing permit, including notification of additional use or disposal sites not

reported during the permit application process or not reported pursuant to an approved land application plan. (40 C.F.R. § 122.41(l)(1)(iii).)

G. Anticipated Noncompliance

The Discharger shall give advance notice to the Regional Water Board or State Water Board of any planned changes in the permitted facility or activity that may result in noncompliance with General Order requirements. (40 C.F.R. § 122.41(l)(2).)

H. Other Noncompliance

The Discharger shall report all instances of noncompliance not reported under Standard Provisions – Reporting V.C, V.D, and V.E above at the time monitoring reports are submitted. The reports shall contain the information listed in Standard Provision – Reporting V.E above. (40 C.F.R. § 122.41(l)(7).)

I. Other Information

When the Discharger becomes aware that it failed to submit any relevant facts in a permit application, or submitted incorrect information in a permit application or in any report to the Regional Water Board, State Water Board, or USEPA, the Discharger shall promptly submit such facts or information. (40 C.F.R. § 122.41(l)(8).)

VI. STANDARD PROVISIONS – ENFORCEMENT

The Regional Water Board is authorized to enforce the terms of this permit under several provisions of the Water Code, including, but not limited to, sections 13385, 13386, and 13387.

VII. ADDITIONAL PROVISIONS – NOTIFICATION LEVELS

A. Publicly-Owned Treatment Works (POTWs)

All POTWs shall provide adequate notice to the Regional Water Board of the following (40 C.F.R. § 122.42(b)):

1. Any new introduction of pollutants into the POTW from an indirect discharger that would be subject to sections 301 or 306 of the CWA if it were directly discharging those pollutants (40 C.F.R. § 122.42(b)(1)); and,
2. Any substantial change in the volume or character of pollutants being introduced into that POTW by a source introducing pollutants into the POTW at the time of adoption of the Order. (40 C.F.R. § 122.42(b)(2).)
3. Adequate notice shall include information on the quality and quantity of effluent introduced into the POTW as well as any anticipated impact of the change on

the quantity or quality of effluent to be discharged from the POTW. (40 C.F.R. § 122.42(b)(3).)

ATTACHMENT E – MONITORING AND REPORTING PROGRAM (MRP)

The Code of Federal Regulations section 122.48 requires that all NPDES permits specify monitoring and reporting requirements. Water Code Sections 13267 and 13383 also authorize the Regional Water Quality Control Board (Regional Water Board) to require technical and monitoring reports. This MRP establishes monitoring and reporting requirements, which implement the federal and California regulations.

I. GENERAL MONITORING PROVISIONS

- A. All samples shall be representative of the waste discharge under conditions of peak load. Quarterly effluent analyses shall be performed during the months of February, May, August, and November. Semiannual analyses shall be performed during the months of February and August. Annual analyses shall be performed during the month of August. Should there be instances when monitoring could not be done during these specified months, the Discharger must notify the Regional Board, state the reason why monitoring could not be conducted, and obtain approval from the Executive Officer for an alternate schedule. Results of quarterly, semiannual, and annual analyses shall be reported in the monthly monitoring report following the analysis.
- B. Pollutants shall be analyzed using the analytical methods described in 40 CFR, Part 136.3, 136.4, and 136.5 (revised March 12, 2007); or where no methods are specified for a given pollutant, by methods approved by this Regional Water Board or the State Water Board. Laboratories analyzing effluent samples and receiving water samples shall be certified by the California Department of Health Services Environmental Laboratory Accreditation Program (ELAP) or approved by the Executive Officer and must include quality assurance/quality control (QA/QC) data in their reports. A copy of the laboratory certification shall be provided each time a new certification and/or renewal of the certification is obtained from ELAP.
- C. Water/wastewater samples must be analyzed within allowable holding time limits as specified in 40 CFR, Part 136.3 (revised March 12, 2007). All QA/QC analyses must be run on the same dates that samples are actually analyzed. The Discharger shall retain the QA/QC documentation in its files and make available for inspection and/or submit them when requested by the Regional Water Board. Proper chain of custody procedures must be followed and a copy of that documentation shall be submitted with the monthly report.
- D. The Discharger shall calibrate and perform maintenance procedures on all monitoring instruments and to insure accuracy of measurements, or shall insure that both equipment activities will be conducted.
- E. For any analyses performed for which no procedure is specified in the USEPA guidelines, or in the MRP, the constituent or parameter analyzed and the method or procedure used must be specified in the monitoring report.

- F. Each monitoring report must affirm in writing that “all analyses were conducted at a laboratory certified for such analyses by the Department of Health Services or approved by the Executive Officer and in accordance with current USEPA guideline procedures or as specified in this MRP.”
