Visual Resource Management

What Is Visual Resource Management?

The U.S. Department of the Interior Bureau of Land Management (BLM) defines visual resource management (VRM) as the inventory and planning actions taken to identify visual resource values and to establish objectives for managing those values, and the management actions taken to achieve the visual resource management objectives. The visual resource programs of most U.S. federal agencies do not meet all of the criteria included in this definition. While some may have established procedures for visual impact assessment, or may have visual resource inventory processes, most do not actively manage lands, and so they do not have inventoried lands with identified resource values and established management objectives, along with procedures or practices for achieving the management objectives. Two agencies with visual resource programs that do meet these criteria are the BLM and the U.S. Department of Agriculture Forest Service (USFS).

U.S. Department of the Interior Bureau of Land Management

The BLM manages large areas of public land primarily in the Western United States. BLM-administered lands are managed in accordance with approved resource management plans (RMPs). The RMP establishes how the public lands will be used and allocated for different purposes; it is developed with public participation and collaboration. RMP decisions establish goals and objectives for resource management (desired outcomes) and the measures needed to achieve these goals and objectives (management actions and allowable uses).

The BLM has developed the Visual Resource Management (VRM) system (/vr-overview/blm/index.cfm) for visual resource inventory, management, and impact assessment. VRM class objectives are designated to establish the desired future condition of the visual resource. Allowable uses and management actions must be planned in accordance with these desired future conditions. The VRM classes set VRM objectives for lands in each class and describe the limits of allowable visual change in the landscape character with which proposed management activities must comply. See the BLM's Visual Resource Management (VRM) Classes (/vr-mgmt/blm/index.cfm) page of this website for more information on how BLM VRM classes are used to manage scenic resources.

U.S. Department of Agriculture Forest Service

The USFS's Scenery Management System (SMS) provides a framework for the inventory, analysis, and management of scenery on National Forest Lands. Using the SMS, the USFS inventories all USFS-managed lands, and sets landscape character goals scenic integrity objectives for these lands when adopting a forest plan. The SMS is summarized on the USFS Visual Resource Inventory (/vr-inventory/usfs/index.cfm) page of this website and is described in detail in USFS Agriculture Handbook 701 Landscape Aesthetics: A Handbook for Scenery Management (/docs/Landscape Aesthetics (AH-701).pdf) (Issued 1996, 264 pp).

U.S. Department of the Interior National Park Service

The National Park Service (NPS) administers lands and waters within NPS units, but does not currently identify resource values and establish VRM objectives for NPS-managed lands and waters. The NPS has developed the Visual Resource Inventory process (/vr-inventory/nps/index.cfm) for identifying and inventorying important scenic views for conservation purposes, but these lands may be inside or outside NPS units, and there currently is no requirement that all NPS-managed lands and waters be inventoried for scenic values. In some cases, selected individual NPS units have historically developed their own visual resource inventory and/or visual resource management tools and data independently, for use within their unit.

Other Federal Agency Policies and Programs

The Federal Highway Administration (FHWA), U.S. Army Corps of Engineers (USACE), the National Resource Conservation Service (NRCS), and the Federal Energy Regulatory Commission (FERC) are not land management agencies, and thus do not manage visual resources according to the BLM definition above. However, all of these agencies have visual resource-related programs or procedures that they use to protect visual resources in the conduct of their activities. The Bureau of Ocean Energy Management (BOEM) regulates utility-scale energy development on the Outer Continental Shelf, but currently does not conduct scenic inventories or set visual quality objectives for these waters.

Follow the link below to learn more about other federal agency visual resource programs and policies, including the FHWA, USACE, BOEM, NRCS, and FERC:

- Other federal agency visual resource programs and policies (/vr-overview/other-federal/index.cfm)

Non-Federal Agency Policies and Programs

A number of states have policies or regulations regarding project siting that include visual resources, and some non-federal agencies have required or recommended processes for conducting visual resource-related projects, such as scenic resources inventories and especially visual impact assessments, but currently non-federal agencies generally do not manage visual resources through inventory of managed lands, the setting of visual resource management objectives for those lands, and the use of procedures to achieve those objectives; however, there are exceptions, such as the Tahoe Regional Planning Agency.

Follow the link below to learn more about other non-federal agency visual resource management:

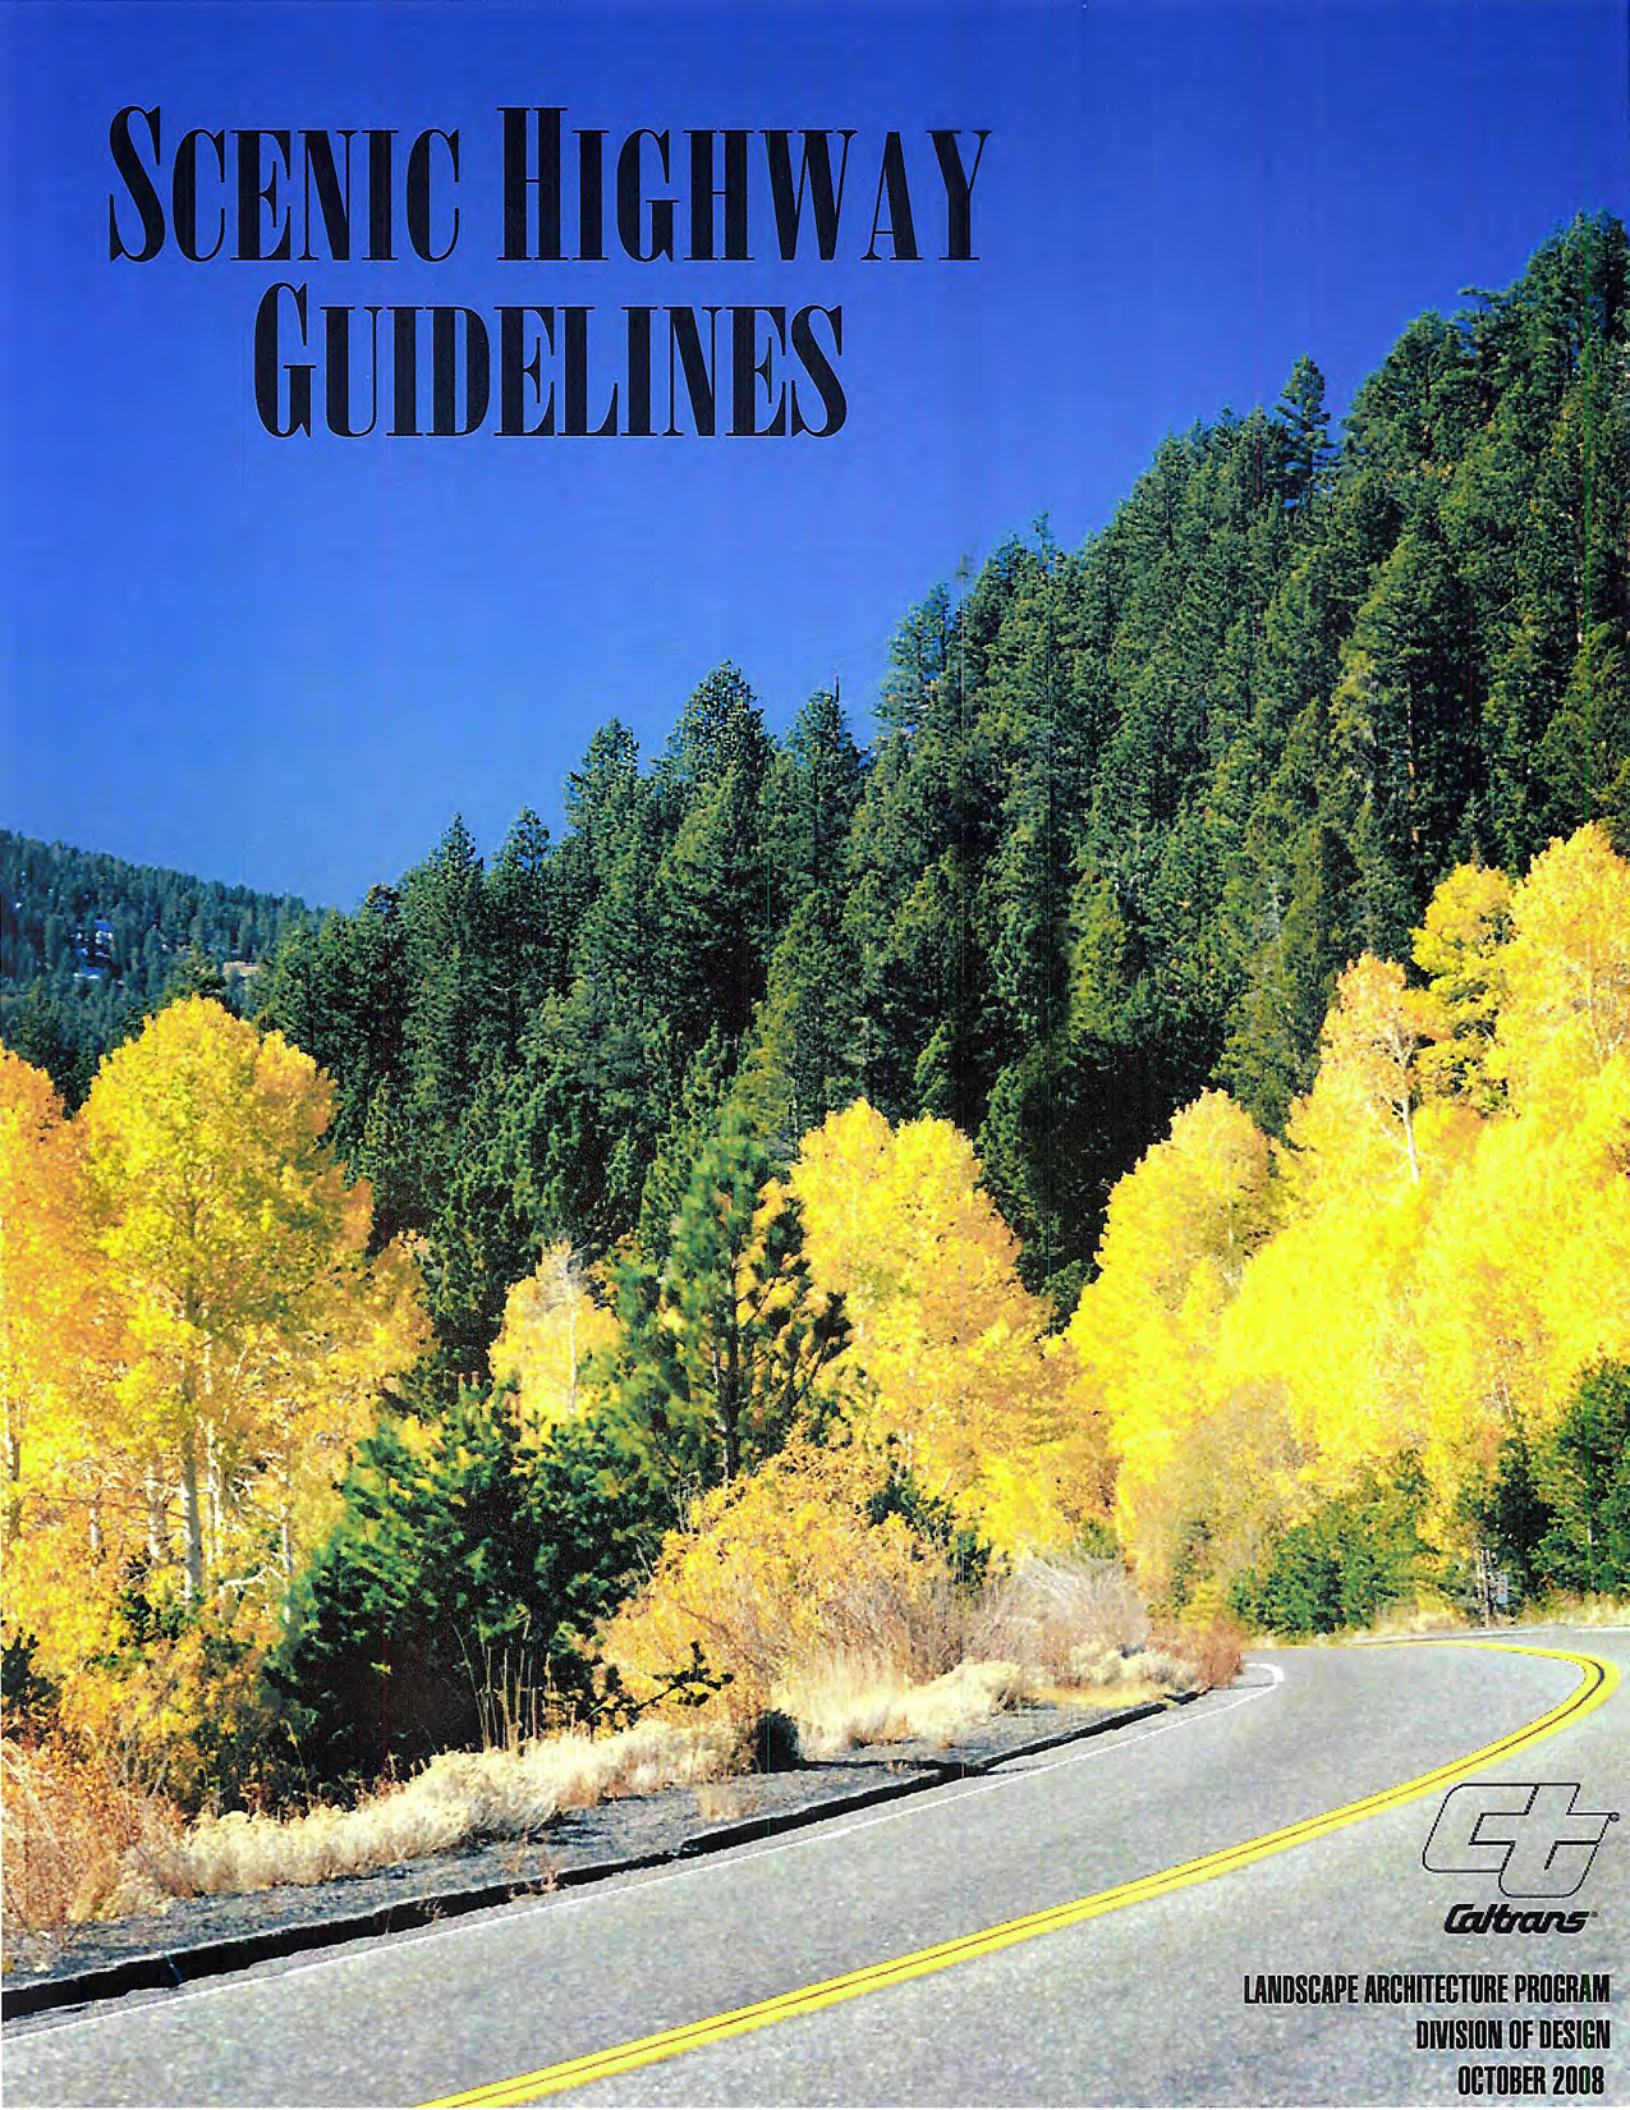
Scenic Highway Guidelines



Caltrans

LANDSCAPE ARCHITECTURE PROGRAM
DIVISION OF DESIGN
OCTOBER 2008

Scenic Highway Guidelines

TABLE OF CONTENTS

SECTION I: INTRODUCTION AND BACKGROUND

The Department of Transportation (Caltrans) manages the State Scenic Highway Program, provides guidance, and assists local government agencies, community organizations, and citizens with the process to officially designate scenic highways. The following information includes background and criteria for the Scenic Highway Program, and describes nomination steps for the official designation of State and County Scenic Highways. In addition, this guidance discusses compliance reviews and the revocation of scenic highway designations.

Scenic Highway Program History

In 1963, the State Legislature established the California Scenic Highway Program through Senate Bill 1467 (Farr). The bill declared:

> "The development of scenic highways will not only add to the pleasure of the residents of this State, but will also play an important role in encouraging the growth of the recreation and tourist industries upon which the economy of many areas of this State depend."

Senate Bill 1467 added Sections 260 through 263 to the Streets and Highways Code. In these statutes the State proclaims intent to:

> "establish the State's responsibility for the protection and enhancement of California's natural scenic beauty by identifying those portions of the State highway system which, together with adjacent scenic corridors, require special conservation treatment." (Scenic corridors consist of land that is visible from, adjacent to, and outside the highway right-of-way, and is comprised primarily of scenic and natural features. Topography, vegetation, viewing distance, and/or jurisdictional lines determine the corridor boundaries.)

Existing law provides Caltrans with full possession and control of all State highways. This legislation places the Scenic Highway Program under the stewardship of Caltrans.

The legislation further declares the intent of the State to assign responsibility for the regulation of land use and development along scenic highways to the appropriate State and local governmental agencies. A county highway component was later added to the Scenic Highway Program in Section 154 of the Streets and Highways Code. These and related statutes are located in Appendix A.

Scenic Highway Program Features

The following features characterize the program:

- A State Scenic Highway System list of highways eligible to become, or designated as, official scenic highways. Legislative action establishes and amends this list.

- A process for the designation of official State or County Scenic Highways whereby cities and/or counties (hereafter referred to as local governing bodies) develop and implement a Corridor Protection Program containing five legislatively required elements, generally accepted as land use planning standards.

- State and District Scenic Highway Coordinators who review and recommend eligible highways for official scenic highway designation to the Caltrans Director.

- Caltrans places scenic highway signs with the poppy logo along officially designated scenic routes (the California poppy serves as the logo for the California Scenic Highway Program).

- A process for revoking official State or County Scenic Highway designations that no longer comply with the program requirements.

SECTION II: SCENIC HIGHWAY CRITERIA

The goal of the California Scenic Highway Program is to preserve and enhance the natural beauty of California. California contains several distinct landscape regions and the merits of a particular landscape are considered within the context of its own region. Regardless of landscape region, the highway should traverse an area of outstanding scenic quality, containing striking views, flora, geology, or other unique natural attributes. Therefore, Caltrans evaluates the merits of a nominated highway on how much of the natural landscape a traveler sees and the extent to which visual intrusions impact the "scenic corridor." Visual intrusions may be natural or constructed elements, viewed from the highway, that adversely affect the scenic quality of a corridor. Adverse affects are characterized as minor, moderate, or major. Visual intrusions are evaluated in the following manner:

- The more pristine the natural landscape is and less affected by intrusions, the more likely the nominated highway will qualify as scenic.

- Where intrusions have occurred, the less impact they have on an area's natural beauty, the more likely the nominated highway will qualify as scenic.

- The extent to which intrusions dominate views from the highway will determine the significance of their impact on the scenic corridor.

State highways nominated for scenic designation must first be on the statutory list of highways eligible for scenic designation in the State Scenic Highway System. These highways are identified in Section 263 of the Streets and Highways Code (see Appendix A). A process for adding eligible highways to the statutory list is described in Section III: Obtaining Eligibility. *County* highways nominated for scenic designation that are believed to have outstanding scenic values are considered eligible and do not require any legislative action. Both State and county highway nominations follow the same process and have the same requirements.

Scenic highway nominations are evaluated using the following criteria:

- The State or county highway consists of a scenic corridor that is comprised of a memorable landscape that showcases the natural scenic beauty or agriculture of California (see definition for ‘vividness’, under Section III: Step 1, Visual Assessment).

- Existing visual intrusions do not significantly impact the scenic corridor (see definitions for ‘intactness’ and ‘unity’ below, under Section III. Step 1: Visual Assessment).

- Demonstration of strong local support for the proposed scenic highway designation.

- The length of the proposed scenic highway is not less than a mile and is not segmented.

When Caltrans determines the proposed scenic highway satisfies these qualifications, the local governing body, with citizen support, must adopt a program to protect the scenic corridor. The zoning and land use along the highway must meet the State's legislatively required elements for scenic highway corridor protection as stated in Section IV: Designation Process.

SECTION III: NOMINATION PROCESS

Obtaining Eligibility

A state route must be included on the list of highways eligible for scenic highway designation in Streets and Highways Code Section 263 (see Appendix A). State routes not listed must be added before they can be nominated for official designation. Additions and deletions can only be made through legislative action. Short (less than a mile) or segmented routes are not recommended for inclusion in the State Scenic Highway System. If several suitable routes within a jurisdiction are being considered, they may be incorporated by a single legislative action.

It is advisable for the local governing body to consult with the Caltrans District Scenic Highway Coordinator to determine suitability for scenic designation *before* seeking legislative action. Location and contact information for Caltrans Scenic Highway Coordinators is in Appendix D.

Eligible Scenic Highways

Once a state route is in Streets and Highways Code Section 263, it may be nominated for official designation by the local governing body with jurisdiction over the lands adjacent to the proposed scenic highway. The application to nominate eligible scenic highways for official designation requires the preparation of a visual assessment and Scenic Highway Proposal. The proposal must include a letter of intent from the local governing body, topographic and zoning maps, and a narrative description of the scenic elements in the corridor that includes a discussion of any visual intrusions on scenic views. Steps for completing the application are explained below. A flow chart summarizing the process and procedure is in Appendix B. The local governing body should contact the District Scenic Highway Coordinator before starting this process. See Appendix D for contact information.

STEP 1
Visual Assessment

The local governing body must prepare and submit a brief and concise visual assessment. The visual assessment must identify scenic attributes and visual intrusions, as viewed from the highway, and describe how those characteristics contribute or detract from the overall quality of the corridor's visual environment. The local governing body should consult with the District Scenic Highway Coordinator prior to preparing the visual assessment.

The visual assessment should include the following items for the proposed scenic highway:

- Identification of major landscape segments that represent unique characteristics or that correspond to previously named places or districts.

- An inventory of the natural landscape such as landforms, vegetation, water features.

- A description of visual intrusions and length of impact. Not more then one-quarter of the proposed scenic highway should be impacted by visual intrusions. For a mile segment, "one-quarter" is calculated either as 1/4 of a mile impacted by continuous intrusions on one or both sides of the highway, or intrusions occurring on one or the other side of the highway totaling 1/4 of a mile. Examples of visual intrusions are provided in Appendix E.

- Photo-images or other supporting graphics.

California contains several distinct landscape regions and the merits of a particular landscape are considered within the context of its own region. However, the highway should traverse an area of outstanding scenic quality, containing striking views, flora, geology, and other unique natural attributes.

The visual assessment should use the following terms in discussing visual quality of the proposed scenic highway:

- **Vividness** - The extent to which the landscape is memorable. This is associated with the distinctiveness, diversity and contrast of visual elements. A vivid landscape makes an immediate and lasting impression on the viewer.

- **Intactness** - The integrity of visual order in the landscape and the extent to which the natural landscape is free from visual intrusions.

- **Unity** - The extent to which visual intrusions are sensitive to and in visual harmony with the natural landscape.

STEP 2
Consultation with Caltrans

The local governing body must discuss and field review the visual assessment of the proposed scenic highway with the District Scenic Highway Coordinator before proceeding to Step 3.

STEP 3
Scenic Highway Proposal

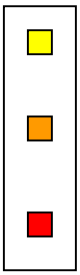
The local governing body must prepare a Scenic Highway Proposal that consists of the following:

A. Letter of intent – The local governing body must submit a current letter of intent to seek official scenic highway designation. When more than one governing body is involved, a joint letter of intent may be submitted. The letter should cite the reason(s) (e.g., scenic protection, tourism) for seeking official scenic highway designation.

B. Topographic map and map overlay – A two-part mapping procedure is required to illustrate the visual quality of the proposed scenic highway.

A topographic map (USGS or comparable) should show the proposed scenic corridor boundaries and scenic highway limits. The map should show natural features in the landscape such as landforms, water, and vegetative cover.

The map overlay should be colored to indicate where minor, moderate, and major intrusions (see definitions and colors below) are visible from the highway. These colored intrusions should correspond and be identified by state highway post-mile designations. As an alternative to the map overlay, the topographic map may be colored to indicate the level of intrusions. Examples of intrusions are in Appendix E.



Minor intrusions are those that are somewhat but not entirely compatible with the landscape or are of recognized cultural or historical significance. Color these yellow.

Moderate intrusions are those that are not well integrated into the landscape and yet do not dominate the landscape or obstruct scenic views. Color these orange.

Major intrusions are those that dominate the landscape, degrade or obstruct scenic views. Color these red.

C. Zoning map - A zoning map should delineate the scenic corridor and show existing and allowable land uses.

D. Narrative - A complete description of the elements that makes the route scenic, including natural features, structures of historical significance and other scenic resources that are visible from the highway. The narrative should describe the types of visual intrusions such as buildings, unsightly land uses, and noise barriers, and the percentage for minor, moderate, or major intrusions impacting the highway. In addition, provide a description of present zoning and planned zoning changes for lands in the scenic corridor. Include photo-images and other supporting graphics.

To calculate the percentage of the highway impacted by visual intrusions, determine the highway length impacted by each intrusion and divide it by the total mileage of the proposed scenic highway in one direction. When intrusions occur on both sides of the highway at the same location, measure and select only the more prominent intrusion (e.g., major over moderate, moderate over minor) for calculating length and percentage. As an example, when a 5-mile segment of proposed scenic highway has a 1/2-mile section that is impacted by moderate intrusions on one side and minor intrusions on the other, then it should be noted that approximately ten percent of the roadway is impacted by moderate intrusions.

The Scenic Highway Proposal should be placed on the agenda at a public meeting to allow public input at the beginning of the project. Include letters of support for the proposal from the public and other interested parties.

Examples of Scenic Highway Proposals are available on the Scenic Highways webpage at:
http://www.dot.ca.gov/hq/LandArch/scenic/guidelines/sr1_example.pdf
http://www.dot.ca.gov/hq/LandArch/scenic/guidelines/sr395_example.pdf

STEP 4
Caltrans Review of Scenic Highway Proposal

- Following completion of the Scenic Highway Proposal, the local governing body submits 1 electronic copy and 3 hard copies to the District Scenic Highway Coordinator.

- The District Scenic Highway Coordinator forwards a copy of the proposal to the State Scenic Highway Coordinator for concurrent review. The proposal is reviewed for

completeness and accuracy, and to ensure it complies with Section II: Scenic Highway Criteria.

- ❖ The District Scenic Highway Coordinator provides comments to the local governing body, including those by the State Scenic Highway Coordinator, for incorporating into the proposal.

- ❖ After the final package is accepted and the Scenic Highway Coordinators determine the route meets scenic highway criteria, the District Scenic Highway Coordinator directs the local governing body to begin the next step; preparation and adoption of the Corridor Protection Program as described in Section IV: Designation Process.

SECTION IV: DESIGNATION PROCESS

STEP 1
Corridor Protection Program

This step requires the local governing body to develop and adopt protection measures in the form of ordinances, zoning, and/or planning policies that apply to the area of land within the scenic corridor (see definition in Section I: Scenic Highway Program History). When there is more than one governing body involved, each jurisdiction shall jointly submit protection measures. Such ordinances and/or policies may already exist. They should be assembled in an easy-to-read format and arranged under the headings of the five legislatively required elements[1] listed below. They should be written in sufficient detail to avoid broad discretionary interpretation and demonstrate a concise strategy to effectively maintain the scenic character of the corridor. An effective protection program ensures that activities within the scenic corridor are compatible with scenic resource protection and consistent with community values, while still allowing appropriate development.

The five legislatively required elements of corridor protection[2] are:

1) Regulation of land use and density of development (i.e., density classifications and types of allowable land uses),

2) Detailed land and site planning (i.e., permit or design review authority and regulations for the review of proposed developments),

3) Control of outdoor advertising (i.e., prohibition of off-premise advertising signs[3] and control of on-premise advertising signs),

4) Careful attention to and control of earthmoving and landscaping (i.e., grading ordinances, grading permit requirements, design review authority, landscaping and vegetation requirements), and

[1] See Appendix A, Section 261 of the Streets and Highways Code, Planning and Design Standards.
[2] For additional requirements on scenic highways see Appendix A, Section 320 of the Public Utilities Code, Undergrounding of Electric and Communication Distribution Facilities near State Scenic Highways.
[3] See Appendix A, Section 5440.1 of the Business and Professions Code, Outdoor Advertising Act.

5) The design and appearance of structures and equipment (i.e., design review authority and regulations for the placement of utility structures, microwave receptors, wireless communication towers, etc.).

Examples of Corridor Protection Programs are available on the Scenic Highways webpage at:
http://www.dot.ca.gov/hq/LandArch/scenic/guidelines/sr1_example.pdf
http://www.dot.ca.gov/hq/LandArch/scenic/guidelines/sr395_example.pdf

STEP 2
Public Participation

Public participation is important for the preparation of a Corridor Protection Program. Affected property owners, local citizens' committees, environmental groups and other stakeholders who might be impacted or interested in the proposed designation should be involved as early as possible to afford ample time for review and comment before official action is taken. Direct notification of affected parties by the local governmental body is strongly suggested. Effective citizen participation results in a protection program that meets local desires and reduces the probability of controversy.

STEP 3
Caltrans Review of Corridor Protection Program

Following adoption of the Corridor Protection Program, the local governing body(s) submits a request for official designation to the District Scenic Highway Coordinator. The submittal must include 1 electronic version and 3 hard copies of each:

- The adopted Corridor Protection Program, arranged under the headings of the five legislatively required elements,
- A brief description of the process employed for public participation, and
- Evidence of protection program adoption such as official resolution, copy of local ordinances, or planning policies.

The Corridor Protection Program is reviewed as follows:

- The District Scenic Highway Coordinator forwards a copy of the Corridor Protection Program to the State Scenic Highway Coordinator for concurrent review. The coordinators check for compliance with the five legislatively required elements and indicate to the local governing body any deficiencies of the Corridor Protection Program.
- After receiving an acceptable submittal that includes any deficiency corrections, the District Scenic Highway Coordinator submits a recommendation for official designation to the Caltrans District Director for concurrence.
- Upon District Director concurrence, a recommendation to designate the route is submitted to the State Scenic Highway Coordinator. If the State Scenic Highway Coordinator concurs with the District recommendation, then a final recommendation to designate the route is submitted to the Caltrans Director for approval.

STEP 4
Official Designation of Scenic Highways

If the Caltrans Director approves the scenic highway recommendation, the route becomes an official State Scenic Highway. In the case of a recommendation to designate a county highway, the Director authorizes the county to designate the highway as an official County Scenic Highway. State and County Scenic Highways are on the Caltrans scenic highway map and included with other information made available to the public.

SECTION V: SCENIC HIGHWAY SIGNS

Upon official designation, Caltrans places and maintains scenic highway signs on *State* Scenic Highways. For *County* Scenic Highways the District, at its discretion, furnishes scenic highway signs to the county at no cost. The county is responsible for the installation and maintenance of these signs. Standards for scenic highway signing are published in the *Manual of Uniform Traffic Control Devices (MUTCD) California Supplement* and include guidance for:

Posting **G30** scenic highway signs (48" x 26"), when appropriate, with the words "scenic route," to identify routes that have been designated as official State Scenic Highways. The sign is installed on the right at the beginning of the scenic route. A standard sign indicating, "begin" (26" x 12") may be used with this sign.

Posting **G30A** scenic highway signs (12" x 18" or 18" x 27") at beginning, end and/or intermittent locations on the State Scenic Highway. These signs are posted below and on the same post as the route shields. On conventional highways, these signs will be installed at important urban and rural intersections and at three- to five-mile intervals in rural areas. **G30C** signs indicating "begin" (26" x 12") and/or **G30D** signs indicating "end" (18" x 12") may be used in combination with these signs.

Posting **G30B** five-sided scenic highway signs (18" x 18" or 24"x 24") at beginning and/or intermittent locations on the County Scenic Highway.

All requests for new or replacement signs must be ordered and approved by the Caltrans District Traffic Engineer.

SECTION VI: COMPLIANCE REVIEW

The degree to which a Corridor Protection Program is successful depends on enforcement of the protection measures. This requires that the District Scenic Highway Coordinator remains familiar with the requirements of the protection program and any significant visual changes to the corridor. Caltrans is authorized by statute to revoke an official scenic highway designation if it

determines that the Corridor Protection Program or the scenic quality of the corridor is no longer in compliance.

Caltrans defines non-compliance for a Corridor Protection Program as a program that:

- No longer complies with the five legislatively required elements under Section 261 of the Streets and Highways Code, or
- No longer affords protection because required elements have been amended or changed, or
- No longer is being enforced by the local governing body.

Non-compliance for scenic quality is defined as a route or route segment that has been significantly degraded due to visual intrusions.

To maintain the consistency and integrity of the California Scenic Highway Program, Caltrans conducts a compliance review of each designated scenic highway and its Corridor Protection Program every five years, or more often if the corridor has significant scenic degradation issues. The District Scenic Highway Coordinator initiates this effort and conducts a field review to assess the effectiveness of the route's protection program. At this time the local governing body(s) is asked to provide a copy of the protection program, that includes any amendments or updates, approved variances or exceptions that are relevant. If the local governing body chooses to forego this review it may request, by letter of intent, revocation of the scenic highway designation. For the complete process under this circumstance see Section VII: Revocation Process.

If it is determined that no scenic degradation or protection program infractions exist, or if infractions have been identified and are resolved, the District Scenic Highway Coordinator informs the State Scenic Highway Coordinator and certifies route compliance. When protection program infractions are identified, the District Scenic Highway Coordinator will notify the local governing body(s) to discuss a possible resolution. The local governing body(s) will be given a period of one year from the date of notification to remedy the infraction(s). The District Scenic Highway Coordinator documents the protection program infractions and whether or not they are resolved.

SECTION VII: REVOCATION PROCESS

Initiated by Caltrans

- When significant scenic degradation has occurred or when there are protection program infractions that cannot be resolved, the District Scenic Highway Coordinator informs the State Scenic Highway Coordinator.
- The District Scenic Highway Coordinator prepares the appropriate documentation and, with concurrence from the District Director, notifies the local governing body of the Department's intent to revoke the scenic highway designation.
- Following a meeting between the District and the local governing body to discuss this action, the District Scenic Highway Coordinator submits a recommendation for revocation to the State Scenic Highway Coordinator.

- ❖ If the State Scenic Highway Coordinator concurs with the District recommendation, then a final recommendation for revocation is submitted to the Caltrans Director for approval.

- ❖ The Director makes the final decision to revoke the scenic highway designation. If the Director approves revocation, the local governing body(s) receives official notification of this action. Caltrans removes scenic highway signs along the route and references in maps and other program materials.

- ❖ For County Scenic Highways the Director rescinds authority of the county to designate the highway as scenic and officially requests that the county remove the scenic highway signs along the route. References in maps and other program materials are removed.

- ❖ The appropriate portions of these State and county routes are no longer considered eligible and the local governing body (s) is no longer required to maintain its Corridor Protection Program.

Initiated by Local Governing Body

- ❖ A local governing body may request that Caltrans revoke a scenic highway designation within its jurisdiction at any time. The revocation proposal should be placed on the agenda at a public meeting to allow public input.

- ❖ A letter of intent by the local governing body must be submitted to the District Scenic Highway Coordinator. When more than one governing body is responsible for the scenic highway, a joint letter must be submitted. The letter should cite the reason(s) for the jurisdiction's desire to revoke the scenic highway designation.

- ❖ The District Scenic Highway Coordinator informs the Caltrans District Director and forwards the request, including documentation, to the State Scenic Highway Coordinator.

- ❖ After receiving the revocation request the State Scenic Highway Coordinator reviews and then forwards it to the Caltrans Director for approval.

- ❖ The Director approves the revocation and officially notifies the local governing body(s). Caltrans removes scenic highway signs along the State routes and for county routes requests that the county remove its scenic highway signs. References in maps and other program materials are removed.

SECTION VIII: CONFLICT RESOLUTION PROCESS

The Chief, Division of Design facilitates the resolution of Department or external conflicts regarding scenic highway designation or revocation proposals. Conflicts may arise from opposing recommendations between the District and the Landscape Architecture Program (LAP) for scenic highway designation or revocation proposals. Similarly, a local governing body may not agree with the Department's position on the merits of a designation or revocation proposal. The elevation of a conflict to the Chief, Division of Design, should be done only after both parties have consented to this course of action and all reasonable efforts have been made to reach agreement at the lowest level possible. Elevation of the issue should occur in a timely manner.

Initiated by Caltrans

For internal Department conflicts, issues are documented in memorandum form and forwarded to the Chief, Division of Design for discussion. The District and LAP describe their opposing positions in this memo, and provide the appropriate background, discussion, time factor, and recommendation. The Chief, Division of Design facilitates a meeting between the District and LAP representatives, and ensures that each party make a concerted effort to reach a consensus. If consensus cannot be reached, the Chief Engineer reviews the issue and determines the Department's official position for designation or revocation. The goal is to provide a unified Department response to the local jurisdiction for designation or revocation proposals.

Initiated by Local Governing Body

When the local governing body does not agree with the Department's position regarding scenic highway designation or revocation proposals, it requests a meeting with the Chief, Division of Design. The Chief, Division of Design facilitates a meeting between the local agency and the Department's representatives. Each party presents their case, and after careful consideration of this information, including scenic highway program guidance and statutes, the Chief, Division of Design recommends a resolution. If the local governing body does not agree to the resolution then they may submit an appeal to the Chief Engineer for reconsideration. The Chief Engineer reviews the appeal and makes a final determination on recommending scenic highway designation or revocation to the Director. If a revocation recommendation is forwarded to the Director for approval, full disclosure of any opposition by the local governing body is included.

SECTION IX: MISCELLANEOUS

Route Realignments and Relocation

When a route is realigned from its original location, scenic designation or eligibility status is not automatically carried over to the new location. A route may be eligible for designation when the new alignment is within the same corridor, or when the alignment is outside of the existing corridor and in an area of outstanding scenic quality. Scenic designation may be transferred if the new alignment remains within the protected scenic corridor. The Caltrans District Scenic Highway Coordinator makes these determinations with concurrence from the State Scenic Highway Coordinator.

Undergrounding of Utility Lines

Section 320 of the California Public Utilities Code requires the undergrounding of all new or relocated electric and communication distribution facilities within 1,000 feet of any highway designated an official scenic highway and visible from that highway where feasible. Appendix A provides the full text of Section 320. Copies of the Public Utilities Commission's Order and Court Decisions Relating to Section 320 are available from the Caltrans District Scenic Highway Coordinator, and provide more detail on utility undergrounding. The California Public Utilities Commission makes final determinations regarding exceptions to undergrounding utilities.

Effects of Official Designation on Highway Construction, Emergency Repairs and Maintenance Activities

Highway construction and emergency repairs proposed on designated State Scenic Highways are evaluated for visual impact to scenic views as part of the environmental process. If impacts occur, then appropriate mitigation measures are necessary. Generally, the designation of a route as an official scenic highway does not substantially alter the type of project proposed but it may limit the use of statutory or categorical exemption from the California Environmental Quality Act[4] (CEQA).

Caltrans works with appropriate agencies to ensure the protection of scenic corridors to the maximum extent feasible. It identifies impacts to scenic corridors such as degradation and obstruction of scenic views as an integral part of its project planning, project development and maintenance operations.

[4] See Appendix A, Public Resources Code Sections 21080.33 and 21084(b)

APPENDIX A

STATUTES RELATING TO THE CALIFORNIA STATE SCENIC HIGHWAY PROGRAM

STREETS AND HIGHWAY CODE
Division 1, Chapter 2, Article 2.5

260. LEGISLATIVE INTENT
It is the intent of the Legislature in designating certain portions of the state highway system as state scenic highways to establish the State's responsibility for the protection and enhancement of California's natural scenic beauty by identifying those portions of the state highway system which, together with the adjacent scenic corridors, require special scenic conservation treatment. It is further declared to be the intent of the Legislature in designating such scenic highways to assign responsibility for the development of such scenic highways and for the establishment and application of specific planning and design standards and procedures appropriate thereto and to indicate, in broad statement terms, the location and extent of routes and areas requiring continuing and careful coordination of planning, design, construction, and regulation of land use and development, by state and local agencies as appropriate, to protect the social and economic values provided by the State's scenic resources.

261. PLANNING AND DESIGN STANDARDS; COMPLETE HIGHWAY
The department shall establish and apply pertinent planning and design standards for development of official scenic highways. In establishing and applying such standards for, and undertaking the development of official scenic highways, the department shall take into consideration the concept of the "complete highway," which is a highway which incorporates not only safety, utility, and economy, but also beauty. The department shall also take into consideration in establishing such standards that, in a "complete highway," pleasing appearance is a consideration in the planning and design process. In the development of official scenic highways, the department shall give special attention both to the impact of the highway on the landscape and to the highway's visual appearance. The standards for official scenic highways shall also require that local governmental agencies have taken such action as may be necessary to protect the scenic appearance of the scenic corridor, the band of land generally adjacent to the highway right-of-way, including, but not limited to, (1) regulation of land use and intensity (density) of development; (2) detailed land and site planning; (3) control of outdoor advertising; (4) careful attention to and control of earthmoving and landscaping; and (5) the design and appearance of structures and equipment.

262. DESIGNATION OF SCENIC HIGHWAYS
Whenever the department determines that the corridor protection program for any state highway in the state scenic highway system established by this article has been implemented by local governmental agencies and a plan and program has been developed by the department for bringing the highway up to the standards for official scenic highways established by the department, including the concept of the "complete highway," as described in Section 261, the department shall designate the highway as an official state scenic highway and shall so indicate the highway in any publications of the department or in any maps which are issued by the department to the public.

The department shall cause appropriate signs to be placed and maintained along the portions of the state scenic highway system which the department has designated as official state scenic highways that indicate that the highways are official state scenic highways.

If at any time the department determines that the corridor protection program of local governmental agencies, with respect to any highway which has been designated as an official state scenic highway, no longer adequately carries out responsibility of the local governmental agencies for the protection of the scenic corridor, it may revoke the designation of the highway as an official state scenic highway and remove the signs which so indicate the highway.

262.1 LOCATION AND CONSTRUCTION OF NEW DISTRICT FACILITY OF LOCAL AGENCY WITHIN SCENIC CORRIDOR; APPROVAL

A local agency as defined in subdivision (c) of Section 65402 of the Government Code, shall coordinate its planning with, and obtain the approval from, the appropriate local planning agency on the location and construction of any new district facility that would be within the scenic corridor of any state scenic highway.

263. SCENIC HIGHWAY SYSTEM; ESTABLISHMENT; COMPOSITION

The state scenic highway system is hereby established and shall be composed of the highways specified in this article. The highways listed in Sections 263.1 to 263.8, inclusive are either eligible for designation as state scenic highways or have been so designated.

263.1 THE STATE SCENIC HIGHWAY SYSTEM SHALL INCLUDE:

Routes 28, 35, 38, 52, 53, 62, 74, 75, 76, 89, 96, 97, 127, 150, 151, 154, 156, 158, 161, 173, 197, 199, 203, 209, 221, 236, 239, 243, 247, 254, and 330 in their entirety.

263.2 ADDITIONAL INCLUSIONS; PORTIONS OF ROUTES 1 TO 4

The state scenic highway system shall also include:

- Route 1 from: (a) Route 5 south of San Juan Capistrano to Route 19 near Long Beach, (b) Route 187 near Santa Monica to Route 101 near El Rio, (c) Route 101 at Las Cruces to Route 246 near Lompoc, (d) Route 227 south of Oceano to Route 101 near Pismo Beach, (e) Route 101 near San Luis Obispo to Route 35 near Daly City, (f) Route 35 in San Francisco to Route 101 near the approach to the Golden Gate Bridge in San Francisco, (g) Route 101 near Marin City to Route 101 near Leggett.
- Route 2 from Route 210 in La Canada Flintridge to Route 138 via Wrightwood.
- Route 3 from: (a) Route 36 near Peanut to Route 299 near Douglas City, (b) Route 299 near Weaverville to Montague.
- Route 4 from: (a) Route 160 near Antioch to Route 84 near Brentwood, (b) Route 49 near Angels Camp to Route 89.

263.3 ADDITIONAL INCLUSIONS; PORTIONS OF ROUTES 5, 8 TO 10, 12, 14 TO 18, 20, 24, 25, 27, 29, 30, 33 AND 36

The state scenic highway system shall also include:

- Route 5 from: (a) The international boundary near Tijuana to Route 75 near the south end of San Diego Bay, (b) San Diego opposite Coronado to Route 74 near San Juan Capistrano, (c) Route 210 near Tunnel Station to Route 126 near Castaic, (d) Route 152 west of Los Banos to Route 580 near Vernalis, (e) Route 44 near Redding to the Shasta Reservoir, (f) Route 89 near Mt. Shasta to Route 97 near Weed, (g) Route 3 near Yreka to the Oregon state line near Hilts.
- Route 8 from Sunset Cliffs Boulevard in San Diego to Route 98 near Coyote Wells.
- Route 9 from: (a) Route 1 near Santa Cruz to Route 2 near Boulder Creek, (b) Route 236 near Boulder Creek to Route 236 near Waterman Gap, (c) Route 236 near Waterman Gap to Route 35, (d) Saratoga to Route 17 near Los Gatos, (e) Blaney Plaza in Saratoga to Route 35.
- Route 10 from Route 38 near Redlands to Route 62 near Whitewater.
- Route 12 from Route 101 near Santa Rosa to Route 121 near Sonoma.
- Route 14 from Route 58 near Mojave to Route 395 near Little Lake.
- Route 15 from: (a) Route 76 near the San Luis Rey River to Route 91 near Corona, (b) Route 58 near Barstow to Route 127 near Baker.
- Route 16 from Route 20 to Capay.
- Route 17 from Route 1 near Santa Cruz to Route 9 near Los Gatos.
- Route 18 from Route 138 near Mt. Anderson to Route 247 near Lucerne Valley.
- Route 20 from: (a) Route 1 near Fort Bragg to Route 101 near Willits, (b) Route 101 near Calpella to Route 16, (c) Route 49 near Grass Valley to Route 80 near Emigrant Gap.
- Route 24 from the Alameda-Contra Costa county line to Route 680 in Walnut Creek.
- Route 25 from Route 198 to Route 156 near Hollister.
- Route 27 from Route 1 to Mulholland Drive.

•Route 29 from: (a) Route 37 near Vallejo to Route 221 near Napa, (b) The vicinity of Trancas Street in northwest Napa to Route 20 near Upper Lake.
•Route 30 from Route 330 near Highland to Route 10 near Redlands.
•Route 33 from: (a) Route 101 near Ventura to Route 150, (b) Route 150 to Route 166 in Cuyama Valley, (c) Route 198 near Coalinga to Route 198 near Oilfields.
•Route 36 from: (a) Route 101 near Alton to Route 3 near Peanut, (b) Route 89 near Morgan Summit to Route 89 near Deer Creek Pass.

263.4 ADDITIONAL INCLUSIONS; PORTIONS OF ROUTES 37, 39 TO 41, 44, 46, 49, 50, 57, 58, 68, 70 AND 71

The state scenic highway system shall also include:

•Route 37 from: (a) Route 251 near Nicasio to Route 101 near Novato, (b) Route 101 near Ignacio to Route 29 near Vallejo.
•Route 39 from Route 210 near Azusa to Route 2.
•Route 40 from Barstow to Needles.
•Route 41 from: (a) Route 1 near Morro Bay to Route 101 near Atascadero, (b) Route 46 near Cholame to Route 33, (c) Route 49 near Oakhurst to Yosemite National Park.
•Route 44 from Route 5 near Redding to Route 89 near Old Station.
•Route 46 from: (a) Route 1 near Cambria to Route 101 near Paso Robles, (b) Route 101 near Paso Robles to Route 41 near Cholame.
•Route 49 from: (a) Route 41 near Oakhurst to Route 120 near Moccasin, (b) Route 120 to Route 20 near Grass Valley, (c) Route 20 near Nevada City to Route 89 near Sattley.
•Route 50 from Route 49 near Placerville to the Nevada state line near Lake Tahoe.
•Route 57 from Route 90 to Route 60 near Industry.
•Route 58 from Route 14 near Mojave to Route 15 near Barstow.
•Route 68 from Monterey to Route 101 near Salinas.
•Route 70 from Route 149 near Wicks Corner to Route 83 north of Corona.
•Route 71 from Route 91 near Corona to Route 83 north of Corona.

263.5 ADDITIONAL INCLUSIONS; PORTIONS OF ROUTES 78 TO 80, 84, 88, 91, 92 AND 94

The state scenic highway system shall also include:

•Route 78 from Route 79 near Santa Ysabel to Route 86 passing near Julian.
•Route 79 from: (a) Route 8 near Descanso to Route 78 near Julian, (b) Route 78 near Santa Ysabel to Route 371 near Aguanga.
•Route 80 from: (a) Route 280 near First Street in San Francisco to Route 61 in Oakland, (b) Route 20 near Emigrant Gap to the Nevada state line near Verdi, Nevada.
•Route 84 from Route 238 to Route 680 near Sunol.
•Route 88 from Route 49 in Jackson to the Nevada state line via Pine Grove, Silver Lake, and Kirkwood.
•Route 91 from Route 55 near Santa Ana Canyon to Route 15 near Corona.
•Route 92 from Route 1 near Half Moon Bay to Route 280 near Crystal Springs Lake.
•Route 94 from Route 125 near Spring Valley to Route 8 west of Jacumba.

263.6 ADDITIONAL INCLUSIONS; PORTIONS OF ROUTES 101, 108, 111, 116, 118, 120, 121, 125 AND 126

The state scenic highway system shall also include:

•Route 101 from: (a) Route 27 (Topanga Canyon Road) to Route 46 near Paso Robles, (b) Route 156 near Prunedale northeasterly to Route 156, (c) A point in Marin County opposite San Francisco to Route 1 near Marin City, (d) Route 37 near Ignacio to Route 37 near Novato, (e) Route 20 near Calpella to Route 20 near Willits, (f) Route 1 near Leggett to Route 199 near Crescent City, (g) Route 197 near Fort Dick to the Oregon state line.
•Route 108 from Route 49 near Sonora to Route 395.
•Route 111 from: (a) Bombay Beach in Salton Sea State Park to Route 195 near Mecca, (b) Route 74 near Palm Desert to Route 10 near Whitewater.
•Route 116 from Route 101 near Cotati to Route 1 near Jenner.
•Route 118 from Route 23 to DeSoto Avenue near Browns Canyon.

- •Route 120 from: (a) Route 49 near Chinese Camp to Route 49 near Moccasin, (b) The east boundary of Yosemite National Park to Route 395 near Mono Lake.
- •Route 121 from: (a) Route 37 near Sears Point to Route 12 near Sonoma, (b) Route 221 near Napa State Hospital to near the vicinity of Trancas Street in northeast Napa.
- •Route 125 from Route 94 near Spring Valley to Route 8 near La Mesa.
- •Route 126 from Route 150 near Santa Paula to Route 5 near Castaic.

263.7 ADDITIONAL INCLUSIONS; PORTIONS OF ROUTES 138 TO 140, 142, 146, 152, 160, 163, 166, 168, 174, 178, 180, 190 AND 266

The state scenic highway system shall also include:

- •Route 138 from Route 2 near Wrightwood to Route 18 near Mt. Anderson.
- •Route 139 from Route 299 near Canby to the Oregon state line near Hatfield.
- •Route 140 from Route 49 at Mariposa to Yosemite National Park near El Portal.
- •Route 142 from the Orange-San Bernardino county line to Peyton Drive.
- •Route 146 from Pinnacles National Monument to Route 25 in Bear Valley.
- •Route 152 from: (a) Route 1 to the Santa Clara county line at Hecker Pass, (b) Route 156 near San Felipe to Route 5.
- •Route 160 from Route 4 near Antioch to Sacramento.
- •Route 163 from Ash Street in San Diego to Route 8.
- •Route 166 from Route 101 near Santa Maria to Route 33 in Cuyama Valley.
- •Route 168 from: (a) Route 65 near Clovis to Huntington Lake, (b) Camp Sabrina to Route 395, (c) Route 395 at Big Pine to Route 266 at Oasis.
- •Route 174 from the Bear River to the Grass Valley city limits.
- •Route 178 from the east boundary of Death Valley National Monument to Route 127 near Shoshone.
- •Route 180 from: (a) Route 65 near Minkler to General Grant Grove section of Kings Canyon National Park, (b) General Grant Grove section of Kings Canyon National Park to Kings Canyon National Park boundary near Cedar Grove.
- •Route 190 from Route 65 near Porterville to Route 127 near Death Valley Junction.
- •Route 266 from the Nevada state line easterly of Oasis to Route 168 at Oasis.

263.8 ADDITIONAL INCLUSIONS; PORTIONS OF ROUTES 198, 210, 215, 251, 280, 299, 395, 580 AND 680

The state scenic highway system shall also include:

- •Route 198 from: (a) Route 101 near San Lucas to Route 33 near Coalinga, (b) Route 33 near Oilfields to Route 5, (c) Route 99 near Goshen to the Sequoia National Park line.
- •Route 210 from Route 5 near Tunnel Station to Route 134.
- •Route 215 from Route 74 near Romoland to Route 74 near Perris.
- •Route 251 from Route 37 near Nicassio to Route 1 near Point Reyes Station.
- •Route 280 from Route 17 in Santa Clara County to Route 80 near First Street in San Francisco.
- •Route 299 from: (a) Route 101 near Arcata to Route 96 near Willow Creek, (b) Route 3 near Weaverville to Route 5 near Redding, (c) Route 89 near Burney to Route 139 near Canby.
- •Route 395 from Route 14 near Little Lake to Route 89 near Coleville.
- •Route 580 from Route 5 southwest of Vernalis to Route 80.
- •Route 680 from the Santa Clara-Alameda county line to Route 24 in Walnut Creek.

STREETS AND HIGHWAYS CODE
Division 1, Chapter 1, Article 3

154. COUNTY SCENIC HIGHWAYS; ENCOURAGEMENT; DESIGNATION; REVOCATION OF DESIGNATION

The department shall encourage the construction and development by counties of portions of the county highways as official county scenic highways and may furnish to the counties any information or other assistance which will aid the counties in the construction or development or such scenic highways. Whenever the department determines that any county highway meets the minimum standards prescribed by the department for official scenic highways, including the concept of the "complete highway," as described in Section 261, it may authorize the county in which the highway is located to designate the highway as an official county scenic highway and the department shall so indicate the highway in publications of the department and in any maps which are prepared by the department for distribution to the public which show the highway.

If the department determines that any county highway which has been designated as an official county scenic highway no longer meets the minimum standards prescribed by the department for official scenic highways, it may, after notice to the county and a hearing on the matter, if requested by the county, revoke the authority of the county to designate the highway as an official county scenic highway.

PUBLIC UTILITIES CODE
Division 1, Part 1, Chapter 2

320. UNDERGROUNDING OF ELECTRIC AND COMMUNICATION DISTRIBUTION FACILITIES NEAR STATE SCENIC HIGHWAYS

The Legislature hereby declares that it is the policy of this State to achieve, whenever feasible and not inconsistent with sound environmental planning, the undergrounding of all future electric and communication distribution facilities which are proposed to be erected in proximity to any highway designated a state scenic highway pursuant to Article 2.5 (commencing with Section 260) of Chapter 2 of Division 1 of the Streets and Highways Code and which would be visible from such scenic highways if erected above ground. The commission shall prepare and adopt by December 31, 1972, a statewide plan and schedule for the undergrounding of all such utility distribution facilities in accordance with the aforesaid policy and the policy and the rules of the commission relating to the undergrounding of facilities.

The commission shall coordinate its activities regarding the plan with local governments and planning commissions concerned.

The commission shall require compliance with the plan upon its adoption.

This section shall not apply to facilities necessary to the operation of any railroad.

PUBLIC RESOURCES CODE
California Environmental Quality Act (CEQA)
Chapter 2.6: General

21080.33. EMERGENCY PROJECTS TO MAINTAIN, REPAIR OR RESTORE EXISTING HIGHWAYS; APPLICATION OF DIVISION; EXCEPTIONS (TO CEQA)

This division does not apply to any emergency project undertaken, carried out, or approved by a public agency to maintain, repair, or restore an existing highway, as defined in Section 360 of the Vehicle Code, except for a highway designated as an official state scenic highway pursuant to Section 262 of the Streets and Highways Code, within the existing right-of-way of the highway, damaged as a result of fire, flood, storm, earthquake, land subsidence, gradual earth movement, or landslide, within one year of the damage.

This section does not exempt from this division any project undertaken, carried out, or approved by a public agency to expand or widen a highway damaged by fire, flood, storm, earthquake, land subsistence, gradual movement, or landslide.

21084. LIST OF EXEMPT CLASSES OF PROJECTS; PROJECTS DAMAGING SCENIC RESOURCES

b) No project which may result in damage to scenic resources, including, but not limited to, trees, historic buildings, rock outcroppings, or similar resources, within a highway designated as an official state scenic highways, pursuant to Article 2.5 (commencing with Section 260) of Chapter 2 of Division 1 of the Streets and Highways Code, shall be exempted from this division pursuant to subdivision (a). This subdivision does not apply to improvements as mitigation for a project for which a negative declaration has been approved or an environmental impact report has been certified.

BUSINESS AND PROFESSIONS CODE
Outdoor Advertising Act
Division 3, Chapter 2. Advertisers
Article 8. Landscaped Freeways

5441. Removal of Structures, Signs

Except as provided in Section 5442.5, no advertising display may be placed or maintained along any highway or segment of any interstate highway or primary highway that before, on, or after the effective date of Section 131(s) of Title 23 of the United States Code is an officially designated scenic highway or scenic byway.

APPENDIX E

EXAMPLES OF VISUAL INTRUSIONS ALONG SCENIC CORRIDORS

The following examples do not include all visual intrusions possible within the corridor. These examples illustrate many of the typical built elements, and should be used as a guide when developing the mapping for the Scenic Highway Proposal. Where more than one example is listed, only one example needs to occur for an intrusion to be applicable. The District Scenic Highway Coordinator may be consulted for assistance in defining specific levels of visual intrusions.

LEVEL OF INTRUSION AND COLOR: **Minor** **Moderate** **Major**

BUILDINGS:
Residential Development, Commercial Development, Industrial Development

Minor - Widely dispersed buildings. Natural landscape dominates. Wide setbacks and buildings screened from roadway. Forms, exterior colors and materials are compatible with landscape. Buildings have cultural or historical significance.

Moderate - Increased numbers of buildings, not well integrated into the landscape. Smaller setbacks and lack of roadway screening. Buildings do not dominate the landscape or obstruct scenic view.

Major - Dense and continuous development. Highly reflective surfaces. Buildings poorly maintained. Visible blight. Development along ridgelines. Buildings dominate the landscape or obstruct scenic view.

UNSIGHTLY LAND USES:
Dumps, Quarries, Concrete Plants, Tank Farms, Auto Dismantling

Minor - Screened from view so that most of facility is not visible from the highway.

Moderate - Not screened and visible but programmed/funded for removal and site restoration. Land use is visible but does not dominate the landscape or obstruct scenic view.

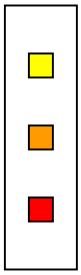
Major - Not screened and visible by motorists. Will not be removed or modified. Land use dominates the landscape or obstructs scenic view.

COMMERCIAL RETAIL DEVELOPMENT

Moderate - Neat and well landscaped. Single story. Generally blends with surroundings. Development is visible but does not dominate the landscape or obstruct scenic view.

Major - Not harmonious with surroundings. Poorly maintained or vacant. Blighted. Development dominates the landscape or obstructs scenic view.

PARKING LOTS



Minor - Screened from view so that most of the vehicles and pavement are not visible from the highway.

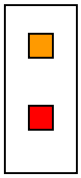
Moderate - Neat and well landscaped. Generally blends with surroundings. Pavement and/or vehicles visible but do not dominate the landscape or degrade scenic view.

Major - Not screened or landscaped. Pavement and/or vehicles dominate the landscape or degrade scenic view.

OFF-SITE ADVERTISING STRUCTURES

Major - Billboards degrade or obstruct scenic view.

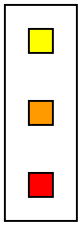
NOISE BARRIERS



Moderate - Noise barriers are well landscaped and complement the natural landscape. Noise barriers do not degrade or obstruct scenic view.

Major - Noise barriers degrade or obstruct scenic view.

POWER LINES AND COMMUNICATION FACILITIES

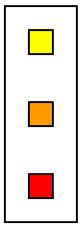


Minor - Not easily visible from road.

Moderate - Visible, but do not dominate scenic view.

Major - Towers, poles or lines dominate view. Scenic view is degraded.

AGRICULTURE:
Structures, Equipment, Crops

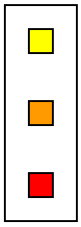


Minor - Generally blends in with scenic view. Is indicative of regional culture.

Moderate - Not compatible with the natural landscape. Scale and appearance of structures and equipment visually competes with natural landscape.

Major - Scale and appearance of structures and equipment are incompatible with and dominates natural landscape. Structures, equipment or crops degrade or obstruct scenic view.

EXOTIC VEGETATION

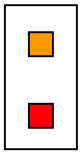


Minor - Used as screening and landscaping. Generally is compatible with scenic view.

Moderate - Competes with native vegetation for visual dominance.

Major - Incompatible with and dominates natural landscape. Scenic view is degraded.

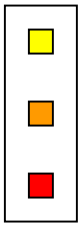
CLEARCUTTING



Moderate - Clearcutting or deforestation is evident, but is in the distant background.

Major - Clearcutting or deforestation is evident. Scenic view is degraded.

EROSION

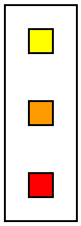


Minor - Minor soil erosion. (i.e., rill erosion)

Moderate - Rill erosion starting to form gullies.

Major - Large slip outs and/or gullies with little or no vegetation. Scenic view is degraded.

GRADING

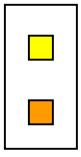


Minor - Grading generally blends with adjacent landforms and topography.

Moderate - Some changes, less engineered appearance and restoration is taking place.

Major - Extensive cut and fill. Unnatural appearance, scarred hillsides or steep slopes with little or no vegetation. Canyons filled in. Scenic view is degraded.

ROAD DESIGN



Minor - Blends in and complements scenic view. Roadway structures are suitable for location and compatible with landscape.

Moderate - Large cut and fill slopes are visible. Scale and appearance of roadway, structures, and appurtenances are incompatible with landscape.

Community Development Department
Standard Operating Procedure

HILLSIDE MANAGEMENT PROGRAM

Purpose: To provide clarification of Departmental policy and to establish consistency regarding the Hillside Management Program (HMP) relating to existing subdivided and developed properties.

Background: The HMP is clear in terms of future hillside development, but there has been a lack of clarity and consistency when it comes the application of the HMP in regard to existing subdivided and developed properties. In researching past practices of limiting or prohibiting grading or building on slopes greater than 30% in existing subdivided and developed properties, research revealed that past practice has been to allow grading, construction of retaining walls, and building on slopes greater than 30%. Furthermore, research of past Council meeting minutes found that shortly after the adoption of the HMP, the Community Development Director explained to the Council that the HMP did not apply to already developed areas. Given the precedence established by past practice and evidence from Council minutes clarifying the intent of the application of the HMP, the following shall be the guidelines to be followed by the Community Development Department staff:

Policy: That Chapter II – Objectives and Policies, Section 6 – Project Review Standards, Paragraph 3 shall be applied as follows:

3. No grading is permitted on any slope greater than 30% except in the following cases:

    - When the grading is for restorative purposes to repair a slope failure and stabilize the slope. A grading plan shall be prepared by an appropriately licensed engineer in the State of California and submitted for City review, approval, and grading permit issuance in accordance with the City grading ordinance.
    - When the grading is to stabilize a slope that has not yet failed, but has become unstable as identified by a soils report prepared by an appropriately licensed engineer in the State of California. A grading plan shall be prepared by an appropriately licensed engineer in the State of California and submitted for City review, approval, and grading permit issuance in accordance with the City grading ordinance.
    - In limited cases for street or access purposes as approved by the City Engineer and the Community Development Department.

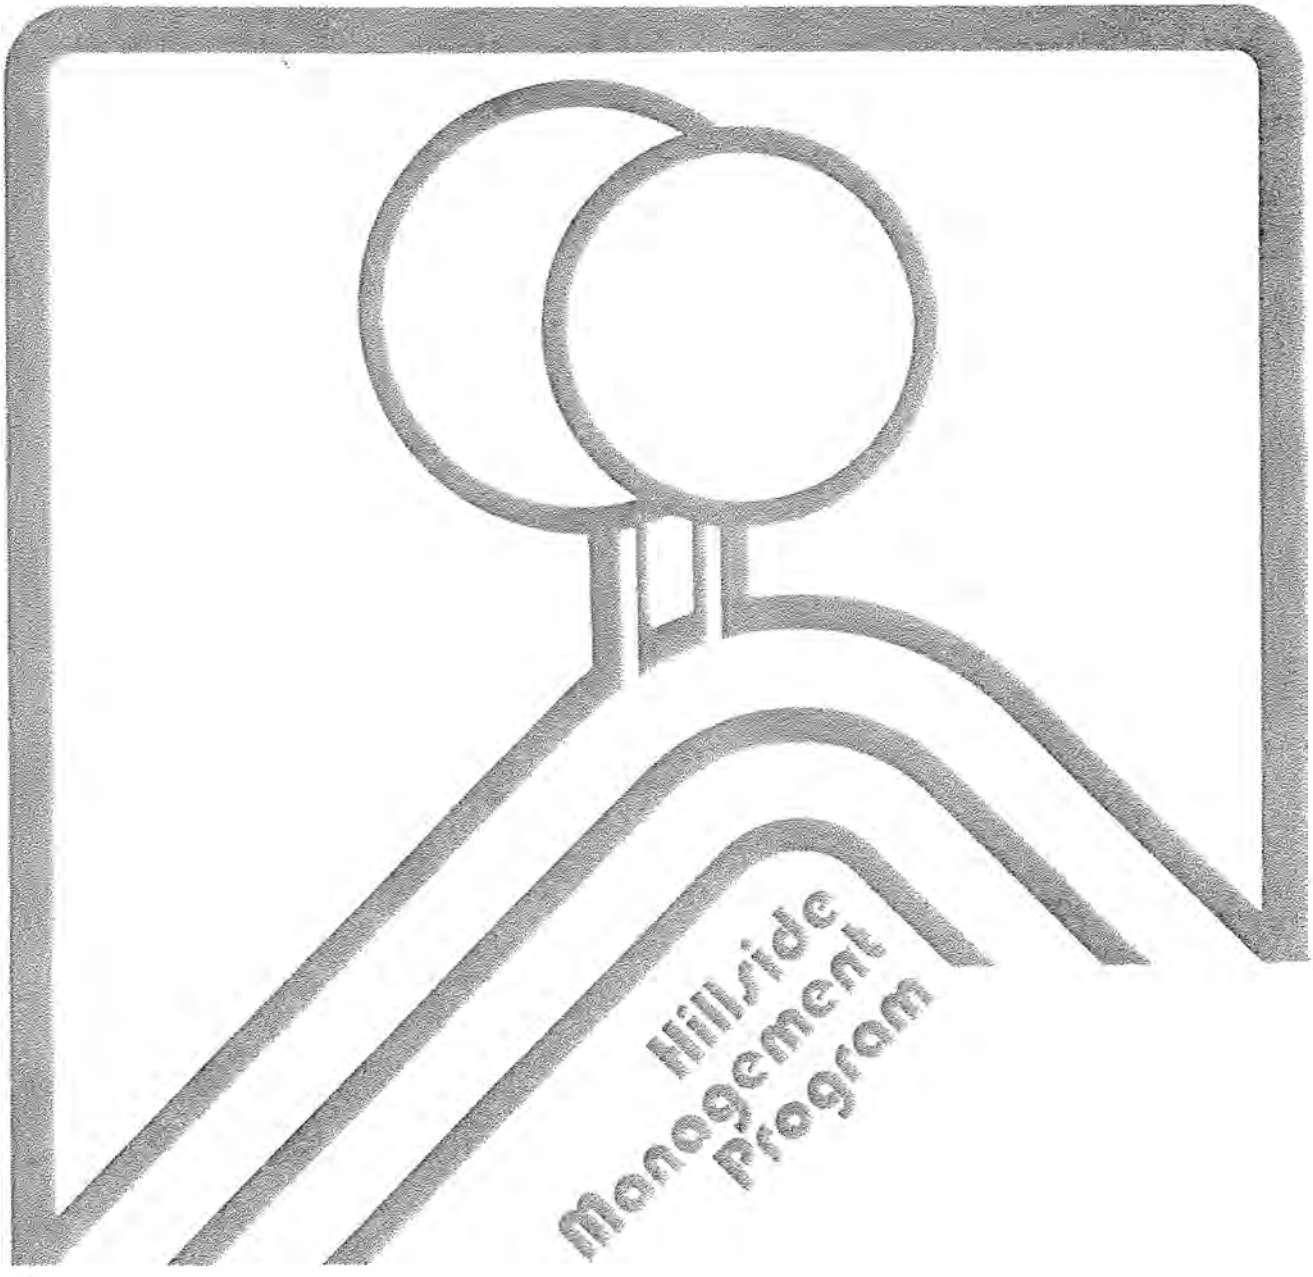
Expansion of existing building pad requiring construction of a retaining wall: Existing legal lots or lot splits within existing subdivisions and not otherwise approved with building envelope restrictions may grade slopes greater than 30% as follows:

- Construction of any retaining walls shall include the following:
  - Minimize the amount of retaining wall to be constructed.
  - Construction of retaining walls shall be of decorative materials. (i.e., simulated stone, stucco to match existing structure) and shall be reviewed by the Planning Division.
  - Wall appearance shall be softened by the use of landscape plantings to break up the mass of wall and shall be reviewed by the Planning Division.
  - Construction of smaller height (3ft. to 5 ft.) terraced walls is preferred over one larger/taller wall.
  - Total maximum height of exposed wall(s) is 10 feet.
  - Construction of wall shall have supporting soils report prepared by an appropriately licensed engineer in the State of California that indicates that slope stability will not be adversely affected by the construction of the wall.
  - A grading plan shall be prepared and submitted for City review and approval and grading permit issuance in accordance with the City grading ordinance.
  - A retaining wall plan shall be prepared and submitted to the Building & Safety Division for review and approval and issuance of a building permit.

Construction of residences on slopes greater than 30%: Existing legal lots or lot splits within existing subdivisions and not otherwise approved with building envelope restrictions may construct residence as follows:

- Construction of residence on caissons or day-lighted basement with no other grading.
  - Limited grading (including minor retaining walls) for access driveway is permissible.
  - Construction of residence shall have supporting soils report prepared by an appropriately licensed engineer in the State of California that indicates that slope stability will not be adversely affected by the construction of the residence.
  - Roof drainage shall be conveyed to the street unless otherwise approved by the City Engineer.
  - Applicant shall submit a proposal for how he plans to stage, store, stockpile, and construct the foundation for City review, comment, and approval.

The above does not preclude complying with all other municipal code requirements including, but not limited to, building setbacks, building heights, minimum lot size, lot coverage, etc.



CITY OF SAN BUENAVENTURA

Adopted Policies

HILLSIDE MANAGEMENT PROGRAM

CITY OF SAN BUENAVENTURA

Adopted by the City Council
August 28, 1989

Ventura, CA. 93002

HILLSIDE MANAGEMENT PROGRAM

TABLE OF CONTENTS

HILLSIDE MANAGEMENT PROGRAM

INTRODUCTION

The Hillside Management Program consists of policies, development criteria and submittal requirements established by the City to implement the Comprehensive Plan as it relates to Hillside Areas. The overall objective is to relate the number and distribution of dwelling units in future hillside development to the topographical, geological, and hydrological conditions of the hillsides, so that the terrain will retain its natural and scenic character, and the danger to life and property by the hazards of fire, flood, water pollution, soil erosion, and land slippage will be minimized. Major objectives and policies are noted in the Resources, Land Use, Safety, and Park and Recreation Elements of the Comprehensive Plan. Other more specific policies for each of the hillside communities are also contained in the Community Intent and Rationale Statements in the Land Use Element of the Comprehensive Plan.

It is intended that the Comprehensive Plan and this Program supersede all other City plans, policies, and regulations for the Hillside Area. In addition, existing City plans and ordinances relating to zoning, grading, landscaping, geologic reports, fire protection regulations and other related matters should be reviewed for conformance with the policies of the Comprehensive Plan and this Program and, if different, be brought into conformance as soon as possible.

Incorporated, vacant and underdeveloped parcels which are designated HPR, and which have zoning designations that do not conform with the Comprehensive Plan, will not be allowed to develop until the zoning is made to conform. In order to meet the intent of the Comprehensive Plan, all incorporated hillside properties designated HPR should be given an RPD zone designation with a density consistent with this Program, and with the

understanding that the actual number of permitted dwelling units on any parcel will be based on the appropriate slope/density formula.

I. DEFINITION

The Hillside Area Boundary is shown on the Comprehensive Plan Land Use Plan Map. Generally, the Hillside Area is that area within the City's Planning Area located easterly of Cedar Street (or its proposed extension) and northerly of Poli Street and Foothill Road. The Planning Area boundaries form the northern and eastern boundaries of the Hillside Area. Urban uses within the Hillside Area include the Hillside Planned Residential (HPR) and Existing Urban Comprehensive Plan land use designations. Applicability of the Hillside Management Program differs within these areas and with the type of discretionary action being sought. Section III of this Program details the applicable submittal requirements.

II. OBJECTIVES AND POLICIES

In addition to the objectives and policies contained in the Comprehensive Plan, the following are the objectives and policies of this Program:

1. DEVELOPMENT/TIMING

Objectives

A. To encourage additional residential development in Ventura's hillsides, as a part of the City's Comprehensive Plan for overall community development.

B. To direct hillside development to areas where it will have the least impact on the City's existing urban service systems, while postponing development of areas which would require major expansion of existing systems, both in the hillside and flatland areas.

C. To direct hillside development to areas which are least susceptible to geologic and other environmental hazards, as well as fire hazards, while postponing development in those areas which are more prone to such hazards.

D. To direct hillside development to areas where it will have the least impact on the natural environment of the Hillside Area, including such factors as scenic resources, water resources, and unique habitats.

Policies

1. All of the Hillside Area may be considered for development, subject to the Comprehensive Plan and this Program.

2. The City will not annex or provide urban services (i.e., domestic water and sewers) to any new development within the Hillside Area until the new development has received discretionary permits.

3. The City encourages the County to zone unincorporated parcels in the Hillside Area to a restrictive open space zone (permitting a maximum of 1 dwelling unit per 40 acres) or similar zone which minimizes urban development possibilities.

4. The City will support qualified property owners who request to enter into County Land Conservation Act contracts or similar measures which will preserve the views and wildlife habitats, oak woodlands and general undeveloped characteristics of the Hillside Area.

2. LAND USE

Objectives

A. To relate the number and distribution of dwelling units in future hillside developments to topographic, geologic, hydrologic, and fire hazard conditions, in order to minimize dangers to life and property.

B. To protect the natural and scenic resources of the Hillside Area in conjunction with future hillside development.

C. To provide a variety of housing opportunities in the Hillside Area.

D. To preserve the residential nature and character of established hillside neighborhoods.

E. To ensure that public access to the Hillside Area is not unduly restricted by future development.

Policies

1. Hillside Planned Residential Categories

All future development in the areas designated HPR by the Comprehensive Plan should be developed at residential densities not to exceed those allowed by the net density suffix of the appropriate HPR designation (e.g., HPR-4, HPR-6, HPR-8, HPR-15, HPR-20). See the Land Use Element of the Comprehensive Plan for further definition of the HPR categories.

2. Cluster Development

Cluster development is encouraged as a means of preserving the natural appearance of the hillside, and maximizing the amount of usable open space. Under this concept, dwelling units are grouped on the more level portions of the site, while steeper areas are preserved in a natural state.

Cluster development projects are permitted in all HPR designated areas, provided that:

a) In cluster developments containing attached dwelling units, the design of the project must include level open space areas (less than 5% slope) for recreational use, in addition to areas kept in their natural state.

b) The project is designed to minimize the visual impact on adjoining residential areas.

Density allocations under the HPR-4 and HPR-6 designations may be transferred from steeper slope areas (i.e., greater than 30% slope) to less steep slope areas.

3. Fire Zone Regulations

All areas preserved in a natural state will be subject to applicable fire regulations (i.e., "Fire Zone 4" regulations) to ensure that natural vegetation does not pose a fire threat to nearby structures.

4. Neighborhood Convenience Stores

Neighborhood convenience stores, defined as "a small retail outlet selling food and sundries" may be permitted in "Hillside Planned Residential" areas, provided there is no existing or proposed commercial center within one-half mile radius of the site. A Conditional Use Permit must be obtained for this use. The Architectural Review Board, when reviewing such projects, should give special consideration to signs, landscaping, lighting, colors, and construction materials, to ensure that the project is compatible with the character of the hillside community. This use will not be permitted within 100 feet of Foothill Road.

5. Hillside Scenic Resource Area

Refer to the Land Use Element of the Comprehensive Plan for policies related to the Hillside Scenic Resource Area designation.

3. CIRCULATION

Objectives

A. To provide public access to the scenic features of the City.

B. To provide for safe and efficient means of ingress and egress into the Hillside Area for day-to-day vehicle and pedestrian traffic, as well as ready access for emergency vehicles.

C. To minimize the scarring effect of major hillside streets.

Policies

1. Future improvements to Foothill Road should be designed so as to:

   a. Provide a high level of service by minimizing congestion and the number of traffic signals.

   b. Maintain its scenic qualities by keeping its present curvilinear path wherever possible, and by contouring and landscaping all man-made slopes.

   c. Minimize the need for retaining walls or similar structures.

   d. Preserve existing trees along this route wherever possible.

   e. Improve bicycle circulation along this route.

2. East-west connector streets should, wherever feasible, be constructed between drainage areas, north of Poli Street and Foothill Road. The feasibility and location of such streets

will be determined as part of the Circulation and Drainage Master Plans. (See Section III, Submittal Plan Requirements.)

3. Two access points should be provided between all major drainage areas and extend onto Foothill Road. These access points are to be located as part of the Circulation and Drainage Master Plan for these drainage areas. Design should include, at a minimum, alignment feasibility studies based on policies contained in this Program.

4. Each hillside drainage area should be served by an interior loop street system. If a loop system is infeasible, the number of dwelling units served by a single, long residential street should be limited.

5. All public access streets, interior loop streets and inter-canyon connector streets should be designed to major residential street standards (see Appendix C).

6. Hiking trails, which may be required within the Hillside Area, should be dedicated and improved in conjunction with hillside development. (See Resource Element, Park and Recreation Element and Land Use Element policies). In addition, public hiking trails should be provided within a development, wherever feasible, to provide connections with any designated hillside trail system and the City's linear park system.

4. CAPITAL IMPROVEMENTS

Objectives

A. To demonstrate that the long-range urban service implications of hillside development are fully addressed, in order not to unintentionally preclude future development in any given

drainage area.

B. To ensure the City's financial capability to participate, where necessary, in future improvements to the urban infrastructure.

C. To achieve quality levels of service for present residents of the City prior to committing significant revenues to the expansion of services.

Policies

1. The practicality of extending urban services to the hillside portion of any Community must be demonstrated to the City, and the City must be financially able to participate, if necessary, in providing adequate services either prior to or in conjunction with development. In order to ensure that an adequate level of any service can be provided within the hillside portion of a Community, the adoption of a capital improvement deficiency study will be required for the entire hillside portion of each Community prior to filing an application for any future development within the HPR portion of that Community.

2. Urban service extensions to hillside parcels should address existing and projected flatland and hillside service problems and deficiencies, according to criteria which promote incremental development and the efficient operation of urban systems.

3. Where additional urban service facilities are shown to benefit solely future hillside development, such development will be required to finance all needed improvements, including participation in mitigating such flatland or downstream problems as may be caused by the additional development.

4. The first property or properties to develop in each Community of the Hillside Area must design, construct, and finance necessary capital improvements, so as not to preclude future hillside development in the Community or drainage area. Some of such capital improvements may be reimbursed through participation by other benefiting properties.

5. The extension of urban services to hillside areas will be considered concurrently with the consideration for development of those areas, subject to the adoption of a capital improvement deficiency study for the entire hillside portion of the Community in which the development is proposed.

5. RESOURCE PROTECTION

Objectives

A. To maintain the scenic character of the hillsides in areas of future development, by preserving significant natural landmarks and scenic ridgelines and slopes.

B. To provide increased recreational opportunities for existing and future hillside residents, by improving access to existing parks and establishing additional parks or open, non-developed areas in conjunction with future hillside development.

C. To maximize public access to hillside open space and recreation areas, by establishing a system of linear parks and hiking trails along scenic ridges and barrancas.

D. To minimize the impact of hillside development on sensitive natural habitats and historical and archaeological resources.

Policies

1. Scenic resource areas, such as skyline ridges and significant natural landmarks, as designated on the Land Use Plan Map, should be preserved in a natural state. It is the City's intent to obtain a reservation of a scenic easement from the property owner with respect to such scenic resource areas that are not intended for public access, in conjunction with any development which may occur on the remainder of the property in accordance with the policies and objectives of the Comprehensive Plan.

2. Scenic easements should be reserved for other areas, not designated as scenic resource areas, which are to be preserved in a natural state (such as steep slope areas which are to be preserved under a cluster development density transfer concept). An access easement should be required for any scenic resource area where it is deemed desirable to permit public access (e.g., scenic vista points, trails).

3. Future hillside neighborhood parks should be provided as necessary to serve residents based on the criteria in the Park and Recreation Element of the Comprehensive Plan. In addition, the City should encourage the park-like improvement of flood control retention facilities in the hillsides.

4. Hillside development should be designed, whenever possible, to preserve existing trees and areas of significant natural vegetation, and wildlife migration routes.

5. Hillside development should protect and preserve archaeological sites. The City may require that a qualified archaeologist be present during any grading operations.

6. PROJECT REVIEW STANDARDS

Grading and Site Design

Objectives

A. To preserve the natural character and appearance of the hillsides.

B. To use to the best possible advantage the limited resource of hillside view lots.

Policies

1. Hillside development should minimize grading, terracing, padding and cut and fill to the maximum extent possible. Where grading, terracing, padding or cut and fill is unavoidable, it should be shaped and rounded to simulate natural-appearing contours.

2. Cut and fill slopes will be limited to a maximum slope angle of two horizontal to one vertical.

3. No grading is permitted on any slope greater than 30%, except in limited cases for street or access purposes as approved by the City Engineer and City Planner.

4. Units should be sited on lots in such a way that the living areas take maximum advantage of the views afforded by the lot.

5. Each unit should be located so that it will not, to the maximum extent possible, interfere with the view from adjoining lots.

Drainage Systems

Objectives

A. To provide for the safe and efficient disposal of storm water runoff from hillside development, while minimizing costs of expanding flatland drainage systems to accommodate additional hillside runoff.

B. To minimize adverse visual impacts which may result from the design and placement of drainage facilities, by maintaining existing channels in a natural state, and allowing flexibility in the design of individual drainage systems.

C. To design hillside drainage facilities in such a way that groundwater recharge is maximized.

Policies

1. To the maximum extent possible, barranca channels should be preserved and maintained in their natural state, and detention facilities provided in locations which are most suitable for enhancing groundwater recharge. Use of concrete-lined channels should be avoided.

2. The developer must participate in the financing of any improvements needed to alleviate anticipated downstream impacts on existing flood control facilities.

3. Areas adjacent to flood control and storm drainage facilities in unimproved barranca channels (2:1 slope from the toe of the slope plus 20 feet) should be dedicated as Parcel "X" lands to maintain an adequate margin of safety.

4. Detention facilities and all other primary drainage facilities must be designed as required by the City Engineer and the County Flood Control District. Any detention basin should be located

in the upper third area of canyons. A geologic investigation must be made to ensure that any proposed retention facility will not cause slippage or seepage in downslope properties.

5. Detention facilities and Parcel "X" lands should be incorporated as private recreation areas whenever possible, and should be designed to minimize maintenance costs.

6. Where it is determined to be appropriate by the City Engineer, a site may drain to a private drainage system before entering the public drainage system. Any private drainage system must establish adequate on-going provisions for private maintenance of the system. The visual impacts of such private drainage systems, if above grade, will be critically evaluated in determining their suitability.

Geologic Hazards

Objective

A. To ensure the maximum level of safety to both existing and future hillside residents in the event of seismic activity, or other natural occurrences, through the proper evaluation and consideration of geologic hazards in future hillside development.

Policy

1. If required soils and geologic reports for a project do not demonstrate that all identified hazards can and will be mitigated, the project must be modified in order to mitigate such hazards.

Landscaping

Objectives

A. To ensure the planting of hillside slopes in such a manner as to aid in controlling erosion and fire hazards, stabilizing exposed slopes, and reducing water consumption for landscaping purposes.

B. To enhance the visual character of hillside development through the use of appropriate landscaping methods and materials.

Policies

1. All man-made slopes four feet or higher should be planted and irrigated according to approved methods with an approved perennial type of planting selected from a listing of materials suited to hillside use developed by the City Parks and Recreation Department. Primary consideration will be given to the use of plants which aid erosion control and require little irrigation. Deviation from plant selections in the approved hillside listing must be reviewed and approved by the City Parks Superintendent.

2. In order to enhance the physical appearance of hillside developments, a minimum of one street tree per lot should be required to be located in, or immediately adjacent to, street rights-of-way. Such trees must be selected from an approved listing developed by the Parks and Recreation Department.

3. No occupancy clearance will be issued for any lot until all required planting, as approved by the City Parks Superintendent and the Building Official, has been viably established (i.e., capable of living and growing).

4. The developer will be responsible for the maintenance of all landscaping prior to the occupancy of homes. Hillside property owners will be required to assume the responsibility to fully maintain landscaped slopes. Appropriate irrigation systems may be required in the project design in order to facilitate and ensure proper maintenance. Agricultural planting and related irrigation systems may be permitted subject to detailed slope and geologic studies prepared by a qualified engineer.

5. Where deemed necessary to ensure the long-term maintenance of hillside landscaping, measures such as a special assessment district, homeowner's association, or some other mechanism may be required.

Street Design

Objectives

A. To minimize the adverse visual impact of streets on the hillside landscape.

B. To establish internal street systems in future hillside developments which permit safe and efficient travel for motor vehicles, bicycles, and pedestrians, and ensure ready access for emergency vehicles.

Policies

1. The table in Appendix C, entitled Hillside Street Standards, delineates an alternative set of standards which may be used in the design of hillside streets. The use of split-level one-way streets will be allowed wherever such use will result in a more efficient use of the existing terrain, or will minimize the scarring effects of hillside development. Dead-end streets must

have a turn-around area with a minimum clear diameter of 40 feet, regardless of the permitted width of the street.

2. Streets should run with the natural contours of the land, and not at right angles to them, unless absolutely unavoidable. The burden will be upon the developer to show that streets running with the contours are infeasible.

3. Horizontal and vertical curves should be such that a minimum site distance of 200 feet is provided at all points. The minimum horizontal centerline curve radius on residential streets should be 150 feet. Reversed curves should be connected with tangents as long as practicable. Major residential streets should be designed to incorporate vertical and horizontal curves greater than the minimums for residential streets, in order to provide for increased traffic flow.

4. The maximum centerline grade for residential streets should be 15%, but maximum grades will not be allowed at intersections or adjacent areas of transition. In these areas, the centerline grade should be flat, unless a steeper grade is permitted by the City Engineer. The maximum grade for major residential streets should be 12%. Changes in grade greater than 0.5% should be connected by vertical curves. The length of vertical curves must conform to standards of sight distances and riding qualities established by the City Engineer.

5. All hillside public streets must be provided with a minimum level of street lighting consistent with the standards set forth in "American National Standard Practice for Roadway Lighting." Adverse impacts on views should be mitigated in the location and design of street lights.

6. Easements and common driveways may be allowed in the hillsides to reduce the scarring of the natural landscape. The width must be a minimum of 12 feet for one housing unit, and 20 feet for two, three, or four units. The travelway to 5 units or more must be built to public street standards.

7. All subdivisions should provide public parking spaces at strategic vista points within the development. Developments should also provide adequate private off-street parking to minimize the need for parking on narrow hillside streets.

III. SUBMITTAL REQUIREMENTS

1. Requirements for Existing Urban Designated Areas and HPR Designated Areas Less Than Five Acres in Size

Projects located in Existing Urban designated areas which require discretionary permit(s) (e.g., planned development permit, modification/minor variance, subdivision), and in HPR designated areas involving existing lots of record less than five acres in size, must submit the following information as a part of any application for discretionary permits:

(1) Soils and geology report (see item B, page 24 for more detail)

(2) Grading plan (see item E, page 28 for more detail)

(3) Hillside Height information for each lot, as required by the Zoning Ordinance

The above submittal requirements do not apply to the remodeling of, or additions to, existing residential development except as required by the Zoning Ordinance.

2. Requirements for HPR Designated Areas

Applications for development of HPR designated properties in the Hillside Area (except for applications involving existing lots of record less than five acres in size) may not be filed prior to City Council adoption of a capital improvement deficiency study for the entire Community in which the project is proposed as required by the Comprehensive Plan. Such a study must be prepared by an engineering consultant, approved and selected by the City. The cost of the study must be paid for by the developer and/or property owner. (Refer to the Land Use Element of the Comprehensive Plan for a general listing of items to be considered as part of any capital improvement deficiency study.)

The following submittal requirements are established for all future residential development within areas designated Hillside Planned Residential (HPR). In addition to the basic submittal requirements for discretionary permits (e.g., change of zone, subdivision map, planned development permit), all of the items listed below must also be submitted as part of any application for discretionary permits:

A. Slope/Density Calculation Worksheet and Map (see below for more detail);

B. Soils and geology report (see below for more detail);

C. Circulation and drainage master plan (see below for more detail);

D. Building envelope plan (see below for more detail);

E. Grading plan (see below for more detail);

F. Three-dimensional drawings or models depicting existing conditions and as proposed after development (see below for more detail);

G. An arborist's report (see below for more detail);

H. A biologist's report (see below for more detail);

I. an archaeologist's report (see below for more detail); and,

J. Hillside Height information for each lot as required by the Zoning Ordinance.

K. Analysis of other environmental issues (e.g., potential scenic resource impacts) identified as potentially significant by the EIR Committee.

A. Slope/Density Formula and Map Requirements

In applying the land use designations (defined under the "Land Use" Section) to specific parcels, the following slope/density formulas apply:

Average Natural Slope	Permitted Density (units/gross acre)				
(%)	HPR-4	HPR-6	HPR-8	HPR-15	HPR-20
0- 5.00	3.00	4.50	6.00	11.25	15.00
5.01-10.00	2.50	3.75	5.00	9.50	12.50
10.01-15.00	2.00	3.00	4.00	7.50	10.00
15.01-20.00	1.50	2.25	3.00	5.75	7.50
20.01-25.00	1.00	1.50	2.00	3.75	5.00
25.01-30.00	.50	.75	1.00	2.00	2.50
30.01 or greater	.10	.10	.10	.10	.10

Density credit of 1 unit per 10 acres will be given on any portion of a parcel with a natural slope greater than 30%. In calculating the average natural slope of a parcel, areas with less than 30% slope should be computed separately, and the total number of dwelling units permitted on a parcel will be the sum of:

a) number of dwelling units for areas less than 30% slope, based on the permitted density corresponding to the average natural slope of that area, multiplied by the number of acres less than 30% slope; and

b) 1 unit per 10 acres for areas greater than 30% slope.

Fractions of a dwelling unit must be rounded to the nearest whole number.

The number of dwelling units permitted in Hillside Planned Residential designated areas may be reduced from the maximum permitted under the slope/density formula if, based on the analysis of a specific site, the proposed development does not comply with the objectives and policies of the Comprehensive Plan or this Program.

The Slope/Density Calculation Worksheet is attached as Appendix A.

Slope Map

In order to calculate permitted densities for Hillside Planned Residential designations, the applicant must submit a slope map. This map should be produced on a base topographical map of the site, at a scale of 1" per 50 feet or larger for parcels less than or equal to 20 acres, and 1" per 100 feet or larger for parcels greater than 20 acres. Maps should have a minimum contour interval of 10 feet, in constant increments from zero.

The slope map must show the location of slopes in the following percent slope categories: 0-10%; 10-20%; 20-30%; 30-50% and 50% and above. Slopes should be displayed either in contour bands or in 100 foot by 100 foot grids.

The average natural slope must be calculated by the following formula:

S = IL/A X 100; where

S = Average natural slope, in percent;
I = Contour interval, in feet;
L = Total accumulated length of all contours of interval "1," in feet,
A = The area being considered, in square feet.

In addition to a graphic display of slope information, the slope map must include calculations of acreage in each percent slope category, as well as a slope/acreage summary, which indicates:

1. Total number of acres with 30% or less slope, and the average natural slope of such areas; and

2. Total number of acres greater than 30% slope.

Number of dwelling units permitted on a parcel must be calculated on the basis of data presented in the slope/acreage summary. Alternative slope calculation methods, as approved by the Director of Community Development, may be used.

B. Soils and Geology Report

Soils and geologic reports (as defined by the Ventura County General Guidelines for Geologic Reports, see Appendix B for reference; the latest County Guidelines will be used for checking purposes), must be prepared by a qualified engineer and must, at a minimum, include the following:

1. A soils evaluation describing the nature of the subsurface soils and any soil conditions which would affect the geometrics of the proposed development. The soils evaluation must state whether the proposed plan is feasible and provide general solutions for all known hazardous conditions or problems. The evaluation must include the location and lots of any test borings.

2. An engineering geology evaluation defining geologic conditions of the site. The geologic evaluation must state

whether the proposed plan is feasible and provide general solutions for all known hazardous conditions or problems. The evaluation must include the location and lots of any test borings and shall evaluate the effect of the geology on the proposed development and on adjacent properties. The report must point out specific areas where development may create hazardous conditions and make recommendations regarding hazard mitigation.

3. The geology report must generally identify any soils and/or geologic conditions existing on adjacent sites located in such a manner or of such a nature as may be hazardous to the proposed project.

Soils and geologic investigations required for hillside development will be reviewed by a certified expert to be selected by the City, to be paid by the applicant, in order to determine the sufficiency of the evaluations.

C. **Circulation and Drainage Master Plan**

The first project within a hillside community or a drainage area, if the drainage area is larger than the defined Planning Community, must provide a Circulation and Drainage Master Plan for the Community or, if larger, the drainage area within which it is situated. (Projects on existing lots of record less than five acres in size are exempt from this requirement.) The following are the specific requirements for such a Plan:

1. The plan must be submitted with the discretionary permit applications for the proposed project, and notice will be given to property owners affected by the proposed Circulation and Drainage Master Plan at the time of the hearings on the discretionary permits.

2. The circulation portion of the Plan must include the design of a major residential street system for the Community or, if larger, the drainage area which meets all the City's adopted circulation policies. Specifically, the plan should demonstrate that:

   a. A maximum 12% grade can be maintained on major residential streets:

   b. Where it is required that more than one access to Foothill Road or other flatland streets be provided, such improvements are feasible and practical from an economic and engineering standpoint;

   c. A major residential street connection can be made with adjoining Communities and drainage areas, if feasible, including a review of alternate connecting routes;

   d. A demonstration how undeveloped or underdeveloped portions of the hillside area are not precluded access to Foothill Road or other flatland streets;

   e. A demonstration how major residential streets will, to the maximum extent feasible, run with the natural contours of the hillsides.

3. The drainage portion of the Plan must depict the location and size of detention facilities and other flood control mechanisms. The plan must also include landscaping plans for proposed retention facilities. This plan will be subject to the review and approval of the Ventura County Flood Control District when their facilities are impacted.

If the developer proposes to improve the natural channels (e.g., concrete lining) rather than provide detention facilities, the developer must provide a funding mechanism which will pay for the capital expenditures necessary to expand existing facilities to accommodate the flow from a 100-year storm frequency. Such plans will also be subject to the review and approval of the Ventura County Flood Control District when their facilities will be impacted.

4. The Master Plan may also be required to address other specific urban service system problems (e.g., water and sewer systems) which may be identified in a given hillside community area.

D. Building Envelope Plan

The developer must submit a three-dimensional building envelope plan depicting the location and design of the dwelling unit on each lot, and the direction it is facing. When the design of the unit is known, the developer shall also provide floor plans and elevations for each type of unit being used in the project.

The intent of a building envelope is to specify where a unit can be built and expanded without interfering substantially with the view from other lots. A building envelope restriction will be made a condition of the Planned Development permit or other appropriate approvals and must be recorded as part of the covenants, conditions and restrictions (CC&R's) for the tract with language approved by the City. The following are required for each building envelope plan:

1. The plan must be prepared by a registered civil engineer or licensed architect;

2. The plan must reflect a three-dimensional diagram, indicating the maximum building parameters for each lot (i.e., height, width, depth);

3. The plan must indicate the finished floor elevation of the four corners of the building pad, and the height, bulk and mass of existing adjacent structures;

4. The plan must indicate the existing and proposed contours of the site (contours with five foot maximum intervals);

5. Slope areas which are 30% or greater must be indicated by shading; and,

6. The scale of the plan must be at least one inch equaling 40 feet.

E. Grading Plan

A grading plan prepared by a registered civil engineer must be submitted which shows at least the following information:

- all adjacent and nearby ridgelines and their elevations in relation to the proposed development;
- existing and proposed grades (contours with five foot maximum intervals);
- all areas of cut and fill (shaded to highlight these areas);
- location and height of all retaining walls;
- any proposed drainage system or structures;
- minimum of two cross sections through the site showing existing and proposed grades (more may be required if necessary);
- location of 30% slopes (shaded to highlight these areas); and,
- location and size of all trees or significant landscaping to be preserved and/or removed.

F. Three-Dimensional Drawing or Model

Three-dimensional drawings or models must depict the property to be developed before and after the proposed project is completed, and must show all existing and proposed streets. This requirement may be waived by the EIR Committee if it finds, based on a preliminary evaluation, that the proposed project would have no significant impact on the scenic resources of the hillside area, or it may be made part of an EIR.

G. Arborist's Report

A report prepared by a qualified arborist must be submitted which assesses the conditions of all trees and stands of substantial native vegetation, including an assessment of any oak woodlands. The report should determine the number and condition of any trees and substantial native vegetation and recommend short and long-term methods necessary for maintenance and preservation. This requirement may be waived by the EIR Committee if it finds based, on a preliminary evaluation, that the proposed project would have no impact on any trees or areas of significant native vegetation, or it may be made part of an EIR.

H. Biologist's Report

A report prepared by a qualified biologist must be submitted which assesses the impacts on the flora and fauna in the areas to be developed. The report should identify any significant species and wildlife migration routes, and make recommendations for their maintenance and preservation. This requirement may be waived by the EIR Committee if it finds, based on a preliminary evaluation, that the proposed project would have no impact on any significant species or wildlife migration routes, or it may be made part of an EIR.

I. Archaeologist's Report

A report prepared by a qualified archaeologist must be submitted which surveys the area to be developed and identifies any known or suspected archaeological sites. The survey should determine the significance of such sites and make recommendations for their testing. If significant sites are identified, the report should contain recommendations for their maintenance and preservation. This requirement may be waived by the EIR Committee if it finds, based on a preliminary evaluation, that the proposed project would have no impact on any known or suspected archaeological sites, or it may be made part of an EIR.

APPENDIX A

SLOPE/DENSITY CALCULATION WORKSHEET

I. SLOPE/ACREAGE CALCULATIONS:

A. 0-30% Slope Areas:

Category	Acres		Average Slope		Slope-weighted Acres
0 - 5%	_____	X	2.5	=	_____

SAMPLE

SLOPE/DENSITY CALCULATION WORKSHEET

I. SLOPE/ACREAGE CALCULATIONS:

A. 0-30% Slope Areas:

Category	Acres		Average Slope		Slope-weighted Acres
0 - 5%	-0-	X	2.5	=	-0-
5.01-10%	-0-	X	7.5	=	-0-
10.01-15%	.034	X	12.5	=	0.425
15.01-20%	.138	X	17.5	=	2.415
20.01-25%	.020	X	22.5	=	.45
25.01-30%	.085	X	27.5	=	2.338
Total	.277		Total		5.628

Total Slope-weighted Acres ÷ Total Acres = Average Slope

5.628 ÷ .277 = 20.31%

B. Greater than 30% slopes Areas: .211 Acres

II. SLOPE/DENSITY CALCULATIONS:

A. Land Use Designation: HPR-20

B. 0-30% Slope Areas:

Average slope 20.31% 20-25 % slope Category

5 dwelling units/gross acres x .277 acres = 1.4 units

C. Greater than 30% slope areas:

0.01 dwelling units/gross acre x .21 acres = .021 units

D. Total Dwelling Units:

B 1.4 + C .021 = Total units 1.421

EXAMPLE FOR .488 acre parcel in an area designated HPR-20

APPENDIX B

GENERAL GUIDELINES FOR GEOLOGICAL REPORTS

FOR THE

COUNTY OF VENTURA

The purpose of this statement is to provide geologists who submit reports to the Department of Public Works, County of Ventura, with an understanding of what kinds of information, discussion, and recommendations are desired in order that such reports can be accepted. It is recognized that certain geologic interpretations cannot be firm or complete, at least in advance of grading operations, but it is expected that all kinds of pertinent data will be presented fully and clearly, so that interpretations and recommendations can be critically reviewed by others. It also is recognized that different physical situations demand reports differing from one another in scope, length, and organization; most of the following comments are therefore intended to serve as a general guide for those persons who prepare and use geological reports, rather than as a rigid framework of requirements.

I. GEOLOGICAL MAPPING

A. Each report must be a product of independent geologic mapping of the subject area at an appropriate scale and in sufficient detail to yield a maximum return of pertinent data. In connection with this objective, it may be necessary for the geologist to extend his mapping into adjacent areas.

B. All mapping should be done on a base with satisfactory horizontal and vertical control—in general a detailed topographic map. The nature and source of the base map should be specifically indicated. *For sub-divisions, the base map should be the same as that to be used for the tentative map or grading plan.*

C. Mapping by the geologist should reflect careful attention to the lithology, structural elements, and three-dimensional distribution of the earth materials exposed or inferred within the area. In most hillside areas these materials will include *both* bedrock and surficial deposits. A clear distinction should be made between observed and inferred features and relationships.

D. A detailed large-scale map normally will be required for a report on a tract, as well as for a report on a smaller area in which the geologic relationships are not simple.

E. Where three-dimensional relationships are significant but cannot be described satisfactorily in words alone, the report should be accompanied by one or more appropriately positioned structure sections.

F. The locations of test holes and other specific sources of subsurface information should be indicated in the text of the report or, better, on the map and any sections that are submitted with the report.

II. GENERAL INFORMATION

Each report should include definite statements concerning the following matters:

A. Location and size of subject area, and its general setting with respect to major geographic and geologic features.

B. Who did the geologic mapping upon which the report is based, and when the mapping was done.

C. Any other kinds of investigations made by the geologist and, where pertinent, reasons for doing such work.

D. Topography and drainage in the subject area.

E. Abundance, distribution, and general nature of exposures of earth materials within the area.

F. Nature and source of available subsurface information. Suitable explanations should provide any technical reviewer with the means for assessing the probable reliability of such data. (Subsurface relationships can be variously determined or inferred, for example, by projection of surface features from adjacent areas, by the use of test-hole logs, and by interpretation of geophysical data, and it is evident that different sources of such information can differ markedly from one another in degree of detail and reliability according to the method used).

III. GEOLOGIC DESCRIPTIONS

The report should contain brief but complete descriptions of all natural materials and structural features recognized or inferred within the subject area. Where interpretations are added to the recording of direct observations, the bases for such interpretations should be clearly stated.

The following check list may be useful as a general, though not necessarily complete, guide for descriptions:

A. Bedrock—igneous, sedimentary, metamorphic types.

1. Identification as to rock type (e.g.; granite, silty sandstone, mica schist).
2. Relative age, and, where possible, correlation with named formations (e.g.; Rincon formation, Vaqueros sandstone).
3. Distribution.
4. Dimension features (e.g.; thickness, outcrop breadth, vertical extent).
5. Physical characteristics (e.g.; color, grain size, nature of stratification, foliation, or schistosity, hardness, coherence).
6. Special physical or chemical features (e.g.; calcareous or siliceous cement, concretions, mineral deposits, alteration other than weathering).
7. Distribution and extent of weather zones; significant differences between fresh and weathered rock.
8. Response to natural surface and near-surface processes (e.g.; raveling, gullying, mass movement).

B. Structural features—stratification, foliation, schistosity, folds, zones of contortion or crushing, joints, shear zones, faults, etc.

1. Occurrence and distribution.
2. Dimensional characteristics.
3. Orientation, and shifts in orientation.
4. Relative ages (where pertinent).
5. Special effects upon the bedrock. (Describe the conditions of planar surfaces).
6. Specific features of faults (e.g.; zones of gouge and breccia, nature of offsets, timing of movements); are faults active in either the geological sense or the historical sense?

C. Surficial (unconsolidated) deposits—artificial (manmade) fill, topsoil, stream-laid alluvium, beach sands and gravels, residual debris, lake and pond sediments, swamp accumulations, dune sands, marine and nonmarine terrace deposits, talus accumulations, creep and slopewash materials, various kinds of slump and slide debris, etc.

1. Distribution, occurrence, and relative age; relationships with present topography.
2. Identification of materials as to general type.
3. Dimensional characteristics (e.g.; thickness, variations in thickness, shape).
4. Surface expression and correlation with features such as terraces, dunes, undrained depressions, anomalous protuberances.
5. Physical or chemical features (e.g.; moisture content, mineral deposits, content of expansible clay minerals, alteration, cracks and fissures, fractures).
6. Physical characteristics (e.g.; color, grain size, hardness, compactness, coherence, cementation).
7. Distribution and extent of weathered zones; significant differences between fresh and weathered material.
8. Response to natural surface and near-surface processes (e.g.; raveling, gullying, subsidence, creep, slope-washing, slumping, and sliding).

D. Drainage—surface water and groundwater.

1. Distribution and occurrence (e.g.; streams, ponds, swamps, springs, seeps, subsurface basins).
2. Relations to topography.
3. Relations to geologic features (e.g.; previous strata, fractures, faults).
4. Sources and permanence.
5. Variations in amounts of water (e.g.; intermittent springs and seeps, floods).
6. Evidence for earlier occurrence of water at localities now dry (e.g.; vegetation, mineral deposits, historic records).
7. The effect of water on the properties of the in-place materials.

E. Features of special significance (if not already included in foregoing descriptions).

1. Features representing accelerated erosion (e.g.; cliff reentrants, badlands, advancing gully heads).
2. Features indicating subsidence or settlement (e.g.; fissures, scarplets, offset reference features, historic records and measurements).
3. Features indicating creep (e.g.; fissures, scarplets, distinctive patterns of cracks and/or vegetation, topographic bulges, displaced or tilted reference features, historic records and measurements).
4. Slump and slide masses in bedrock and/or surficial deposits; distribution, geometric characteristics, correlation with topographic and geologic features, age and rates of movement.
5. Deposits related to recent floods (e.g.; talus aprons, debris ridges, canyon-bottom trash).
6. Active faults and their recent effects upon topography and drainage.

IV. THE BEARING OF GEOLOGIC FACTORS UPON THE INTENDED LAND USE

Treatment of this general topic, whether presented as a separate section or integrated in some manner with the geologic descriptions, normally constitutes the principal contribution of the report. It involves *both* (1) the effects of geologic features upon the proposed grading, construction, and land use, and (2) the effects of these proposed modifications upon future geological processes in the area.

The following check list includes the topics that ordinarily should be considered in submitting discussion, conclusions, and recommendations in the geologic reports:

A. General compatibility of natural features with proposed land use: Is it basically reasonable to develop the subject area?

1. Topography.
2. Lateral stability of earth materials.
3. Problems of flood inundation, erosion, and deposition.
4. Problems caused by features or conditions in adjacent properties.
5. Other general problems.

B. Proposed cuts.

1. Prediction of what materials and structural features will be encountered.
2. Prediction of stability based on geologic factors.
3. Problems of excavation (e.g.; unusually hard or massive rock, excessive flow of groundwater).
4. Recommendations for reorientation or repositioning of cuts, reduction of cut slopes, development of compound cut slopes, special stripping above daylight lines, buttressing, protection against erosion, handling of seepage water, setbacks for structures above cuts, etc.

C. Proposed masses of fill.

1. General evaluation of planning with respect to canyon-filling and sidehill masses of fill.
2. Comment on suitability of existing natural materials for fill.
3. Recommendations for positioning of fill masses, provision for underdrainage, buttressing, special protection against erosion.

D. Recommendations for subsurface testing and exploration.

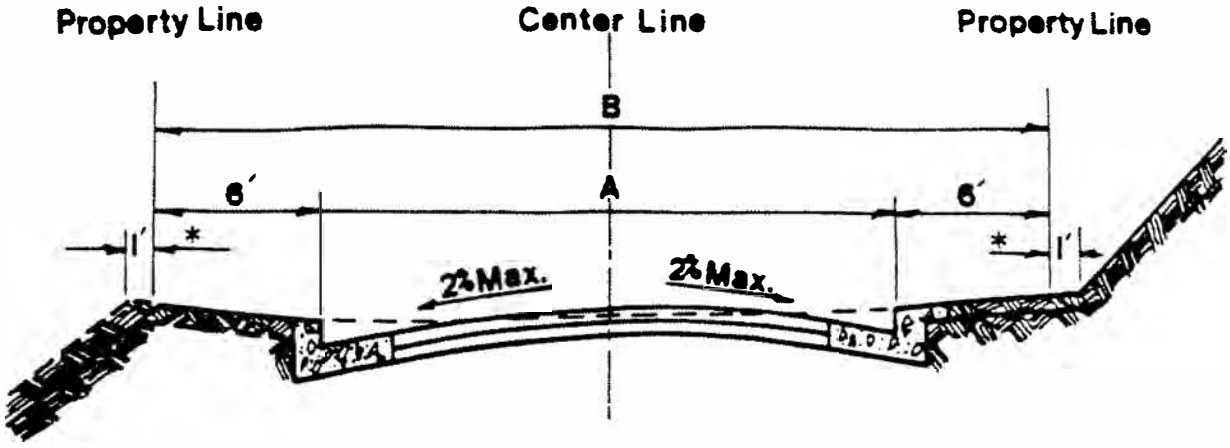
1. Cuts and test holes needed for additional geologic information.
2. Program of subsurface exploration and testing, based upon geologic considerations, that is most likely to provide data needed by the soils engineer.

E. Special recommendations:

1. Areas to be left as natural ground.
2. Removal or buttressing of existing slide masses.
3. Flood protection.
4. Protection from wave erosion along shorelines.
5. Problems of groundwater circulation.
6. Position of structures with respect to active faults.

APPENDIX C

STREET GEOMETRICS



HILLSIDE STREET STANDARDS

STREET DESIGNATION	TRAVELWAY WIDTH "A"	TOTAL R.O.W. WIDTH "B"	SIDEWALK REQUIRED	MAX. GRADE PERMITTED	MIN. CURVE RADII PERMITTED	COMMENTS
RESIDENTIAL STREET (one-way)	20	32	1 side only (same side as parking)	15%	150'	PARKING PERMITTE ON ONE SIDE ONL
SPLIT-LEVEL STREET (one-way in each direction)	20' each level	V**	Both sides	15%	150'	PARKING PERMITT ON RIGHT SIDE O EACH LEVEL ONLY
RESIDENTIAL STREET (two-way)	32	44	1 side only (same side as parking)	15%	150'	PARKING PERMITT ON ONE SIDE ONL
MAJOR RESIDENTIAL (two-way) [parking both sides]	40	56	Both sides	12%	150'	PARKING PERMITT ON BOTH SIDES

* 1' extension only if adjacent to sidewalk
** Varies, depending on slope

APPENDIX D

RESOLUTION NO. 89-104

RESOLUTION OF THE CITY COUNCIL OF THE CITY OF SAN BUENAVENTURA ADOPTING AN AMENDED HILLSIDE MANAGEMENT PROGRAM

BE IT RESOLVED by the City Council of the City of San Buenaventura as follows:

SECTION 1: The City's Comprehensive Plan being approved concurrently herewith provides in pertinent part as follows:

> "The Hillside Management Program was established in 1978 in response to concerns that the City's valuable hillside area should be safeguarded both physically and aesthetically by minimizing the effects of development. The Hillside Area is identified on the Land Use Plan Map.
>
> All hillside development must be consistent with the provisions of this Comprehensive Plan and City Zoning and Grading Ordinance, which apply to the Hillside Area, and must also be consistent with provisions of the Hillside Management Program adopted by separate City Council resolution. The Hillside Management Program contains standards, guidelines and the review process for proposed development in the Hillside Area...." (p. III-8)."
>
> "All future residential land uses in areas designated for 'Hillside Planned Residential' development shall be subject to the provisions of the Hillside Management Program and any other applicable policies contained in the Comprehensive Plan." (p. III-20)."

SECTION 2: The document attached hereto, entitled "Hillside Management Program City of San Buenaventura" is hereby adopted as the City's Hillside Management Program implementing the updated Comprehensive Plan being approved concurrently herewith.

PASSED AND ADOPTED this 28th day of August, 1989.

City Clerk

EV:8-203

STATE OF CALIFORNIA)
COUNTY OF VENTURA) ss
CITY OF SAN BUENAVENTURA)

I, BARBARA J. KAM, City Clerk of the City of San Buenaventura, California, do hereby certify that the foregoing Resolution was passed and adopted by the City Council of the City of San Buenaventura, at a regular meeting thereof, held on the 28th day of August, 1989, by the following vote:

AYES: Councilmembers Sullard, Francis, Villeneuve, Drake, McWherter, Crew and Monahan.

NOES: None.

ABSENT: None.

IN WITNESS WHEREOF, I have hereunto set my hand and affixed the official seal of the City this 29th day of August, 1989.

City Clerk

WE THE PEOPLE

of Ventura, in order to ensure that our City continues to be a great place for us to live . . .

FIGURES

ventura's general plan

OVERVIEW

"The building of cities is one of man's greatest achievements. The form of his city always has been and always will be a pitiless indicator of the state of his civilization. This form is determined by the multiplicity of decisions made by the people who live in it."

— Edmund N. Bacon
Design of Cities, 1967

CITY OF
VENTURA

We, the people of Ventura, in order to ensure that our City remains a great place for us to live ...

. . . establish these goals for our community's future:

OUR NATURAL COMMUNITY

Our goal is to be a model for other communities of environmental responsibility, living in balance with our natural setting of coastline, rivers, and hillside ecosystems.

OUR PROSPEROUS COMMUNITY

Our goal is to attract and retain enterprises that provide high-value, high wage jobs; to diversity the local economy; to increase the local tax base; and to anticipate our economic future in order to strengthen our economy and help fund vital public services.

OUR WELL-PLANNED COMMUNITY

Our goal is to protect our hillsides, farmlands, and open spaces; enhance Ventura's historic and cultural resources; respect our diverse neighborhoods; reinvest in older areas of our community; and make great places by insisting on the highest standards of quality in architecture, landscaping and urban design.

OUR ACCESSIBLE COMMUNITY

Our goal is to provide residents with more transportation choices by strengthening and balancing bicycle, pedestrian and transit connections in the City and surrounding region.

OUR SUSTAINABLE INFRASTRUCTURE

Our goal is to safeguard public health, well being and prosperity by providing and maintaining facilities that enable the community to live in balance with natural systems.

OUR ACTIVE COMMUNITY

Our goal is to add to and enhance our parks and open spaces to provide enriching recreation options for the entire community.

OUR HEALTHY AND SAFE COMMUNITY

Our goal is to build effective community partnerships that protect and improve the social well being and security of all our citizens.

OUR EDUCATED COMMUNITY

Our goal is to encourage academic excellence and life-long learning resources to promote a highly-educated citizenry.

OUR CREATIVE COMMUNITY

Our goal is to become a vibrant cultural center by weaving the arts and local heritage into everyday life.

OUR INVOLVED COMMUNITY

Our goal is to strive to work together as a community to achieve the Ventura Vision through civic engagement, partnerships, and volunteer service.

State law requires each California city to adopt a comprehensive, long-term General Plan for the physical development of the community that guides local decision-making by expressing community goals about the future distribution and character of land uses and activities. The plan should be comprehensive by both covering the City's entire planning area and addressing the broad range of issues facing the community, including physical, social, aesthetic and economic concerns. The plan must be internally consistent and serve as a long-term guide, establishing policies for day-to-day land use decisions over an approximately 20-year period.

Introduction and Background

"To remain successful, Ventura must periodically renew itself, re-examine its goals and create a shared vision to guide the community into the future."

With these opening words, the citizens of our community proclaimed the **Ventura Vision,** which was unanimously accepted by the City Council in March 2000. That landmark report captured the results of "a partnership encompassing city government, non-profit organizations, community groups, businesses, schools and individual residents to chart the community's future through a process of visioning."

Building on that shared vision, the City embarked on an effort to revise the 1989 Comprehensive Plan that served as the General Plan that all cities are required by State law to use to guide land use, transportation and other important policy decisions. This new General Plan is the culmination of that effort to translate the Ventura Vision into a coherent and comprehensive implementation plan to guide future development and preservation.

Throughout the visioning process and at the ballot box, Ventura residents have made clear we want a well-planned approach to managing growth. We don't want continued suburban sprawl paving over farm land and sensitive hillside areas. Instead, we want vacant or run-down properties to be improved with high quality "infill" to provide new jobs, new homes and new stores and services.

Managing growth to improve our quality of life and standard of living is the smart thing to do. Ventura residents don't want uncontrolled growth and suburban sprawl. We also don't want traffic gridlock, more "cookie cutter" tract houses or housing prices that make Ventura unaffordable for working families. By targeting new development to areas that would benefit from reinvestment – and by respecting our historic character and sense of place – "smart growth" is a better alternative.

Our vision is for a prosperous and well-planned community. Smart Growth emphasizes reusing existing buildings and land, revitalizing our historic downtown and neighborhoods, and protecting the environment for future generations. Smart Growth channels new businesses and homes into appropriate areas. It also provides options for public transportation, creates neighborhoods where homes are in walking distance of local services and ensures green space for public use.

We seek to protect and enhance our unique "sense of place" that builds on our pride in Ventura's history and natural setting. Instead of new development that looks like everywhere else, our vision is for interesting, unique neighborhoods and districts, which reflect our values and heritage. The policies for pursuing these goals are spelled out in this new General Plan.

The Ventura General Plan

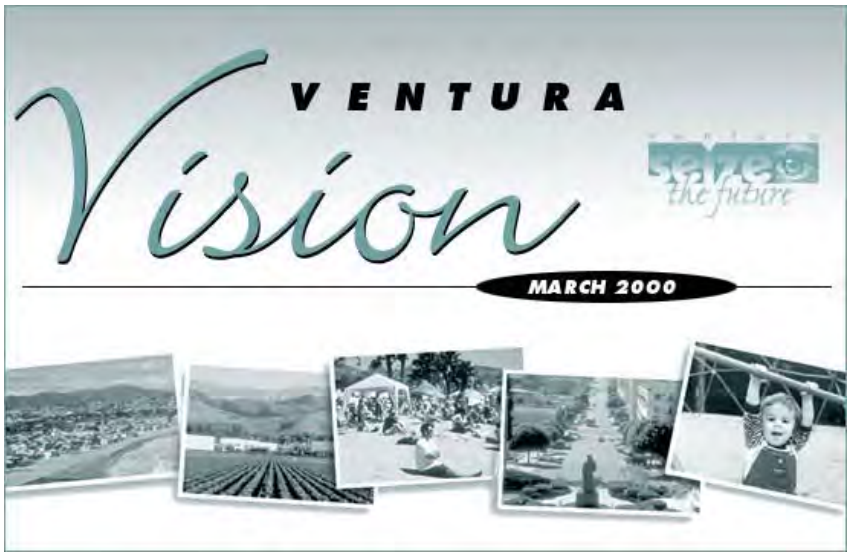
The *2005 Ventura General Plan* is the second in a series of three connected documents that will guide future conservation and change in the city. The *Ventura Vision* set the stage for this plan and enumerated four overarching principles that were affirmed by the community to guide Ventura into the future:

- Reach broadly and deeply into the community.
- Build on existing cultural, natural, and economic assets.
- Emphasize and encourage connections within the community.
- Work proactively and collaboratively to achieve the community's shared vision.

The final piece of the trilogy is a form-based *Development Code*. This code represents a new approach to zoning that prioritizes the appearance of development, while still ensuring that neighboring land uses are compatible and appropriate.

The *General Plan* will be put into action through the Development Code and a variety of other mechanisms, such as a mobility plan, specific plans, community plans, and capital improvement projects that will together shape the future of Ventura. The *General Plan* purposefully anticipates the *Code* focusing on the districts, corridors, and neighborhood centers where future change will be most pronounced.

The following vision statements reflect a high level of community consensus about a desired future for Ventura.



In the future, Ventura is a community that…

Environment

- Seeks sustainability by simultaneously promoting ecological health, economic vitality, and social well-being for current and future generations.
- Acts as an environmentally responsible model for other coastal areas.
- Protects and restores the natural character of its beaches, ocean views, hillsides, barrancas, and rivers as a scenic backdrop for its high quality urban environment.

Economy

- Develops a flourishing and balanced economy by encouraging a broad range of high quality employment and entrepreneurial opportunities.
- Encourages private economic development that supports public services and amenities associated with high quality of life.
- Has a vital, prosperous, and stable economy while maintaining its small-town feel.
- Is noted for private and public sector cooperation that enhances economic vitality.
- Actively participates in regional economic development efforts.

Planning, Design, and Circulation

- Retains its character as an attractive coastal town by growing slowly and sustainably, and by emphasizing its history, diversity, and natural environment.
- Cherishes its distinctive, diverse, and eclectic neighborhoods, and preserves their character.
- Has safe, accessible, and balanced transportation that promotes multiple modes of travel to local and regional destinations.

Social Activity

- Is known as an inclusive, diverse, and tolerant place that welcomes and celebrates all people.
- Provides all residents access to quality and affordable health and social services.
- Recognizes the importance of children and seniors by providing exceptional cultural, educational, and social support programs.
- Offers a diverse range of active and passive recreation for residents and visitors of all ages and abilities.
- Is dedicated to educational excellence and an emphasis on lifelong learning.
- Celebrates and is enriched by the arts and diverse cultural opportunities.

Collaboration

- Encourages residents to collaborate with each other and City government in an informed, active, and constructive manner to assess and resolve common issues.

ventura
seize
the future

Building on the Vision

Following adoption of the *Ventura Vision*, the City Council established a 19-member Comprehensive Plan Advisory Committee (CPAC) to shape the *Vision* concepts into issues and priorities for revision of the 1989 Comprehensive Plan. The CPAC included representatives of varied interests, including neighborhoods, agriculture, seniors and schools, as well as one member from the Planning Commission and one from the City Council. The committee met more than 30 times over almost three years. During that effort, the City published the August 2002 *Comprehensive Plan Update Background Report*, which provides a highly detailed account and analysis of opportunities and constraints that affect planning and land use in Ventura. This ultimately led to their findings, contained in the September 2003 *CPAC Issues & Alternatives Report*.

CPAC endeavored to create strategies to resolve planning and land use issues in Ventura utilizing the smart growth principles formulated by the U.S. Environmental Protection Agency:

- Mix land uses.
- Achieve compact building design.
- Provide a range of housing opportunities.
- Create walkable neighborhoods.
- Foster distinctive, attractive communities with a strong sense of place.
- Preserve open space, farmland, natural beauty, and critical environmental areas.
- Strengthen and direct development toward existing communities.
- Provide a variety of transportation choices.
- Make development decisions predictable, fair, and cost effective.
- Encourage community collaboration in planning decisions.

The recommendations of the CPAC were presented to the Planning Commission and City Council. After several months of reviewing the CPAC recommendations, the Planning Commission in December 2003 made some modifications to the CPAC's recommended land use scenario.

The City Council met 11 times from February through August 2004 to consider the CPAC and Planning Commission recommendations, review relevant data, and formulate broad goals, policies, and a diagram to guide growth and change in the City until 2025. In September 2004, the City Council established an ad-hoc General Plan Committee consisting of three Planning Commissioners and three City Council members to work with City staff and consultants to ensure that the *General Plan* would be completed expeditiously and with ample public participation, and to ensure open communication, transparency, and coordination among all parties interested in the creation of the *Plan*. All of the CPAC, Planning Commission, City Council, and General Plan Committee workshops, meetings, and hearings were open to the public and included significant, meaningful, and often extensive citizen input and participation.

Goals *summarize how conservation, development, and future growth should occur by identifying physical, economic and social ends that the community wishes to achieve.*

Policies *establish basic courses of action for the Planning Commission and City Council to follow in working to achieve community goals, by directly guiding the response of elected and appointed officials to development proposals and related community actions.*

Actions *need to be undertaken by the City to implement policies.*

Plan Format

The comprehensive and involved process of creating what is really a totally new (not just updated) *General Plan* – based on a new community vision and smart growth principles – resulted in a new set of goals, policies, and actions to guide future decision-making in Ventura that truly reflect the planning objectives of the community. These policy directives are organized by subject area in *General Plan* Chapters 1 through 10, which follow the organizational framework established in the *Ventura Vision* (see Table 1). Each topic is introduced with an overarching goal that carries forward the *Vision*, a description of issues needing resolution and methods for remedying them, and finally measurable policies and actions to achieve those solutions. Each of the policies contained within the Plan are intended to be understood and read with the following preface: "It is the intent of the City of San Buenaventura to...". All of the actions are summarized in table form in Appendix A, along with the City department or division responsible for implementing each action and timeframe for completion. Also included in the Plan are the legally binding Appendices B through E. Attachment A is provided as a reference, while Attachment B is provided to serve as guidelines for future development until an update to the Zoning Ordinance is completed.

Table 1
General Plan Organization

Vision/General Plan Chapter	Required/*Optional* Elements	Examples of Topics Covered
1. Our Natural Community	Conservation Open Space	Open space, hillsides, watersheds, riparian areas, sensitive plants and animals
2. Our Prosperous Community	*Economic Development*	Commercial and industrial growth, economic diversification, job opportunities, tourism
3. Our Well-Planned and Designed Community	Land Use/*Design* Housing *Park & Recreation*	Development patterns, neighborhoods, visual character, urban design, streetscapes, demographics, housing needs, affordability, constraints on production
4. Our Accessible Community	Circulation	Traffic, street network, parking, transit services, bike routes
5. Our Sustainable Infrastructure	Land Use	Water supply, wastewater treatment, drainage
6. Our Active Community	Land Use *Park & Recreation*	Park and recreation facilities, youth and senior programs
7. Our Healthy and Safe Community	Safety Noise Land Use	Development in hazardous areas, hazardous waste management, seismicity, flood control, water quality, brownfields, noise, police, fire, air quality
8. Our Educated Community	Land Use	Schools and libraries
9. Our Creative Community	*Culture*	Arts, events, community programs, cultural and historic resources
10. Our Involved Community	*Citizen Input*	Participation in governance

The format of the *General Plan* satisfies the State requirement that every general plan include policies for seven "elements," as follows:

Land use – establishes the general distribution and intensity of land uses, including housing, commerce, industry, open space, education, and public facilities.

Circulation – identifies the location and type of existing and proposed highways, arterial and collector roadways, bicycle routes, and other transportation facilities.

Conservation – addresses treatment of natural and cultural resources, including watersheds, wetlands, trees, rivers and barrancas, and cultural and historic landmarks.

Housing – assesses current and projected housing needs of all segments of the community and identifies land to provide adequate housing to meet those needs. Although the City's Housing Element and Technical Report is contained in a separate document to facilitate the frequent updating required by the State, the goals, policies and programs of the Housing Element must be and are consistent with the goals, policies, and actions of the *2005 Ventura General Plan.* (See Chapter 3, page 3-28, for 2004 Housing Element Goals and Policies.)

Noise – appraises noise sources in the community and develops means to mitigate nuisances.

Open Space – details techniques for preserving open space areas for natural resources, outdoor recreation, public health and safety, and agricultural activities.

Safety – establishes policies to protect the community from risks associated with seismic, geologic, flood, fire, and other hazards.

The *General Plan* also contains a number of special elements that aren't required by State law but are integral to the unique identity of Ventura. These cover a range of topics including education, recreation, arts and culture, and community involvement in local government. Another chapter treats the very important subject of the local economy, providing guidance to citizens, City staff and policy makers regarding strategies and priorities for economic development in Ventura.

California Coastal Act

The *General Plan* also satisfies State requirements for the City's **Local Coastal Program** in accordance with the California Coastal Act (*Public Resources Code § 30000 et seq.)*. Actions in the *General Plan* that affect coastal resources are intended to become part of the Land Use Plan of the Local Coastal Program, which will be accomplished through specific or community plans for those areas. These actions are identified with the logo of the California Coastal Commission (which oversees all Local Coastal Programs). The basic goals of the State for the coastal zone are to:

- Protect, maintain, and where feasible, enhance and restore the overall quality of the coastal zone environment and its natural and artificial resources.
- Assure orderly, balanced utilization and conservation of coastal zone resources taking into account the social and economic needs of the people of the state.
- Maximize public access to and along the coast and maximize public recreational opportunities in the coastal zone consistent with sound resources conservation principles and constitutionally protected rights of the private property owners.
- Assure priority for coastal-dependent and coastal-related development over other development on the coast.
- Encourage state and local initiatives and cooperation in preparing procedures to implement coordinated planning and development for mutually beneficial uses, including educational uses, in the coastal zone.
  (Public Resources Code § 30001.5)

ventura's general plan

OUR NATURAL COMMUNITY

"As age comes on, one source of enjoyment after another is closed, but Nature's sources never fail. Like a generous host, she offers her brimming cups in endless variety, served in a grand hall, the sky its ceiling, the mountains its walls, decorated with glorious paintings and enlivened with bands of music ever playing."

— John Muir
20th Century Naturalist

CITY OF
VENTURA

1. OUR NATURAL COMMUNITY

Our goal is to be a model for other communities of environmental responsibility, living in balance with our natural setting of coastline, rivers, and hillside ecosystems.

Natural Context

Ventura's natural setting is one if its greatest assets, and preserving the environment is a top community priority. Situated between the ocean, hills, and two rivers, the city affords its residents and visitors with a significant amount of accessible, beautiful, and biologically diverse open space. Although a number of programs are in place to protect coastal and watershed ecosystems and to maintain and preserve existing open lands, some natural features in and around the city have been compromised by the impacts of human activity.

As in many communities across the nation, concern is growing in Ventura about human impacts on natural resources. The historic spread of local development has given rise to grassroots efforts aimed at preserving Ventura's viable agricultural land, open space, and hillsides. The 1995 Save Our Agricultural Resources initiative (see Appendix B) and the 2001 Hillside Voter Participation Area (Appendix C) measure require voter approval before the city can expand into open space areas. The Ventura Hillsides Conservancy formed in 2003 seeks to preserve local hillsides, canyons, and open space.

Ventura, Oxnard, Ventura County, and the County Local Agency Formation Commission have adopted agreements to preserve agricultural and open space land located between the cities. A change that amends these greenbelts requires the approval of all signatories.

Protecting Ventura's fragile natural resources is a fundamental focus of the *2005 Ventura General Plan*. Policies and actions in this chapter intend to ensure that coastal, hillside, and watershed features are preserved, remain visible and accessible, and demarcate boundaries for urban development to define and enhance the city's identity.

The community cherishes the shoreline as one of Ventura's best features. Coastal facilities in the city include:

- Emma Wood State Beach
- Ventura Seaside Park and Fairgrounds
- Surfers Point at Seaside Park
- Beachfront Promenade Park
- San Buenaventura State Beach
- Pierpont Community Beach
- Marina Beach/Cove Port District Beach
- Channel Islands National Park Headquarters
- Surfers Knoll
- Santa Clara River Mouth

Coastal Resources

Ventura boasts seven miles of beautiful sand beaches and valuable shoreline habitat. This "string of pearls" has long been identified by the community as one of the city's most prized features. At its eastern end, the Ventura Harbor offers opportunities for residents and visitors to explore the local marine environment, including the Channel Islands National Park and Marine Sanctuary. Elsewhere along the coast, shoreline and dune habitat provide nesting, feeding, and mating grounds for a wide variety of wildlife, including threatened or endangered species such as the western snowy plover and the least tern.

Shoreline conservation programs underway include the Surfers Point Managed Shoreline Retreat, San Buenaventura State Beach restoration, Ventura Harbor wetland rehabilitation, and coastline water quality monitoring. The City will continue to invest in restoration to enhance the shoreline ecosystem, with the actions in this chapter augmenting current efforts.

Hillsides

The hills of the Transverse Range rise 1,200 feet above Ventura, providing an important visual backdrop that frames the City. Not only do these hills provide residents and visitors with scenic vistas, they are also part of a larger integrated ecosystem comprised by the hillsides, coastal areas, rivers and barrancas that together provide a rich habitat for many species. It is vital to the community that these hillsides that lie outside the city limits (with a County land use designation of either Open Space or Agriculture), are protected and preserved.

These hillsides, by definition, are coterminous with the Hillside Voter Participation Area, and comprise the Hillside Open Space community as depicted on the General Plan Diagram (page 3-22). Because the Hillside Voter Participation Area measure prohibits the extension of City urban services to the hillsides through 2030 without voter approval, the General Plan Diagram identifies the hillsides affected by the measure with a Planning Designation of Open Space. The full text and map of the Hillside Voter Participation Area appears in Appendix C (as required by the act). This chapter calls working with land conservation organizations to establish a Ventura hillsides preserve, and Chapter 6, *Our Active Community*, contains actions to work with the County to create public trails in the hillsides.

Definitions for “Hillside Open Space,” “Hillside Area,” “hillsides,” and “Hillside Voter Participation Area” can be found in the Glossary (Attachment A).

Rivers and Barrancas

The Ventura River flows south to the Pacific Ocean along the western edge of the city, and the Santa Clara River bisects the Oxnard coastal plain south of Ventura. A series of seasonal watercourses called barrancas traverse the city in narrow incised drainage channels running down from the hillsides. The rivers and barrancas and their larger watersheds provide undeveloped open space, riparian vegetation, wildlife habitat and corridors, recreational opportunities, and aesthetic beauty.

Where local watercourses have not been channelized, riparian trees and shrubs grow in fringing woodlands and thickets. Several sensitive bird species breed in these areas, including the least Bell's vireo, willow flycatcher, yellow warbler, and yellow-breasted chat. Steelhead and rainbow trout seasonally inhabit both the Ventura and Santa Clara Rivers.

Riparian and freshwater marsh areas in Ventura represent only a remnant of pre-human coverage, but the City has initiated conservation and restoration efforts such as the Ventura River Estuary Program to help reverse this trend. The estuaries at the mouths of the Ventura and Santa Clara Rivers serve as breeding grounds and feeding areas for migratory and resident shorebirds and waterfowl, as well as home to many terrestrial animals, fish, and free-swimming invertebrates.

Actions in this chapter – such as maintaining adequate buffers from watercourses, requiring restoration of natural drainage features, and prohibiting the placement of manmade materials in drainages – can protect and improve water and habitat quality in local watersheds. The bolder action of removing concrete channel structures would further enhance natural functions and aesthetics.

Resource Conservation

As Ventura continues to grow, conserving resources, increasing energy efficiency, and achieving environmental sustainability become ever more important. The City desires to incorporate green building measures into the design, construction, and maintenance of public and private buildings which can result in significant cost savings and promote overall health and productivity of residents, workers, and visitors to the city. Raising conservation awareness can help minimize waste and pollution released into the natural environment. Improving energy efficiency in buildings, expanding recycling programs, and reducing transportation-related energy consumption will make the city a greener place. The policies and actions in this chapter provide clear direction to guide conservation, green practices, and responsible use of resources.

Policy 1A: Reduce beach and hillside erosion and threats to coastal ecosystem health.

Action 1.1: Adhere to the policies and directives of the California Coastal Act in reviewing and permitting any proposed development in the Coastal Zone.

Action 1.2: Prohibit non-coastal-dependent energy facilities within the Coastal Zone, and require any coastal-dependent facilities including pipelines and public utility structures to avoid coastal resources (including recreation, habitat, and archaeological areas) to the extent feasible, or to minimize any impacts if development in such areas is unavoidable.

Action 1.3: Work with the State Department of Parks and Recreation, Ventura County Watershed Protection Agency, and the Ventura Port District to determine and carry out appropriate methods for protecting and restoring coastal resources, including by supplying sand at beaches under the Beach Erosion Authority for Control Operations and Nourishment (BEACON) South Central Coast Beach Enhancement program.

Action 1.4: Require new coastal development to provide non-structural shoreline protection that avoids adverse impacts to coastal processes and nearby beaches.

Action 1.5: Collect suitable material from dredging and development, and add it to beaches as needed and feasible.

Action 1.6: Support continued efforts to decommission Matilija Dam to improve the sand supply to local beaches.

Action 1.7: Update the Hillside Management Program to address and be consistent with the Planning Designations as defined and depicted on the General Plan Diagram.

Policy 1B: Increase the area of open space protected from development impacts.

Action 1.8: Buffer barrancas and creeks that retain natural soil slopes from development according to State and Federal guidelines.

Action 1.9: Prohibit placement of material in watercourses other than native plants and required flood control structures, and remove debris periodically.

Action 1.10: Remove concrete channel structures as funding allows, and where doing so will fit the context of the surrounding area and not create unacceptable flood or erosion potential.

Action 1.11: Require that sensitive wetland and coastal areas be preserved as undeveloped open space wherever feasible and that future developments result in no net loss of wetlands or "natural" coastal areas.

Action 1.12: Update the provisions of the Hillside Management Program as necessary to ensure protection of open space lands.

Action 1.13: Recommend that the City's Sphere of Influence boundary be coterminous with the existing City limits in the hillsides in order to preserve the hillsides as open space.

Action 1.14: Work with established land conservation organizations toward establishing a Ventura hillsides preserve.

Action 1.15: Actively seek local, State, and federal funding sources to achieve preservation of the hillsides.

Policy 1C: Improve protection for native plants and animals.

Action 1.16: Comply with directives from regulatory authorities to update and enforce stormwater quality and watershed protection measures that limit impacts to aquatic ecosystems and that preserve and restore the beneficial uses of natural watercourses and wetlands in the city.

Action 1.17: Require development to mitigate its impacts on wildlife through the development review process.

Action 1.18: Require new development adjacent to rivers, creeks, and barrancas to use native or non-invasive plant species, preferably drought tolerant, for landscaping.

Action 1.19: Require projects near watercourses, shoreline areas, and other sensitive habitat areas to include surveys for State and/or federally listed sensitive species and to provide appropriate buffers and other mitigation necessary to protect habitat for listed species.

Action 1.20: Conduct coastal dredging in accordance with the U.S. Army Corps of Engineers and California Department of Fish and Game requirements in order to avoid impacts to sensitive fish and bird species.

Action 1.21: Work with State Parks on restoring the Alessandro Lagoon and pursue funding cooperatively.

Action 1.22: Adopt development code provisions to protect mature trees, as defined by minimum height, canopy, and/or trunk diameter.

Action 1.23: Require, where appropriate, the preservation of healthy tree windrows associated with current and former agricultural uses, and incorporate trees into the design of new developments.

Action 1.24: Require new development to maintain all indigenous tree species or provide adequately sized replacement native trees on a 3:1 basis.

Policy 1D: Expand the use of green practices.

Action 1.25: Purchase and use recycled materials and alternative and renewable energy sources as feasible in City operations.

Action 1.26: Reduce pesticide use in City operations.

Action 1.27: Utilize green waste as biomass/compost in City operations.

Action 1.28: Purchase low-emission City vehicles, and convert existing gasoline-powered fleet vehicles to cleaner fuels as technology becomes available.

Action 1.29: Require all City funded projects that enter design and construction after January 1, 2006 to meet a design construction standard equivalent to the minimum U.S. Green Building Council LEED™ Certified rating in accordance with the City's Green Building Standards for Private and Municipal Construction Projects. 

Action 1.30: Provide information to businesses about how to reduce waste and pollution and conserve resources.

Action 1.31: Provide incentives for green building projects in both the public and private sectors to comply with either the LEED™ Rating System, California Green Builder, or the Residential Built Green program and to pursue registration and certification; incentives include "Head-of-the-Line" discretionary processing and "Head-of-the-Line" building permit processing. 

Action 1.32: Apply for grants, rebates, and other funding to install solar panels on all City-owned structures to provide at least half of their electric energy requirements. 

Action 1.33: Publicly acknowledge individuals and businesses that implement green construction and building practices.

ventura's general plan

OUR PROSPEROUS COMMUNITY

"Every increment of construction should be done in such a way as to heal the city."

— Christopher Alexander
Author of *A Pattern Language*, 1977

CITY OF
VENTURA

2. OUR PROSPEROUS COMMUNITY

Our goal is to attract and retain enterprises that provide high-value, high wage jobs; to diversify the local economy; to increase the local tax base; and to anticipate our economic future in order to strengthen our economy and help fund vital public services.

Adapting in the 21st Century

Great communities are prosperous communities. A successful city brings people, institutions, ideas, and capital together in creative ways that enrich the lives of those who live and work there. In today's global economy, high-wage high-value jobs are the foundation of the prosperity that instills a city with the financial resources necessary to provide high quality of life and excellent community amenities.

Ventura has been blessed with a history of prosperity, thanks in large part to success in harnessing the area's natural assets for economic benefit. For most of the 20th Century, Ventura was sustained largely by its role as the hub of the region's oil and agriculture industries. These two sectors not only provided a stable source of jobs and business opportunities, but also helped to shape Ventura's role as the legal, governmental, and cultural center of the County.

In the 21st Century, however, Venturans can't take continued prosperity for granted. Competition occurs regionally, nationally, and globally for innovative businesses, top talent, and good jobs. The community must build on its resources and constantly be on the lookout for new economic opportunities.

County government will likely remain the city's largest employer, providing an important element of economic stability, but government employment is not likely to grow significantly. Oil and agriculture will continue to be important, but their roles are diminishing. While Ventura is a regional center for healthcare, that industry will continue to face intense pressures to reduce costs. Still, the City of Ventura is positioned to move into an era dominated by innovation and reliant on emerging technologies. Cities and regions that excel in the "New Economy" promote high tech industries and boast a high quality of life. Likewise, to remain competitive, Ventura must continue to support economic development, but also create a more attractive living environment, including by providing appropriate housing for all segments of the local workforce. Efforts to boost economic development must be supported by a high quality of life, including a thriving cultural arts scene, award winning schools, and an engaged community. Tourism is also a strong market for Ventura. The beaches, museums, downtown, harbor and the nearby Channel Islands National Park attract more than 1.5 million visitors a year.

The policies and actions in this chapter seek to identify business niches that can thrive locally to diversify the economic base and ensure future community prosperity.

Economic Challenges

Ventura faces a variety of interrelated challenges to continued economic vitality, including:

1. Capturing a share of high-value job markets, such as biotechnology, computer software, communications, entertainment, multimedia, education, and business and financial services.

2. Diversifying the local economy to reduce dependence on the service, retail, and government sectors.

3. Building on the success of the tourism, manufacturing, business, and financial services sectors through marketing and job training programs that will ensure retention and attraction of these enterprises.

4. Finding appropriate locations for commercial and industrial land, including through revitalization opportunities in the Westside and Downtown and possibly via annexations of sites in the North Ventura Avenue and 101 Business Corridor areas.

5. Expanding the retail base, because sales tax represents a major City revenue source.

6. Providing housing for the full range of workforce households at all income levels.

7. Providing adequate infrastructure and financing resources.

Meeting all of these challenges in an integrated, strategic manner will be necessary to achieve long-term economic stability and success. The City must endeavor to identify the businesses most likely to remain and grow in an area that has very high costs – especially for housing – but also has outstanding community amenities, including good weather, a spectacular natural setting, and a safe and desirable community fabric.

The *Ventura Vision* calls for targeting industries that demonstrate the greatest promise for long-term community prosperity by:

- Providing high-wage, high skilled jobs,
- Possessing a local competitive advantage in the global economy,
- Being committed to local responsibility,
- Growing from local ownership, control or management,
- Practicing environmental leadership in their markets, and
- Strengthening the community's creative, cultural identity.

The *Vision* also offers principles for the City to pursue in charting future strategies for economic development:

- Encourage a broad range of high-quality employment and entrepreneurial opportunities.
- Encourage private economic prosperity that can support public services and quality-of-life amenities.

- Develop a vital, prosperous, and stable economy while maintaining a "small-town" flavor.
- Encourage the public and private sectors to work together to achieve prosperity.
- Participate constructively in regional economic development efforts.

Implementing these strategies will not be simple or easy. For one reason, California's current tax system contains provisions that result in some of the lowest-paying economic sectors providing the city with the most tax revenue, and vice versa.

Pillars for Prosperity

Community prosperity is not something that a city government can create by itself. Any successful economic development effort requires the participation of many partners, including community-based business organizations, educational and training institutions, venture capitalists, individual entrepreneurs and business owners, networks of suppliers, and other government agencies that have a mission to enhance prosperity.

Together, the City and its economic partners must ensure that the building blocks for community prosperity are in place. These foundations include organizations and institutions that can coordinate local economic development efforts, as well as land and other economic infrastructure required to make Ventura an attractive business location.

This organizational infrastructure is evolving in Ventura. Business groups such as the Chamber of Commerce and the Ventura County Economic Development Association (a countywide group) are already active, but a wider network is needed to assemble the resources and capacity of entrepreneurs, venture capitalists, educators, and other stakeholders in building a healthy business climate. Greater synergy is needed among the area's higher education institutions – including California State University Channel Islands, Ventura College, Brooks Institute, and satellite campuses of other colleges and universities.

Appropriate and sufficient land will also be necessary to ensure continued economic prosperity over the next 20 years, even as we seek to protect open space and combat sprawl. Demand for land to support retail and office development is likely to outstrip current supply unless allowable building intensities are significantly increased. While some increased density is likely, and some older industrial land may be recycled for new business uses, the City must take care to reserve sufficient land for these purposes – especially in an environment where short-term pressure is likely to encourage conversion of land to commuter housing.

Thus, the strategy for community prosperity must be coordinated with area-specific planning efforts, especially on the Westside (where industrial land is likely to be recycled), Downtown (which must stress office, studio, and retail business growth as well as an emerging residential component), and in the 101 Corridor between Mills Road and

Johnson Drive (where most of the city's business activity now takes place). The City will advance on a set of defined focused areas:

Auto Center – efforts over the short term will focus on making the area a regional retail destination. The City will strengthen its partnership with Auto Center dealers to realize beautification projects and facilitate land use entitlements for additional dealerships.

McGrath Property – the 76-acre site provides Ventura with the very best opportunity to attract new industry with high-value, high-wage jobs. The City and property owners will work on securing project entitlement approvals and recruiting desired tenants. The objective is to attract targeted industries and provide the impetus for initial site development over the short-term.

Westside – the feasibility of establishing a redevelopment project area will be considered by the City and Westside citizens. Such legal designation would provide the resources needed to leverage and implement planned initiatives in various Westside plans. Brownfield reuse efforts will also continue to secure funding for much needed site assessment and remediation activities.

Upper North Avenue – the objective is to transform this area from an oilfield industrial area to a dynamic economic engine. Development efforts will address reuse of the former USA Petroleum site, including and evaluation of the site's potential to emerge as a component of a campus expansion opportunity for Brooks Institute. Keys to this effort are site remediation, compatibility issues, and future annexation to the City.

Downtown – proposed initiatives include well defined design standards in the updated Downtown Specific Plan, enhanced efforts to market the Downtown Cultural District, formation of a downtown management entity, and attracting uses that create "around–the-clock" activity.

Anticipating Our Economic Future – Ventura's economic growth is built on a foundation of concerted efforts that fuel innovation, collaboration, and continuous learning. The focus will be on attracting high technology and knowledge-based businesses including biotechnology, non-durable manufacturing, and business and financial services. Continuous learning opportunities for job seekers, workers, and employers will acknowledge demographic pressures and rapidly changing skill needs. Through specific strategies, the community will develop leaders for tomorrow, and attract and retain new graduates and skilled employees. Critical players will include the Workforce Investment Board, Ventura College, California State Channel Islands, and the Brooks Institute.

The policies and actions in this chapter attempt to provide the means to support these targeted efforts to achieve a stable and balanced economic base.

Policy 2A: Establish a clear economic strategy.

Action 2.1: Track economic indicators for changes that may affect City land resources, tax base, or employment base, such as terms and conditions of sale or lease of available office, retail, and manufacturing space.

Action 2.2: Prepare an economic base analysis that identifies opportunities to capture retail sales in sectors where resident purchasing has leaked to other jurisdictions.

Action 2.3: Maintain and update an Economic Development Strategy to implement City economic goals and objectives.

Policy 2B: Make the local economic climate more supportive of businesses investment.

Action 2.4: Map priority locations for commercial and industrial development and revitalization, including a range of parcel sizes targeted for high-technology, non-durables manufacturing, finance, business services, tourism, and retail uses.

Action 2.5: Share economic and demographic information with organizations that may refer businesses to Ventura.

Action 2.6: Encourage intensification and diversification of uses and properties in districts, corridors, and neighborhood centers, including through assembly of vacant and underutilized parcels.

Action 2.7: Partner with local commerce groups to recruit companies and pursue funding for business development and land re-utilization.

Action 2.8: Carry out Housing Element programs that provide housing to all segments of the local workforce.

Action 2.9: Expedite review for childcare facilities that will provide support to local employees.

Policy 2C: Encourage niche industries.

Action 2.10: Expedite review of the entitlement process for installation of infrastructure necessary to support high technology and multimedia companies.

Action 2.11: Allow mixed-use development in commercial and industrial districts as appropriate.

Action 2.12: Allow uses such as conference centers with resort amenities on appropriately sized and located parcels.

Action 2.13: Market the city to businesses that link agriculture with high technology, such as biotechnology enterprises.

Action 2.14: Partner with local farms to promote farmers markets and high quality locally grown food.

Policy 2D: Expand tourism opportunities.

Action 2.15: Provide incentives for use of waterfront parcels for recreation, visitor-serving commerce, restaurant, marina, and fishing uses.

Action 2.16: Work with the State to create year-round commercial opportunities at the fairgrounds.

Action 2.17: Partner with the Harbor District and National Park Service to promote Channel Islands tours and develop a marine learning center.

Action 2.18: Prioritize uses within the Harbor master plan area as follows: (1) coastal dependent, (2) commercial fishing, (3) coastal access, and (4) visitor serving commercial and recreational uses.

Action 2.19: Partner with hotels and the Chamber of Commerce to promote city golf courses.

Action 2.20: Promote outdoor recreation as part of an enhanced visitor opportunities strategy.

ventura's general plan

OUR WELL PLANNED COMMUNITY

"Communities should be designed to serve the cycle of the day and the cycle of the lifetime."

— Andres Duany
Architect & Town Planner

CITY OF
VENTURA

3. OUR WELL PLANNED & DESIGNED COMMUNITY

Our goal is to protect our hillsides, farmlands and open spaces; enhance Ventura's historic and cultural resources; respect our diverse neighborhoods; reinvest in older areas of our community; and make great places by insisting on the highest standards of quality in architecture, landscaping and urban design.

Our City

Ventura is a unique coastal community, proud of our heritage and dedicated to being a national model for effectively managing growth to protect our natural environment and continue to be a great place for us to live.

It is our public responsibility to plan and shape the physical realm to achieve these goals. Past policies, particularly the 1989 Comprehensive Plan, reined in rapid outward suburban sprawl. The 1992 Downtown Specific Plan set the direction for revitalization of the historic heart of our community. Voter-approved measures clearly underscored a mandate to protect agricultural resources and open space, particularly in our hillsides.

Guided by the Ventura Vision of 2000, the centerpiece for this General Plan is creating a "well-planned and designed community." The policies build on the foundation of the past. This plan also represents an historic commitment to *smart* growth:

1. Mix land uses
2. Take advantage of compact building design
3. Create a range of housing opportunities and choices
4. Create walkable communities
5. Foster distinctive, attractive communities with a strong sense of place
6. Preserve open space, farmland, natural beauty, and critical environmental areas
7. Strengthen and direct development toward existing communities
8. Provide a variety of transportation choices
9. Make development decisions predictable, fair, and cost effective
10. Encourage community and stakeholder collaboration in development decisions

Source: U.S. Environmental Protection Agency

"**Smart growth** is about being good stewards of our communities and of our rural lands, parks, and forests. It is about ensuring that the best of the past is preserved, while creating new communities that are attractive, vital, and enduring."
--Michael Leavitt, EPA Administrator

Infill First

Ventura today is the product of decades of earlier growth and development. These patterns have largely established our community's character and will continue to do so in the future. The passage of SOAR, the Hillside Voter Protection Area, and other land-use constraints, along with natural boundaries, such as the ocean and the rivers, make it abundantly clear that before we expand outward any further, we must pursue an "Infill First" strategy. Such a strategy will help avoid sacrificing farmland and sensitive areas in our hillsides and along our rivers.

Our “Infill First” strategy for Ventura means avoiding suburban sprawl by directing new development to vacant land in the City and Sphere of Influence (with the exception of SOAR land), and by focusing new public and private investment in carefully selected districts, corridors, and neighborhood centers where concentrated development and adaptive reuse will improve the standard of living and quality of life for the entire community.

Recognizing that the rate of future population growth is not subject to City control, this plan has been analyzed (in the accompanying Environmental Impact Report) on the basis of estimates of what new homes and other development might be expected to take place over the next twenty years (see Table 3-2). Looking at the rate of growth over the past decade and recognizing the challenges to "infill" development compared to "greenfield" expansion, a projection of roughly 8,300 additional housing units and approximately 5 million square feet of non-residential development has been used for the plan's 20 year planning horizon. Table 3-2 provides estimates of the amount of development that could reasonably be expected to occur in the City and Sphere of Influence.

The actual distribution of future growth in the City may vary based on market forces and other factors. The districts, corridors, and neighborhood center areas, shown on Figure 3-1 Infill Areas, could accommodate more development and/or a different mix of development than shown in Table 3-2. To demonstrate this, Table 3-1 shows the potential development based on the overall carrying capacity of the land.

Distribution of growth in the districts and corridors is based on the following general assumptions:

- Development in the Downtown and Harbor Districts will conform to the plans for those areas,
- The Downtown area and, to a lesser extent, the Ventura Avenue corridor will be the focus of future residential and commercial growth, and
- The Arundell, North Avenue, and Upper North Avenue areas will be the focus of future economic growth, potential expansion of the Brooks Institute, with some residential uses.

Table 3-1. Potential Development Based on Carrying Capacity of Land Area

Planning Designation	Allowed Density (du/acre)	Existing Development 2004					General Plan Capacity			
		Single Family Units	Multi Family Units	Comm./Ind. Sq. Ft.	Parcels	Acres	Vacant Parcels	Vacant Acres	Additional Potential[3] Units	Additional Potential[3] Sq. Ft.

Figure 3-1
Infill Areas

Footnotes for Table 3-2:
Growth estimates for the Arundell community consider the likely development of the 75-acre McGrath property with a mix of uses and development of other vacant lands. Growth estimates for the North Bank area consider the possibility of a large retailer in that area. Estimates of growth in the SOI/Other Infill sites are based on the following general assumptions: (a) 101/126 Orchard site will develop similarly to a project recently proposed for that site; (b) Wells/Saticoy sites will develop in accordance with ongoing planning efforts for those areas; (c) the Pierpont area will develop generally in accordance with a conceptual project recently considered by the City; (d) Second Units will be added at a rate of 15/year; (e) roughly half of underutilized lands identified in the Housing Element will be re-developed over the next 20 years; (f) all vacant lands outside the districts and corridors will be developed in accordance with the proposed planning designations. Planned and Pending Developments based upon the City's 2004 Pending Projects list. Building areas do not include self storage facilities.
The following potential projects not included in the 2004 Planned and Pending Developments list have been included in the future development totals: (1) 150,000 square feet of industrial development in the North Bank area; (2) 165,000 square feet of retail development along Wells Road in the Saticoy area; (3) 50,000 square feet of office development on a 3.5-acre site along Ralston Drive. The Auto Center industrial project is included in the North Bank district; the other two projects are included in the "vacant" category. The square footage associated with these projects has been added to the projections of future growth to provide a conservative analysis of possible future impacts.

Together Table 3-2 and Figure 3-1, Infill Areas, offer a sense of how much growth Ventura might experience by 2025, and a picture of where such change is likely to occur. Precisely how and when development happens and what resources are conserved will be determined by the actions presented in the ten chapters of the *General Plan*, and by the specific land development standards. This plan is one of many tools the City will use to control where and how any future development takes place.

21st Century Tool Kit

The City has a wide array of tools at its disposal to achieve our "Infill First" strategy in ways that respect Ventura's heritage and result in beautiful buildings, blocks, streetscapes, and public places that enhance and enrich quality of life for the entire community. Shaping the City's physical form in the 21st Century will be achieved most effectively and aesthetically by combining Planning Designations with a transect-based approach, and with a new form-based Development Code. Together these can strongly influence the design and functioning of Ventura's distinct and unique neighborhoods, districts, and corridors.

The policies and actions in this chapter seek to enrich Ventura's urban fabric through appropriate design that showcases the attractive features of neighborhoods, districts, and corridors. To promote high-quality infill, the policies and actions encourage neighborhood centers, pedestrian access, established and desirable building types, and dynamic, neighborhood-serving nodes of mixed-use development along primary streets and corridors. This chapter specifically calls for detailed attention to community design through a form-based approach.

Neighborhoods: The Basic Building Blocks of Community

Like any great city, Ventura has grown around the basic unit of the neighborhood. A true neighborhood is not a subdivision of similar houses disconnected from surrounding places. Instead it is an identifiable area containing a neighborhood center with a pedestrian-friendly mix of uses and a palette of housing types for people in all stages of their lives. Neighborhoods are often defined by a quarter-mile "pedestrian shed" (see Figure 3-2), in which most residents' daily needs can be met within a five-minute walk. The organic nature of neighborhoods and their interdependency is what makes them viable for generations. Neighborhoods are not static places that resist change, but rather evolve naturally through periods of transformation to accommodate new residents' needs and desires.

> "In a neighborhood, everything that is needed is there and everything that is there is needed."
> - Anonymous

Figure 3-2
Pedestrian Shed, Theoretical versus Actual

The City is rich in a variety of neighborhoods, most of which are within one of Ventura's distinct communities. A total of 17 communities were identified in the 1989 Comprehensive Plan and have been carried forward, with some modifications to allow for a more detailed approach to describe Ventura's geography. Figure 3-3 illustrates 19 distinct communities, some of which are composed of a group of neighborhoods, each boasting their own unique attractions and potential. The oldest settled area is nearest the ocean, with newer areas found eastward, with the exception of Saticoy. Some of Ventura's communities have neighborhood centers established around parks, community gathering places, or civic buildings, and contain or are near services they share with surrounding areas, such as schools, libraries, post offices, and specialty shopping.

Ventura also has residential subdivisions and commercial and industrial districts that could evolve into true neighborhoods. A long-term strategy should be developed to gradually transform these areas that do not yet follow the neighborhood pattern. Existing subdivisions could be linked by pedestrian routes to new small-scale retail and service centers. Congested commercial areas could be redesigned as mixed-use centers on a grid of streets with walkable blocks that connect with surrounding neighborhoods and central plazas. These streets could be lined with buildings containing upper level housing and lower level commercial, office, and civic spaces that hide internal parking structures. Industrial sites that are fast converting to light industry, high tech manufacturing, and assembly could become factory villages with green space, multiple types of housing, small-scale retail to serve workers, and spin-off businesses.

Ventura's 19 communities (Figure 3-3) can each be enriched by using the *transect* (see discussion page 3-10) as a lens to understanding the ways in which it functions and by applying form-based development controls to respect and enhance its character to ensure that, where appropriate, each community provides one, if not more, walkable neighborhoods.

----- City Limits

- - - Planning Communities

Figure 3-3
Planning Communities

Taylor Ranch
This area is essentially undeveloped, with agriculture as the primary activity. Taylor Ranch is within the City's Planning Area, including a portion within the Coastal Zone Boundary.

Ventura River
This area includes the Ventura River Basin, is within the Coastal Zone Boundary, and with Emma Wood State Beach Park, its major activity is recreation offering day use and overnight camping. Opportunities exist for passive recreation and nature study.

Hillside Open Space
Within the City's Planning Area, is undeveloped, and designated Open Space. Plant communities include chaparral, riparian willow forest, and oak woodland. This area has tremendous potential for passive recreation including scenic trails with panoramic views. This area is coterminous with the Hillside Voter Participation Area or "HVPA" (see Chapter 1 and Appendix C).

North Avenue
Within the City's Planning Area. Historically, largely oilfield industrial. Includes both the Upper North Avenue and North Avenue districts, and is home to the Brooks Institute, which is world renown for its professional photographic and motion picture education. Opportunities exist to strengthen the economy of this area and provide for the expansion of the Brooks Institute into a campus-village including spin-off businesses with a mix of housing types and transit options for all ages.

Westside
Includes the Ventura Avenue corridor and is home to several neighborhood centers that are surrounded by well-connected neighborhood blocks. Opportunities exist to realize the potential of neighborhood improvements initiated in ongoing and past grassroots efforts, such as the Westside Revitalization Plan. This community includes "Hillside Areas" (see definition in Attachment A), which are subject to the Hillside Management Program that provides necessary development criteria in order to retain the natural qualities and minimize potential hazards.

Downtown
The area is regulated by the Downtown Specific Plan. This community is both an urban core with opportunity to grow economically stronger, and the historic center of the City. Civic uses include City Hall, Seaside Park, Grant Park, the Ventura County Museum, San Buenaventura Mission, and is home to a number of historic sites and landmarks. Additional opportunity to enhance the area's already strong cultural climate, including art, cookery, music, performance, and entertainment. Tremendous potential to create "around-the-clock activity" leading to increased vitality. This community includes "Hillside Areas".

Midtown
Includes the Main, Thompson, and Loma Vista corridors, a portion of the Telegraph corridor, as well as the Seaward/Alessandro neighborhood center. Home to the Pacific View Mall, the City's Bus Transfer Center, Ventura High School. Blanche Reynolds Park, Ocean Avenue Park,

and Memorial Park. Includes a small amount of agriculture. Opportunities exist to realize potential improvements initiated in ongoing and past grassroots efforts, such as Midtown by Design, and more recently the Midtown Urban Design Charrette. This community includes "Hillside Areas".

Pierpont
Within the Coastal Zone Boundary, a unique-beach oriented predominantly residential community, with high-quality beachfront homes. Includes the Harbor district and the Pierpont neighborhood center. Home to the Ventura Harbor, Seaward Elementary School, a mobile home park, and Marina Park. Currently offers highway retail such as motels, hotels, and fast food, but opportunity exists to offer residents and visitors with more attractive and improved neighborhood and coastal oriented services and to develop a specific plan for the Harbor district.

College
Includes a portion of the Telegraph corridor, and the College/Day neighborhood center. Major civic uses are Arroyo Verde and Camino Real Park, Ventura Community College and Buena High School. This community includes "Hillside Areas".

Thille
Includes the Gateway neighborhood center and shares the Victoria corridor with Montalvo to the east. Contains mix of housing types built mostly between 1960 and 1980, with some newer development in the 1990's and early 2000's. Its primary civic use is the County Square Linear Park

Arundell
This community contains the main industrial and warehouse district of Ventura, but also has mixed-use areas with retail, restaurants, and offices within walking distance of many workers. Callens Road, the historic center of this community, has great potential to expand and increase the mix of uses it contains, including residential. A significant vacant parcel, the 75-acre McGrath property, offers great economic opportunity to attract new industry that provides high value, high wage jobs to the City.

Olivas
Predominantly agricultural. Its major civic use is the Olivas Park Golf Course and is home to the Olivas Adobe. Contains some commercial and industrial.

North Bank
This community contains a portion regulated by the Auto Center Specific Plan. Its major civic use the Buenaventura Golf Course. Predominantly industrial, with some agriculture. Opportunity to enhance the area as a regional retail destination, while providing workforce serving retail uses.

Poinsettia
Includes the Victoria Plaza neighborhood center. Its primary civic uses include elementary and middle schools. Predominantly residential, with some housing in the Hillside Area, and a significant amount of agricultural operations.

Montalvo
Includes the Johnson Drive corridor, Bristol neighborhood center, and shares the Victoria corridor with Thille to the west. Its major civic use is the County Government Center (equal size to 12 downtown blocks), but also the Rancho Ventura Linear Park and the Barranca Vista Park. Contains mix of housing types and is home to the Metrolink Station.

Serra
Includes the Telephone/Petit neighborhood center, and is home to the City's newest civic use – the Community Park, set to open Fall 2005. Also includes the Chumash Park, Junipero Serra Park, North Bank Linear Park, and Bristol Bay Linear Park. Contains a significant amount of agricultural land.

Juanamaria
Includes the Kimball/Telegraph neighborhood center. Primary civic use is Hobert Park; this community contains some agricultural land.

Wells
Includes the Wells corridor. The Brown Barranca runs through the northerly portion of this area. Contains agricultural land.

Saticoy
Includes the Telephone/Cachuma and Saticoy neighborhood centers and the Saticoy district. Developed originally as a rural town in the late 1800s, Saticoy has the full range of transect characteristics: from the Santa Clara river and the rural eastern edge, to its neighborhood centers, and a mix of housing types at various intensities. Its major civic uses are the Fritz Huntsinger Youth Sports Complex, Saticoy Regional Golf Course and the Saticoy neighborhood park.

Planning Designations and Transect Zones

Land in the City's Planning Area is divided into eight basic Planning Designations on the General Plan Diagram (page 3-22). Each acknowledges a particular predominant development pattern that exhibits certain desirable characteristics, such as building types and functions that can be measured and described.

The wide range of building forms in Ventura offers great potential for compatible infill and viable mixed-use projects in existing neighborhoods, districts, corridors, and neighborhood centers. The wealth of building types includes attached and detached housing, duplexes, courtyard bungalows, second units (often over garages), lofts (some live-work), urban villas, neighborhood shopfronts, concentrated retail developments, and civic buildings. Public buildings retain special importance by serving as prominent landmarks that shape the visual character of the city.

Streetscapes set the tone for quality of life in Ventura by providing the shared outdoor living space of the community. Although the city's distinct neighborhoods, commercial and industrial districts, and agricultural areas are linked by corridors that have evolved primarily to accommodate motor vehicles, opportunities abound to make those streets more livable and to focus activities in neighborhood centers that emphasize walking, biking, and public gathering, and thereby ease traffic and reinforce community vitality. Accordingly, new development needs to be high quality, compact, and walkable, and it should incorporate design diversity that increases lifestyle choices and bolsters commerce and industry.

Determining which building types are most appropriate in specific locations requires shifting away from conventional zoning that emphasizes use toward a form-based approach that prioritizes function, appearance, and compatibility with surrounding context. A powerful tool for understanding this context is the *Transect*, which depicts the continuum from rural to urban conditions (see Figure 3-4).

The transect is a tool that can be used by the community to understand and describe the full range of unique environmental and built characteristics within each of Ventura's neighborhoods. Using the six parenthetical transect zones to better understand the broad Planning Designations of the General Plan Diagram, a finer-grained (site specific) set of development standards can be created to ensure that new development is in keeping with local preferences for building.

This new Development Code will better accommodate the diversity of lifestyles Ventura desires – from the *rural* farm to the *sub-urban* house and yard to the *urban core* with apartments above shops – and will contribute to the identity and character desired by the community. Common elements that the transect will help measure and describe, and that the Development Code will prescribe, include the types and

arrangements of buildings, their "intensity" of lot coverage, height and mass, the details of streets, public and private frontages and the requirements for and character of open spaces. In general it will prescribe individual neighborhood preferences for urban design and building characteristics, including standards.

In many cases, area specific codes, applying the Planning Designations including districts, corridors, and neighborhood centers, will be developed as part of community or specific plans that establish a detailed strategy for public and private investment and policies to promote the appropriate preservation and development of community desired character.

The following descriptions of the Planning Designations include a parenthetical reference to the transect zones they encompass that will be used as guidance in interpreting the planning designations while drafting detailed plans and codes:

"A **transect** is a geographical cross-section of a region used to reveal a sequence of environments. For human environments, this cross-section can be used to identify a set of habitats that vary by their level and intensity of urban character, a continuum that ranges from rural to urban. In transect planning, this range of environments is the basis for organizing the components of the built world: building, lot, land use, street, and all of the other physical elements of the human habitat."
--SmartCode, Volume 6.5, 2005

"All architecture should be beautiful. All towns should be beautiful. Beauty nurtures the soul and the spirit. It makes life worth living."
-Camillo Sitte

- Neighborhood Low – *(T3 Sub-Urban and T4 General Urban)*
emphasizes detached houses with some attached units in a small mix of building types from 0 up to 8 dwelling units per acre. Predominantly residential, with opportunity for limited home occupation and neighborhood services sensitively located along corridors and at intersections.

- Neighborhood Medium – *(T3 Sub-Urban, T4 General Urban and T5 Urban Center)*
anticipates a mixture of detached and attached dwellings and higher building types at approximately 9 to 20 dwelling units per acre. Predominantly residential with small scale commercial at key locations, primarily at intersections and adjacent to corridors.

- Neighborhood High – *(T3 Sub-Urban through T6 Urban Core)*
accommodates a broader mix of building types, primarily attached, from 21 to 54 dwelling units per acre; A mix of residential, commercial, office, and entertainment that includes mixed-use buildings.

- Commerce – *(T4 General Urban through T6 Urban Core, neighborhood center downtown, regional center, town center or village center)*
encourages a wide range of building types of anywhere from two to six stories (depending on neighborhood characteristics) that house a mix of functions, including commercial, entertainment, office and housing.

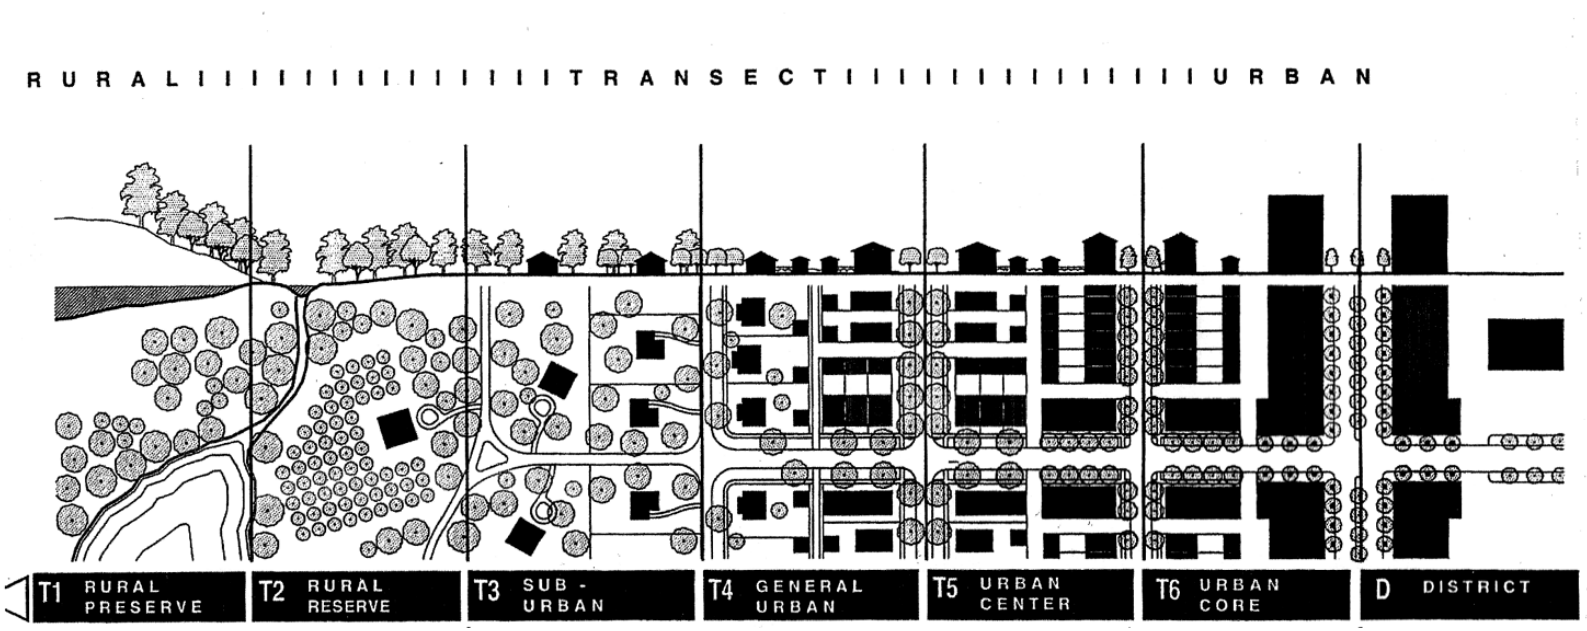
- Industry – *(T2 Rural through T6 Urban Core)*
encourages intensive manufacturing, processing, warehousing and similar uses, as well as light, clean industries and support offices; also encourages workplace-serving retail functions and work-live residences where such secondary functions would complement and be compatible with industrial uses. Primarily large-scale buildings. Also can be developed as Transit Oriented Development, employment center or working village with a mix of uses.

- Public and Institutional – *(T1 Preserve through T6 Urban Core)*
accommodates civic functions such as government offices, hospitals, libraries, schools and public green space.

- Agriculture – *(T2 Rural)*
predominantly commercial cultivation of food and plants and raising of animals.
Pursuant to SOAR: The Agricultural use (not to be considered until after the Year 2030) category identifies those lands that are designated for agricultural use on the General Plan Diagram. The target date of 2030 associated with the Agricultural Use designation indicates a review date after which agriculturally designated lands may be reconsidered for urban uses. However, during the life of this Plan as amended by initiative, it is intended that only agricultural uses are permitted on these lands, except as such lands may be appropriate to public open space and recreational usage. Furthermore, any updates to this Plan are not intended to imply that development would necessarily be appropriate at that time.

- Parks and Open Space – (*T1 Preserve through T6 Urban Core)*
designate lands to public recreation and leisure and visual resources, and can range from neighborhood tot lots and pocket parks to urban squares and plazas and playgrounds to large regional parks and natural preserves.

Figure 3-4. The Transect



Transect: a system of ordering human habitats in a range from the most natural to the most urban. For convenience, the Transect is divided into six zones which describe the physical character of place at any scale, according to the intensity of land use and urbanism. The T-Zones are T1 Natural, T2 Rural, T3 Sub-Urban, T4 General Urban, T5 Urban Center, and T6 Urban Core.

Natural Zone (T1): consists of lands approximating or reverting to a wilderness condition, includes lands unsuitable for settlement due to topography, hydrology, or vegetation.

Rural Zone (T2): consists of lands in open or cultivated state or sparsely settled. These may include woodlands, agricultural lands, grasslands and irrigable deserts.

Sub-Urban Zone (T3): though similar in density to conventional suburban residential areas, differs by its superior connectivity and by allowing home occupations. It is typically adjacent to other urban T-zones. This zone is naturalistic in its planting. Blocks may be large and the roads irregular to accommodate site conditions.

General Urban (T4): has a denser and primary residential urban fabric. Mixed-use is usually confined to certain corner locations. This zone has a wide range of building types: singles, side yard and rowhouses. Setbacks and street tree settings are variable.

Urban Center (T5): is the equivalent of the main street area. This zone includes mixed-use building types that accommodate retail, offices and dwellings, including rowhouses and apartments. This zone is a tight network of streets and blocks with wide sidewalks, steady street tree planting and buildings set close to the frontages.

Urban Core (T6): is the equivalent of a downtown. It contains the densest urbanism – the tallest buildings and the greatest variety of uses, particularly unique ones such as financial districts and important civic buildings. This zone is the least naturalistic of all the zones; street trees are formally arranged or non-existent.

Source: Duany, Plater Zyberk & Company's SmartCode, Volume 6.5, Spring 2005

The General Plan Diagram (page 3-22) also depicts the Downtown, Auto Center, and Saticoy Village Specific Plan areas, which are subject to detailed standards for form and use. In addition, the Diagram identifies Districts, Corridors, and Neighborhood Centers – where the development of housing alongside commercial uses is specifically encouraged. These Districts, Corridors, and Neighborhood Centers make up the growth priority areas as the City's "Infill First" strategy (See Figure 3-1 Infill Areas).

Districts, Corridors, and Neighborhood Centers

One of the primary objectives for infill in Ventura is to produce mixed-use development that places most people's daily needs within walking distance of their dwellings. This may include encouraging "flex space" where a single building functions as both living and working area for the owner, combining housing and commercial uses in the same structures, or sensitively integrating small-scale retail, service, and entertainment within convenient distance of residential areas. Mixed-use places inherently reduce automobile trips and improve the pedestrian experience, resulting in safer neighborhoods, healthier citizens, and better access to everyday needs. The City's corridors and districts already encompass significant mixed-use development. Opportunities exist to augment those areas in ways that complement and enhance existing urban form and streetscapes to better serve Ventura's residents.

Districts

Districts consist of streets or areas emphasizing specific types of activities and exhibiting distinct characteristics. A neighborhood or parts of neighborhoods can form a district. A thoroughfare may also be a district, such as when a major shopping avenue runs between adjoining neighborhoods. The following nine districts are depicted on the General Plan Diagram:

1. Upper North Avenue – home to a mix of industrial uses, including an abandoned oil refinery and Brooks Institute. Tremendous opportunities exist for the remediation and reuse of the former USA Petroleum site, as well as for the expansion of the Brooks Institute as a campus village, surrounded by a green edge to define the upper limits of Ventura.

2. North Avenue – an area with oilfield, industrial, and residential development, which has potential to fully develop into a more balanced mix of building types and uses with unique character, to serve as a major neighborhood anchor for northwest Ventura.

3. Downtown – the most intensely developed area of the city and its urban core. The Downtown Specific Plan regulates this area. Proposed initiatives include well-defined design standards via the Downtown Specific Plan update; enhanced efforts to market the Downtown Cultural District; formation of a

downtown management entity; and attracting uses that create "around–the-clock" activity.

4. Pacific View Mall – an enclosed shopping center and adjacent commercial uses. Large expanses of surface parking paired with significant building mass offer opportunity for the reintroduction of the block pattern and a reinvention of single-use retail into a much more sustainable mix of high intensity uses.

5. Harbor – an area with visitor serving uses, marine facilities, boating and commercial and recreational fishing activities, as well mixed-use places. A specific plan (based on the draft Harbor Master Plan) is being prepared for the Harbor District that will ensure a mix of uses, including residential, and highly defined public frontages and shared civic space for increased accessibility to ocean-front amenities.

6. Arundell – is currently an industrial center with a mix of small-scale industrial uses, business park development, and limited retail services. The McGrath Property – is a 76-acre site of undeveloped land that could provide the catalyst for Ventura's redefinition of 21st Century light industry, manufacturing, research and development, and technological innovation. It is centrally located in the Arundell area, which is ripe for redevelopment into a new form of community plan and building that incorporates large-scale employment, workforce housing and neighborhood commercial in an economically diverse setting.

7. North Bank – a combination of automobile retail, regulated by the Auto Center Specific Plan, and industrial/business park uses. Auto Center – efforts over the short tem will focus on making the area a regional retail destination. The City will strengthen its partnership with Auto Center dealers to realize beautification projects and facilitate land use entitlements for additional dealerships, as well as nurture creative partnerships to discover potential for unique attractions of regional interest.

8. Montalvo – an area of industrial and heavier commercial uses, and currently home to the Metrolink Station. Because of the strategic location of this area between east and west Ventura and it's transportation-rich infrastructure, it needs a strong plan for connectivity and a strategic mix of uses for evolution that is economically sustainable.

9. Saticoy – a mix of homes, older industrial and agricultural operations, and the planned site for the County maintenance yard. The Saticoy Village Specific Plan governs a small portion of this area. A larger effort should ensure Saticoy's seamless connection with adjacent areas, including a greenspace and circulation plan.

Corridors

Corridors, which can be natural or urban, often form boundaries, as well as connections, between neighborhoods and/or districts. Natural corridors can be those such as streams, barrancas, canyons, or green parkways. Urban corridors can be transportation thoroughfares that frequently encompass major access routes, especially ones with commercial destinations, including transit routes and rail lines. The following eight urban corridors are depicted on the General Plan Diagram. Each has the potential to evolve into a vibrant mixed-use City street with a distinct character borrowed from the neighborhoods that share it:

A. Ventura Avenue – a mix of older, small-scale commercial, industrial, and residential uses, with potential to grow even more vibrant by building on existing strengths, including its historic role as a major "working center." Using the warehouse model and diversity of building materials as a cue, "The Avenue" could harness cultural expression and become an eclectic center for the emerging arts and manufacturing crafts.

B. Main Street – currently a commerce-oriented area with a limited amount of mixed use development, this corridor displays the broadest range of architectural types and styles in the city, as well as the widest spectrum of transect characteristics. It has the most potential for increased mixed use and housing with improved streetscape and pedestrian enhancement to slow traffic.

C. Thompson Boulevard – a commercial thoroughfare in need of streetscape improvements and pedestrian amenities, this corridor is much like Main Street in that it boasts tremendous history as a "gateway to Ventura" and epitomizes a beach town character. It is a natural for a major transit or streetcar corridor, where nodes of mixed-use development and pedestrian and bike enhancement could support parallel neighborhoods and increase access to the ocean.

D. Loma Vista Road – a mix of commercial and residential development at varying scales, with a high concentration of medical facilities, this is the ideal place for Ventura to focus on creating a concentration of medical and research-centered business, with a high intensity of workforce housing and services housed in large-scale mixed-use buildings of high-tech character and serviced by increased transit.

E. Telegraph Road – a sub-urban-scale commercial area with some detached homes and multifamily buildings. The City's bus transfer station is located along this corridor, creating the perfect opportunity for a multi-modal connection with an intense node of housing and employment. The streetscape could change character along its length, with a mixture of intensities of development.

F. Victoria Avenue – currently a wide artery with high traffic volumes and shopping centers, Victoria needs effective traffic management

and pedestrian and streetscape improvements with strong attention to additional mobility options. Actions in this General Plan, along with the new Development Code, will call for revitalizing this corridor by redesigning the current array of single-use shopping centers and retail parcels with a mix of building types, uses, and public and private frontages. By eliminating "big box", mega-block, auto-oriented strip development, and the traffic patterns it generates, Victoria Avenue could create tremendous opportunity for healthy economic investment in walkable blocks, connected to better serve surrounding neighborhoods. Creative solutions, including dedicating transit or streetcar lanes, wider sidewalks, and bike lanes could transform Victoria's image into a regional thoroughfare of great and sophisticated diversity. All new commercial development within the Victoria Avenue corridor must follow this approach.

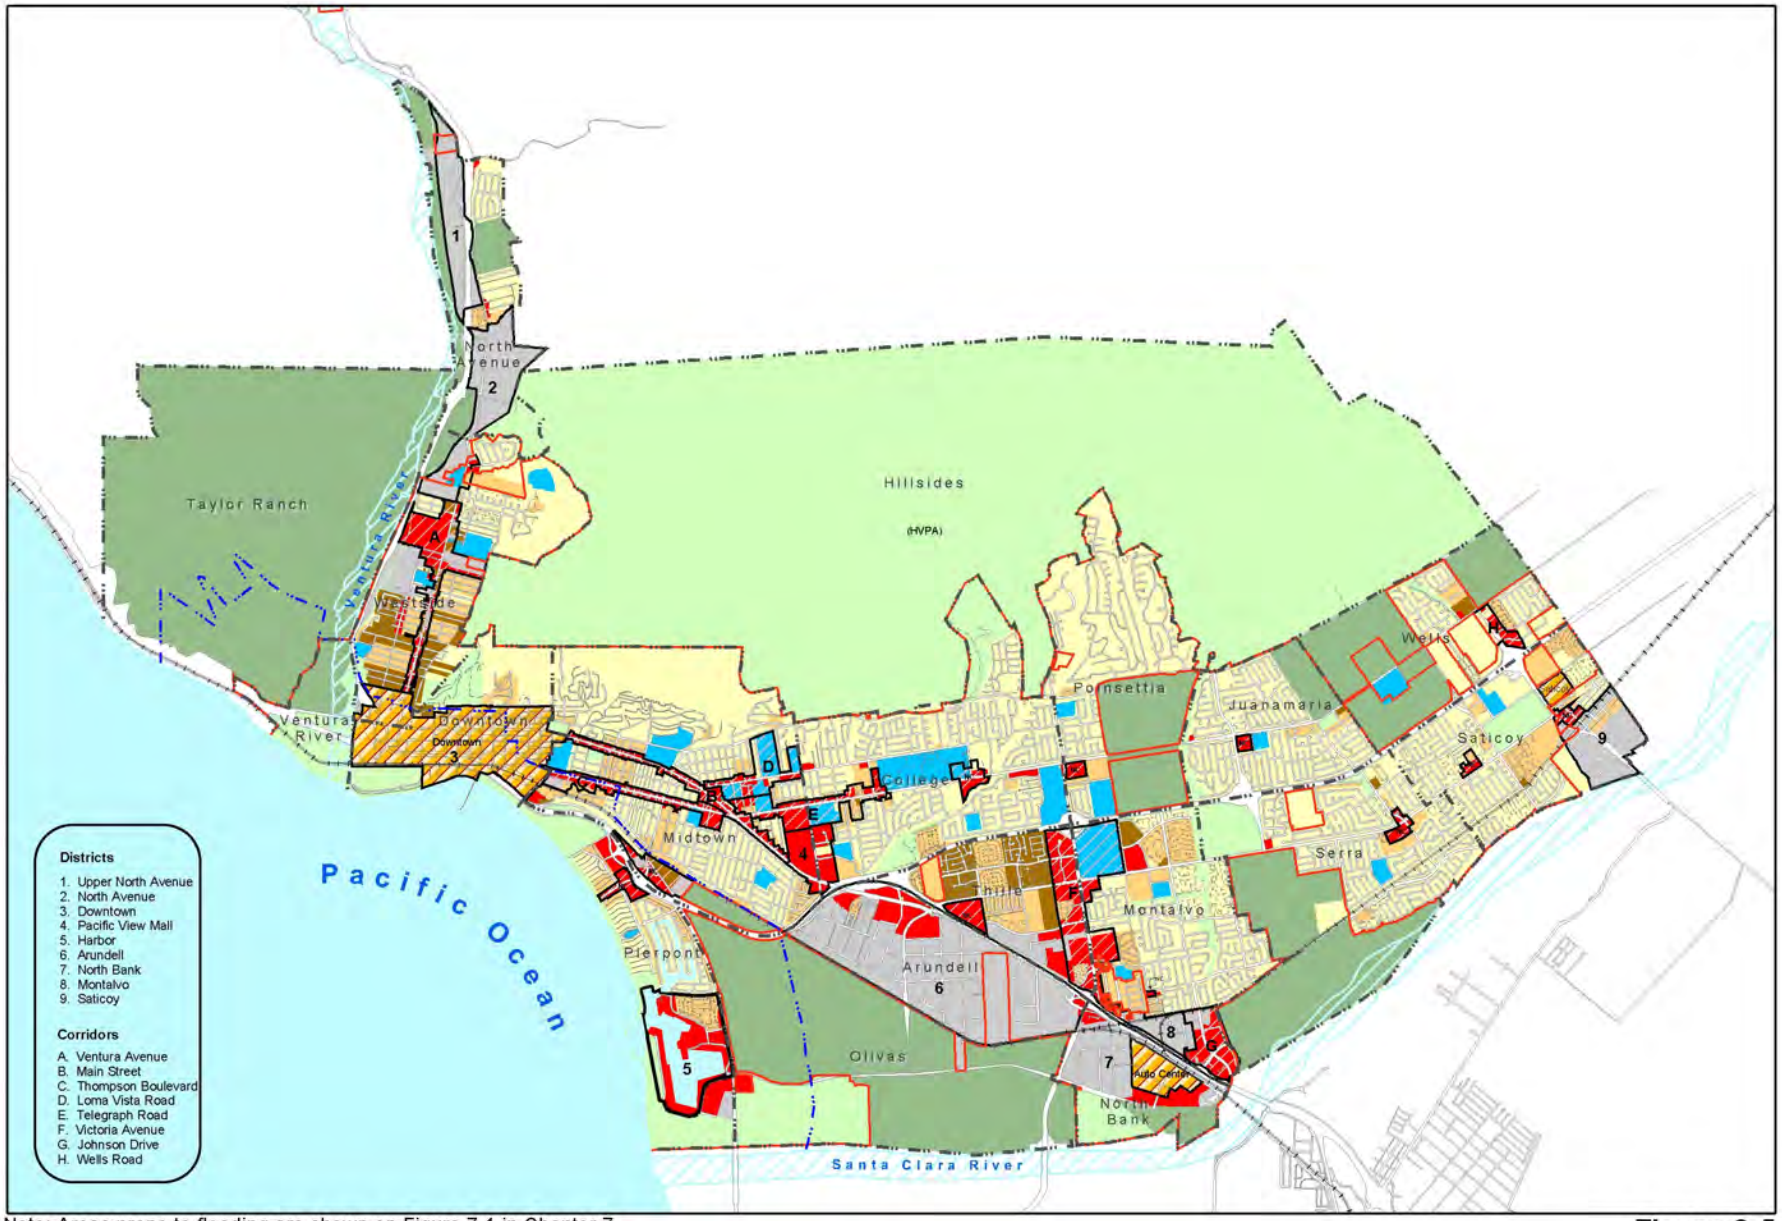
G. Johnson Drive – a connector between eastern Ventura and Highway 101 with sub-urban scale retail. Opportunities exist for high-quality, mixed-uses (such as child-care, restaurants, offices, light industrial, and housing) with ground floor commercial space to strengthen its economic presence and provide a visual gateway.

H. Wells Road – a mix of older industrial uses and newer sub-urban commercial and residential development. Well's Road should be returned to the neighborhoods it serves, so that new development can emulate the country charm that existed prior to its widening. Traffic calming in appropriate locations would encourage neighborhood connectivity, and end the current trend toward walls and buildings that turn their back to the street. This would also encourage redevelopment of the old neighborhood centers.

Neighborhood Centers

Community evolves from individual conversations and the best places to grow community are in individual neighborhoods. Every neighborhood should have at least one center where people can meet by chance at a local coffee shop, market, bookstore, diner, or even hardware store. *Our Involved Community* needs places to gather to have meaningful conversations and share civic information. Ventura's existing neighborhood centers have the opportunity to become such places. The General Plan Diagram identifies 10 neighborhood centers – where the development of housing alongside commercial uses is specifically encouraged. These centers include:

(1) Pierpont, (2) Seaward/Alessandro, (3) College/Day, (4) Gateway Plaza, (5) Victoria Plaza, (6) Bristol, (7) Kimball/Telegraph, (8) Petit/Telephone, (9) Telephone/Cachuma, and (10) Saticoy.



Note: Areas prone to flooding are shown on Figure 7-1 in Chapter 7.

Figure 3-5

GENERAL PLAN DIAGRAM

Neighborhood
- Low (up to 8 du/ac)
- Medium (9-20 du/ac)
- High (21-54 du/ac)

- Commerce
- Industry
- Public and Institutional
- Agriculture
- Parks and Open Space
- Specific Plan Area
- Corridors, Neighborhood Centers (NC)
- Districts
- City Limits
- Planning Communities
- California Coastal Zone Boundary

Special Topics

Agricultural Lands

During the 20th Century, the value of agricultural land in Ventura became secondary to that for development. However, this pattern is not irreversible, and protecting green land to save the aesthetic beauty of open space, preserve the cultural landscape of the community's heritage, and conserve land for environmental quality are high priorities in Ventura. In fact, the land's historic role for food production may soon be more highly valued once again, as prime agricultural areas continue to disappear to development at an astounding rate.

Ventura is fortunate to retain much of its rural landscape. Agriculture still plays an important role in the economy of the City and County of Ventura. Significant yields are made possible by the presence of high quality soils, adequate water supply, favorable climate, long growing season, and level topography. Mechanisms such as the California Land Conservation Act (more popularly known as the Williamson Act), the Save Our Agricultural Resources (SOAR) initiative (see Appendix B), and greenbelt agreements with neighboring jurisdictions continue to help maintain a balance between urban growth and agricultural preservation. The SOAR initiative that was adopted by the voters in 1995, and that, by its own terms, remains in full legal effect until 2030, refers to specific policies from the 1989 Comprehensive Plan that are still in effect and, as such, have been carried forward into this Plan under Policy 3D and Action 3.20 in addition to being incorporated in this General Plan as set forth in Appendix B.

A primary agricultural concern is the potential conflict with adjacent urban uses over pesticides, dust, odors, noise, and the visual impact of large greenhouses. Other issues of importance to agricultural producers include restrictions on farm-related activities, access to water, and provision of farmworker housing. Paralleling these concerns is a community interest in sustainability, the ability to provide for the needs of future generations. The policies and actions in this chapter intend to sustain viable farm operations in areas designated for agricultural use.

Growth Management

Growth management seeks to preserve public good, improve social equity, and minimize adverse impacts of development while still accommodating new housing and business attraction. The effects of growth management policies on housing prices are complex due to the idiosyncrasies of local real estate markets. Properly designed, growth management programs can plan for all development needs, such as open space, access to public transportation, and walkable neighborhoods.

The City's Residential Growth Management Program (originally established in 1979 to ensure that housing development would not outpace needed infrastructure) has not always contributed to housing affordability or quality design. This General Plan calls for revising the Residential

Subsequent to the adoption of the **SOAR** initiative, there have been two general plan amendments, which redesignated individual agricultural properties through a vote of the electorate as required by SOAR. These remain in full legal effect and have been carried forward into this Plan. These include the new Community Park at Kimball Road and the southeast corner of Montgomery and Bristol (see Appendix E and F).

Growth Management Program with an integrated set of growth management tools. Such tools not only include the adoption of a new form-based Development Code, but also community or specific plans based on availability of infrastructure and resources.

Long Term Potential Expansion Strategy

Indeed, the community has indicated that before the City expands any further, the first priority for achieving planning goals should be in the vacant and underutilized areas of the City. Yet, even the most successful effort to achieve community planning goals through infill may need to be supplemented at some point by expanding into areas outside the city limits. Such expansion may not only be necessary to fulfill development objectives; it also may be needed to provide open space, parklands, and natural areas to be preserved and restored. To address this, citizens discussed during the preparation of this General Plan which areas, if any, should be possible expansion areas. These areas were identified because they embody opportunities for achieving a variety of community vision objectives that may not be feasible within existing city limits. The community further went on to agree upon a set of rules about how these areas should be planned. These areas were analyzed in the environmental impact report prepared for this General Plan, and a "long term potential expansion strategy" will be formulated to guide the process of prioritizing any potential future expansion areas to fulfill General Plan objectives that may not be able to be achieved by our "Infill First" approach. Should any areas be selected for future planning, a specific plan, a public vote (if required pursuant to SOAR), and an amendment with the regulatory planning framework would have to occur.

The policies and actions in this chapter call for measured and appropriate growth in Ventura by prioritizing areas appropriate for additional development based on community values and infrastructure potential.

Policy 3A: Sustain and complement cherished community characteristics.

Action 3.1: Preserve the stock of existing homes by carrying out Housing Element programs.

Action 3.2: Enhance the appearance of districts, corridors, and gateways (including views from highways) through controls on building placement, design elements, and signage.

Action 3.3: Require preservation of public view sheds and solar access.

Action: 3.4 Require all shoreline development (including anti-erosion or other protective structures) to provide public access to and along the coast, unless it would duplicate adequate access existing nearby, adversely affect agriculture, or be inconsistent with public safety, military security, or protection of fragile coastal resources.

Action 3.5: Establish land development incentives to upgrade the appearance of poorly maintained or otherwise unattractive sites, and enforce existing land maintenance regulations.

Action 3.6: Expand and maintain the City's urban forest and thoroughfare landscaping, using native species, in accordance with the City's Park and Development Guidelines and Irrigation and Landscape Guidelines.

Action 3.7: Evaluate whether lot coverage standards should be changed based on neighborhood characteristics.

Policy 3B: Integrate uses in building forms that increase choice and encourage community vitality.

Action 3.8: Adopt new development code provisions that designate neighborhood centers, as depicted on the General Plan Diagram, for a mixture of residences and small-scale, local-serving businesses.

Action 3.9: Adopt new development code provisions that designate areas within districts and corridors for mixed-use development that combines businesses with housing, and focuses on the redesign of single-use shopping centers and retails parcels into walkable, well connected blocks, with a mix of building types, uses, and public and private frontages.

Action 3.10: Allow intensification of commercial areas through conversion of surface parking to building area under a district-wide parking management strategy in the Downtown Specific Plan.

Action 3.11: Expand the downtown redevelopment area to include parcels around future transit areas and along freeway frontage.

Action 3.12: The City will work with the hospitals on the new Development Code treatment for the Loma Vista corridor, which includes both hospitals.

Action 3.13: Assess whether the City's Affordable Housing Programs respond to current needs, and modify them as necessary within State mandated Housing Element updates.

Specific Plan Requirements

Specific Plans must include a statement of its relationship to the General Plan and specify all of the following:

1. distribution, location, and extent of uses
2. distribution, location, extent, and intensity of public and private transportation, sewage, water, drainage, solid waste disposal, energy
3. standards and criteria by which development will proceed and standards for conservation, development, and utilization of natural resources
4. program of implementation measures, including regulations, programs, public works projects, and financing
5. any other subjects that are necessary

(§65450-65452)

Policy 3C: Maximize use of land in the city before considering expansion.

Action 3.14: Utilize infill, to the extent possible, development to accommodate the targeted number and type of housing units described in the Housing Element.

Action 3.15: Adopt new development code provisions that ensure compliance with Housing Element objectives.

Action 3.16: Renew and modify greenbelt agreements as necessary to direct development to already urbanized areas.

Action 3.17: Continue to support the Guidelines for Orderly Development as a means of implementing the General Plan, and encourage adherence to these Guidelines by all the cities, the County of Ventura, and the Local Agency Formation Commission (LAFCO); and work with other nearby cities and agencies to avoid urban sprawl and preserve the rural character in areas outside the urban edge.

Action 3.18: Complete community or specific plans, subject to funding, for areas such as Westside, Midtown, Downtown, Wells, Saticoy, Pierpont, Harbor, Loma Vista/Medical District, Victoria Corridor, and others as appropriate. These plans will set clear development standards for public and private investments, foster neighborhood partnerships, and be updated as needed.

Action 3.19: Preparation of the new Development Code will take into account existing or proposed community or specific plans to ensure efficient use of City resources and ample citizen input.

Policy 3D: Continue to preserve agricultural and other open space lands within the City's Planning Area.

Action 3.20: Pursuant to SOAR, adopt development code provisions to "preserve agricultural and open space lands as a desirable means of shaping the City's internal and external form and size, and of serving the needs of the residents.

Action 3.21: Adopt performance standards for non-farm activities in agricultural areas that protect and support farm operations, including requiring non-farm uses to provide all appropriate buffers as determined by the Agriculture Commissioner's Office.

Action 3.22: Offer incentives for agricultural production operations to develop systems of raw product and product processing locally.

Policy 3E: Ensure the appropriateness of urban form through modified development review.

Action 3.23: Develop and adopt a form-based Development Code that emphasizes pedestrian orientation, integration of land uses, treatment of streetscapes as community living space, and environmentally sensitive building design and operation.

Action 3.24: Revise the Residential Growth Management Program (RGMP) with an integrated set of growth management tools including:

- community or specific plans and development codes based on availability of infrastructure and transit that regulate community form and character by directing new residential development to appropriate locations and in ways that integrate with and enhance existing neighborhoods, districts and corridors;
- appropriate mechanisms to ensure that new residential development produces high-quality designs and a range of housing types across all income levels; and,
- numeric limitations linked to the implementation of community or specific plans and development codes and the availability of appropriate infrastructure and resources; within those limitations, the RGMP should provide greater flexibility for timing new residential development.

Action 3.25: Establish first priority growth areas to include the districts, corridors, and neighborhood centers as identified on the General Plan Diagram; and second priority areas to include vacant undeveloped land when a community plan has been prepared for such (within the City limits).

Action 3.26: Establish and administer a system for the gradual growth of the City through identification of areas set aside for long-term preservation, for controlled growth, and for encouraged growth.

Action 3.27: Require the use of techniques such as digital simulation and modeling to assist in project review.

Action 3.28: Revise the planning processes to be more user-friendly to both applicants and neighborhood residents in order to implement City policies more efficiently.

Policies and actions related to the preservation of **historic architecture and resources** are contained in Chapter 9.

2000-2006 HOUSING ELEMENT GOALS AND POLICIES, City Council Adopted Resolution 2004-014. Adopted April 12, 2004

Goal 1

Maintain and improve the quality of existing housing and residential neighborhoods in Ventura.

Policy 1.1 Encourage citizen involvement in addressing the maintenance and improvement of the housing stock and neighborhood quality.

Policy 1.2 Continue to preserve and maintain the City's historical and architecturally significant buildings and neighborhoods.

Policy 1.3 Encourage homeowners and landlords to maintain properties in sound condition through the City's residential rehabilitation assistance programs and code enforcement efforts.

Policy 1.4 Cooperate with housing providers in the acquisition, rehabilitation, and maintenance of older residential properties as long-term affordable housing.

Policy 1.5 Permit the conversion of apartments to condominiums only when such conversion would not adversely affect the overall supply and availability of rental units, particularly units occupied by lower- and moderate-income households.

Policy 1.6 Continue to support the provision of rental assistance to lower-income households, and encourage property owners to list units with the Housing Authority.

Policy 1.7 Continue to preserve the affordability of mobile homes through the Rent Stabilization Ordinance. Support the acquisition and ownership of mobile home parks by non-profit housing providers and resident organizations.

Policy 1.8 Preserve the existing stock of affordable housing, including mobilehomes, through City regulations, as well as financial and other forms of assistance.

Goal 2

Facilitate the provision of a range of housing types to meet the diverse needs of the community.

Policy 2.1 Provide high quality housing for current and future residents with a diverse range of income levels.

Promote housing that is developed under modern sustainable community standards.

Policy 2.2 Provide expanded housing opportunities for the City's workforce. Promote the City's affordable housing programs with employers in Ventura.

Policy 2.3 Continue to offer and promote homeownership assistance programs to lower- and moderate-income households to purchase both new and existing housing. Pursue participation in other homeownership programs available in the private market.

Policy 2.4 Continue to provide financial and regulatory incentives to non-profits, private housing developers, and public agencies for the construction of the types of housing required to meet identified needs.

Policy 2.5 Support the provision of quality rental housing with three or more bedrooms to accommodate large families, and encourage room additions in the existing housing stock to address household overcrowding.

Policy 2.6 Support a variety of housing types to address the needs of agricultural workers, including affordable rentals, mobilehome parks, single room occupancy hotels (SROs), and group housing for migrant laborers.

Policy 2.7 Facilitate the provision of housing to address Ventura's growing senior population, including senior housing with supportive services, assisted living facilities, and second units.

Policy 2.8 Encourage the provision of housing adaptable to the physically disabled through integration of universal design features in new development, and compliance with Title 24 of the California Health and Safety Code.

Policy 2.9 Encourage the provision of supportive housing for persons with mental illness to address the severe shortage of housing for this special needs population.

Policy 2.10 Support efforts by non-profits to expand transitional and emergency housing in Ventura, including support of grant applications and assistance in identification of suitable sites.

Policy 2.11 Evaluate adoption of an inclusionary housing ordinance as a means of integrating affordable units within new residential development: 1) Require affordable units to be provided on or off-site, with allowance for payment of an in-lieu fee at the discretion of the City; 2) Evaluate the financial impact of inclusionary requirements on development, and assess incentive-based alternative strategies for provision of affordable housing.

Policy 2.12 Facilitate the provision of second units as a means of providing affordable rental housing in existing neighborhoods. Ensure compatibility with the primary unit and surrounding neighborhood.

Policy 2.13 Encourage the production of housing that meets the needs of all economic segments, including lower, moderate, and above moderate-income households, to achieve a balanced community.

Policy 2.14 Promote and facilitate non-traditional housing types and options, including co-housing, assisted living facilities, live-work spaces, and artist lofts.

Policy 2.15 Direct City-controlled housing funds towards programs that address the needs of very low- and low-income households.

Policy 2.16 Prioritize affordable housing opportunities and assistance for public service employees.

Policy 2.17 Annually monitor the City's progress in meeting its housing needs for all income levels.

Goal 3

Provide adequate housing sites through appropriate land use and zoning designations to accommodate the City's share of the regional housing needs.

Policy 3.1 Maintain an up-to-date inventory of vacant and underutilized parcels and provide to interested developers in conjunction with information on available development incentives. Within redevelopment project areas, provide assistance in land assembly in support of affordable housing.

Policy 3.2 Implement smart growth principles by rewarding quality infill projects that utilize existing infrastructure.

Policy 3.3 Encourage efficient utilization of the City's limited land resources by encouraging development at the upper end of the permitted Zoning Code/Comprehensive Plan density.

Policy 3.4 Utilize the Urban Infill Overlay Zone and Downtown Specific Plan as a tool to facilitate higher density residential and mixed-use development.

Policy 3.5 Explore residential reuse opportunities on obsolete commercial properties, such as older motels and underutilized historic structures.

Policy 3.6 Pursue use of publicly owned land, such as public parking lots, for development of affordable housing.

Policy 3.7 Identify opportunities for housing development that achieves other community goals such as neighborhood improvement, recreation opportunities, and the preservation of sensitive lands and neighborhood character.

Policy 3.8 Facilitate the development of mixed-use projects in appropriate commercial areas, including stand-alone residential developments (horizontal mixed-use) and housing above ground floor commercial uses (vertical mixed-use).

Policy 3.9 Promote higher density housing as part of mixed-use developments along parts of Thompson Boulevard and Main Street in Midtown Ventura, as well as other areas such as Westside, Downtown and East Ventura.

Policy 3.10 Promote mixed-use developments on the Westside of Ventura.

Policy 3.11 Ensure that the updated Land Use Element designates adequate sites for housing for executives to enhance the City's ability to attract businesses with higher paying jobs.

Goal 4

Mitigate or remove any potential governmental constraints to housing production and affordability.

Policy 4.1 Provide regulatory and/or financial incentives, where appropriate, to offset or reduce the costs of affordable housing development, including density bonuses and flexibility in site development standards.

Policy 4.2 Utilize the Affordable Housing Program to provide incentives for production of affordable units, including streamlined permit processing, reduced fees and exemption from the required competition for RGMP allocations.

Policy 4.3 Amend the City's Residential Growth Management Plan (RGMP) to better facilitate housing production, while discouraging sprawl and maintaining quality of life goals.

Policy 4.4 Undertake a comprehensive review of the City's residential development project review procedures and establish modified procedures as appropriate to streamline processing times, while maintaining adequate levels of public review.

Policy 4.5 Provide flexibility in development standards to accommodate new models and approaches to providing affordable housing, such as co-housing, live/work units and assisted living facilities.

Goal 5

Promote equal opportunity for all residents to reside in the housing of their choice.

Policy 5.1 Continue to enforce fair housing laws prohibiting arbitrary discrimination in the building, financing, selling or renting of housing on the basis of race, religion, family status, national origin, physical or mental disability, or other such factors.

Policy 5.2 Continue to support organizations that offer fair housing and mediation services to Ventura residents.

Policy 5.3 Promote housing that meets the special needs of large families, elderly persons, agricultural workers, and the disabled.

Policy 5.4 Continue to enforce notification and provide relocation assistance for lower-income persons displaced due to demolition, reuse, condominium conversion, or rehabilitation as a result of code enforcement.

ventura's general plan

OUR ACCESSIBLE COMMUNITY

"Restore human legs as a means of travel. Pedestrians rely on food for fuel and need no special parking facilities."

— Lewis Mumford
Author of *The City in History*, 1961

CITY OF
VENTURA

4. OUR ACCESSIBLE COMMUNITY

Our goal is to provide residents with more transportation choices by strengthening and balancing bicycle, pedestrian and transit opportunities in the City and surrounding region.

An Integrated Mobility System

Central to the well-being of Ventura's citizens and visitors is *mobility*, the ability to get from one place to another. Mobility depends on the range, efficiency, and connectivity of the various components that comprise the transportation network – sidewalks, bicycle routes, and thoroughfares, as well as transit services – and that enable people to access the things they need, from the most basic to the extraordinary (See Figures 4-1 Bicycle Facilities, 4-2 Bus and Rail Routes, and 4-3 Roadway Classification Plan). Ventura is a community that recognizes that thoroughfares serve a variety of functions and are not simply conduits for automobile traffic.

Balancing automobile use with other means of travel is essential to maintaining social and physical health. Safe and enjoyable routes for pedestrians and bicyclists should connect every part of the city, and neighborhoods need to be linked by ample and convenient transit service along corridors. Ventura also must be connected to the larger region by a variety of transportation modes.

Thoroughfares have a tremendous effect on neighborhood character and therefore quality of life for both residents and visitors.

Thoroughfares are essentially the stage of public life where a diversity of citizens interact. They can create places of remembrance, chance encounters, and discovery. Ensuring that Ventura thoroughfares are *great places* requires improving design and quality as well as connectivity. In some cases, city thoroughfares are over-engineered to accommodate the worst-case scenario.

Slowing down automobiles, especially in residential neighborhoods, is a desire shared by many residents. Vehicle travel should be directed toward routes that minimize congestion, avoid conflicts with walkers and bicyclists, and keep residential neighborhoods free of excessive cut-through traffic. Additionally, in some areas of the city, suburban patterns have resulted in less connectivity than is desired by the community. Transportation modes and land uses in the city need to be distributed so that residents have close and easy access to meet their basic needs and travel destinations.

Traffic congestion is a major concern among Ventura residents. Although traffic on local roads is generally free-flowing, a few key intersections and road segments experience congestion during peak traffic hours. Simply widening roads to add lanes will not solve traffic congestion. Instead, the system needs integrated solutions that improve mobility for all

The essential qualities of a properly functioning mobility system are:

1. Well connected, interesting components
2. Convenient accessibility
3. Integrated linkage of all modes
4. Comfort and safety
5. Design reflecting natural and urban context

means of travel. While walking, biking, and transit use are already popular, these alternative modes need to be enhanced and better linked. For example, bus and rail systems serve Ventura, but not thoroughly enough to provide a reasonable alternative to auto use for most travelers. And while pedestrian access exists in most areas of Ventura, the network lacks continuous routes in some key locations.

As expressed in the *Ventura Vision,* a top community priority is to minimize automobile use through a fully integrated multi-modal transportation system. The policies and actions in this chapter aim to achieve this objective.

Travel Modes

Walking

Sidewalks are arguably the most important component of the city's mobility system. As with circulation in general, the utility of pedestrian systems is inextricably linked to land use patterns. Combined with urban design elements, land use patterns influence how much walking can safely and effectively occur in the community. Circulation systems that are designed with pedestrians in mind tend to increase outdoor activity and community interaction, while those oriented toward motor vehicles tend to create disincentives to walking.

Ventura's pedestrian system consists of sidewalks, access ramps, crosswalks, linear park paths, and overpasses and tunnels. Special corridors such as the Beachfront Promenade, California Plaza, and Figueroa Plaza have been designated especially for pedestrians. The pedestrian system also includes neighborhood and park path systems, and dedicated trail facilities that are shared with bicyclists and other users.

Pedestrian paths need to be interesting, enjoyable, and lead to a destination, from the most simple – such as a pocket park – to more grand points of arrival, such as major civic spaces. Creating a network of paths that connect key features such as parks, schools, civic facilities, shops, and services is vital to the success of reducing dependence on the automobile. Those most in need of pedestrian access include children, teenagers, and the elderly, as well as those who cannot afford a car or choose not to drive.

The main deficiency of Ventura's pedestrian system is its discontinuity. Some sections of thoroughfares lack sidewalks, and pedestrian connections between some key use areas are in need of repair. Crosswalks are prohibited along some corridors, and pedestrian signal phases are not always long enough for all walkers. Traffic-calming measures also are needed to improve walkability in many neighborhoods. Citizens have placed a high emphasis on improving the pedestrian network, recommending specific improvements such as:

- narrowing selected thoroughfare segments,
- improving sidewalks and road crossings,
- lengthening pedestrian signal phases,
- adding marked crossings at key intersections,
- developing safe and attractive walkways from Downtown and Midtown to the beach,
- ensuring that new development provides ample pedestrian access,
- creating trails along watercourses and through the hillsides, and
- improving pedestrian facilities near schools.

Figure 4-1 illustrates the three State defined classes of bikeway facilities:

- Bike Path (Class I) – Class I bike paths are separated from roads by distance or barriers, and cross-traffic by motor vehicles is minimized.
- Bike Lane (Class II) – Class II bikeways are roadway lanes reserved for bicycles. These lanes are painted with pavement lines and markings and are signed.
- Bike Route (Class III) – Class III bike routes share existing roads and provide continuity to other bikeways or designated preferred routes through high traffic areas. There are no separate lanes, and bike routes are established by placing signs that direct cyclists and warn drivers of the presence of bicyclists.

Policies and actions in this chapter intend to improve pedestrian access through this range of methods.

Biking

Because bicycles are an integral component of the city's mobility system, they are allowed on *all* city thoroughfares. The City has adopted a General Bikeway Plan intended to create a safe, accessible, and interconnected network of bike paths, lanes, and routes that will ensure Ventura becomes and remains a truly bicycle-friendly community. The General Bikeway Plan is a flexible, comprehensive, and long-range guide for bicycle transportation and recreation planning, design, and budget decision-making. Accordingly, it is designed to:

- refine and implement City bicycle-related policies,
- establish bikeway design standards,
- enhance bicycle safety and education programs,
- set priorities and phasing for improvements and amenities depicted on the Select System of Bikeways map, and
- identify funding means and opportunities for interagency cooperation.

The City places high emphasis on improving the local bicycle network by following the recommendations of the General Bikeway Plan, which include:

- connecting schools, parks, activity areas, housing areas, and employment centers with bike paths and lanes, particularly in areas without thoroughfares,
- constructing additional Class I or Class II bikeways in a number of locations, including along the Santa Clara River and the coast to connect to the Ventura River Trail,
- installing bicycle racks,
- updating bicycle facility standards to ensure proper design and maintenance,
- constructing improvements to resolve bicycle/automobile conflicts,
- establishing a highly visible route identification and signage program that fits the character of the community, and
- mitigating impacts on bicyclists from new development and during and following construction of roadway projects.

Policies and actions in this chapter seek to improve bicycle access and safety by carrying out these recommendations.

Public Transit – Bus & Rail

Transit service in Ventura includes bus and rail operations (see Figure 4-2). South Coast Area Transit (SCAT) provides local bus service, Ventura Intercity Transit Authority (VISTA) runs regional routes, and Greyhound offers statewide and national connections. Metrolink provides rail service to and from Los Angeles – although on a very limited schedule, while Amtrak trains that stop in Ventura run between San Luis Obispo and San Diego.

Although local bus routes connect most activity centers, the East End is not well served, and more frequent service is needed to key destinations such as the beach and downtown. Metrolink and Amtrak need to be linked to each other and accessed by local bus routes. An agreement between the City and the Ventura County Transportation Commission calls for identifying a permanent Metrolink site, and the best way to integrate all of these services is with a major multi-modal transit center that also accommodates potential additional future alternative transportation modes.

SCAT buses are equipped with wheelchair lifts and adjustable steps to ensure access for all riders. SCAT also offers discounted fares for seniors and disabled riders, as well as dial-a-ride service. However, seniors and mobility-impaired persons also desire frequent fixed-route service in smaller vehicles, and all riders need upgraded amenities at a number of stops. Bus routes also need increased frequency and stops to make transit a viable alternative to driving.

Other transit system needs include:

- reduced-emission vehicles,
- continued use of schedule synchronization to accommodate route transfers, and
- service to regional destinations such as California State University Channel Islands and airports.

Policies and actions in this Chapter aim to improve transit efficiency, encourage ridesharing, and preserve long-term transit options.

The Automobile and Types of Roadways

The most basic component of the mobility system is the *thoroughfare*, used not only by people who drive, but also by people who ride the bus, bike and walk. Thoroughfares encompass sidewalks, bicycle lanes, travel lanes, and are the most utilized means of travel in Ventura. This system is organized into the following classifications: local thoroughfares, collectors, and arterials (see Figure 4-3, Roadway Classification Plan – also known as "Circulation Plan").

Local Thoroughfares

Local thoroughfares provide mobility within neighborhoods and are generally not shown on the Roadway Classification Plan. Local thoroughfares include *alleys, lanes,* and *"yield" streets*.

Collectors

Collectors serve as links between local thoroughfares. Collectors may front residential and neighborhood-serving commercial uses. Collectors can be configured as *boulevards, avenues, streets,* and *main streets*.

Arterials

Arterials are the primary mechanism for cross-town travel and serve the major centers of activity. These roads typically carry a high proportion of the total urban area travel. Arterials can be configured as *boulevards, avenues,* and *streets*.

Collector and arterial thoroughfare segments in the City are characterized in two ways that describe their physical features: *design* classification and *functional* classification. Design Classification defines the number of travel *lanes* using the following categories: Primary Arterial (6 lanes or more), Secondary Arterial (4 lanes), and Collector (2 lanes), as shown on the Roadway Classification Plan, Figure 4-3. Functional Classification describes how a thoroughfare is used: essentially as a *boulevard*, *avenue*, *street*, or *main street*.

Functional Classification also identifies whether roadways have medians, parking, bike lanes, and other streetscape attributes needed to achieve objectives other than just moving traffic, such as accommodating pedestrians, bicycles, and adjoining land uses and public spaces. Table 4-1 shows the design and functional classifications for thoroughfares in the City.

Ventura is mainly connected by 2-lane and 4-lane thoroughfares. The classification for each type of road segment represents a balance between vehicle capacity, pedestrian and bicycle access, parking requirements, streetscape character, and right-of-way limitations.

Boulevard
A multi-lane and generally urban corridor with a central, planted median.

Avenue
Avenues are typically multi-lane, short distance connectors, with a painted median, used in both residential and commercial areas, and often terminate at prominent buildings or plazas.

Table 4-1 Thoroughfare Sizes and Types

	Street Sizes (Engineering Design Classification)		
	Primary Arterial (6 or more lane roadway)	Secondary Arterial (4 lane roadway)	Collector (2 lane roadway)
Existing			
Future Widening			
Future Extension			
	Thoroughfare Types (Functional Classification)		
	Boulevard	Boulevard	Boulevard
	Avenue	Avenue	Avenue
		Street	Street
			Main Street

Source: Definitions for Design Classifications are the City's modifications to the American Association of State Highway and Transportation Officials (AASHTO) standards. Definitions for Functional Classifications are the City's modifications to the Traditional Neighborhood Development Street Design Guidelines.

Street
Street typically allows two way travel and may be multi-lane and does not have a central median and generally provides access to predominantly residential areas.

Main Street

Main streets have 2 vehicle lanes. Their main purpose is to provide low-speed access to commercial, mixed-uses, and higher density neighborhoods.

Consistency between the design and functional classifications is determined based on the number of through lanes. Temporary improvements, such as restriping to change the number of lanes are allowed, however a permanent improvement that moves the curbs and changes the number of lanes would require an amendment to this plan.

The *Ventura Vision* offers several key recommendations to improve the city thoroughfare system:

- add or enhance north-south arterials;
- consider an additional Santa Clara River bridge, Portola Avenue overcrossing of U.S. 101, and Johnson Drive overcrossing of Route 126; and
- soften the barrier impact of U.S. 101 by working with Caltrans to improve signage, aesthetics, undercrossings, and overcrossings.

Policies, actions, and the Roadway Classification Plan work together to address these recommendations. To improve the safety and functioning of the thoroughfare network and to maintain its compatibility with the character of the community, the policies and actions in this chapter also call for upgrading problem thoroughfares and intersections, improving and constructing freeway ramps, and connecting unfinished roadways. Additional actions intend to protect views from scenic routes, including State-designated scenic highways.

Policy 4A: Ensure that the transportation system is safe and easily accessible to all travelers.

Action 4.1: Direct city transportation investment to efforts that improve user safety and keep the circulation system structurally sound and adequately maintained. First priority for capital funding will go to our pavement management program to return Ventura streets to excellent condition.

Action 4.2: Develop a prioritized list of projects needed to improve safety for all travel modes and provide needed connections and multiple route options.

Action 4.3: Provide transportation services that meet the special mobility needs of the community including youth, elderly, and disabled persons.

Action 4.4: Combine education with enforcement to instill safe and courteous use of the shared public roadway.

Action 4.5: Utilize existing roadways to meet mobility needs, and only consider additional travel lanes when other alternatives are not feasible.

Action 4.6: Require new development to be designed with interconnected transportation modes and routes to complete a grid network.

Action 4.7: Update the traffic mitigation fee program to fund necessary citywide circulation system and mobility improvements needed in conjunction with new development.

Action 4.8: Implement the City's Neighborhood Traffic Management Program and update as necessary to improve livability in residential areas.

Action 4.9: Identify, designate, and enforce truck routes to minimize the impact of truck traffic on residential neighborhoods.

Action 4.10: Modify traffic signal timing to ensure safety and minimize delay for all users.

Action 4.11: Refine level of service standards to encourage use of alternative modes of transportation while meeting state and regional mandates.

Action 4.12: Design roadway improvements and facility modifications to minimize the potential for conflict between pedestrians, bicycles, and automobiles.

Action 4.13: Require project proponents to analyze traffic impacts and provide adequate mitigation in the form of needed improvements, in-lieu fee, or a combination thereof.

Policy 4B: Help reduce dependence on the automobile.

Action 4.14: Provide development incentives to encourage projects that reduce automobile trips.

Action 4.15: Encourage the placement of facilities that house or serve elderly, disabled, or socioeconomically disadvantaged persons in areas with existing public transportation services and pedestrian and bicycle amenities.

Action 4.16: Install roadway, transit, and alternative transportation improvements along existing or planned multi-modal corridors, including primary bike and transit routes, and at land use intensity nodes.

Action 4.17: Prepare and periodically update a Mobility Plan that integrates a variety of travel alternatives to minimize reliance on any single mode.

Action 4.18: Promote the development and use of recreational trails as transportation routes to connect housing with services, entertainment, and employment.

Action 4.19: Adopt new development code provisions that establish vehicle trip reduction requirements for all development.

Action 4.20: Develop a transportation demand management program to shift travel behavior toward alternative modes and services.

Action 4.21: Require new development to provide pedestrian and bicycle access and facilities as appropriate, including connected paths along the shoreline and watercourses.

Action 4.22: Update the General Bikeway Plan as needed to encourage bicycle use as a viable transportation alternative to the automobile and include the bikeway plan as part of a new Mobility Plan.

Action 4.23: Upgrade and add bicycle lanes when conducting roadway maintenance as feasible.

Action 4.24: Require sidewalks wide enough to encourage walking that include ramps and other features needed to ensure access for mobility-impaired persons.

Action 4:25: Adopt new development code provisions that require the construction of sidewalks in all future projects.

Action 4.26: Establish a parking management program to protect the livability of residential neighborhoods, as needed.

Action 4.27: Extend stubbed-end streets through future developments, where appropriate, to provide necessary circulation within a developing area and for adequate internal circulation within and between neighborhoods. Require new developments in the North Avenue area, where applicable, to extend Norway Drive and Floral Drive to connect to Canada Larga Road; and connect the existing segments of Floral Drive. Designate

the extension of Cedar Street between Warner Street and south of Franklin Lane and the linking of the Cameron Street segments in the Westside community as high priority projects.

Policy 4C: Increase transit efficiency and options.

Action 4.28: Require all new development to provide for citywide improvements to transit stops that have sufficient quality and amenities, including shelters and benches, to encourage ridership.

Action 4.29: Develop incentives to encourage City employees and local employers to use transit, rideshare, walk, or bike.

Action 4.30: Work with public transit agencies to provide information to riders at transit stops, libraries, lodging, and event facilities.

Action 4.31: Work with public and private transit providers to enhance public transit service.

Action 4.32: Coordinate with public transit systems for the provision of additional routes as demand and funding allow.

Action 4.33: Work with Amtrak, Metrolink, and Union Pacific to maximize efficiency of passenger and freight rail service to the City and to integrate and coordinate passenger rail service with other transportation modes.

Action 4.34: Lobby for additional transportation funding and changes to Federal, State, and regional transportation policy that support local decision-making.

Action 4.35: The City shall pursue funding and site location for a multi-modal transit facility in coordination with VCTC, SCAT, U.P.R.R., Metrolink, Greyhound Bus Lines, and other forms of transportation.

Policy 4D: Protect views along scenic routes.

Action 4.36: Require development along the following roadways – including noise mitigation, landscaping, and advertising – to respect and preserve views of the community and its natural context.

- State Route 33
- U.S. HWY 101
- Anchors Way
- Brakey Road
- Fairgrounds Loop
- Ferro Drive
- Figueroa Street
- Harbor Boulevard
- Main Street
- Navigator Drive
- North Bank Drive
- Poli Street/Foothill Road
- Olivas Park Drive
- Schooner Drive
- Spinnaker Drive
- Summit Drive

- Telegraph Road – east of Victoria Avenue
- Victoria Avenue – south of U.S. 101
- Wells Road

Action 4.37: Request that State Route 126 and 33, and U.S. HWY 101 be designated as State Scenic Highways.

Action 4.38: Continue to work with Caltrans to soften the barrier impact of U.S. HWY 101 by improving signage, aesthetics and undercrossings and overcrossings. 

Action 4.39: Maintain street trees along scenic thoroughfares, and replace unhealthy or missing trees along arterials and collectors throughout the City. 

Note: Bike facilities shown on this figure are taken from the 1999 General Bikeway Plan and may change as updates to the General Bikeway Plan are completed.

OUR SUSTAINABLE INFRASTRUCTURE

"Now, I truly believe, that we in this generation, must come to terms with nature, and I think we're challenged as mankind has never been challenged before to prove our maturity and our mastery, not of nature, but of ourselves."

— Rachel Carson
Biologist, Writer; Ecologist 1907-1964

CITY OF
VENTURA

5. OUR SUSTAINABLE INFRASTRUCTURE

Our goal is to safeguard public health, well-being and prosperity by providing and maintaining facilities that enable the community to live in balance with natural systems.

Essential Support Systems

Infrastructure is an extremely important though largely unnoticed foundation of quality of life in Ventura. Efficient water supply, wastewater treatment, and drainage systems are vital to most daily activities. These facilities on which the community depends need regular maintenance, and they frequently require upgrading both to meet the demands of a growing population and to be sensitive to environmental resources.

To ensure that citizens get high-quality drinking water, the City owns and operates a State-certified laboratory where water quality is tested continuously. Each City treatment plant is also run by State-certified operators who monitor water quality. As a result, City water exceeds State and federal water quality requirements.

The City employs conservation measures and emerging technology in its effort to achieve a high standard for wastewater treatment while protecting natural systems. As a result, treatment capability historically has outpaced community needs, with even peak flows typically reaching only 75 percent of plant capacity. Even so, further expanding the use of reclaimed water and reducing water consumption will be vital to maintaining long-term water supplies.

Much of the storm drain system is aging and in need of repair or replacement, especially corrugated metal pipes in some of the older areas of Ventura. Collecting adequate fees that truly reflect the cost of serving development can help support City efforts to preclude additional deficiencies, and relying on and complementing natural drainage features can both help avoid the need for expensive and environmentally damaging channelization and improve the functioning of the overall drainage system.

Water Supply

The City provides drinking water, and water for fire protection, to households and businesses in Ventura through a complex system with more than 500 miles of distribution mains, 3 water treatment plants, 22 booster pump stations, 25 treated water reservoirs, and 13 wells. Five distinct sources provide surface and ground water to the City supply system:

- Casitas Municipal Water District
- Ventura River surface water intake, subsurface water and wells (Foster Park)
- Mound groundwater basin
- Oxnard Plain groundwater basin (Fox Canyon Aquifer)
- Santa Paula groundwater basin

The City also holds a State Water Project entitlement of 10,000 acre-feet per year;

however, new facilities would need to be constructed to transport this water to the City. The City updates its Urban Water Management Plan every two years (instead of every five years as required by State law) as part of its ongoing effort to ensure that City-managed water supplies will continue to accommodate demand in Ventura.

Meeting future water demands requires saving and reusing every drop possible. The City utilizes recycled water from its reclamation facility (a tertiary wastewater treatment plant) near the Harbor to augment the municipal water supply. Recycled water is used to irrigate City and private landscaping in the area and the Buenaventura and Olivas Park municipal golf courses. The remaining effluent is discharged to the Santa Clara River Estuary.

Largely as a result of conservation efforts, water consumption per city resident has generally declined (see Table 5-1). Projections anticipate that the City will continue to be able to meet consumer needs. Policies and actions in this chapter seek to refine demand management practices and conservation programs to further reduce per capita water use so that Ventura can sustain water resources for many more generations.

Table 5-1
Historic and Projected Water Production (Acre Feet)

Year	Estimated Population Served	Per Capita Use[1]	Treated Water Production	Raw Water Production	Total Water Production
Historic					
1980	73,774	0.236	17,381	4,766	22,147
1990	94,856	0.177	16,831	2,317	19,148
1995	99,668	0.165	16,428	1,602	18,030

2010	115,774	0.179	20,724	1,000	21,724
2015	122,447	0.179	21,918	1,000	22,918
2020	129,504	0.179	23,181	1,000	24,181

Sources: City of Ventura Urban Water Management Plan, Dec. 2000, City of Ventura 2004 Biennial Water Supply Report, as amended, September 2004.

[1] Per Capita use excludes raw water.

Wastewater Treatment

Ventura residents generate millions of gallons of wastewater each day, which is carried by more than 450 miles of sewer mains and 12 lift stations to the water reclamation facility in the Harbor area near the mouth of the Santa Clara River. While most residents receive sewer service directly from the City, three other sanitary sewer agencies with their own treatment facilities provide service to some citizens in the Montalvo, Saticoy, and North Ventura Avenue areas. As shown in Table 5-2, all local treatment facilities operate well below capacity.

Table 5-2 Treatment Facilities

Treatment Facilities	Treatment Type	Capacity	Average Daily Flow
Ventura Water Reclamation Facility	Tertiary	14 MGD	9.0 MGD (68% capacity)
Montalvo Municipal Improvement District Treatment Plant	Secondary	0.36 MGD	0.242 MGD (67% capacity)
Saticoy Sanitary District Treatment Plant	Secondary[2]	0.25 MGD	0.16 MGD (64% capacity)
Ojai Valley Sanitary District Treatment Plant	Tertiary	3 MGD	2.0 MGD (71% capacity)

[2] Includes nutrient removal prior to percolation.
Source: Individual agencies listed

About two-thirds of the wastewater treated locally is discharged to the Santa Clara River Estuary, as allowed by the Regional Water Quality Control Board. The remaining effluent is either transferred to recycling ponds, where some is delivered as reclaimed water, or it percolates to underground aquifers or evaporates. The policies and actions in this chapter call for improving treatment system efficiency to reclaim and reuse as much water as possible.

Storm Drainage

Storm runoff travels from the hills above Ventura through the City until it is absorbed into the ground or reaches the Ventura River, the Santa Clara River, or the Pacific Ocean. To convey the occasional high flows associated with storms, the Ventura County Flood Control District oversees about 20 natural or concrete lined barrancas that serve as the major drainage courses for local watersheds. The City has about 20 miles of off-street drain system designed to convey runoff from all but the most severe of storms, in which case water also runs off via city streets.

Maintaining the barrancas and other watercourses that are not already lined with concrete as natural flood channels can help reduce peak flows by limiting water velocity. Incorporating natural features into drainage systems rather than hard treatment devices also can improve water quality and reduce maintenance costs. The policies and actions in this chapter seek to prevent increases in future storm water impacts by incorporating natural drainage and flood control features such as wildlife ponds and wetlands – instead of cement retention basins – into the storm drain system where possible. Such less intensive approaches not only cost less, but they also preserve environmental resources and protect water quality.

Policy 5A: Follow an approach that contributes to resource conservation.

Action 5.1: Require low flow fixtures, leak repair, and drought tolerant landscaping (native species if possible), plus emerging water conservation techniques, such as reclamation, as they become available.

Action 5.2: Use natural features such as bioswales, wildlife ponds, and wetlands for flood control and water quality treatment when feasible.

Action 5.3: Demonstrate low water use techniques at community gardens and city-owned facilities.

Action 5.4: Update the Urban Water Management plan as necessary in compliance with the State 1983 Urban Water Management Planning Act.

Action 5.5: Provide incentives for new residences and businesses to incorporate recycling and waste diversion practices, pursuant to guidelines provided by the Environmental Services Office.

Policy 5B: Improve services in ways that respect and even benefit the environment.

Action 5.6: Require project proponents to conduct sewer collection system analyses to determine if downstream facilities are adequate to handle the proposed development.

Action 5.7: Require project proponents to conduct evaluations of the existing water distribution system, pump station, and storage requirements in order to determine if there are any system deficiencies or needed improvements for the proposed development.

Action 5.8: Locate new development in or close to developed areas with adequate public services, where it will not have significant adverse effects, either individually or cumulatively, on coastal resources.

Action 5.9: Update development fee and assessment district requirements as appropriate to cover the true costs associated with development.

Action 5.10: Utilize existing waste source reduction requirements, and continue to expand and improve composting and recycling options.

Action 5.11: Increase emergency water supply capacity through cooperative tie-ins with neighboring suppliers.

Action 5.12: Apply new technologies to increase the efficiency of the wastewater treatment system.

Action 5.13: Increase frequency of city street sweeping, and post schedules at key points within each neighborhood.

Action 5.14: Develop a financing program for the replacement of failing corrugated metal storm drain pipes in the City.

Action 5.15: Establish assessment districts or other financing mechanisms to address storm drain system deficiencies in areas where new development is anticipated and deficiencies exist.

Action 5.16: Require new developments to incorporate stormwater treatment practices that allow percolation to the underlying aquifer and minimize offsite surface runoff utilizing methods such as pervious paving material for parking and other paved areas to facilitate rainwater percolation and retention/detention basins that limit runoff to pre-development levels.

Action 5.17: Require stormwater treatment measures within new development to reduce the amount of urban pollutant runoff in the Ventura and Santa Clara Rivers and other watercourses.

Action 5.18: Work with the Ventura Regional Sanitation District and the County to expand the capacity of existing landfills, site new landfills, and/or develop alternative means of disposal that will provide sufficient capacity for solid waste generated in the City.

"Leave all the afternoon for exercise and recreation, which are as necessary as reading. I will rather say more necessary because health is worth more than learning."

— Thomas Jefferson
3rd President of the United States
1801-1809

CITY OF
VENTURA

OUR ACTIVE COMMUNITY

ventura's general plan

6. OUR ACTIVE COMMUNITY

Our goal is to add to and enhance our parks and open spaces to provide enriching recreation options for the entire community.

Higher Standards

For many people, spending time outdoors and participating in recreational activities represent some of life's most cherished rewards. Ventura's superb public park, open space, and recreation system offers a myriad of ways to partake in these privileges. The city offers 34 developed parks, 45 miles of linear park and trail network, stellar beaches, specialized play and sports facilities and programs, communitywide events, senior and youth activities, and two 18-hole tournament class public golf courses. Figure 6-1 at the end of this chapter shows the locations of various public facilities in the city.

The City is committed to ensuring that its citizens have ample access to high quality spaces for leisure and active recreation. The City's adopted standard of 10 acres per 1,000 residents has created far more park area than would be possible under the basic State level of 3 acres per 1,000, and also tops the more ambitious National Park and Recreation Association benchmarks for specific park types (see Table 6-1). The City continues to create customized facilities like the Community Park (approved by the voters pursuant to SOAR) to expand opportunities for local residents to enjoy healthy, active lifestyles.

Table 6-1 Park Acreage per 1,000 Population

Park Type	Standards	
	City of Ventura	National Park & Recreation Association
Neighborhood	2 acres	1.5 acres
Community	3 acres	2.5 acres
Citywide	5 acres	5 acres
Total	10 acres	9 acres

Sources: City of Ventura, www.nrpa.org.

City Parks and Open Space

The public park and open space system in Ventura includes neighborhood, community, citywide, and linear parks. As shown in Table 6-2, the City oversees nearly 600 acres of developed park facilities, plus the linear park network, which provides important connections among watersheds for both people and wildlife.

As the City continually strives to improve the quality of leisure and recreation opportunities for everyone in the community, it must address a number of challenges such as:

- modernizing existing facilities,
- finding appropriate land for new facilities,
- developing useful and enjoyable public spaces, such as plazas and mini-parks in urban settings,
- formalizing shared use arrangements for non-City facilities like school playfields,
- meeting increasing demand for athletic courts, fields and pools,
- provide opportunities for passive recreation, and
- providing services needed by youth, seniors, and residents with special needs.

Neighborhood Parks
Typically less than 8 acres each, these smaller parks primarily serve specific residential areas in the community. The 18 neighborhood parks in Ventura cover about 73 total acres. Any future development outside the current city limits will have to provide new neighborhood parks to serve the added population.

Community Parks
These parks are designed to offer specialized opportunities and facilities to residents of more than one neighborhood. Amenities in community parks may include formal athletic fields, courts, recreation buildings, preschool and youth play structures, group and individual picnic areas, and landscaped areas for informal activity or leisure.

Citywide Parks
These parks feature recreational opportunities that draw a wide range of age and interest groups from throughout the city. They offer a variety of attractive amenities, such as large open spaces, unique natural resources, interpretive centers, cultural amenities, group picnic areas, sports facilities, and equestrian, bicycling, and hiking trails. The Ventura Community Park also serves some citywide park functions and attracts visitors from outside the city with its high-quality playing fields and aquatic center.

Linear Parks
Ventura's unique linear park network intersperses trails and picnic areas among a mostly undeveloped web of barranca and riverbanks that provide valuable wildlife habitat and migration corridors. The linear parks also merge with a number of neighborhood and community parks, complementing developed recreation areas with natural riparian qualities. Extending trails through the linear park network can create additional opportunities for low-impact contact with nature, and in some cases even provide pleasant non-automobile commuting options.

Table 6-2 City Park Facilities

Park	Park Size (in acres)				
	Neighborhood Parks	Community Parks	Citywide Parks	Special Use Facilities	Total

Westpark	1.5	5.8			**7.3**
Total	**60.8**	**142.7**	**275.8**	**97.8**	**577.1**

Sources: City of Ventura, 2004. Note: several parks serve functions in more than one category.
[1] Acreage varies with ocean high levels.
[2] Acreage varies with fluctuations in Ventura River level.

As with most parks in the city, resources for linear park system improvements typically come through conditions placed on adjacent development. City regulations establish standards for park width, landscaping, fencing, lighting, and tree rows that apply specifically along barrancas, freeways, rivers, the shoreline, harbor, hillsides, and utility rights-of-way.

Recreation Programs

The City operates four neighborhood centers where recreation programs and senior services are available: the Ventura Avenue Adult Center, Senior Recreation Center, Barranca Vista Center, and Westpark Community Center. The City also offers a wide range of sports programs, including youth and adult sports programs, classes, aquatics, and corporate games. Other City-sponsored recreational activities include arts and environmental education, community gardening, recreation programs for special needs residents, and after-school activities and summer camps.

A variety of other recreation opportunities are available in Ventura in addition to City programs. Foremost among these are all of the activities possible at State beaches and developed waterfront areas. Other local non-City facilities include the County Fairgrounds and local golf courses. In addition, joint-use agreements allow city residents to use sports fields, pools, and gymnasiums during certain times at public schools and Ventura College.

The policies and actions in this chapter seek to further expand local park and recreation choices by:

- identifying sites for new parks,
- increasing public access to open space, including via linear park trails,
- collaborating with schools and other local agencies and organizations,
- ensuring universal and equal access to parks and recreation facilities, and
- allowing appropriate revenue-generating activities at City parks.

Policy 6A: Expand the park and trail network to link shoreline, hillside, and watershed areas.

Action 6.1: Develop new neighborhood parks, pocket parks, and community gardens as feasible and appropriate to meet citizen needs, and require them in new development.

Action 6.2: Require higher density development to provide pocket parks, tot lots, seating plazas, and other aesthetic green spaces.

Action 6.3: Work with the County to plan and develop trails that link the City with surrounding open space and natural areas, and require development projects to include trails when appropriate.

Action 6.4: Request Flood Control District approval of public access along unchannelized watercourses for hiking.

Action 6.5: Seek landowner permission to allow public access on properties adjacent to open space where needed to connect trails.

Action 6.6: Update plans for and complete the linear park system as resources allow.

Action 6.7: Work with the County of Ventura to initiate efforts to create public trails in the hillsides.

Action 6.8: Update and require periodic reviews of the Park and Recreation Workbook as necessary to reflect City objectives and community needs.

Action 6.9: Require dedication of land identified as part of the City's Linear Park System in conjunction with new development.

Action 6.10: Evaluate and incorporate, as feasible, linear park segments in the General Bikeway Plan.

Action 6.11: Update standards for citywide public parks and open space to include an expanded menu of shared park types, and identify locations and potential funding sources for acquiring new facilities in existing neighborhoods.

Action 6.12: Update and carry out the Grant Park Master Plan.

Action 6.13: Foster the partnership between the City and Fair Board to improve Seaside Park.

Policy 6B: Ensure equal access to facilities and programs.

Action 6.14: Improve facilities at City parks to respond to the requirements of special needs groups.

Action 6.15: Adjust and subsidize fees to ensure that all residents have the opportunity to participate in recreation programs.

Action 6.16: Update the project fee schedule as necessary to ensure that development provides its fair share of park and recreation facilities.

Policy 6C: Provide additional gathering spaces and recreation opportunities.

Action 6.17: Update and create new agreements for joint use of school and City recreational and park facilities.

Action 6.18: Offer programs that highlight natural assets, such as surfing, sailing, kayaking, climbing, gardening, and bird watching.

Action 6.19: Provide additional boating and swimming access as feasible.

Action 6.20: Earmark funds for adequate maintenance and rehabilitation of existing skatepark facilities, and identify locations and funding for new development of advanced level skatepark facilities.

Policy 6D: Increase funding and support for park and recreation programs.

Action 6.21: Promote the use of City facilities for special events, such as festivals, tournaments, and races.

Action 6.22: Enter into concession or service agreements where appropriate to supplement City services.

Figure 6-1
Public Faciities

ventura's general plan

OUR HEALTHY & SAFE COMMUNITY

"A city, like a living thing, is a united and continuous whole."

— Plutarch
ca. 50-120 AD, author of *Moralia*

CITY OF
VENTURA

7. OUR HEALTHY AND SAFE COMMUNITY

Our goal is to build effective community partnerships that protect and improve the social well-being and security of all our citizens.

Community Wellness

Keeping the small town feel of Ventura depends on working together as a community to look out for the well being of all residents, especially those most at risk. Community wellness requires comprehensive preventative care, as well as careful preparation for and response to dangers within the built environment and to risks posed by natural processes (see Figure 7-1).

Adequate shelter, sufficient medical services, walkable neighborhoods, and proper nutrition create an essential foundation for a healthy community. Reducing as much as possible the threat to people and property from earthquakes, landslides, floods, and fires further enhance the collective wellness of the city. In addition, a healthy Ventura community requires thorough protection from crime, and freedom from pollution, unwanted noise, and the threat of hazardous materials.

***Alquist-Priolo** designation requires a geologic investigation prior to the approval of a development permit to determine if a specific site within the zone is threatened by surface displacement from future fault movement.*

Geologic and Flood Hazards

Ventura lies in an active geologic region and is therefore subject to a variety of seismic hazards, including ground shaking, liquefaction, and slope failure. State law requires the City to regulate development in mapped seismic hazard zones. Major faults in the city include the Ventura-Foothill (a State-designated Alquist-Priolo Earthquake Fault Zone), Oak Ridge, McGrath, Red Mountain and Country Club Faults. Areas closest to these faults are most likely to experience ground shaking or rupture in the event of an earthquake. Liquefaction during an earthquake is most likely to occur in areas with loose, granular soils where the water table lies within 50 feet of the surface. As the soil liquefies, buildings and other objects may tilt or sink.

Hillside stability varies based on slope, soil, rock type and groundwater depth. The hills north of Poli Street/Foothill Road have experienced many historic landslides and are prone to future movement. The City Hillside Management Program limits development in the area to minimize dangers from landsliding, erosion, flooding, and fire, and to retain natural and scenic character.

The Federal Emergency Management Agency regulates development along watercourses based on the likelihood of flooding: the basic benchmark – the 100-year flood – has a one percent chance of occurring in any given year. Although the mapped 100-year flood hazard areas for local rivers and barrancas are fairly limited in size, the largest recorded flood events along the Ventura and Santa Clara Rivers, both following heavy rains in 1969, exceeded the 100-year flood zone. The policies and actions in this Chapter intend to limit harm from geologic and flood events by requiring detailed risk analyses and mitigation prior to development of sites in hazard prone areas.

Fire and Emergency Response

The Ventura Fire Department responds to fire, medical, and disaster calls from six stations in the city. The Department's goal is to reach the scene within 4 minutes 90% of the time. The Department has a reciprocal agreement with the County Fire Protection District to ensure that Ventura residents receive the swiftest service possible. The Department also has a responsibility to provide disaster preparedness for the City. Particular fire department concerns in the City include:

- the need for reliable and sustainable source of fire service revenue,
- lengthy response times to areas farthest from existing stations (See Figure 7-2),
- firefighter and support staffing levels that are far below the .98 firefighter per 1,000 population averages of other municipal fire departments with comparable city size, age, and population,
- the threat of wildland fire entering urban area, and
- the lack of fire protection systems in older structures.

The policies and actions in this Chapter aim to optimize firefighting and emergency response capabilities through oversight of new development, improved facilities, and added staff.

Police Protection

Ventura Police response to crimes in progress or alarm soundings averages less than six minutes, and less than sixteen minutes for most other calls. While the local crime rate is slightly higher than State average, the Department hopes to better engage the community in policing efforts to lower crime levels. As part of a Strategic Planning Process, the Department has established the following goals:

- reduce crime and the fear of crime
- improve the quality of life in neighborhoods
- enhance community and police partnerships
- develop personnel
- continued accountability

One-time grant funding has helped add officers dedicated to community crime prevention, gang control, and youth mentoring programs. As these grants end the City must face the challenge of funding these services. Actions in this Chapter seek to improve the full range of police services to maximize community safety by increasing staffing, outreach efforts, and public access to police services.

Noise

Noise is generally defined as unwanted sound. Its effects can range from annoyance to nuisances to health problems. State law requires the City to identify and address noise sources and establish projected noise levels for roadways, railroads, industrial uses, and other significant generators. The Noise Contours map (Figure 7-3) is used to help guide land use in a way that minimizes exposure of residents to excessive noise.

Vehicle traffic is by far the greatest source of noise affecting Ventura residents. Other sources include the Seaside Park raceway, the Grant Park shooting range, and railroad, commercial, and industrial activity. Homes, schools, hotels, and hospitals are considered sensitive receptors where excessive noise can interfere with normal activities.

Noise intensity is customarily measured on the decibel scale, an index of loudness. Sounds as faint as 10 decibels (dB) are barely audible, while noise over 120 dB can be painful or damaging to hearing (Table 7-1 shows some typical noise levels). A sound 10 dB higher than another is perceived as about twice as loud. A 5 dB change is readily noticeable, but a 3 dB difference is barely perceptible.

As shown in Table 7-2, normally acceptable outdoor noise in residential areas may reach 65 decibels. The Ldn label in the table indicates that sound is averaged over time to account for the fact that sources like traffic or aircraft may cause fluctuations of more than 20 dB over a few seconds. CNEL refers to the fact that 5 dB is added to noise after 7 p.m. and 10 dB added from 10 p.m. to 7 a.m., when quieter conditions make sound more noticeable.

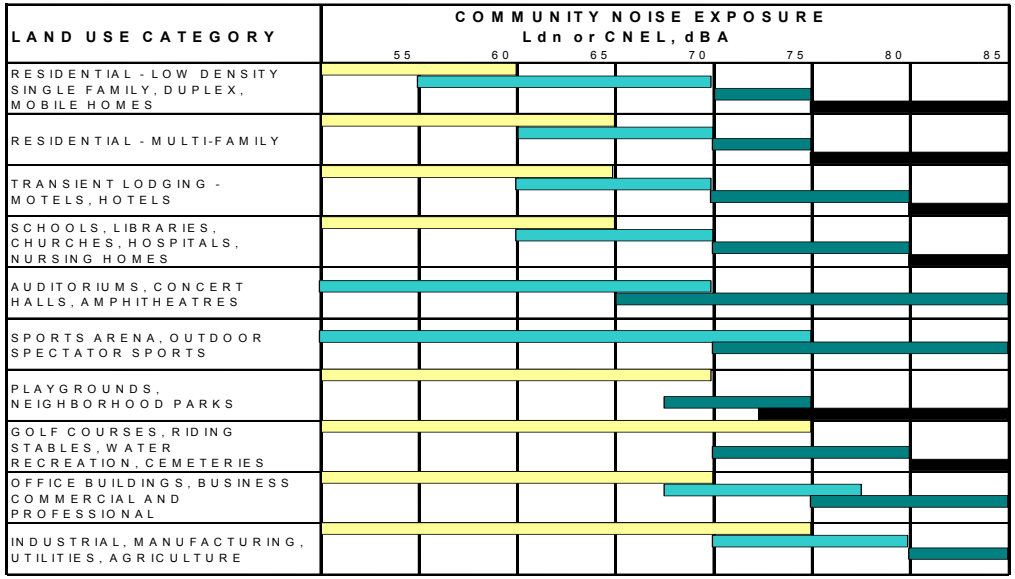
The State Building Code requires an acoustical study whenever outdoor noise would exceed 60 decibels at a proposed duplex, multifamily residence, hotel, motel or other attached dwelling. The study must show that the proposed project design would result in interior noise levels of 45 dB or less.

Although future increases in traffic are not expected to produce a significant change in perceived noise levels, other specific sound generators have been identified as problems in the community. The policies and actions in this chapter look to reduce the exposure of people in Ventura to these noise sources.

Table 7-1. Typical Noise Levels

Type of Noise or Environment	Decibels
Recording Studio	20
Soft Whisper; Quiet Bedroom	30
Busy Open-plan Office	55
Normal Conversation	60-65
Automobile *at 20 mph 25 ft. away*	65
Vacuum Cleaner *10 ft. away*	70
Dump Truck *at 50 mph 50 ft. away*	90
Train Horn *100 ft. away*	105
Claw Hammer; Jet Takeoff *200 ft. away*	120
Shotgun *at shooter's ear*	140

Table 7-2
Acceptable Noise Levels



NORMALLY ACCEPTABLE
Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction, without any special noise insulation requirements.

NORMALLY UNACCEPTABLE
New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design

CONDITIONALLY ACCEPTABLE
New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning will normally suffice.

CLEARLY UNACCEPTABLE
New construction or development should generally not be undertaken.

Source: General Plan Guidelines, California Office of Planning and Research

Hazardous Materials

Hazardous materials include medical and industrial wastes, pesticides, herbicides, radioactive materials, and combustible fuels. Improper use, storage, transport, or disposal of these materials may result in harm to humans, surface or ground water degradation, air pollution, fire, or explosion. Most of the several hundred facilities in Ventura that use or store hazardous materials lie along Ventura Avenue or in the Arundell industrial district.

The Fire Department maintains a team specially trained and equipped to respond to hazardous materials emergencies. Additional equipment and personnel for large-scale hazardous materials incidents is available from the County Fire Protection District, the City of Oxnard, and the U.S. Naval Construction Battalion Center in Port Hueneme.

The Westside and North Avenue neighborhoods include about 30 brownfields: sites that may possess contaminated soils but also have potential for reuse. Cleanup of these sites will make them more attractive for redevelopment that can improve the neighborhoods and generate employment and tax revenue. The City has established a Brownfield Assessment Demonstration Pilot Program to fund site assessments and initiate remediation. The policies and actions in this chapter intend to minimize the risk of adverse health effects of hazardous materials by regulating their location and seeking funding for cleanup of brownfield sites to encourage their reuse.

Policy 7A: Encourage wellness through care and prevention.

Action 7.1: Work with interested parties to identify appropriate locations for assisted-living, hospice, and other care-provision facilities.

Action 7.2: Provide technical assistance to local organizations that deliver health and social services to seniors, homeless persons, low-income citizens, and other groups with special needs.

Action 7.3: Participate in school and agency programs to:

- provide healthy meals,
- combat tobacco, alcohol, and drug dependency,
- distribute city park and recreation materials through the schools, and
- distribute information about the benefits of proper nutrition and exercise.

Action 7.4: Enhance or create ordinances which increase control over ABC licensed premises.

Action 7.5: Investigate the creation of new land use fees to enhance funding of alcohol related enforcement, prevention and training efforts.

Policy 7B: Minimize risks from geologic and flood hazards.

Action 7.6: Adopt updated editions of the California Construction Codes and International Codes as published by the State of California and the International Code Council respectively.

Action 7.7: Require project proponents to perform geotechnical evaluations and implement mitigation prior to development of any site:

- with slopes greater than 10 percent or that otherwise have potential for landsliding,
- along bluffs, dunes, beaches, or other coastal features
- in an Alquist-Priolo earthquake fault zone or within 100 feet of an identified active or potentially active fault,
- in areas mapped as having moderate or high risk of liquefaction, subsidence, or expansive soils,
- in areas within 100-year flood zones, in conformance with all Federal Emergency Management Agency regulations.

Action 7.8: To the extent feasible, require new critical facilities (hospital, police, fire, and emergency service facilities, and utility "lifeline" facilities) to be located outside of fault and tsunami hazard zones, and require critical facilities within hazard zones to incorporate construction principles that resist damage and facilitate evacuation on short notice.

Action 7.9: Maintain and implement the Standardized Emergency Management System (SEMS) Multihazard Functional Response Plan.

Action 7.10: Require proponents of any new developments within the 100-year floodplain to implement measures, as identified in the Flood Plain Ordinance, to protect structures from 100-year flood hazards (e.g., by raising the finished floor elevation outside the floodplain).

Action 7.11: Prohibit grading for vehicle access and parking or operation of vehicles within any floodway.

Policy 7C: Optimize firefighting and emergency response capabilities.

Action 7.12: Refer development plans to the Fire Department to assure adequacy of structural fire protection, access for firefighting, water supply, and vegetation clearance.

Action 7.13: Resolve extended response time problems by:

- adding a fire station at the Pierpont/Harbor area,
- relocating Fire Station #4 to the Community Park site,
- increasing firefighting and support staff resources,
- reviewing and conditioning annexations and development applications, and
- require the funding of new services from fees, assessments, or taxes as new subdivisions are developed.

Action 7.14: Educate and reinforce City staff understanding of the Standardized Emergency Management System for the State of California.

Policy 7D: Improve community safety through enhanced police service.

Action 7.15: Increase public access to police services by:

- increasing police staffing to coincide with increasing population, development, and calls for service,
- increasing community participation by creating a Volunteers in Policing Program, and,
- require the funding of new services from fees, assessments, or taxes as new subdivisions are developed.

Action 7.16: Provide education about specific safety concerns such as gang activity, senior-targeted fraud, and property crimes.

Action: 7.17: Establish a nexus between police department resources and increased demands associated with new development.

Action 7.18: Continue to operate the Downtown police storefront.

Action 7.19: Expand Police Department headquarters as necessary to accommodate staff growth.

Policy 7D: Minimize exposure to air pollution and hazardous substances.

Action 7.20: Require air pollution point sources to be located at safe distances from sensitive sites such as homes and schools.

Action 7.21: Require analysis of individual development projects in accordance with the most current version of the Ventura County Air Pollution Control District Air Quality Assessment Guidelines and, when significant impacts are

identified, require implementation of air pollutant mitigation measures determined to be feasible at the time of project approval.

Action 7.22: In accordance with Ordinance 93-37, require payment of fees to fund regional transportation demand management (TDM) programs for all projects generating emissions in excess of Ventura County Air Pollution Control District adopted levels.

Action 7.23: Require individual contractors to implement the construction mitigation measures included in the most recent version of the Ventura County Air Pollution Control District Air Quality Assessment Guidelines.

Action 7.24: Only approve projects involving sensitive land uses (such as residences, schools, daycare centers, playgrounds, medical facilities) within or adjacent to industrially designated areas if an analysis provided by the proponent demonstrates that the health risk will not be significant.

Action 7.25: Adopt new development code provisions that ensure uses in mixed-use projects do not pose significant health effects.

Action 7.26: Seek funding for cleanup of sites within the Brownfield Assessment Demonstration Pilot Program and other contaminated areas in West Ventura.

Action 7.27: Require proponents of projects on or immediately adjacent to lands in industrial, commercial, or agricultural use to perform soil and groundwater contamination assessments in accordance with American Society for Testing and Materials standards, and if contamination exceeds regulatory action levels, require the proponent to undertake remediation procedures prior to grading and development under the supervision of the County Environmental Health Division, County Department of Toxic Substances Control, or Regional Water Quality Control Board (depending upon the nature of any identified contamination).

Action 7.28: Educate residents and businesses about how to reduce or eliminate the use of hazardous materials, including by using safer non-toxic equivalents.

Action 7.29: Require non-agricultural development to provide all necessary buffers, as determined by the Agriculture Commissioner's Office, from agricultural operations to minimize the potential for pesticide drift.

Action 7.30: Require all users, producers, and transporters of hazardous materials and wastes to clearly identify the materials that they store, use, or transport, and to notify the appropriate City, County, State and Federal agencies in the event of a violation.

Action 7.31: Work toward voluntary reduction or elimination of aerial and synthetic chemical application in cooperation with local agricultural interests and the Ventura County agricultural commissioner.

Policy 7E: Minimize the harmful effects of noise.

Action 7.32: Require acoustical analyses for new residential developments within the mapped 60 decibel (dBA) CNEL contour, or within any area designated for commercial or industrial use, and require mitigation necessary to ensure that:

- Exterior noise in exterior spaces of new residences and other noise sensitive uses that are used for recreation (such as patios and gardens) does not exceed 65 dBA CNEL, and
- Interior noise in habitable rooms of new residences does not exceed 45 dBA CNEL with all windows closed.

Action 7.33: As funding becomes available, construct sound walls along U.S. 101, SR 126, and SR 33 in areas where existing residences are exposed to exterior noise exceeding 65 dBA CNEL.

Action 7.34: Request that sound levels associated with concerts at the County Fairgrounds be limited to 70 dBA at the eastern edge of that property.

Action 7.35: Request the termination of auto racing at the County fairgrounds.

Action 7.36: Amend the noise ordinance to restrict leaf blowing, amplified music, trash collection, and other activities that generate complaints.

Action 7.37: Use rubberized asphalt or other sound reducing material for paving and re-paving of City streets.

Action 7.38: Update the Noise Ordinance to provide standards for residential projects and residential components of mixed-use projects within commercial and industrial districts.

OUR EDUCATED COMMUNITY

ventura's general plan

"A vigorous culture capable of making corrective, stabilizing changes depends heavily on its educated people, and especially upon their critical capacities and depth of understanding."

— Jane Jacobs
Dark Age Ahead

CITY OF
VENTURA

8. OUR EDUCATED COMMUNITY

Our goal is to encourage academic excellence and life-long learning resources to promote a highly-educated citizenry.

Lifelong Learning

Education is more important than ever before as the foundation for the vitality of informed community participation in Ventura. The *Ventura Vision* calls for the city to be "a community dedicated to educational excellence and an emphasis on lifelong learning." A truly educated community is key to achieving most of the goals in this General Plan because:

- In the 21st Century information economy a highly educated and skilled workforce is vital to community prosperity,
- Education and the institutions that provide it are critical to achieving environmental and cultural leadership, and
- An educated and informed citizenry is essential to sound planning and decision-making.

While Ventura has a comparatively well-educated population (see Table 8-1), the high costs of doing business and finding housing in the city will force even greater emphasis on businesses and jobs that require ever-higher levels of skill. The need and desire for lifelong learning will require relentlessly expanding educational resources and access to them in the years ahead. Plus, the assets that strong educational institutions provide are necessary to bring a rich cultural life to the community as well.

Ventura can build on an impressive base of well-regarded public schools, array of private alternatives, major community college, satellite university campuses, expanding media-training institute, law school, and three branch libraries, among other educational resources. The key to becoming renowned as a local "learning community" lies in creating stronger linkages between these existing resources and integrating them into the physical and social landscape of our community.

Leveraging our Assets

Excellence in public education is the top priority for the Ventura Unified School District (whose boundaries extend beyond the city). In Ventura, the District manages 16 elementary schools, four middle schools, three high schools, and one continuation high school, plus independent study and adult education programs.

In addition to District schools, the city also is home to more than a dozen private schools (see Table 8-2), serving 13 percent of elementary and high school students living in Ventura, according to the 2000 Census. Figure 6-1 shows school locations in the city.

Table 8-1
Education Level

Schooling Completed	Percent of Population
High School	21.7
Some College	28.2
Associate Degree only	9.6
Bachelors Degree only	15.4
Graduate Degree	9.3
High School Diploma & Above	***84.1***
Associate Degree & Above	***34.2***

Table 8-2
Private Schools

School	Grades
First Baptist Day	K-5
St. Augustine Academy	4-12
Sacred Heart	K-8
Ventura Missionary Christian Day	K-8
College Heights Christian	K-8
St. Bonaventure High School	9-12
Holy Cross	K-8
Our Lady of The Assumption	K-8
St. Paul's Parish Day	K-8
Grace Lutheran Christian Day	K-6
Jameson	K-12
Ventura County Christian	K-12
Hill Road Montessori Preschool	K-3
Wells Road Baptist Academy	K-12

Most public schools operate at or near capacity (see Table 8-3), and continuing growth in Ventura requires the District to search for sites for new schools (see Table 8-4). Developers of new projects are required to dedicate land or pay fees for school purposes, and any major annexation of land outside the city is likely to have to provide a school site to serve new resident children. Still, the scarcity and cost of suitable sites means that greater thought will need to be given to shared facility use and other non-traditional approaches to expanding capacity.

Table 8-3. Ventura Unified School District Enrollment

Schools – No.	Students	Capacity
Elementary – 17	8,093	95%
Middle – 4	4,304	93%
High - 3	4,820	85%
TOTAL	**17,217**	**92%**

Table 8-4. Public School Demand

School Type	Students/ School	School Needs	Acres Needed[1]
Elementary	600	4	40
Middle	1,000	1	20
High	2,000	1	40
TOTAL		**6**	**100**

1. Assumes 10 acres for elementary schools, 20 acres for middle schools, and 40 acres for high schools.

Source: Ventura Unified School District, 2003

Ventura is increasingly becoming recognized as a center for higher education. Ventura College is a highly respected two-year school with more than 12,000 students, providing everything from a distinguished transfer opportunity for the University of California to certificates and associates degrees in important fields such as manufacturing and nursing. Students also can obtain four-year degrees in certain fields at the UCSB Ventura Center. Brooks Institute of Photography provides education in photojournalism, filmmaking, and related fields, providing the city with a significant cultural asset. Residents can earn graduate degrees in law, public policy, and education at the Ventura campuses of California Lutheran University, Azusa Pacific University, the Ventura College of Law, and the Southern California Institute of Law. The opening of the nearby California State University Channel Islands has drawn many students and faculty to live in Ventura, especially those in creative fields.

Combined, these institutions of higher learning provide Ventura with tremendous educational assets. Through the policies and actions in this chapter, the City is committed to nurturing these institutions, creating synergy among them, and instilling both cultural and economic opportunities.

Libraries of the Future

The County public library system in Ventura currently operates three branch libraries that serve about 200,000 visits annually (see Table 8-5). But in a digital age where more and more content is available online, the traditional book borrowing function is becoming outmoded. Library administrators and staff, the City's Library Advisory Commission, and patrons have all pointed to needs for adding library space, extending operating hours, and updating and expanding learning resources.

At a more fundamental level, the ideas of what constitutes a library and how it fits the patterns of a learning community need to be reexamined. Integration with school libraries, including the Ventura College Learning Center, is a top priority for this reevaluation, as embodied in the policies and actions in this chapter.

City and Community Programs

Traditional classroom settings alone cannot provide the complete set of educational skills and experience needed by people of all ages. The City provides a variety of learning opportunities, including youth and adult art programs, environmental education, adaptive recreation programs, youth after-school activities, and summer camps. Community organizations also provide a range of classes and experiences, including tours, museums, lectures, and hands-on activities. Expanding venues for such activities and promoting participation in them are key challenges.

Policies and actions in this chapter seek to expand lifelong learning opportunities for everyone in the community.

Table 8-5. Local Libraries

Library	Card-Holders	2003-2004 Patronage	Hours Open Weekly	Facility Size (sq. ft.)
E. P. Foster	48,195	366,134	54	31,000
H. P. Wright			39	12,000
Avenue			25	3,000

Source: Ventura County Library Administration, 2005

Policy 8A: Reach out to institutions and educators to advance lifelong learning.

Action 8.1: Work closely with schools, colleges, and libraries to provide input into site and facility planning.

Action 8.2: Organize a regional education summit to generate interest in and ideas about learning opportunities.

Action 8.3: Adopt joint-use agreements with libraries, schools, and other institutions to maximize use of educational facilities.

Action 8.4: Distribute information about local educational programs.

Policy 8B: Increase the availability and diversity of learning resources.

Action 8.5: Install infrastructure for wireless technology and computer networking in City facilities.

Action 8.6: Establish educational centers at City parks.

Action 8.7: Work with the State Parks Department to establish a marine learning center at the Harbor.

Action 8.8: Work with the Ventura Unified School District to ensure that school facilities can be provided to serve new development.

Policy 8C: Reshape public libraries as 21st Century learning centers.

Action 8.9: Complete a new analysis of community needs, rethinking the role of public libraries in light of the ongoing advances in information technology and the changing ways that individuals and families seek out information and life-long learning opportunities.

Action 8.10: Reassess the formal and informal relationships between our current three branch public libraries and school libraries – including the new Ventura College Learning Resource Center – as well as joint use of facilities for a broader range or compatible public, cultural, and educational uses.

Action 8.11: Develop a Master Plan for Facilities, Programs, and Partnerships to create an accessible, robust, and vibrant library for the 21st Century system, taking into consideration that circulation of books is no longer the dominant function but will continue to be an important part of a linked network of learning centers.

Action 8.12: Develop formal partnerships, funding, capital strategies, and joint use agreements to implement the new libraries Master Plan.

ventura's general plan

OUR CREATIVE COMMUNITY

"Whatever you can do, or dream you can, begin it. Boldness has genius, power and magic in it."

— Johann Wolfgang von Goethe

CITY OF
VENTURA

9. OUR CREATIVE COMMUNITY

Our goal is to become a vibrant cultural center by weaving the arts and local heritage into everyday life.

A Rich Foundation

Local history, artistic expression, and cultural diversity play vital roles in making Ventura a vibrant and interesting place. The heritage of Chumash civilization, which developed over the course of about 9,000 years, and influences of Mexican settlement establish a rich tableau for the modern development of the city. Art in museums, galleries, and public places, as well as space and energy devoted to the creation of artwork and crafts connect the community in complex and fundamental ways. Cultural expression in the form of festivals and informal gatherings provide additional and essential bonds that strengthen the community.

Historic Context

Abundant food and water, temperate climate, and ample material for tool manufacturing attracted early local inhabitants. Chumash peoples were living in a string of coastal villages when Spanish explorers arrived in 1542. Shisholop village (at the south end of present-day Figueroa Street) was a thriving Chumash provincial capital at the time of the Spanish arrival. Other Chumash villages and burial sites have been found in what are now the North Avenue and Saticoy neighborhoods, as well as north of the Ventura River. Mexican settlers began to arrive in earnest after the founding of Mission San Buenaventura in 1782.

Table 9-1
Key Historical and Cultural Sites

Site	Description
Albinger Museum	Artifacts spanning 3,500 years excavated from a site next to the Mission are on display in this former adobe at 113 East Main Street.
Downtown	Downtown Ventura is home to a variety of 19th Century buildings that house restaurants and retail establishments in a small-town setting with a variety of cultural amenities.
Olivas Adobe Park	Completed in 1849 for the Raymundo ranching family, the well-preserved hacienda at 4200 Olivas Park Road is utilized as concert and banquet facility.
Ortega Adobe	Built in 1857, the adobe is only remaining example of the middle class homes that once lined West Main Street. The building has since been used as a police station and restaurant.
San Buenaventura Mission	Built in 1782, the Mission anchors the western part of the downtown area and is still used for regular Catholic services.
Santa Gertrudis Chapel	The Chapel was originally completed around 1809. The site is located along Highway 33 near Foster Park.
San Miguel Chapel	The site is located at Thompson Boulevard and Palm Street. The original chapel dated back to the early 1800s.
Ventura County Museum of History and Art	The museum at 100 East Main Street houses exhibits featuring local artists and historical artifacts. Expansion plans include a 200-seat auditorium and a gallery with touring exhibits.

Source: City of Ventura

More than 90 historic sites have been identified in the planning area (which includes areas outside the city). Notable ones include the Mission, the Ortega and Olivas Adobes, and the locations of the Santa Gertrudis and San Miguel Chapels (See Table 9-1 and Figure 9-1). Many of the existing buildings in Ventura were constructed between 1880 and 1940, a period that coincided with development of the railroads and harbor. City

Hall (formerly the County Courthouse) and the Mission aqueduct are listed as landmarks on the National Register of Historic Places, and structures in the following historic districts are protected by City architectural controls:

- the grounds within the Mission District,
- the Mitchell block (south of Thompson Boulevard between Chestnut and Fir Streets),
- the Selwyn Shaw block (north of Poli Street between Ann and Hemlock Streets), and
- the Simpson Tract (west of Ventura Avenue between Simpson and Prospect Streets).

Arts and Culture

When the City first adopted a Community Cultural Plan in 1992, Ventura's creative community was in its fledgling stage. Few of the now-thriving professional art and cultural organizations existed (see Table 9-2). A burgeoning visual artist community had made the city its home, but was fairly invisible except to the more intrepid arts supporters and collectors.

Since completion of that plan, the City has either implemented or initiated all of its recommendations, which were developed through extensive public involvement. As a result, the growth of the cultural community has been extraordinary. Now Ventura is home to a wealth of active artists and arts organizations. From 1994-2004, the budgets of arts organizations in Downtown Ventura alone increased from $500,000 to more than $4 million.

Ventura also now has a complement of major cultural institutions unique for a city of its size, including the Ventura Music Festival, the Rubicon Theatre Company, the Ventura County Museum of History and Art, and Focus on the Masters. The individual artists who live and work in the city continue to comprise a major part of its cultural fabric, and are highlighted in popular cultural events like the Downtown ArtWalks.

A strong focus of the City's general is to build the arts infrastructure of Ventura. A strong cultural infrastructure is the foundation of a healthy arts ecosystem: this includes *places* (for arts creation, sales, exhibition, performance, rehearsal, living), *people* (artists, audiences, patrons), and *organizations* (production, support, and presentation).

In keeping with the community's respect for its roots, the Ventura arts scene remains authentic, no small feat in today's competitive environment. While many communities focus on importing Broadway shows or big-name art exhibits to increase their profile, Ventura successfully continues to highlight local artists, architecture, culture, history, and the environment – the unique threads that together comprise the rich tapestry of the Ventura community. Policies and actions in this chapter call for continuing to build the cultural foundations of the community by involving everyone in the production, support, and presentation of art and cultural programs, installing art in public places, providing working and display space for local artists, and identifying a site for an arts and cultural center.

Table 9-2
Art and Cultural Institutions

Name	Description	Years in Operation	Annual Patronage
Buenaventura Arts Association	Fine art gallery in downtown Ventura.	50	5,000
Channelaire Chorus	Women's chorus	42	2,500
City of Ventura Cultural Affairs Division	Supports local arts organizations; produces cultural programs (ArtWalks, Street Fairs, Music Under the Stars, Arts Education classes, grants, public art, etc.)	13	132,000
Focus on the Masters	Documentation of extraordinary artists (photographs, audio and video interviews)	10	15,000
Kids' Art	Ongoing, free kids' creative arts programs	12	350
Music 4 Kids	After school music instruction at Boys & Girls Clubs	4	800
Plexus Dance Theater	Professional modern dance performances	20	1,400
Rubicon Theater	Regional theater – classic and contemporary	6	37,000
San Buenaventura Foundation for the Arts	Arts umbrella organization - supports development of the Cultural Center and produces Arts Explosion	5	5,900
Ventura Area Theater Sports	Live improvisational theater in downtown Ventura	15	5,000
Ventura Artists' Union	Art gallery and weekly arts shows on California Plaza	15	17,000
Ventura College Opera Workshop	Opera and theater company at Ventura College	21	4,500
Ventura County Ballet	Ballet school with twice annual performances	6	11,000
Ventura County Master Chorale	Professional vocal music ensemble	23	6,000
Ventura County Museum of History and Art	Museum featuring exhibits on the history and art of Ventura County	26	55,000
Ventura Music Festival	Annual concert festival presenting international and local performers	11	9,000

Policy 9A: Increase public art and cultural expression throughout the community.

Action 9.1: Require works of art in public spaces per the City's Public Art Program Ordinance.

Action 9.2: Sponsor and organize local art exhibits, performances, festivals, cultural events, and forums for local arts organizations and artists.

Action 9.3: Expand outreach and publicity by:

- promoting locally produced art and local cultural programs
- publishing a monthly calendar of local art and cultural features,
- distributing the *State of the Arts* quarterly report, and
- offering free or subsidized tickets to events.

Action 9.4: Support the creative sector through training and other professional development opportunities.

Action 9.5: Work with the schools to integrate arts education into the core curriculum.

Action 9.6: Promote the cultural and artistic expressions of Ventura's underrepresented cultural groups.

Action 9.7: Offer ticket subsidy and distribution programs and facilitate transportation to cultural offerings.

Policy 9B: Meet diverse needs for performance, exhibition, and workspace.

Action 9.8: Increase the amount of live-work development, and allow its use for production, display, and sale of art.

Action 9.9: Work with community groups to locate sites for venues for theater, dance, music, and children's programming.

Policy 9C: Integrate local history and heritage into urban form and daily life.

Action 9.10: Provide incentives for preserving structures and sites that are representative of the various periods of the city's social and physical development.

Action 9.11: Organize and promote multi-cultural programs and events that celebrate local history and diversity.

Action 9.12: Allow adaptive reuse of historic buildings.

Action 9.13: Work with community groups to identify locations for facilities that celebrate local cultural heritage, such as a living history Chumash village and an agricultural history museum.

Policy 9D: Ensure proper treatment of archeological and historic resources.

Action 9.14: Require archaeological assessments for projects proposed in the Coastal Zone and other areas where cultural resources are likely to be located.

Action 9.15: Suspend development activity when archaeological resources are discovered, and require the developer to retain a qualified archaeologist to oversee handling of the resources in coordination with the Ventura County Archaeological Society and local Native American organizations as appropriate.

Action 9.16: Pursue funding to preserve historic resources.

Action 9.17: Provide incentives to owners of eligible structures to seek historic landmark status and invest in restoration efforts.

Action 9.18: Require that modifications to historically-designated buildings maintain their character.

Action 9.19: For any project in a historic district or that would affect any potential historic resource or structure more than 40 years old, require an assessment of eligibility for State and federal register and landmark status and appropriate mitigation to protect the resource.

Action 9.20: Seek input from the City's Historic Preservation Commission on any proposed development that may affect any designated or potential landmark.

Action 9.21: Update the inventory of historic properties.

Action 9.22: Create a set of guidelines and/or policies directing staff, private property owners, developers, and the public regarding treatment of historic resources that will be readily available at the counter.

Action 9.23: Complete and maintain historic resource surveys containing all the present and future components of the historic fabric within the built, natural, and cultural environments.

Action 9.24: Create a historic preservation element.

OUR INVOLVED COMMUNITY

ventura's general plan

"Never believe that a few caring people can't change the world. For indeed, that's all who ever have."

— Margaret Mead
Renowned Anthropologist

CITY OF
VENTURA

10. OUR INVOLVED COMMUNITY

Our goal is to strive to work together as a community to achieve the Ventura Vision through civic engagement, partnerships, and volunteer service.

Civic Engagement

It is not enough to have a vision of smart growth for Ventura. Achieving that vision requires the active and ongoing participation of an engaged and active community. Fortunately, Ventura builds on a strong foundation: thousands of Ventura citizens are involved in their schools and places of worship and give their time to civic, cultural, and charitable organizations. City Commissions, the Community Councils, the Chamber of Commerce and other well-established avenues provide opportunities for community leadership.

This is what Alexis De Toqueville celebrated in his famous book, *Democracy in America*, calling our nation, "the one country in the world, day in and day out, that makes use of an unlimited freedom of association." Yet today in Ventura, as all across America, there is concern about the health of our democracy. Sociologist Robert Putnam gained national attention with his research showing that "by almost every measure, Americans' direct engagement in politics and government has fallen steadily and sharply over the last generation."

Among the symptoms in Ventura have been a decline in voter turnout in recent local elections – (a 36% drop from 1995 through 2003.) Over those years, the ability to build consensus about future development has been undermined by sharply polarized divisions, showdowns at the ballot box, and often rancorous public hearings. The complaint often recurs that planning decisions are made without adequate notice or consideration of the views of those affected. Many citizens criticize the City decision-making process as convoluted and counterproductive.

Moreover, ongoing participation of an engaged community requires civic places where citizens can come together. It is not insignificant that a decline in public participation and the quality of civic discourse has paralleled the loss of civic places in our cities. Historically, governments provided open spaces and buildings that were at the center of a community, physically and symbolically. Town squares and plazas, often faced by a hall for formal gathering and civic engagement, have all but disappeared. The poverty of American public places was apparent after the Columbine High School shooting in Colorado, when citizens gathered to mourn, not in a shared place for people, but in a parking lot.

Nearly everyone agrees we can and should do better. The best model for doing this was the citywide effort to craft the *Ventura Vision*. Thousands participated in a year-long partnership encompassing City government, non-profit organizations, community groups, business,

schools and individual residents to chart the community's future.

The vision of an "involved community" was described in the *Ventura Vision* report as: seeking "broad community collaboration; more widely publicizing city government services, planning processes and policies; better involvement of typically under-represented groups such as youth, seniors and ethnic minorities in community planning; and developing public parks, plazas, neighborhood greenways and other spaces that promote civic interaction and events."

Since that vision was adopted by the City Council in 2000, the City has worked to implement it, building on existing community assets and strengthening the linkages and interconnections that already exist among people, organizations, and shared community goals. A remarkable example of broad community collaboration earned attention throughout Southern California in late 2004. Facing the prospect of winter flooding, the City undertook to evacuate homeless people living in the channel of the Ventura River. This was accomplished by a partnership involving non-profit social service agencies, faith-based organizations, City staff, business leaders, community volunteers and the affected homeless population.

There are many more models of successful community collaboration in Ventura, including: the restoration of the pier, the community's rich array of after-school programs, the implementation of the 1992 Cultural Plan, the 2004 Downtown Charrette, the 2005 Midtown Design Charrette and the establishment of conservancies to preserve the Grant Park cross and Ventura's cherished hillsides.

City government has learned from these efforts to reach broadly and deeply into the community. Civic engagement and trust are built when City representatives actively seek to involve everyone in positive and transparent partnerships. That goal requires a continually evolving effort to promote participation:

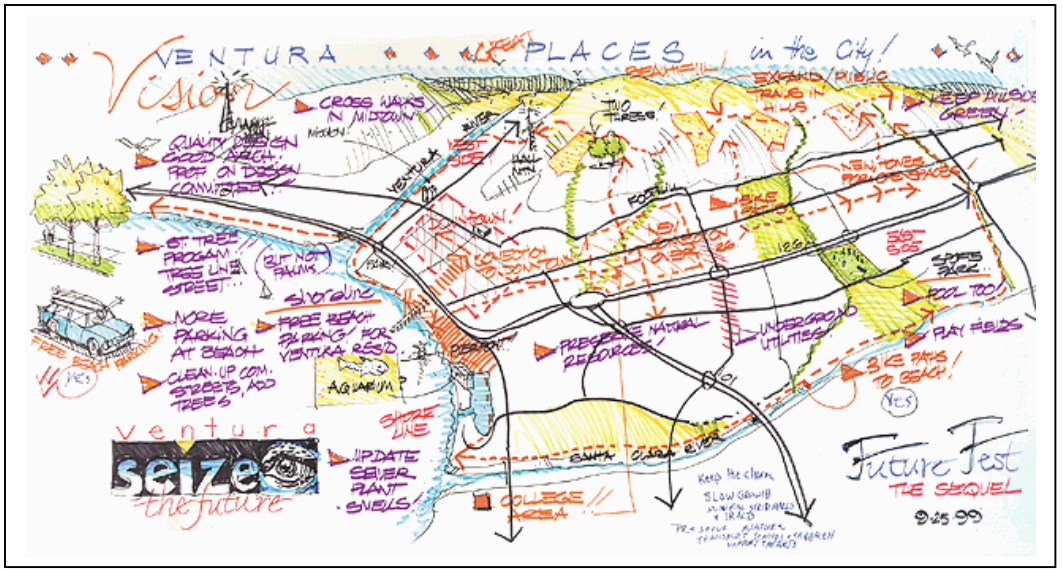
- through proactive and interactive media outreach in the press, on the web, on radio and television,
- by striving to include everyone in decision making and making it convenient for them to participate by seeking them out in their neighborhoods and gathering places like schools, houses of worship and public spaces, and
- through community dialogues, workshops, charrettes, town hall forums, and community councils, in addition to formal public hearings.

More effort needs to be put into building consensus about future growth and change upfront through community planning, rather than waiting until specific development projects are proposed. That effort will continue with the work to craft a citywide "form-based code" and concentrated planning efforts for specific neighborhoods and districts.

Focused attention should be paid to making our public decision-making processes easier to understand and participate in. Citizens have little time or patience for complicated planning and entitlement processes that drag on for years. By establishing clearer rules and public processes for applying them, the policies and actions in this chapter will enable more citizens to feel that they will be heard and their contributions valued. By involving a wider range of the community in clearly setting Ventura's planning goals and standards of quality, we can devote more time to achieving those goals and less time wrangling over specific proposals.

Ventura also needs to reestablish places for civic discourse. While the City will continue to encourage the use of our beautiful City Hall for its historic role of government by and for the people, we also need a hierarchy of civic spaces citywide that are strategically located in neighborhood centers and accessible by pedestrians (see Chapter Three, Action 3.8). Every neighborhood should have access to a physical location designated for public gathering and civic purposes.

Our long-range vision is to build an ethic and a fabric of robust civic engagement – what De Toqueville called "the habits of the heart." His phrase evokes what the Ventura Vision called "direct engagement in public affairs" through "participation, hard work and collaboration . . . sustaining Ventura as an exceptional place." The policies and actions in this chapter aim to do just that.



Policy 10A: Work collaboratively to increase citizen participation in public affairs.

Action 10.1: Conduct focused outreach efforts to encourage all members of the community – including youth, seniors, special needs groups, and non-English speakers – to participate in City activities.

Action 10.2: Obtain public participation by seeking out citizens in their neighborhoods and gathering places such as schools, houses of worship and public spaces.

Action 10.3: Invite civic, neighborhood, and non-profit groups to assist with City project and program planning and implementation.

Action 10.4: Provide incentives for City staff to participate in community and volunteer activities.

Action 10.5: Invite seniors to mentor youth and serve as guides at historical sites.

Action 10.6: Offer internships in City governance, and include youth representatives on public bodies.

Action 10.7: Continue to offer the Ambassadors program to obtain citizens assistance with City projects.

Policy 10B: Raise awareness of City operations and be clear about City objectives.

Action 10.8: Utilize the City website as a key source of information and expand it to serve as a tool for civic engagement.

Action 10.9: Publish an annual report that evaluates City performance in such areas as conservation, housing, and economic development.

Action 10.10: Continue to improve the user-friendliness of the media that communicate information about the City, including the website, cable channels, newsletters, kiosks, and water billing statements.

Policy 10 C: Work at the neighborhood level to promote citizen engagement.

Action 10.11: Establish a clear policy toward the scope, role, boundaries, and jurisdiction of neighborhood Community Councils citywide, with the objectives of strengthening their roles in decision-making.

Action 10.12: Establish stronger partnerships with neighborhood Community Councils to set area priorities for capital investment, community policing, City services, commercial investment, physical planning, education, and other concerns, to guide both City policies and day-to-day cooperation and problem-solving.

Action 10.13: Recognizing that neighborhood empowerment must be balanced and sustained by overall City policies and citywide vision and resources – establish a citywide Neighborhood Community Congress where local neighborhood Community Councils can collaborate and learn from each other.

Action 10.14: Establish clear liaison relationships to foster communication, training, and involvement efforts between the City, neighborhood Community Councils and other community partners, including the Ventura Unified School District and business, civic, cultural and religious groups.

ventura's general plan

APPENDICES

"Individual commitment to a group effort, that is what makes a team work, a company work, a society work, a civilization work."

— Vince Lombardi

ORDINANCE NO. 95-33

AN ORDINANCE OF THE PEOPLE OF THE CITY OF SAN BUENAVENTURA ADOPTING AN ORDINANCE AMENDING THE COMPREHENSIVE PLAN WITH RESPECT TO THE PRESERVATION OF AGRICULTURAL LANDS.

The people of the City of San Buenaventura do hereby ordain as follows:

Section 1. Findings and Purpose.

A. The protection of existing agricultural and watershed lands is of critical importance to present and future residents of the City of San Buenaventura (City of Ventura). Agriculture has been and remains the major contributor to the economy of the City and County of Ventura, creating employment for many people, directly and indirectly, and generating substantial tax revenues for the City.

B. In particular, the City of Ventura and surrounding area, with its unique combination of soils, micro-climate and hydrology, has become one of the finest growing regions in the world. Vegetable and fruit production from the County of Ventura and in particular production from the soils and silt from the Santa Clara and Ventura rivers have achieved international acclaim, enhancing the City's economy and reputation.

C. Uncontrolled urban encroachment into agricultural and watershed areas will impair agriculture and threaten the public health, safety and welfare by causing increased traffic congestion, associated air pollution, and potentially serious water problems, such as pollution, depletion, and sedimentation of available water resources. Such urban encroachment would eventually result in both the unnecessary, expensive extension of public services and facilities and inevitable conflicts between urban and agricultural uses.

D. The unique character of the City of Ventura and quality of life of City residents depend on the protection of a substantial amount of open space lands. The protection of such lands not only ensures the continued viability of agriculture, but also protects the available water supply and contributes to flood control and the protection of wildlife, environmentally sensitive areas, and irreplaceable natural resources.

E. The Resolution by which the City of Ventura adopted its Comprehensive Plan on August 28, 1989, Resolution No. 89-103, at page 4, contains in part the following "mitigation measures" in recognition of the importance of preserving agriculture resources:

> "Any potential significant adverse impacts are mitigated by substantially limiting the amount of agricultural land converted from an agricultural land use designation limiting the amount of prime farmland converted, and by making the various agricultural land areas designated for potential development subject to conditions which narrowly limit the possible land use."

F. The Comprehensive Plan sets out as Objective 4 (at II-9) the desire to:

"Continue to preserve agricultural and other open space lands within the City's Planning Area."

And, the Comprehensive Plan describes as the first Goal of its Resource Element (at II-3) the objective to:

> "Preserve agricultural and open space lands as a desirable means of shaping the City's internal and external form and size, and of serving the needs of residents."

G. The purpose of this initiative is to ensure that the Goals and Objectives of the Comprehensive Plan are inviolable by transitory short-term political decisions and that agricultural, watershed and open space lands are not prematurely or unnecessarily converted to other non-agricultural or non-open space uses without public debate and a vote of the people. Accordingly, the initiative ensures that until December 31, 2030, the general plan provisions governing agricultural land use designation and intent may not be change except by vote of the people. In addition, the initiative provides that any lands designated as "Agriculture Use", referring to both "Agricultural Use (not to be reconsidered until after the Year 2010" and Agricultural/Institutional" on the City of Ventura's General Plan "Land Use Plan Map" adopted by the City Council by Resolution 89-103 on August 28, 1989, as amended through February 1, 1995, will remain designated as Agricultural Use until December 31, 2030, unless the land is redesignated to another land use category by vote of the people, or redesignated by the City Council for the City of San Buenaventura pursuant to the procedures set forth in this initiative.

H. This initiative allows the City Council to redesignate agriculture lands only if certain if certain findings can be made, including (among other things) that the land is proven to be unsuitable for any form of agriculture and redesignation is necessary to avoid an unconstitutional taking of property without just compensation.

Section 2. General Plan Amendment.

The Agricultural Lands Preservation Initiative hereby reaffirms and readopts until December 31, 2030, The "Agricultural Use" designations as defined in the City of San Buenaventura Comprehensive Plan adopted August 28, 1989, as amended through February 1, 1995, at pages III-25 and III-26, with the modification that the "target date" is extended from 2010 until after December 31, 2030.

The following terminology shall replace the current "Agricultural Use" designation defined at page III-25 of The Plan:

Agricultural Use

The Agricultural Use (not to be reconsidered until after the Year 2030) category identifies those lands that are designated for agricultural use on the Land Use Plan Map.

The target date of 2030 associated with the Agricultural Use designation indicates a review date after which agriculturally designated lands may be reconsidered for urban uses. However, during the life of this plan as amended by initiative, it is intended that only agricultural uses are permitted on these lands, except as such lands may be appropriate to public open space and recreational usage. Furthermore, any updates to this Plan are not intended to imply that development would necessarily be appropriate at hat time.

In addition, the initiative hereby reaffirms and readopts until December 31, 2030, the "Agricultural" designations set forth on the of the City of Ventura Comprehensive Plan "Land Use Plan Map" adopted by the City Council on August 28, 1989, as amended through February 1, 1995, which map is incorporated herein by reference, modified, as appropriate, to delete the reference year 2010 and replace it with the reference year 2030.

Finally, the text of the Amendment Procedures of the City of Ventura Comprehensive Plan adopted August 28, 1989, as amended through February 1, 1995, (at XI-I) shall be amended to add a new subsection which provides:

Limitation on General Plan Amendments Relating to "Agricultural Use"

a) Until December 31, 2030, the provisions and designations governing the intent for lands designated "Agricultural Use" of the Land Use Element and Resource Element adopted on August 28, 1989, as amended through February 1, 1995, shall not be amended unless such amendment is approved by vote of the people.

b) All those lands designated as "Agricultural Use" in the City of Ventura Comprehensive Plan "Land Use Plan Map" adopted by the City Council on August 28, 1989 as amended through February 1, 1995, shall remain so designated until December 31, 2030 unless redesignated to another general plan land use category by vote of the people, or redesignated by the City Council pursuant to the procedures set forth in subsections c) or d), below.

c) Except as provided in subsection d), below, land designated as "Agricultural Use" may be redesignated by the City Council to a land use other than "Agricultural Use" as defined by the Comprehensive Plan adopted by the City Council on August 28, 1989, as amended through February 1, 1995, only if the City Council makes all of the following findings supported by the evidence:

   i) The land is immediately adjacent to areas developed in a manner comparable to the proposed use;

   ii) Adequate public services and facilities are available and have the capacity and capability to accommodate the proposed use;

   iii) The proposed use is compatible with agricultural uses, does not interfere with accepted agricultural practices, and does not adversely affect the stability of land use patterns in the area;

   iv) The land proposed for redesignation has not been used for agricultural purposes in the past 2 years and is unusable for agriculture due to its topography, drainage, flooding, adverse soil conditions or other physical reasons; and

v) The land proposed for redesignation pursuant to this subsection (c) does not exceed 40 acres for any one landowner in any calendar year, and one landowner may not obtain redesignation in the Comprehensive Plan of "Agricultural Use" land pursuant to this subsection (c) more often than every other year. Landowners with any unity of interest are considered one landowner for purposes of this limitation.

d) Land designated as "Agricultural Use" on the Land Use Plan Map may be redesignated to another land use category by the City Council if each of the following conditions are satisfied:

i) The City Council makes a finding that the application of the provisions of Section 2 (a) would constitute an unconstitutional taking of the landowners' property; and

ii) In permitting the redesignation, the City Council allows additional land uses only to the extent necessary to avoid said unconstitutional taking of the landowner's property.

e) Approval by a vote of the people is accomplished when a Comprehensive Plan amendment is placed on the ballot through any procedure provided for in the Election Code, and a majority of the voters vote in favor of it. Whenever the City Council adopts an amendment requiring approval by a vote of the people pursuant to the provisions of this subsection, the City Council's action shall have no effect until after such a vote is held and a majority of the voters vote in favor of it. The City Council shall follow the provisions of the Election Code in all matters pertaining to such an election.

Section 3. Implementation.

A. Upon the effective date of this initiative, the initiative shall be deemed inserted in the City of Ventura's Comprehensive Plan as an amendment thereof; except, that if the four amendments of the mandatory elements of the general plan permitted by state law for any given calendar year have already been utilized in 1995, prior to the effective date of this initiative, this Comprehensive Plan amendment shall be deemed inserted in the City's General Plan on January 1, 1996. At such time as this Comprehensive Plan amendment is deemed inserted in the City's Comprehensive Plan (hereinafter, the "insertion date") any provisions of the City's Zoning Ordinance inconsistent with that amendment shall not be enforced to the extent of the inconsistency. Within 180 days of the insertion date, the City shall complete

such revisions of its Comprehensive Plan, including, but not limited to, the Comprehensive Plan Land Use Plan Map adopted by the City Council on August 28, 1989, (as amended through February 1, 1995) and accompanying test, as are necessary to achieve consistency with all provisions of this initiative. Also, within 180 days of the insertion date, the City Council shall complete such revisions of its Zoning Ordinance and other land use regulations as are necessary to conform to and be consistent with all provisions of this initiative.

B. The provisions of this initiative shall prevail over any revisions to the City of Ventura's Comprehensive Plan as amended through February 1, 1995, or to the City of Ventura's Land Use Plan Map as amended through February 1, 1995 which conflict with the initiative. Except as provided in Section 4 below, upon the specific plans, tentative or final subdivision maps, parcel maps, conditional use permits, building permits or other ministerial or discretionary entitlements for use not yet approved or issued shall not be approved or issued unless consistent with the policies and provisions of this initiative.

Section 4. Exemptions for Certain Projects.

This initiative shall not apply to or affect any property owner whose property has acquired any of the following prior to its effective date:

A. A vested right pursuant to state law;

B. A validly approved and fully executed development agreement with the City; or

C. Approval of a vesting tentative map.

Section 5. Severability.

If any portion of this initiative is declared invalid by a court, the remaining portions are to be considered valid.

Section 6. Amendment or Repeal.

This initiative may be amended or repealed only by the voters at a general election.

STATE OF CALIFORNIA)
COUNTY OF VENTURA) ss
CITY OF SAN BUENAVENTURA)

I, BARBARA J. KAM, City Clerk of the City of San Buenaventura, California, do hereby certify that the foregoing Ordinance was adopted by the voters of the City of San Buenaventura at the General Municipal Election held on November 7, 1995 and subsequently declared adopted by the City Council of the City of San Buenaventura on November 27, 1995. The Ordinance shall take effect December 7, 1995. This ordinance shall not be repealed or amended except by a vote of the people, unless provision is otherwise made in the original ordinance.

Dated this 30th day of November, 1995.

Barbara J. Kam, CMC
City Clerk

Ventura Hillside Voter Participation Measure

The people of the City of San Buenaventura do ordain as follows:

Section 1. Title

This measure shall be known as the Ventura Hillside Voter Participation Measure.

Section 2. Purpose

The overall purpose of this measure is to allow City voters to participate in the review process relating to non-exempt development projects that may be proposed in a certain portion of the "Hillside Area" of the City as defined in the City's Comprehensive Plan Update to the Year 2010 (hereafter the "Comprehensive Plan"). The portion of the Hillside Area under consideration lies generally north of the City, constitutes an area approximately 9108 acres in size, and is further depicted as the "Hillside Voter Participation Area" indicated in Exhibit "A" attached hereto and made a part hereof. The proposed Hillside Voter Participation Area (also referred to from time to time hereafter as "HVP Area" or "HVPA") is outside the Ventura City limits, but it is within the "Planning Area" of the City of San Buenaventura as further indicated on Exhibit "A." The Comprehensive Plan Land Use Map currently designates the properties within the proposed Hillside Voter Participation Area as "Hillside Planned Residential" or "HPR" rather than "Agricultural" and, therefore, these properties are not subject to the Save Our Agricultural Resources ("SOAR") Initiative adopted by the voters in 1995.

In the recent past, some property owners within the proposed Hillside Voter Participation Area have publicly presented initial proposals to develop those properties with a combination of residential uses and open space and recreational areas proposed to include, among other things, hiking and equestrian trails for use by the public. In the course of public meetings and informational workshops discussing these proposals, it has become apparent that there is a high level of public concern over potential issues of scenic resource protection, open space and recreational opportunities, infrastructure needs, traffic circulation, and other development-related issues arising from any proposed changes in the use of this important part of the City's Planning Area. This measure, in recognition of this heightened public concern, is intended to provide the electorate of the City of San Buenaventura with an opportunity to vote on the approval of any such development proposals or any similar proposals to extend urban services to the Hillside Voter Participation Area or develop property in the Hillside Voter Participation Area with urbanized land uses.

More particularly, this measure proposes to amend the Comprehensive Plan of the City of San Buenaventura by adding a requirement that approvals for extensions of "urban services" (defined in the City's Hillside Management Program as the provision of domestic water and sewers) or any proposed "urbanized uses of land" (as defined herein) in the Hillside Voter Participation Area cannot be granted without prior approval by a majority vote of the electorate.

Section 3. Comprehensive Plan Amendment

The following text shall be inserted into the Land Use Element of the Comprehensive Plan at page 111-8 thereof:

Hillside Voter Participation Area

The electorate of the City of Ventura has adopted a Hillside Voter Participation Area (Ventura HVP Area). Its purpose, principles, implementation procedures, and methodologies for amendment are set forth in this Comprehensive Plan amendment.

A. PURPOSE

The City of Ventura Hillside Area, with its unique topography, viewsheds, watershed lands; its unique microclimate and hydrology, and its diversity of plant and wildlife resources, is one of the finest scenic resources in the Southern California region. The Comprehensive Plan recognizes the unique and important qualities and potential of the Hillside Area in, among other provisions, the declaration of specialized Objectives and Policies for the Hillside Area in the Resources Element of the Plan and the Plan's requirements for continuing operation of, and compliance with, the City's Hillside Management Program.

This Comprehensive Plan amendment is intended to provide for an increased level of public awareness and participation in the development review process applicable to that portion of the Hillside Area described and depicted in Exhibit "A" as the "Hillside Voter Participation Area." It is further intended to provide assurance to the public that any proposed development in the Hillside Voter Participation Area appropriately takes into account the Area's unique combination of viewshed, watershed, open space, scenic area, and environmentally sensitive habitat, and that agricultural, viewshed, watershed, and open space lands in the Hillside Voter Participation Area are not converted to urban or other non-open space uses without public discussion and a vote of the people. Increasing citizen participation in the development review process through the establishment of a Hillside Voter Participation Area enhances the City's sense of community, allows for development unique to the City of Ventura, and promotes the efficient use of the City's infrastructure.

More specifically, this Comprehensive Plan amendment is intended to provide an opportunity for the public to be involved in insuring that any development projects proposed in the Hillside Voter Participation Area, shall, at a minimum:

1. Maintain the scenic character of the hillsides in areas of future development, by preserving significant natural landmarks and scenic ridgelines and slopes.

2. Provide increased recreational opportunities for existing and future hillside and other City residents, by improving access to existing parks and establishing additional parks or open, non-developed areas in conjunction with future hillside development.

3. Maximize public access to hillside open space and recreation areas, by establishing a system of linear parks and hiking trails along scenic ridges and barrancas.

4. Minimize the impact of hillside development on sensitive natural habitats and historical or archaeological resources.

B. PRINCIPLES

Inappropriate urban encroachment into Hillside open space, viewshed, watershed, scenic areas, and biological resource areas would have the potential to impact sensitive environmental areas, unwarrantedly intrude on open space, diminish the quality of life and threaten the public health, safety and welfare by leading to increased traffic congestion, associated air pollution, erosion, alteration of sensitive lands in watershed areas and causing potentially serious water problems, such as pollution, depletion and sedimentation of available water resources not only for the City of Ventura, but for its jurisdictional neighbors. Inappropriate urban encroachment could further result in the unwarranted extension of public services and facilities into sensitive areas.

The unique character of the City of Ventura and quality of life of City residents depends on the appropriate protection of the Hillside Area's substantial amount of open space, viewshed, watershed, scenic resources, and biological resources. The increased public awareness and involvement in the fate of such lands through the implementation of this Comprehensive Plan amendment will provide the public a special opportunity to assure that future generations of Ventura citizens will not be deprived of the benefits of access to a viable water supply, flood and erosion control, protection of viewsheds, wildlife, environmentally sensitive areas, open space and recreational areas, and irreplaceable natural resources.

C. IMPLEMENTATION

(1) There is hereby established a Ventura Hillside Voter Participation Area (Ventura HVP Area). The Ventura HVP Area is that portion of the Hillside Area delineated and depicted in Exhibit "A" of this Comprehensive Plan amendment (hereafter, the "HVP Area Map"). As shown on the HVP Area Map, the southern boundary of the HVP Area generally follows the northern segment of the City's incorporated limit as established by the Local Agency Formation Commission for the City of Ventura, except as the HVP boundary line runs northerly of some small residential lots on or near Foothill Road west of Arroyo Verde Park as further depicted on Exhibit "A." East of Harmon Barranca, the HVP Area boundary generally follows the alignment of Foothill Road eastward to the boundary of the City's Planning Area. The northerly boundary of the HVP Area continues, generally, as the northern boundary of the City's Planning Area. The westerly boundary of the HVP Area alternately follows the City limit boundary or Sphere of Influence boundary easterly of the North Avenue area. The foregoing narrative description is intended to be general in nature and all of the foregoing is more particularly depicted and described in Exhibit "A'

Insofar as the HVP Area boundary described and depicted in this Comprehensive Plan amendment, including Exhibit "A" hereto, is said or shown to be coterminous with either the City's incorporated limit or the City's Sphere of Influence boundary, or with the boundary of the City's Planning Area, such references are intended to be, and shall be construed to be, the location of the City limit boundary or Sphere of Influence boundary or boundary of the City's Planning Area. as applicable, as each of those boundaries are established for the City of Ventura as of January 1, 2001. Although the HVP Area boundary is established, in part, in generally the same location as the City limit boundary, or in some instances, the Sphere of Influence boundary, the establishment of the HVP Area boundary is not intended to and shall in no way inhibit the Local Agency Formation Commission from changing or altering the City limit boundary or Sphere of Influence boundary in accordance with State law. The boundary of the HVP Area, although incidentally coterminous as of one point in time with the City limit boundary or Sphere of Influence boundary or boundary of the City's Planning Area, is independent from these boundaries in legal significance and purpose. While the City limit boundary or Sphere of Influence boundary may be, from time to time, altered by the Local Agency Formation Commission, or the boundary of the City's Planning Area may be changed, the HVP Area boundary shall not be changed except as provided herein.

(2) Until December 31, 2030, the City of Ventura shall not extend urban services into, and shall not authorize urbanized uses of land within, the Ventura Hillside Voter Participation Area unless otherwise authorized by a vote of the people, except for the purpose of construction of public potable water facilities, public parks or other city government facilities or as otherwise provided or excepted herein. Upon the effective date of this Hillside Voter Participation Area Comprehensive

Plan amendment, the City and its departments, boards, commissions, officers and employees shall not grant, or by inaction allow to be approved by operation of law, any Comprehensive Plan amendment, rezoning, specific plan, subdivision map, conditional use permit, building permit or any other ministerial or discretionary entitlement, which is inconsistent with the purposes of this Comprehensive Plan amendment, unless in accordance with the amendment procedures of Section 4 of this Comprehensive Plan amendment.

(3) "Urbanized uses of land" shall mean any development that would require the establishment of new community sewer systems or the significant expansion of existing community sewer systems; or, would result in the creation of residential densities greater than one primary residential unit per 40 acres in area; or, would result in the establishment of commercial or industrial uses that are neither agriculturally-related nor related to the production of mineral resources.

(4) The Land Use Map is amended to reflect the existence of the Ventura Hillside Voter Participation Area as generally described in paragraph (1) above and as depicted in Exhibit "A," attached hereto.

(5) The Hillside Voter Participation Area, as defined herein, may not be amended, altered, revoked or otherwise changed prior to December 31, 2030, except by vote of the people or by the City Council pursuant to the procedures set forth in Section 4 of this Comprehensive Plan amendment. For purposes of this Ordinance, approval by a vote of the people is accomplished when a Comprehensive Plan amendment is placed on the ballot through any procedure provided for in the Election Code, and a majority of the voters vote in favor of it. Whenever the City Council adopts an amendment requiring approval by a vote of the people pursuant to the provisions of this subsection, the City Council's action shall have no effect until after such a vote is held and a majority of the voters vote in favor of it. The City Council shall follow the provisions of the Election Code in all matters pertaining to such an election.

Section 4. Changes to Area: Procedures.

Until December 31, 2030, the foregoing Purposes, Principles and Implementation provisions of this Comprehensive Plan amendment, and the Hillside Voter Participation Area may be amended only by a vote of the people commenced pursuant to the initiative process by the public, or pursuant to the procedures set forth below:

A. The City Council may amend the boundary of the Hillside Voter Participation Area depicted on Exhibit "A" if it finds such amendment to be in the public interest, provided that the amended boundary enlarges said Hillside Voter Participation Area established by this Comprehensive Plan amendment.

B. The City Council, following at least one public hearing for presentation by an applicant and the public, and after compliance with the California Environmental Quality Act, may amend the Hillside Voter Participation Area described herein, based on substantial evidence in the record, if the City Council makes each of the following findings:

(1) Application of the provisions of subsections (A) or (B) of the amendment procedures set forth in this Section 4 are unworkable and failure to amend the Hillside Voter Participation Area would constitute an unconstitutional taking of a landowner's property for which compensation would be required or would deprive the landowner of a vested right; and

(2) The amendment and associated land use designations will allow additional land uses only to the minimum extent necessary to avoid said
unconstitutional taking of the landowner's property or to give effect to the vested right.

C. The City Council, following at least one public hearing for presentations by an applicant and the public, and after compliance with the California Environmental Quality Act, may place any amendment to the Hillside Voter Participation Area or the provisions of this Comprehensive Plan amendment on the ballot pursuant to the mechanisms provided by state law.

D. The Comprehensive Plan may be reorganized and individual provisions, including the provisions of this ordinance, maybe renumbered or reordered in the course of ongoing updates of the Comprehensive Plan in accordance with the requirements of state law.

Section 5. No Changes to Save Our Agricultural Resources Initiative

Any restrictions imposed upon the City of San Buenaventura limiting the City's ability to redesignate, or allow development of, property designated "Agricultural" that are in effect as a result of the "SOAR" initiative approved by the voters in 1995 and adopted by the City Council as Ordinance No. 95-33 shall remain in full force and effect and shall not be amended, modified, altered, or abridged by the adoption of this ordinance.

Section 6. Exemptions:

The provisions of this ordinance do not apply to:

A. Construction or reconstruction of, or related to, public potable water facilities, public: parks or other city government facilities; or

B. Construction or reconstruction of no more than one residential dwelling unit, and incidental uses or structures related thereto, on an individual parcel of land that is lawfully established of record as of the effective date of this Comprehensive Plan amendment and that is contiguous to the City's incorporation boundary but only to the extent that such a legally established parcel is developed with, or proposed to be developed with, no more than one residential dwelling unit; or

C. Any development that would result in the creation of residential densities equal to or less than one primary residential unit per 40 acres in area; or, would result in the establishment of commercial or industrial uses that are agriculturally-related or related to the production of mineral resources; or

D. Any development project that has obtained, as of the effective date of this Comprehensive Plan amendment, a vested right pursuant to state or local law; or

E. Uses that are "incidental' (as the City's Zoning Ordinance defines "incidental uses") to uses lawfully established as of the effective date of this Comprehensive Plan amendment.

Section 7. Interpretation

This ordinance shall be broadly construed in order to achieve the purposes stated in this ordinance. It is the intent of the voters that the provisions of this measure shall be interpreted by the City and others in a manner that promotes public participation in decision-making relating to future development proposals within in the Hillside Voter Participation Area.

Section 8. Insertion Date

A. Upon the effective date of this ordinance, Sections 3, 4, 5, 6, and 7 of this ordinance shall be deemed inserted in the Comprehensive Plan and the Land Use Map referred to in Part C of Section 3 shall be deemed amended even though the reprinting may not occur until it can be carried out by the staff of the City of San Buenaventura.

B. The Comprehensive Plan in effect at the time the City Council decided to place this measure on the ballot, and the Comprehensive Plan as amended by this ordinance, comprise an integrated, internally consistent and compatible statement of policies for the City of San Buenaventura. In order to ensure that the Comprehensive Plan remains an integrated, internally consistent and compatible statement of policies and to ensure that the actions of the voters in enacting this ordinance are given effect, any provision of the Comprehensive Plan that is adopted between July 23, 2001 and the effective date of this ordinance, to the extent that such provision is inconsistent with this ordinance, shall be amended as soon as possible and in the manner and time required by state law to ensure consistency between such provision and Section 3 of this ordinance. In the alternative, such interim-enacted inconsistent provisions shall be repealed.

Section 9. Amendment or Repeal

This ordinance may be amended or repealed only by the voters of the City of San Buenaventura at an election held in accordance with state law, except as expressly provided by Section 4 herein.

The people of the City of San Buenaventura do ordain as follows:

Section 1. Title

This measure shall be known as the Ventura Community Park SOAR Amendment.

Section 2. Purpose

The purpose of this measure is to allow the City to develop a Community Park on a parcel of property located at the northwest corner of the intersection of Kimball Road and Telephone Road. The subject property, which is approximately 100 acres in size, is further described in Exhibit "A," attached hereto and made a part hereof, and is hereafter referred to as the "Property." Most of the Property is outside the Ventura City limits but within the "Planning Area" of the City of San Buenaventura and therefore covered by the City's Comprehensive Plan Update to the Year 2010 (hereafter the "Comprehensive Plan"). The Property is currently designated "Agricultural" under the Comprehensive Plan and, therefore, also subject to the 1995 Save Our Agricultural Resources ("SOAR") Initiative.

The City is proposing to develop the Property with community-oriented public park facilities that may include, among other things, athletic fields, an aquatic facility, a community center and other related buildings and structures for use by the public. If this measure is approved, the City may also construct and operate a fire station on a portion of the Property.

This initiative proposes to amend the Comprehensive Plan of the City of San Buenaventura, by changing the designation of the Property in the Comprehensive Plan Land Use Plan Map from "Agricultural" (or "A") to "Parks" (or "P"). This will allow the City of San Buenaventura to potentially develop the Property with a Community Park without being restricted by the SOAR Initiative.

Section 3. Comprehensive Plan Amendment

Part A.

The following paragraph titled “Parks Uses” is hereby added to the Land Use Element of the Comprehensive Plan, more particularly, to the provisions of the Serra Community Intent and Rationale Statement on page III-96, to read as follows:

“Parks Uses: The Parks Land Use Plan designation is applied to an approximately 100-acre site at the northwest corner of Kimball Road and Telephone Road for the purpose of developing a multi-purpose community-oriented public park on this site. It is further intended that this site should be zoned to the “P” (Parks) zone if and when it is annexed to the City. Design Review should be carried out by the City's Planning Commission prior to the development of any Recreation Services use types on the site to assure that the range of community park uses potentially permitted on the site by the "P" zone are well integrated on the site and compatible with adjacent land uses.”

Part B.

The Property is deleted from the discussion of “Agricultural Uses” in the Serra Community provisions of the Land Use Element of the Comprehensive Plan. To that end, the final paragraph with the heading “Agricultural Use” beginning at the bottom of page III-95 and ending at the top of page III-96 is hereby revised to read as follows:

“Agricultural Use: A 297-acre area between Telephone Road and the Southern Pacific Railroad and a 172-acre area between Bristol Road and the Santa Clara River are designated Agricultural Use, not to be reconsidered until after the Year 2010, to preserve their existing agricultural character.”

Part C.

The Land Use Plan Map incorporated in the Comprehensive Plan is hereby amended, and official copies thereof shall be revised by City staff, to reflect the foregoing amendments to the text of the Land Use Element.

Section 4. Zoning

Upon annexation to the City of San Buenaventura, the zoning classification for the Property shall be "P" (Parks) and the Official Zoning District Map incorporated in the Zoning Ordinance shall, by this Measure, be amended, and official copies thereof shall be revised by City staff, to reflect the foregoing zone change to the Property.

Section 5. Save Open-Space and Agricultural Resources

Any restrictions imposed upon the City of San Buenaventura limiting the City's ability to redesignate, or allow development of, property designated "Agricultural" that are in effect on the day that this Initiative is approved by the voters shall remain in full force and effect except as to the Property. The City of San Buenaventura may allow development of a community park on the Property in accordance with this ordinance.

Section 6. Interpretation

This ordinance shall be broadly construed in order to achieve the purposes stated in this ordinance. It is the intent of the voters that the provisions of this ordinance shall be interpreted by the City of San Buenaventura and others in a manner that facilitates the development of a community park on the Property in accordance with the purposes of this ordinance.

Section 7. Insertion Date

Part A. Upon the effective date of this ordinance, Part A and Part B of Section 3 of this ordinance shall be deemed inserted in the Comprehensive Plan and the Land Use Map referred to in Part C of Section 3 shall be deemed amended even though the reprinting may not occur until it can be carried out by the staff of the City of San Buenaventura.

Part B. The Comprehensive Plan in effect at the time the City Council decided to place this measure on the ballot, and the Comprehensive Plan as amended by this ordinance, comprise an integrated, internally consistent and compatible statement of policies for the City of San Buenaventura.

In order to ensure that the Comprehensive Plan remains an integrated, internally consistent and compatible statement of policies and to ensure that the actions of the voters in enacting this ordinance are given effect, any provision of the Comprehensive Plan that is adopted between [the date the City Council decided to place this measure on the ballot] and the effective date of this ordinance, to the extent that such provision is inconsistent with this ordinance, shall be amended as soon as possible and in the manner and time required by state law to ensure consistency between such provision and Section 3 of this ordinance. In the alternative, such interim-enacted inconsistent provisions shall be repealed.

Section 8. Amendment or Repeal

Section 3 and Section 4 of this ordinance may be amended or repealed only by the voters of the City of San Buenaventura at an election held in accordance with state law.

The people of the City of San Buenaventura do ordain as follows:

Section 1. Title

This ordinance shall be known as the First Assembly of God Land Initiative.

Section 2. Purpose

The purpose of this ordinance is to allow the First Assembly of God (hereafter "Church") to develop a property located at the northwest corner of the intersection of Montgomery Avenue and Northbank Drive. Such property is 25.59 acres and is further described in Exhibit A, attached hereto and made a part hereof, and is hereafter referred to as "Property". The Church wishes to develop the Property in accordance with City of San Buenaventura Ordinance No 95-33 (commonly known as "SOAR") guidelines for a sanctuary, related Church buildings, and athletic fields for use by the community of San Buenaventura.

Since the Property is within the sphere of influence of the City of San Buenaventura, this ordinance (1) amends the Comprehensive Plan Update to the Year 2010 (hereafter the "General Plan") of the City of San Buenaventura, and (2) prezones the Property to the R-1 Single Family zone with a subzone of R-1-1AC. This will allow the City of San Buenaventura to annex the Property with a restricted land use that is compatible with the Church's development of the Property.

Section 3. General Plan Amendment

Part A.

The second paragraph under the heading "Residential Uses" appearing on page III-94 of the General Plan describes the areas that may be used for low-density, single family homes in the Serra Community area of the City of San Buenaventura. The single family use (designated as SF in the General Plan) is the most restrictive land use that will allow the Church to build a sanctuary, related church buildings, and athletic fields. Section 4 of this initiative will further restrict the Property by pre-zoning the Property and requiring a minimum of one acre for each parcel. This will make the Property unattractive for single family development but still acceptable for the Church sanctuary, related Church buildings, and athletic fields. This ordinance adds the Church's 25.59 acre parcel to the SF land use.

The second paragraph under the heading "Residential Uses" appearing on page III-94 of the General Plan is hereby amended to read as follows:

"The SF category is applied to an approximately 3-acre site at the southeast corner of Henderson and Petit Avenue, a 1.7-acre site southerly of Darling Road extended, and a 25.59-acre site located at the northwest corner of Montgomery Avenue and Northbank Drive."

Part B.

The final paragraph with the heading "Agricultural Use" beginning at the bottom of page III-95 and ending at the top of page III-96 of the General Plan describes that portion of the Serra Community area of the City of San Buenaventura which may only be used for agricultural uses. This ordinance deletes the Church's 25.59 acre parcel from the agricultural use category.

The final paragraph with the heading "Agricultural Use" beginning at the bottom of page III-95 and ending at the top of page III-96 of the General Plan is hereby amended to read as follows:

"Agricultural Use: A 100-acre site at the northwest corner of Kimball Road and Telephone, a 297-acre area between Telephone Road and the Southern Pacific Railroad except for the 25.59-acre site located at the northwest corner of Montgomery Avenue and Northbank Drive, and a 172-acre area between Bristol Road and the Santa Clara River are designated Agricultural Use, not to be reconsidered until after the Year 2010, to preserve their existing agricultural character."

Part C.

The map of the Land Use Plan contained in the General Plan shall be redrafted to reflect the foregoing amendments.

Section 4. Zoning

The most restrictive zoning in the City of San Buenaventura which will allow the Church to build a sanctuary, related Church buildings, and athletic fields on the Property is an R-1 Single Family zone with a subzone of R-1-1AC. The R-1-1AC subzone restricts the Property by requiring a minimum of one acre for each parcel. This will make the Property unattractive for single family development but still acceptable for the Church's sanctuary, related Church buildings, and athletic fields.

Therefore, upon annexation of the Property to the City of San Buenaventura the zoning designation for the Property shall be the R-1 Single Family zone with a subzone of R-1-1AC.

Section 5. Save Open-Space and Agricultural Resources

Any restrictions imposed upon he City of San Buenaventura limiting the City's ability to annex property and allow development of such property shall remain in full force and effect except as to the 25.59-acres of the Property.

Section 6. Construction

This ordinance shall be broadly construed in order to achieve the purposes stated in this ordinance. It is the intent of the voters that the provisions of this ordinance shall be interpreted by the City of San Buenaventura and others in a manner that facilitates the development of the Property in accordance with the purposes of this ordinance.

Section 7. Insertion Date

Part A. Upon the effective date of this ordinance, Part A and Part B of Section 3 of this ordinance shall be deemed inserted in the General Plan and the Land Use Map referred to in Part C of Section 3 shall be deemed amended even though the reprinting may not occur until deemed convenient by the City of San Buenaventura.

Part B. The General Plan in effect at the time the Notice of Intention to circulate this initiative was submitted to the City Clerk of the City of San Buenaventura, and the General Plan as amended by this ordinance, comprise an integrated, internally consistent and compatible statement of policies for the City of San Buenaventura. In order to ensure that the General Plan remains an integrated, internally consistent and compatible statement of policies and to ensure that the actions of the voters in enacting this ordinance are given effect, any provision of the General Plan that is adopted between the Notice of Intention and the effective date of this ordinance, to the extent that such provision is inconsistent with this ordinance, shall be amended as soon as possible and in the manner and time required by state law to ensure consistency between such provision and Section 3 of this ordinance. In the alternative, such interim-enacted inconsistent provisions shall be repealed.

Section 8. Amendment or Repeal

Section 3 and Section 4 of this ordinance may be amended or repealed only by the voters of the City of San Buenaventura at an election held in accordance with state law.

EXHIBIT "A"

PARCEL 1:

That portion of Subdivision 98 of Rancho Santa Paula y Saticoy, in the county of Ventura, state of California, as per map recorded in book "A" pag3 290 of Miscellaneous Records (Transcribed Records from Santa Barbara County), in the office of the county recorder of said county, described as follows:

Beginning at the point of intersection of the centerline of the right of way of the Southern Pacific Railroad and the boundary line between Subdivisions 98 and 99 of said Rancho Santa Paula y Saticoy; thence from said point of beginning,

1st: - North 10° 30' West 9.482 chains, more or less, to the southeast corner of that certain Parcel of land conveyed to Charles H. Fowler, by deed dated March 18, 1892, recorded in book 36 page 86 of Deeds; thence,

2nd: - South 79º 30' West 19.25 chains, along the south line of said lands of Charles H. Fowler, to the northeast corner of that certain Parcel of land as conveyed to Emma J. Tyler, by deed dated June 20, 1894, recorded in book 43 page 90 of Deeds; thence,

3rd: - South 10º 30' East 18.982 chains, more or less, along the east line of said lands of Emma J. Tyler, to a point in the centerline of the right of way of the Southern Pacific Railroad; thence along same,

4th: - North 53º 15' East 22.57 chains, more or less, to the point of beginning.

EXCEPT a strip of parcel of land 50 feet wide lying adjoining and immediately west of the east line of the above described land, conveyed to the County of Ventura, as a public highway, by deed recorded July 12, 1889, in book 28 page 338 of Deeds.

ALSO EXCEPT that portion thereof conveyed to the Southern Pacific Railroad Company by deed recorded January 27, 1887 in book 18 page 146 of Deeds.

RESERVING unto the grantor herein, all oil, gas and mineral rights in and to said land, without however, any right of surface entry in and to a depth of 500 feet.

PARCEL 3:

That certain parcel in Lot 99 of the Rancho Santa Paula y Saticoy, marked “not a part of this subdivision” on the map of Tract No. 1333-1, in the City of San Buenaventura, county of Ventura, state of California, as per map recorded in book 30 page 51 of Maps, in the office of the county recorder of said county, and lying northwesterly of the Southern Pacific Railroad right of way, easterly of Bristol Road and southwesterly of Montgomery Avenue, as shown on said map.

RESERVING unto the grantor herein, all oil, gas and mineral rights in and to said land, without however, any right of surface entry in and to a depth of 500 feet from the surface thereof.

CITY OF
VENTURA

21ST CENTURY TOOL KIT

Prelude

The 2005 Ventura General Plan envisions a new direction to protect and preserve its citizens' quality of life. This direction is based on the recognition that zoning and land development, as practiced for the past several decades, has not served our citizens, our city, or our environment as well as it should.

Currently, the two most successful movements created to alleviate this situation are "Smart Growth" and "New Urbanism." Smart Growth is a government initiated approach against sprawl that addresses underlying policy from the top-down, and is primarily marketed by government and similar agencies. New Urbanism is a grass roots, market response to outdated zoning and land use policy as it impacts development and the physical properties of the public realm. Its chief advocates are architects and town designers.

Smart Growth grew out of early New Urbanist work, and both are concerned with the real outcomes of the built environment and how it affects communities environmentally, economically, culturally, and socially.

The Ahwahnee Principles and the Charter for the New Urbanism, listed below, were created early on as "constitutions" that governed these movements. Both are valuable tools that Ventura would be wise to include in it's 21st Century Tool Kit to understand and solve long-standing problems associated with growth and change.

AHWAHNEE PRINCIPLES

Preamble:

Existing patterns of urban and suburban development seriously impair our quality of life. The symptoms are: more congestion and air pollution resulting from our increased dependence on automobiles, the loss of precious open space, the need for costly improvements to roads and public services, the inequitable distribution of economic resources, and the loss of a sense of community. By drawing upon the best from the past and the present, we can plan communities that will more successfully serve the needs of those who live and work within them. Such planning should adhere to certain fundamental principles.

Community Principles

1. All planning should be in the form of complete and integrated communities containing housing, shops, work places, schools, parks and civic facilities essential to the daily life of the residents.

2. Community size should be designed so that housing, jobs, daily needs and other activities are within easy walking distance of each other.
3. As many activities as possible should be located within easy walking distance of transit stops.
4. A community should contain a diversity of housing types to enable citizens from a wide range of economic levels and age groups to live within its boundaries.
5. Businesses within the community should provide a range of job types for the community's residents.
6. The location and character of the community should be consistent with a larger transit network.
7. The community should have a center focus that combines commercial, civic, cultural and recreational uses.
8. The community should contain an ample supply of specialized open space in the form of squares, greens and parks whose frequent use is encouraged through placement and design.
9. Public spaces should be designed to encourage the attention and presence of people at all hours of the day and night.
10. Each community or cluster of communities should have a well-defined edge, such as agricultural greenbelts or wildlife corridors, permanently protected from development.
11. Streets, pedestrian paths and bike paths should contribute to a system of fully-connected and interesting routes to all destinations. Their design should encourage pedestrian and bicycle use by being small and spatially defined by buildings, trees and lighting; and by discouraging high speed traffic.
12. Wherever possible, the natural terrain, drainage and vegetation of the community should be preserved with superior examples contained within parks or greenbelts.
13. The community design should help conserve resources and minimize waste.
14. Communities should provide for the efficient use of water through the use of natural drainage, drought tolerant landscaping and recycling.
15. The street orientation, the placement of buildings and the use of shading should contribute to the energy efficiency of the community.

Regional Principles

1. The regional land-use planning structure should be integrated within a larger transportation network built around transit rather than freeways.
2. Regions should be bounded by and provide a continuous system of greenbelt/wildlife corridors to be determined by natural conditions.
3. Regional institutions and services (government, stadiums, museums, etc.) should be located in the urban core.
4. Materials and methods of construction should be specific to the region, exhibiting a continuity of history and culture and compatibility with the climate to encourage the development of local character and community identity.

Implementation Principles

1. The general plan should be updated to incorporate the above principles.
2. Rather than allowing developer-initiated, piecemeal development, local governments should take charge of the planning process. General plans should designate where new growth, infill or redevelopment will be allowed to occur.

3. Prior to any development, a specific plan should be prepared based on these planning principles.
4. Plans should be developed through an open process and participants in the process should be provided visual models of all planning proposals.

CONGRESS FOR THE NEW URBANISM

THE CONGRESS FOR THE NEW URBANISM views disinvestment in central cities, the spread of placeless sprawl, increasing separation by race and income, environmental deterioration, loss of agricultural lands and wilderness, and the erosion of society's built heritage as one interrelated community building challenge.

WE STAND for the restoration of existing urban centers and towns within coherent metropolitan regions, the reconfiguration of sprawling suburbs into communities of real neighborhoods and diverse districts, the conservation of natural environments, and the preservation of our built legacy.

WE RECOGNIZE that physical solutions by themselves will not solve social and economic problems, but neither can economic vitality, community stability, and environmental health be sustained without a coherent supportive physical framework.

WE ADVOCATE the restructuring of public policy and development practices to support the following principles: neighborhoods should be diverse in use and population; communities should be designed for the pedestrian and transit as well as the car; cities and towns should be shaped by physically defined and universally accessible public spaces and community institutions; urban places should be framed by architecture and landscape design that celebrate local history, climate, ecology, and building practice.

WE REPRESENT a broad-based citizenry, composed of public and private sector leaders, community activists, and multidisciplinary professionals. We are committed to reestablishing the relationship between the art of building and the making of community, through citizen-based participatory planning and design.

WE DEDICATE ourselves to reclaiming our homes, blocks, streets, parks, neighborhoods, districts, towns, cities, regions, and environment.

We assert the following principles to guide public policy, development practice, urban planning, and design:

The region: Metropolis, city, and town

1. Metropolitan regions are finite places with geographic boundaries derived from topography, watersheds, coastlines, farmlands, regional parks, and river basins. The metropolis is made of multiple centers that are cities, towns, and villages, each with its own identifiable center and edges.

2. The metropolitan region is a fundamental economic unit of the contemporary world. Governmental cooperation, public policy, physical planning, and economic strategies must reflect this new reality.

3. The metropolis has a necessary and fragile relationship to its agrarian hinterland and natural landscapes. The relationship is environmental, economic, and cultural. Farmland and nature are as important to the metropolis as the garden is to the house.

4. Development patterns should not blur or eradicate the edges of the metropolis. Infill development within existing urban areas conserves environmental resources, economic investment, and social fabric, while reclaiming marginal and abandoned areas. Metropolitan regions should develop strategies to encourage such infill development over peripheral expansion.

5. Where appropriate, new development contiguous to urban boundaries should be organized as neighborhoods and districts, and be integrated with the existing urban pattern. Noncontiguous development should be organized as towns and villages with their own urban edges, and planned for a jobs/housing balance, not as bedroom suburbs.

6. The development and redevelopment of towns and cities should respect historical patterns, precedents, and boundaries.

7. Cities and towns should bring into proximity a broad spectrum of public and private uses to support a regional economy that benefits people of all incomes. Affordable housing should be distributed throughout the region to match job opportunities and to avoid concentrations of poverty.

8. The physical organization of the region should be supported by a framework of transportation alternatives. Transit, pedestrian, and bicycle systems should maximize access and mobility throughout the region while reducing dependence upon the automobile.

9. Revenues and resources can be shared more cooperatively among the municipalities and centers within regions to avoid destructive competition for tax base and to promote rational coordination of transportation, recreation, public services, housing, and community institutions.

The neighborhood, the district, and the corridor

1. The neighborhood, the district, and the corridor are the essential elements of development and redevelopment in the metropolis. They form identifiable areas that encourage citizens to take responsibility for their maintenance and evolution.

2. Neighborhoods should be compact, pedestrian-friendly, and mixed-use. Districts generally emphasize a special single use, and should follow the principles of neighborhood design when possible. Corridors are regional connectors of neighborhoods and districts; they range from boulevards and rail lines to rivers and parkways.

3. Many activities of daily living should occur within walking distance, allowing independence to those who do not drive, especially the elderly and the young. Interconnected networks of streets should be designed to encourage walking, reduce the number and length of automobile trips, and conserve energy.

4. Within neighborhoods, a broad range of housing types and price levels can bring people of diverse ages, races, and incomes into daily interaction, strengthening the personal and civic bonds essential to an authentic community.

5. Transit corridors, when properly planned and coordinated, can help organize metropolitan structure and revitalize urban centers. In contrast, highway corridors should not displace investment from existing centers.

6. Appropriate building densities and land uses should be within walking distance of transit stops, permitting public transit to become a viable alternative to the automobile.

7. Concentrations of civic, institutional, and commercial activity should be embedded in neighborhoods, and districts, not isolated in remote, single-use complexes. Schools should be sized and located to enable children to walk or bicycle to them.

8. The economic health and harmonious evolution of neighborhoods, districts, and corridors can be improved through graphic urban design codes that serve as predictable guides for change.

9. A range of parks, from tot-lots and village greens to ball fields and community gardens, should be distributed within neighborhoods. Conservation areas and open lands should be used to define and connect different neighborhoods and districts.

The block, the street, and the building

1. A primary task of all urban architecture and landscape design is the physical definition of streets and public spaces as places of shared use.

2. Individual architectural projects should be seamlessly linked to their surroundings. This issue transcends style.

3. The revitalization of urban places depends on safety and security. The design of streets and buildings should reinforce safe environments, but not at the expense of accessibility and openness.

4. In the contemporary metropolis, development must adequately accommodate automobiles. It should do so in ways that respect the pedestrian and the form of public space.

5. Streets and squares should be safe, comfortable, and interesting to the pedestrian. Properly configured, they encourage walking and enable neighbors to know each other and protect their communities.

6. Architecture and landscape design should grow from local climate, topography, history, and building practice.

7. Civic buildings and public gathering places require important sites to reinforce community identity and the culture of democracy. They deserve distinctive form, because their role is different from that of other buildings and places that constitute the fabric of the city.

8. All buildings should provide their inhabitants with a clear sense of location, weather and time. Natural methods of heating and cooling can be more resource-efficient than mechanical systems.

9. Preservation and renewal of historic buildings, districts, and landscapes affirm the continuity and evolution of urban society.

Congress of the New Urbanism, 140 S. Dearborn St., Suite 310, Chicago, IL, 60603, (312) 551-7300

GLOSSARY OF TERMS IN THE 2005 VENTURA GENERAL PLAN

Abbreviations

ADT: Average number of vehicle trips per day
CEQA: California Environmental Quality Act
CIP: Capital Improvements Program
CNEL: Community Noise Equivalent Level
dB: Decibel
DOF: California Department of Finance
EIR: Environmental Impact Report
FAR: Floor Area Ratio
FEMA: Federal Emergency Management Agency
LAFCo: Local Agency Formation Commission
Ldn: Day and Night Average Sound Level
Leq: Sound Energy Equivalent Level
LOS: Traffic Intersection Level of Service
RDA: City of Ventura Redevelopment Agency
SCAG: Southern California Association of Governments
SOI: Sphere of Influence
TDM: Transportation Demand Management
TOD: Transit-Oriented Development
VCOG: Ventura County Council of Governments

Definitions

Acre: Approximately 43,560 square feet.

Acres, Gross: The entire acreage of a site calculated to the centerline of proposed bounding streets and to the edge of the right-of-way of existing or dedicated streets.

Acres, Net: The portion of a site that can actually be built upon. The following generally are not included in the net acreage of a site**:** public or private road rights-of-way, public open space, and flood ways.

Action: A strategy carried out in response to adopted policy to achieve a specific goal or objective. Policies and action statements establish the "who," "how" and "when" for carrying out the "what" and "where" of goals and objectives.

Adaptive Reuse: The conversion of obsolescent or historic buildings from their original or most recent use to a new use; for example, the conversion of former hospital or school buildings to residential use, or the conversion of a historic single-family home to office use.

Affordable Housing: Housing capable of being purchased or rented by a household with very low, low, or moderate income, based on a household's ability to make monthly payments necessary to obtain housing. Housing is considered affordable when a household pays less than 30 percent of its gross monthly income (GMI) for housing including utilities.

Alley: A narrow service way, either public or private, which provides a permanently reserved but secondary means of public access not intended for general traffic circulation. Alleys typically are located along rear property lines.

Ambient: Surrounding on all sides; used to describe measurements of existing conditions with respect to traffic, noise, air and other environments.

Annex, *v*: To incorporate a land area into an existing district or municipality, with a resulting change in the boundaries of the annexing jurisdiction.

Aquifer: An underground, water-bearing layer of earth, porous rock, sand, or gravel, through which water can seep or be held in natural storage. Aquifers generally hold sufficient water to be used as a water supply.

Arterial: Medium-speed (30-40 mph), medium-capacity (10,000-35,000 average daily trips) roadway that provides intra-community travel and access to the county-wide highway system. Access to community arterials should be provided at collector roads and local streets, but direct access from parcels to existing arterials is common.

Bicycle Lane (Class II): A corridor expressly reserved for bicycles, existing on a street or roadway in addition to any lanes for use by motorized vehicles.

Bicycle Path (Class I): A paved route not on a street or roadway and expressly reserved for bicycles traversing an otherwise unpaved area. Bicycle paths may parallel roads but typically are separated from them by landscaping.

Bicycle Route (Class III): A facility shared with motorists and identified only by signs, a bicycle route has no pavement markings or lane stripes.

Buffer: An area of land separating two distinct land uses that acts to soften or mitigate the effects of one land use on the other.

Building: Any structure used or intended for supporting or sheltering any use or occupancy.

Building Type: a structure category determined by function, disposition on the lot, and configuration, including frontage and height. For example, a rowhouse is a type, not a style.

Buildout: Development of land to its full potential or theoretical capacity as permitted under current or proposed planning or zoning designations.

California Environmental Quality Act (CEQA): Law requiring State and local agencies to regulate activities with consideration for environmental protection. If a proposed activity has the potential for a significant adverse environmental impact, an Environmental Impact Report (EIR) must be prepared and certified before taking action on the proposed project.

Capital Improvements Program (CIP): A program that schedules permanent City improvements at least five years ahead to fit projected fiscal capability. The CIP is reviewed annually.

Channelization: The straightening and/or deepening of a watercourse for purposes of runoff control or ease of navigation; often includes lining banks with retaining material such as concrete.

Character: Special physical characteristics of a structure or area that set it apart from its surroundings and contribute to its individuality.

Charrette: An interactive, multi-day public process in which the community works together with planning and design professionals and City staff and officials to create and support a feasible plan for a specific area of the City that will produce positive and transformative community change.

City: When capitalized, refers to the governmental entity; "city" refers to the geographic area.

Civic: the term defining not-for-profit organizations dedicated to the arts, culture, education, recreation, government, transit, and municipal parking.

Clustered Development: Buildings placed close together with the purpose of retaining open space area.

Co-housing: A residential development with dwelling units for grouped around a common kitchen, gathering room, and child-care facilities. Co-housing developments normally are organized as condominiums.

Collector: Relatively-low-speed (25-30 mph), relatively low-volume (5,000-10,000 average daily trips) street that provides circulation within and between neighborhoods. Collectors usually serve short trips and are intended for collecting trips from local streets and distributing them to the arterial network.

Commerce; Commercial: The buying and selling of commodities and services.

Community Noise Equivalent Level (CNEL): A 24-hour energy equivalent level derived from a variety of single-noise events, with weighting factors of 5 and 10 dBA applied to the evening (7 PM to 10 PM) and nighttime (10 PM to 7 AM) periods, respectively, to allow for the greater sensitivity to noise during these hours.

Community Park: Land with full public access intended to provide recreation opportunities beyond those supplied by neighborhood parks. Community parks are larger in scale than neighborhood parks but smaller than regional parks.

Corridor: Linear features that may form boundaries, as well as connections, between neighborhoods. Corridors frequently encompass major access routes, especially ones with commercial destinations. Corridors also can incorporate parks or natural features such as streams or canyons.

dB: Decibel; a unit used to express the relative intensity of a sound as it is heard by the human ear.

dBA: The "A-weighted" scale for measuring sound in decibels; weighs or reduces the effects of low and high frequencies in order to simulate human hearing. Every increase of 10 dBA doubles the perceived loudness though the noise is actually ten times more intense.

Dedication: The turning over by an owner or developer of private land for public use, and the acceptance of land for such use by the governmental agency having jurisdiction over the public function for which it will be used. Dedications for roads, parks, school sites, or other public uses often are made conditions for approval of a development by a city or county.

Density, Residential: The number of permanent residential dwelling units per gross acres of land.

Density Bonus: The allocation of development rights that allow a parcel to accommodate additional square footage or additional residential units beyond the maximum for which the parcel is zoned, usually in exchange for the provision or preservation of an amenity at the same site or at another location. Under California law, a housing development that provides 20 percent of its units for lower income households, or 10 percent of its units for very low-income households, or 50 percent of its units for seniors, is entitled to a density bonus.

Design Review: The comprehensive evaluation of a development and its impact on neighboring properties and the community as a whole, from the standpoint of site and landscape design, architecture, materials, colors, lighting, and signs, in accordance with a set of adopted criteria and standards.

Detention Basin: A structure constructed to retard flood runoff and minimize the effect of sudden floods. Water is temporarily stored and released through an outlet structure at a rate that will not exceed the carrying capacity of the channel downstream. Basins often are planted with grass and used for open space or recreation in periods of dry weather.

Developer: An individual or business that prepares raw land for the construction of buildings or causes to be built physical space for use primarily by others, and in which the preparation of the land or the creation of the building space is in itself a business and is not incidental to another business or activity.

Development: The physical extension and/or construction of urban land uses, including: subdivision of land; construction or alteration of structures, roads, utilities, and other facilities; installation of septic systems; grading; deposit of refuse, debris, or fill materials; and clearing of natural vegetative cover (with the exception of agricultural activities). Routine repair and maintenance activities are exempted.

Development Fee: (See "Impact Fee.")

District: An area of the city that has a unique character identifiable as different from surrounding areas because of distinctive architecture, streets, geographic features, culture, landmarks, activities, and/or land uses. A neighborhood or parts of neighborhoods can form a district. Districts consist of streets or areas emphasizing specific types of activities. A corridor may also be a district, as when a major shopping avenue runs between adjoining neighborhoods.

Dwelling Unit: A room or group of rooms (including sleeping, eating, cooking, and sanitation facilities, but not more than one kitchen), which constitutes an independent housekeeping unit, occupied or intended for occupancy by one household on a long-term basis.

Encourage, *v*: To stimulate or foster a particular condition through direct or indirect action by the private sector or government agencies.

Enhance, *v*: To improve existing conditions by increasing the quantity or quality of beneficial uses or features.

Environment: The existing physical conditions in an area that will be affected by a proposed project, including land, air, water, mineral, flora, fauna, noise, and objects of historic or aesthetic significance.

Environmental Impact Report (EIR): A report required by CEQA that assesses all the environmental characteristics of an area and determines what effects or impacts will result if the area is altered or disturbed by a proposed action.

Fault: A fracture in the earth's crust forming a boundary between rock masses that have shifted.

Flood, 100-Year: The magnitude of a flood expected to occur on the average every 100 years, based on historical data. The 100-year flood has a one percent chance of occurring in any given year.

Floodplain: The relatively level land area on either side of the banks of a stream regularly subject to flooding. That part of the flood plain subject to a one percent chance of flooding in any given year is designated as an "area of special flood hazard" by the Federal Insurance Administration.

Floodway: The channel of a river or other watercourse and the adjacent land areas that must be reserved in order to discharge the "base flood" without cumulatively increasing the water surface elevation more than one foot. No development is allowed in floodways.

General Plan: A compendium of city or county policies regarding its long-term development, in the form of maps and accompanying text. The General Plan is a legal document required by the State of California Government Code Section 65301 and adopted by the City Council.

Gateway: A point along the edge of a city at which a person gains a sense of having left the environs and entered the city.

Goal: A general, overall, and ultimate purpose, aim, or end toward which the City will direct effort.

Green: A whole-building and systems approach to siting, design, construction, and operation that employs techniques that minimize environmental impacts and reduce the energy consumption of buildings while contributing to the health and productivity of occupants.

Hazardous Material: Any substance that, because of its quantity, concentration, or physical or chemical characteristics, poses a significant present or potential hazard to human health and safety or to the environment if released into the workplace or the environment. The term includes, but is not limited to, hazardous substances and hazardous wastes.

Hillside Area: All that area north of Foothill and Poli Street, and east of Cedar Street and within City limits. This area is subject to the Hillside Management Program.

Hillside Open Space: One of the 19 distinct communities within the City's Planning Area; coterminous with the Hillside Voter Participation Area; generally referred to as "hillsides".

Hillside Voter Participation Area or HVPA: The area subject to the "Hillside Voter Participation Act" (also known as Measure "P") as set forth in Appendix X and coterminous with the "Hillside Open Space" area depicted on the Land Use Diagram.

Hillsides: Synonymous and coterminous with HVPA and "Hillside Open Space".

Historic: Noteworthy for significance in local, state, or national history or culture, architecture or design, or housing works of art, memorabilia, or artifacts.

Household: Persons who occupy a housing unit.

Housing Element: A separately published State-mandated general plan element that assesses existing and projected housing needs of all economic segments of the community, identifies potential sites adequate to provide the amount and kind of housing needed, and contains adopted goals, policies, and implementation programs for the preservation, improvement, and development of housing. The Housing Elements is updated every five years.

Housing Unit: A rooms or a rooms intended for occupancy, separate from any other living space, with direct access from outside or through a common area.

Impact: The direct or indirect effect of human action on existing physical, social, or economic conditions.

Impact or Development Fee: A fee levied on the developer of a project as compensation for otherwise-unmitigated impacts the project will produce, not to exceed the estimated reasonable cost of providing the service for which the fee is charged.

Industry/Industrial: The manufacture, production, and processing of consumer goods. Industrial is often divided into "heavy industrial" uses, such as construction yards, quarrying, and factories; and "light industrial" uses, such as research and development and less intensive warehousing and manufacturing.

Infill: Development of vacant and/or underutilized land within areas already largely developed with urban uses.

Infrastructure: Public services and facilities, such as sewage-disposal systems, water-supply systems, and other utilities.

In-lieu Fee: Payment that substitutes for required dedication of land or provision of structures or amenities.

Institutional: Uses such as hospitals, museums, schools, places of worship, and nonprofit activities of a welfare, educational, or philanthropic nature that cannot be considered residential, commercial, or industrial activities.

Landmark: (1) A building, site, object, structure, or significant tree, having historical, architectural, social, or cultural significance and marked for preservation by the local, state, or federal government. (2) A visually prominent or outstanding structure or natural feature that functions as a point of orientation or identification.

Ldn: Day-Night Average Sound Level. The A-weighted average sound level for a given area (measured in decibels) during a 24-hour period with a 10 dB weighting applied to night-time sound levels. The Ldn is approximately numerically equal to the CNEL for most environmental settings.

Leq: The energy equivalent level, defined as the average sound level on the basis of sound energy (or sound pressure squared). The Leq is a "dosage" type measure and is the basis for the descriptors used in current standards, such as the 24-hour CNEL used by the State of California.

Lease: A contractual agreement by which an owner of real property (the lessor) gives the right of possession to another (a lessee) for a specified period of time (term) and for a specified consideration (rent).

Level of Service, Intersection (LOS): A scale that measures the amount of traffic an intersection is capable of handling. Levels range from A, representing free-flow, to F corresponding to significant stoppage.

Liquefaction: The transformation of loose water-saturated granular materials (such as sand or silt) from a solid into a liquid state, which can lead to ground failure during an earthquake.

Live-Work: A dwelling unit that contains, to a limited extent, a commercial component. A live-work unit is a fee-simple unit on its own lot with the commercial component limited to the ground level. (see Work-Live)

Local Agency Formation Commission (LAFCo): A commission in each county that reviews and evaluates proposals for formation of special districts, incorporation of cities, annexation to special districts or cities, consolidation of districts, and merger of districts with cities. LAFCo members include two county supervisors, two city council members, and one member representing the general public.

Local Coastal Program (LCP): A combination of City land use plans, zoning regulations, and zoning district maps that control land use in the Coastal Zone established under the California Coastal Act of 1976.

Local Street: Relatively low-volume, low-speed streets (not shown on the Roadway Classifications map), whose primary purpose is to provide access to fronting properties.

Lot: A legally-recognized parcel with frontage on a public or City-approved private street.

Low Income: Households with annual income 80 percent of the County median or less.

Maintain: Keep in an existing state. (See “Preserve.”)

Median: The dividing area between opposing lanes of traffic.

Mitigate: Alleviate or avoid to the extent feasible.

Mixed Use: Properties on which various uses, such as office, commercial, and institutional, are combined with residences in a single building or site in an integrated development project with significant functional interrelationships and a coherent physical design. A single site may include contiguous properties.

Neighborhood: The basic building blocks of a community that together comprise the city. Each neighborhood is limited in physical area, with a defined edge and a center. The size of a neighborhood is usually based on the distance that a person can walk in five minutes from the center to the edge – a quarter-mile. Neighborhoods have a fine-grained mix of land uses, providing places to live, work, shop, and be entertained.

Neighborhood Center: The focal point of a neighborhood, commonly featuring places for work, shopping, services, entertainment, leisure, recreation, and social and civic interaction.

Neighborhood Park: A facility intended to serve the recreation needs of people living or working within a one-half mile radius of the park.

Noise: Sound that is undesirable because it interferes with speech and hearing, is intense enough to damage hearing, or is otherwise annoying.

Noise Contour: A line connecting points of equal noise level as measured on the same scale. Noise levels greater than the 60 Ldn contour (measured in dBA) require mitigation in residential development.

Office: Professional or consulting services in fields such as accounting, architecture, design, engineering, finance, law, insurance, medicine, real estate, and similar types of work.

Open Space: An area of land or water that is essentially unimproved and devoted to outdoor recreation and/or the preservation of natural resources.

Outdoor Recreation: Recreation in an urbanized outdoor setting (active recreation) or open-space outdoor setting (passive recreation).

(a) *Active outdoor recreation* includes participant sports or other activities conducted in open or partially enclosed or screened recreational activities facilities. Typical uses include driving ranges, miniature golf courses, golf courses, amusement parks, swimming pools, and tennis courts and usually rely on permanent above-ground improvements, including, but not limited to, playing fields or courts, restrooms, and tables.

(b) *Passive outdoor recreation* includes recreational activities, usually of an individual or small group nature, such as sunbathing, walking, hiking, bird watching, or nature study, conducted in an open-space setting and which, generally, do not rely on the use of permanent aboveground improvements or involve motorized vehicle use.

Parcel: A lot, or contiguous group of lots, in single ownership or under single control, usually considered a unit for purposes of development.

Parks: Open space lands whose primary purpose is recreation.

Parkway: The area between curb and sidewalk, usually planted with ground cover and/or trees.

Pedestrian Shed: an area defined by the average distance that may be traversed at and easy walking pace from its edge to its center. This distance is applied to determine the size of a neighborhood or extent of a community. A standard Pedestrian Shed is one quarter of a mile radius or 1,320 feet. With transit available or proposed, a long Pedestrian Shed has an average walking distance of ½-mile or 2,640 feet. Pedestrian Sheds should be conceived as oriented toward a central destination containing one or more important intersections, meeting places, civic spaces, civic buildings, and the capacity to accommodate a T5 Transect Zone in the future. Sometimes called a Walkshed.

Planning Area: The land area addressed by the General Plan, which includes the City Limits, potentially annexable land in the Sphere of Influence, and neighboring open space and agricultural areas of Ventura County that the City desires to remain in rural condition.

Policy: A statement of principle that anticipates specific actions to be undertaken to meet City goals.

Pollution: The presence of matter or energy whose nature, location, or quantity produces undesired environmental effects.

Preserve: Keep intact and safe from destruction or decay.

Protect: Maintain and preserve beneficial uses in their present condition.

Public and Quasi-public Facilities: Institutional, academic, governmental and community service uses, either publicly owned or operated by non-profit organizations.

Public Art: Signs, other monuments, sculptures, murals, statues, fountains, and other artistic installations in spaces accessible to the general public that accentuate or draw attention to a particular place or feature of the city, provide a focal point for public gathering, and/or serve a specific function, such as to provide seating.

Recreation, Active: A type of recreation that requires organized play areas, such as softball, baseball, football and soccer fields, tennis and basketball courts and various forms of children's play equipment.

Recreation, Passive: Recreation that does not require organized play areas.

Recycling: The process of extracting and reusing materials from waste products.

Redevelop: To demolish existing buildings, or increase the overall floor area existing on a property, or both, irrespective of whether a change occurs in land use.

Redevelopment Agency: The City division created under California Redevelopment Law for the purpose of planning, developing, re-planning, redesigning, clearing, reconstructing, and/or rehabilitating all or part of a specified area with residential, commercial, industrial, and/or public (including recreational) structures and facilities.

Regional: Pertaining to activities or economies at a scale greater than that of a single jurisdiction and affecting a broad geographic area.

Regional Park: A park typically 150-500 acres in size focusing on activities and natural features not included in most other types of parks and often based on a specific scenic or recreational opportunity.

Restore: Renew, rebuild, or reconstruct to a former state.

Ridesharing: Vehicle travel other than driving alone.

Ridgeline: A line connecting the highest points along a ridge and separating drainage basins or small-scale drainage systems from one another.

Right-of-way: Land intended to be occupied by transportation and public use facilities such as roadways, railroads, and utility lines.

Riparian: Areas adjacent to perennial and intermittent streams delineated by the existence of plant species normally found near fresh water.

Runoff: The portion of precipitation that does not percolate into the ground.

Seismic: Caused by or subject to earthquakes or earth vibrations.

Sidewalk: the paved layer of the public frontage dedicated exclusively to pedestrian activity.

Specific Plan: A legal tool allowed by State Government Code Section 65450 et seq. that prescribes detailed regulations, conditions, programs, and/or proposed legislation for a defined area of the city.

Sphere of Influence: The probable ultimate physical boundaries and service area of the city, as determined by LAFCo.

Streetscape: the urban element that establishes the major part of the public realm. The streetscape is composed of thoroughfares (travel lanes for vehicles and bicycles, parking lanes for cars, and sidewalks or paths for pedestrians) as well as the visible private frontages (building facades and elevations, porches, yards, fences, awnings, etc.), and the amenities of the public frontages (street trees and plantings, benches, and streetlights, etc.).

Structure: Anything constructed or erected that requires location on the ground (excluding swimming pools, fences, and walls used as fences).

Subdivision: The division of a land into defined lots or condominiums that can be separately conveyed by sale or lease.

Sustainable: Meeting the needs of the present without compromising the ability of future generations to meet their needs, and successfully balancing economic, environmental, and social equity concerns.

Tourism: The business of providing services for persons traveling for pleasure.

Transect: a system of ordering human habitats in a range from the most natural to the most urban. Based upon six Transect Zones that describe the physical character of place at any scale, according to the density and intensity of land use and urbanism.

Transit-Oriented Development (TOD): Relatively high-density development located within an easy walk of a major transit stop, generally with a mix of residential, employment, and shopping designed primarily for pedestrians.

Transit, Public: A system of regularly-scheduled buses and/or trains available to the public on a fee-per-ride basis.

Transportation Demand Management (TDM): Strategies for reducing the number of vehicle trips by increasing ridesharing, transit use, walking, and biking.

Trip: A one-way journey that proceeds from an origin to a destination via a single mode of transportation.

Truck Route: A route required for all vehicles exceeding set weight or axle limits, which follows major arterials through commercial or industrial areas and avoids sensitive areas.

Underutilized: Non-vacant properties that have not been fully developed with improvements that reach the allowed density and/or floor area.

Urban Design: The attempt to give form, in terms of both beauty and function, to selected urban areas or to whole cities. Urban design is concerned with the location, mass, and design of various urban components and combines elements of urban planning, architecture, and landscape architecture.

Use Permit: The discretionary and conditional review of an activity or function or operation on a site or in a building or facility.

Very Low Income: Households with annual income 50 percent of the County median or less.

View Corridor: The line of sight of an observer looking toward an object of significance (e.g., ridgeline, river, historic building, etc.).

Viewshed: The area within view from a defined point.

Watercourse: Presently or once naturally perennially or intermittently flowing water, including rivers, streams, barrancas, and creeks. Includes waterways that have been channelized, but not ditches or underground drainage and sewage systems.

Watershed: The total area above a given point on a watercourse that contributes water to its flow; also, the entire region drained by a watercourse.

Wetlands: Transitional areas between terrestrial and aquatic systems where the water table is usually at or near the surface, or the land is covered by shallow water. Federal agencies establish hydrology, vegetation, and soil criteria to define wetlands.

Work-Live: A dwelling unit that contains a commercial component. A Work-Live unit is a fee-simple unit on a lot with the commercial component anywhere within the unit. (see Live-Work)

Yield Street: A street whereby by two vehicles, going in opposite directions, one car will often have to pull over slightly and yield to the other vehicle, depending on how many cars are parked on the street. A standard residential street.

Zoning: The regulation of building forms and land uses throughout the city.

ACHIEVING THE VISION

SUMMARY

This section summarizes the characteristics of the proposed 2005 General Plan, alternatives, environmental impacts associated with the General Plan, recommended mitigation measures, and the level of significance of impacts after mitigation.

PROJECT SYNOPSIS

Project Proponent

City of San Buenaventura
501 Poli Street
Ventura, California 93001

Project Description

Project Characteristics

The 2005 Ventura General Plan is an update to the 1989 Comprehensive Plan, which is the current general plan for the City. The 2005 General Plan is a policy document that sets over-arching goals for the future development of the City and specifies policies and actions to achieve these overall goals. The EIR analysis focuses on the possible physical effects of two primary components of the proposed General Plan: 1) physical development potential; and 2) the goals, policies, and actions. Because the goals, policies, and actions are specifically intended to mitigate the environmental effects associated with future growth in the City, they are discussed as part of an overall mitigation strategy, where applicable, for a given issue.

The City Council directed City and consultant staff to include analysis of six separate land use scenarios in the EIR. These scenarios range from an "intensification/reuse" only option in which only minimal changes to the City's sphere of influence (SOI) would occur to an option that includes three "expansion areas" that include a total of 1,423 acres currently in agricultural use for possible future development. The six land use scenarios, which are discussed in detail in Section 2.0, *Project Description*, are summarized below.

1. **Intensification/Reuse Only Scenario –** This scenario assumes that future development will be limited almost exclusively to areas within the current Sphere of Influence and that none of the possible expansion areas would be considered.

2. **Intensification/Reuse + North Avenue + Olivas + Serra –** This scenario assumes an emphasis on infill development at an intensity level similar to that of the Intensification/Reuse Only, but includes the following potential expansion areas:

    - *North Avenue (55 acres)*
    - *Olivas (930 acres)*
    - *Serra (438 acres)*

3. **Intensification/Reuse + North Avenue + Olivas Scenario –** This scenario assumes intensification/reuse at a level similar to the other scenarios, but includes the following potential expansion areas:

   - *North Avenue (55 acres)*
   - *Olivas (930 acres)*

4. **Intensification/Reuse + North Avenue + Serra Scenario –** This scenario assumes intensification/reuse at a level similar to the other scenarios, but includes the following potential expansion areas:

   - *North Avenue (55 acres)*
   - *Serra (438 acres)*

5. **Intensification/Reuse + North Avenue + Western Cañada Larga Scenario –** This scenario assumes intensification/reuse at a level similar to the other scenarios, but includes the following potential expansion areas:

   - *North Avenue (55 acres)*
   - *Western Cañada Larga (110 acres)*

6. **Intensification/Reuse + North Avenue + Poinsettia Scenario** - This scenario assumes intensification/reuse at a level similar to the other scenarios, but includes the following potential expansion areas:

   - *North Avenue (55 acres)*
   - *Poinsettia (418 acres)*

For the purpose of environmental analysis and forecasting future residential growth through 2025, two population growth scenarios were used. A 1.14% annual growth rate was used for the five scenarios that include expansion areas (Scenarios 2-6), while a lower growth rate of 0.88% annually was used for Scenario 1 (the Intensification/ Reuse Only scenario). The lower growth rate was used for Scenario 1 because it was assumed that limiting growth to the current SOI would result in a lower overall growth rate. The 1.14% growth rate represents the annual growth rate for the City from 1984-2004 (20-year rate), while the 0.88% growth rate represents the annual growth rate from 1994-2004 (10-year rate). Population and housing projections associated with each of these growth rates are summarized in the table on the following page.

Varying levels of non-residential (employment) growth were also assumed, with a lower rate corresponding to the lower population growth rate for Scenario 1 and a higher employment growth rate for Scenarios 2-6. For Scenario 1, it is anticipated that a total of just over 14,000 jobs would be added citywide through 2025. For Scenarios 2-6, overall citywide employment growth through 2025 is projected at just over 20,000 jobs. Projected growth in employment and non-residential building area is discussed in detail in Section 2.0.

Population and Housing Projections

	2004 Levels[a]	2025 Estimates		Change from 2004-2025	
		0.88% Annual Growth	1.14% Annual Growth	0.88% Annual Growth	1.14% Annual Growth
Population	104,952	126,153	133,160	21,201	28,208
Housing Units[b]	40,880	49,138	51,867	8,258	10,987

[a] *Source: California Department of Finance, City/County Population and Housing Estimates, 1/1/2004.*

[b] *Housing unit estimates assume that the current ratio of 2.57 persons per household remains constant through 2025. In reality, the number of persons per unit could go up or down, depending upon housing costs, the types of housing built in the City, population growth, and other factors.*

Project Objectives

The proposed 2005 General Plan includes the following over-arching goals for the City of Ventura:

- **Our Natural Community** - Our goal is to be a model for other communities of environmental responsibility, living in balance with our natural setting of coastline, rivers, and hillside ecosystems.
- **Our Prosperous Community** - Our goal is to attract and retain enterprises that provide high-value, high wage jobs; to diversity the local economy; to increase the local tax base; and to anticipate our economic future in order to strengthen our economy and help fund vital public services.
- **Our Well Planned and Designed Community** - Our goal is to protect our hillsides, farmlands, and open spaces; enhance Ventura's historic and cultural resources; respect our diverse neighborhoods; reinvest in older areas of our community; and make great places by insisting on the highest standards of quality in architecture, landscaping and urban design.
- **Our Accessible Community** - Our goal is to provide residents with more transportation choices by strengthening and balancing bicycle, pedestrian and transit connections in the City and surrounding region.
- **Our Sustainable Infrastructure** - Our goal is to safeguard public health, well being and prosperity by providing and maintaining facilities that enable the community to live in balance with natural systems.
- **Our Active Community** - Our goal is to add to and enhance our parks and open spaces to provide enriching recreation options for the entire community.
- **Our Healthy and Safe Community -** Our goal is to build effective community partnerships that protect and improve the social well being and security of all our citizens.
- **Our Educated Community -** Our goal is to encourage academic excellence and life-long learning resources to promote a highly-educated citizenry.
- **Our Creative Community -** Our goal is to become a vibrant cultural center by weaving the arts and local heritage into everyday life.

- **Our Involved Community -** Our goal is to strive to work together as a community to achieve the Ventura Vision through civic engagement, partnerships, and volunteer service.

Required Approvals

The City of Ventura Planning Commission and City Council will need to take the following discretionary actions in conjunction with the proposed 2005 General Plan:

- *Certification of the Final EIR on the 2005 General Plan*
- *Approval of the proposed 2005 General Plan*
- *Approval of the 2005 Local Coastal Program Amendment (LCPA), including the revised Land Use Plan (LUP) component of the Local Coastal Program*

Any future adjustments to the SOI will require approval from the Ventura County LAFCO. Because a portion of the City of Ventura is within the Coastal Zone, the Comprehensive Plan Update also involves an update to the City's Local Coastal Program (LCP). The LCP update will require approval by the California Coastal Commission. The California Department of Conservation, Division of Mines and Geology, will review the plans and policies relating to seismic safety for compliance with state regulations.

ALTERNATIVES

In addition to the six land use scenarios for the 2005 General Plan, this EIR examines six alternatives, as described below.

- **No Project (no further development) –** This alternative assumes that no further development occurs in the City and environmental conditions do not change.
- **No Project (1989 Comprehensive Plan) –** This alternative assumes that growth continues under the 1989 Comprehensive Plan. Overall growth is assumed to be similar to that associated with General Plan Scenarios 2-6, but with areas in the hillsides above the City potentially developed rather than the expansion areas.
- **Restricted Growth –** This alternative assumes that population growth through 2025 would be limited to an annual average rate of 0.78%. This is consistent with the growth rate upon which the Ventura County AQMP and SCAG Regional Transportation Plan are based.
- **No Important Farmland Conversion –** This alternative assumes that no Prime, Statewide Importance, or Unique Farmland is converted. The average annual population growth rate for this alternative is assumed to be 0.88%.
- **Upper North Avenue District Housing –** This alternative is a derivative of General Plan Scenario 5. It assumes that a portion of the residential and non-residential development assumed to occur in the North Avenue and Western Cañada Larga expansion areas would instead be built in the Upper North Avenue district.

- **Intensification/Reuse + Minor Map Clean-Up –** This alternative is a minor variation of General Plan Scenario 1 that changes the land use designation for a limited number of properties in Saticoy and West Ventura.
- **All Expansion Areas –** This alternative assumes that all five expansion areas are developed with a mix residential and non-residential uses. The average annual growth rate for this alternative is assumed to by 1.6%.

Although the No Project (no further development) alternative is not feasible (from either a legal or practical standpoint) and may not be desirable in many respects, it can be considered environmentally superior overall since it would avoid all impacts associated with future growth. However, it would not meet RHNA requirements or housing needs identified in the City's Housing Element. Among the remaining alternatives, either the Restricted Growth or No Important Farmland Conversion alternative would be environmentally superior, depending upon which issue(s) are deemed most important. The Restricted Growth alternative would incrementally reduce impacts in most issues areas due to the overall reduction in future development and would avoid the significant impact of the 2005 General Plan relating to exceedance of Ventura County AQMP and SCAG Regional Transportation Plan population forecasts. The No Important Farmland Conversion alternative would avoid the significant impact relating to conversion of agricultural lands to urban uses. A combination of the Restricted Growth alternative and the No Important Farmland Conversion alternative would achieve both a reduction of agricultural land impacts, as well as AQMP and SCAG consistency.

AREAS OF PUBLIC CONTROVERSY

The primary area of known public controversy with respect to the 2005 General Plan relates to which of the five expansion areas, if any, should be considered for future development. The inclusion of expansion areas was the source of substantial discussion among the public, the Comprehensive Plan Advisory Committee (CPAC), the Planning Commission, and the City Council during the development of the draft General Plan. Much of the controversy revolved around whether to consider future development of the Cañada Larga area near the north end of the Ventura River valley. Scenario 5 of this EIR considers the possible future development of an approximately 110-acre portion of the larger Cañada Larga area that was contemplated by the CPAC and Planning Commission. It should be noted that, with the exception of a portion of the Western Cañada Larga expansion area included in Scenario 5, future development of any of the potential expansion areas considered in this EIR could occur only following voter approval under the City's SOAR Ordinance.

INCORPORATION OF STUDIES, REPORTS AND OTHER DOCUMENTS

This EIR contains references to studies, reports and other documents that were used as a basis for, or a source of, information summarized in the body of the EIR. These documents are incorporated by reference in this EIR in accordance with Section 15150 of the CEQA Guidelines. Where a study, report or document is briefly cited or referred to for convenience in the body of this EIR, the reader may consult Section 7.0 of this document for the full citation.

SUMMARY OF IMPACTS AND MITIGATION MEASURES

Table S-1 lists the environmental impacts of the proposed project, proposed mitigation measures, and residual impacts. Impacts are categorized by classes. Each individual impact analysis subsection in Section 4.0, *Environmental Impact Analysis*, also includes a summary comparison of the impacts associated with each General Plan land use scenario.

Class I impacts are defined as significant, unavoidable adverse impacts, which require a statement of overriding considerations pursuant to Section 15093 of the *CEQA Guidelines* if the project is approved. Class II impacts are significant adverse impacts that can be feasibly mitigated to less than significant levels and which require findings to be made under Section 15091 of the *CEQA Guidelines*. Class III impacts are adverse, but less than adopted significance thresholds. Class IV effects are those where there is no impact or the effect would be beneficial.

As noted in Table S-1, most of the potential impacts associated with growth accommodated under the 2005 General Plan can be mitigated to a less than significant level through implementation of proposed policies and actions. However, certain significant impacts could occur under any of the EIR land use scenarios. The Class I and Class II impacts of the 2005 General Plan, along with the scenarios to which each impact applies, are listed below.

Class I, Unavoidably Significant, Impacts

- **Aesthetics –** change in overall community character and alteration of views from scenic corridors due to agricultural land conversion (all scenarios)
- **Agricultural Land Conversion –** potential conversion of Prime, Statewide Importance, and Unique farmlands (all scenarios) and potential conflicts with agricultural land use designations (Scenarios 2-6)
- **AQMP Inconsistency –** inconsistency with Ventura County AQMP due to possible exceedance of citywide growth projections upon which the 1994 AQMP is based (all scenarios)
- **Solid Waste Disposal Facilities –** generation of solid waste exceeding disposal facility capacity given that landfills serving the City are projected to close within or close to the timeframe of the General Plan (all scenarios)
- **Transportation and Circulation –** potential exceedance of proposed performance standard at the Johnson Drive/North Bank Drive intersections (Scenario 2 only)
- **Coastal Act Inconsistency –** potential inconsistency with Coastal Act policy to preserve Prime farmland within the Coastal Zone (Scenarios 2 and 3 only)
- **Exceedance of SCAG Population Forecast –** possible exceedance of the Southern California Association of Government's 2025 population growth projection for the City (all scenarios)

Class II, Significant but Mitigable, Impacts

- **Traffic Noise –** potentially significant increases in traffic noise along North Ventura Avenue (all scenarios) and Johnson Drive (Scenario 6 only); this impact can be mitigated through re-surfacing of streets using rubberized

asphalt or other sound-reducing paving material (which can reduce noise by 3-5 decibels)

- **Storm Drain System** – potential impacts due to system deficiencies in older parts of the City, including Ventura Avenue corridor and Downtown district (all scenarios); this impact can be mitigated through development of funding mechanisms to address system deficiencies
- **Fire Protection Service** – potentially significant impacts to fire protection service in the North Ventura Avenue area (Scenarios 2-6); this impact can be mitigated through development of a new fire station in the North Ventura Avenue area
- **Police Protection Service** – potentially significant impacts relating to the need for new facilities (all scenarios); this impact can be mitigated through expansion of facilities as necessary
- **Traffic Performance Standards** – potentially significant impacts to roadway intersections (Scenarios 1, 3, 4, 5, and 6); impacts can be mitigated through policies and actions directing implementation of feasible system improvements as needed
- **Wastewater Treatment Capacity** – potentially significant impact relating to the capacity of the Ojai Valley Sanitary District plant (Scenario 5 only); this impact can be mitigated through restrictions on development in the North Ventura Avenue area until planned plant capacity expansions are completed

Table S-1
Summary of Environmental Impacts and Mitigation Measures

Impact	Mitigation Measures	Significance After Mitigation
AESTHETICS and COMMUNITY DESIGN		
Impact AES-1 All six General Plan land use scenarios emphasize intensification and reuse of already urbanized lands and would therefore create a more densely settled, urban environment in some areas of the City. The reuse of urbanized areas in lieu of further growth at the City's periphery would be expected to generally enhance the visual character of the community and minimize impacts to existing natural and agricultural areas and is generally considered a beneficial effect. Nevertheless, all of the scenarios would change the visual character of the community and would accommodate the conversion of some agricultural lands in the Planning Area to urban uses. This change in visual character is considered Class I, unavoidably significant, under any of the six scenarios.	Changing the fundamental character of the areas to be converted from agricultural and open space uses to urban use cannot be avoided if these areas are to be developed. Each of the proposed growth scenarios focuses development on intensification of the existing urban areas and encourages infill over city expansion. In addition, Actions 1.22 and 1.23 require the preservation of mature trees and agricultural windrows.	Unavoidably significant for all scenarios.
Impact AES-2 Development that would be accommodated under any of the 2005 General Plan land use scenarios would potentially alter and/or block views from various public view corridors. The magnitude of impact would vary among the scenarios and the 2005 General Plan includes several policies and actions to preserve public views. Nevertheless, the impact of all six scenarios is considered Class I, unavoidably significant.	Policies included in the proposed 2005 General Plan, as described above, would reduce impacts on view corridors associated with intensification and reuse to a less than significant level. Other than the actions listed above and General Plan Action 1.23, which would preserve windrows on agricultural lands, additional mitigation is not available for the change in views from scenic corridors related to the conversion of agricultural lands.	Unavoidably significant for all scenarios.
Impact AES-3 Development accommodated under any of the 2005 General Plan land use scenarios would introduce new sources of light and glare. Light and glare conditions are not expected to change dramatically throughout most of the Planning Area because of the focus on intensification and reuse of already developed lands. Therefore, impacts would be Class III, less than significant, for any of the six scenarios.	None required.	Less than significant for all scenarios.
AGRICULTURAL RESOURCES		
Impact AG-1 Any of the six scenarios for the 2005 General Plan would accommodate the development that would involve the conversion of State-designated Prime, Statewide Importance, and Unique farmland. The overall acreage of agricultural land that could be converted would range from	Implementation of proposed General Plan policies and actions would minimize the premature conversion of agricultural land under any of the land use scenarios. However, outside of re-designating important farmlands for continued agricultural use, additional mitigation is not available.	Unavoidably significant for all scenarios.

Table S-1
Summary of Environmental Impacts and Mitigation Measures

Impact	Mitigation Measures	Significance After Mitigation
about 674 acres under Scenario 1 to about 2,075 acres under Scenario 2. Conversion of farmland would represent a Class I, unavoidably significant, impact for any of the six scenarios.		
Impact AG-2 Five of the six land use scenarios under consideration for the 2005 General Plan would accommodate the future conversion of agricultural land that is designated for agricultural use, subject to the City SOAR Ordinance, within the Ventura-Oxnard Greenbelt, and/or under LCA contract. This is considered a Class I, unavoidably significant, impact of Scenarios 2 through 6. The impact for Scenario 1 (Intensification/Reuse Only) is considered Class III, less than significant.	Proposed General Plan policies and actions would reduce potential conflicts with policies relating to the preservation of agricultural land to the degree feasible. Additional mitigation outside of avoiding conversion of lands designated for agricultural use is not available.	Less than significant for Scenario 1. Unavoidably significant for Scenarios 2-6.
Impact AG-3 Development that could be accommodated under any of the 2005 General Plan land use scenarios could generally reduce agricultural compatibility conflicts in some locations. Though certain areas of agricultural/urban conflict would remain within the Planning Area, any of the six scenarios would generally reduce the potential for such conflicts. With the policies and actions recommended in the 2005 General Plan, effects under any of the six scenarios would be Class IV, beneficial.	Implementation of proposed General Plan policies and actions would generally reduce the potential for agricultural/urban compatibility conflicts. In particular, Action 3.21 would minimize effects to farming operations and adjacent urban uses by requiring that non-farm operations provide buffers between urban and agricultural uses. Mitigation beyond the General Plan policies and actions is not required.	Beneficial for all scenarios.
AIR QUALITY		
Impact AQ-1 Anticipated growth under any of the six land use scenarios exceeds Ventura County Air Quality Management Plan population forecasts. This is largely because AQMP forecasts are outdated and the 2005 General Plan is not expected to hinder attainment of state or federal air quality standards. Nevertheless, the exceedance of population projections used for regional air quality planning represents a potential inconsistency with the AQMP. This is considered a Class I, unavoidably significant, impact of any of the six scenarios.	The 2005 General Plan includes various policies and actions that encourage mixed use and infill development. Implementation of these policies/actions would reduce air pollutant emissions to the maximum degree feasible given the amount of growth anticipated under the 2005 General Plan. However, outside of restricting population growth to be within SCAG and VCAPCD forecasts, the potential inconsistency with the AQMP cannot be avoided.	Unavoidably significant for all scenarios.
Impact AQ-2 Individual projects accommodated under the proposed 2005 General Plan would generate air pollutant emissions. The significance of air quality impacts associated with individual projects would depend upon	None required. The following actions are recommended for inclusion in the 2005 General Plan. **AQ-2 Additional Air Quality Actions.** The following actions should be added to the 2005	Less than significant for all scenarios.

Table S-1
Summary of Environmental Impacts and Mitigation Measures

Impact	Mitigation Measures	Significance After Mitigation
the characteristics of the projects and the availability of feasible mitigation measures. However, implementation of existing programs, in combination with proposed 2005 General Plan policies and actions, would reduce impacts associated with individual development projects to a Class III, less than significant, level for all six scenarios.	General Plan to address air quality impacts of future development on a case-by-case basis: • Require air quality analysis of individual development projects in accordance with the most current version of the Ventura County Air Pollution Control District Air Quality Assessment Guidelines and, when significant impacts are identified, require implementation of air pollutant mitigation measures determined to be feasible at the time of project approval. • In accordance with Ordinance 93-37, continue to require payment of fees to fund regional transportation demand management (TDM) programs for all projects generating emissions in excess of Ventura County APCD thresholds. The following action should be added if a land use scenario that includes expansion areas is adopted: • Require the development of specific plans for expansion areas for which overall air pollutant emissions shall be estimated to establish a TDM fund as required under Ordinance 93-37. Require individual developers within expansion areas to contribute pro rata fees to the TDM fund.	
Impact AQ-3 Construction of individual projects accommodated under the 2005 General Plan would result in temporary emissions of air pollutant emissions. The Ventura County APCD has not adopted significance thresholds for construction impacts because of their temporary nature; therefore, impacts would be Class III, less than significant, for all six scenarios. Nevertheless, implementation of standard emission and dust control techniques will be required on all future development regardless of the land use scenario selected.	None required, but the following is recommended to reduce construction-related emissions to the maximum degree feasible. **AQ-3 Construction Mitigation.** The following action should be added to the 2005 General Plan to address air quality impacts of future construction projects on a case-by-case basis: • Require individual construction contractors to implement the construction mitigation measures included in the most recent version of the Ventura County APCD's Ventura County Air Quality Assessment Guidelines.	Less than significant for all scenarios.
Impact AQ-4 Increased traffic congestion associated with projected growth under any of the General Plan land use scenarios would potentially increase carbon monoxide (CO) concentrations at congested intersections. However, because of the low ambient CO concentrations and anticipated reduction in emissions associated with less polluting vehicles, exceedance of state and federal CO	None required.	Less than significant for all scenarios.

Table S-1
Summary of Environmental Impacts and Mitigation Measures

Impact	Mitigation Measures	Significance After Mitigation
standards is not expected. Impacts relating to CO "hot spots" are therefore considered Class III, less than significant, for all six scenarios.		
BIOLOGICAL RESOURCES		
Impact BIO-1 All of the 2005 General Plan land use scenarios generally avoid direct impacts to riparian, wetland, and open water habitats. However, in certain areas, development could adversely affect the quality of riparian and wetland habitat. Implementation of proposed General Plan policies and actions, including Action 1.8 (which provides buffers from rivers, creeks, and barrancas), would reduce potential impacts to a Class III, less than significant, level for any of the six land use scenarios.	Implementation of General Plan Actions 1.8 and 1.9 would reduce potential impacts to wetland and riparian habitats to a less than significant level. No additional mitigation measures are required.	Less than significant for all scenarios.
Impact BIO-2 All of the General Plan land use scenarios would largely avoid impacts to sensitive habitats and mature native trees by emphasizing intensification/reuse of urbanized areas. Implementation of General Plan policies and actions that aim to protect sensitive habitats and mature trees would reduce potential impacts to a Class III, less than significant, level for all six scenarios.	Compliance with proposed General Plan actions would reduce potential impacts to sensitive habitats to a less than significant level. No additional mitigation measures are required.	Less than significant for all scenarios.
Impact BIO-3 All of the General Plan land use scenarios would largely avoid impacts to special-status plant and animal species by emphasizing intensification/reuse of already urbanized areas rather than developing greenfields at the City's periphery. Potential impacts could occur in certain locations, but would be addressed through implementation of proposed General Plan policies and actions. Impacts are considered Class III, less than significant, for all six scenarios.	Implementation of General Plan Action 1.19 would require protect state and federally listed species and buffer such species from urban uses. Actions 1.22, 1.23, and 1.24 would preserve existing mature trees, including windrows. Additional mitigation is not needed.	Less than significant for all scenarios.
Impact BIO-4 All of the General Plan land use scenarios would largely avoid impacts to wildlife movement corridors by emphasizing intensification/reuse of existing urbanized areas. Implementation of General Plan Actions 1.8, 1.9, and 1.10 would maintain ecological connectivity corridors through urban spaces and potentially enhance connectivity in some locations. Therefore, impacts to wildlife movement are considered Class III, less than	Compliance with proposed General Plan policies and actions would reduce potential impacts to wildlife corridors to a less than significant level. No additional mitigation measures are required.	Less than significant for all scenarios.

Table S-1
Summary of Environmental Impacts and Mitigation Measures

Impact	Mitigation Measures	Significance After Mitigation
significant, for all six scenarios.		
CULTURAL and HISTORIC RESOURCES		
Impact CR-1 Growth accommodated under any of the six scenarios could adversely affect previously identified and unidentified pre-historic archaeological resources. However, implementation of policies and actions included in the 2005 General Plan would reduce impacts to a Class III, less than significant, level for any of six land use scenarios.	Implementation of Policy 9D and Actions 9.14 and 9.15 would reduce potential archaeological resource impacts to a less than significant level for all six land use scenarios. Mitigation is not required.	Less than significant for all scenarios.
Impact CR-2 Several of the growth districts and corridors include identified historic resources, as does the Western Cañada Larga expansion area. The other expansion areas also include structures that meet the minimum age criterion for eligibility for the National and California Registers of Historic Places. However, implementation of proposed 2005 General Plan policies and action, in combination with existing regulatory requirements, would reduce impacts to a Class II, less than significant, level for Scenarios 1-6.	Implementation of the City of Ventura Historic Preservation Regulations and HD Overlay Zone regulations would reduce impacts to historical resources within designated Historic Districts under Scenarios 1-6. These existing requirements, in combination with the policies included in the 2005 General Plan, would reduce historic resource impacts to a less than significant level. Mitigation is not required.	Less than significant for all scenarios.
GEOLOGIC HAZARDS		
Impact GEO-1 Future seismic events could produce groundshaking throughout the Planning Area as well as surface rupture in some areas where future development could be accommodated. Groundshaking and surface rupture could damage structures and/or create adverse safety effects. However, compliance with City policies, in combination with the requirements of the CBC and the Alquist-Priolo legislation, would reduce the risk associated with groundshaking and surface rupture to a Class III, less than significant, level for six scenarios.	Compliance with the California Building Code and General Plan Action 7.7 would reduce impacts to a less than significant level. No mitigation measures are required.	Less than significant for all scenarios.
Impact GEO-2 The Planning Area contains several steep slopes that present a potential slope stability hazards. However, none of the General Plan land use scenarios encourage substantial new development in areas of high landslide risk. In addition, General Plan actions require geotechnical analysis and case-by-case mitigation for any development in an area with a high potential for landslides. Therefore, impacts due to landslide risk are	Compliance with applicable General Plan policies/actions and the City Hillside Management Program would reduce potential impacts from development in hillside areas to a less than significant level. No mitigation would be required.	Less than significant for all scenarios.

Table S-1
Summary of Environmental Impacts and Mitigation Measures

Impact	Mitigation Measures	Significance After Mitigation
considered Class III, less than significant, for all scenarios.		
Impact GEO-3 Future seismic events could result in liquefaction of soils in portions of the Planning Area. Development in certain areas within the City could be subject to liquefaction hazards under any of the 2005 General Plan land use scenarios. However, compliance with City General Plan policies would reduce potential impacts to Class III, less than significant, for all six scenarios.	Compliance with the California Building Code and implementation of General Plan Action 7.7 would reduce impacts due to liquefaction risk to a less than significant level. Additional mitigation is not required.	Less than significant for all scenarios.
Impact GEO-4 Expansive soil or other soil conditions leading to subsidence could result in foundation and building distress problems and cracking of concrete slabs. Areas that could accommodate development could be subject to subsidence hazards under any of the six land use scenarios. However, compliance with 2005 General Plan policies would reduce potential impacts to Class III, less than significant, for all six scenarios.	Compliance with the California Building Code and implementation of General Plan Action 7.7 would reduce impacts due to expansive soils to a less than significant level. Additional mitigation is not required.	Less than significant for all scenarios.
Impact GEO-5 Development along the coast and near rivers may be susceptible to inundation from tsunamis. However, provided that the City continues its participation in the Seismic Sea Wave Warning System and the SEMS Multihazard Functional Response Plan, impacts would be Class III, less than significant, for all six scenarios.	Continuing participation in the Seismic Sea Wave Warning System and maintenance of the SEMS Multihazard Functional Response Plan would reduce impacts related to tsunami risk to less than significant. No additional mitigation would be required.	Less than significant for all scenarios.
HAZARDS and HAZARDOUS MATERIALS		
Impact HAZ-1 Some industrial and agricultural operations within the Planning Area use hazardous materials to which current and future residents could be exposed. Potential development near hazardous material users could expose individuals to health risks due to soil/groundwater contamination or emission of hazardous materials into the air. However, compliance with proposed General Plan policies and actions, in combination with existing regulations, would reduce potential impacts associated with hazardous material use to a Class III, less than significant, level for any of the six land use scenarios.	Compliance with federal, state, and local regulations, in combination with the proposed 2005 General Plan policies and actions, would reduce impacts to a less than significant level. No mitigation is required.	Less than significant for all scenarios.
Impact HAZ-2 The transportation of hazardous materials could potentially	Compliance with existing hazardous materials transportation regulations as well as	Less than significant for all scenarios.

Table S-1
Summary of Environmental Impacts and Mitigation Measures

Impact	Mitigation Measures	Significance After Mitigation
create a public safety hazard for new development that could be accommodated along major transportation corridors under the General Plan Update. Provided that the City continues its participation in the SEMS Multihazard Functional Response Plan, impacts would be Class III, less than significant for any of the six land use scenarios.	continuing participation and maintenance of the SEMS Multihazard Functional Response Plan would reduce impacts related to hazardous material upset risk to a less than significant level. No mitigation would be required.	
Impact HAZ-3 Future development on brownfields and other sites with potential soil or groundwater contamination could create a public safety hazard. However, compliance with City policies requiring soil and groundwater assessments on these sites would reduce impacts to Class III, less than significant, for any of the six land use scenarios.	Compliance with General Plan Action 7.27 would reduce impacts to a less than significant level. No mitigation measures are required.	Less than significant for all scenarios.
HYDROLOGY AND WATER QUALITY		
Impact HWQ-1 Most of the areas within the Planning Area that could accommodate new development are outside the 100-year flood zone. Limited portions of the Planning Area that could accommodate new development under any of the six land use scenarios are within the 100-year flood zones. However, compliance with the City Flood Plain Ordinance and proposed General Plan actions would reduce impacts to a Class III, less than significant, level for any of the six land use scenarios.	As noted above, proposed 2005 General Plan actions require continued compliance with the City's Flood Plain Ordinance and other applicable requirements. Additional mitigation is not needed.	Less than significant for all scenarios.
Impact HWQ-2 Development accommodated through the year 2025 under any of the land use scenarios under consideration for the 2005 General Plan would increase the amount of impervious surfaces within the Planning Area, potentially increasing surface runoff in areas where existing storm drain systems are deficient. This is considered a Class II, significant but mitigable, impact for all scenarios.	**HWQ-2 Additional Drainage Actions.** The following actions shall be added to the 2005 General Plan to address existing storm drain system deficiencies: • Develop a financing program for the replacement of failing corrugated metal storm drain pipes in the City. • Adopt assessment districts or other financing mechanisms to address storm drain system deficiencies in areas where new development is anticipated and deficiencies exist (e.g., Downtown district, Ventura Avenue corridor, and Harbor district). The following actions are recommended to minimize the impact of future development on the local storm drain system and implement	Less than significant for all scenarios.

Table S-1
Summary of Environmental Impacts and Mitigation Measures

Impact	Mitigation Measures	Significance After Mitigation
	City goals regarding sustainable infrastructure: • As feasible, require new developments to incorporate stormwater treatment practices that allow percolation to the underlying aquifer and minimize offsite surface runoff. Such methods may include, but are not limited to, (1) the use of pervious paving material within parking lots and other paved areas to facilitate rainwater percolation; and (2) construction of retention/detention basins to limit runoff to pre-development levels and to encourage infiltration into the groundwater basin. • Where deemed appropriate, require new developments adjacent to Ventura County Watershed Protection District channels to dedicate necessary right-of-way to meet future District needs.	
Impact HWQ-3 Development accommodated under any of the General Plan land use scenarios would incrementally increase the generation of urban pollutants in surface runoff. Point and non-point sources of contamination could affect water quality in the Ventura and Santa Clara Rivers, the Pacific Ocean, and groundwater. However, implementation of existing regulatory requirements and proposed General Plan policies and actions would reduce impacts to a Class III, less than significant, level for all scenarios.	None required.	Less than significant for all scenarios.
MINERAL RESOURCES		
Impact M-1 None of the 2005 General Plan land use scenarios would significantly reduce access to mineral resources. Impacts under Scenarios 1-6 are considered to be Class III, less than significant.	None required.	Less than significant for all scenarios.
Impact M-2 Scenarios 1-6 could introduce new development that is located adjacent to, and potentially incompatible with, existing oil production activity in the North Avenue and Upper North Avenue districts. However, policies and actions included in the 2005 General Plan would address potential incompatibilities. Impacts would be Class III, significant but mitigable, for any of the six land use scenarios.	Actions included in the 2005 General Plan would reduce compatibility conflicts between residential uses and mineral extraction activity to a less than significant level. Mitigation is not required.	Less than significant for all scenarios.

Table S-1
Summary of Environmental Impacts and Mitigation Measures

Impact	Mitigation Measures	Significance After Mitigation
NOISE		
Impact N-1 Growth accommodated through 2025 under any of the six land use scenarios would incrementally increase noise along area roadways and potentially expose new noise sensitive uses to noise exceeding City standards. Implementation of proposed General Plan policies would address potential exposure to excessive noise for new development. Noise levels would generally increase for existing uses adjacent to transportation corridors. Impacts on most roadways would not be significant, but a potentially significant noise increase could occur along North Ventura Avenue under any scenario and along Johnson Drive under Scenario 6. Impacts are therefore considered Class II, significant but mitigable, for all six scenarios.	Compliance with existing regulations and proposed General Plan policies and actions would reduce potential noise impacts in most locations to a less than significant level. Construction of a sound wall along SR 33 as indicated under General Plan Action 7.33 could address noise exposure along North Ventura Avenue by reducing noise from the nearby SR 33. The following measure is also recommended. **N-1 Rubberized Asphalt.** The following action shall be added to the 2005 General Plan to reduce general traffic noise: • As feasible, use rubberized asphalt or other sound reducing material for paving and re-paving of City streets. Studies have indicated that rubberized asphalt can reduce overall roadway noise by 3-5 dBA as compared to conventional asphalt.	Less than significant for all scenarios.
Impact N-2 Construction of individual projects throughout the Planning Area could intermittently generate high noise levels under any of the land use scenarios. This may affect sensitive receptors near construction sites. However, compliance with Noise Ordinance restrictions on construction timing would reduce this impact to a Class III, less than significant level.	Compliance with the Ventura Noise Ordinance would reduce temporary impacts associated with construction noise to less than significant.	Less than significant for all scenarios.
Impact N-3 The placement of residential and other noise-sensitive uses in proximity to industrial and commercial uses could potentially expose such uses to high noise levels. The City Noise Ordinance restrictions do not apply to noise-sensitive uses within commercial or industrial zones. Therefore, impacts would be Class II, significant but mitigable, for any of the six land use scenarios.	The following measure is required for any of the six land use scenarios. **N-3 Noise Ordinance Update.** The following action shall be added to the 2005 General Plan: • Update the Noise Ordinance in conjunction with the new development code to provide noise standards for residential projects and residential components of mixed use projects within commercial and industrial zones.	Less than significant for all scenarios.
Impact N-4 Noise-sensitive land uses near the UPRR corridor may be exposed to noise exceeding City noise standards. However, proposed General	None required assuming implementation of 2005 General Plan Action 7.32.	Less than significant for all scenarios.

Table S-1
Summary of Environmental Impacts and Mitigation Measures

Impact	Mitigation Measures	Significance After Mitigation
Plan actions require acoustical analysis for any development in an area with a built within the 60 dBA CNEL contour. Therefore, impacts due to railroad noise are considered Class III, less than significant for all six scenarios.		
Impact N-5 Operation of recreational uses, including the Ventura County Fairgrounds, Ventura Shooting Range, and the Ventura Raceway could continue to create noise disturbance for existing and planned noise-sensitive uses. City policies pursue termination, relocation, or restriction of these noise-generating activities. Impacts due to recreational uses are considered Class III, less than significant.	Impacts are not significant for any scenario. Therefore, mitigation is not required. Implementation of proposed General Plan policies may eliminate and/or reduce noise associated with activities at the Ventura Fairgrounds.	Less than significant for all scenarios.
PUBLIC SERVICES		
Impact PS-1 Development under any of the 2005 General Plan land use scenarios would increase the City's population and density of development, and introduce new development into high fire hazard areas. This would increase demand for fire protection services and potentially create the need for new fire protection facilities. With proposed General Plan policies, impacts for Scenario 1 are Class III, less than significant. Impacts for Scenarios 2-6 are considered Class II, significant but mitigable.	**PS-1(a) North Avenue and Western Cañada Larga Expansion Areas.** The following action shall be added to the 2005 General Plan if any land use scenario that includes possible future development of the North Avenue expansion area or the Western Cañada Larga expansion area is adopted: • Add a fire station in the North Avenue area as determined necessary by the Ventura Fire Department. Consider an assessment district for the North Avenue area to fund a new station. **PS-1(b) Poinsettia Expansion Area.** The following action shall be added to the 2005 General Plan if any land use scenario that includes possible future development of the Poinsettia expansion area is adopted: • Include a fire station site in any future specific plan for the Poinsettia expansion area if determined necessary by the Ventura Fire Department.	Less than significant for all scenarios.
Impact PS-2 Possible future development under Scenarios 1-6 would increase the City's population and density of development, thereby resulting in the need to construct new facilities in order to provide effective police protection service. Impacts would be Class II, significant but mitigable, for any of the six land use scenarios.	**PS-2 Police Protection Service.** The following actions shall be added to the 2005 General Plan: • Establish a new Downtown storefront to meet the needs of the growing Downtown population • Expand the Police Department headquarters as necessary to accommodate staff growth.	Less than significant for all scenarios.
Impact PS-3 Projected enrollment growth under the 2005 General Plan would exceed the capacity of existing	None required, but the following are recommended:	Less than significant for all scenarios.

Table S-1
Summary of Environmental Impacts and Mitigation Measures

Impact	Mitigation Measures	Significance After Mitigation
schools within the Ventura Unified School District, thereby creating the need to construct additional facilities. However, payment of State-mandated school impact fees is presumed to provide funding for needed new school facilities. Therefore, although available land for new schools may be limited (particularly for Scenarios 1 and 5), impacts to schools would be reduced to a Class III, less than significant, level for any of the six land use scenarios.	**PS-3(a) School Coordination.** The following action should be added to the 2005 General Plan: • Work with the Ventura Unified School District to ensure that school facilities can be provided to serve new development. **PS-3(b) Expansion Area Schools.** The following action should be added to the 2005 General Plan if any land use scenario that includes an expansion area is adopted: • Require expansion area specific plans to be prepared in coordination with the Ventura Unified School District and set aside land needed for new school facilities.	
Impact PS-4 Ventura libraries are currently undersized to serve the City's existing population and, given the projected population growth rates for Scenarios 1-6, the existing library services would be inadequate to serve the future service area population. Although new facilities would be needed to meet projected demand under Scenarios 1-6, facilities could be constructed without causing significant environmental impacts. This is considered to be a Class III, less than significant, impact for all six scenarios.	Mitigation is not needed, though increased funding of libraries would be needed if new facilities are to be developed.	Less than significant for all scenarios.
Impact PS-5 Existing landfills have adequate capacity to accommodate projected citywide increases in solid waste generation for the next 15-17 years. However, regional waste generation increases could exceed the daily capacity of area landfills. In addition, area landfills are projected to close in the 2022-2027 period; therefore, expanded or new facilities will be needed to accommodate solid waste generated in the City through 2025. Although the identification of new facilities is physically feasible, the City cannot ensure that new facilities are sited. Impacts are therefore considered Class I, unavoidably significant, for all six land use scenarios.	**PS-5 Solid Waste Disposal Facilities.** The following actions shall be added to the 2005 General Plan: • Coordinate with the Ventura Regional Sanitation District and the County to expand the capacity of existing landfills, site new landfills, or develop alternative means of disposing of solid waste that will provide sufficient capacity for waste generated in the City. • Develop incentives for new residences and businesses to incorporate recycling and waste diversion practices using guidelines provided by the Environmental Services Office.	Unavoidably significant for all scenarios. Development of new or expanded solid waste disposal facilities could have significant secondary effects.
Impact PS-6 Population growth accommodated under any of the 2005 General Plan land use scenarios would increase demand for recreational facilities and programs. With continued	Continued payment of required park fees and dedication of land for parks on a case-by-case basis would reduce impacts to a less than significant level. Mitigation is not required for any of the six scenarios.	Less than significant for all scenarios.

Table S-1
Summary of Environmental Impacts and Mitigation Measures

Impact	Mitigation Measures	Significance After Mitigation
payment of Quimby fees and parkland dedication in conjunction with new development, impacts could be reduced to a Class III, less than significant, level for all six scenarios. It should be noted, however, that Scenario 1 does not include land that could accommodate new citywide park facilities, while the expansion areas included in Scenario 5 do not include sufficient land to provide park acreage meeting the demands of projected expansion area population growth.		
TRANSPORTATION and CIRCULATION		
Impact TC-1 Growth accommodated under any of the General Plan land use scenarios could result in deficiencies to the local circulation system based on recommended level of service standards. The number of locations that could have deficiencies based on the projected growth scenarios ranges from one (for Scenario 1) to four (for Scenarios 2 and 4). Feasible improvements are available to address all projected deficiencies for Scenarios 1, 3, 4, 5, and 6; therefore, impacts associated with those scenarios are considered Class II, significant but mitigable. For Scenario 2, implementation of feasible improvements would not achieve performance standards at the Johnson Drive/North Bank Drive intersection. The impact at that location is considered Class I, unavoidably significant, for Scenario 2.	To ensure that impacts are addressed and that the improvements identified in this EIR (or other feasible improvements that achieve the same objectives) are identified, the following measure is required: **TC-1 Additional Circulation Actions.** The following actions shall be added to the 2005 General Plan to ensure that traffic impacts of future developments are addressed and mitigated: • Require project proponents to analyze traffic impacts and implement mitigation as appropriate prior to development. Depending upon the nature of the impacts and improvements needed, mitigation may either consist of implementing needed physical improvements, contributing "fair share" fee toward implementation of needed improvements, or some combination thereof. • Update the traffic mitigation fee program to fund necessary citywide circulation and mobility system improvements needed in conjunction with new development.	Less than significant for Scenarios 1, 3, 4, 5, and 6. Unavoidably significant at Johnson Drive/North Bank Drive intersection for Scenario 2.
Impact TC-2 Implementation of any of the 2005 General Plan land use scenarios would be expected to generally enhance the use of alternative transportation modes, including transit, bicycling, and walking. Impacts relating to alternative transportation are considered Class IV, beneficial, under any scenario.	None required.	Beneficial for all scenarios.
Impact TC-3 None of the 2005 General Plan land use scenarios would accommodate design features that would create traffic hazards. The	None required.	Less than significant for all scenarios.

Table S-1
Summary of Environmental Impacts and Mitigation Measures

Impact	Mitigation Measures	Significance After Mitigation
placement of new residential development along highly traveled thoroughfares may incrementally increase hazards for pedestrians; however, implementation of proposed policies relating to traffic calming and improving walkability would reduce such impacts to a Class III, less than significant, level for any of the General Plan land use scenarios.		
Impact TC-4 None of the 2005 General Plan land use scenarios would affect air traffic patterns. Impacts relating to air traffic are considered Class III, less than significant, under any scenario.	None required.	Less than significant for all scenarios.
UTILITIES and SERVICE SYSTEMS		
Impact U-1 Development accommodated under any of the 2005 General Plan land use scenarios would increase water demand, with net increases in demand ranging from about 2,700 acre-feet per year (AFY) to 5,900 AFY. The total estimated water available from Lake Casitas, the Ventura River diversion, and groundwater basins of approximately 28,300 acre-feet per year is sufficient to meet these projected demand increases. Therefore, water supply impacts are considered Class III, less than significant, for all six scenarios .	The 2005 General Plan includes various policies and actions aimed at reducing water consumption. No mitigation is required, but the following action will be added to ensure that future . **U-1 Water System Analysis.** The following action shall be added to the 2005 General Plan: • Require project proponents to conduct evaluations of the existing water distribution system, pump station, and storage requirements for the proposed development in order to determine if there are any system deficiencies or needed improvements for the proposed development.	Less than significant for all scenarios.
Impact U-2 New development under any of the 2005 General Plan land use scenarios would increase wastewater generation. Projected future wastewater flows to the City's wastewater treatment plant are projected to remain within the current capacity for all six scenarios. Projected flows to the Ojai Valley Sanitary District plant would be within the capacity of the plant for all scenarios except Scenario 5 (Intensification/Reuse + North Avenue + Western Cañada Larga). Therefore, the impacts of Scenarios 1-4 and 6 are considered Class III, less than significant, while the impact of Scenario 5 is considered Class II, significant but mitigable.	In addition to 2005 General Plan policies and actions, the following measure is recommended for all six scenarios. **U-2(a) Sewer System Analyses.** The following action should be added to the 2005 General Plan: • Require project proponents to conduct sewer collection system analysis to determine if downstream facilities are adequate to handle the proposed development. The following measure is required for Scenario 5. **U-2(b) Ojai Valley Sanitary District Capacity.** The following action shall be added to the 2005 General Plan if Scenario 5 or any other scenario that includes both the	Less than significant for all scenarios.

Table S-1
Summary of Environmental Impacts and Mitigation Measures

Impact	Mitigation Measures	Significance After Mitigation
	North Avenue and Western Cañada Larga expansion areas is selected: • Allow development within the North Avenue expansion area or Western Cañada Larga expansion only when the Ojai Valley Sanitary District has adequate treatment capacity for projected wastewater flows or other mitigation is approved by the City Engineer.	
LAND USE and PLANNING		
Impact LU-1 No boundary adjustments are being sought at this time and all of the General Plan scenarios emphasize intensification and reuse over expansion of the City. Annexations and Sphere of Influence adjustments could be sought at some point in the future under any of the scenarios and certain possible annexations/Sphere of Influence adjustments could potentially conflict with relevant State and LAFCO policies. However, because any conflicts would need to be resolved prior to LAFCO approval of any boundary adjustment, impacts can be reduced to a Class III, less than significant, level for all six scenarios.	None required.	Less than significant for all scenarios.
Impact LU-2 Scenarios 1, 4, 5, and 6 could be found to be consistent with applicable policies of the California Coastal Act. Impacts would be Class III, less than significant. However, Scenarios 2 and 3 would potentially accommodate the conversion of Prime agricultural land within the Olivas expansion area, which is within the Coastal Zone. Such conversion could be found inconsistent with California Coastal Act policies relating to the maintenance of Prime agricultural land within the coastal zone. Impacts for these two scenarios would be Class I, unavoidably significant.	None available for the potential inconsistency of Scenarios 2 and 3 with Coastal Act policy pertaining to Prime farmland preservation.	Less than significant for Scenarios 1, 4, 5, and 6. Unavoidably significant for Scenarios 2 and 3.
Impact LU-3 Scenarios 1-6 could be found to be consistent with SCAG Regional Comprehensive Plan and Guide (RCPG) Growth Management, Air Quality, Outdoor Recreation, and Water Quality policies. Impacts would be Class III, less than significant, for any of the six 2005 General Plan land use scenarios.	With implementation of the policies and actions of the 2005 General Plan, Scenarios 1-6 could be found to be consistent with RCPG policies. No mitigation measures would be required.	Less than significant for all scenarios.
Impact LU-4 Scenarios 1-6 could be	With implementation of the proposed 2005	Less than significant for

Table S-1
Summary of Environmental Impacts and Mitigation Measures

Impact	Mitigation Measures	Significance After Mitigation
found to be consistent with the Southern California Association of Governments' Regional Transportation Plan (RTP). Impacts would be Class III, less than significant, for any of the six land use scenarios.	General Plan policies and actions, Scenarios 1-6 could all be found to be consistent with the SCAG 2004 RTP. No mitigation is required.	all scenarios.
Impact LU-5 Scenarios 1-6 could all be found to be consistent with the Southern California Association of Governments' Growth Visioning Report. Impacts would be Class III, less than significant, for any of the six 2005 General Plan land use scenarios.	With implementation of the 2005 General Plan policies and actions, Scenarios 1-6 could be found to be consistent with SCAG's Visioning Report. No mitigation is required.	Less than significant for all scenarios.
POPULATION and HOUSING		
Impact PH-1 Scenarios 1-6 would not result in the displacement of substantial numbers of people or housing. Any displacement would be more than offset by new housing that would be accommodated under the 2005 General Plan. Impacts would be Class III, less than significant, for any of the General Plan land use scenarios.	None required.	Less than significant for all scenarios.
Impact PH-2 Proposed General Plan policies implement most SCAG policies relating to growth. However, growth accommodated under Scenarios 1-6 exceeds SCAG's Regional Comprehensive Plan and Guide and Ventura County AQMP population forecasts. This is largely because regional growth forecasts have not been updated to reflect current conditions in the City. Nevertheless, exceedance of regional forecasts is considered a Class I, unavoidably significant, impact of any of the six scenarios.	The 2005 General Plan includes various policies that encourage mixed use and infill development and would be expected to reduce vehicle miles traveled (VMT) and associated air pollutant emissions as compared to continued low density development at the City's periphery. Additional mitigation beyond restricting growth to SCAG forecasts is not available.	Unavoidably significant for all scenarios.
Impact PH-3 The 2005 General Plan could be found to be consistent with the Southern California Association of Governments Growth Visioning Report. Impacts would be Class III, less than significant, for any of the six land use scenarios.	None required.	Less than significant for all scenarios.
Impact PH-4 Any of the 2005 General Plan land use scenarios would provide for a balance of jobs and housing through 2025. Impacts relating to jobs/housing balances would be Class III, less than significant, for any of the six land use scenarios.	None required.	Less than significant for all scenarios.

1.0 INTRODUCTION

This document is a Final Environmental Impact Report (EIR) that evaluates the environmental impacts that could occur as a result of the growth and development envisioned in the City of San Buenaventura (Ventura) 2005 General Plan. The EIR has been prepared in accordance with the requirements of the California Environmental Quality Act (CEQA).

The 2005 General Plan is an update to the 1989 Comprehensive Plan,[1] which is the current general plan for the City. The EIR analysis focuses on the possible physical effects of two primary components of the proposed General Plan: 1) physical development potential; and 2) the goals/policies and subsequent action items/ implementation measures.

This section: (1) provides an overview of the background behind the 2005 General Plan; (2) describes lead, responsible, and trustee agencies for the EIR; (3) describes the purpose of and legal authority of the document; (4) summarizes the scope and content of the EIR; and (5) provides a synopsis of the environmental review process required under CEQA.

The contents of other EIR sections are as follows:

- Section 2.0, *Project Description*, provides a detailed discussion of the proposed Plan.
- Section 3.0, *Environmental Setting*, describes the general environmental setting for the City.
- Section 4.0, *Environmental Impact Analysis*, describes the environmental effects associated with each of six development scenarios.
- Section 5.0, *Other CEQA Requirements*, discusses issues such as growth inducement and significant irreversible environmental effects.
- Section 6.0, *Alternatives*, discusses alternatives to the proposed Plan, including the CEQA-required "no project" alternative.
- Section 7.0, *References and Preparers*, lists informational sources for the EIR and persons involved in the preparation of the document.

1.1 GENERAL PLAN OVERVIEW AND BACKGROUND

The City of Ventura is in the process of updating all of the General Plan elements other than the Housing Element, an update of which was approved by the City Council in 2004. The 2005 General Plan will guide future development within the existing City limits as well as in areas being considered for possible future annexation and those areas potentially affected by City land use decisions. The study area evaluated in this EIR consists of this entire "planning area."

State law (Government Code Section 65300) requires that each city and county adopt a comprehensive general plan. The proposed project fulfills this requirement by updating the City's existing Comprehensive (General) Plan, which was last updated in 1989. The General

[1] *The terms "General Plan" and "Comprehensive Plan" are interchangeable in the context of this EIR. The current plan is termed a "Comprehensive Plan." However, a change to the term "General Plan" is proposed for consistency with State General Plan law and to better reflect the broader nature of the plan.*

Plan defines the framework by which the City's physical and economic resources are to be managed and used in the future. The 2005 General Plan's planning horizon is 2025.

The 2005 General Plan embodies more than six years of intensive communitywide effort to chart a clear course for the future of Ventura. Based on that extensive public participation, the primary focus of the plan is the intensification and reuse of vacant or underutilized parcels in the established urban area of Ventura to provide housing and businesses that complement the needs of the community in attractive buildings and settings that enhance the unique character and identity of the City. This emphasis means that hillside open space will remain undeveloped and agriculturally-designated lands within the Planning Area will not be considered for urban development (which would require voter approval) unless and until they are needed to achieve community planning goals that cannot be met within the existing City limits.
The 2005 General Plan is the second in a series of three connected documents that will guide future conservation and change in the city. The Ventura Vision, published in 2000, set the stage for the policies and actions in the General Plan by establishing citizen desires for environmental preservation and resource protection, community character and design, infrastructure and services, and cultural, recreational, and educational programs. The final piece of the trilogy will be a form-based Development Code. This new approach to zoning prioritizes the appearance of development, while still ensuring that neighboring land uses are compatible and appropriate. The General Plan anticipates that the Code will focus on the districts, corridors, and neighborhood centers where future change will be concentrated.

Following publication of the Ventura Vision, the City Council established a 19-member Comprehensive Plan Advisory Committee (CPAC) to help translate the Vision concepts into issues and priorities to be addressed in the General Plan. The CPAC included people representing neighborhoods, agricultural interests, seniors, and schools, as well as one member from the Planning Commission and one from the City Council. The committee met more than 30 times over almost three years to formulate an issues summary and recommended future land use scenarios, which are presented in the September 2003 CPAC Issues & Alternatives Report.

During the course of the CPAC process, the City published the August 2002 Comprehensive Plan Update Background Report, which provides a detailed account and analysis of the range of existing conditions, opportunities, and constraints that affect planning and land use in Ventura. CPAC took this information into account in refining its recommendations to the Planning Commission and City Council. After several months of review of the CPAC recommendations, the City Planning Commission in December 2003 made some modifications to the CPAC recommended land use scenario.

The City Council met 11 times from February through August 2004 to review the CPAC and Planning Commission recommendations, consider relevant data, and formulate broad goals, policies, and a diagram to guide growth and change in the City until 2025. In July 2004, the City Council selected a general plan diagram for consideration in the Draft EIR, including five potential "expansion areas," and directed City staff to proceed with the preparation of a draft general plan policy document.

In September 2004, the City Council established an ad-hoc General Plan Committee consisting of three Planning Commissioners and three City Council members to work with City staff and consultants to ensure that the General Plan would be completed by July 2005 with ample public

participation, and to ensure open communication, transparency, and coordination among all parties interested in the creation of the General Plan. All of the CPAC, Planning Commission, City Council, and General Plan Committee workshops, meetings, and hearings were open to the public and included significant, meaningful, and often extensive citizen input and participation.

1.2 LEAD, RESPONSIBLE, AND TRUSTEE AGENCIES

The City of Ventura is the Lead Agency for this EIR under CEQA. The City has primary discretionary authority to determine whether or how to approve the 2005 General Plan.

In addition to the City, other public agencies have discretionary authority over certain aspects of the General Plan. These agencies, called "Responsible Agencies," are responsible for carrying out or approving components of the 2005 General Plan (such as an annexation or an amendment of the City's sphere of influence). Section 15381 of the *State CEQA Guidelines* defines a "responsible agency" as:

> *A public agency which proposes to carry out or approve a project, for which a Lead Agency is preparing or has prepared an EIR or Negative Declaration. For purposes of CEQA, responsible agencies include all public agencies other than the lead agency that have discretionary approval authority over the project.*

The "responsible agencies" for the 2005 General Plan are listed below, along with their general approval responsibilities.

- California Coastal Commission – The coastal areas of the City are within the Coastal Zone. Therefore, the 2005 General Plan will also serve as an update to the City's Local Coastal Program (LCP). The updated LCP will require approval by the California Coastal Commission.
- California Department of Conservation – The State Geologist is responsible for the review and approval of the City's program for minimizing exposure to geologic hazards and for regulating surface mining activities.
- Ventura County LAFCO – Possible future adjustments to the City's Sphere of Influence (SOI) are subject to review and approval by the Ventura County Local Agency Formation Commission (LAFCO). In addition, any future annexations by the City that occur under the guise of the General Plan would be subject to LAFCO approval.

Though not responsible for approval of the 2005 General Plan, the Ventura County Transportation Commission and Caltrans are responsible for the review and approval of future regional transportation improvement projects (design, funding, and construction) that may be approved in concept as part of the General Plan. Similarly, the California Department of Fish and Game does not have specific permit authority over the General Plan, but may have review and permit authority over specific future developments that involve alterations of streambeds or that affect sensitive plant or animal species. Similarly, the Ventura County Watershed Protection District has review and permit authority over alterations to flood control facilities, while the Los Angeles Regional Water Quality Control Board (RWQCB) has permit authority over projects with the potential to affect surface water quality under the Clean Water Act.

The U.S. Army Corps of Engineers (USACOE) is a federal agency and therefore is not a responsible agency under CEQA. However, the USACOE has permit authority over individual projects that would affect waters of the United States. Therefore, the USACOE may have authority over certain future developments that could occur under the 2005 General Plan.

Trustee agencies have jurisdiction over certain resources held in trust for the people of California but do not have legal authority over approving or carrying out the project. *CEQA Guidelines* Section 15386 designates four agencies as Trustee Agencies: (1) the California Department of Fish and Game with regards to fish and wildlife, native plants designated as rare or endangered, game refuges, and ecological reserves; (2) the State Lands Commission, with regard to state-owned "sovereign" lands, such as the beds of navigable waters and state school lands; (3) the California Department of Parks and Recreation, with regard to units of the state park system; and, (4) the University of California, with regard to sites within the Natural Land and Water Reserves System.

1.3 PURPOSE AND LEGAL AUTHORITY

This EIR is as an informational document for use in the City's review and consideration of the proposed 2005 General Plan. The Plan will guide subsequent actions taken by the City in its review of new development projects and its establishment of new and/or revised citywide programs. The EIR will also be used by various responsible agencies (listed above) to facilitate informed decision-making with respect to their discretionary authority over the project.

The EIR has been prepared in accordance with the requirements of CEQA and the *State CEQA Guidelines*. In accordance with Section 15121(a) of the *State CEQA Guidelines* (California Code of Regulations, Title 14, Division 6, Chapter 3), the purpose of an EIR is to:

> *Inform public agency decision-makers and the public of the significant environmental effects of a project, identify possible ways to minimize the significant effects, and describe reasonable alternatives to the project.*

This EIR fulfills the requirements for a Program EIR. Although the legally required contents of a Program EIR are the same as those of a Project EIR, Program EIRs are typically more conceptual and contain a more comprehensive discussion of impacts, alternatives, and mitigation measures than a Project EIR. As provided in Section 15168 of the *State CEQA Guidelines*, a Program EIR may be prepared on a series of actions that may be characterized as one large project. Use of a Program EIR provides the City (as Lead Agency) with the opportunity to consider broad policy alternatives and program-wide mitigation measures. It also provides the City with greater flexibility to address environmental issues and/or cumulative impacts on a comprehensive basis.

Once a Program EIR has been prepared, subsequent activities within the program must be evaluated to determine whether an additional CEQA document needs to be prepared. However, subsequent activities could be found to be within the Program EIR scope and additional environmental documents may not be required if the Program EIR addresses all of the impacts of the subsequent activity [Guidelines Section 15168(c)]. When a Program EIR is relied on for a subsequent activity, the Lead Agency must incorporate feasible mitigation measures and alternatives developed in the Program EIR into the subsequent activities [Guidelines Section 15168(c)(3)]. If a subsequent activity would have effects not identified in the Program EIR, the Lead

Agency must prepare a new Initial Study, leading to either a Negative Declaration (ND), a Mitigated Negative Declaration (MND), or an EIR.

The *CEQA Guidelines* [Section 15168(b)] encourage the use of Program EIRs, citing five advantages:

- *Provision of a more exhaustive consideration of impacts and alternatives than would be practical in an individual EIR*
- *Focus on cumulative impacts that might be slighted in a case-by-case analysis*
- *Avoidance of duplicative reconsideration of basic policy issues*
- *Consideration of broad policy alternatives and programmatic mitigation measures at an early stage when the agency has greater flexibility to deal with them*
- *Reduction of paperwork by encouraging the reuse of data (through tiering)*

This document also serves as a Master Environmental Assessment (MEA) of the City. According to Section 15169 of the *CEQA Guidelines*, an MEA serves as an inventory or database describing the environmental characteristics of the Planning Area. The purpose of an MEA is to identify and organize environmental information that may be used for reference in future EIRs or NDs prepared for individual projects. As noted in the *CEQA Guidelines*, an MEA is used for the following:

- *To identify the environmental characteristics and constraints of an area, information which can be used to influence the design and location of individual projects*
- *To provide information that agencies can use in initial studies to decide whether certain environmental effects are likely to occur and whether they would be significant*
- *To provide a central source of current information for use in preparing EIRs and NDs on individual projects*
- *To serve as a reference for EIRs and NDs on individual projects*
- *To assist in identifying long range, areawide, and cumulative impacts of individual projects*
- *To assist a City or County in formulating a general plan*
- *To serve as a reference document to assist public agencies that review other environmental documents dealing with activities in the area that are covered by the assessment*

1.4 EIR SCOPE AND CONTENT

In accordance with the *CEQA Guidelines*, the City of Ventura issued a Notice of Preparation (NOP) of an EIR in October 2004. Subsequent to the release of the NOP, the City Council decided to revise the development scenarios to be studied in the EIR; therefore, a revised NOP reflecting the scenarios studied in this EIR was issued in December 2004. Both versions of the NOP and the NOP responses are contained in Appendix A. The NOP noted that the 2005 General Plan could have potentially significant impacts in each of the issue areas on the City's environmental checklist. Therefore, this EIR examines all environmental issues on the checklist, including:

- *Aesthetics*
- *Air Quality*
- *Agricultural Resources*
- *Land Use and Planning*
- *Noise*
- *Population/Housing*

- *Biological Resources*
- *Cultural Resources*
- *Energy/Mineral Resources*
- *Geology/Soils*
- *Hazards/Hazardous Materials (including wildland fire hazards)*
- *Public Services (police, fire, schools)*
- *Recreation*
- *Utilities/Service Systems*
- *Transportation/Traffic*
- *Water (including Water Supply, Hydrology/Flooding, and Water Quality)*

The City also held two public scoping meetings for the project to solicit comments on the scope and content of the EIR. The first meeting was held on October 13, 2004. Approximately ten people attended this meeting. The second meeting was held on January 12, 2005. The primary issues raised at both meetings revolved around the assumptions to be used in the EIR analysis. No significant new environmental issues were raised at either meeting.

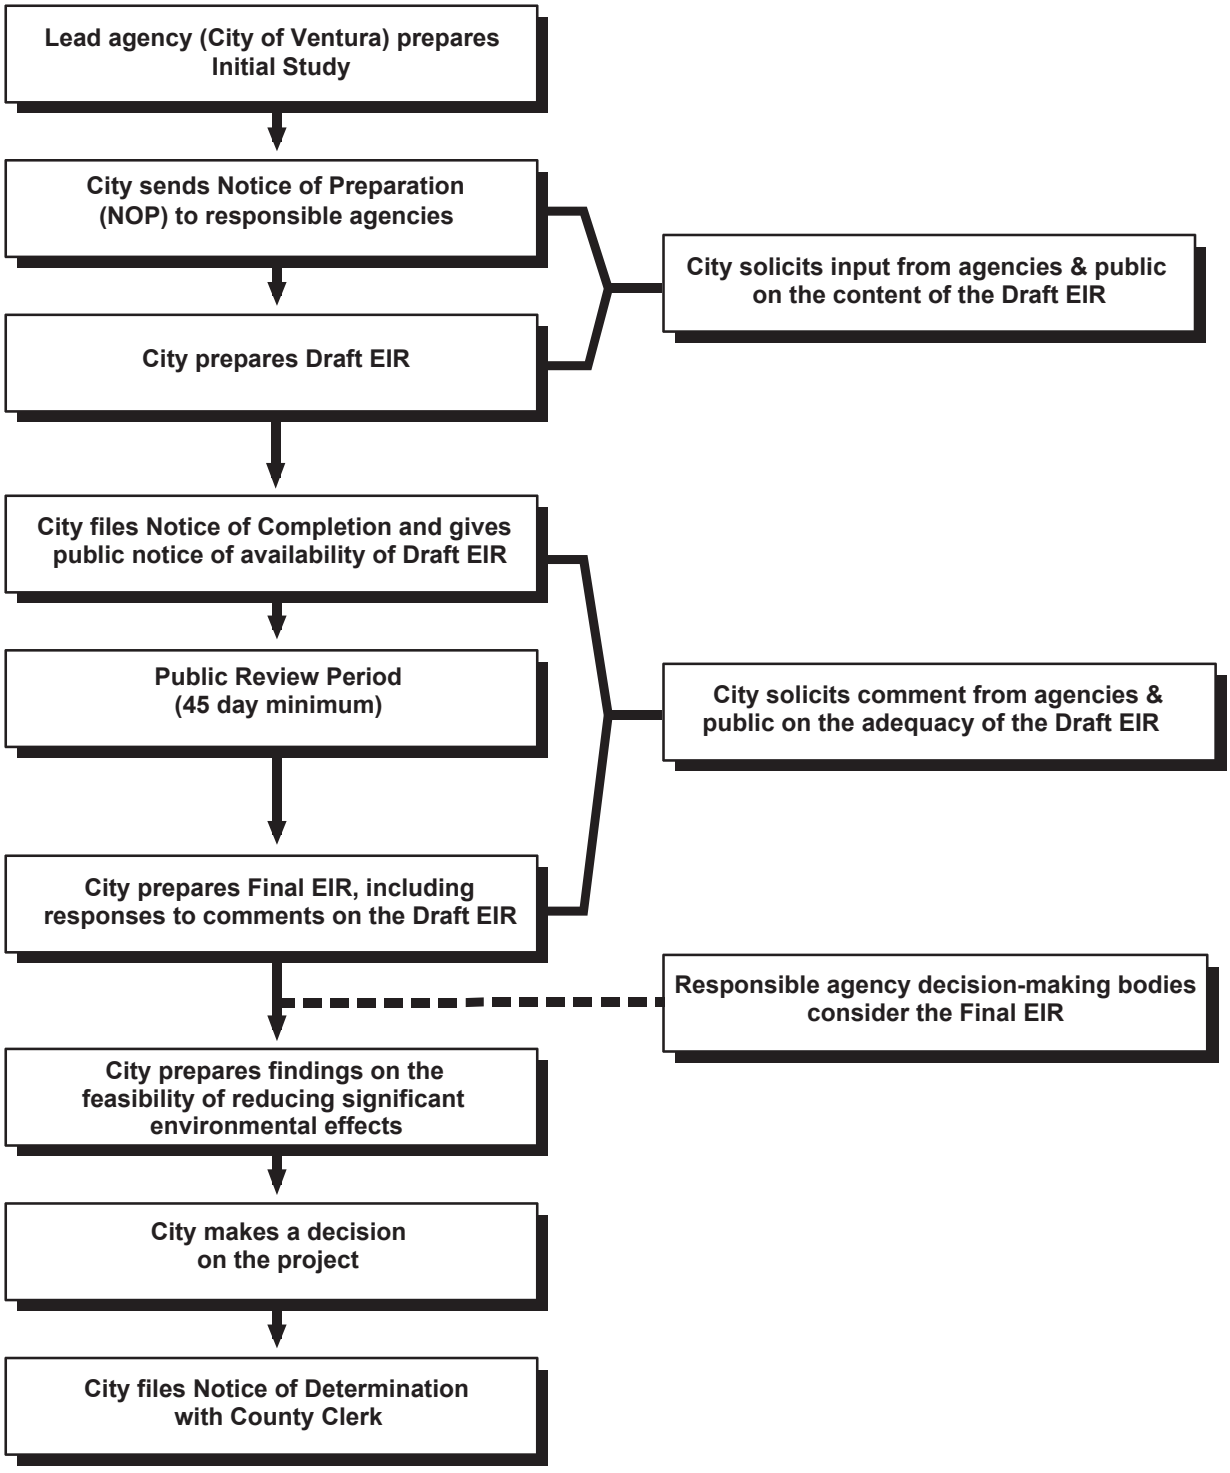
The focus of this EIR is to:

- *Provide information about the 2005 General Plan and different growth scenarios for consideration by the Planning Commission and the City Council*
- *Review and evaluate the potentially significant environmental impacts that could occur as a result of the growth and development envisioned in the 2005 General Plan and different growth scenarios*
- *Identify feasible mitigation measures that may be incorporated into the project in order to reduce or eliminate potentially significant effects.*

1.5 ENVIRONMENTAL REVIEW PROCESS

The environmental review process, as required under CEQA, is summarized below and illustrated generally on Figure 1-1.

1. **Notice of Preparation (NOP).** After deciding that an EIR is required, the lead agency must file an NOP soliciting input on the EIR scope to the State Clearinghouse, other concerned agencies, and parties previously requesting notice in writing (*CEQA Guidelines* Section 15082; Public Resources Code Section 21092.2). The NOP must be posted in the County Clerk's office for 30 days. For projects of regional significance, the lead agency holds a scoping meeting during the 30-day NOP review period.
2. **Draft EIR.** The Draft EIR must contain: a) table of contents or index; b) summary; c) project description; d) environmental setting; e) discussion of significant impacts (direct, indirect, cumulative, growth-inducing and unavoidable impacts); f) a discussion of alternatives; g) mitigation measures; and h) discussion of irreversible changes.
3. **Notice of Completion.** Upon completion of a Draft EIR, the lead agency must file a Notice of Completion with the State Clearinghouse and prepare a Public Notice of Availability of a Draft EIR. The lead agency must place the Notice in the County Clerk's office for 30 days (Public Resources Code Section 21092) and send a copy of the Notice to anyone requesting it (*CEQA*



CEQA Environmental Review Process

Figure 1-1

Guidelines Section 15087). Additionally, public notice of the availability of the Draft EIR must be given through at least one of the following procedures: a) publication in a newspaper of general circulation; b) posting on and off of the project site; or c) direct mailing to owners and occupants of contiguous properties and others who have requested such notification. The lead agency must solicit comments from the public and respond in writing to all written comments received (Public Resources Code Sections 21104 and 21253). The minimum public review period for a Draft EIR is 30 days. When a Draft EIR is sent to the State Clearinghouse for review, the public review period must be 45 days unless a shorter period is approved by the Clearinghouse (Public Resources Code Section 21091).

4. **Final EIR.** Following the close of the Draft EIR review period, a Final EIR is prepared. The Final EIR must include: a) the Draft EIR; b) copies of comments received during public review; c) a list of persons and entities commenting; and d) responses to comments.

5. **Final EIR Certification.** Prior to making a decision on a proposed project, the lead agency must certify that: a) the Final EIR has been completed in compliance with CEQA; b) the Final EIR was presented to the decision-making body of the lead agency; and c) the decision-making body reviewed and considered the information in the Final EIR prior to approving a project (*CEQA Guidelines* Section 15090).

6. **Lead Agency Project Decision.** Upon certification of an EIR, the lead agency makes a decision on the project analyzed in the EIR. A lead agency may: a) disapprove a project because of its significant environmental effects; b) require changes to a project to reduce or avoid significant environmental effects; or c) approve a project despite its significant environmental effects, if the proper findings and statement of overriding considerations are adopted (*CEQA Guidelines* Sections 15042 and 15043).

7. **Findings/Statement of Overriding Considerations.** For each significant impact of the project identified in the EIR, the lead or responsible agency must find, based on substantial evidence, that either: a) the project has been changed to avoid or substantially reduce the magnitude of the impact; b) changes to the project are within another agency's jurisdiction and such changes have or should be adopted; or c) specific economic, social, or other considerations make the mitigation measures or project alternatives infeasible *(CEQA Guidelines* Section 15091). If an agency approves a project with unavoidable significant environmental effects, it must prepare a written Statement of Overriding Considerations that sets forth the specific social, economic, or other reasons supporting the agency's decision and explaining why the project's benefits outweigh the significant environmental effects.

8. **Mitigation Monitoring/Reporting Program.** When an agency makes findings on significant effects identified in the EIR, it must adopt a reporting or monitoring program for mitigation measures that were adopted or made conditions of project approval to mitigate significant effects.

2.0 PROJECT DESCRIPTION

The proposed project is an update of the City of Ventura Comprehensive (General) Plan (hereinafter referred to as the "2005 General Plan"). The 2005 General Plan, which updates the 1989 Comprehensive Plan, establishes the community's vision for the development of Ventura through the year 2025 and will serve as the fundamental land use policy document for the City.

This section of the EIR describes the key characteristics of the 2005 General Plan, including the project applicant, the geographic extent of the plan, project objectives, required approvals, and the various development scenarios under consideration. This section also summarizes the key policy statements from the various General Plan elements that have the potential to result in physical environmental effects.

2.1 PROJECT PROPONENT

City of San Buenaventura
501 Poli Street
Ventura, California 93001

2.2 GEOGRAPHIC EXTENT OF THE PLANNING AREA

Ventura is located in western Ventura County, approximately 60 miles north of Los Angeles and 25 miles south of Santa Barbara. Figure 2-1a shows the City within the Southern California region. The City is generally bounded by the Ventura River to the west, the Pacific Ocean to the southwest, the Santa Clara River to the south, and the Transverse Range to the north. The key planning boundaries for the community – corporate limits, the sphere of influence, and the Planning Area - are illustrated on Figure 2-1a and described below. An aerial photograph of the Planning Area is presented on Figure 2-1b.

a. Corporate Limits. The corporate limits of the City currently encompass approximately 13,700 acres, or 21 square miles. The City stretches from the Pacific Ocean eastward to the community of Saticoy and northward up the Ventura River valley. The City is not currently seeking annexation of any lands outside the current City limits. However, the City may seek annexation of unincorporated islands as well as urbanized areas adjacent to the current City limits (such as in Saticoy and the North Ventura Avenue area) over the life of the 2005 General Plan. Any annexations would be sought only at such time as the area to be annexed is contiguous with the current (at that time) City limit.

b. Sphere of Influence. The Sphere of Influence (SOI) encompasses both incorporated and unincorporated territories that either are or are anticipated to be within a local agency's ultimate service area. In other words, it represents the probable physical boundaries and service area of a local agency. Typically, an SOI encompasses the area that a local agency expects to annex. The SOI must be approved by the Local Agency Formation Commission (LAFCO). With the passage of the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000 (California Government Code Section 56000 et seq.), LAFCOs are required to update spheres of influence every five years either in conjunction with, or after completing, service reviews.

Regional Location

Figure 2-1a

City of Ventura

Aerial Date: 1994
Sources: City of Ventura, 2002 and Rincon Consultants, Inc., 2005.

Ventura Planning Area Figure 2-1b

City of Ventura

Ventura's current SOI encompasses the entire City as well as several areas outside the current City limits. Areas outside the City, but within the current SOI include portions of the North Ventura Avenue area, the communities of Montalvo and Saticoy, and the Arundell industrial area. About 2,300 acres in the hillsides above the City are also outside the City, but within the current SOI. Finally, all or portions of four of the "expansion areas" under consideration are within the current SOI. These include all of the North Avenue and Poinsettia areas and portions of the Olivas and Serra areas, which are discussed in detail in subsection 2.5, beginning on page 2-8.

The City is not seeking any adjustments to the SOI at this time. However, the 2005 General Plan includes a land use designation ("Industrial") for a small area outside the current SOI. This area encompasses approximately 10-11 acres located north of the City's water filtration plant. The City may seek inclusion of that area within the SOI over the life of the 2005 General Plan; however, any application for an adjustment to the SOI and annexation would occur (if ever) only at such time as the City's corporate boundary has been extended to be contiguous with the boundary of the area. Similarly, should any potential expansion areas be selected for inclusion in the General Plan land use map in the future, the SOI may be proposed for adjustment at that time to encompass the expansion areas. Applications for any necessary SOI adjustments would be sought at such time as development of these areas is proposed. The SOI adjustments that would be needed for each expansion area are discussed in detail in subsection 2.5. Finally, the City is interested in having the SOI moved to be coterminous with the City's corporate boundary for the hillside areas above the City pursuant to Action 1.13 of the Draft General Plan. It is the City's understanding that the Ventura LAFCO is planning to prepare a Municipal Service Review (MSR) for the City that will likely result in the removal this area (and possibly other areas, including all of the potential expansion areas) from the SOI; therefore, the City will not seek an SOI adjustment at this time. However, if the LAFCO does not take action to remove the hillside areas from the SOI, the City may apply for such an adjustment in the future.

c. Planning Area. The Ventura Planning Area encompasses all areas within and outside the City's boundaries that bear a relation to the City's planning area as contemplated by State Government Code section 65300. The current Planning Area for the City encompasses about 31,000 acres and includes the entire City and SOI, as well as the Taylor Ranch area west of the City, additional acreage in the hillsides above the City, and farmlands south and east of the City, including the Olivas expansion area (see subsection 2.5 for discussion of this expansion area). The entire Planning Area is the focus of this EIR.

2.3 PROJECT OBJECTIVES

The 2005 General Plan is intended to function as a policy document to guide land use decisions within the City's planning area through the year 2025. The Plan includes goals, objectives, policies, and implementation programs adopted from the 1989 Comprehensive Plan, the Ventura Vision 2000, and input from the Comprehensive Plan Advisory Committee (CPAC), Planning Commission, City Council, and community received over the course of the development of the Plan.

Adopted by the Ventura City Council in March 2000, the Ventura Vision 2000 set the framework for the 2005 General Plan by setting the overall goals and direction for the

community. The Vision includes a number of vision statements covering a wide range of topics. These are presented on page 2-7 and categorized into five areas for convenience (Environmental, Economic, Social, Planning and Design, and Collaboration). Taken as a whole, the Vision principles establish the general objectives for the 2005 General Plan.
Based on the vision statements and input from the community, CPAC, and Planning Commission, the City Council established the following goals to guide City decision-making.

- **Our Natural Community** - Our goal is to be a model for other communities of environmental responsibility, living in balance with our natural setting of coastline, rivers, and hillside ecosystems.
- **Our Prosperous Community** - Our goal is to attract and retain enterprises that provide high-value, high wage jobs; to diversity the local economy; to increase the local tax base; and to anticipate our economic future in order to strengthen our economy and help fund vital public services.
- **Our Well Planned and Designed Community** - Our goal is to protect our hillsides, farmlands, and open spaces; enhance Ventura's historic and cultural resources; respect our diverse neighborhoods; reinvest in older areas of our community; and make great places by insisting on the highest standards of quality in architecture, landscaping and urban design.
- **Our Accessible Community** - Our goal is to provide residents with more transportation choices by strengthening and balancing bicycle, pedestrian and transit connections in the City and surrounding region.
- **Our Sustainable Infrastructure** - Our goal is to safeguard public health, well being and prosperity by providing and maintaining facilities that enable the community to live in balance with natural systems.
- **Our Active Community** - Our goal is to add to and enhance our parks and open spaces to provide enriching recreation options for the entire community.
- **Our Healthy and Safe Community -** Our goal is to build effective community partnerships that protect and improve the social well being and security of all our citizens.
- **Our Educated Community -** Our goal is to encourage academic excellence and life-long learning resources to promote a highly-educated citizenry.
- **Our Creative Community -** Our goal is to become a vibrant cultural center by weaving the arts and local heritage into everyday life.
- **Our Involved Community -** Our goal is to strive to work together as a community to achieve the Ventura Vision through civic engagement, partnerships, and volunteer service.

2.4 1989 COMPREHENSIVE PLAN

The City Council adopted the current Comprehensive Plan Update to the Year 2010 on August 28, 1989. The 1989 Comprehensive Plan has since served as a policy document that guides land use decisions in the City.

Ventura Vision 2000 Vision Statements

Environmental

- A community that seeks sustainability by simultaneously promoting ecological health, as well as economic vitality and social well-being for current and future generations.
- An environmentally responsible coastal community serving as a model for other areas.
- A community that protects and restores the natural character of its beaches, ocean views, hillsides, barrancas, and rivers as a scenic backdrop for its high quality urban environment.

Economic

- A community that develops a flourishing and balanced economy by encouraging a broad range of high quality employment and entrepreneurial opportunities.
- A community that encourages private economic development that can in turn support public services and amenities associated with a high quality of life.
- A community that develops a vital, prosperous, and stable economy while maintaining its "small town" characteristics and qualities.
- A community where the private and public sectors cooperate to enhance economic vitality.
- A community that actively participates in regional economic development efforts.

Social

- An inclusive, diverse, and tolerant community that welcomes and celebrates all people.
- A community in which all residents have access to quality and affordable health and social services.
- A community that recognizes the importance of children and seniors by providing exceptional cultural, educational, and social support programs.
- A community that provides a diverse range of active and passive recreation for residents and visitors of all ages and abilities.
- A community dedicated to educational excellence and an emphasis on lifelong learning.
- A community that celebrates and is enriched by the arts and its diverse cultural opportunities.

Planning and Design

- A community that retains its character as an attractive coastal town by growing slowly and sustainably and by emphasizing its history, diversity, and natural environment.
- A community that cherishes its distinctive, diverse, and eclectic neighborhoods and recognizes that future changes to the community must preserve their character.
- A community with safe, accessible, and balanced transportation that promotes multiple modes of travel to local and regional destinations.

Collaboration

- A community in which residents collaborate with each other and with the city government in an informed, active, and constructive manner to assess and resolve common issues.

The 1989 Comprehensive Plan is made up of the "Visions of Ventura" and nine individual elements, including each of the seven state-mandated general plan elements plus Parks and Community Design. The elements establish goals, objectives, policies, and programs for public and private entities. The Visions of Ventura is a list of generalized principles and philosophies that serve as guidelines for long-term decision making established by the City Council.

The 1989 Comprehensive Plan land use map is shown on Figure 2-2. The current map includes about 30 individual land use designations. Most of the area within the current City limits is simply designated "Existing Urban," a designation intended to indicate that the site is already developed with an urban use. Other designations allow a variety of residential, commercial, industrial, and institutional uses throughout the City. The hillsides above the City are currently designated Hillside Planned Residential (HPR). Many of the agricultural lands within the planning area continue to be designated Agriculture (AG). These include four of the five areas under evaluation as potential expansion areas to accommodate future growth (North Avenue, Olivas, Serra, Poinsettia). The 1995 "Save Our Agricultural Resources" initiative ("SOAR") amended the 1989 Comprehensive Plan by, among other things, specifying that these Agriculture designations should remain in effect until the year 2030.

The current circulation map includes three roadway designations: (1) Primary Arterial; (2) Secondary Arterial; and (3) Collector.[1] The map shows planned extensions of several roadways, including Cedar Street in West Ventura, Mills Road from U.S. 101 to Harbor Boulevard, and Johnson Drive and North Bank Drive in East Ventura. The map also delineates the existing linear park system and planned improvements.

2.5 PROPOSED 2005 GENERAL PLAN

The EIR analysis focuses on two primary components of the 2005 General Plan: (1) physical development potential; and (2) the goals and policies, including subsequent actions. The potential physical development of the City is reviewed and evaluated for each of the areas of environmental impact. As appropriate, the environmental effects of the goals, policies, and actions included in the 2005 General Plan are also reviewed and evaluated for each area of potential impact. Because many of the goals, policies, and actions are specifically intended to mitigate the environmental effects associated with future growth in the City, they are discussed as part of an overall mitigation strategy, where applicable, for a given issue.

2.5.1 General Plan Organization

The proposed 2005 General Plan has been organized into ten chapters that correlate to the chapters of the Ventura Vision document. These chapters encompass the seven elements required by California General Plan law as well as some optional elements. The chapters are listed in Table 2-1. The table also shows how the chapters correlate to the required and optional General Plan elements and the types of topics covered in each chapter.

[1] *Primary arterials are major streets designed to expedite through traffic, with restricted access to abutting properties. Secondary arterials provide access to Major Arterials, other Secondary Arterials, and Collectors, with some access to local roads and major traffic-generating uses. Collectors provide both land access and movement within residential, commercial, and industrial areas, as well as connecting the local areas with the arterial street system.*

Current Comprehensive Plan Land Use Map

Figure 2-2

Table 2-1
2005 General Plan Chapters

2005 General Plan Chapters	Required/*Optional* Elements	Examples of Topics Covered
Our Natural Community	Conservation, Open Space	Open space, hillsides, riparian areas, sensitive plants and animals
Our Prosperous Community	*Economic Development*	Commercial and industrial growth, economic diversification, job opportunities, tourism
Our Well-planned and Designed Community	Land Use, Housing, *Community Design*	Development patterns, neighborhoods, visual character, urban design, demographics, housing needs, affordability, constraints on production
Our Accessible Community	Circulation	Traffic, street network, parking, transit services, bike routes
Our Sustainable Infrastructure	Land Use, *Parks and Recreation*	Public facilities, utilities
Our Active Community	Land Use	Park and recreation facilities, youth and senior programs
Our Healthy and Safe Community	Safety, Noise, *Parks and Recreation*	Development in hazardous areas, hazardous waste management, seismicity, flood control, water quality, brownfields, noise
Our Educated Community	Land Use	Schools, libraries, cultural and historic resources
Our Creative Community	Land Use	Arts, events, community programs
Our Involved Community	Land Use	Participation in governance

Each of the General Plan chapters listed in Table 2-1 includes specific policies and action items intended to meet the overall goals discussed under subsection 2.3, *Project Objectives*. Most of the policies either do not involve physical environmental changes or are intended to reduce the potential environmental changes associated with future development within the City. For example, Chapter 7, *Our Healthy and Safe Community*, includes policies and actions intended to minimize potential conflicts relating to noise, hazardous materials, and seismic and other natural hazards. Consequently, the policies themselves generally would not create significant environmental impacts and are not listed in this project description. A complete listing of proposed 2005 General Plan actions is included in Appendix B. Individual policies and actions with the potential to either create or address physical environmental impacts are discussed as appropriate in the individual impact discussions in Section 4.0, *Environmental Impact Analysis*.

2.5.3 Land Use Map

The purpose of the land use map is to guide the general distribution, location and extent of the various types of land uses in the City. For the 2005 General Plan, the roughly 30 existing land use designations in the current land use map are proposed to be consolidated into 10 designations in four categories, as shown in Table 2-2. Specific land use regulations for parcel development will continue to be defined in the Zoning Ordinance, which will be updated following adoption of the 2005 General Plan.

Table 2-2
Planning Designations

Designation	Principal Use Development Intensity/Density
Neighborhood Low	Emphasizes detached houses with some attached units in a small mix of building types at approximately 8 dwelling units per acre. Predominantly residential
Neighborhood Medium	Anticipates a mixture of detached and attached dwellings and higher building types at approximately 9 to 20 dwelling units per acre. Predominantly residential with small scale commercial at key locations, primarily at intersections and adjacent to corridors.
Neighborhood High	Accommodates a broader mix of building types, primarily attached, at up to 54 dwelling units per acre. A mix of residential, commercial, office, and entertainment that includes mixed-use buildings.
Commerce	Encourages a wide range of building types of anywhere from two to six stories that house a mix of functions, including commercial, entertainment, office, and housing.
Industry	Encourages intensive manufacturing, processing, warehousing, and similar uses, as well as light, clean industries and support offices; also encourages limited workplace-serving retail functions and work-live residences where such secondary functions would complement and be compatible with large-scale buildings.
Public and Institutional	Accommodates civic functions such as government offices, hospitals, libraries, and schools.
Agriculture	Predominantly commercial cultivation of food and plants and raising of animals.
Parks and Open Space	Dedicates land to public recreation and leisure and visual resources.

The map specifies land uses for all areas of the City. The land use map does not change the land use designation of any agricultural lands within the Planning Area that are currently designated for agricultural or open space uses under either the City's 1989 Comprehensive Plan or the County of Ventura General Plan. However, at the direction of the City Council, the EIR analysis considers a range of possible future land use scenarios, some of which include potential "expansion areas" that are currently used for agriculture or open space, but may be considered for future development. Discussions of areas where intensification and reuse of urbanized lands is to be emphasized and each of the expansion areas follow.

a. Intensification/Reuse. The proposed land use map is intended to primarily emphasize intensification and reuse of already urbanized lands within the current City and SOI. To that end, the map includes nine growth districts and eight growth corridors located throughout the City that are to be the focal points of future development and land use intensification. Most of the growth districts and corridors are already within the City and developed with urban uses. However, portions of the Upper North Avenue, North Avenue, Saticoy, and Arundell districts are currently either in oil or agricultural production and within the current SOI, but outside the current City limits. These areas are already designated for urban uses (primarily industrial) under the 1989 Comprehensive Plan, but would require annexation prior to development within urban uses.

The districts and corridors are primarily commercial or industrial in character, though some (Upper North Avenue, Arundell, Saticoy) include agricultural and vacant lands that are designated for urban use under the 1989 Comprehensive Plan. The districts and corridors are anticipated over time to be partially re-developed with a mix of uses that may include the underlying land use and/or residential use (for example, properties within the primarily commercial Main Street corridor could be developed with either commercial or residential uses, or some combination thereof). All or portions of three of the districts – Downtown, North Bank, and Saticoy – are to be subject to Specific Plans that specify mixed land uses. The Harbor district is subject to the draft Harbor Master Plan.

On Commerce-designated parcels, it is assumed that future developments could entail: (1) commercial only projects; (2) mixed use projects that include a commercial component and a residential component; or (3) multiple family residential only projects. For Industrial-designated parcels, industrial only projects would be allowed. Residential uses could include work/live or live/work residences or traditional housing as part of mixed use development so long as residences are not subject to significant compatibility conflicts relating to such issues as aesthetics, noise, or health and safety that cannot be addressed through site planning.

Additional development may also occur outside the growth districts and corridors as infill of vacant parcels occurs. The City is largely built out, but vacant parcels are located throughout the community. In addition, there are a number of undeveloped parcels outside the City, but within the SOI that could develop over the next 20 years. All of these areas are currently designated for urban uses under the 1989 Comprehensive Plan and therefore are not subject to the Save Our Agricultural Resources (SOAR) Ordinance (see Section 4.1, *Agriculture*, for a discussion of the SOAR Ordinance).

b. Potential Expansion Areas. As discussed above, the General Plan land use map does not include any re-designation of lands currently designated for agricultural or open space use. Nevertheless, at City Council direction, this EIR considers five separate areas for possible future expansion. These include:

- ***North Avenue*** *– a 55-acre area west of Ventura Avenue and north of Los Cabos Lane that is currently primarily in agricultural production (orchards)*
- ***Olivas*** *– a 930-acre agricultural area (mix of row crops and orchards) located between the Midtown and Arundell communities and Ventura Harbor that is roughly bounded by the Union Pacific Railroad, Telephone Road, Olivas Park Drive, and Harbor Boulevard*
- ***Serra*** *– a 438-acre area in East Ventura that is primarily in agricultural production (mix of row crops and orchards) and is roughly bounded by Telephone Road, Montgomery Avenue, Bristol Road, and Ramelli Avenue*
- ***Western Cañada Larga*** *– a 110-acre area along the east and west sides of SR 33 at the entrance to Cañada Larga that is primarily undeveloped grazing land, with a limited amount of irrigated agriculture*
- ***Poinsettia*** *– a 418-acre agricultural area (orchards) generally bounded by SR 126 on the south, Hill Road on the west, Foothill Road on the north, and Harmon Barranca on the east.*

The entirety of four of the five potential expansion areas – North Avenue, Olivas, Serra, and Poinsettia - are designated "Agriculture" in the 1989 Comprehensive Plan; therefore, a public vote is required in accordance with the City's SOAR Ordinance prior to any re-designation of these areas to allow a non-agricultural use until 2030. An approximately 29-acre portion of the Western Cañada Larga expansion area is also subject to SOAR. The 2005 General Plan would not change the land use designation for any of these areas. Any land use designation change and subsequent development in any of these areas would need to be pursued by individual landowners and would occur only after receiving voter approval of a General Plan amendment.

The portion of the 110-acre Western Cañada Larga area east of SR 33 is outside the current SOI and has no City land use designation. This area is designated Open Space under the County of Ventura General Plan and would be subject to the County's SOAR Ordinance if a re-designation were sought through the County. However, if considered for annexation by the City, the area would not be subject to either the County or City SOAR Ordinances. Nevertheless, no re-designation of the area is being proposed or considered at this time.

Because no re-designation or specific development concepts are currently being considered for any of the potential expansion areas, the magnitude and type of development (if any) that may occur in any of the areas cannot be predicted with certainty. It is anticipated that any of the expansion areas would only be developed in accordance with a specific plan that provides guidance with respect to land use, infrastructure, circulation, and development standards. However, the CPAC provided the following general parameters for future development in any of the expansion areas, which are assumed to form the basis for possible future development proposals:

- *Build new neighborhoods in a compact form and plan for walkability (i.e., 80-to-100 acres, ¼- mile from center);*
- *Encourage development that promotes a mix of housing types and meets affordable housing needs;*
- *Connect street systems that balance auto, pedestrian, and bicycle movement in a fine-grained block, pedestrian and park network system;*
- *Encourage mixed-use development, preferably near transit nodes;*
- *Encourage development that responds to unmet needs in nearby existing neighborhoods;*
- *Connect open spaces, parks and trails into an integrated system;*
- *Protect sensitive habitat and watershed land;*
- *Recognize traditional downtown, commercial districts and urban neighborhoods as being critical anchors for the economic and community vitality of a region; and*
- *Assume that each potential neighborhood has the opportunity not only to provide amenities to its residents directly, but also to improve quality of life for the larger community.*

c. Possible Future Changes to Sphere of Influence Boundaries. As noted in subsection 2.2, although the City is not seeking adjustment to the Sphere of Influence (SOI) at this time, implementation of the 2005 General Plan may require several adjustments to the Sphere of Influence (SOI) that would subsequently be processed and subject to approval by LAFCO. About 2,300 acres in the hillsides above the City are proposed to be removed from the SOI. This would remove these areas from consideration for future City extension of services and focus

future development on non-hillside areas. In addition, approximately 10-11 acres north of the City's water filtration plant along the west of SR 33 may need to be included in the SOI at some point in the future. This area is partly in agricultural use, but it is designated for industrial development in the Ventura County General Plan and in the 1989 Comprehensive Plan.

The SOI would not need to be adjusted at this time to include any of the expansion areas considered in this EIR. However, certain expansion areas would require expansion of the SOI if they are to be considered for future development. Such SOI expansions would be sought, if ever, at such time as development of the areas is proposed. Possible future expansions of the SOI include the following:

- ***Western Cañada Larga*** *– This 110-acre area, located at the northern end of the Planning Area along the State Route (SR) 33 corridor, would need to be included in the SOI if selected for possible future development. Inclusion within the SOI could occur only at such time as the City's corporate boundary has been extended to be contiguous with the boundary of the expansion area.*
- ***Olivas*** *– About 55 acres of the 930-acre Olivas area (the portion of this area north of U.S. 101) are within the current SOI. However, the remaining 875 acres, which consist of agricultural land located primarily between U.S. 101 and Harbor Boulevard, would need to be included in the SOI if this area is selected for possible future development.*
- ***Serra*** *– About 160 acres of the 438-acre Serra area are currently outside the SOI. This area, which is located south of Bristol Road and along the north bank of the Santa Clara River, would need to be included in the SOI if the Serra area is selected for possible future development.*

Because the Ventura LAFCO may remove all areas subject to voter approval from the SOI as a result of its Municipal Service Review, any of the expansion areas may have been removed from the SOI by the time they are considered for development. Therefore, an SOI adjustment may need to be sought for any of the expansion areas.

2.5.4 Possible Land Use and Growth Scenarios

This EIR considers six different land use scenarios selected by the City Council that represent options for accommodating future growth in the City. The options range from including no expansion areas and focusing development almost exclusively on already urbanized areas to including up to three expansion areas for possible future development. The six 2025 development scenarios include:

1. **Intensification/Reuse Only Scenario –** This scenario assumes that future development will be limited to areas within the current Sphere of Influence and that none of the possible expansion areas would be considered.

2. **Intensification/Reuse + North Avenue + Olivas + Serra –** This scenario assumes an emphasis on infill development at an intensity level similar to that of the Intensification/Reuse Only, but includes the following potential expansion areas:
   - *North Avenue (55 acres)*

- *Olivas (930 acres)*
- *Serra (438 acres)*

3. **Intensification/Reuse + North Avenue + Olivas Scenario –** This scenario assumes intensification/reuse at a level similar to the other scenarios, but includes the following potential expansion areas:

   - *North Avenue (55 acres)*
   - *Olivas (930 acres)*

4. **Intensification/Reuse + North Avenue + Serra Scenario –** This scenario assumes intensification/reuse at a level similar to the other scenarios, but includes the following potential expansion areas:

   - *North Avenue (55 acres)*
   - *Serra (438 acres)*

5. **Intensification/Reuse + North Avenue + Western Cañada Larga Scenario –** This scenario assumes intensification/reuse at a level similar to the other scenarios, but includes the following potential expansion areas:

   - *North Avenue (55 acres)*
   - *Western Cañada Larga (110 acres)*

6. **Intensification/Reuse + North Avenue + Poinsettia Scenario** - This scenario assumes intensification/reuse at a level similar to the other scenarios, but includes the following potential expansion areas:

   - *North Avenue (55 acres)*
   - *Poinsettia (418 acres)*

The various land use scenarios are shown on Figures 2-3 through 2-8.

Each of the land use scenarios emphasizes intensification and reuse of already urbanized lands prior to development of "greenfields" at the City's periphery. As discussed previously, future growth is to be primarily focused within the nine growth districts and eight growth corridors located throughout the City.

The primary difference among the land use scenarios is in the areas included for possible future expansion of the City. The Intensification/Reuse Only scenario (Scenario 1) assumes that future growth would be limited to areas within the proposed SOI that are already designated for non-agricultural uses (this excludes the hillside areas above the City, which are proposed for removal from the SOI). The Intensification/Reuse + North Avenue + Olivas + Serra scenario (Scenario 2) assumes eventual development of three expansion areas. The other scenarios with potential expansion areas (Scenarios 3-6) include the North Avenue area plus one of the other expansion areas. The primary purpose of analyzing these scenarios is to weigh the relative impacts and benefits of considering future development of the Olivas, Serra,

Scenario 6 - Intensification/Reuse + North Avenue + Poinsettia Figure 2-8

Western Cañada Larga, and Poinsettia areas. It is assumed that the SOI would be adjusted as necessary for each of the scenarios to include the expansion areas being considered for the scenario at such time as future development is considered. Figures 2-3 through 2-8 show the possible future SOIs under each land use scenario.

Based on the policies and actions outlined in Chapter 3 of the 2005 General Plan, each expansion area is assumed to include a mix of residential uses at varying densities and non-residential uses, including retail and office uses, schools, and other institutional facilities. It is assumed that any of the areas would also include large areas of public open space (parks, passive open space, recreational facilities) that serve the community as a whole. The actual amount of development and open space that may be provided in future specific plans for the expansion areas will likely vary from what is assumed in the EIR. However, any future development within any of the expansion areas would be subject to a vote of the electorate and/or further independent environmental review under CEQA.

2.5.5 Growth Projections

a. Growth Assumptions for Environmental Analysis. Residential and non-residential growth estimates were developed for purposes of environmental analysis in order to provide decision-makers and the community a realistic assessment of the potential environmental effects of growth through 2025. The residential and non-residential growth assumptions used for the analysis of the various land use scenarios are discussed below.

Population and Residential Growth. For the purpose of environmental analysis and forecasting future residential growth through 2025, two growth scenarios were used. A 1.14% annual growth rate was used for the five scenarios that include expansion areas (Scenarios 2-6), while a lower growth rate of 0.88% annually was used for Scenario 1 (the Intensification/ Reuse Only scenario). The lower growth rate was used for Scenario 1 because it was assumed that limiting growth to the current SOI would result in a lower overall growth rate. The 1.14% growth rate represents the annual growth rate for the City from 1984-2004 (20-year rate), while the 0.88% growth rate represents the annual growth rate from 1994-2004 (10-year rate).

Table 2-3 shows the level of housing and population growth that would occur in the City through 2025 under both the 1.14% and 0.88% annual growth rates. As shown, the 1.14% growth rate would add about 11,000 residences and, based on the current average of 2.57 persons per dwelling unit (California Department of Finance, 2004), about 28,000 people. The 0.88% annual growth rate would add roughly 8,300 residential units and 21,000 people.

Non-Residential Growth. Non-residential growth through 2025 was estimated based upon job growth estimates developed by Stanley R. Hoffman Associates, Inc. as part of a land supply and demand analysis performed in conjunction with the 2005 General Plan. The "medium growth" estimate from the Stanley R. Hoffman report was assumed to apply to the five land use scenarios that include expansion areas (Scenarios 2-6) and the "lower growth" estimate was applied to the Intensification/Reuse Only Scenario (Scenario 1).

Table 2-4 shows the medium and lower job growth estimates for the City. As indicated, the medium growth scenario would add about 12,300 new retail, office, and industrial jobs, and about 19,700 total jobs. Under the lower growth estimate, the City would add about 8,600

Table 2-3
Population and Housing Projections

	2004 Levels[a]	2025 Estimates		Change from 2004-2025	
		0.88% Annual Growth	1.14% Annual Growth	0.88% Annual Growth	1.14% Annual Growth
Population	104,952	126,153	133,160	21,201	28,208
Housing Units[b]	40,880	49,138	51,867	8,258	10,987

[a] *Source: California Department of Finance, City/County Population and Housing Estimates, 1/1/2004. Note that 2004 data are used as the baseline because 2005 data were not available when the EIR was initiated in Fall 2004; 2005 population and housing estimates are provided in Table 3-1 in Section 3.0, Environmental Setting.*

[b] *Housing unit estimates assume that the current ratio of 2.57 persons per household remains constant through 2025. In reality, the number of persons per unit could go up or down, depending upon housing costs, the types of housing built in the City, population growth, and other factors.*

Table 2-4
Projected Job Growth by Sector, 2004-2025

Sector	2004 Jobs	2025 Jobs		Job Growth 2004-2025	
		Lower Growth (Scenario 1)	Medium Growth Scenario (Scenarios 2-6)	Lower Growth (Scenario 1)	Medium Growth (Scenarios 2-6)
Retail	12,095	13,432	13,857	1,337	1,762
Office	14,014	17,943	20,189	3,929	6,175
Industrial	9,322	12,662	13,684	3,340	4,362
Total (Retail, Office, Industrial)	**35,432**	**44,037**	**47,730**	**8,605**	**12,298**
Total Jobs (all sectors)	**54,732**	**69,211**	**75,060**	**14,479**	**20,328**

Job estimates from Stanley R. Hoffman Associates, Inc., August 2003, and UCSB Economic Forecast Project. Job estimates for 2004 are based on interpolation between 2000 and 2005 "low growth" estimates.

retail, office, and industrial jobs, and about 14,500 total jobs. Under the medium growth scenario, the projected job growth would increase citywide employment by about 37% through 2025. Under the lower growth scenario, citywide employment would grow by about 26% through 2025.

Table 2-5 on page 2-32 shows the projected increase in retail, office, and industrial building area needed to accommodate the job growth projections shown in Table 2-4. As indicated, the projected increase in jobs is expected to create demand for about 5.3 million square feet of new building area under the medium growth scenario and about 3.8 million square feet of new building area under the lower growth scenario. Discounting the amount of non-residential

Table 2-5
Projected Housing Growth Distribution

Growth Area	Intensification/ Reuse Only (Scenario 1)	Scenarios 2-6
Currently Planned/ Pending[a]	1,700	1,700
Growth Districts/ Corridors	3,950	3,950
SOI/Other Infill[b]	2,650	2,650
Expansion Areas	--	2,700
Total	**8,300**	**11,000**

See Appendix C for a detailed breakdown of assumed residential growth by district/corridor and expansion area.

[a] From City of Ventura Community Development Department, Pending Projects, July 2004.

[b] Includes development of non-agriculturally designated agricultural lands in East Ventura (1,250 units), growth expected within the Pierpont and other neighborhood centers (200 units), development of up to 300 second units on single family lots, and development of vacant and underutilized parcels outside the districts and corridors (700 units).

development already planned or pending (estimated at 639,724 square feet per the City's pending projects list, July 2004), the net increase in retail, office, and industrial development needed to meet demand would range from about 3.2 million square feet under the lower growth scenario to about 4.7 million square feet under the medium growth scenario.

b. Projected Distribution of Growth. In order to assess the possible impacts of projected growth through 2020, it was necessary to develop working assumptions regarding how overall residential and non-residential growth might be distributed throughout the Planning Area. Working assumptions were developed by City and consultant staff based on the general guidance and priorities provided by the CPAC, the Planning Commission, and the City Council.

Potential residential and non-residential growth can be broken down into four geographic categories:

- *Currently planned and pending projects that are being or are planned to be developed under the existing Comprehensive Plan;*
- *Intensification or reuse development in Growth Districts and Corridors;*
- *Infill development in other already urban areas of the City;*
- *Development of expansion areas.*

Currently planned and pending projects were taken from the City's Pending Projects list. These were assumed to occur. The remainder of the growth was distributed throughout the planning area for each of the scenarios based on the following general assumptions:

- *Intensification/reuse within already urbanized areas has highest priority and development within expansion areas will occur only when it can help implement City*

planning objectives. To this end, it was assumed that about 8,300 residential units would be built within areas of the proposed SOI that are designated for urban uses under any scenario. For the scenarios that include expansion areas, the remaining 2,700 units would be built within expansion areas.

- *Within the intensification/reuse areas, the older core areas of the City – in particular, Downtown and the Ventura Avenue corridor – will continue to be a focal point of development and are likely to accommodate a large proportion of the residential and non-residential growth.*
- *The Downtown and Harbor Districts will generally develop in accordance with the Specific Plans being developed for those two areas.*
- *Expansion areas will be developed with a mix of residential and non-residential uses. The overall mix and density of development assumed to be developed is dictated by the amount of available land. For example, expansion areas with more acreage than necessary to accommodate projected growth will be assumed to have a high percentage of civic space (recreational facilities, etc.) or to remain partially in agriculture.*

It is important to note that the assumptions used in the EIR analysis are not meant to serve as development caps, either in an overall sense or within individual districts/corridors or expansion areas. Rather, the growth assumptions are used for analytical purposes in order to provide information about the possible effects of growth through 2025. In reality, any of the EIR scenarios, if developed to full "buildout" could accommodate substantially more development than is assumed in this EIR and the overall amount and distribution of new development that will occur through 2025 could be somewhat different than that assumed herein.

Tables 2-5 and 2-6 show the projected distribution of residential and non-residential growth among the four geographic categories described above for each of the land use scenarios under consideration (more detailed breakdowns of assumed growth levels by district/corridor and expansion area are included in Appendix C). The non-residential growth estimates shown in Table 2-6 are based upon the job growth projections shown in Table 2-4; however, the building area estimates have been increased in some instances to account for specific projects considered likely to occur over the next 20 years.

Scenarios 2-6 would each accommodate an estimated 11,000 total units, while Scenario 1 (Intensification/Reuse Only) is assumed to accommodate less overall housing growth (8,300 units over the 20-year period). Based on City Council direction, it is assumed that intensification/reuse within already urbanized areas and areas already designated for urban development is the first priority. Therefore, the level of growth within these areas has been assumed to be a constant for all six scenarios, with the growth beyond that accommodated through intensification/reuse to be achieved in the expansion areas for Scenarios 2-6.

Based on the development potential of each growth district and corridor and direction from the community, CPAC, Planning Commission, and City Council on where growth in the community should be encouraged, growth was distributed among the various corridors and districts in the City. The bulk of new intensification/reuse residential development was

Table 2-6
Non-Residential Growth Distribution (square feet)

Growth Area	Scenario 1 (Intensification/ Reuse Only)		Scenarios 2-6	
	Commercial (Retail, Office, Hotel)	Industrial	Commercial (Retail, Office, Hotel)	Industrial
Currently Planned/ Pending[a]	355,000	435,000	355,000	435,000
Growth Districts/ Corridors	2,055,000	1,800,000	2,055,000	2,325,000
SOI/Other Infill	245,000	--	245,000	--
Expansion Areas	--	--	915,000	--
Total	**2,655,000** [b]	**2,235,000**	**3,570,000** [b]	**2,760,000**

All figures are rounded. See Appendix C for a detailed breakdown of growth projections by corridor, district, and expansion area.

[a] From City of Ventura Community Development Department, Pending Projects, July 2004.

[b] Includes 450,000 square feet of hotel development.

assumed to occur in the older urban core of the City. For example, Downtown and the Ventura Avenue, Main Street, and Thompson Boulevard corridors were assumed to accommodate a combined 2,800 new residences through 2025. This is about 67% of the total residential growth anticipated to occur within the districts and corridors. These older core areas are presumed to be a focal point of non-residential growth as well, though to a lesser degree. Industrial growth is anticipated to be focused primarily in the Arundell, North Avenue, and Upper North Avenue districts, which are assumed to accommodate a combined total of about 1.4-1.8 million square feet of industrial development (of the 2.2-2.7 million square feet of projected growth).

c. Assumed Expansion Area Development. Table 2-7 on page 2-34 summarizes the total amount of development assumed to be accommodated in the potential expansion areas under each of the five land use scenarios that include expansion areas in terms of residential units and square feet of non-residential development. The assumed overall level of growth within the expansion areas is based upon City Council direction and is the same for each scenario. The overall mix of uses has been adjusted from scenario to scenario based on available acreage. For Scenario 5, in particular, the intensity of development for the North Avenue area was greatly increased as compared to the other scenarios because substantially less overall acreage would be available under that scenario.

Table 2-8 on page 2-35 compares the overall acreage of various uses assumed for each scenario. The amount of acreage dedicated to most uses does not vary widely among the scenarios since the overall level of development is assumed to be the same for all scenarios. However, the amount of civic space varies widely, depending upon the overall acreage available. For Scenario 2, for example, it is assumed that up to about 937 acres (66% of the total acreage) would be open (civic) space because this scenario includes far more land than would be

Table 2-7
Estimates of Expansion Area Residential and Non-Residential Development by Land Use Scenario

Expansion Area	Land Use Scenario									
	2		3		4		5		6	
	Residential (units)	Commercial (square feet)	Residential (units)	Commercial (square feet)	Residential (units)	Commercial (square feet)	Residential (units)	Commercial (square feet)	Residential (units)	Commercial (square feet)
North Avenue	180	20,000	320	90,000	320	90,000	1,000	330,000	320	90,000
Olivas	1,480	550,000	2,380	810,000	--	--	--	--	--	--
Serra	1,040	350,000	--	--	2,380	810,000	--	--	--	--
Western Cañada Larga	--	--	--	--	--	--	1,700	570,000	--	--
Poinsettia	--	--	--	--	--	--	--	--	2,380	810,000
Total	**2,700**	**920,000**	**2,700**	**900,000**	**2,700**	**900,000**	**2,700**	**900,000**	**2,700**	**900,000**

All estimates of units and square feet are rounded. The totals presented herein are estimates only to be used for analytical purposes.

Table 2-8
Assumed Expansion Area Acres by Use

Use	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
Residential Low[a]	200	175	155	--	155
Residential Medium[b]	77	88	68	--	68
Residential High[c]	20	20	35	94	35
Office	38	38	38	36	38
Retail	12	12	12	11	12
Schools	110	70	50	--	40
Open Space[d]	937	565	121	32	113
Other[e]	29	17	14	3	12
Total	**1,423**	**985**	**493**	**176**	**473**

The totals presented herein are estimates only to be used for analytical purposes. Detailed breakdowns by expansion area are included in Appendix C.
[a] Up to 8 units per acre.
[b] 8-20 units per acre.
[c] 20-36 units per acre
[d] Open space is expected to consist of civic space such as parks and other recreational facilities. For certain expansion areas, it is possible that some land could remain in agricultural production under the scenarios studied herein. However, for analytical purposes, it is assumed that land would be converted from agricultural use.
[e] Could include various non-recreational public facilities, such as fire stations.

necessary to accommodate projected growth. For Scenario 5, on the other hand, only about 32 acres of open space are assumed to be available because of the limited amount of available usable land under that scenario. It should also be noted that, under Scenario 5, all residential lands in both the North Avenue and Western Cañada areas would need to be developed with high density development in order to provide 2,700 residential units. Because such a scenario may not be realistic for these areas, an alternative with a more modest amount of growth within these areas is considered in Section 6.0, *Alternatives*.

A complete breakdown of the projected growth by district, corridor, and expansion area for each of the land use scenarios is provided in Appendix C. The projections included in this EIR are assumptions for analytical purposes only and provide a reasonable estimate of where and how much growth will occur in the City through 2025. The growth projections for each of the districts and corridors are well within the maximum theoretical buildout under the proposed land use designations. However, the actual locations and distribution of growth in the City over the next 20 years cannot be predicted with certainty.

2.5.6 Circulation Map

The proposed circulation system map is shown on Figure 2-9. For the most part, the map reflects the current roadway network. Possible new roadway links shown on the map include:

- *Extension of Thille Street to connect Telephone Road to the current Thille Street terminus;*
- *Extension of Hill Road between Ralston Street and Moon Drive;*
- *Completion of A Street between Saticoy Avenue and Wells Road;*

Additional new roads may be included if the North Avenue, Olivas, Serra, or Poinsettia expansion areas are developed at some point in the future. The new road links anticipated to accompany any possible future development in these areas are listed below.

Olivas Expansion Area

1. *Mills Road extension to Harbor Boulevard (connection at Schooner Drive)*
2. *New collector between Mills Road and Telephone Road in the Olivas expansion area*

Serra Expansion Area

1. *North Bank Drive extension from Johnson Drive to Bristol Road*
2. *Kimball Road extension from Telephone Road to North Bank Drive*
3. *Ralston Street extension from Ramelli Avenue to Montgomery Avenue*

Poinsettia Expansion Area

1. *Johnson Drive extension from SR 126 to Foothill Road*
2. *Loma Vista Road extension from Victoria Avenue to Kimball Road*
3. *Woodland Street extension from Hill Road to Johnson Drive*

Several additional conceptual links are included on the draft circulation map to facilitate City Council discussion. These road links are listed below and circled on Figure 2-9 as needing "additional policy direction."

- *Floral Drive connection linking N. Ventura Avenue to existing residential neighborhoods on the east side of N. Ventura Avenue and possibly the North Avenue expansion area*
- *Two extensions of Cedar Street that would provide a continuous link between residential neighborhoods on the east side of Ventura Avenue and Poli Street*
- *Portola Road "flyover" connecting the Arundell district to neighborhoods north of U.S. 101*
- *Portola Road southerly extension to connect to Olivas Park Drive*
- *Olivas Park Drive extension to connect to Johnson Drive at U.S. 101*
- *Two extensions of North Bank Drive in the East Ventura/Saticoy area to Wells Road*

Other than the two extensions of North Bank Drive, the above road links are not included in the traffic analysis in Section 4.12, *Transportation and Circulation*, and are not needed to address any identified circulation system deficiencies. However, they may serve other objectives relating to overall system connectivity. These road links are discussed in Chapter 5.0 of the traffic study in Appendix E.

2.6 DISCRETIONARY ACTIONS

With recommendations from the Planning Commission, the City of Ventura City Council will need to take the following discretionary actions in conjunction with the proposed 2005 General Plan:

- *Certification of the Final EIR on the 2005 General Plan*
- *Approval of the proposed 2005 General Plan*
- *Approval of the 2005 Local Coastal Program Amendment (LCPA), including the revised Land Use Plan (LUP) component of the Local Coastal Program (LCP)*

The City is not seeking annexation of lands or adjustments to the SOI at this time. However, implementation of the 2005 General Plan may require future approval of adjustments to the City's SOI, as described above. Annexations and SOI adjustments would be sought as appropriate at such time as developments are proposed for the areas in question. Any adjustments to the SOI will require approval from the Ventura LAFCO.

Because a portion of the City of Ventura is within the Coastal Zone, the 2005 General Plan also involves an amendment to the City's Local Coastal Program (LCP). The LCP update will require approval by the California Coastal Commission.

The California Department of Conservation, Division of Mines and Geology, will review the plans and policies relating to seismic safety for compliance with state regulations.

3.0 ENVIRONMENTAL SETTING

This section provides a general overview of the environmental setting for the City of Ventura. More detailed descriptions of the setting with respect to specific environmental issues can be found in the setting discussions for individual issue areas in Section 4.0, *Environmental Impact Analysis*.

3.1 REGIONAL OVERVIEW

Ventura is located in western Ventura County, about 60 miles northwest of Los Angeles and 30 miles southeast of Santa Barbara. The County is topographically diverse, with mountains, rich agricultural valleys, and distinct urban areas, all within close proximity of the Pacific Ocean. The Mediterranean climate of the region and coastal influence produce moderate temperatures year round, with rainfall concentrated in the winter months. The region is subject to various natural hazards, including earthquakes, landslides, flooding, and wildfires.

3.2 PHYSICAL SETTING

3.2.1 Geography and Topography

Ventura is situated between the Pacific Ocean, the Ventura foothills, and the Ventura and Santa Clara rivers. The City is located at the western edge of the Oxnard Plain, an alluvial plain that covers over 200 square miles in the southern portion of Ventura County. Much of the City is on the relatively flat coastal plain, but steeply sloped hills abut the northern portion of the community. The western portion of the City stretches north along the Ventura River and is characterized by a narrow valley with steeply sloped areas on both sides.

Drainage throughout the Planning Area is generally to the southwest toward the Pacific Ocean. The older parts of the City near the coast are drained by a series of barrancas that drain directly to the Pacific Ocean. The eastern portion of the community generally drains toward the Santa Clara River, while West Ventura generally drains toward the Ventura Rivers. Both the Santa Clara and Ventura rivers are fed by a series of smaller creeks and barrancas, some of which have been channelized and others of which remain in a relatively natural condition.

Similar to much of southern California, Ventura is located within a seismically active region and is crossed by several potentially active fault systems. Major fault zones in the Planning Area include the Ventura-Foothill, Country Club, Oak Ridge, McGrath, and Red Mountain faults.

3.2.2 Climate

Ventura is located in the South Central Coast Air Basin, which includes all of San Luis Obispo, Santa Barbara, and Ventura counties. The climate of Ventura County and all of the SCCAB is strongly influenced by its proximity to the Pacific Ocean and the location of the semi-permanent high pressure cell in the northeastern Pacific. The area is characterized by warm, dry summers and cool winters with occasional rainy periods.

Daytime summer temperatures in the area average in the high 70s to the low 90s. Nighttime low temperatures during the summer are typically in the high 50s to low 60s, while the winter high temperatures tend to be in the 60s. Winter low temperatures are in the 40s. Annual average rainfall in Ventura ranges from about 14 to 16 inches, the majority of which falls in winter months.

3.2.3 Natural Resources

The Ventura Planning Area has a wide variety of landscapes and seascapes, including natural, agricultural, and urban components. The hills of the Transverse Range rise above Ventura about 1,200 feet, providing a dramatic visual backdrop and scenic vistas of the City, ocean, Ventura River Valley, and Oxnard coastal plain. The hillside area covers about 4,000 acres of steep slopes, incised drainages, ridge tops, and narrow flat valleys. Much of the foothills have been used for grazing in the past; and grazing operations remain in some locations. Vegetation and habitat includes annual grasses with scattered pockets of coastal sage scrub and remnant riparian corridors.

The well-developed riparian communities found along the Ventura and Santa Clara Rivers are dominated primarily by Arroyo willow, with occasional trees, including Western sycamore, cottonwoods, and white elder. The area now covered by riparian vegetation represents a small remnant of the historic riparian zone, and recent flooding has temporarily denuded some areas. A more diverse, extensive and native plant dominated habitat has been lost due to permanent development and disturbance.

Coastal Freshwater Marshes are found along the upper reaches of the Santa Clara and Ventura Rivers where saltwater does not intrude at high tide. Freshwater marshes are also found at the Alessandro Lagoon, the mouth of the San Jon Barranca, and at the end of the Kalorama Canyon Drain. The marshes are very high in biological productivity and scarce in the region. The habitat areas at the mouth of the Ventura and Santa Clara Rivers and the Alessandro Lagoon are used as resting and feeding areas for migratory and residential shorebirds and waterfowl, and to a lesser degree, by resident terrestrial species.

The Planning Area includes about seven miles of beach. Although not owned entirely by the City, the waterfront open space provides valuable recreational opportunities for Ventura residents and visitors. Scarce dune habitat and beach vegetation provide some nesting, foraging, and mating grounds for wildlife. Exposure to the elements and human intrusion has diminished the habitat value of the beach area, but ongoing rehabilitation and conservation programs aim to enhance the beach area.

3.3 TRANSPORTATION

Regional access to Ventura is provided by a series of freeways and the Union Pacific Railroad. U.S. Highway 101 is the main regional transportation artery, providing connections to points both north and south along the Pacific Coast. State Route 126 is an east-west running highway that connects Ventura to the Santa Clara River Valley, the City of Santa Clarita, and Interstate 5. State Route 33 is a north-south running highway that connects U.S. 101 to the Ojai Valley. The railroad connects Ventura to points north and south, providing both freight and passenger service.

3.4 DEMOGRAPHICS

Tables 3-1 and 3-2 show population and housing trends from 2000-2005. As indicated, Ventura's 2005 population is estimated at 106,096. The population has grown by an estimated 5,180 persons since 2000. This represents an average annual growth rate of 1.00% over the 5-year period. About 97.5% of the City's residents reside in households, with the remainder in group quarters.

Table 3-1
2000 and 2005 Population Estimates

Year	Population		
	Household	Group Quarter	Total
2000	98,546	2,370	100,916
2005	103,435	2,661	106,096

2004 data are used as the baseline for the analysis contained throughout this EIR. The 2005 data have been provided for informational purposes.

Table 3-2
2000 and 2005 Housing Estimates

Year	Housing Units			
	Detached Single Family	Attached Multi-Family	Mobile Homes	Total
2000	22,238	14,942	2,623	39,803
2005	23,110	15,410	2,623	41,143

Source: California Department of Finance, 2005.
(http://www.dof.ca.gov/HTML/DEMOGRAP/E-5a.xls)
2004 data are used as the baseline for the analysis contained throughout this EIR. The 2005 data have been provided for informational purposes.

Ventura's 2005 housing stock is estimated at 41,143 units. An estimated 1,340 units have been added since 2000, which represents an average annual growth rate of about 0.66% over the 5-year period. As of 2005, single family residences make up about 56% of the City's housing stock, while 38% are attached multiple family residences and 6% are mobile homes. The housing vacancy rate has remained steady over the past five years and is estimated at 3.21% (California Department of Finance, 2005).

4.0 ENVIRONMENTAL IMPACT ANALYSIS

This section discusses the potentially significant environmental impacts associated with each of the land use scenarios described in Section 2.0, *Project Description*. A "significant effect" is defined by the *CEQA Guidelines* (Section 15382) as "a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance. An economic or social change by itself shall not be considered a significant effect on the environment, but may be considered in determining whether the physical change is significant."

The assessment of each issue area begins with a description of the setting for the particular issue. The setting describes current conditions within the Planning Area and, as appropriate, the regulatory framework under which that specific issue area is regulated at the federal, state, and/or local level.

Following the setting is the analysis of the potential impacts associated with each of the land use scenarios. Within the impact analysis, the first subsection identifies the methodologies used and the "significance thresholds." Significance thresholds are those criteria adopted by the City or other agencies, which are universally recognized, or are developed specifically for this analysis to determine whether potential effects are significant. The next subsection describes each impact of the proposed project, mitigation measures for significant impacts, and the level of significance after mitigation. At the beginning of each impact discussion is a matrix that provides a summary comparison of the impacts of each scenario. Following the summary matrix is a detailed discussion of impacts. Each effect under consideration for an issue area is separately listed in bold text, with the discussion of the effect and its significance following. Each bolded impact listing also contains a statement of the significance determination for the environmental impact, as follows:

> ***Class I, Unavoidably Significant:*** An impact that cannot be reduced to below the threshold level given reasonably available and feasible mitigation measures. Such an impact requires a Statement of Overriding Considerations to be issued if the project is approved per Section 15093 of the *CEQA Guidelines*.
>
> ***Class II, Significant but Mitigable:*** An impact that can be reduced to below the threshold level given reasonably available and feasible mitigation measures. Such an impact requires findings to be made under Section 15091 of the *CEQA Guidelines*.
>
> ***Class III, Less than Significant:*** An impact that may be adverse, but does not exceed the threshold levels and does not require mitigation measures. However, mitigation measures that could further lessen the environmental effect may be suggested if readily available and easily achievable.
>
> ***Class IV, No Impact or Beneficial:*** An instance in which the project would result in no physical change or an effect that would reduce existing environmental problems or hazards.

When appropriate, the impact analysis describes the impacts of each land use scenario individually. When the impacts of the scenarios are the same or are more easily understood when the scenarios are discussed together, the discussion of the impacts of the three phases consists of a single narrative.

Following each environmental effect discussion is a list of recommended mitigation measures (if required) and the residual effects or level of significance remaining after the implementation of the measures. Because this is a program level document, the mitigation measures consist of new policies and actions that can be added to the General Plan to address potential impacts at a programmatic level. Individual developments that could be accommodated under any of the land use scenarios may require specific mitigation that would be incorporated as part of the subsequent environmental review of the individual project. In those cases where the mitigation measure for an impact could have a significant environmental impact in another issue area, this impact is discussed as a residual effect.

It should be noted that this EIR does not include a separate discussion of cumulative effects because projected growth under the 2005 General Plan constitutes cumulative development; therefore, project and cumulative impacts are one and the same. For issues where cumulative growth in the region would contribute to overall impacts (traffic and noise, for instance), the effects of regional growth have been factored into the analysis of project impacts.

4.1 AESTHETICS and COMMUNITY DESIGN

This section analyzes the 2005 General Plan's potential impacts with respect to aesthetics and community design. Specifically, changes in visual character, impacts to viewsheds, and light and glare are discussed.

4.1.1 Setting

a. Visual Character. The Ventura Planning Area has a wide variety of landscapes and seascapes, including natural, agricultural, and urban components. The major visual components of the community are described below.

Hillsides. The northern portion of the Planning Area consists of the rolling hills and steep mountains of the coastal range. West of the Ventura River, hills form the western and northern boundaries of the Planning Area. Mesas and steep bluffs provide variation and create visual interest. The greatest diversity in the hillside area can be found in and near Harmon and Hall Canyons, where slopes can exceed 60% and the canyons form deep cuts in the landscape. The remaining hillside areas have slopes ranging from 20% to 60%, with scattered mesas and rolling terrain. In addition to providing distinctive views from the urban core looking north, the hillsides provide residents and visitors panoramic views of the City and the ocean. Grant Park affords the best public access to vista points.

The hillsides dominate much of the city landscape and can be seen from throughout the Planning Area. The visual quality of the hillsides is a function of their open space, partially agricultural character, and topographic diversity. The visual condition of the hillsides varies widely depending on whether and how an area has been developed (residential or industrial) and how visible it is. The hills west of the Ventura River have a significant amount of oil production activity that is not screened and is highly visible from portions of West Ventura, including State Route 33. The hillside areas above the Downtown and Midtown communities have substantial residential development, which has significantly altered their visual character. Farther east, the hillsides include a mix of residential communities (Skyline, Ondulando), orchards, and open space.

Shorelines. Ventura's beaches begin at the mouth of the Santa Clara River and continue in a northwesterly direction to Promenade Park at the southern terminus of Figueroa Street. Beyond this point, the beaches become rocky, providing a variation in the visual character of the coastline. The coastline and offshore views exhibit extensive human-made alterations in the form of the Ventura Pier, Ventura Harbor, and several breakwaters along the shore. The coastline offers clear views of the Channel Islands and a distant open horizon that area residents value highly. Most of the area directly inland from the beaches from the Ventura Marina to San Buenaventura State Beach Park is densely developed. This limits travelers' seashore vistas to views along Harbor Boulevard from the state beach to the Holiday Inn, and from U.S. Highway 101, which is elevated in this area. Public views of the shore are also available from state beaches. The Promenade that runs parallel to the shore from the pier to Figueroa Street is a prime public view corridor developed by the City and State to take advantage of the seashore as a scenic resource.

Rivers and Barrancas. The Ventura River and its associated floodplain form a distinctive landmark along the western boundary of the City as it parallels the State Route 33 for several miles. Views of the river from the highway are limited by the levee between the river and the freeway.

The area where the Ventura River flows into the Pacific Ocean offers unique scenic opportunities with changes in vegetation as the floodplain freshwater meets seawater. This estuary provides a distinctive view for pedestrians and bicyclists using the path that parallels the river and for Amtrak travelers crossing the river. Motorists also have an opportunity to see this vista from U.S. 101. Looking north, travelers see the densely vegetated Ventura River and the grass-covered hills when entering or leaving the City.

The Santa Clara River forms the southeastern boundary of the City. The river and adjacent floodplain serve as important visual elements in creating a scenic approach to the City from the south. The river is nearly dry most of the year, exposing an expansive rock and sand streambed interspersed with riparian vegetation. Aside from the visual opportunities provided from the City circulation system, the Santa Clara River is visible only to residents in the southeastern portion of the City along the northern riverbank and to some hillside residents. Human-made features such as sand and gravel operations, maintenance roads, levees, and utility lines are all present, but do not dominate views of the Santa Clara River.

The Planning Area contains several barrancas of varying depth and width that add another visual dimension to the landscape. In their natural state, barrancas are often densely vegetated and provide a pleasant contrast to surrounding urban or undeveloped areas because of their lush green appearance. Several wooded barrancas in the Planning Area enhance the surrounding neighborhoods.

Agricultural Lands and Windrows. Agricultural activity is prevalent in portions of East and West Ventura. Orchards and irrigated row crops create distinctive colored patterns that contrast sharply with the urban landscape and with the wheat-colored grasslands of the hillsides from April through November. Large parcels of farmland in East Ventura are interspersed with suburban residential developments, providing a visual break from the suburban land use pattern.

Windrows are rows of trees planted adjacent to agricultural lands to serve as windbreaks. They function as visual accompaniments to the various agricultural parcels throughout the Planning Area. Tree windrows also serve as reference points or demarcation lines within the community. Finally, they preserve a sense of the local heritage and contribute to the aesthetics of the City.

b. View Corridors. Principal travel corridors are important to an analysis of aesthetic features because they define the vantage points for the largest number of views. The following routes in the Planning Area have particular scenic value:

- *State Route 33*
- *State Route 126*
- *U.S. Highway 101*
- *Anchors Way*
- *Brakey Road*
- *Fairgrounds Loop*
- *Ferro Drive*
- *Figueroa Street*
- *Harbor Boulevard*
- *Main Street*
- *Navigator Drive*
- *North Bank Drive*
- *Poli Street/Foothill Road*
- *Olivas Park Drive*
- *Schooner Drive*
- *Spinnaker Drive*
- *Summit Drive*
- *Telegraph Road east of Victoria Avenue*
- *Victoria Avenue South of Highway 101*
- *Wells Road*

Railroads and Roadways that serve as important view corridors are shown on Figure 4.1-1 and described below.

State Route 33. State Route 33 is the primary route linking Ventura to the Ojai Valley to the north. This highway runs along the Ventura River at the western boundary of the City. Travelers entering or leaving the City along this route have views of the hillsides. Where State Route 33 meets U.S. 101, views of the Pacific Ocean and beaches are available.

U.S. Highway 101. U.S. 101 is the major public viewing corridor traversing the City in a northwest/southeast direction. Within the City, U.S. 101 generally runs parallel to the shoreline with foreground views to the east of the City and background views of the hillsides behind the City. To the west, views of the ocean, beaches, and harbor are intermittent along the highway.

State Route 126. State Route 126, also known as the Santa Paula Freeway, is the primary route linking Ventura to Santa Paula and points farther east. The highway runs through the eastern portion of the City and, traveling east, it offers background views of the hillsides behind the City.

Brakey, Summit, and Ferro Drives. These roads are within Grant Park and offer views of the hillsides, Pacific Ocean, and the City.

Fairgrounds Loop. The road encircles the Ventura County Fairgrounds. Portions of the road offer views of Surfers Point Park and the Pacific Ocean.

Figueroa Street. This road connects the shoreline to the downtown in the northern portion of the City. Traveling south on this road offers views of the Pacific Ocean and shoreline. Northbound travelers can view the hillsides as a background to the City.

Harbor Boulevard. Harbor Boulevard runs parallel to U.S. 101 in the western portion of the City and along the harbor area in the southwestern portion of the City. In the west, there are views of the San Buenaventura State Beach, the Ventura Pier, and the Pacific Ocean. In the southwest, Harbor Boulevard offers views of the Ventura Harbor and the ocean.

Main Street. Main Street links neighborhoods and districts within the City together, running through the Downtown and Midtown areas. Views of historic buildings, parks, and the surrounding hillsides are intermittent along this corridor.

Navigator Drive, Spinnaker Drive, Schooner Drive, and Anchors Way. These roads, adjacent to the Ventura Harbor, offer views of the Pacific Ocean, the Harbor itself, and marine related activities.

North Bank Drive. North Bank Drive crosses through suburban residential neighborhoods in East Ventura along the north bank of the Santa Clara River. Portions of North Bank Drive offer views of agricultural activity and the Santa Clara River.

Poli Street/Foothill Road. Poli Street runs through the downtown past the historic City Hall and the San Buenaventura Mission. Foothill Road, in many places, is the boundary of urban development, separating it from the hillsides to the north. This corridor has aesthetic value because of the views of historic structures and unobstructed views of the hillsides.

Olivas Park Drive. Olivas Park Drive connects the Harbor area to the southern portion of the City to the east. The road travels through the agricultural area between the southern edge of the City and the Santa Clara River and provides views of this area as well as the hillsides as a backdrop to the City.

Telegraph Road east of Victoria Avenue. East of Victoria Avenue, Telegraph Road crosses through a mix of agricultural and residential suburban areas. Portions of this road offer views of the foothills to the north.

Victoria Avenue south of U.S. 101. This section of Victoria Avenue crosses the Santa Clara River, and continues south to Oxnard. This road offers views of agricultural areas in the south and the foothills north of the City.

Wells Road. Wells Road is in the eastern part of the City and runs between the hills to the north and SR 126. This road provides views of the hills and agriculture areas on the east side of the road at the base of the hills.

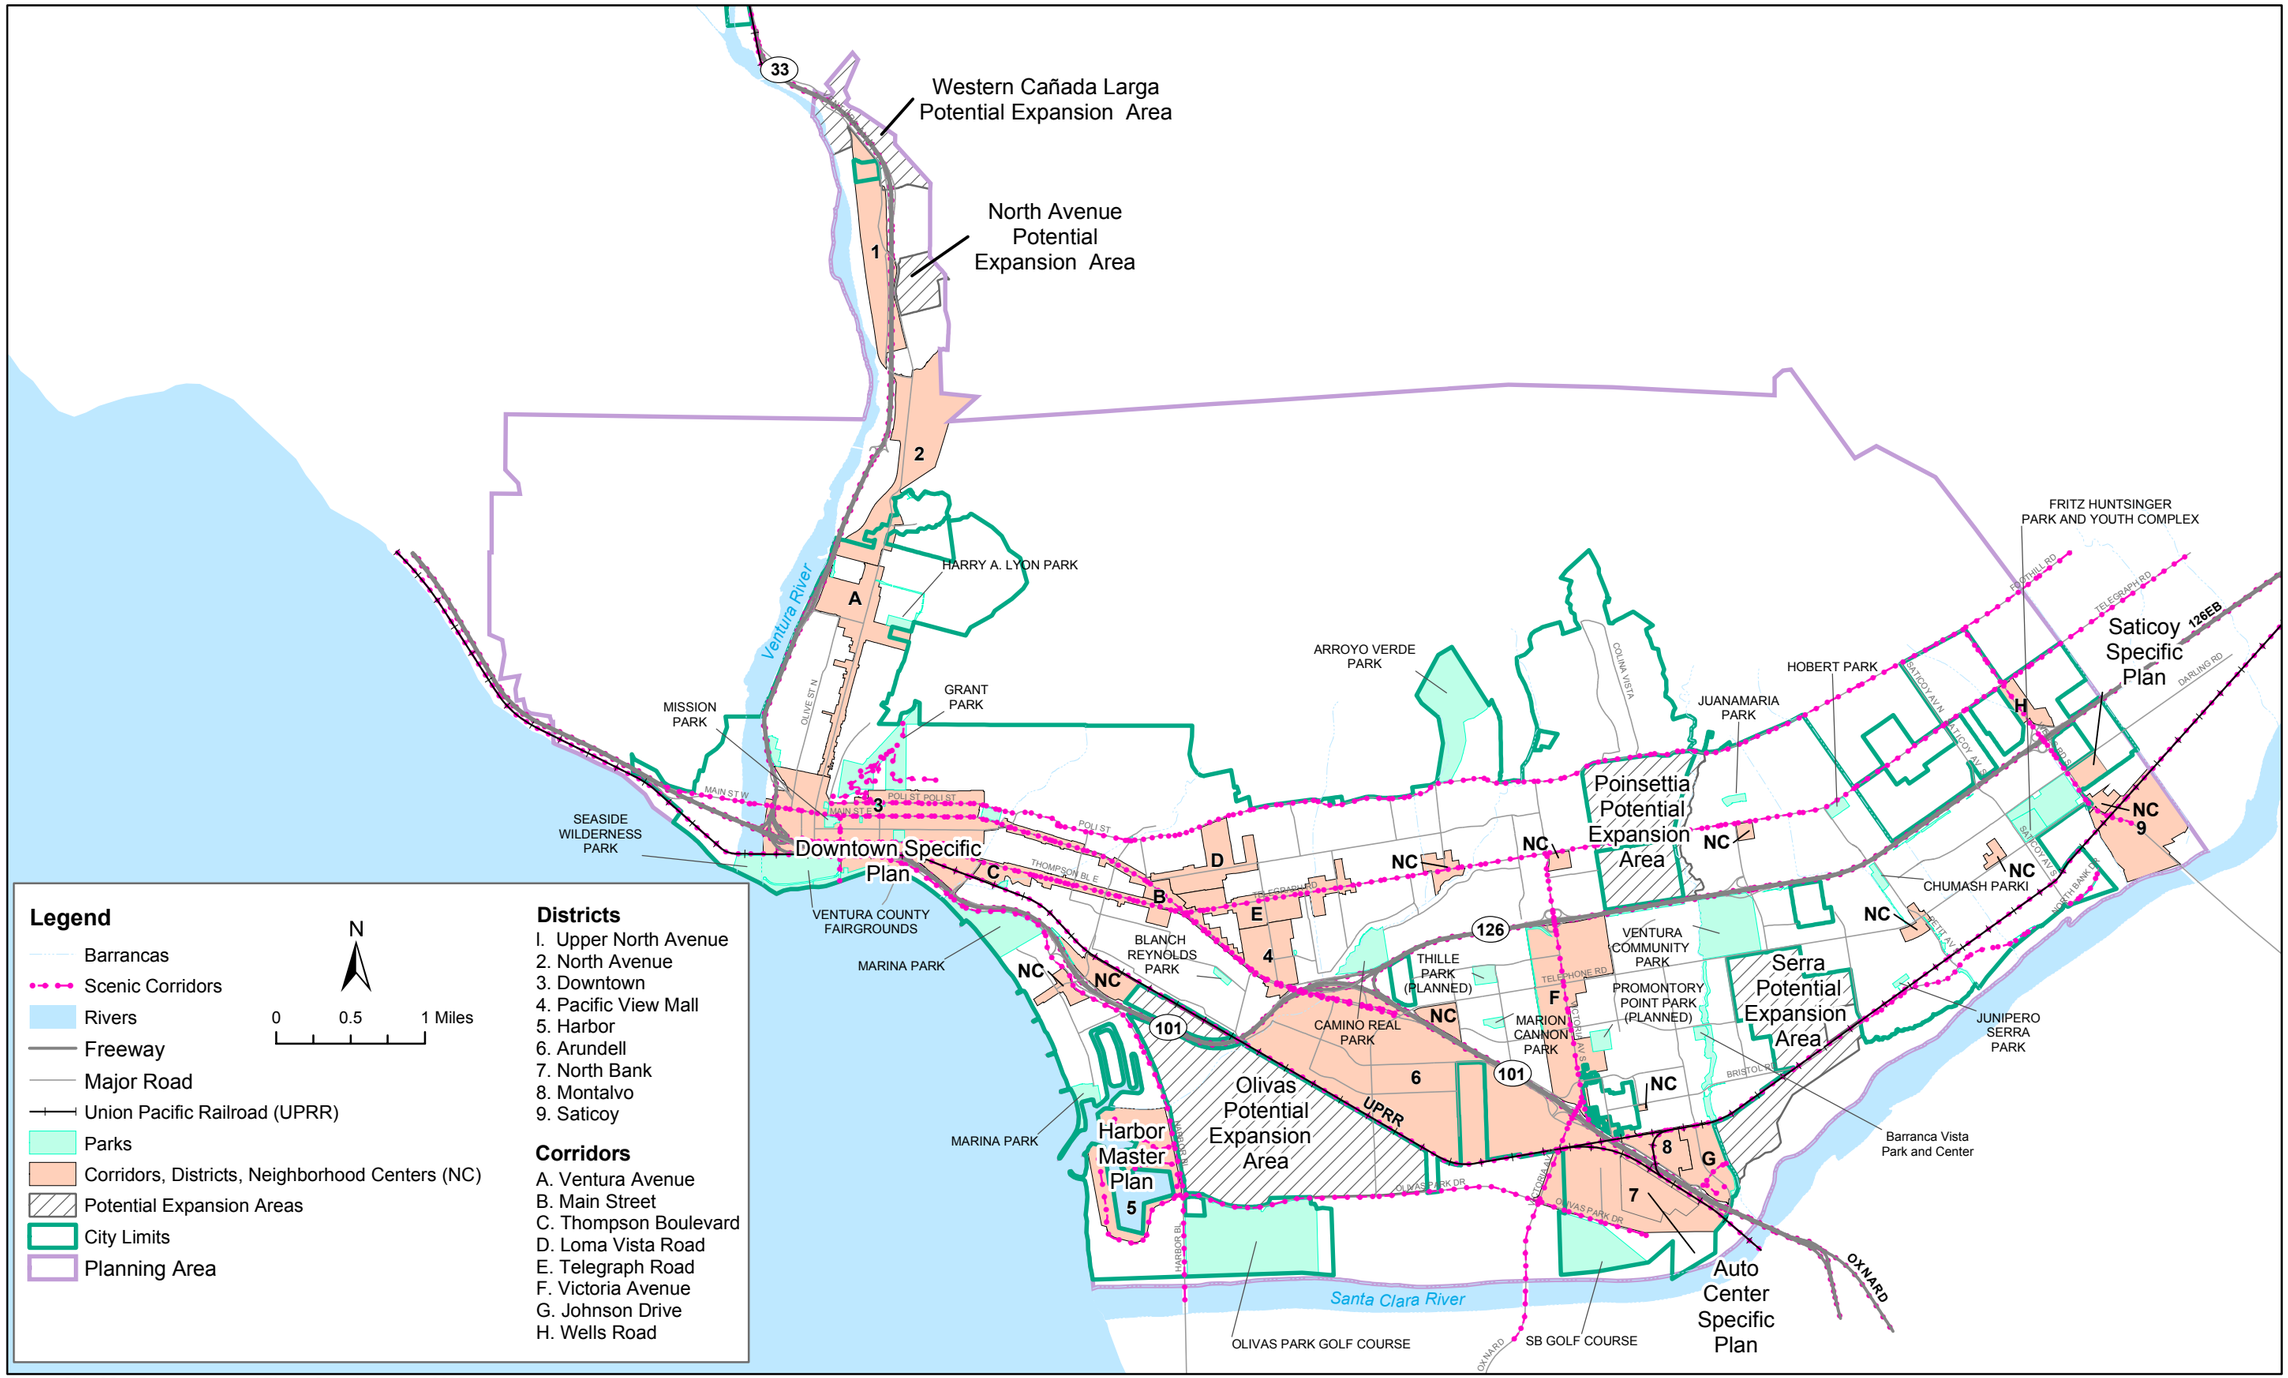
Union Pacific Rail Corridor. The Union Pacific Railroad (UPRR) runs parallel to U.S 101, crossing over the highway in the northern portion of the City. Currently, the rail line is used for both freight and interstate passenger service. Views of the City, surrounding hillsides, and the Pacific Ocean are intermittent along the corridor.

c. Districts and Corridors. The proposed land use map identifies a number of districts and corridors that are anticipated to be the focus of land intensification and reuse through 2025. These districts and corridors are shown on Figures 2-3 through 2-8 in Section 2.0, *Project Description*. The general visual characteristics of these districts and corridors are described below.

Districts. A neighborhood or parts of neighborhoods can form a district. Districts consist of streets or areas emphasizing specific types of activities. A corridor may also be a district, such as when a major shopping avenue runs between adjoining neighborhoods. The following districts are depicted on the General Plan Diagram:

1. **Upper North Avenue.** This area, located primarily along the west side of SR 33 and outside the current City limits, includes an educational institute and a mix of industrial uses, including an abandoned oil refinery. It is a transitional area between the more urban areas to the south and more rural areas to the north. The area includes a number of vacant properties. The Ventura River and hills to the west are key visual features.

2. **North Avenue.** A mix of oilfield, industrial, and residential development characterizes this district, which is located north of the current City limits and east of SR 33. The area includes a number of vacant properties and abandoned businesses, with relatively low visual quality.



Source: City of San Buenaventura and Rincon Consultants, Inc., 2005.

Scenic Corridors Figure 4.1-1

City of Ventura

3. **Downtown.** This is the most intensely developed area of the City and its central core. Downtown is characterized by a mix of retail, office, and residential uses, with some industrial uses present in the west end of the district. The area has seen intensification of both commercial and residential use, and this pattern is anticipated to continue.

4. **Pacific View Mall.** This district encompasses an enclosed shopping mall and adjacent commercial uses along Telegraph and Mills Roads. The area is a focal point of commercial activity in the City as well as a transit hub.

5. **Harbor.** This district includes the Ventura Harbor Village, other visitor-serving uses, and various harbor-related facilities, as specified in the Harbor Master Plan. The area is planned for intensification of use, with new residential, hotel, and recreational developments intended to complement the current uses in the area and facilitate greater use of the Harbor as a community amenity.

6. **Arundell.** This is an industrial district characterized by a mix of primarily small-scale industrial uses, business park development, and limited retail services. Buildings generally emphasize function over form. Areas of agricultural activity remain and are highly visible from U.S. 101. Suburban-scaled retail development is located in the northern portion of this district along the south side of Telephone Road.

7. **North Bank.** This district includes a mix of automobile retail and industrial/business park uses. The auto center and other uses within this area are highly visible from U.S. 101.

8. **Montalvo.** This district includes a mix of older industrial and generally heavier commercial uses. The area, highly visible to U.S. 101 northbound travelers, exhibits relatively low visual quality.

9. **Saticoy.** This district contains a mix of older industrial and agricultural operations, as well as a small residential area. Much of the area east of Route 118 is in agriculture, and there is a neighborhood center that anchors the north end of this district.

Corridors. Corridors often form boundaries, as well as connections, between neighborhoods and/or districts. Corridors frequently encompass major access routes, especially ones with commercial destinations. Corridors also can incorporate parks or natural features such as streams or canyons. The following corridors are depicted on the General Plan Diagram:

A. **Ventura Avenue.** A mix of older, small-scale commercial, industrial, and residential uses characterizes this corridor. The corridor retains a pedestrian scale. The corridor has been undergoing visual improvements over the past several years (newer developments, removal of overhead power lines), though a large number of buildings that are either vacant or lacking maintenance remain.
B. **Main Street.** This is primarily a commerce-oriented corridor with a limited amount of mixed residential/commercial development. Development consists

of one- to two-story buildings at a relatively urban intensity. Buildings are generally well-maintained throughout the corridor, though landscaping is sparse in some areas.

C. **Thompson Boulevard.** This is primarily a commerce-oriented corridor with a limited amount of mixed residential/commercial development. The intensity of development is lower than along Main Street, with a high number of auto dealerships and large parking areas.

D. **Loma Vista Road.** This corridor is characterized by a mix of commercial and residential development at varying scales, with a high concentration of medical facilities, including two hospitals. Other than the hospitals, development consists primarily of one- and two-story buildings.

E. **Telegraph Road.** This corridor is characterized primarily by suburban-scale commercial development, with some single-family and multifamily residences. Some portions of this corridor are characterized by "zero lot line" development with on-street parking. Other developments are more suburban scaled.

F. **Victoria Avenue.** This corridor consists of a wide arterial roadway that accommodates high traffic volumes at relatively high speeds. It is primarily characterized by newer large-scale, suburban shopping centers and other retail development, though single-family residential development is also present on the east side in some areas.

G. **Johnson Drive.** This is a relatively high-speed travel corridor that connects East Ventura to U.S. 101. The corridor is characterized by suburban-scale retail development. A number of vacant parcels are present near the U.S. 101 interchange.

H. **Wells Road.** A mix of older industrial uses and newer suburban commercial and residential development characterizes this corridor. Over the past several years, this area has been undergoing a transition toward a mix of suburban-scale residential and retail uses.

d. Light and Glare. The majority of the Planning Area is urban and includes outdoor lighting associated with development. Light pollution is present in and around the City, particularly in the vicinity of development, but it is still fairly localized. Nighttime illumination is currently generated by streetlights and vehicular lights associated with roadways, as well as housing developments. Other prominent sources of light within the City include the fairgrounds, parks with sports fields, and the auto center along U.S. 101, where there is a concentration of auto sales businesses. Glare is created by exterior building materials, surface paving materials, and vehicles traveling or parked on roads and driveways. Any highly reflective facade materials are of particular concern, as buildings reflect sunlight.

e. Regulatory Setting. Development in the City is subject to the following regulatory programs aimed in part at the preservation of the community's visual character.

Zoning Ordinance. The Zoning Ordinance implements the 1989 Comprehensive Plan by establishing setback, parking and sign standards, building height limits, hillside development restrictions, and building densities.

Hillside Management Program. The Hillside Management Program sets forth a slope/density formula to be used in determining the appropriate density of development in the Hillside Area. In addition, this land use designation requires that any proposed project meet the objectives, policies, and submittal requirements contained in the Hillside Management Program.

SOAR Ordinance. The City's Save Our Agricultural Resources (SOAR) Ordinance, adopted by the voters in 1995, prevents changes in specified land use designation unless the land use change is approved by a majority of voters. A number of agricultural and open space areas in East Ventura and West Ventura, including all of the North Avenue, Olivas, and Serra, Poinsettia expansion areas and a portion of the Western Cañada Larga expansion area are subject to the SOAR Ordinance.

4.1.2 Impact Analysis

a. Methodology and Significance Thresholds. The assessment of aesthetic impacts involves qualitative analysis that is inherently subjective in nature. Different viewers react to viewsheds and aesthetic conditions differently. This evaluation measures the existing visual environment against the proposed action, analyzing the nature of the anticipated change.

An impact is considered significant if year 2025 buildout development under a proposed General Plan land use scenario would result in one or more of the following conditions, which are based upon the environmental checklist in Appendix G of the *CEQA Guidelines*:

- *A substantial adverse effect on a scenic vista*
- *Substantial damage to scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings*
- *Substantial degradation of the existing visual character of quality of the community*
- *New sources of light or glare that would adversely affect day or nighttime views*

b. Project Impacts and Mitigation Measures. The matrix on the following page provides a summary comparison of impacts for each of the six 2005 General Plan land use scenarios. A discussion of the impacts for each scenario follows.

Summary Comparison of Impacts for EIR Scenarios

	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
Visual Character Changes (Impact AES-1)	Intensification and reuse would generally enhance visual character by adding appropriately scaled infill development and would reduce pressure for development at the City's periphery. However, the conversion of agricultural lands in the Saticoy and Arundell areas would transform the character of these areas. Impacts are Class I, unavoidably significant.	Intensification/reuse impacts would be similar to Scenario 1. Possible future conversion of the North Avenue, Olivas, and Serra expansion areas would further the transformation toward a more urban community. Impacts are Class I, unavoidably significant.	Intensification/reuse impacts would be similar to Scenario 1. Possible future conversion of the North Avenue and Olivas expansion areas would further the transformation toward a more urban community. Impacts are Class I, unavoidably significant.	Intensification/reuse impacts would be similar to Scenario 1. Possible future conversion of the North Avenue and Serra expansion areas would further the transformation toward a more urban community. Impacts are Class I, unavoidably significant.	Intensification/reuse impacts would be similar to Scenario 1. Possible future conversion of the North Avenue and Western Cañada Larga expansion areas would further the transformation toward a more urban community. Impacts are Class I, unavoidably significant.	Intensification/reuse impacts would be similar to Scenario 1. Possible future conversion of the North Avenue and Poinsettia expansion areas would further the transformation toward a more urban community. Impacts are Class I, unavoidably significant.
Alteration of Views (Impact AES-2)	Intensification/reuse development generally would not substantially alter public views and may enhance views from some locations. However, the conversion of highly visible agricultural lands along U.S. 101 and SR 126 would alter views from these major view corridors. Impacts are Class I, unavoidably significant.	Intensification/reuse impacts similar to Scenario 1. Possible future development of the North Avenue, Olivas, and Serra areas would alter views from U.S. 101, SR 33, Harbor Boulevard, Union Pacific Railroad, Telephone Road, and Bristol Road. Impacts are Class I, unavoidably significant.	Intensification/reuse impacts similar to Scenario 1. Possible future development of the North Avenue and Olivas areas would alter views from U.S. 101, SR 33, Harbor Boulevard, and Union Pacific Railroad. Impacts are Class I, unavoidably significant.	Intensification/reuse impacts similar to Scenario 1. Possible future development of the North Avenue and Serra areas would alter views from SR 33, Telephone Road, and Bristol Road. Impacts are Class I, unavoidably significant.	Intensification/reuse impacts similar to Scenario 1. Possible future development of the North Avenue and Western Cañada Larga areas would alter views from SR 33. Impacts are Class I, unavoidably significant.	Intensification/reuse impacts similar to Scenario 1. Possible future development of the North Avenue and Poinsettia areas would alter views from SR 33, SR 126, Telegraph Road, and Foothill Road. Impacts are Class I, unavoidably significant.

Summary Comparison of Impacts for EIR Scenarios

	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
Light and Glare (Impact AES-3)	Intensification/reuse would incrementally increase lighting levels in districts and corridors and introduce residential development in heavily lighted areas. Implementation of General Plan actions reduces impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Possible future expansion area development would increase overall light levels, but would not significantly affect sensitive uses. Implementation of General Plan actions reduces impacts to Class III, less than significant.	Impacts similar to Scenario 2 and Class III, less than significant.	Impacts similar to Scenario 2 and Class III, less than significant.	Impacts similar to Scenario 2 and Class III, less than significant.	Impacts similar to Scenario 2 and Class III, less than significant.

Impact AES-1	**All six General Plan land use scenarios emphasize intensification and reuse of already urbanized lands and would therefore create a more densely settled, urban environment in some areas of the City. The reuse of urbanized areas in lieu of further growth at the City's periphery would be expected to generally enhance the visual character of the community and minimize impacts to existing natural and agricultural areas and is generally considered a beneficial effect. Nevertheless, all of the scenarios would change the visual character of the community and would accommodate the conversion of some agricultural lands in the Planning Area to urban uses. This change in visual character is considered Class I, *unavoidably significant*, under any of the six scenarios.**

All of the six land use scenarios under consideration emphasize intensification and reuse of already developed areas of the Planning Area prior to developing agricultural lands or other areas at the urban fringe. The intensification of land use anticipated to occur as the City grows over time may be considered an adverse effect to some viewers due to the presence of larger and taller buildings and the corresponding reduction in open land within the City's urban framework. However, the reuse and intensification of already developed areas would be expected to reduce the pressure for development at the City's periphery, thus minimizing the potential for the loss of open lands surrounding the City. Notably, by seeking to remove the hillside areas above the City from the SOI, the City indicates no intention to seek or accommodate development of those areas, thus largely preserving these important visual features of the City in their current undeveloped condition. Areas where hillside development could occur would be limited to a small area above Poli Street/Foothill Road that is within the City limits. This area, known as Mariano Ranch, is not highly visible from any public view area. The focus on intensification and reuse would also be expected to minimize pressure to develop agricultural properties within the Planning Area.

Much of the intensification and reuse that would be anticipated under any of the land use scenarios would also generally be expected to enhance the visual character of the community. In particular, it is anticipated that future developments in the West Ventura area, Downtown, and the Midtown travel corridors (Main Street and Telegraph Road) would enhance the visual quality of these areas by adding attractive infill developments with new landscaping and other amenities. Figure 4.1-2 shows examples of the types of infill development projects anticipated to occur under any scenario.

The 2005 General Plan includes the following policies and actions intended to enhance the appearance of the community.

Policy 3A *Sustain and complement cherished community characteristics.*

Photo 1 - Casa de Anza Apartment building on Ventura Avenue, with a ground floor library and apartments above. This is the type of intensification/ reuse project anticipated for the Ventura Avenue corridor.

Photo 2 - New mixed-use development on Poli Street in Downtown Ventura, with ground floor commercial uses and residences above. This project typifies the intensity and style of development anticipated for the Downtown district.

Intensification/Reuse Examples

Figure 4.1-2

City of Ventura

Action 3.2	*Enhance the appearance of districts, corridors, and gateways (including views from highways) through controls on building placement, design elements, and signage.*
Action 3.5	*Establish land development incentives to upgrade the appearance of poorly maintained or otherwise unattractive sites, and enforce existing land maintenance regulations.*
Policy 3C	*Maximize use of land in the city before considering expansion.*
Action 3.14	*Utilize infill, to the extent possible, development to accommodate the targeted number and type of housing units described in the Housing Element.*
Action 3.16	*Renew and modify greenbelt agreements as necessary to direct development to already urbanized areas.*
Action 3.17	*Continue to support the Guidelines for Orderly Development as a means of implementing the General Plan, and encourage adherence to these Guidelines by all the cities, the County of Ventura, and the Local Agency Formation Commission (LAFCO); and work with other nearby cities and agencies to avoid urban sprawl and preserve the rural character in areas outside the urban edge.*
Policy 3E	*Ensure the appropriateness of urban form through modified development review.*
Action 3.23	*Develop and adopt a form-based Development Code that emphasizes pedestrian orientation, integration of land uses, treatment of streetscapes as community living space, and environmentally sensitive building design and operation.*

Although the effect of much of intensification and reuse would generally be beneficial, any of the six scenarios would allow for conversion of agricultural lands in the Planning Area to urban uses. Many viewers would see this change in visual character as a negative aesthetic effect; therefore, impacts are considered significant for any of the scenarios. A discussion of the specific impacts of each scenario follows.

Scenario 1 – Intensification/Reuse Only

This scenario would emphasize land intensification and reuse within the nine districts and eight corridors described in the *Setting*. Though any of the districts and corridors could theoretically undergo major intensification under the land use plan for this scenario, it is anticipated that the major growth areas would include the Ventura Avenue corridor, Downtown, and the Midtown area (Main Street and Thompson Boulevard corridors and the Pacific View Mall district). Intensification within these areas would create a more urban appearance, but would be expected to generally enhance the character of the areas by adding appropriately scaled infill development that emphasizes mixed use, neighborhood character, and walkability. Actions 3.2 and 3.5 would facilitate the general improvement in the visual character of community districts and corridors. Nevertheless, the visual character of portions of the Planning Area would change to that of a more intensely developed, urban community.

The North Avenue, Upper North Avenue, Arundell, and North Bank districts would accommodate the majority of future industrial/business park development. New development would generally enhance the visual character of the North Avenue and Upper North Avenue districts by replacing abandoned and deteriorating oil-related businesses (including the Petrochem refinery) with new industrial development. Such new development would have a less dramatic effect on the visual character of the Arundell and North Bank districts, but would be expected to generally enhance visual conditions in these areas.

Though the visual effects of implementing this scenario are generally expected to be positive, Scenario 1 would accommodate the conversion of a number of agricultural properties within Planning Area to urban uses. These areas, discussed in detail in Section 4.2, *Agricultural Resources*, include more than 300 acres of farmland in the Saticoy area, the 75-acre McGrath property in the Arundell district, and a 25-acre agricultural parcel near the U.S. 101/SR 126 interchange. Several agricultural parcels are highly visible from U.S. 101 and/or SR 126 and provide visual relief to both freeway travelers and area residents. The visual change associated with conversion is not necessarily adverse and many of the agricultural lands are largely or completely surrounded by urban land uses. Nevertheless, the complete change in character of these areas is considered a significant visual impact.

Scenario 2 - Intensification/Reuse + North Avenue + Olivas + Serra

This scenario would accommodate all of the visual changes that could occur under Scenario 1. This scenario also includes three potential expansion areas – North Avenue, Olivas, and Serra – that potentially could be developed in the future. All three of the expansion areas are currently used for agricultural production. Thus, development of these areas with a mix of residential, retail, and office uses would involve a complete transformation of the areas' visual character. Photographs of the three areas are shown on Figures 4.1-3 through 4.1-5. The North Avenue area is highly visible from SR 126, while portions of the Olivas area are highly visible to both northbound and southbound travelers on U.S. 101 as well as travelers on Harbor Boulevard.

The Olivas area also includes large eucalyptus windrows along Harbor Boulevard that could potentially be removed if the area is developed. The Serra area is not highly visible from any freeway, but can be readily viewed from Telephone Road, Bristol Road, and a number of private residences surrounding the area.

The impact upon the visual character of the expansion areas is considered significant due to the complete change in visual character that could occur in any of the areas. Implementation of General Plan Action 1.21 would reduce the impact of this visual change, particularly for the Olivas area, by requiring the preservation of healthy tree windrows and incorporation of trees into the design of new developments. It should also be noted that this scenario includes substantially more land (1,423 acres) than would be needed to accommodate the level of growth anticipated through 2025 under this scenario. Therefore, it is likely that either: (1) not all of the expansion areas would actually be converted within the timeframe of the 2005 General Plan; or (2) any development could include wide areas of open space that could either allow portions of the areas to remain in agriculture or allow for large areas of civic spaces (parks) that would soften the visual effects of any future development. It should again be noted that the SOAR Ordinance would require a public vote approving a change in land use designation for any of the expansion areas.

Photo 3 - Olivas expansion area looking northwest from northbound U.S. 101. This portion of the Olivas area is highly visible to northbound travelers.

Photo 4 - Olivas expansion area looking southeast from southbound U.S. 101. Views of most of the Olivas area are available sporadically to southbound travelers.

Photo 5 - Olivas expansion area looking northeast from Harbor Boulevard. Much of the Harbor Boulevard corridor is lined with eucalyptus trees that provide a distinctive visual character.

Photo 6 - Channelized Arundell Barranca, which traverses the Olivas area. This channel could potentially be returned to a quasi-natural condition if the Olivas area is developed.

Olivas Expansion Area

Figure 4.1-3

Photo 7 - Serra expansion area looking east from Ramelli Avenue. This expansion area consists almost entirely of agricultural land, but is surrounded by residential development.

Photo 8 - Serra expansion area looking east from eastbound Bristol Road. The area sough of Bristol Road fronts the Santa Clara River.

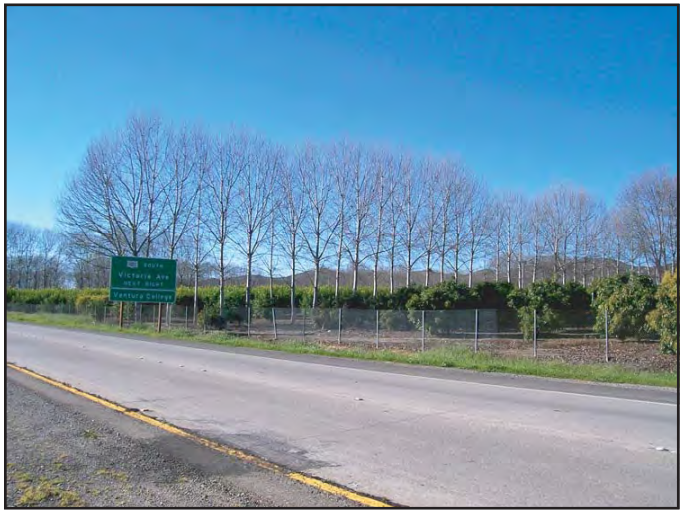


Photo 9 - Poinsettia expansion area looking northwest from SR 126. This area is planted in orchards and also includes several visually distinctive poplar windrows.

Photo 10 - Poinsettia expansion area looking south from Foothill Road. The Foothill Road corridor provides expansive views of the Poinsettia area and points beyond, including the Pacific Ocean.

Serra and Poinsettia Expansion Areas

Figure 4.1-4

Photo 11 - North Avenue expansion area looking southeasterly from Ventura Avenue. The entire expansion area is visible to travelers on Ventura Avenue.

Photo 12 - North Avenue expansion area looking northeasterly from SR 33. Much of the expansion area is visible to both northbound and southbound travelers on SR 33.

Photo 13 - Western Cañada Larga expansion area looking northeasterly from northbound SR 33. Portions of the hillside area fronting the freeway were graded for the construction of SR33 and could potentially be re-graded and developed if this expansion area is selected.

Photo 14 - Agricultural land adjacent to the Western Canada Larga expansion area looking south from SR 33. This area is within the Upper North Avenue District and is currently designated Industrial.

North Avenue and Western Cañada Larga Expansion Areas

Figure 4.1-5

Scenario 3 – Intensification/Reuse + North Avenue + Olivas

Scenario 3 would accommodate all of the visual changes that could occur under Scenario 1. This scenario also includes two potential expansion areas – North Avenue and Olivas – that potentially could be developed in the future. Visual impacts associated with the potential conversion of these areas would be similar to those described under Scenario 2 and are considered significant. Similar to Scenario 2, this scenario would include more land than would be necessary to accommodate anticipated growth through 2025. As noted under Scenario 2, the SOAR Ordinance would require a public vote approving a change in land use designation for either expansion area.

Scenario 4 – Intensification/Reuse + North Avenue + Serra

Scenario 4 would accommodate all of the visual changes that could occur under Scenario 1. This scenario also includes two potential expansion areas – North Avenue and Serra – that potentially could be developed in the future. Visual impacts associated with the potential conversion of these two areas would be similar to those described under Scenario 2 and are considered significant. As noted under Scenario 2, the SOAR Ordinance would require a public vote approving a change in land use designation for either expansion area.

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga

Scenario 5 would accommodate all of the visual changes that could occur under Scenario 1. This scenario also includes two potential expansion areas – North Avenue and Western Cañada Larga – that potentially could be developed in the future. Visual impacts associated with the potential conversion of the North Avenue area would be similar to those described under Scenario 2 and are considered significant. The Western Cañada Larga area consists primarily of grazing land that has been disturbed by past activity. This expansion area also includes a small area of irrigated agriculture west of SR 33. Cañada Larga is semi-rural in character and is within a transitional area between the suburban/urban areas to the south and undeveloped hills to the north. The conversion of the area would represent a complete change in visual character, which is considered a significant impact.

It should be noted that this scenario includes relatively little expansion area land (about 165 acres, about 30 acres of which are within the Ventura River floodplain). The only way that these areas could accommodate the 2,700 residential units assumed to occur within the expansion areas would be to develop the areas with all high density development (30 units per acre or more). This probably is not a realistic land use pattern for this area and would be out of character with the semi-rural nature of the area. Therefore, Section 6.0, *Alternatives*, considers an alternative land use pattern for this area that would allow for less intense development of the North Avenue and Western Cañada Larga areas.

Scenario 6 – Intensification/Reuse + North Avenue + Poinsettia

Scenario 6 would accommodate all of the visual changes that could occur under Scenario 1. This scenario also includes two potential expansion areas – North Avenue and Poinsettia – that potentially could be developed in the future. Visual impacts associated with the potential conversion of the North Avenue area would be similar to those described under Scenario 2 and

are considered significant. The Poinsettia area is also in agricultural production (orchards) and is highly visible from portions of SR 126, Telegraph Road, and Foothill Road, as well as from residential areas to the west, north, and east. This area includes several poplar windrows that provide an important visual feature that could potentially be lost if the area is developed in the future. General Plan Action 1.23 would require preservation of these windrows, thus partially mitigating the impact of the visual change. The visual change associated with the possible conversion of this area is considered a significant impact.

MITIGATION MEASURES

Changing the fundamental character of the areas to be converted from agricultural and open space uses to urban use cannot be avoided if these areas are to be developed. Each of the proposed growth scenarios focuses development on intensification of the existing urban areas and encourages infill over city expansion. In addition, Actions 1.22 and 1.23 require the preservation of mature trees and agricultural windrows.

SIGNIFICANCE AFTER MITIGATION

Any of the six scenarios would be expected to generally improve visual conditions in the Planning Area, but would accommodate the conversion of agricultural land within the Planning Area to urban uses. This change in the visual character of agricultural lands is a significant impact that cannot be avoided outside of leaving the properties in agriculture. Among the six scenarios, Scenario 1 would accommodate the least amount of agricultural land conversion and would only accommodate conversion of lands that are already designated for urban uses. Scenario 2 would accommodate the greatest amount of agricultural land conversion among the six scenarios.

Impact AES-2	**Development that would be accommodated under any of the 2005 General Plan land use scenarios would potentially alter and/or block views from various public view corridors. The magnitude of impact would vary among the scenarios and the 2005 General Plan includes several policies and actions to preserve public views. Nevertheless, the impact of all six scenarios is considered Class I, *unavoidably significant*.**

By emphasizing intensification and reuse of already developed lands, all six land use scenarios would minimize the potential to alter identified scenic resources. In particular, by seeking to remove the hillsides above the City from the SOI, the 2005 General Plan would avoid altering views of this important visual feature. Nevertheless, development that could be accommodated under any of the six scenarios would potentially alter views of such visual resources as the Pacific Ocean and agricultural land from scenic corridors in the Planning Area. A discussion of the potential impacts associated with each land use scenario follows. In addition to the policy and actions listed under Impact AES-1, the 2005 General Plan includes the following actions intended to minimize impacts to view sheds.

Policy 1B *Increase the area of open space protected from development impacts.*

Action 1.8 *Buffer barrancas and creeks that retain natural soil slopes from development according to State and Federal guidelines.*

Action 1.11 *Require that sensitive wetland and coastal areas be preserved as undeveloped open space wherever feasible and that future developments result in no net loss of wetlands or "natural" coastal areas.*

Action 1.12 *Update the provisions of the Hillside Management Program as necessary to ensure protection of open space lands.*

Action 1.13 *Recommend that the City's Sphere of Influence boundary be coterminous with the existing City limits in the hillsides in order to preserve the hillsides as open space.*

Action 3.3 *Require preservation of public viewsheds and solar access.*

Policy 4D *Protect views along scenic routes.*

Action 4.36 *Require development along the following roadways – including noise mitigation, landscaping, and advertising – to respect and preserve views of the community and its natural context.*

- *State Route 33*
- *U.S. Highway 101*
- *Anchors Way*
- *Brakey Road*
- *Fairgrounds Loop*
- *Ferro Drive*
- *Figueroa Street*
- *Harbor Boulevard*
- *Main Street*
- *Navigator Drive*
- *North Bank Drive*
- *Poli Street/Foothill Road*
- *Olivas Park Drive*
- *Schooner Drive*
- *Spinnaker Drive*
- *Summit Drive*
- *Telegraph Road – east of Victoria Avenue*
- *Victoria Avenue – south of U.S. 101*
- *Wells Road*

Action 4.37 *Request that State Route 126 and 33, and U.S. HWY 101 be designated as State Scenic Highways.*

Action 4.38 *Continue to work with Caltrans to soften the barrier impact of U.S. Highway 101 by improving signage, aesthetics and undercrossings and overcrossings.*

Scenario 1 – Intensification/Reuse Only

In general, the intensification and reuse of lands that would be accommodated under Scenario 1 would avoid substantial alteration of scenic resources. However, new development could potentially block views of the Pacific Ocean or the hillsides above the City from certain identified scenic corridors. For example, three- to four-story development that could be accommodated in the Downtown district could potentially block ocean views from portions of Poli Street. In addition, similarly scaled development along the north sides of the Main Street and Thompson Boulevard corridors could potentially block existing views of the hillsides to the north from some vantage points. View changes in these areas are not considered significant since the view blockage would only be sporadic and because the change in views along the corridors is generally expected to be enhanced by the presence of attractive infill development.

As discussed under Impact AES-1 and in Section 4.2, *Agricultural Resources*, this scenario would accommodate development of a number of agricultural lands that are visible from U.S. 101 and SR 126. Notable conversions include the McGrath property in the Arundell district, a 25-acre agricultural parcel near the U.S. 101/SR 126 interchange, and agricultural lands east of Wells Road in the Saticoy community. Conversion of these highly visible agricultural lands would alter views from these scenic corridors. The overall image of the community from U.S. 101 and SR 126 would not change dramatically under this scenario and implementation of Actions 4.36 through 4.38 would minimize the impact of agricultural land conversion from scenic corridors. Nevertheless, the incremental change associated with the conversion of remaining agricultural lands visible from important view corridors is considered a significant impact.

Scenario 2 – Intensification/Reuse + North Avenue + Olivas + Serra

All of the view corridor changes that would occur under Scenario 1 would also occur under Scenario 2. In addition, this scenario includes the North Avenue, Olivas, and Serra expansion areas, each of which is currently in agricultural production. The North Avenue expansion area is occupied by an orchard and is in a semi-rural portion of the SR 33 corridor. The Olivas area can be readily viewed from U.S. 101, Harbor Boulevard, and the Union Pacific Railroad. The Serra area is not highly visible from any freeway corridor, but is highly visible from portions of Telephone Road and Bristol Road/North Bank Drive. Among the three expansion areas, conversion of the Olivas area would affect the largest number of viewers because of its proximity to U.S. 101. Conversion of the portion of the Olivas area north of U.S. 101, in particular, may alter the image of the City for northbound freeway viewers. The North Avenue and Serra areas are less prominent visually than the Olivas area. Nevertheless, conversion of any of the three areas would be considered a significant impact to views from identified scenic corridors.

As discussed under Impact AES-1, this scenario includes far more land than would be necessary to accommodate projected growth through 2025. In addition, a land use designation change for any of the three expansion areas included in this scenario would require voter approval under the SOAR Ordinance. As such, it is unlikely that all three areas would develop by 2025.

Scenario 3 – Intensification/Reuse + North Avenue + Olivas

All of the view corridor changes that would occur under Scenario 1 would also occur under Scenario 3. In addition, this scenario includes the North Avenue and Olivas areas. As discussed under Scenario 2, view corridor impacts associated with the conversion of either area would be significant.

Scenario 4 – Intensification/Reuse + North Avenue + Serra

All of the view corridor changes that would occur under Scenario 1 would also occur under Scenario 4. In addition, this scenario includes the North Avenue and Serra areas. As discussed under Scenario 2, view corridor impacts associated with the conversion of either area would be significant.

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga

All of the view corridor changes that would occur under Scenario 1 would also occur under Scenario 5. In addition, this scenario includes the North Avenue and Western Cañada Larga expansion areas. As discussed under Scenario 2, view corridor impacts associated with conversion of the North Avenue area would be significant. As with the North Avenue area, the Western Cañada area is located in a semi-rural portion of the SR 33 corridor. The area that could be developed includes hillside grazing land and a small amount of irrigated agriculture. Conversion of this area to urban uses would fundamentally alter the nature of views along this semi-rural stretch of SR 33. This is considered a significant impact.

Scenario 6 – Intensification/Reuse + North Avenue + Poinsettia

All of the view corridor changes that would occur under Scenario 1 would also occur under Scenario 6. In addition, this scenario includes the North Avenue and Poinsettia areas. As discussed under Scenario 2, view corridor impacts associated with conversion of the North Avenue area would be significant. The Poinsettia area is currently used as an orchard and is visible from SR 126, Foothill Road, and Telegraph Road. Telegraph Road runs through the center of this area. Development of this area would result in the loss of a break from the suburban development that is present east and west of the area and fundamentally alter views for travelers on all three affected roadways. Although the Poinsettia area is completely surrounded by urban uses, the loss of this break in the suburban development pattern is considered a significant view impact to the SR 126, Telegraph Road, and Foothill Road corridors.

MITIGATION MEASURES

Policies included in the proposed 2005 General Plan, as described above, would reduce impacts on view corridors associated with intensification and reuse to a less than significant level. Other than the actions listed above and General Plan Action 1.23, which would preserve windrows on agricultural lands, additional mitigation is not available for the change in views from scenic corridors related to the conversion of agricultural lands.

SIGNIFICANCE AFTER MITIGATION

Implementation of 2005 General Plan policies and actions would reduce impacts to view corridors associated with agricultural land conversion to the degree feasible. Nevertheless, outside of avoiding development of agricultural lands that are visible from scenic corridors, the impact cannot be reduced to a less than significant level. View corridor impacts are considered unavoidably significant for all six scenarios. Scenario 1 would have the least impact among the scenarios, while Scenario 2 would have the greatest potential for impacts. It should again be noted that the conversion of agriculturally-designated lands in the expansion areas could occur only with a public vote under the SOAR Ordinance.

Impact AES-3	**Development accommodated under any of the 2005 General Plan land use scenarios would introduce new sources of light and glare. Light and glare conditions are not expected to change dramatically throughout most of the Planning Area because of the focus on intensification and reuse of already developed lands. Therefore, impacts would be Class III, *less than significant*, for any of the six scenarios.**

Development in accordance with the any of the land use scenarios for the 2005 General Plan would incrementally increase ambient nighttime lighting throughout the City and potentially introduce new sources of glare. Increased lighting could come from streetlights, parking lot lights, and signage on business establishments. Increased glare could potentially occur as a result of building materials, roofing materials and windows reflecting sunlight. A discussion of impacts for each scenario follows.

Scenario 1 – Intensification/Reuse Only

Scenario 1 would emphasize intensification and reuse of already developed areas. As such, it may incrementally increase overall lighting in portions of the community, but would not be expected to dramatically change communitywide light and glare conditions or greatly extend lighting into large areas where lighting is not currently present. As discussed under Impacts AES-1 and AES-2, this scenario would accommodate the conversion of a number of agricultural properties that are already designated for urban development. However, these areas are already surrounded primarily by urban uses and are therefore in areas where urban lighting is present; therefore, the extension of lighting into these areas would not significantly alter overall lighting. Similarly, the undeveloped areas in the North Avenue and Upper North Avenue areas are already lighted by the sporadic existing development.

This scenario would potentially accommodate residential development in the commercially oriented districts and corridors as well as at the neighborhood centers. Many of these areas – notably, Downtown, the Pacific View Mall, and all of the corridors - include retail development with relatively high levels of lighting and associated glare; therefore, the introduction of large numbers of light sensitive residences to these areas could pose conflicts with respect to light and glare. However, it is anticipated that implementation of Action 3.23 would result in the development of appropriate design standards as part of a form-based Development Code that emphasizes pedestrian orientation, integration of land uses, treatment of streetscapes as

community living space, and environmentally sensitive building design and operation. Thus, significant impacts are not anticipated.

Scenario 2 – Intensification/Reuse + North Avenue + Olivas + Serra

Light and glare impacts associated with intensification and reuse would be similar to those of Scenario 1 and would be reduced a less than significant level through implementation of Action 3.23. This scenario would also accommodate future development in the North Avenue, Olivas, and Serra expansion areas. All three areas are currently in agricultural production. The North Avenue expansion area is in a semi-rural area along SR 33. The Olivas area encompasses a large area (930 acres) that currently lacks lighting, but is located between U.S. 101 and the Ventura Harbor. The Serra area is surrounded on three sides by urban uses, with the Santa Clara River to the southeast. The North Avenue and Olivas areas are relatively isolated; therefore, the extension of lighting into these areas would not affect a high number of sensitive uses. Extension of lighting into the Serra area would affect a higher number of uses due to the area's proximity to existing residential neighborhoods. However, development in any of the expansion areas would be subject to current City lighting standards as well as new standards to be developed as part of the new development code (Action 3.23) and any additional standards developed as part of a specific plan for the expansion area. Thus, significant impacts are not anticipated.

Scenario 3 – Intensification/Reuse + North Avenue + Olivas

Light and glare impacts associated with intensification and reuse would be similar to those of Scenario 1 and would be reduced to a less than significant level through implementation of Action 3.23. This scenario would also accommodate future development in the North Avenue and Olivas expansion areas, both of which are currently in agricultural production. As discussed under Scenario 2, both areas are relatively isolated; therefore, extension of lighting into these areas would affect relatively few sensitive receivers. As with Scenario 2, significant impacts are not anticipated.

Scenario 4 – Intensification/Reuse + North Avenue + Serra

Light and glare impacts associated with intensification and reuse would be similar to those of Scenario 1 and would be reduced a less than significant level through implementation of Action 3.23. This scenario would also accommodate future development in the North Avenue and Serra expansion areas, both of which are currently in agricultural production. The North Avenue area is relatively isolated; therefore, the extension of lighting into this area would not affect a high number of sensitive uses. Extension of lighting into the Serra area would affect a higher number of uses due to the area's proximity to existing residential neighborhoods. However, development in any of the expansion areas would be subject to current City lighting standards as well as new standards to be developed as part of the new development code (Action 3. 23) and any additional standards developed as part of a specific plan for the expansion area. Significant impacts are not anticipated.

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga

Light and glare impacts associated with intensification and reuse would be similar to those of Scenario 1 and would be reduced a less than significant level through implementation of Action 3.23. In addition, this scenario would accommodate future development in the North Avenue and Western Cañada Larga expansion areas. Both areas are in a semi-rural portion of the community that is relatively isolated; therefore, the extension of lighting into these areas would not affect a high number of sensitive uses. Assuming implementation of existing requirements and new development code standards, significant impacts are not anticipated.

Scenario 6 – Intensification/Reuse + North Avenue + Poinsettia

Light and glare impacts associated with intensification and reuse would be similar to those of Scenario 1 and would be reduced a less than significant level through implementation of Action 3.23. In addition, this scenario would accommodate future development in the North Avenue and Poinsettia expansion areas. As discussed under Scenario 2, extension of lighting into the North Avenue area would not affect a high number of sensitive uses. Like the Serra area, the Poinsettia area is almost entirely surrounded by existing residential neighborhoods; therefore, extension of lighting into this area would affect a relatively high number of adjacent uses. Assuming implementation of existing requirements and new development code standards, significant impacts are not anticipated.

MITIGATION MEASURES

Mitigation is not required for any of the six scenarios.

SIGNIFICANCE AFTER MITIGATION

With implementation of proposed General Plan policies, impacts from light and glare associated with new development would not be significant for any of the six land use scenarios.

4.2 AGRICULTURE

This section analyzes the impacts of development accommodated under the 2005 General Plan upon agricultural resources. Both direct impacts relating to the potential conversion of agricultural lands and indirect effects associated with placing urban development adjacent to agriculture are addressed.

4.2.1 Setting

a. General Setting. Agriculture plays an important role in the economy of Ventura County and the City of Ventura. Ventura County is one of the principal agricultural counties in the state; in 2003, the total value of agriculture production for Ventura County was $1.118 billion. This level of production is made possible by the presence of high quality soils, adequate water supply, favorable climate, long growing season, and level topography. In 2003, the top five cash crops in the County were strawberries, nursery stock, lemons, celery, and avocados.

b. Planning Area Agriculture. Figure 4.2-1 shows lands within the Ventura Planning Area that are currently in agricultural production. The City has soil and climate conditions suitable for specialty crops, including citrus, strawberries, and selected vegetables, sometimes yielding three crops per year. The top crops in Ventura County by value are lemons, strawberries, celery, nursery stock, and avocados. Nursery stock and cut flowers are of increasing importance to local agricultural production.

Approximately 17,000 acres of land within the Planning Area are currently used for active agricultural activity or grazing. Figure 4.2-1 shows lands currently used for agriculture. Irrigated farmland is located primarily within the eastern and southern portions of the Planning Area. Dry land farming and grazing occur on the Taylor Ranch west of the Ventura River. Grazing occurs on the hillside areas north of the City. These four general types of agricultural lands can be further separated into the following categories of products:

- *Row crops. These include vegetables (such as broccoli and lettuce) and strawberries.*
- *Orchards. Most of the City orchards are in lemons, although oranges are found in the flatlands. The orchards located on the hillsides in the northeast portion of the Planning Area are in avocados.*
- *Dry Farming. The only dry farming in the Planning Area is lima beans on the Taylor Ranch.*
- *Grazing. Grazing includes lands used for cattle and sheep.*

The U.S. Soil Conservation Service Important Farmlands Inventory (IFI) system is used to inventory lands with agricultural value. Figure 4.2-2 shows important farmlands in the Planning Area. This system divides farmland into classes based on productive capability of the land (rather than the mere presence of ideal soil conditions). The system effectively recognizes that a large amount of agricultural land in California and Ventura County that would not ordinarily be classified as "prime" under the previous evaluation system and is among the most productive land in the country. The major classifications for farmlands are described below.

- *"Prime" farmlands in California are irrigated soils (Class I and II) over 40 inches deep with an available water-holding capacity of four inches or more. They are generally well drained and free from frequent flooding. Soil reaction is neither extremely acid nor strongly alkaline. The erosion hazard is slight and farming is not limited by cobbly surface layers, slow subsoil permeability, or freezing soil temperatures.*
- *Farmlands of "statewide" importance are lands other than "prime" that have a good combination of physical and chemical characteristics to produce food, feed, forage, fiber, and oil seed crops. The criteria are like that for "prime" except that no minimum soil depth limitation or permeability restriction exists. "Statewide" farmlands have broader waterholding capacity, soil reaction, may be slightly saline or alkali affected, and may have a slight erosion hazard.*
- *"Unique" farmlands are additional lands that produce high value food and fiber crops, as listed in the annual report of the Department of Food and Agriculture.*

Table 4.2-1 summarizes the acreage of important farmlands within the potential expansion areas. A number of properties within the current Sphere of Influence (SOI) that are designated for urban uses in the current Comprehensive Plan are currently in agricultural production. Major agricultural lands currently slated for eventual urbanization include nearly 300 acres in the Saticoy area, the 75-acre McGrath property in the Arundell district, and a 25-acre area near the U.S. 101/SR 126 interchange. An estimated 520 acres currently designated for urban uses are classified as "Prime" farmland. About 138 acres currently designated for urban uses are classified as "Statewide Importance" farmland, and another 16 acres are designated "Unique."

Table 4.2-1
Important Farmlands Designated for Non-Agricultural Use and Within Potential Expansion Areas

Area	Acres of Prime, Statewide Importance, and Unique Farmlands			
	Prime	Statewide Importance	Unique	Totals
Areas Already Planned for Non-Agricultural Use	520	138	16	674
Potential Expansion Areas				
North Avenue	0	32	1	33
Olivas	876	33	21	930
Serra	228	207	3	438
Western Cañada Larga	0	0	0	0
Poinsettia	194	176	48	418
Expansion Area Subtotal	1,298	448	73	1,819
Totals	**1,818**	**586**	**89**	**2,493**

Note: All acreage numbers are approximate.

Important Farmlands Figure 4.2-2

City of Ventura

All of the potential expansion areas studied in this EIR are wholly or partially in agriculture use. Four of the five expansion areas are wholly or partially within the current SOI; however, these areas are all currently designated Agriculture under the current Comprehensive Plan.

North Avenue. This 55-acre area is currently a lemon orchard. It is surrounded by low to medium density residential developments to the north and south, Ventura Avenue to the west with industrial uses across the Avenue, and open hillsides to the east. About 32 acres of this area are designated as "Statewide Importance" farmland and about one acre is designated as "Unique" farmland. The remainder of the area is classified as being of local importance.

Olivas. This 930-acre area includes a mix of row crops and orchards. The Union Pacific Railroad (UPRR) runs the length of the northeast side of the site and U.S. 101 bisects the area in the northwest corner. Across the UPRR are residential development and industrial uses. Across Harbor Boulevard to the south and west are harbor-related uses and multiple and single family residential development. Across Olivas Park Drive to the south and east is the Olivas Park golf course and more row crop agriculture. The Department of Conservation has classified about 876 acres of the Olivas expansion area as "Prime" farmland. The remainder of the area consists of "Statewide Importance" and "Unique" farmlands.

Serra. This 438-acre area is currently used for lemon and avocado orchards and for row crops. Adjacent to the farmland on the north are residential development and Telephone Road. Across Telephone Road to the north are more single family homes and the new 100-acre community park that is currently under construction. To the east is low density residential development, and to the west are both low and medium density residential development. At the corner of Montgomery Avenue and Bristol Road is a 26-acre parcel that is no longer subject to the SOAR Ordinance and that is planned for development. Commercial uses are to the southwest along Johnson Drive. The Santa Clara River is located along the southern boundary of this area. The Department of Conservation has classified this area as a mix of "Prime," "Statewide Importance," and "Unique" farmland.

Western Cañada Larga. This 110-acre area is primarily used as grazing land, though a small area west of SR 33 is currently used for row crop production. No portion of this area is classified as "Prime," "Statewide Importance," or "Unique" farmland. The area is classified as a mix of "Grazing Land" and "Farmland of Local Importance."

Poinsettia. This 418-acre area is currently a lemon orchard. The site is surrounded on all sides by residential development except for Balboa Middle School and Mound Elementary School, both of which are adjacent to the southwest corner of the area. The Department of Conservation has classified this area as a mix of "Prime," "Statewide Importance," and "Unique" farmland.

b. Conflicts Between Agricultural and Urban Uses. Large agricultural parcels abut urban land uses, including residences and schools, in portions of the Planning Area. Various conflicts have arisen between farmers and users of adjoining parcels. Areas of potential conflict are primarily in East Ventura, where newer housing tracts, schools, and other uses are located immediately adjacent to agricultural parcels. This land use pattern also occurs to a lesser degree in portions of the North Ventura Avenue community.

The direct interface between agricultural and urban uses has created a variety of potential conflicts for both growers and urban interests. Issues concerning the agricultural/urban interface include:

Issues for Urban Interests

- *Use of pesticides/dust problems in vicinity of residential neighborhoods, particularly near schools*
- *Odors associated with pesticides and livestock*
- *Noise related to farming equipment*
- *Growing presence and operation of large greenhouses*
- *General effects of agriculture on air quality*

Issues for Agricultural Interests

- *Restrictions on activity*
- *Restrictions on conversion*
- *Loss of revenue and competitiveness*
- *Competition for water and land*
- *Pilferage, trespassing, and littering*
- *Dust from adjacent construction activity*

c. Regulatory Setting. A number of state and local regulatory mechanisms are in place to preserve farmland and agricultural activity. These are described below. Figure 4.2-3 shows lands that are affected by one or more of these policies.

Land Conservation Act. A primary tool to preserve farmlands is the California Land Conservation Act (LCA) or Williamson Act contract program, established in 1965. Under provisions of the Act, private landowners may voluntarily enter into a long-term contract (minimum of 10 years) with cities and counties to form agricultural preserves and maintain their property in agricultural or open space uses in return for a reduced property tax assessment based on the agricultural value of the property. The term of an LCA contract is generally ten years and the contract automatically renews itself each year for another ten-year period, unless a Notice of Non-Renewal is filed or the contract is cancelled. State Government Code Section 51282 provides specific findings that must be made for the approval of LCA contract cancellations. Ventura County entered the program in 1969, and as of April 2002, between 130,000 and 132,000 acres of crops were in under LCA contracts. Properties within the Planning Area that are subject to LCA contracts are shown on Figure 4.2-3. These properties include portions of the Olivas, Serra, and Western Cañada Larga expansion areas.

Save Our Agricultural Resources (SOAR) Initiative. In November 1995, a majority of voters (52%) in Ventura passed the Save Our Agricultural Resources (SOAR) Ordinance, also called the Agricultural Lands Preservation Initiative. The Ventura County Save Open Space and Agricultural Resources Initiative, Measure B, passed in November 1998 by a 63% majority. Both measures generally prevent changes in specified land use categories (of the City's Comprehensive Plan and the County General Plan) unless the land use change is approved by a majority of voters. The City SOAR Ordinance reaffirms and readopts the Agriculture designations defined in the current Comprehensive Plan until the year 2030. Areas subject to

Greenbelts, Land Conservation Act Contracts, SOAR Designated Lands, and Hillside Voter Participation Areas Figure 4.2-3

City of Ventura

the SOAR Ordinance are shown on Figure 4.2-3. The North Avenue, Olivas, Serra, and Poinsettia expansion areas all contain land subject to the City SOAR Ordinance.

Greenbelt Agreements. Several cities, Ventura County, and the Local Agency Formation Commission (LAFCO) have adopted greenbelt agreements between jurisdictions to further the objectives of the Guidelines for Orderly Development and to assist in preserving agriculture and other open space lands located between cities. Greenbelt agreements are joint or co-adopted resolutions by cities, the County (when applicable) and LAFCO, whereby it is agreed to cooperatively administer a policy of non-annexation and non-development in a specific area. The basic purpose of the greenbelt is to establish a mutual agreement between cities regarding the limits of urban growth for each city. A greenbelt agreement must be amended by all parties involved before the LAFCO will consider any proposal that may be in conflict with the agreement.

The City of Ventura is a participant in two greenbelt agreements. Ventura and Santa Paula adopted an agreement in 1967 to maintain the area between the Franklin Barranca east of the Ventura city limits and the Adams Barranca west of the Santa Paula city limits in agriculture production. The majority of agricultural lands in this greenbelt are under LCA contract. Ventura first entered into a greenbelt agreement with the City of Oxnard in 1994 and updated the agreement in 2002. That agreement applies to farmlands between the two cities, including the Olivas expansion area.

Boundaries for the greenbelts involving the City of Ventura are depicted on Figure 4.2-3.

Right-To-Farm Ordinances. In 1997, the City approved a Right-To-Farm Ordinance to provide protection to farmers against nuisance claims and frivolous lawsuits involving legal and accepted farming practices. The measure requires realtors to disclose potential conflicts with agriculture (e.g., pesticide smells, noise from machinery, pesticides use) when properties adjacent to agricultural parcels are for sale. The ordinance also provides a statement that agriculture is not subject to nuisance claims if it is being properly conducted. Ventura County also has a Right-To-Farm Ordinance that mediates similar disputes between neighboring cities.

4.1.2 Impact Analysis

a. Methodology and Significance Thresholds. Agricultural impacts were based upon review of Department of Conservation farmland classifications, regulatory requirements that apply to the various agricultural lands within the Planning Area, and the potential of future development to create agricultural/urban interface.

Impacts to agriculture would be significant if development accommodated by the 2005 General Plan 2025 would:

- *Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland) to nonagricultural use*
- *Conflict with existing zoning for agricultural use, or a Williamson Act contract*
- *Involve other changes in the existing environment which, due to their location or nature, could individually or cumulatively result in the loss of Farmland*

b. Project Impacts and Mitigation Measures. The matrix on the following page provides a summary comparison of impacts for each of the six 2005 General Plan land use scenarios. A discussion of impacts for each scenario follows.

Impact AG-1	**Any of the six scenarios for the 2005 General Plan would accommodate the development that would involve the conversion of State-designated Prime, Statewide Importance, and Unique farmland. The overall acreage of agricultural land that could be converted would range from about 674 acres under Scenario 1 to about 2,075 acres under Scenario 2. Conversion of farmland would represent a Class I, *unavoidably significant*, impact for any of the six scenarios.**

Development in accordance with any of the six land use scenarios under consideration for the proposed 2005 General Plan could result in the conversion of agriculture land that is classified as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to non-agricultural uses. Table 4.2-2 compares the acreage of important farmlands that could potentially be converted under each scenario. The potential impact relating to agricultural land conversion is considered significant for all six scenarios.

Table 4.2-2
Potential Conversion of Important Farmlands

Farmland Classification	Important Farmlands Potentially Converted (in acres)					
	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
Prime Farmland	520	1,624	1,370	748	494	688
Farmland of Statewide Importance	138	410	203	377	170	314
Unique Farmland	16	41	38	20	17	65
Total	**674**	**2,075**	**1,611**	**1,145**	**681**	**1,067**

Scenario 1 - Intensification/Reuse Only

Scenario 1 emphasizes the intensification and reuse of already urbanized areas in order to accommodate projected growth. This scenario includes none of the expansion areas, all of which are wholly or partially in agricultural production and include important farmlands under IFI criteria. Consequently, this scenario would have the least potential for direct impacts relating to agricultural land conversion among the six scenarios. Nevertheless, Scenario 1 would accommodate the development of a number of properties that are already designated for non-agricultural uses under the current Comprehensive Plan, but that contain important farmlands. These include the 75-acre McGrath property in the Arundell area, the 25-acre

Summary Comparison of Impacts for EIR Scenarios

	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
Important Farmland Conversion (Impact AG-1)	Potential conversion of up to about 674 acres of important farmlands, including 520 acres of "Prime" farmland, 138 acres of "Statewide Importance" farmland, and 16 acres of "Unique" farmland. Impacts are Class I, unavoidably significant.	Potential conversion of up to 2,075 acres of important farmlands, including 1,624 acres of "Prime" farmland, 410 acres of "Statewide Importance" farmland, and 41 acres of "Unique" farmland. Impacts are Class I, unavoidably significant.	Potential conversion of up to 1,611 acres of important farmlands, including 1,370 acres of "Prime" farmland, 203 acres of "Statewide Importance" farmland, and 38 acres of "Unique" farmland. Impacts are Class I, unavoidably significant.	Potential conversion of up to 1,145 acres of important farmlands, including 748 acres of "Prime" farmland, 377 acres of "Statewide Importance" farmland, and 20 acres of "Unique" farmland. Impacts are Class I, unavoidably significant.	Potential conversion of up to 681 acres of important farmlands, including 494 acres of "Prime" farmland, 170 acres of "Statewide Importance" farmland, and 17 acres of "Unique" farmland. Impacts are Class I, unavoidably significant.	Potential conversion of up to 1,066 acres of important farmlands, including 688 acres of "Prime" farmland, 314 acres of "Statewide Importance" farmland, and 65 acres of "Unique" farmland. Impacts are Class I, unavoidably significant.
Conflicts with Agricultural Zoning, SOAR Ordinance, Greenbelt Agreements, and LCA contracts (Impact AG-2)	No conflicts with agricultural zoning, SOAR Ordinance, greenbelt agreements, or LCA contracts. Impacts are Class III, less than significant.	Potential conversion of 1,423 acres subject to SOAR Ordinance, 930 acres within Ventura-Oxnard greenbelt, and 170 acres under LCA contract. Impacts are Class I, unavoidably significant.	Potential conversion of 959 acres subject to SOAR Ordinance, 930 acres within Ventura-Oxnard greenbelt, and 170 acres under LCA contract. Impacts are Class I, unavoidably significant.	Potential conversion of 493 acres subject to SOAR Ordinance. Impacts are Class I, unavoidably significant.	Potential conversion of 84 acres subject to SOAR Ordinance and 26 acres under LCA contract. Impacts are Class I, unavoidably significant.	Potential conversion of 473 acres subject to SOAR Ordinance. Impacts are Class I, unavoidably significant.
Agricultural/Urban Conflicts (Impact AG-3)	Certain areas of conflict would continue in East Ventura, though conversion of agricultural lands adjacent to urban areas would generally reduce conflicts. Impacts are Class IV, beneficial.	Impacts generally similar to Scenario 1; potential conflicts with Olivas area, though conversion of expansion areas generally reduces conflicts. Impacts are Class IV, beneficial.	Impacts generally similar to Scenario 1; potential conflicts with Olivas area, though conversion of expansion areas generally reduces conflicts. Impacts are Class IV, beneficial.	Impacts generally similar to Scenario 1; conversion of N. Avenue and Serra areas generally reduces conflicts. Impacts are Class IV, beneficial.	Impacts generally similar to Scenario 1; conversion of N. Avenue and Western Cañada Larga area would not create significant conflicts. Impacts are Class IV, beneficial.	Impacts generally similar to Scenario 1; conversion of N. Avenue and Poinsettia areas generally reduces conflicts. Impacts are Class IV, beneficial.

agricultural property in the Thille community near the U.S. 101/SR 126 interchange, several properties in the Saticoy area, and approximately 11 acres of agricultural land north of the City's water filtration plant. As indicated in Table 4.2-2, up to about 674 acres of important farmlands could be converted under this scenario, including 520 acres of "Prime" farmland, 138 acres of "Statewide Importance" farmland, and 16 acres of "Unique" farmland. Such conversion is considered a significant impact.

Scenario 2 - Intensification/Reuse + North Avenue + Olivas + Serra

Farmland conversion relating to intensification and reuse would be the same as Scenario 1. In addition, this scenario includes three expansion areas – North Avenue, Olivas, and Serra - that are designated Agriculture under the current Comprehensive Plan. Although the land use designations for these areas would remain Agriculture, all three would be considered for future development under this scenario. As shown in Table 4.2-2, this scenario would accommodate eventual conversion of up to 2,075 acres of important farmlands, including 1,624 acres of "Prime" farmland, 410 acres of "Statewide Importance" farmland, and 41 acres of "Unique" farmland. This is considered a significant impact.

This scenario would potentially accommodate the greatest amount of agricultural land conversion among the six scenarios, though it should be noted that the above estimates represent the maximum potential conversion. Re-designation of any of the three expansion areas included in this alternative would require voter approval under the SOAR Ordinance. In addition, this alternative includes substantially more acreage than would be needed to accommodate projected growth through 2025. Therefore, the actual acreage converted through 2025 may be less than presented herein.

Scenario 3 - Intensification/Reuse + North Avenue + Olivas

Farmland conversion relating to intensification and reuse would be the same as Scenario 1. This scenario also includes two expansion areas – North Avenue and Olivas - that are designated Agriculture under the current Comprehensive Plan. The land use designations for these areas would not change, but both areas would be considered for future development under this scenario. As shown in Table 4.2-2, this scenario would accommodate eventual conversion of up to 1,611 acres of important farmlands, including 1,370 acres of "Prime" farmland, 203 acres of "Statewide Importance" farmland, and 38 acres of "Unique" farmland. This is considered a significant impact.

As noted under Scenario 2, the acreage estimates represent the maximum potential conversion. Re-designation of either the North Avenue or Olivas expansion areas would require voter approval under the SOAR Ordinance. In addition, this alternative includes substantially more acreage than would be needed to accommodate projected growth through 2025. Therefore, the actual acreage converted through 2025 may be less than presented herein.

Scenario 4 - Intensification/Reuse + North Avenue + Serra

Farmland conversion relating to intensification and reuse would be the same as Scenario 1. This scenario also includes two expansion areas – North Avenue and Serra - that are designated Agriculture under the current Comprehensive Plan. The land use designations for these areas

would not change, but both areas would be considered for future development under this scenario. As shown in Table 4.2-2, this scenario would accommodate eventual conversion of up to 1,145 acres of important farmlands, including 748 acres of "Prime" farmland, 377 acres of "Statewide Importance" farmland, and 20 acres of "Unique" farmland. This is considered a significant impact.

As noted under Scenario 2, the acreage estimates represent the maximum potential conversion. Re-designation of either the North Avenue or Serra expansion areas would require voter approval under the SOAR Ordinance. Therefore, the actual acreage converted through 2025 may be less than presented herein.

Scenario 5 - Intensification/Reuse + North Avenue + Western Cañada Larga

Farmland conversion relating to intensification and reuse would be the same as Scenario 1. This scenario also includes two expansion areas – North Avenue and Western Cañada Larga. The North Avenue area is designated Agriculture under the current Comprehensive Plan, while the Western Cañada Larga area is primarily designated Open Space under the County of Ventura General Plan and includes no "Prime," "Statewide Importance," or "Unique" farmland. The land use designations for these areas would not change, but both areas would be considered for future development. As shown in Table 4.2-2, this scenario would accommodate eventual conversion of up to 681 acres of important farmlands, including 494 acres of "Prime" farmland, 170 acres of "Statewide Importance" farmland, and 17 acres of "Unique" farmland. This is considered a significant impact.

As noted under Scenario 2, the acreage estimates represent the maximum potential conversion. Re-designation of the North Avenue expansion area or 29 acres of the Western Cañada Larga expansion area west of SR 33 would require voter approval under the SOAR Ordinance. Therefore, the actual acreage converted through 2025 may be less than presented herein.

Scenario 6 - Intensification/Reuse + North Avenue + Poinsettia

Farmland conversion relating to intensification and reuse would be the same as Scenario 1. This scenario also includes two expansion areas – North Avenue and Poinsettia - that are designated Agriculture under the current Comprehensive Plan. The land use designations for these areas would not change, but both areas would be considered for future development. As shown in Table 4.2-2, this scenario would accommodate eventual conversion of up to 1,067 acres of important farmlands, including 688 acres of "Prime" farmland, 314 acres of "Statewide Importance" farmland, and 65 acres of "Unique" farmland. This is considered a significant impact.

As noted under Scenario 2, the acreage estimates represent the maximum potential conversion. Re-designation of either the North Avenue or Poinsettia expansion areas would require voter approval under the SOAR Ordinance. Therefore, the actual acreage converted through 2025 may be less than presented herein.

MITIGATION MEASURES

Policy 3C of the 2005 General Plan states that the City will "[m]aximimize the use of land in the city before considering expansion." To that end, General Plan Actions 3.16 and 3.17 direct the City to renew and modify greenbelt agreements as necessary to direct development to already urbanized areas and continue to support the Guidelines for Orderly Development, which generally direct future urban development to the urban areas. Action 3.20 directs the City to adopt development code provisions to "preserve agricultural and open space lands as a desirable means of shaping the City's internal and external form and size."

General Plan Policy 3D directs the City to "Continue to preserve agricultural and other open space lands lands within the City's Planning Area." To that end, Action 3.21 directs the City to adopt performance standards for non-farm activities in agricultural areas to protect and support farm operations, including requiring non-farm uses to provide all necessary buffers.

Implementation of the above policies/actions would minimize the premature conversion of agricultural land under any of the land use scenarios. Outside of re-designating important farmlands for continued agricultural use, additional mitigation is not available.

SIGNIFICANCE AFTER MITIGATION

Implementation of 2005 General Plan policies and actions would minimize the premature conversion of productive agricultural lands within the Planning Area to non-agricultural uses. In addition, the Ventura County LAFCO will review all proposed conversions of agricultural land that require annexation into the City. Nevertheless, potential impacts relating to the conversion of agricultural land to urban uses is considered unavoidably significant for all six land use scenarios.

Impact AG-2	**Five of the six land use scenarios under consideration for the 2005 General Plan would accommodate the future conversion of agricultural land that is designated for agricultural use, subject to the City SOAR Ordinance, within the Ventura-Oxnard Greenbelt, and/or under LCA contract. This is considered a Class I, unavoidably significant, impact of Scenarios 2 through 6. The impact for Scenario 1 (Intensification/Reuse Only) is considered Class III, *less than significant*.**

Table 4.2-3 compares acreage subject to the SOAR Ordinance, adopted greenbelt agreements, and existing LCA contracts under the six land use scenarios. A discussion of each scenario follows.

Scenario 1 - Intensification/Reuse Only

Scenario 1 limits future growth and development to intensification and reuse of properties that are already designated for non-agricultural uses under the current Comprehensive Plan. As

Table 4.2-3
Acres Subject to SOAR, Greenbelt Agreements, and LCA Contracts

	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
Acres Subject to SOAR	0	1,423	959	493	84	473
Acres Within a Greenbelt	0	930	930	0	0	0
Acres Currently Under LCA Contract	0	170	170	0	26	0

discussed under Impact AG-1, this scenario would allow for the conversion of certain agricultural lands to non-agricultural uses; however, all such lands are already designated for urban use. None of the areas that could be developed under this scenario are subject to the City SOAR Ordinance and none are within established greenbelts or subject to LCA contracts. As such, this scenario would not accommodate any development that would conflict with agricultural zoning or other policies regarding the preservation of agriculture. Impacts relating to conflicts with agricultural policy would not occur under this scenario.

Scenario 2 - Intensification/Reuse + North Avenue + Olivas + Serra

Like Scenario 1, the Intensification/Reuse + North Avenue + Olivas + Serra Scenario also emphasizes intensification and reuse development. However, this scenario also includes three expansion areas – North Avenue, Olivas, and Serra – that are currently designated Agriculture and subject to the City's SOAR Ordinance. These areas combined total about 1,423 acres. In addition, the 930-acre Olivas area is within the Ventura-Oxnard Greenbelt. Finally, about 170 acres within the Olivas area are under LCA contract. The California Government Code (Section 56856.5) generally precludes the LAFCO from approving annexation of lands under LCA contract unless a notice of non-renewal has been filed and the annexing agency (the City) agrees that no services will actually be provided during the remaining life of the contract for land uses or activities not allowed under the contract.

The 2005 General Plan would not change the land use designation for either the North Avenue, Olivas, or Serra areas, but all three areas would be considered for future conversion. None of the expansion areas could be converted without voter approval in accordance with the SOAR Ordinance and lands under LCA contract could only be converted upon cancellation of the contracts. Nevertheless, this alternative potentially conflicts with current policies relating to the preservation of agricultural land. This is considered a significant impact.

Conversion of any of the three expansion areas may require a future adjustment to the SOI because the Ventura LAFCO will likely remove all areas subject to the SOAR Ordinance, including the North Avenue, Olivas, and Serra areas, from the SOI following a Municipal Service review for Ventura.

Scenario 3 - Intensification/Reuse + North Avenue + Olivas

This scenario also emphasizes intensification and reuse, but includes two expansion areas – North Avenue and Olivas – that are currently designated Agriculture and subject to the City's SOAR Ordinance. These two areas total about 959 acres. In addition, the Olivas area is within the Ventura-Oxnard Greenbelt Agreement and about 170 acres within the Olivas area are under LCA contract. The California Government Code (Section 56856.5) generally precludes the LAFCO from approving annexation of lands under LCA contract unless a notice of non-renewal has been filed and the annexing agency (the City) agrees that no services will actually be provided during the remaining life of the contract for land uses or activities not allowed under the contract.

The 2005 General Plan would not change the land use designation for either the North Avenue area or the Olivas area, but both areas would be considered for future conversion. Neither of the expansion areas could be converted without voter approval in accordance with the SOAR Ordinance and lands under LCA contract could only be converted upon cancellation of the contracts. Nevertheless, this alternative potentially conflicts with current policies relating to the preservation of agricultural land. This is considered a significant impact.

Conversion of either expansion area may require a future adjustment to the SOI because the Ventura LAFCO will likely remove all areas subject to the SOAR Ordinance, including the North Avenue and Olivas areas, from the SOI following a Municipal Service review for Ventura.

Scenario 4 - Intensification/Reuse + North Avenue + Serra

This scenario also emphasizes intensification and reuse, but includes two expansion areas – North Avenue and Serra – that are currently designated Agriculture and subject to the City's SOAR Ordinance. These two areas total about 493 acres.

The 2005 General Plan would not change the land use designation for either the North Avenue area or the Serra area under this scenario; nevertheless, both areas would be considered for future conversion. Therefore, although neither of the expansion areas could be converted without voter approval in accordance with the SOAR Ordinance, this alternative potentially conflicts with current policies relating to the preservation of agricultural land. This is considered a significant impact.

Conversion of either expansion area may require a future adjustment to the SOI because the Ventura LAFCO will likely remove all areas subject to the SOAR Ordinance, including the North Avenue and Serra areas, from the SOI following a Municipal Service review for Ventura.

Scenario 5 - Intensification/Reuse + North Avenue + Western Cañada Larga

This scenario also emphasizes intensification and reuse, but includes two expansion areas – North Avenue and Western Cañada Larga. The entire North Avenue expansion area is currently designated Agriculture and subject to the City's SOAR Ordinance. This area encompasses about 55 acres. About 29 acres of the 110-acre Western Cañada Larga expansion area (the area west of SR 33) are also designated Agriculture and subject to SOAR. The

remainder of the Western Cañada Larga area (the portion east of SR 33) is not subject to the City SOAR Ordinance and, if annexed by the City, would not be subject to the County SOAR Ordinance. An estimated 26 acres within the Western Cañada Larga area are subject to an LCA contract. The California Government Code (Section 56856.5) generally precludes the LAFCO from approving annexation of lands under LCA contract unless a notice of non-renewal has been filed and the annexing agency (the City) agrees that no services will actually be provided during the remaining life of the contract for land uses or activities not allowed under the contract.

The 2005 General Plan would not change the land use designation for either the North Avenue area or the Western Cañada Larga area, but both areas would be considered for future conversion. In accordance with the SOAR Ordinance, neither of the expansion areas could be converted without voter approval. Lands under LCA contract could only be converted upon cancellation of the contracts. Nevertheless, this alternative potentially conflicts with current policies relating to the preservation of agricultural land. This is considered a significant impact.

Conversion of either expansion area may require a future adjustment to the SOI. The Western Cañada Larga area is already outside the SOI and the Ventura LAFCO will likely remove all areas subject to the SOAR Ordinance, including the North Avenue area, from the SOI following a Municipal Service review for Ventura.

Scenario 6 - Intensification/Reuse + North Avenue + Poinsettia

This scenario also emphasizes intensification and reuse, but includes two expansion areas – North Avenue and Poinsettia – that are currently designated Agriculture and subject to the City's SOAR Ordinance. These two areas total about 473 acres. No portion of either expansion area is within an existing Greenbelt Agreement or under LCA contract.

The 2005 General Plan would not change the land use designation for either the North Avenue area or the Poinsettia area; nevertheless, both areas would be considered for future conversion. Therefore, although neither of the expansion areas could be converted without voter approval in accordance with the SOAR Ordinance, this alternative potentially conflicts with current policies relating to the preservation of agricultural land. This is considered a significant impact.

Conversion of either expansion area may require a future adjustment to the SOI because the Ventura LAFCO will likely remove all areas subject to the SOAR Ordinance, including the North Avenue and Poinsettia areas, from the SOI following a Municipal Service review for Ventura.

MITIGATION MEASURES

The policies and actions included in the 2005 General Plan and discussed under Impact AG-1 would reduce potential conflicts with policies relating to the preservation of agricultural land to the degree feasible. Additional mitigation outside of avoiding conversion of lands designated for agricultural use is not available.

SIGNIFICANCE AFTER MITIGATION

No impact with respect to agricultural land preservation policy would occur under Scenario 1. The amount of agriculturally-designated land would vary among Scenarios 2 through 6. However, Scenarios 2 through 6 would all potentially accommodate the eventual conversion of lands designated for agricultural use, within existing Greenbelt Agreements, and/or under LCA contracts to non-agricultural use. Thus, impacts associated with each of these scenarios are considered unavoidably significant.

Impact AG-3	**Development that could be accommodated under any of the 2005 General Plan land use scenarios could generally reduce agricultural compatibility conflicts in some locations. Though certain areas of agricultural/urban conflict would remain within the Planning Area, any of the six scenarios would generally reduce the potential for such conflicts. With the policies and actions recommended in the 2005 General Plan, effects under any of the six scenarios would be Class IV, beneficial.**

Residents living adjacent to agricultural lands often cite odor nuisance impacts, noise from farm equipment, vehicle conflicts, dust and pesticide spraying as land use conflicts. Conflicts between farm vehicles and high-speed automobiles used by residents on adjacent roadways can lead to accidents. Pesticide spraying can result in health hazards, while odor and noise are nuisances that can affect the enjoyment of private dwellings. Increased dust from soils and farm equipment can be both a nuisance and a health hazard. These conflicts can also result in reduced property values along the interface with agricultural uses.

The placement of residential development adjacent to farmland can also have negative impacts on farming operations. Direct physical impacts include vandalism to farm equipment or fencing, and theft of fruits and vegetables. Soil compaction from trespassers or equestrians can also damage crop potential. These can result in indirect economic impacts. One study (Ventura County Agricultural Land Trust, 1996) showed that crop production in the first two rows adjacent to urban uses is about 20% lower than the rows beyond. Reduced air quality from adjacent urban development can also result in impacts to adjacent farmland.

Placement of residences adjacent to cultivated agriculture can also have economic impacts to growers. Increased regulations and liability insurance to protect the farmer from adjacent urban uses cost time and money. Some farmers' sensitive to nearby residences voluntarily limit their hours of operation and do not intensively use the portions of their property closest to urban uses, in effect establishing informal buffer zones on their own property. This has the effect of lowering crop yields, which can potentially affect the long-term economic viability of the agricultural operation. Though these types of economic impacts are not environmental effects under CEQA, they could ultimately cause the loss of agricultural production due to cessation of operations if the economic impacts become severe enough. The City and County's right to farm ordinances help protect on-going agricultural operation from nuisance lawsuits.

Scenario 1 - Intensification/Reuse Only

This land use scenario focuses on intensification and reuse of properties within the existing developed City and does not include expansion areas. As noted under Impact AG-1, several agricultural properties that are currently designated for non-agricultural uses could be developed under this scenario. Development of these areas would take agriculture land currently adjacent to urban uses out of operation, thereby reducing the potential for agricultural/urban compatibility conflicts in these areas. The only areas where new development could potentially create new conflicts with existing agriculture area are in the Saticoy area. Development of residentially-designated lands along the west side of Saticoy Avenue could potentially create new conflicts with agricultural activity along the west side of that roadway. In addition, new residential development east of Wells Road may abut agricultural lands to the east. Conflicts similar to those currently present in portions of the Saticoy area may occur in these areas, though proposed policies requiring buffers between agricultural and urban uses (described below under Mitigation Measures) would minimize impacts.

The impact of this scenario with respect to urban/agricultural conflicts would primarily be beneficial. Nevertheless, it should be noted certain areas of potential conflict would remain, including the agricultural/urban interface that exists at the North Avenue, Olivas, Serra, and Poinsettia expansion areas. Although areas where intensification is expected to occur generally are not adjacent to agricultural areas, remaining growers may be further isolated in a general sense by the further urbanization of the Planning Area.

Scenario 2 - Intensification/Reuse + North Avenue + Olivas + Serra

This scenario would potentially result in the same primarily beneficial effects noted for Scenario 1, but would also potentially accommodate the future development of all or portions of the North Avenue, Olivas, and Serra areas. Each of these areas is wholly or partially surrounded by urban uses, including residential development. Therefore, taking these areas out of agricultural production would potentially eliminate conflicts that currently exist in these areas. This is considered a potentially beneficial effect of this scenario.

The North Avenue and Serra areas are essentially completely surrounded by urban uses; therefore, conversion of these areas would not create any new interface between agricultural and urban uses. On the other hand, full or partial conversion of the Olivas area could potentially create new areas of conflict as that area is bounded by agricultural operations to the east and south. Thus, conversion of the Olivas area would eliminate some existing conflicts, while potentially creating others.

Scenario 3 - Intensification/Reuse + North Avenue + Olivas

This scenario would potentially result in the same primarily beneficial effects noted for Scenario 1, but would also potentially accommodate the future development of all or portions of the North Avenue and Olivas areas. Both of these areas are wholly or partially surrounded by urban uses, including residential development. Therefore, taking these areas out of agricultural production would potentially eliminate conflicts that currently exist in these areas. On the other hand, as noted for Scenario 2, the Olivas area is bounded by agricultural operations to the

east and south; therefore, partial or complete conversion of this area could potentially create new areas of conflict. Thus, as with Scenario 2, conversion of the Olivas area would eliminate some existing conflicts, while potentially creating others.

Scenario 3's effects would be primarily beneficial, though this scenario would not accommodate conversion of the Serra area to non-agricultural use. Therefore, there would be somewhat greater residual potential for conflict than under Scenario 2.

Scenario 4 - Intensification/Reuse + North Avenue + Serra

This scenario would potentially result in the same primarily beneficial effects noted for Scenario 1, but would also potentially accommodate the future development of all or portions of the North Avenue and Serra areas. Both of these areas are surrounded by urban uses, including residential development. Therefore, taking these areas out of agricultural production would potentially eliminate conflicts that currently exist in these areas. This is considered a potentially beneficial effect of this scenario. Though certain areas of agricultural/urban conflict would remain in portions of the Planning Area, including the Olivas and Poinsettia areas, this scenario's effect would be primarily beneficial and no new areas of conflict would be created.

Scenario 5 - Intensification/Reuse + North Avenue + Western Cañada Larga

This scenario would potentially result in the same primarily beneficial effects noted for Scenario 1, but would also potentially accommodate the future development of all or portions of the North Avenue and Western Cañada Larga areas. The North Avenue area is primarily surrounded by urban uses, including residential development. Therefore, taking these areas out of agricultural production would potentially eliminate conflicts that currently exist in this area. This is considered a potentially beneficial effect of this scenario. The Western Cañada Larga area does not have any current agricultural activity that poses conflicts with urban uses, though conversion of this area would not create any compatibility conflicts with existing agricultural activity.

As with the other scenarios, certain areas of agricultural/urban conflict would remain in portions of the Planning Area under this scenario, including the Olivas and Poinsettia areas. Nevertheless, this scenario's effect would be primarily beneficial and no new areas of conflict would be created.

Scenario 6 - Intensification/Reuse + North Avenue + Poinsettia

This scenario would potentially result in the same primarily beneficial effects noted for Scenario 1, but would also potentially accommodate the future development of all or portions of the North Avenue and Poinsettia areas. Both of these areas are surrounded by urban uses, including residential development and, in the case of the Poinsettia area, Ventura Unified School District schools that have been a source of compatibility concerns. Therefore, taking these areas out of agricultural production would eliminate conflicts that currently exist in these areas. This is considered a potentially beneficial effect of this scenario. Though certain areas of agricultural/urban conflict would remain in portions of the Planning Area, including the Olivas and Serra areas, this scenario's effect would be primarily beneficial and no new areas of conflict would be created.

MITIGATION MEASURES

Implementation of the policies and actions listed under Impact AG-1 would be expected to generally reduce the potential for agricultural/urban compatibility conflicts. In particular, Action 3.21 would minimize effects to farming operations and adjacent urban uses by requiring that non-farm operations provide buffers between urban and agricultural uses. Mitigation beyond the General Plan policies and actions is not required.

SIGNIFICANCE AFTER MITIGATION

Any of the six land use scenarios would generally reduce the potential for agricultural/urban compatibility conflicts. Certain areas of conflict would remain within the Planning Area, primarily in East Ventura where agricultural lands would continue to directly abut residential and other urban uses. However, the overall effect of any of the scenarios would be beneficial.

4.3 AIR QUALITY

This section analyzes the impacts of the 2005 General Plan upon local and regional air quality. Both temporary impacts relating to construction activity and long-term impacts associated with population growth and associated growth in vehicle traffic and energy consumption are discussed.

4.3.1 Setting

a. Local Climate and Meteorology. The semi-permanent high pressure system west of the Pacific coast strongly influences California's weather. It creates sunny skies throughout the summer and influences the pathway and occurrence of low pressure weather systems that bring rainfall to the area during October through April. As a result, wintertime temperatures in Ventura are generally mild, while summers are warm and dry. During the day, the predominant wind direction is from the west and southwest, and at night, wind direction is from the north and generally follows the Santa Clara River Valley.

Predominant wind patterns are occasionally broken during the winter by storms coming from the north and northwest and by episodic Santa Ana winds. Santa Ana winds are strong northerly to northeasterly winds that originate from high pressure areas centered over the desert of the Great Basin. These winds are usually warm, very dry, and often full of dust. They are particularly strong in the mountain passes and at the mouths of canyons.

Daytime summer temperatures in the area average in the high 70s to the low 90s. Nighttime low temperatures during the summer are typically in the high 50s to low 60s, while the winter high temperatures tend to be in the 60s. Winter low temperatures are in the 40s. Annual average rainfall in Ventura ranges from about 14 to 16 inches, the majority of which falls in winter months.

Two types of temperature inversions (warmer air on top of colder air) are created in the Ventura County area: subsidence and radiational (surface). The subsidence inversion is a regional effect created by the Pacific high in which air is heated as it is compressed when it flows from the high pressure area to the low pressure areas inland. This type of inversion generally forms at about 1,000 to 2,000 feet and can occur throughout the year, but is most evident during the summer months. Surface inversions are formed by the more rapid cooling of air near the ground at night, especially during winter. This type of inversion is typically lower and is generally accompanied by stable air. Both types of inversions limit the dispersal of air pollutants within the regional airshed. The primary air pollutant of concern during the subsidence inversions is ozone, while carbon monoxide and nitrogen oxides are of greatest concern during winter inversions.

b. Local Regulatory Framework. Both the federal and state governments have established ambient air quality standards for the protection of public health. The U.S. Environmental Protection Agency (USEPA) is the federal agency designated to administer air quality regulation, while the California Air Resources Board (CARB) is the state equivalent in the California Environmental Protection Agency. Local control in air quality management is provided by the CARB through county-level Air Pollution Control Districts (APCDs). The CARB has established air quality standards and is responsible for the control of mobile emission

sources, while the local APCDs are responsible for enforcing standards and regulating stationary sources. The CARB has established 14 air basins statewide. In addition, the City further regulates air quality through the City's Air Quality Ordinance (Ordinance 93-37). This ordinance requires developers of projects that generate emissions exceeding Ventura County APCD (VCAPCD) significance thresholds to pay air quality impact fees that are placed in a transportation demand management (TDM) fund that is used by the City to offset project emissions through implementation of regional air quality programs.

The USEPA has set primary national ambient air quality standards (NAAQS) for ozone (O_3), carbon monoxide (CO), nitrogen dioxide (NO_2), sulfur dioxide (SO_2), suspended particulates, known as PM_{10} (particulate matter with a diameter of 10 microns or less) and $PM_{2.5}$ (particulates of less than 2.5 microns in diameter), and lead (Pb). Primary standards are those levels of air quality deemed necessary, with an adequate margin of safety, to protect public health. In addition, the State of California has established health-based ambient air quality standards for these and other pollutants, some of which are more stringent than the federal standards. Table 4.3-1 lists the current Federal and State standards for regulated pollutants.

Table 4.3-1
Federal and State Ambient Air Quality Standards

Pollutant	Averaging Time	Federal Primary Standards	California Standard
Ozone	1-Hour	---	0.09 ppm
	8-Hour	0.08 ppm	0.07 ppm
Carbon Monoxide	8-Hour	9.0 ppm	9.0 ppm
	1-Hour	35.0 ppm	20.0 ppm
Nitrogen Dioxide	Annual	0.05 ppm	---
	1-Hour	---	0.25 ppm
Sulfur Dioxide	Annual	0.03 ppm	---
	24-Hour	0.14 ppm	0.04 ppm
	1-Hour	---	0.25 ppm
PM_{10}	Annual	50 $\mu g/m^3$	20 $\mu g/m^3$
	24-Hour	150 $\mu g/m^3$	50 $\mu g/m^3$
$PM_{2.5}$	Annual	15 $\mu g/m^3$	12 $\mu g/m^3$
	24-Hour	65 $\mu g/m^3$	--
Lead	30-Day Average	---	1.5 $\mu g/m^3$
	3-Month Average	1.5 $\mu g/m^3$	---

ppm = parts per million
$\mu g/m^3$ = micrograms per cubic meter

Source: California Air Resources Board

The federal one-hour ozone standard was revoked in June 2005. Under this new rule, Ventura County has been listed as "moderate nonattainment" for the eight-hour ozone standard with a required attainment date of June 2010.

The USEPA is currently in the process of reviewing the particulate matter standards and issued a Draft Staff Paper in January 2005 for public review and comment regarding the policy implications of the latest scientific and technical information regarding particulate matter. In this report, USEPA staff recommends continuing the $PM_{2.5}$ annual standard while reducing the 24-hour standard to between 25-35 $\mu g/m^3$ or reducing both standards, the annual to 12 $\mu g/m^3$ (same as California standard) and the 24-hour standard to 35-40 $\mu g/m^3$. The PM_{10} standard is recommended to be revised to not include the 2.5 micron increment.

Ventura is located in the Ventura County portion of the South Central Coast Air Basin. The Ventura County Air Pollution Control District (APCD) is the designated air quality control agency in the Ventura County portion of the Basin. The Ventura County portion of the South Central Coast Air Basin is a state and federal non-attainment area for ozone and a state non-attainment area for suspended particulates. In addition, though the Ventura County portion of the South Central Coast Air Basin is in attainment for the state and federal carbon monoxide standards, carbon monoxide can potentially be a problem at heavily congested intersections. Each of these pollutants is described below. The City is within the "Ventura growth area" designated by the VCAPCD; however, portions of West Ventura are immediately adjacent to the "Ojai Planning Area" and emissions generated in West Ventura can affect air quality within the Ojai Valley airshed.

Ozone. Ozone is produced by a photochemical reaction (triggered by sunlight) between nitrogen oxides (NO_x) and reactive organic gases (ROG). Nitrogen oxides are formed during the combustion of fuels, while reactive organic gases are formed during combustion and evaporation of organic solvents. Because ozone requires sunlight to form, it mostly occurs in serious concentrations between the months of May and October. Ozone is a pungent, colorless toxic gas with direct health effects on humans including respiratory and eye irritation and possible changes in lung functions. Groups most sensitive to ozone include children, the elderly, people with respiratory disorders, and people who exercise strenuously outdoors.

Suspended Particulates. PM_{10} is small particulate matter measuring no more than 10 microns in diameter. It is mostly composed of dust particles, nitrates, and sulfates. PM_{10} is a by-product of fuel combustion and wind erosion of soil and unpaved roads, and is directly emitted into the atmosphere through these processes. PM_{10} is also created in the atmosphere through chemical reactions. Particles less than 10 micrometers in diameter (PM_{10}) pose a health concern because they can be inhaled into and accumulate in the respiratory system. Particles less than 2.5 micrometers (=microns) in diameter ($PM_{2.5}$) are referred to as "fine" particles and are believed to pose the greatest health risks. Because of their small size (approximately 1/30th the average width of a human hair), fine particles can lodge deeply into the lungs. Fine particulate matter is composed primarily as a by-product of combustion, while matter between 2.5 and 10 microns is mostly dust from roads and grinding or crushing operations. Fine particulate matter poses a serious health threat to all groups, but particularly to the elderly, children, and those with respiratory problems. More than half of the fine particulate matter that is inhaled into the lungs remains there, which can cause permanent lung damage. These materials can damage health by interfering with the body's mechanisms for clearing the respiratory tract or by acting as carriers of an absorbed toxic substance.
An important fraction of the particulate matter emission inventory is that formed by diesel engine fuel combustion. Particulates in diesel emissions are very small and readily respirable. The particles have hundreds of chemicals adsorbed onto their surfaces, including many known

or suspected mutagens and carcinogens. The California Office of Environmental Health Hazard Assessment (OEHHA) reviewed and evaluated the potential for diesel exhaust to affect human health, and the associated scientific uncertainties (California EPA, ARB, April 1998). Based on the available scientific evidence, it was determined that a level of diesel PM exposure below which no carcinogenic effects are anticipated has not been identified. The Scientific Review Panel that approved the OEHHA report determined that based on studies to date that 3×10^{-4} $(\mu g/m^3)^{-1}$ is a reasonable estimate of the unit risk for diesel PM. This means that a person exposed to a diesel PM concentration of 1 $\mu g/m^3$ continuously over the course of a lifetime has a 3 per 10,000 chance (or 300 in one million chance) of contracting cancer due to this exposure. Based on an estimated year 2000 statewide average concentration of 1.26 $\mu g/m^3$ for indoor and outdoor ambient air, about 380 excess cancer cases per one million population could be expected if diesel PM concentrations remained the same (ARB, October 2000).

Compared to other air toxics the ARB has identified and controlled, diesel PM emissions are estimated to be responsible for about 70% of the total ambient air toxics risk. In addition to these general risks, diesel PM can also be responsible for elevated localized or near-source exposures ("hot spots"). Depending on the activity and nearness to receptors, these potential risks can range from small to 1,500 per million or more (ARB, October 2000). Risk characterization scenarios have been conducted by the ARB staff to determine the potential excess cancer risks involved due to the location of individuals near to various sources of diesel engine emissions, ranging from school buses to high volume freeways.

Diesel PM emissions are expected to decrease 30% from 2000 to 2020 due to currently adopted on-road standards and fleet turn-over as new vehicles with controls replace older vehicles with little or far less effective controls, but such reductions will not be sufficient to fully reduce the existing risk. ARB staff have prepared a Diesel Risk Reduction Plan (ARB, October 2000) that includes a comprehensive plan to significantly reduce diesel PM emissions. The ARB is in the process of developing specific regulations to implement the plan. The basic concept is to require all new diesel-fueled vehicles and engines to use state-of-the-art catalyzed diesel particulate filters (DPFs) and very low-sulfur diesel fuel. Also, where technically and economically feasible, the ARB staff recommends that existing vehicles and engines should be retro-fitted to further reduce particulate emissions. For example, the ARB in 2001 adopted new PM and NO_x emission standards to clean up large diesel engines that power big-rig trucks, trash trucks, delivery vans and other large vehicles. The new standard for PM takes effect in 2007 and reduces emissions to 0.01 gram of PM per brake horsepower-hour (g/bhp-hr.), a 90% reduction from the existing standard.

The USEPA is also working to reduce the emissions from diesel engines. The USEPA finalized a new rule in December 2000 for on-road vehicles requiring petroleum refiners to remove all but 15 ppm of sulfur from diesel fuel by mid-2006, and requiring engine makers to reduce particulate matter emissions by almost 90% and NO_x levels by up to 95% for new engines by the model year 2007.

Carbon Monoxide. Carbon monoxide, a colorless, odorless, poisonous gas, is a local pollutant that is found in high concentrations only very near the source. The major source of carbon monoxide is automobile engines. Elevated concentrations, therefore, are usually only found near areas of high traffic volumes. Carbon monoxide's health effects are related to its affinity for hemoglobin in the blood. At high concentrations, carbon monoxide reduces the

amount of oxygen in the blood, causing heart difficulties in people with chronic diseases, reduced lung capacity and impaired mental abilities.

c. Current Ambient Air Quality. The Air Quality Monitoring Stations in El Rio and at Emma Wood State Beach are the nearest to the City of the seven VCAPCD monitoring stations. Air quality at the Ojai monitoring station can also be affected by air pollutants generated in the West Ventura area. The El Rio monitoring station measures ozone, CO, NO_2, and PM_{10}. The Emma Wood station measures ozone. The Ojai station measures ozone, PM_{10}, and NO_2. Table 4.3-2 lists air quality data for the El Rio monitoring station, Table 4.3-3 lists air quality data for the Emma Wood station, and Table 4.3-4 lists air quality data for the Ojai monitoring station.

Ozone concentrations at the El Rio monitoring station did not exceed federal or state standards during 2002-2004. Ozone concentrations at the Emma Wood station exceeded state standards on three days in 2003 and one day in 2004. Concentrations of PM_{10} at El Rio exceeded the state standard all three years (2002-2004), but the federal PM_{10} standard was not exceeded in either location. Ventura County is in attainment for the federal $PM_{2.5}$ standard. Neither carbon monoxide nor nitrogen dioxide at the El Rio station exceeded federal or state standards.

Ozone concentrations at the Ojai monitoring station exceeded the federal 1-hour standard once in 2002 and once in 2003, but did not exceed the federal standard in 2004. Ozone concentrations exceeded the state 1-hour standard on 15 days in 2002, 24 days in 2003, and 7 days in 2004. Eight-hour concentrations exceeded the federal standard on 12 days in 2002, 22 days in 2003, and 13 days in 2004. PM_{10} concentrations did not exceed the federal standard during the 2002-04 period, but the state standard was exceeded twice in 2003.

The major sources of ozone precursors in Ventura County are motor vehicles and other mobile equipment, solvent use, pesticide application, the petroleum industry, and electric utilities. The major sources of PM_{10} are road dust, construction, mobile sources, and farming operations. Locally, Santa Ana winds are responsible for entraining dust and occasionally causing elevated PM_{10} levels.

d. Air Quality Management Plan. The 1994 Air Quality Management Plan (AQMP) prepared by the Ventura County APCD includes a number of air pollution control measures to reduce emissions and bring the region into compliance with the federal ozone standard. The AQMP was revised in 1995, 1997, and 2004 and predicted attainment of the federal one hour ozone standard by 2005. Based on the last three years of monitoring, Ventura County has effectively attained the federal one hour ozone standard. Further emission reductions are needed to attain the eight hour standard. To that end, the APCD is currently developing a new AQMP, which will be completed in 2007. The 2007 AQMP will contain strategies for attainment of the new eight-hour federal ozone standard by 2010. It will also incorporate updated projections of population, dwelling units, and motor vehicle emissions.

Ventura County must also comply with the California Clean Air Act (effective January 1, 1989), which requires attainment of the California Ambient Air Quality Standards by the earliest practicable date. The state ozone standard is more stringent than the federal standard and is more difficult to achieve. The latest Triennial Plan Assessment and Update (VCAPCD, February 2004) does not predict an attainment date for the state ozone standard, but provides documentation that the County has met exposure reductions mandated under the state Health

Table 4.3-2
Ambient Air Quality Data for the El Rio Monitoring Station

Pollutant	Air Pollution Data		
	2002	2003	2004
Ozone, ppm - maximum hourly concentration (ppm)	0.086	0.081	0.090
Number of days of state exceedances (>0.09 ppm)	0	0	0
Number of days of federal exceedances (>0.12 ppm)	0	0	0
Ozone, ppm - maximum 8-hour concentration (ppm)	0.067	0.071	0.080
Number of days of federal exceedances (>0.08 ppm)	0	0	0
Carbon Monoxide, ppm - Worst 8 Hours	1.23	3.50	1.52
Number of days of state 1-hour exceedances (>20.0 ppm)	0	0	0
Number of days of state 8-hour exceedances (>9.0 ppm)	0	0	0
Nitrogen Dioxide, ppm - Worst Hour	0.048	0.057	0.063
Number of days of state exceedances (>0.25 ppm)	0	0	0
Particulate Matter <10 microns, maximum concentration in $\mu g/m^3$ (State/Fed)	100.4/ 97.4	127.2/ 123.8	59.3/ 59.6

and Safety Code Section 40920. Health and Safety Code Section 40914(b)(2) requires a demonstration that the plan to attain the ozone standard is to provide for expeditious

implementation of "every feasible measure" to reduce ozone precursor emissions. Per the Triennial Plan Assessment and Update, VCAPCD staff examined 26 emission source categories with the "Most Stringent All Feasible Measures List" prepared by the California Air Pollution Control Officers Association Rules Subcommittee and determined that "all feasible measures" have been implemented for 13 of the source categories. The District has scheduled rule making from 2004-2006 for the other 13 emission source categories.

e. Sensitive Receptors. Ambient air quality standards have been established to represent the levels of air quality considered sufficient, with an adequate margin of safety, to protect public health and welfare. They are designed to protect that segment of the public most susceptible to respiratory distress, such as children under 14; the elderly over 65; persons engaged in strenuous work or exercise; and people with cardiovascular and chronic respiratory diseases. The majority of sensitive receptor locations are therefore schools and hospitals. School locations are identified in Section 4.11, *Public Services.*

4.3.2 Impact Analysis

a. Methodology and Significance Thresholds. The analysis of the proposed 2005 General Plan's air quality impacts follows the guidance and methodologies recommended in the Ventura County air Quality Assessment Guidelines (October 2003).

The VCAPCD recommends 25 pounds per day thresholds for ROC and NO_x emissions that apply to individual development projects within the Ventura growth area. For the Ojai Planning Area (which is adjacent to portions of the West Ventura area), the VCAPCD recommends thresholds of 5 pounds per day ROC and NO_x emissions. However, these thresholds do not apply to general plans, which could accommodate numerous individual projects. Significance thresholds for citywide planning programs, such as the 2005 General Plan, are based on whether the planning program exceeds regional growth forecasts thus delaying the attainment of regional air quality objectives. For the purposes of this analysis, long-term impacts to regional air quality are determined to be significant if growth accommodated under the 20005 General Plan would be inconsistent with adopted Air Quality Management Plan (AQMP) growth forecasts through 2025. The population projections in the AQMP are adopted from the Southern California Association of Governments (SCAG).

Projects and programs requiring an analysis of consistency with the AQMP include general plan updates and amendments, specific plans, area plans, large residential developments and large commercial/industrial developments. The consistency analysis evaluates the following questions:

- *Are the population projections used in the plan or project equal to or less than those used in the most recent AQMP for the same area?*

- *Is the rate of increase in vehicle trips and miles traveled less than or equal to the rate of population growth for the same area?*

- *Have all applicable land use and transportation control measures from the AQMP been included in the plan or project to the maximum extent feasible?*

If the answer to all of the above questions is yes, then the proposed project or plan is considered consistent with the AQMP. If the answer to any one of the questions is no, then General Plan buildout could potentially delay or preclude attainment of the state ozone standard. This would be considered inconsistent with the AQMP.

Long-term impacts are also considered potentially significant if the growth in traffic accommodated under the 2005 General Plan would have the potential to create CO "hot spots" where CO concentrations exceed state or federal standards. Such hot spots typically occur at severely congested intersections where a level of service (LOS) E or F is projected.

The VCAPCD has not adopted significance thresholds for construction-related emissions because of their temporary nature. In any event, construction-related emissions are not relevant at the General Plan level because such emissions are dependent on the characteristics of individual development projects. Nevertheless, because the region does not meet the federal or State standards for ozone or the State standard for PM_{10}, the City requires implementation of standard emission and dust control techniques for all construction.

b. Project Impacts and Mitigation Measures. The matrix on the following page provides a summary comparison of impacts for each of the six 2005 General Plan land use scenarios. A discussion of the impacts for each scenario follows.

Impact AQ-1	**Anticipated growth under any of the six land use scenarios exceeds Ventura County Air Quality Management Plan population forecasts. This is largely because AQMP forecasts are outdated and the 2005 General Plan is not expected to hinder attainment of state or federal air quality standards. Nevertheless, the exceedance of population projections used for regional air quality planning represents a potential inconsistency with the AQMP. This is considered a Class I, *unavoidably significant*, impact of any of the six scenarios.**

Impacts relating to consistency with the Ventura County AQMP are generally the same for the six land use scenarios. Therefore, the scenarios are not discussed individually.

Vehicle use, energy consumption, and associated air pollutant emissions are directly related to population growth. The population forecasts upon which the Ventura County AQMP is based are used to estimate future emissions and devise appropriate strategies to attain state and federal air quality standards. When population growth exceeds the forecasts upon which the AQMP is based, emission inventories could be surpassed, which could affect attainment of standards.

The Ventura County AQMP relies on the most recent population estimates developed by the Metropolitan Planning Organization (MPO). The Southern California Association of Governments (SCAG) acts as the MPO for Ventura County. According to SCAG's 2004 Regional Transportation Plan (RTP) population forecasts, the projected 2025 population for the City of Ventura is 123,645. This represents an average annual growth rate of 0.78%.

Summary Comparison of Impacts for EIR Scenarios

	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
AQMP Consistency (Impact AQ-1)	Projected 2025 population of 126,153 exceeds AQMP projection by 2,508 persons. Though population growth is not expected to hinder progress toward state and federal standards, exceedance of the population projection is an unavoidably significant impact.	Projected 2025 population of 133,160 exceeds AQMP projection by 9,515 persons. Though population growth is not expected to hinder progress toward state and federal standards, exceedance of the population projection is an unavoidably significant impact.	Impacts similar to Scenario 2 and unavoidably significant.	Impacts similar to Scenario 2 and unavoidably significant.	Impacts similar to Scenario 2 and unavoidably significant.	Impacts similar to Scenario 2 and unavoidably significant.
Individual Future Developments (Impact AQ-2)	Most intensification/ reuse development would not exceed VCAPCD thresholds; developments on large agricultural parcels in Saticoy, Arundell, North Bank, and North Avenue areas may exceed thresholds, but implementation of current requirements and proposed policies reduces impacts to Class III, less than significant.	Intensification/ reuse impacts similar to Scenario 1. Development of Olivas and Serra expansion areas would exceed VCAPCD thresholds and North Avenue expansion area development could. Implementation of current requirements and proposed policies reduces impacts to Class III, less than significant.	Intensification/ reuse impacts similar to Scenario 1. Development of Olivas expansion area would exceed VCAPCD thresholds and North Avenue expansion area development could. Implementation of current requirements and proposed policies reduces impacts to Class III, less than significant.	Intensification/ reuse impacts similar to Scenario 1. Development of Serra expansion area would exceed VCAPCD thresholds and North Avenue expansion area development could. Implementation of current requirements and proposed policies reduces impacts to Class III, less than significant.	Intensification/ reuse impacts similar to Scenario 1. Development of Western Cañada Larga and North Avenue expansion area development would exceed VCACPD thresholds. Implementation of current requirements and proposed policies reduces impacts to Class III, less than significant.	Intensification/ reuse impacts similar to Scenario 1. Development of Poinsettia expansion area would exceed VCAPCD thresholds and North Avenue expansion area development could. Implementation of current requirements and proposed policies reduces impacts to Class III, less than significant.

Summary Comparison of Impacts for EIR Scenarios

	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
Construction (Impact AQ-3)	An estimated 8,300 residences and 4.9 million square feet of non-residential development could be developed under this scenario through 2025. Impacts reduced to Class III, less than significant, through implementation of proposed policies, including VCAPCD-recommended emission and dust control techniques.	An estimated 11,000 residences and 6.3 million square feet of non-residential development could be developed under this scenario through 2025. Impacts reduced to Class III, less than significant, through implementation of proposed policies, including VCAPCD-recommended emission and dust control techniques.	Overall impacts similar to Scenario 2, but more construction would occur in the North Avenue and Olivas areas and no construction would occur in the Serra area. Impacts reduced to Class III, less than significant, through implementation of proposed policies, including VCAPCD-recommended emission and dust control techniques.	Overall impacts similar to Scenario 2, but more construction would occur in the North Avenue and Serra areas and no construction would occur in the Olivas area. Impacts reduced to Class III, less than significant, through implementation of proposed policies, including VCAPCD-recommended emission and dust control techniques.	Overall impacts similar to Scenario 2, but more construction activity would be focused in the North Ventura Avenue area. Impacts reduced to Class III, less than significant, through implementation of proposed policies, including VCAPCD-recommended emission and dust control techniques.	Overall impacts similar to Scenario 2, but construction would occur in the North Avenue and Poinsettia expansion areas. Impacts reduced to Class III, less than significant through implementation of proposed policies, including VCAPCD-recommended emission and dust control techniques.
Carbon Monoxide (Impact AQ-4)	Increased traffic levels would potentially increase CO concentrations; however, reductions in CO emission rates would more than offset effects of increased traffic congestion. Impacts are Class III, less than significant.	Increased growth as compared to Scenario 1 would incrementally increase traffic congestion and CO emissions. Nevertheless, impacts are similar to Scenario 1 and Class III, less than significant.	Impacts similar to Scenario 2 and Class III, less than significant.	Impacts similar to Scenario 2 and Class III, less than significant.	Impacts similar to Scenario 2 and Class III, less than significant.	Impacts similar to Scenario 2 and Class III, less than significant.

Table 4.3-5 compares the 2025 population projections for the 2005 General Plan land use scenarios to the forecasts upon which the AQMP is based. As indicated, the projections for Scenarios 1-6 all exceed the AQMP forecasts. The projected 2025 population of 126,153 for Scenario 1 is 2% over the AQMP forecast, while the projected population of 133,160 for Scenarios 2-6 is about 8% over the AQMP forecast.

Table 4.3-5
Comparison of 2025 Population Projections

	Scenario 1	Scenarios 2-6
2005 General Plan 2025 Population Projection	126,153	133,160
Ventura AQMP 2025 Population Projection	123,645	
Persons Over AQMP Projection	2,508	9,515

Based on the projected average annual growth estimate for growth Scenario 1 (0.88%), the 2025 population projection for the City is 126,153. This is 2,508 persons, or about 2%, greater than the AQMP population projection. The 1.14% average annual growth rate assumed for Scenarios 2-6 would result in a 2025 population estimated at 133,160. This exceeds the AQMP projection by 9,515 persons, or about 8%. Thus, any of the six scenarios could be considered inconsistent with the AQMP.

Although population growth associated with Scenarios 1-6 is projected to exceed forecasts upon which the AQMP is based, the 2005 General Plan includes goals, policies, and actions that would at least partially alleviate increases in traffic and energy consumption, and associated increases in air pollutant emissions. Development under Scenarios 1-6 would be subject to Policy 3C and Actions 3.14 and 3.16 of the 2005 General Plan, which promote intensification and reuse of existing lands within the existing City limits and SOI prior to expansion. In addition, Policy 4B directs the City to "[h]elp reduce dependence on the automobile," while Policy 4C directs the City to "[i]ncrease transit efficiency and options." Several 2005 General Plan actions support these policies. Among the actions are the development of trip reduction and transportation demand management incentives and programs (Actions 4.14, 4.19, 4.20, and 4.29), improvements to sidewalks (Actions 4.24 and 4.25), and citywide improvements to transit and alternative transportation mode facilities (Actions 4.16 and 4.28).

Recent research indicates that infill development reduces vehicle miles traveled (VMT) and associated air pollutant emissions as compared to development on sites at the periphery of metropolitan areas, also known as "greenfield" sites. For example, a 1999 simulation study conducted for the U.S. Environmental Protection Agency comparing infill development to greenfield development found that infill development results in substantially fewer VMT per capita and generates fewer emissions of most air pollutants and greenhouse gases (see Table 4.3-6). Similarly, a 1991 study presented to the California Energy Resources Conservation and Development Commission (Holtzclaw, 1991) found that a doubling of residential densities (as could occur with infill development under Scenarios 1-6) is associated with a 20-30% reduction in per capita VMT.

Table 4.3-6
Comparison of VMT and Emissions: Infill versus Greenfield Development

Case Study	Per Capita Daily VMT, Infill as a Percentage of Greenfield	Emissions, Infill as a Percentage of Greenfield
San Diego, CA	52%	CO 88% NO_x 58% SO_x 51% PM 58% CO_2 55%
Montgomery County, MD	42%	CO 52% NO_x 69% SO_x 110% PM 50% CO_2 54%
West Palm Beach, FL	39%	CO 75% NO_x 72% SO_x 94% PM 47% CO_2 50%

Source: Allen, E., Anderson, G., and Schroeer, W., "The Impacts of Infill vs. Greenfield Development: A Comparative Case Study Analysis," U.S. Environmental Protection Agency, Office of Policy, EPA Publication #231-R-99-005, September 2, 1999.

Implementation of any of the land use scenarios under consideration for the 2005 General Plan would be expected to substantially increase overall residential densities in the community by emphasizing intensification and reuse of lands in already urbanized areas of the community. Table 4.3-7 compares the current number of persons per acre in Ventura to the projected number of persons per acre in 2025 under each of the six land use scenarios.

Table 4.3-7
Estimated Persons per Acre – 2004 and 2025

Scenario	Estimated SOI Acres[a]	Estimated Population	Estimated Persons/Acre
Current (2004)	16,069	104,952	6.53
Scenario 1 (2025)	16,080	126,153	7.85
Scenario 2 (2025)	17,104	133,160	7.79
Scenario 3 (2025)	16,944	133,160	7.86
Scenario 4 (2025)	16,229	133,160	8.21
Scenario 5 (2025)	16,190	133,160	8.22
Scenario 6 (2025)	16,080	133,160	8.28

[a] *Current (2004) SOI acres exclude the hillsides (i.e., same area as under Scenario 1). SOI acres for the 2005 General Plan scenarios add areas outside the current SOI that are proposed for inclusion in the scenario: (1) 11 acres for Scenarios 1 and 6; (2) 1,035 additional acres for Scenario 2; (3) 875 additional acres for Scenario 3; (4) 160 additional acres for Scenario 4; and (5) 110 acres for Scenario 5. Ventura County LAFCO approval of SOI*

adjustments would be needed to accommodate development in areas outside the current SOI.

By increasing the overall population density of the community and encouraging mixed land uses, implementation of the 2005 General Plan would be expected to generally reduce per capita automobile trips and travel distances as compared to existing conditions or continued lower density development at the periphery of the Planning Area. This would generally reduce per capita air pollutant emissions associated with vehicle use. Based on the data in Table 4.3-7, the overall increase in persons/acre within the anticipated future SOI could range from about 19% (for Scenario 2) to 27% (for Scenario 6). Assuming that a doubling of residential density would achieve at least a 20% reduction in per capita VMT (as discussed above), a 19-27% increase in residential density could be expected to reduce citywide per capita VMT by about 4-5%. Thus, the rate of increase in vehicle trips and VMT is expected to be less than the population increase. Such a reduction would at least partially offset the exceedance of the 2025 population forecast upon which the AQMP is based. In addition, as discussed in Section 4.15, *Population and Housing*, any of the land use scenarios would be expected to provide for a balance of jobs and housing in the community, which would be expected to generally limit the need for area residents to travel long distances to jobs.

The Ventura County AQMP provides recommendations for reducing emissions from transportation-related sources by reducing vehicle use or improving traffic flow. These techniques are referred to as Transportation Control Measures (TCMs). Table 4.3-8 compares proposed 2005 General Plan policies and strategies to the AQMP TCMs. As indicated, the 2005 General Plan includes numerous policies that fulfill the intent of the VCAPCD transportation control measures. Thus, no inconsistency with these measures is anticipated for any scenario.

Table 4.3-8
2005 General Plan Consistency with VCAPCD Transportation Control Measures

Transportation Control Measure	2005 General Plan Policies
TCM A – Ridesharing Strategies	Action 4.14 - Provide development incentives to encourage projects that reduce vehicle trips. Action 4.19 – Adopt new development code provisions that establish vehicle trip reduction requirements for all development. Action 4.20 - Develop a transportation demand management program to shift travel behavior toward alternative modes and services.
TCM B – Nonmotorized Strategies	Action 4.12 - Refine level of service standards to encourage use of alternative modes of transportation while meeting state and regional mandates. Action 4.13 – Design roadway improvements and facility modifications to minimize the potential for conflict between pedestrians, bicycles, and automobiles. Action 4.16 - Install roadway, transit, and alternative transportation improvements along existing or planned multi-modal corridors, including primary bike and transit routes, and at land use intensity nodes. Action 4.17 - Prepare and periodically update a Mobility Plan that integrates a variety of travel alternatives to minimize reliance on any single mode. Action 4.18 - Promote the development and use of recreational trails as transportation routes to connect housing with services, entertainment, and employment. Action 4.21 - Require new development to provide

Table 4.3-8
2005 General Plan Consistency with VCAPCD Transportation Control Measures

Transportation Control Measure	2005 General Plan Policies
	pedestrian and bicycle access and facilities as appropriate, including connected paths along the shoreline and watercourses. Action 4.22 - Update the General Bikeway Plan as needed to encourage bicycle use as a viable transportation alternative to the automobile and include the bikeway plan as part of a new Mobility Plan. Action 4.24 - Require sidewalks wide enough to encourage walking that include ramps and other features needed to ensure access for mobility-impaired persons. Action 4.25 – Adopt new development code provisions that require the construction of sidewalks, where appropriate.
TCM C – Traffic Flow Improvement Strategy	Action 4.7 - Update the traffic mitigation fee program to fund necessary citywide circulation system and mobility improvements needed in conjunction with new development. Action 4.10 - Modify traffic signal timing to ensure safety and minimize delay for all users. Action 4.27 - Extend stubbed-end streets through future developments, where appropriate, to provide necessary circulation within a developing area and for adequate internal circulation within and between neighborhoods.
TCM D – Land Use Strategy	Action 3.8 – Adopt new development code provisions that designate neighborhood centers for a mixture of residences and small-scale, local-serving businesses. Action 3.9 - Adopt new development code provisions that designate commerce districts and corridors for mixed-use development that combines businesses with housing. Action 3.10 - Allow intensification of commercial areas through conversion of surface parking to building area under a districtwide parking management strategy in the Downtown Specific Plan. Action 3.11 - Expand the downtown redevelopment area to include parcels around future transit areas and along freeway frontage. Action 4.12 – Design roadway improvements and facility modifications to minimize the potential for conflict between pedestrians, bicycles, and automobiles.
TCM E – Transit Strategies	Action 4.28 - Require all new development to provide for citywide improvements to transit stops that have sufficient quality and amenities, including shelters and benches, to encourage ridership. Action 4.29 - Develop incentives to encourage City employees and local employers to use transit, rideshare, walk, or bike. Action 4.30 - Work with public transit agencies to provide information to riders at transit stops, libraries, lodging, and event facilities. Action 4.31 - Work with public and private transit providers to enhance public transit service. Action 4.32 - Coordinate with public transit systems for the provision of additional routes as demand and funding allow.

Table 4.3-8
2005 General Plan Consistency with VCAPCD Transportation Control Measures

Transportation Control Measure	2005 General Plan Policies
	Action 4.33 - Work with Amtrak, Metrolink, and Union Pacific to maximize efficiency of passenger and freight rail service to the City and to integrate and coordinate passenger rail service with other transportation modes. Action 4.34 - Lobby for additional transportation funding and changes to Federal, State, and regional transportation policy that support local decision-making.

In summary, the rate of increase in vehicle trips is expected to be less than the population growth rate for any of the 2005 General Plan land use scenarios. In addition, policies, actions, and land use strategies contained in the 2005 General Plan would incorporate AQMP transportation control measures to the extent feasible. Nevertheless, because the projected population growth under any of the six scenarios exceeds AQMP forecasts for the City, impacts associated with any of the scenarios are considered significant.

MITIGATION MEASURES

As discussed above, the 2005 General Plan includes various policies and actions that encourage mixed use and infill development. Implementation of these policies/actions would reduce air pollutant emissions to the maximum degree feasible given the amount of growth anticipated under the 2005 General Plan. However, outside of restricting population growth to be within SCAG and VCAPCD forecasts, the potential inconsistency with the AQMP cannot be avoided. Section 6.0, *Alternatives*, includes evaluation of an alternative with a 0.78% average annual growth rate. Under that alternative, the 2025 population would be within SCAG and VCAPCD forecasts.

SIGNIFICANCE AFTER MITIGATION

Outside of restricting population growth to be within SCAG and VCAPCD forecasts, the potential inconsistency with the AQMP is considered an unavoidably significant impact. It should again be noted, however, that the exceedance of AQMP population forecasts is largely a result of the current forecasts not reflecting current City planning policy. As discussed above, the emphasis on reuse of already developed lands and mixed use, pedestrian-oriented development is expected to reduce regional air pollutant emissions as compared to continued low density, automobile oriented development at the City's periphery.

Impact AQ-2	**Individual projects accommodated under the proposed 2005 General Plan would generate air pollutant emissions. The significance of air quality impacts associated with individual projects would depend upon the characteristics of the projects and the availability of feasible mitigation measures. However, implementation of existing programs, in combination with proposed 2005 General Plan policies and actions, would reduce impacts associated with individual**

development projects to a Class III, *less than significant*, level for all six scenarios.

Long-term emissions associated with growth accommodated under any of the 2005 General Plan scenarios are those associated with vehicle trips and stationary sources (electricity and natural gas). As noted under Impact AQ-1, growth that would be accommodated under any of the 2005 General Plan scenarios would be greater than anticipated under regional growth forecasts. It is also likely that some individual intensification/reuse projects would exceed project-specific thresholds established by the VCAPCD. Table 4.3-9 shows the size of projects that would be expected to exceed VCAPCD thresholds in 2005, 2010, 2015, 2020, and 2025. As indicated, it is anticipated that the size of projects that will exceed VCACPD thresholds will increase over time. This is because it is anticipated that emissions from individual vehicles and buildings will continue to decline as new technologies are introduced.

Table 4.3-9
Project Size That Will Exceed VCAPCD Significance Thresholds for Ozone Precursors (ROC and NO_x)

Year	Residential Projects (units)			Non-Residential Projects (square feet)			
	Single Family Housing	Apartments	Condos/ Townhouses	Strip Mall (retail)	Home Improvement (retail)	Office Park	Industrial Park
2005	117	160	203	60,600	70,900	120,500	199,500
2010	173	236	255	88,000	99,900	191,700	366,500
2015	247	294	310	141,600	156,800	328,500	704,000
2020	284	331	345	202,000	220,500	475,000	1,099,000
2025	322	367	378	288,200	311,400	677,000	1,705,000

Source: Ventura County Air Pollution Control District, Ventura County Air Quality Assessment Guidelines, Appendix F, October 2003.

The overall cumulative impact would be greater under Scenarios 2-6 than under Scenario 1 because those scenarios would accommodate more overall new development (approximately 11,000 new residential units and about 33,000 new residents under Scenarios 2-6 as compared to 8,300 new units and about 26,000 new residents under Scenario 1). The 33% greater population increase anticipated for Scenarios 2-6 as compared to Scenario 1 would increase overall emissions of air pollutants commensurately, with greater overall impacts to regional air quality. However, it is important to note that these estimates of population growth are projections used for analytical purposes. The actual increase in population could be higher or lower for any of the scenarios. Moreover, it is not possible to predict how higher or lower population growth in Ventura may affect overall growth in neighboring communities (e.g., whether absorbing more growth in Ventura may result in lower growth in Oxnard or vice versa).

Individual future development projects under any of the 2005 General Plan land use scenarios would be required to include mitigation measures to address potential impacts. Specifically, the City's Air Quality Ordinance (Ordinance 93-37) requires developers of projects that generate emissions exceeding VCAPCD significance thresholds to pay air quality impact fees that are placed in a transportation demand management (TDM) fund that is used by the City to offset

project emissions through implementation of regional air quality programs. The fee is based on a formula developed by the VCAPCD and included in the District's Air Quality Assessment Guidelines (October 2003). Funds are used to implement such programs as enhanced public transit service, vanpool programs/subsidies, rideshare assistance programs, clean fuel programs, improved pedestrian and bicycle facilities, and park-and-ride facilities. Continued collection of fees on all projects that generate emissions over VCAPCD thresholds would reduce the impacts of individual developments to a less than significant level.

The potential for individual projects to generate emissions exceeding VCAPCD thresholds under each scenario is discussed below.

Scenario 1 – Intensification/Reuse Only

Many of the individual developments that would be anticipated under this scenario would likely be smaller than the project sizes listed in Table 4.3-9 and therefore would not trigger VCAPCD significance thresholds. Exceptions to this may include the development of larger parcels in the Saticoy area (which are designated for residential development), the McGrath property and other large vacant parcels in the Arundell and North Bank districts, and large industrial parcels in the North Avenue and Upper North Avenue districts. Whether or not individual projects would generate emissions exceeding VCAPCD thresholds would depend upon the size of the project and when it is proposed.

Scenario 2 – Intensification/Reuse + North Avenue + Olivas + Serra

Impacts associated with intensification/reuse would be the same as described under Scenario 1. Among the three expansion areas included in this scenario (North Avenue, Olivas, and Serra), future development of the Olivas and Serra areas would be expected to involve development exceeding the project sizes listed in Table 4.3-9, regardless of when development occurs. As such, it is anticipated that development of these areas would generate emissions exceeding VCAPCD thresholds and trigger the need for contribution to a TDM fund as required by Ordinance 93-37. Future development of the North Avenue area may or may not exceed the project sizes listed in Table 4.3-9. For this scenario, it has been assumed that 176 residences and roughly 18,000 square feet of non-residential development would be accommodated in the North Avenue area. If such development were to occur prior to 2015, projected emissions would likely exceed VCAPCD thresholds; however, after 2015, the level of development assumed for the North Avenue expansion area would not be expected to exceed thresholds due to the projected reductions in emission rates from vehicles and buildings.

The Ojai Planning Area ROC and NO_x thresholds of five pounds per day do not apply to projects in Ventura and the actual impact of development in the West Ventura area upon air quality in the Ojai Valley cannot be predicted. However, it should be noted that development in the West Ventura area, including the North Avenue expansion area, would generate emissions that could potentially be transported to the Ojai air basin.

Scenario 3 – Intensification/Reuse + North Avenue + Olivas

Impacts associated with intensification/reuse would be the same as described under Scenario 1. Future buildout of the Olivas expansion area would be expected to involve development

exceeding the project sizes listed in Table 4.3-9, regardless of when development occurs. Consequently, it is anticipated that development of this expansion area would generate emissions exceeding VCAPCD thresholds and trigger the need for contribution to a TDM fund as required by Ordinance 93-37. Future development of the North Avenue area may or may not exceed the project sizes listed in Table 4.3-9. For this scenario, it has been assumed that 322 residences and roughly 90,000 square feet of non-residential development would be accommodated in the North Avenue area. Whether or not such development would generate emissions exceeding VCAPCD thresholds would depend upon the mix of housing types and when development occurs.

Scenario 4 – Intensification/Reuse + North Avenue + Serra

Impacts associated with intensification/reuse would be the same as described under Scenario 1. Future buildout of the Serra expansion area would be expected to involve development exceeding the project sizes listed in Table 4.3-9, regardless of when development occurs. Consequently, it is anticipated that development of this expansion area would generate emissions exceeding VCAPCD thresholds and trigger the need for contribution to a TDM fund as required by Ordinance 93-37. Future development of the North Avenue area may or may not exceed the project sizes listed in Table 4.3-7. Similar to Scenario 3, it is assumed that 322 residences and roughly 90,000 square feet of non-residential development would be accommodated in the North Avenue area under this scenario. Whether or not such development would generate emissions exceeding VCAPCD thresholds would depend upon the mix of housing types and when development occurs.

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga

Impacts associated with intensification/reuse would be the same as described under Scenario 1. The North Avenue expansion area would be developed more intensely under this scenario than under Scenarios 2-4 and 6. The two expansion areas included in this scenario could both accommodate development exceeding the project sizes listed in Table 4.3-9. As such, it is anticipated that development of these areas could generate emissions exceeding VCAPCD thresholds and trigger the need for contribution to a TDM fund as required by Ordinance 93-37.

As noted under Scenario 2, the Ojai Planning Area ROC and NO_x thresholds of five pounds per day do not apply to projects in Ventura and the actual impact of development in the West Ventura area upon air quality in the Ojai Valley cannot be predicted. However, it should be noted that development in the West Ventura area, including the North Avenue and Western Cañada Larga expansion areas, would generate emissions that could potentially be transported to the Ojai air basin. As compared to the other land use scenarios, Scenario 5 would accommodate substantially more development, including an estimated 2,700 expansion area residences, within the North Ventura Avenue area, with greater potential to adversely affect air quality in the Ojai Valley.

Scenario 6 – Intensification/Reuse + North Avenue + Poinsettia

Impacts associated with intensification/reuse would be the same as described under Scenario 1. Future buildout of the Poinsettia expansion area would be expected to involve development exceeding the project sizes listed in Table 4.3-9, regardless of when development occurs.

Consequently, it is anticipated that development of this expansion area would generate emissions exceeding VCAPCD thresholds and trigger the need for contribution to a TDM fund as required by Ordinance 93-37. Future development of the North Avenue area may or may not exceed the project sizes listed in Table 4.3-9. Similar to Scenario 3, it is assumed that 322 residences and roughly 90,000 square feet of non-residential development would be accommodated in the North Avenue area under this scenario. Whether or not such development would generate emissions exceeding VCAPCD thresholds would depend upon the mix of housing types and when development occurs.

MITIGATION MEASURES

Impacts associated with individual future developments could be reduced to a less than significant level through implementation of existing programs and proposed 2005 General Plan policies, actions, and land use strategies. Nevertheless, the following actions are recommended for inclusion in the 2005 General Plan.

AQ-2 **Additional Air Quality Actions.** The following actions should be added to the 2005 General Plan to address air quality impacts of future development on a case-by-case basis:

- Require air quality analysis of individual development projects in accordance with the most current version of the Ventura County Air Pollution Control District Air Quality Assessment Guidelines and, when significant impacts are identified, require implementation of air pollutant mitigation measures determined to be feasible at the time of project approval.
- In accordance with Ordinance 93-37, continue to require payment of fees to fund regional transportation demand management (TDM) programs for all projects generating emissions in excess of Ventura County APCD thresholds.

The following action should be added if a land use scenario that includes expansion areas is adopted in order to ensure that individual development projects within expansion areas contribute toward the City's TDM fund:

- Require the development of specific plans for expansion areas for which overall air pollutant emissions shall be estimated to establish a TDM fund as required under Ordinance 93-37. Require individual developers within expansion areas to contribute pro rata fees to the TDM fund.

SIGNIFICANCE AFTER MITIGATION

Impacts associated with individual development projects could be reduced to a less than significant level through implementation of mitigation measures on a case-by-case basis under any of the land use scenarios. The above recommended actions would help ensure that

appropriate analysis and mitigation measures are incorporated into future development projects.

Impact AQ-3	**Construction of individual projects accommodated under the 2005 General Plan would result in temporary emissions of air pollutant emissions. The Ventura County APCD has not adopted significance thresholds for construction impacts because of their temporary nature; therefore, impacts would be Class III, *less than significant*, for all six scenarios. Nevertheless, implementation of standard emission and dust control techniques will be required on all future development regardless of the land use scenario selected.**

Construction activity that would by accommodated over the next 20 years under any of the 2005 General Plan land use scenarios would cause temporary emissions of various air pollutants. Ozone precursors NO_x and CO would be emitted by the operation of construction equipment, while fugitive dust (PM_{10}) would be emitted by activities that disturb the soil, such as grading and excavation, road construction and building construction. Information regarding specific development projects, soil types, and the locations of receptors would be needed in order to quantify the level of impact associated with construction activity.

Impacts associated with individual construction projects are not generally considered significant because of their temporary nature. Nevertheless, given the amount of development that the 2005 General Plan would accommodate over the next 20 years, it is reasonable to conclude that some major construction activity could be occurring at any given time over the life of the 2005 General Plan. Impacts could also be complicated by the fact that multiple construction projects could occur simultaneously in any portion of the City.

Impacts from construction are directly associated with the amount of land disturbance and development that will take place. As shown in Tables 2-5 and 2-6 in Section 2.0, *Project Description*, Scenario 1 would accommodate an estimated 8,300 new residential units and 4.9 million square feet of non-residential development through 2025. Scenarios 2-6 would accommodate an estimated 11,000 new residential units and 6.3 million square feet of non-residential development over the same time period.

Maximum daily emissions associated with individual construction projects would be similar under any of the scenarios. However, because the overall amount of development is expected to be greater under Scenarios 2-6, overall construction-related emissions over the 20-year period through 2025 would be greater than under Scenario 1. Scenarios 2-6 would all accommodate the development of agricultural lands in the expansion areas. Grading of these areas would be expected to generate temporary emissions of fugitive dust. The area of potential disturbance would be greatest under Scenario 2 (Intensification/Reuse + North Avenue + Olivas + Serra) since that scenario would make the largest amount of land available for future development. On the other hand, development accommodated under Scenarios 5 (Intensification/Reuse + North Avenue + Western Cañada Larga) and 6 (Intensification/Reuse + North Avenue + Poinsettia) may involve the greatest potential for large amounts of import or export of material since development of the Western Cañada Larga and Poinsettia areas would involve areas with relatively steep terrain as compared to the other expansion areas.

Any of the scenarios could accommodate the demolition of existing older structures that were constructed with asbestos containing materials (ACMs). Demolition activity that disturbs friable asbestos could potentially create health hazards for receptors in the vicinity of individual demolition sites. However, all demolition activity involving ACMs is required to be conducted in accordance with VCAPCD Rule 62.7, which requires VCAPCD notification and use of licensed asbestos contractors to remove all ACMs prior to demolition. Compliance with Rule 62.7 on all future construction activity would reduce impacts to a less than significant level.

The impact of construction-related emissions upon sensitive receptors such as residences, schools, and hospitals depends upon the location of individual construction projects relative to sensitive receptors. It is not possible to predict where all future development might occur, but virtually any new development within the Planning Area is likely to be adjacent to or near one or more sensitive receptors. All of the expansion areas other than the Western Cañada Larga area are near or adjacent to existing residences. The Serra and Poinsettia areas, in particular, are completely surrounded by residential development. The Poinsettia area is also immediately east of Balboa Middle School and Mound Elementary School.

As mentioned above, the VCAPCD has not adopted significance thresholds for construction-related emissions since such emissions are temporary. Nevertheless, the Ventura County Air Quality Assessment Guidelines (October 2003) recommend various techniques to reduce construction-related emissions associated with individual developments. These include techniques to limit emissions of both ozone precursors (NO_X and ROC) and fugitive dust (PM_{10}) and are identified below:

- *Minimize equipment idling time.*
- *Maintain equipment engines in good condition and in proper tune as per manufacturers' specifications.*
- *Lengthen the construction period during smog season (May through October), to minimize the number of vehicles and equipment operating at the same time.*
- *Use alternatively fueled construction equipment, such as compressed natural gas (CNG), liquefied natural gas (LNG), or electric, if feasible.*
- *The area disturbed by clearing, grading, earth moving, or excavation operations shall be minimized to prevent excessive amounts of dust.*
- *Pre-grading/excavation activities shall include watering the area to be graded or excavated before commencement of grading or excavation operations. Application of water (preferably reclaimed, if available) should penetrate sufficiently to minimize fugitive dust during grading activities.*
- *Fugitive dust produced during grading, excavation, and construction activities shall be controlled by the following activities:*
  a) *All trucks shall be required to cover their loads as required by California Vehicle Code §23114.*
  b) *All graded and excavated material, exposed soil areas, and active portions of the construction site, including unpaved on-site roadways, shall be treated to prevent fugitive dust. Treatment shall include, but not necessarily be limited to, periodic watering, application of environmentally-safe soil stabilization materials, and/or roll-compaction as appropriate. Watering shall be done as often as necessary and reclaimed water shall be used whenever possible.*

- *Graded and/or excavated inactive areas of the construction site shall be monitored by the City Building Inspector at least weekly for dust stabilization. Soil stabilization methods, such as water and roll-compaction, and environmentally-safe dust control materials, shall be periodically applied to portions of the construction site that are inactive for over four days. If no further grading or excavation operations are planned for the area, the area should be seeded and watered until grass growth is evident, or periodically treated with environmentally-safe dust suppressants, to prevent excessive fugitive dust.*
- *Signs shall be posted on-site limiting traffic to 15 miles per hour or less.*
- *During periods of high winds (i.e., wind speed sufficient to cause fugitive dust to impact adjacent properties), all clearing, grading, earth moving, and excavation operations shall be curtailed to the degree necessary to prevent fugitive dust created by on-site activities and operations from being a nuisance or hazard, either off-site or on-site. The site superintendent/supervisor shall use his/her discretion in conjunction with the APCD in determining when winds are excessive.*
- *Adjacent streets and roads shall be swept at least once per day, preferably at the end of the day, if visible soil material is carried over to adjacent streets and roads.*
- *Personnel involved in grading operations, including contractors and subcontractors, should be advised to wear respiratory protection in accordance with California Division of Occupational Safety and Health regulations.*

MITIGATION MEASURES

Although construction-related impacts are not considered significant, the measure below is recommended to reduce construction-related emissions to the maximum degree feasible.

AQ-3 **Construction Mitigation.** The following action should be added to the 2005 General Plan to address air quality impacts of future construction projects on a case-by-case basis:

- Require individual construction contractors to implement the construction mitigation measures included in the most recent version of the Ventura County APCD's Ventura County Air Quality Assessment Guidelines.

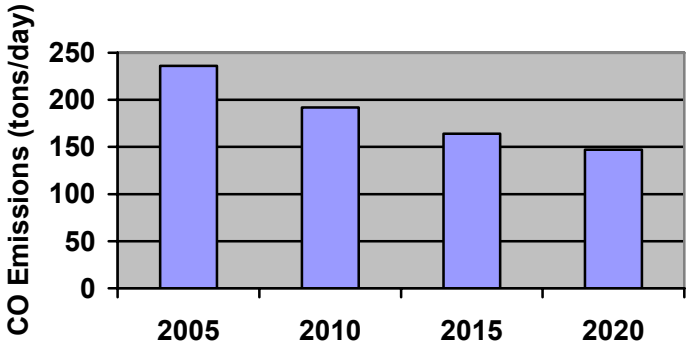
SIGNIFICANCE AFTER MITIGATION

Construction impacts are not considered significant for any of the EIR land use scenarios. The above recommended mitigation measure would reduce construction-related air quality impacts to the maximum degree feasible.

Impact AQ-4	**Increased traffic congestion associated with projected growth under any of the General Plan land use scenarios would potentially increase carbon monoxide (CO) concentrations at congested intersections. However, because of the low ambient CO concentrations and anticipated reduction in emissions associated with less polluting vehicles, exceedance of state and federal CO standards is not expected. Impacts relating to CO "hot spots" are therefore considered Class III, less than significant, for all six scenarios.**

All of Ventura County is in attainment of state and federal CO standards and has been for several years. At the El Rio monitoring station, the maximum 8-hour CO level recorded from 2002-2004 is 3.5 parts per million (ppm), less than half of the 9 ppm state and federal 8-hour standard. In addition, as shown on Figure 4.3-1, countywide CO emissions are projected to fall by about 38% by 2020, largely due to the use of cleaner operating vehicles.

Figure 4.3-1
Countywide Average CO Emissions



Source: California Air Resources Board, 2005 Almanac.

Although CO is not expected to be a major air quality concern in Ventura County over the planning horizon, elevated CO levels can occur at or near intersections that experience severe traffic congestion. A project's localized air quality impact is considered significant if the additional CO emissions resulting from the project create a "hot spot" where the 1-hour or 8-hour standard is exceeded. This typically occurs at severely congested intersections. The Ventura County APCD's *Air Quality Assessment Guidelines* indicate that screening for possible elevated CO levels should be conducted for severely congested intersections experiencing level of service (LOS) E or F with project traffic where a significant project traffic impact may occur.

As discussed in Section 4.12, *Transportation and Circulation*, traffic growth accommodated under each of the six land use scenarios and resulting congestion would potentially result in LOS E or F at one or more Planning Area intersections. However, most of the intersections consist of freeway interchanges that are not adjacent to sensitive receptors such as residences or schools.

In addition, feasible improvements could be implemented to achieve acceptable service levels at affected intersections. Finally, as noted above, the Ventura County region does not experience any CO "hot spots" and CO concentrations are expected to drop substantially over the planning period as cleaner technologies become available. As such, it is not anticipated that violations of state or federal standards would occur under any scenario.

MITIGATION MEASURES

None required.

SIGNIFICANCE AFTER MITIGATION

Significant impacts associated with CO "hot spots" are not expected for any of the six land use scenarios. Implementation of recommended transportation improvements would be expected to ensure that CO concentrations remain within state and federal standards throughout the Planning Area.

4.4 BIOLOGICAL RESOURCES

This section evaluates potential impacts to biological resources within the Planning Area. Both direct and indirect impacts to the following special-status biological resources are discussed: regulated waterways, wetlands and open water areas; sensitive habitats and mature native trees; sensitive plants and animals; and wildlife movement corridors.

4.4.1 Setting

a. Planning Area Habitat Types. The rivers, barrancas, ocean, and hillsides in the Planning Area are home to a variety of important habitats and species of concern. Figure 4.4-1 shows the primary vegetation cover types and location of critical habitats. The major sensitive riparian areas within the Planning Area are the estuaries and upstream regions of the Ventura and Santa Clara Rivers; the Arundell, Harmon Canyon, Clark, Prince, Barlow, San Jon, Harrison, Sudden, Franklin, and Brown Barrancas; Weldon Canyon, Cañada Larga, Manuel Canyon, Cañada de las Encinas and School Canyon Creeks; the Alessandro freshwater marsh; and the coastline. The sewage treatment plant settling ponds south of the harbor at the Santa Clara River mouth are another habitat used by migratory birds. The following paragraphs describe important habitats in the Planning Area that contain significant biological resources.

Coastal Strand/Beach. Sandy beaches are usually not vegetated, and the organisms that inhibit these areas are characteristically mobile and respond quickly to changing sediment patterns. The intertidal area of the sandy beach is used by mole crabs, clams, and polychaete worms that bury themselves in the sand and between cobbles to feed on particles brought in on the waves. These latter species provide an important food resource for various shorebirds, especially during migratory periods. Beach hoppers and the common sand crab are locally abundant on the higher portions of the beach.

Cobble beach habitat is also found near the Ventura River mouth and in patches intermixed with sandy beach habitat. Littleneck and bean clams may be found buried next to cobbles used by gastropods such as the black turban snail. The cobble area also contains a few striped and yellow shore crabs. The listed western snowy plover forages in the beach habitat in the City and has been identified on the beach north of the Santa Clara River. The listed least tern also nests in sandy beach/coastal strand habitat north of the Santa Clara River mouth.

Discontinuous remnant coastal strand habitat exists in the loose sand and stabilized dunes landward of the intertidal and beach areas. The primary plant species are introduced ice plant and various non-native annual grasses. Native plants include silver beachbur, beach evening primrose, and sand verbena, which typically exhibit a low, matted appearance adapted to this harsh environment. The strand habitat has few resident vertebrate species. Typical vertebrates seen in this area include western fence lizard, Brewer's blackbird, house finch, and American pipit, as well as pocket gopher and ground squirrel where soils are more stable. The sensitive silvery legless lizard may also be found in coastal strand and dune habitat.

Limited rocky shore habitat is present along the beach due to man-made revetments at the Harbor, Fairgrounds, Beachfront Promenade, and sharp junctions along the beach. Species commonly found in this habitat include rock lice, striped shore crab, limpet, and acorn barnacles. A variety of shorebirds visit these habitats, as do near-shore fish that feed during

high tides. Sea and shore birds such as cormorants, brown pelicans, willets, and various gulls frequently can be seen roosting on breakwaters and revetments.

Estuaries/Salt and Fresh Water Marshes. Estuaries are partially enclosed coastal waters with a free connection to the sea. They are highly productive biological habitats, and many fish species and free-swimming invertebrates use estuaries as nursery grounds. Marshes form within and along the edges of estuaries and where standing water is present for sufficient periods.

The estuaries at the mouths of the Ventura and Santa Clara Rivers are used as resting and feeding areas for migratory and residential shorebirds and waterfowl, and to a lesser degree, by resident terrestrial species. Several state and federally listed (or candidate) endangered or threatened birds may use the estuaries. These include the listed brown pelican, California least tern, and the Belding's savannah sparrow (in pickleweed saltmarsh). Brown pelicans are commonly seen foraging offshore and at the river mouths, as is the least tern. Also of special interest are the cypress trees at the mouth of the Ventura River that were formerly used as over wintering sites for large aggregations of monarch butterflies. Two sensitive species of fish, the listed tidewater goby and the federally endangered steelhead, use the estuaries of the Ventura and Santa Clara Rivers. The sensitive southwestern pond turtle may also be found in freshwater portions of the Ventura and Santa Clara River estuaries. The sensitive southern tarplant was reported in the Ventura River estuary in 1992, while the listed Ventura marsh milkvetch was formerly found in local estuaries.

Alessandro Lagoon is a freshwater marsh located north of the U.S. 101, between Seaward Avenue and San Jon Road. It provides important migratory and nesting habitat for waterfowl, including mallard, ruddy duck, gadwall, pintail, and teal. Other birds such as marsh wren and red-winged blackbird nest in the marsh vegetation.

Coastal Sage Scrub. Coastal sage scrub is found intermixed with non-native annual grassland communities in the foothills above Ventura and in relatively undisturbed portions of the upland terraces along the Ventura and Santa Clara Rivers. This native plant community is characterized by the predominance of sub-shrubs, one to five feet in height with semi-woody stems growing from a woody base. Many of the species in the community display special adaptations to prevailing climatic conditions, such as winter rainfall and summer drought, by being drought-deciduous, having grayish-foliage with heavy pubescence on stems and leaves, or similar adaptations to arid conditions. Typical coastal sage scrub vegetation within the Planning Area includes coyote brush, California sagebrush, goldenbush, black sage, wild rye, and elderberry. Scattered mulefat, oak trees, and willows are also frequently observed.

This brushland habitat hosts a variety of animals, most of which are permanent residents. Amphibians such as the California slender salamander and the western toad are found in moist canyon areas. Reptiles such as the western fence lizard, side-blotched lizard, western whiptail, gopher snake, common kingsnake, and western rattlesnake also occupy this habitat. The sensitive coast horned lizard can be found in open areas within scrub and grassland areas where native harvester ants are present. Resident bird species include the Anna's hummingbird, California towhee, spotted towhee, wrentit, Bewick's wren, blue-gray gnatcatcher, California thrasher, mourning dove, and California quail. Coastal sage scrub provides the primary year-round hunting ground for many raptors, such as the turkey vulture

Habitat Types

Figure 4.4-1

City of Ventura

and red tail hawk, that forage in the adjacent grasslands during the spring. This plant community also provides the shelter necessary for nesting of many wildlife species. Typical mammals found in this habitat include ground squirrels, gophers, coyote, pocket mice, western harvest mouse, wood rat, cottontail rabbit, bobcat, opossum, raccoon, skunk, and deer.

Oak Woodland. Oak woodlands occur along with riparian woodlands and some dense groves of planted trees along developed and agricultural areas within the City. This designation refers to a closed- to partially-open canopy woodland dominated by the coast live oak. Oaks are relatively limited within the Planning Area, located only within major drainages such as Harmon, Long, and Sexton Canyons and hillside areas along the west side of Ventura Avenue. Oak trees significantly affect the micro-environment around them because their extensive shade produces significantly lowered temperatures than in the nearby scrub and grassland communities. This allows a variety of plants and animals to occur in areas where they otherwise would not be found. Oak trees also provide significant vertical diversity that is important to bird species.

Oak woodlands provide roosting and nesting sites for many birds, particularly raptors. Red-tailed hawk, Cooper's hawk, sparrow hawk, and sharp-shinned hawk are all found in this community. Oak woodland also provides habitat for several species of woodpeckers, including red-shafted flicker, acorn woodpecker, Downey woodpecker, and Nutall's woodpecker. Titmouse, warblers, and flycatchers are also common. Amphibians present in sage scrub communities are also found here, along with reptiles and mammals common to several plant associations. Monarch butterflies are known to utilize woodland areas within the Planning Area.

Riparian Woodland and Thickets. Riparian woodland and thickets consist of scattered semi-aquatic trees, shrubs, and herbs along intermittent and perennial streams. Willows dominate the riparian areas within the City, along with coast live oaks in the adjacent oak woodlands. Wildlife in riparian woodlands is similar to that found in oak woodlands. Several sensitive bird species breed in riparian areas in the City, including the listed least Bell's vireo and willow flycatcher, and sensitive yellow warbler and yellow breasted chat (CSC).

Riparian habitats contain open water at least part of the year, typically during the winter and spring seasons and after rain events, and are an important part of many animals' habitats. Open water is heavily used by larval forms of several insect orders, and is the sole breeding ground for amphibians. Fish, limited to permanent water areas, found within the Ventura and Santa Clara Rivers include, bluegill, carp, green sunfish, mosquito fish, staghorn sculpin, the sensitive arroyo chub (CSC), and listed unarmored threespine stickleback. Steelhead and rainbow trout are known to occur in the Ventura River upstream of the City, and steelhead trout migrate along both the Ventura and Santa Clara Rivers through the City to the ocean.

Grasslands. Grasslands in the area are primarily composed of non-native introduced annuals and biennials used extensively for grazing. Some small pockets of native wildflowers, such as California poppy, blue-eyed grass, and lupines, are scattered throughout the grasslands in areas less exposed to grazing, primarily in grassy openings on upper slopes within the coastal sage scrub community.

The grassland areas provide habitat for grazers and seed eaters. Rodents, which characterize this area, include the ground squirrel, pocket gopher, and deer mice. Deer, coyote, and cottontail rabbits are also relatively common. Many reptiles occupy this habitat, especially where exposed rock or barren soil surfaces are present. Carnivores including the badger and coyote roam this area, though raptor birds such as the sparrow hawk (kestrel), red-tailed hawk, and white-tailed kites are the major dominants of the area. These birds play an important role in controlling rodent populations. Seed-eating bird species are also common constituents of grasslands. Species such as the savannah sparrow, mourning dove, and various finches are common. Grasslands are also the primary foraging grounds for swallows, swifts, and bats, which nest elsewhere.

Thickets and Windrows. Tree thickets and windrows are common within the Planning Area. Trees and windrows can provide habitat to nesting birds, their eggs, and young, which are protected under the Migratory Bird Treaty Act (MBTA) and California Fish and Game Code. The locally sensitive monarch butterfly can also utilize these areas as wintering sites and sensitive bats can utilize the areas as roosting site.

b. Special-Status Biological Resources. The term special-status biological resources includes those plants, animals, vegetation communities, jurisdictional drainages and other sensitive biological resources that are governed under federal, state, and local laws and regulations.

Listed Species. Federal, State, and local authorities under a variety of legislative acts share regulatory authority over biological resources. The California Department of Fish and Game (CDFG) has direct jurisdiction under law for biological resources through the state Fish and Game Code and under the California Endangered Species Act. The federal Endangered Species Act also provides direct regulatory authority over specially designated organisms and their habitats to the U.S. Fish and Wildlife Service (USFWS). These acts specifically regulate listed and candidate endangered and threatened species, which are defined as:

- ***Endangered Species:*** *any species that is in danger of extinction throughout all or a significant portion of its range.*
- ***Threatened Species:*** *any species that is likely to become an endangered species within the foreseeable future throughout all or a significant part of its range.*

Sensitive Plants. Special-status plant species are either listed as endangered or threatened under the federal or California Endangered Special Acts, or rare under the California Native Plant Protection Act, or considered to be rare (but not formally listed) by resource agencies, professional organizations (e.g., California Native Plant Society [CNPS]), and the scientific community. Table 4.4-1 shows 13 special-status plant species that may occur within the Planning Area, two of which are considered endangered. Figure 4.4-2 identifies special-status species documented historically within the Planning Area by the CDFG California Natural Diversity Database (December 2004).

Sensitive Wildlife. Several amphibian, fish, reptile, bird, and mammal species of concern that are known or possibly found in the Planning Area are listed in Table 4.4-2. Documented species are shown on Figure 4.4-2. State or federally listed species are accorded the highest protection status. The two fish species and eight bird species that are federally

CE = California Endangered; CFP = California Fully Protected; CSC = California Species of Concern; ESU=Evolutionary Significant Unit; Federal Candidate; FE = Federal Endangered; FT = Federal Threatened; LS=Locally Sensitive; and SA = CDFG California Special Animal

and/or State listed tend to inhabit the rivers and estuary habitats where development is unlikely to occur. Least bell's vireo is known to forage in scrub areas adjacent to the Santa Clara and Ventura Rivers.

c. Wildlife Corridors. Wildlife corridors are generally defined as connections between habitat patches that allow for physical and genetic exchange between otherwise isolated animal populations. Such linkages may serve a local purpose, such as between foraging and denning areas, or they may be regional in nature allowing movement across the landscape. Some habitat linkages may serve as migration corridors, wherein animals periodically move away from an area and then subsequently return.

The key wildlife corridors in the Planning Area include the Ventura River, which connects the Ventura Area to open space associated with the Los Padres National Forest, and the Santa Clara River, which provides linkage to the east to the Sespe area and the San Gabriel Mountains. Other important corridors in the Planning Area include the drainages (e.g., Weldon Canyon, Cañada Larga, Manuel Canyon, Cañada de las Encinas and School Canyon) and open space areas that connect the Ventura River to the hills overlooking Ventura to the north, and ultimately, the Sulphur Mountain area. Highly degraded corridors between the hillsides north of the City and the Santa Clara River within the Planning Area include the Harmon Canyon, Arundell, Franklin, and Brown Barrancas.

d. Special-Status Communities/Areas. Special-status communities and areas are those that are considered sensitive by federal, state, and local agencies due to their rarity or value in providing habitat for vegetation, fish, and wildlife. Identified special-status communities/areas present within the Planning Area include the following:

- *Oak woodland*
- *Walnut woodland*
- *Native oak and sycamore trees*
- *Native bunchgrass grasslands*
- *Drainages, wetlands and associated riparian vegetation under the jurisdiction of CDFG as waters of the State or USACE as waters of the U.S; the City has also identified the Ventura and Santa Clara River as sensitive resources requiring preservation and possible restoration*
- *City Sensitive Habitat Areas (SHA): Alessandro Lagoon, Santa Clara River Mouth Area, Ventura River Mouth Area*
- *Coastal dunes*

e. Regulatory Setting. The following is a summary of the regulatory context under which biological resources are managed at the federal, state, and local level. Agencies with responsibility for protection of biological resources within the Study Area include:

- *Regional Water Quality Control Board (RWQCB)*
- *U. S. Army Corps of Engineers (USACE; wetlands and other waters of the United States)*
- *U.S. Fish and Wildlife Service (USFWS; federally listed species and migratory birds)*
- *National Marine Fisheries Service (NMFS; anadromous fish)*

- *California Department Fish and Game (CDFG; waters of the State, state listed and fully-protected species, and other protected plants and wildlife)*
- *State of California (Natural Communities Conservation Plan)*
- *City of Ventura (Proposed General Plan Goals, Policies, and Actions)*
- *California Coastal Commission (CCC, Coastal Areas)*

A number of Federal and/or State statutes provide a regulatory structure that guides the protection of biological resources. The following discussion provides a summary of those laws that are most relevant to biological resources in the vicinity of the Planning Area.

Regional Water Quality Control Board. The protection of water quality in the watercourses of Ventura County is under the jurisdiction of the Los Angeles Regional Water Quality Control Board (LARWQCB). The Board establishes requirements prescribing discharge limits and establishes water quality objectives through the Ventura County Municipal Storm Water National Pollutant Discharge Elimination System (NPDES) Permit. The Storm Water Quality Urban Impact Mitigation Plan (SQUIMP), which is part of the NPDES Permit, addresses specific storm water pollution requirements for new developments such as the proposed project. As co-permittee, the City of Ventura is responsible for assuring that new developments are in compliance with the SQUIMP.

The SQUIMP requires that all development projects implement various control techniques (termed best management practices, or BMPs) to minimize the amount of pollutants entering surface waters. The following requirements apply to all new development:

- *Control post-development peak stormwater runoff discharge rates to maintain or reduce pre-development downstream erosion and to protect stream habitat*
- *Conserve natural areas*
- *Minimize stormwater pollutants of concern*
- *Protect slopes and channels*
- *Provide storm drain system stenciling and signage*
- *Properly design outdoor material storage areas*
- *Properly design trash storage areas*
- *Provide proof of on-going best management practice (BMP) maintenance*
- *Implement structural or treatment BMPs that meet design standards*

U.S. Army Corps of Engineers. Under Section 404 of the Clean Water Act and section 10 of the Rivers and Harbors Act, the USACE has authority to regulate activity that could discharge fill or dredge material or otherwise adversely modify wetlands or other waters of the United States. Perennial and intermittent creeks and adjacent wetlands are considered waters of the United States and are within the regulatory jurisdiction of the USACE. The USACE implements the federal policy embodied in Executive Order 11990, which, when implemented, is intended to result in no net loss of wetlands values or acres. In achieving the goals of the Clean Water Act, the Corps seeks to avoid adverse impacts and to offset unavoidable adverse impacts on existing aquatic resources. Any fill or adverse modification of waters of the U.S., wetlands may require a permit from the Corps prior to the start of work. Typically, permits issued by the Corps are a condition of a project as mitigation to offset unavoidable impacts on wetlands and other waters of the U.S. in a manner that achieves the goal of no net loss of wetland acres or values.

U.S. Fish and Wildlife Service. The U.S. Fish and Wildlife Service (USFWS) implements the Migratory Bird Treaty Act (16 USC Section 703-711), the Bald and Golden Eagle Protection Act (16 United States Code (USC) Section 668), Section 10 and the Federal Endangered Species Act (FESA; 16 USC § 153 *et seq)*. Projects that would result in take of any federally listed threatened or endangered species are required to obtain permits from the USFWS through either Section 7 (interagency consultation with a federal nexus) or Section 10 (incidental take permit) of FESA, depending on the involvement by the federal government in permitting or funding the project. The permitting process is used to determine if a project would jeopardize the continued existence of a listed species and what mitigation measures would be required to avoid jeopardizing the species.

Take under federal definition means to harass, harm (which includes habitat modification), pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct. Proposed or candidate species do not have the full protection of FESA, however, the USFWS advises project applicants that they could be elevated to listed status at any time.

National Marine Fisheries Service. The National Marine Fisheries Service (NMFS) shares joint authorities with the USFWS under the FESA for administering the incidental take permit program. Generally, the USFWS is responsible for terrestrial and freshwater aquatic species while NMFS is responsible for listed marine mammals, anadromous fish, and other living marine resources. NMFS also permits for incidental taking of listed fish species during other activities such as state-run hatchery operations and commercial or recreational fisheries.

California Department of Fish and Game. The CDFG derives its authority from the Fish and Game Code of California Species listed under the California Endangered Species Act (CESA; Fish and Game Code Section 2050 *et seq,)* prohibits take of listed threatened or endangered species. Take under CESA is restricted to direct killing of a listed species and does not prohibit indirect harm by way of habitat modification.

California Fish and Game Code Sections 3503, 3503.5, and 3511 describe unlawful take, possession, or needless destruction of birds, nests, and eggs. Fully protected birds (Section 3511) may not be taken or possessed except under specific permit. Section 3503.5 of the Code protects all birds-of prey and their eggs and nests against take, possession, or destruction of nests or eggs.

Species of Special Concern (CSC) is a category used by CDFG for those species which are considered to be indicators of regional habitat changes or are considered to be potential future protected species. Species of Special Concern do not have any special legal status except that afforded by the Fish and Game Code. The CSC category is intended by the CDFG for use as a management tool to take these species into special consideration when decisions are made concerning the development of natural lands.

The CDFG also has authority to administer the Native Plant Protection Act (Fish and Game Code Section 1900 *et seq*). The Act requires CDFG to establish criteria for determining if a species, subspecies, or variety of native plant is endangered or rare. Under Section 1913(c) of the Act, the owner of land where a rare or endangered native plant is growing is required to notify the department at least 10 days in advance of changing the land use to allow for salvage of plant.

Perennial and intermittent streams also fall under the jurisdiction of the CDFG. Sections 1601-1603 of the Fish and Game Code (Streambed Alteration Agreements) gives the CDFG regulatory authority over work within the stream zone (which could extend to the 100-year flood plain) consisting of, but not limited to, the diversion or obstruction of the natural flow or changes in the channel, bed, or bank of any river, stream or lake.

State of California. The Natural Communities Conservation Planning Act of 1991 was established by the California Legislature, is directed by the Department of Fish and Game, and is being implemented by the state, and public and private partnerships to protect habitat in California. As opposed to the single species interpretation of the Endangered Species Act (ESA), this act aims at protecting many species using a regional approach to habitat preservation. A Natural Communities Conservation Plan (NCCP) identifies and provides for the regional or area wide protection of plants, animals, and their habitats, while allowing compatible and appropriate economic activity.

4.4.2 Impact Analysis

a. Methodology and Significance Thresholds. The impact analysis is based on available literature regarding the existing biological resources within the Planning Area, aerial photography, and field visits conducted on February 3, 5-6, 2005. Field investigations concentrated on potentially developable areas that contain sensitive biological resources. The majority of the surveys were conducted by car from roads surrounding the areas; however, some areas were surveyed on foot. Surveys were performed to verify habitat types against available background information and aerial photography. The following analysis determines the potential effects of development on biological resources of the Planning Area, especially within the developable areas.

Environmental impacts relative to biological resources may be assessed using impact significance criteria from federal, state, and local regulations. Project impacts to flora and fauna may be determined to be significant even if they do not directly affect rare, threatened, or endangered species.

Significant impacts to biological resources may occur if a project action would:

- *Conflict with local or regional conservation plans or state goals*
- *Substantially affect rare, threatened or endangered species*
- *Interfere substantially with the movement of any resident or migratory fish or wildlife species*
- *Substantially diminish habitat for fish, wildlife or plants*
- *Involve the use, production or disposal of materials which pose a hazard to animal or plant populations in the area affected*
- *Have impacts that are individually limited, but cumulatively considerable; or involve the alteration or conversion of biological resources (locally important species or locally important communities) identified as significant within the county or region*

When assessing or applying these threshold guidelines, plants and animals may be considered locally important if any of the following criteria are met:

- *The species, subspecies or variety is limited in distribution in the county or region, and endemic (limited to a specific area) in the region.*
- *The species population is at the extreme limit of its overall distribution or is disjunct from the known overall range.*
- *The species potentially affected by project actions has habitat requirements or limitations which makes it susceptible to local extirpation as a consequence of those actions, the introduction of barriers or restrictions to movement, changes in ambient conditions, or increases in human activity.*
- *Populations exhibit unusual localized adaptations, or are high quality examples of the species overall.*
- *Species are considered special-status by recognized biological experts and monitoring groups, such as the California Native Plant Society (CNPS) and Audubon Society.*

Plant communities or habitat types may be considered locally important if they are any of the following:

- *Formations or habitat types of singular or limited occurrence within the jurisdictional boundaries*
- *Formations or habitat types that provide critical or essential support resources for rare, threatened or endangered or locally important species*
- *Formations, habitat types, or geographic areas that serve as wildlife movement routes or habitat linkages between substantial, intact open space areas*
- *Formations or habitat types that are recognized or designated as pristine or highest quality examples of a particular type within a jurisdiction*
- *Specific sites that are type localities for plant or animal species*
- *Formations or habitat types considered sensitive by recognized biological experts and monitoring groups, such as the CNPS, California Natural Diversity Data Base, The Nature Conservancy, or Department of Fish and Game*
- *Ephemeral or perennial wetlands that have been defined as areas which sporadically, seasonally or perennially serve to transmit, conduct or impound water, making it available for use by wildlife and/or facultatively dependent associations of plants and animals (such as vernal pools)*

b. Project Impacts and Mitigation Measures. The matrix on the following page provides a summary comparison of biological resource impacts for each of the scenarios under consideration. The discussion that follows is intended to describe the generalized effects of potential future development within the Planning Area and provide policy level mitigation appropriate for a General Plan analysis. Depending upon the nature and location of individual future development projects, information contained in this EIR regarding the potential occurrence and listing status of special-status species of plants and wildlife and plant communities of special concern may need to be updated at the time specific projects undergo environmental review.

Summary Comparison of Impacts for EIR Scenarios

	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
Riparian, Wetlands, and Open Water Habitats (Impact BIO-1)	Development near the Santa Clara River, Ventura River, and barrancas in the North Avenue and Saticoy districts could adversely affect wetland habitats. Proposed General Plan policies and actions reduce potential impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Development near Manuel Canyon Creek ,Arundell Barranca, Harmon Canyon Barranca, and drainages near Olivas expansion area may result in adverse impacts to wetland habitats. Proposed General Plan policies and actions reduce potential impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Development near Manuel Canyon Creek, Arundell Barranca, and drainages near Olivas expansion area may result in adverse impacts to wetland habitats. Proposed General Plan policies and actions reduce potential impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Development near Manuel Canyon Creek, and Harmon Canyon Barranca may result in adverse impacts to wetland habitats. Proposed General Plan policies and actions reduce potential impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Development near Manuel Canyon Creek, Weldon Creek, and Cañada Larga Creek may result in adverse impacts to wetland habitats. Proposed General Plan policies and actions reduce potential impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Development near Manuel Canyon Creek and Harmon Canyon Barranca may result in adverse impacts to wetland habitats. Proposed General Plan policies and actions reduce potential impacts to Class III, less than significant.
Sensitive Habitats and Native Trees (Impact BIO-2)	Development may adversely affect oak/ walnut woodlands in North Avenue/Upper North Avenue, dune habitat in Harbor district, bunchgrass grasslands, and mature landmark trees. Proposed General Plan policies and actions reduce potential impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Development in North Avenue expansion area may affect oak woodlands. Proposed General Plan policies and actions reduce potential impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Expansion impacts similar to Scenario 2. Proposed General Plan policies and actions reduce potential impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Expansion impacts similar to Scenario 2. Proposed General Plan policies and actions reduce potential impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Development in North Avenue expansion area may affect oak woodlands. Development in Canada Larga may affect oak/walnut woodlands, and native grasslands. Proposed General Plan policies and actions reduce potential impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Expansion impacts similar to Scenario 2. Compliance with Proposed General Plan policies and actions reduce potential impacts to Class III, less than significant.

Summary Comparison of Impacts for EIR Scenarios

	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
Special-status Species (Impact BIO-3)	Possible elimination of native habitats including wetlands, dunes, scrub, woodland may affect special-status species. General Plan actions protect sensitive habitats and encourage preservation of mature trees and windrows. Proposed General Plan policies and actions reduce potential impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Development in North Avenue, Serra, and Olivas may affect species that inhabit mature trees, windrows, oak woodland, riparian, and scrub areas. Proposed General Plan policies and actions reduce potential impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Development in North Avenue and Olivas may affect species that inhabit mature trees and windrows, oak woodland, riparian, and scrub areas. Proposed General Plan policies and actions reduce potential impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Development in North Avenue and Serra may affect species that inhabit mature trees and windrows, oak woodland, riparian, and scrub areas. Proposed General Plan policies and actions reduce potential impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Development in North Avenue and W. Cañada Larga may affect species that inhabit mature trees and windrows, oak woodland, grassland, and scrub areas. Proposed General Plan policies and actions reduce potential impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Development in North Avenue may affect species native to oak woodland, riparian, and scrub, mature trees and windrows. Proposed General Plan policies and actions reduce potential impacts to Class III, less than significant.
Wildlife Corridors (Impact BIO-4)	Development near riparian areas, barrancas, and open space near Mariano Ranch may affect ecological connectivity through these corridors. Proposed General Plan policies and actions reduce potential impacts to Class III, less than significant.	Development impacts similar to Scenario 1. Expansion into North Avenue area may affect the Manuel Creek corridor. Proposed General Plan policies and actions reduce potential impacts to Class III, less than significant.	Development impacts similar to Scenario 1. Expansion into North Avenue area may affect the Manuel Creek corridor. Proposed General Plan policies and actions reduce potential impacts to Class III, less than significant.	Development impacts similar to Scenario 1. Expansion into North Avenue area may affect the Manuel Creek corridor. Proposed General Plan policies and actions reduce potential impacts to Class III, less than significant.	Development impacts similar to Scenario 1. Expansion into North Avenue area may affect the Manuel Creek corridor. Expansion into W. Cañada Larga may affect Cañada Larga and Weldon canyon Creek corridors. Proposed General Plan policies and actions reduce potential impacts to Class III, less than significant.	Development impacts similar to Scenario 1. Expansion into North Avenue area may affect the Manuel Creek corridor. Proposed General Plan policies and actions reduce potential impacts to Class III, less than significant.

Impact BIO-1	**All of the 2005 General Plan land use scenarios generally avoid direct impacts to riparian, wetland, and open water habitats. However, in certain areas, development could adversely affect the quality of riparian and wetland habitat. Implementation of proposed General Plan policies and actions, including Action 1.8 (which requires buffers from rivers, creeks, and barrancas), would reduce potential impacts to a Class III, *less than significant*, level for any of the six land use scenarios.**

Each of the land use scenarios focus predominantly on intensification and reuse of already developed areas and limited expansion into agricultural and/or relatively undisturbed areas. As such, the scenarios would generally avoid direct impacts to riparian, wetland, and open water habitats. In addition, the removal of the hillside areas above the City from the Sphere of Influence, as is anticipated to occur under any of the scenarios, would avoid the potential for impacts to riparian and wetland resources in the hillside areas.

The 2005 General Plan includes the following actions aimed at the protection of riparian areas from the impacts of future development:

Action 1.8 *Buffer barrancas and creeks that retain natural soil slopes from development according to State and Federal guidelines.*

Action 1.9 *Prohibit placement of material in watercourses other than native plants and required flood control structures, and remove debris periodically.*

Action 1.10 *Remove concrete channel structures as funding allows, and where doing so will fit the context of the surrounding area and not create unacceptable flood or erosion potential.*

Action 1.11 *Require that sensitive wetland and coastal areas be preserved as undeveloped open space wherever feasible and that future developments result in no net loss of wetlands or "natural" coastal areas.*

Action 1.17 *Require development to mitigate its impacts on wildlife through the development review process.*

Action 1.18 *Require new development adjacent to rivers, creeks, and barrancas to use native or non-invasive plant species, preferably drought tolerant, for landscaping.*

Action 1.19 *Require projects near watercourses and shoreline areas to include surveys for State and/or federally listed sensitive species and to provide appropriate buffers and other mitigation necessary to protect habitat for listed species.*

Action 1.21 *Work with State Parks on restoring the Alessandro Lagoon and pursue funding cooperatively.*

Scenario 1 – Intensification/Reuse Only

Scenario 1 emphasizes the intensification of development in already developed or disturbed areas. As a result, the extent of riparian and wetland resources affected under this scenario is generally limited. In addition, most of the resources have been modified from their natural state. Examples include the concrete channelized Arundell Barranca, which crosses through the Harbor and Arundell districts, the Barlow Barranca that intersects the Telegraph Road corridor, and the Brown Barranca in the Wells Road corridor and Saticoy district. See Photo 1 on Figure 4.4-3 for a view of Brown Barranca.

Implementation of standard Best Management Practices (BMPS) during construction and receipt and implementation of permits would be required to address potential impacts and modification to jurisdictional drainages. Potential permits that could be required include the USACE Section 404 permit, CDFG Streambed Alteration Agreement, RWQCB Section 401 Certification, and for projects with greater than one acre of ground disturbance, a State Water Resources Control Board (SWRCB) Stormwater Pollution Prevention Plan (SWPPP). Intensification would likely improve the value of some of these areas through future drainage improvements required during development and the requirements of resource agency permits.

The Upper North Avenue, North Avenue, and Saticoy districts have more sensitive riparian and wetland resources than the other areas proposed for intensification and reuse because of their proximity to the Ventura and Santa Clara Rivers. The following partially natural drainages are also present in these areas:

Upper North Avenue

- *Cañada Larga Creek - A natural channel of sand and cobble with dense patches of willow for areas west of Ventura Avenue; and a concrete box devoid of vegetation to the east of Ventura Avenue.*
- *Manuel Canyon Creek – East of Ventura Avenue it is a natural-bottomed channel, scoured of vegetation. West of Ventura Avenue the drainage is partially channelized, but has dense patches of native vegetation.*
- *Cañada de las Encinas – A primarily channelized drainage passing through and under developed areas.*

North Avenue

- *School Canyon Creek – A natural-bottom channel with patches of willow and nonnative vegetation. This drainage is undergrounded west of Ventura Avenue.*

Saticoy

- *Brown Barranca - A concrete rip-rapped channel devoid of vegetation.*

- *Franklin Barranca - A concrete channel that changes to a natural channel with dense native vegetation near the Santa Clara River.*

Photo 1 View of concreted rip-rap that lines the banks of Brown Barranca in the Saticoy District.

Photo 2 Riparian habitat within Manuel Canyon Creek, a natural drainage west of Ventura Avenue.

Photo 3 Cañada Larga Creek, west of Ventura Avenue, is in a relatively natural state.

Photo 4 East of Ventura Avenue, Cañada Larga Creek has been channelized with concrete banks.

Riparian Areas and Drainages

Figure 4.4-3

The western portions of these areas, closest to the Ventura River, have a scattering of riparian vegetation in highly disturbed ruderal fields. The Saticoy area has patches of dense riparian and ruderal vegetation along the Santa Clara River. Least bell's vireo is known to be present along the reach of the Ventura River in the Planning Area and other listed or sensitive species could potentially utilize these areas (e.g. Coulter's goldfields and native oaks and sycamores). Wetlands may also be present is the western portions of the North Avenue and Upper North Avenue districts, as suggested by wet cracked soils observed during the field visits.

Implementation of Action 1.8, requiring buffers from the Ventura and Santa Clara Rivers, would minimize potential impacts to riparian and ruderal vegetation near these rivers to a less than significant level. Action 1.9 would require the use of native landscaping adjacent to rivers, creeks, and barrancas, which would address potential indirect adverse effects to downstream fish, wildlife, and vegetation as a result of water quality degradation associated with increased human activity. In addition, Action 1.10 would restore channelized barrancas and creeks to a quasi-natural condition to the extent feasible.

Scenario 2 – Intensification/Reuse + North Avenue + Olivas + Serra

Scenario 2 would meet projected growth by focusing development on a combination of intensification and reuse of the existing urban area and three expansion areas: North Avenue, Olivas, and Serra. Additional impacts associated with expansion into the North Avenue, Olivas, and Serra expansion areas include potential direct impacts to riparian and wetland resources and jurisdictional areas, reduction and degradation of available wildlife habitat, and indirect impacts to downstream areas via degradation of water quality. With implementation of 2005 General Plan Actions 1.8 and 1.9, these impacts would be reduced to a less than significant level. Specific impacts associated with each expansion area are discussed below.

North Avenue. Development of this area could result in the degradation of riparian habitat associated with additional reaches of Manuel Canyon Creek, a natural channel that is a tributary to the Ventura River, due to increased human activity. See Photo 2 on Figure 4.4-3 for a view of riparian habitat within Manuel Canyon Creek. Wetlands are potentially present within the creek and could also be affected. Downstream water quality could also be affected from erosion. This drainage and its water resources are under the jurisdiction of the USACE, CDFG, and RWQCB.

Olivas. Development of this area could result in impacts to wetland habitat and associated wildlife located within a natural bottomed roadside drainage channel along Olivas Park Drive and scattered patches of riparian vegetation onsite. Despite the adjacent traffic, wildlife utilizes this area, as noted by the egrets and mallards observed within the drainage. Future development of this expansion area could result in a net loss of wetlands and riparian habitat onsite. Indirect water quality impacts to downstream areas could also occur. Like the Arundell Barranca onsite, the drainage may also be under the jurisdiction of USACE, CDFG, and RWQCB. Arundell Barranca would not be adversely affected by future development as it is channelized and supports no significant riparian or other biological resources. See Photo 6 on Figure 4.13 in Section 4.1, *Aesthetics*, for a view of Arundell Barranca. To the contrary, development of this expansion area could potentially provide an opportunity for restoration of the Arundell Barranca to a more natural condition.

Serra. Development of this area could adversely affect the least Bell's vireo and steelhead trout and other special-status species, if present, along the banks and channel Santa Clara River. Indirect water quality impacts to the Santa Clara River via the armored Harmon Canyon Barranca and the protected species that travel along it (e.g. steelhead trout, tidewater goby) could also occur, as discussed above.

Scenario 3 – Intensification/Reuse + North Avenue + Olivas

Scenario 3 includes intensification and reuse of lands as discussed under Scenario 1, as well as the North Avenue and Olivas expansion areas as discussed under Scenario 2. This scenario would be similar to the Scenario 2 in that riparian and wetland resources associated with four natural drainages (Cañada Larga, Manuel Canyon, Cañada de las Encinas and School Canyon Creeks) and the adjacent Ventura and Santa Clara Rivers could be potentially affected. Riparian and wetland habitat associated with Manuel Canyon Creek, the roadside drainage along Olivas Drive, and Arundell Barranca could also be adversely affected under this scenario. With implementation of General Plan Actions 1.8 and 1.9, these impacts would be reduced to a less than significant level.

Scenario 4 – Intensification/Reuse + North Avenue + Serra

Scenario 4 includes intensification and reuse of lands as discussed under Scenario 1, as well as the North Avenue and Serra expansion areas as discussed under Scenario 2. Potential impacts associated with this scenario would be similar to those of Scenario 2 except for the following: (1) no impacts to wetland habitat and associated wildlife located within a natural bottomed roadside drainage channel along Olivas Park Drive would occur; and (2) there would be no opportunity for restoration of Arundell Barranca. With implementation of General Plan Actions 1.8 and 1.9, impacts would be reduced to a less than significant level.

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga

Scenario 5 includes intensification and reuse of lands as discussed under Scenario 1, as well as the North Avenue expansion area as discussed under Scenario 2. This scenario also includes the Western Cañada Larga expansion area. Riparian and wetland resources associated with four natural drainages (Cañada Larga, Manuel Canyon, Cañada de las Encinas and School Canyon Creeks) and the adjacent Ventura and Santa Clara Rivers could be potentially affected as could riparian and wetland habitat associated with the upper reaches of Manuel Canyon Creek in the North Ventura area. In addition, the lower reaches of Cañada Larga and Weldon Canyon Creeks near State Route 33, which are in a relatively natural state, could potentially be affected. It is useful to note the difference between Canada Larga Creek west and east of Ventura Avenue (see Photos 3 and 4 on Figure 4.4-3). General Plan Action 1.8 would provide unchannelized creeks with buffers from development, and Action 1.9 would require the use of native landscaping in riparian areas, and Action 1.10 would aim to restore channelized barrancas to a quasi-natural condition. Implementation of these actions would reduce potential impacts to a less than significant level.

Scenario 6 – Intensification/Reuse + North Avenue + Poinsettia

Scenario 6 includes intensification and reuse of lands as discussed under Scenario 1, as well as the North Avenue expansion area as discussed under Scenario 2. This scenario also includes the Poinsettia expansion area. Riparian and wetland resources associated with four natural drainages (Cañada Larga, Manuel Canyon, Cañada de las Encinas and School Canyon Creeks) and the adjacent Ventura and Santa Clara Rivers could be potentially affected, as could riparian and wetland habitat associated with upstream reaches of Manuel Canyon Creek in the North Ventura Avenue area. Development of the Poinsettia expansion area could further degrade the Harmon Canyon Barranca. As this natural bottomed channel is surrounded by dense vegetation dominated by non-native eucalyptus and tree-tobacco with some scattered native scrub species, the impact to riparian and wetland resources is not anticipated to be significant for this area with use of standard BMPs during construction to protect water quality. With implementation of 2005 General Plan Actions 1.8 and 1.9, potential impacts to riparian and wetland habitats would be reduced to a less than significant level.

MITIGATION MEASURES

Implementation of 2005 General Plan Actions 1.8 and 1.9 would reduce potential impacts to wetland and riparian habitats to a less than significant level. No additional mitigation measures are required.

SIGNIFICANCE AFTER MITIGATION

Implementation of proposed 2005 General Plan actions would reduce impacts to riparian, wetland, and aquatic resources to a less than significant level for any of the six scenarios.

Impact BIO-2	**All of the General Plan land use scenarios would largely avoid impacts to sensitive habitats and mature native trees by emphasizing intensification/reuse of urbanized areas. Implementation of General Plan policies and actions that aim to protect sensitive habitats and mature trees would reduce potential impacts to a Class III, l*ess than significant*, level for all six scenarios.**

All of the General Plan land use scenarios focus predominantly on intensification of existing developed areas and limited expansion into agricultural and/or relatively disturbed areas. As such, sensitive habitats and mature trees are limited in the Planning Area and consist primarily of jurisdictional waters and wetlands. Limited oak woodlands, mature oak trees, and dune habitat are present, and walnut woodland, native bunchgrass grasslands, and mature sycamores and other native trees are anticipated to be present in limited quantities and in a relatively disturbed state. It should also be noted that removal of the hillside areas above the City from the Sphere of Influence, as is anticipated to occur under any of the six land use scenarios, would avoid the potential for impacts to sensitive habitats and mature native trees in the hillside areas.

The 2005 General Plan includes the following policy and actions aimed at the protection of sensitive habitats from the impacts of future development:

Policy 1C *Improve protection for plants and animals.*

Action 1.18 *Require new development adjacent to rivers, creeks, barrancas, and other sensitive habitat areas to use native or non-invasive plant species, preferably drought tolerant, for landscaping.*

Action 1.19 *Require projects near watercourses, shoreline areas, and other sensitive habitat areas to include surveys for State and/or federally listed sensitive species and to provide appropriate buffers and other mitigation necessary to protect habitat for listed species.*

Action 1.22 *Adopt development code provisions to protect mature trees on public and private property.*

Action 1.23 *Require, where appropriate, the preservation of healthy tree windrows associated with current and former agricultural uses, and incorporate trees into the design of new developments.*

Action 1.24 *Require new development to maintain all indigenous tree species or provide adequately sized replacement native trees on a 3:1 basis.*

Scenario 1 – Intensification/Reuse Only

Scenario 1 emphasizes the intensification of development in already developed or disturbed areas. Sensitive habitat types are therefore limited within the intensification areas. Development of the Upper North Avenue, North Avenue, Arundell, and Saticoy districts could affect jurisdictional waters and wetlands as discussed above under Impact BIO-1. See Photo 1 on Figure 4.4-4 for a view of ruderal and riparian vegetation near the Upper North Avenue district. A small area of dune habitat along the western edge of Spinnaker Drive would be restored as part of the Harbor district development. Dredging or similar activities within the open waters of the Ventura Harbor could occur with development of the Harbor district; however, these activities are ongoing and would continue to be regulated by permits from the USACE, CCC, and other entities. Oak and/or walnut woodlands are located along the western edge of the Upper North Avenue district and the eastern edge of the North Avenue district. These areas could be potentially affected by proposed intensification through direct removal of habitat or indirect degradation via non-native plant introduction and increased human usage. There is also some potential for native bunchgrass grasslands or other sensitive habitats to be adversely affected in these areas as well as the Mariano Ranch area above Foothill Road, which could potentially accommodate residential development under the 2005 General Plan. However, provided that Actions 1.8, 1.18, 1.19, and 1.22 are implemented, impacts would be reduced to a less than significant level.

Photo 1 Ruderal areas with scattered riparian vegetation near the Upper North Avenue district.

Photo 2 Native coastal sage scrub can be seen on the hillsides adjacent to the North Avenue expansion area. Much of this area is actively farmed with citrus orchards (foreground).

Photo 3 Coastal sage scrub and grasses cover the hillsides within the Western Cañada Larga expansion area.

Photo 4 Dense nonnative vegetation (eucalyptus) with some native scrub components dominates Harmon Barranca along the eastern edge of the Poinsettia expansion area.

Sensitive Habitats

Figure 4.4-4

Scenario 2 – Intensification/Reuse + North Avenue + Olivas + Serra

Scenario 2 would meet projected growth by focusing development on a combination of intensification and reuse of the existing urban area and three expansion areas: North Avenue, Olivas, and Serra. Future development of the North Avenue expansion area could affect jurisdictional waters and wetlands potentially present in the upper reaches of Manuel Canyon Creek and disturbed oak woodland south of the creek via direct removal sensitive habitat areas, introduction of incompatible landscape species, and increased human intrusion. In addition, native habitats including coastal sage scrub, grasslands, and oak woodlands occur naturally on the hillsides within the North Avenue expansion area (see Photo 2 on Figure 4.4-4). Sensitive habitats potentially affected by development of the Olivas and Serra areas are limited to the potential jurisdictional waters and wetlands onsite and, for the Serra area, the adjacent Santa Clara River bed, banks, and channel. Several locations within the Planning Area, including the Olivas area, contain rows of eucalyptus trees (windrows) that provide a distinct visual character as well as providing habitat for many species. Please refer to Photo 5 in Section 4.1, *Aesthetics*, for a view of eucalyptus windrows located within the Olivas expansion area. Implementation of General Plan Action 1.8 would require a buffer from the top of bank of the Santa Clara River bed and Action 1.22 directs the City to adopt development code provisions to protect mature trees. Action 1.23 directs the preservation of windrows and Action 1.24 requires the preservation or 3:1 replacement of indigenous tree species. Implementation of these actions would reduce potential impacts to a less than significant level.

Scenario 3 – Intensification/Reuse + North Avenue + Olivas

Scenario 3 includes the same intensification potential as described for Scenario 1, as well as the potential future development of the North Avenue and Olivas expansion areas. As discussed under Scenario 2, sensitive habitats within the North Avenue area include jurisdictional waters and wetlands associated with upper reaches of Manuel Canyon Creek and oak woodland. Habitat impacts could occur via direct removal, introduction of incompatible landscape species, and increased human intrusion. Sensitive habitats present in the Olivas area are limited to the wetland areas onsite. As discussed under Scenario 2, implementation of proposed 2005 General Plan actions would reduce impacts to a less than significant level.

Scenario 4 – Intensification/Reuse + North Avenue + Serra

Scenario 4 includes the same intensification potential as described for Scenario 1, as well as the potential future development of the North Avenue and Serra expansion areas. As discussed under Scenario 2, sensitive habitats within the North Avenue area include jurisdictional waters and wetlands associated with Manuel Canyon Creek, oak woodland, walnut woodland, and bunchgrass grasslands. Habitat impacts could occur via direct removal, introduction of incompatible landscape species, and increased human intrusion. Impacts to the sensitive riparian habitats associated with the Santa Clara River could occur with development of the Serra area. As discussed under Scenario 2, implementation of proposed 2005 General Plan actions would reduce impacts to a less than significant level.

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga

Scenario 5 includes the same intensification potential as described for Scenario 1, as well as the potential future development of the North Avenue and Western Cañada Larga expansion areas. As discussed under Scenario 2, sensitive habitats within the North Avenue area include jurisdictional waters and wetlands associated with Manuel Canyon Creek, oak woodland, walnut woodland, and bunchgrass grasslands. Impacts could occur via direct removal, introduction of incompatible landscape species, and increased human intrusion. The Western Cañada Larga area is the least disturbed of the expansion areas and has the greatest likelihood for sensitive upland habitats (e.g., coastal sage scrub, native bunchgrass grassland, oak woodland) to be present, as seen in Photo 3 on Figure 4.4-4. Proposed General Plan Action 1.19 would update the existing tree protection guidelines to include mature trees on public and private property. Implementation of General Plan Action 1.8 would require a buffer from the top of bank of the Ventura River bed, and would reduce potential impacts to a less than significant level. Action 1.19 would require the protection of sensitive habitats from the impacts of urban development. Implementation of these proposed General Plan actions would reduce impacts to a less than significant level.

Scenario 6 – Intensification/Reuse + North Avenue + Poinsettia

Scenario 6 includes the same intensification potential as described for Scenario 1, as well as the possible future development of the North Avenue and Poinsettia expansion areas. As discussed under Scenario 2, sensitive habitats within the North Avenue area could include jurisdictional waters and wetlands associated with the upper reaches of Manuel Canyon Creek, oak woodland, walnut woodland, and bunchgrass grasslands. Habitat impacts could occur via direct removal, introduction of incompatible landscape species, and increased human intrusion. Sensitive habitat areas that could be affected by development of the Poinsettia area are limited to the jurisdictional Harmon Canyon Barranca, as seen in Photo 4 on Figure 4.4-4. Implementation of General Plan Action 1.8 would require a buffer from the top of bank of the Santa Clara River bed, and would reduce potential impacts to a less than significant level. The Poinsettia area also includes several windows of poplars that could potentially be affected by development of that area. However, General Plan Action 1.23 calls for the preservation of windrows. Implementation of these actions would reduce impacts to a less than significant level.

MITIGATION MEASURES

Compliance with proposed 2005 General Plan actions would reduce potential impacts to sensitive habitats to a less than significant level. No additional mitigation measures are required.

SIGNIFICANCE AFTER MITIGATION

Implementation of proposed 2005 General Plan policies and actions would reduce impacts to sensitive habitats, including mature trees, to a less than significant level for any of the six scenarios.

Impact BIO-3	**All of the General Plan land use scenarios would largely avoid impacts to special-status plant and animal species by emphasizing intensification/reuse of already urbanized areas rather than developing greenfields at the City's periphery. Potential impacts could occur in certain locations, but would be addressed through implementation of proposed General Plan policies and actions. Impacts are considered Class III, *less than significant*, for all six scenarios.**

Each of the land use scenarios focuses predominantly on intensification of existing developed areas, with some potential for development in agricultural and/or relatively disturbed areas. As such, the potential for special-status species impacts is limited due to the extent of habitats that can support these resources in the Planning Area. When present, special-status species are most likely to be associated with the Ventura and Santa Clara Rivers (e.g. least Bell's vireo, steelhead trout, southwestern pond turtle), and trees or windrows (nesting birds, monarch butterfly, sensitive bats). Special-status species could also occur in the small areas of oak woodland, riparian, wetland, and other native habitats that are present in the Planning Area.

It should also be noted that removal of the hillside areas above the City from the Sphere of Influence, as is anticipated to occur under any of the six land use scenarios, would avoid the potential for impacts to special-status species in that portion of the Planning Area.

General Plan Action 1.19, listed under Impact BIO-2, requires projects near sensitive habitat areas to include surveys for listed sensitive species and to provide appropriate buffers and other mitigation necessary to protect habitat for listed species. Action 1.22 requires the City to update its tree protection guidelines to protect mature trees on public and private property. Action 1.23 requires the preservation of healthy tree windrows associated with current and former agricultural uses. Action 1.24 requires the preservation or 3:1 replacement of indigenous tree species.

Scenario 1 – Intensification/Reuse Only

Scenario 1 generally involves the intensification of development in already developed or disturbed areas. Special-status species are therefore limited within the intensification areas. Development of the Upper North Avenue, North Avenue, and Saticoy districts could affect special-status species offsite and downstream along the Santa Clara and Ventura Rivers (e.g. least Bell's vireo, arroyo chub, steelhead trout, southwestern pond turtle, two-striped garter snake) via water quality impacts (erosion and spills), reduction of vegetation buffers and increased human intrusion. Areas of native vegetation or natural drainages associated with the Upper North Avenue and North Avenue districts and the Mariano Ranch area in the hillsides above Foothill Road could also support special-status species (e.g. coast horned lizard, silvery legless lizard, burrowing owl, and sensitive plants) and could be affected by removal of native vegetation. Although the dune habitat west of Spinnaker Drive in the Harbor District would be restored as part of future development, short-term impacts to sensitive plants and animals (e.g. Western snowy plover and sensitive plants) could occur during construction. Impacts to special-status species in these areas would be reduced to less than significant with the

implementation of Action 1.19, which requires project proponents to conduct surveys for listed species and provide buffers and other mitigation as necessary.

Trees and windrows could be used for nesting (e.g. raptors, nesting birds) or wintering (e.g. monarch butterfly) by special-status species. Several sensitive bats could also utilize these areas, but would not be significantly affected by development, as they are highly mobile, relatively adapted to human environments, and have adjacent open space areas available to them. Notable areas with large trees or windrows that could be affected by development include the Upper North Avenue, North Avenue, Arundell, and Saticoy districts, and other agricultural lands within the SOI that are slated for residential development (including the agricultural area near the 101/126 interchange and several agricultural properties in the Saticoy area). Actions 1.22, 1.23, and 1.24 require the preservation of mature tree, including windrows. Implementation of these actions, in combination with the requirements of Action 1.19, would reduce impacts to a less than significant level.

Scenario 2 – Intensification/Reuse + North Avenue + Olivas + Serra

Scenario 2 includes the same intensification potential as described for Scenario 1, as well as the possible future development of the North Avenue, Olivas, and Serra expansion areas. Development of the North Avenue expansion area could affect special-status species associated with oak woodland, coastal sage scrub and Manuel Canyon Creek (e.g. burrowing owl, San Diego woodrat, coastal western whiptail, patch-nosed snake, nesting birds, oak trees, etc.). Special-status species potentially associated with the Olivas and Serra areas are anticipated to be limited to species associated with trees and windrows (e.g. nesting birds, monarch butterfly wintering areas). Species associated with the Santa Clara River area (e.g. least Bell's vireo, steelhead trout, southwester pond turtle) could also be adversely affected with development of the Serra area. General Plan Action 1.19 requires proponents of projects near sensitive habitat areas to conduct special-status species and mitigate impacts as necessary. Actions 1.22, 1.23, and 1.24 require the protection of mature trees, including windrows. Implementation of these actions would reduce impacts to a less than significant level.

Scenario 3 – Intensification/Reuse + North Avenue + Olivas

Scenario 3 includes the same intensification potential as described for Scenario 1, as well as the possible future development of the North Avenue and Olivas expansion areas. As discussed under Scenario 2, development of the North Avenue area could affect special-status species associated with the oak woodland, coastal sage scrub, and Manuel Canyon Creek onsite (e.g. burrowing owl, San Diego woodrat, coastal western whiptail, patch-nosed snake, nesting birds, oak trees, etc.). Special-status species potentially associated with the Olivas area are anticipated to be limited to species associated with trees and windrows (e.g. nesting birds, and monarch butterfly wintering areas), although sensitive birds may use the wetland areas onsite for foraging. As discussed under Scenario 2, implementation of proposed 2005 General Plan actions would reduce impacts to a less than significant level.

Scenario 4 – Intensification/Reuse + North Avenue + Serra

Scenario 4 includes the same intensification potential as described for Scenario 1, as well as the possible future development of the North Avenue and Serra expansion areas. As discussed

under Scenario 2, development of the North Avenue area could affect special-status species associated with oak woodland, coastal sage scrub, and Manuel Canyon Creek onsite (e.g. burrowing owl, San Diego woodrat, coastal western whiptail, patch-nosed snake, nesting birds, oak trees, etc.). Special-status species potentially associated with the Serra area are anticipated to be limited to species associated with trees and windrows (e.g. nesting birds, and monarch butterfly wintering areas) and species associated with the Santa Clara River area (e.g. least Bell's vireo, steelhead trout). As discussed under Scenario 2, implementation of proposed 2005 General Plan actions would reduce impacts to a less than significant level.

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga

Scenario 5 includes the same intensification potential as described for Scenario 1, as well as the possible future development of the North Avenue and Western Cañada Larga areas. As discussed under Scenario 2, development of the North Avenue area could affect special-status species associated with the oak woodland, coastal sage scrub, and Manuel Canyon Creek onsite (e.g. burrowing owl, San Diego woodrat, coastal western whiptail, patch-nosed snake, nesting birds, oak trees, etc.). Although relatively small in size, the Western Cañada Larga area could include special-status species associated with oak woodlands, scrub, grasslands, and riparian areas present onsite and connected to more extensive open space areas to the north. Special-status species associated with the segment of the Ventura River floodplain onsite and downstream open water areas (e.g. least Bell's vireo, steelhead trout, southwestern pond turtle) could also be affected. Trees and windrows in these areas could support nesting birds and Monarch butterfly wintering areas. As discussed under Scenario 2, implementation of proposed 2005 General Plan actions would reduce impacts to a less than significant level.

Scenario 6 – Intensification/Reuse + North Avenue + Poinsettia

Scenario 6 includes the same intensification potential as described for Scenario 1, as well as the possible future development of the North Avenue and Poinsettia expansion areas. Development of the North Avenue area could affect special-status species associated with the oak woodland, coastal sage scrub, and Manuel Canyon Creek onsite (e.g. burrowing owl, San Diego woodrat, coastal western whiptail, patch-nosed snake, nesting birds, oak trees, etc.). Special-status species potentially associated with the Poinsettia area are anticipated to be limited to species associated with trees and windrows (e.g. nesting birds, and monarch butterfly wintering areas). As discussed under Scenario 2, implementation of proposed 2005 General Plan actions would reduce impacts to a less than significant level.

MITIGATION MEASURES

Implementation of 2005 General Plan Action 1.19 would require protect state and federally listed species and buffer such species from urban uses. Actions 1.22, 1.23, and 1.24 would preserve existing mature trees, including windrows. Additional mitigation is not needed.

SIGNIFICANCE AFTER MITIGATION

Implementation of proposed 2005 General Plan policies would reduce impacts to special-status plant and animal species to a less than significant level for any of the six scenarios.

Impact BIO-4	**All of the General Plan land use scenarios would largely avoid impacts to wildlife movement corridors by emphasizing intensification/reuse of existing urbanized areas. Implementation of General Plan Actions 1.8, 1.9, and 1.10 would maintain ecological connectivity corridors through urban spaces and potentially enhance connectivity in some locations. Therefore, impacts to wildlife movement are considered Class III, *less than significant*, for all six scenarios.**

The proposed scenarios for growth focus predominantly on intensification of existing developed areas and limited expansion into agricultural and/or relatively disturbed areas. As such, the potential for impacts to wildlife corridors is limited and is primarily associated with the semi-natural drainages located in the western and southern portions of the Planning Area (Ventura and Santa Clara Rivers, and Weldon Canyon, Cañada Larga, Manuel Canyon, Cañada de las Encinas and School Canyon Creeks). It should also be noted that removal of the hillside areas above the City from the Sphere of Influence, as is anticipated to occur under any of the six land use scenarios, would limit the potential for impacts to wildlife corridors in that portion of the Planning Area.

As noted under Impact BIO-1, proposed General Plan Action 1.8 requires buffers between barrancas and creeks that retain natural soil slopes and new development. Action 1.9 prohibits the placement of material in watercourses other than native plants and required flood control structures, and Action 1.10 requires the removal of concrete channel structures as funding allows, and where doing so will fit the context of the surrounding area and not create unacceptable flood or erosion potential.

Scenario 1 – Intensification/Reuse Only

Scenario 1 generally emphasizes the intensification of development in already developed or disturbed areas. Wildlife movement corridors are therefore limited only to those portions of the plan that have open space areas, or drainages that connect open space areas. Development of the Upper North Avenue, North Avenue, and Saticoy districts, and other areas such as Mariano Ranch (undeveloped area within the existing City limits above Foothill Road) could potentially affect animal movement, especially along the existing creeks/barrancas and the Ventura and Santa Clara Rivers. However, implementation of the buffer requirement of Action 1.8 and restoration of these drainages as part of Action 1.10 could have a beneficial effect to wildlife movement. Impacts to wildlife corridors under this scenario are therefore considered less than significant.

Scenario 2 – Intensification/Reuse + North Avenue + Olivas + Serra

Scenario 2 includes the same intensification potential as described for Scenario 1, as well as the possible future development of the North Avenue, Olivas, and Serra expansion areas. Manuel Canyon Creek, which crosses through the North Avenue expansion area, is considered a significant wildlife corridor between the Ventura River area and hillsides to the east and could potentially be adversely affected by development of that area. Arundell and Harmon Canyon

Barrancas, which are associated with the Olivas and Serra areas respectively, are not anticipated to be significant corridors due to their high level of disturbance and lack of native vegetation. It should be noted that improvements to these drainages during future development could improve the quality of these areas for wildlife movement. Development along the banks of the Santa Clara River as part of the development of the Serra area could adversely affect fish and wildlife movement along the River. Implementation of
General Plan Action 1.8, which would require a buffer of natural vegetation, would reduce potential impacts to less than significant. Implementation of Action 1.10 on Arundell Barranca through the Olivas area could restore wildlife movement values to some degree along that concrete channel.

Scenario 3 – Intensification/Reuse + North Avenue + Olivas

Scenario 3 includes the same intensification potential as described for Scenario 1, as well as the North Avenue, and Olivas areas. Manuel Canyon Creek is considered a significant wildlife corridor within the North Avenue expansion area and could be adversely affected by development. Arundell Barranca, which is associated with the Olivas area, is not a significant corridor due to its channelized nature and lack of vegetation. As discussed under Scenario 2, implementation of proposed General Plan actions would reduce impacts to a less than significant level.

Scenario 4 – Intensification/Reuse + North Avenue + Serra

Scenario 4 includes the same intensification potential as described for Scenario 1, as well as the North Avenue, and Serra areas. Manuel Canyon Creek is considered a significant wildlife corridor within the North Avenue expansion area and could be adversely affected by development. Harman Canyon Barranca, which is associated with the Serra area, is not a significant wildlife corridor due to its high level of disturbance and areas lacking vegetation. As discussed under Scenario 2, implementation of proposed General Plan actions would reduce impacts to a less than significant level.

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga

Scenario 5 includes the same intensification potential as described for Scenario 1, as well as the North Avenue, and Western Cañada Larga areas. Manuel Canyon Creek is considered a significant wildlife corridor within the North Avenue expansion area and could be adversely affected by development. Cañada Larga and Weldon Canyon Creeks associated with the Western Cañada Larga area are considered significant wildlife corridors between the Ventura River area and hillsides to the east and northeast, and could also be adversely affected by development of that area. However, implementation of Action 1.8, which would require a buffer of natural vegetation, would reduce potential impacts to a less than significant level.

Scenario 6 – Intensification/Reuse + North Avenue + Poinsettia

Scenario 6 includes the same intensification potential as described for Scenario 1, as well as the North Avenue, and Poinsettia areas. Manuel Canyon Creek is considered a significant wildlife corridor within the North Avenue expansion area and could be adversely affected by development. However, implementation of General Plan Action 1.8, which would require a

buffer of natural vegetation, would reduce potential impacts to a less than significant level. Harmon Canyon Barranca, which is the eastern boundary of the Poinsettia area, is not anticipated to be a significant corridor due to its high level of disturbance and areas lacking vegetation. Restoration of the barranca as part of the development of the Poinsettia in accordance with Action 1.10 would have a beneficial effect to wildlife movement.

MITIGATION MEASURES

Compliance with proposed General Plan policies and actions would reduce potential impacts to wildlife corridors to a less than significant level. No additional mitigation measures are required.

SIGNIFICANCE AFTER MITIGATION

Implementation of General Plan Actions 1.8, 1.9, and 1.10 would reduce impacts to wildlife corridors to a less than significant level for any of the six scenarios.

4.5 CULTURAL and HISTORIC RESOURCES

This section analyzes the impacts of the 2005 General Plan on cultural and historic resources. Impacts to both pre-historic archaeological resources and historic resources are addressed.

4.5.1 Setting

Cultural resources include pre-historic resources, historic resources, and Native American resources. Pre-historic resources represent the remains of human occupation prior to European settlement. Historic resources represent remains after European settlement and may be part of a "built environment," including man-made structures used for habitation, work, recreation, education and religious worship. Historic resources may also include natural features, sites, or areas having historical, archaeological, cultural, or aesthetic significance. Native American resources include cultural elements pertaining to Native American issues and values.

The Ventura Planning Area is rich in cultural and historic resources. In addition to numerous pre-historic sites in the vicinity, about 100 sites (primarily in the Downtown area) and four neighborhood districts have been designated as historic. Figure 4.5-1 shows the locations of these districts and sites.

a. Pre-historic Resources. The diversity of natural resources, the temperate climate that allows for long growing seasons, proximity to the coast, and abundant natural materials available for tool manufacturing all combined to produce an archaeological record in Ventura of almost the entire chronological and cultural span of human activity in southern California.

Significant Recorded Pre-historic Sites. For the 1989 Comprehensive Plan Master EIR, an inventory of recorded archaeological sites was compiled from the files of the State Information Center, Institute of Archaeology, University of California at Los Angeles, site records, excavation reports, and relevant literature. This information has been updated for the 2005 General Plan with materials obtained from the City, local museums, Native American organizations, and historical groups.

Within the Planning Area, there are 25 recorded archaeological sites and 96 historic landmarks or points of interest, at least 43 of which may also contain subsurface cultural resources. Pre-historic sites generally involve at least one of the following resources: middens, milling stone sites, large villages, cemeteries, hilltop bead shrines, flake scatters and camp workshops. Key areas include: Shisholop Village, the San Buenaventura Mission, and village sites in the North Avenue community, Saticoy, and Taylor Ranch. Drainages, especially the Ventura River, are also important archaeological locations. Some of the major resources are described below.

Shisholop Village. Also known as Historic Landmark 18, this site, located at the foot of Figueroa Street in Downtown Ventura, once contained a Chumash village believed to have been a Chumash provincial capital. One portion of the village has been excavated. Additional remains may exist.

Mission Area. Village sites exist on both the north and south sides of Main Street in downtown Ventura. Important structures associated with the Mission have also been

documented. The Mission Aqueduct, which is fragmented, lies in sections as it heads north and south from the Mission property.

North Avenue Community. Two different parts of a major Chumash village have been excavated in one area. In another location, excavation revealed "dark mound soil" which contrasted to the light claylike surrounding soils. This location has been covered by a dwelling, roads, gardens, and orchards. The owner of the property collected mortars, pestles, milling stones, and projectile points, as well as branding irons, spurs, and knives. A segment of the Mission aqueduct runs along the base of a hill east and south of the site. Since the original recording of the site, the construction of State Route 33 may have affected part of the front yard. The owner has since died; the whereabouts of his collection are unknown.

Saticoy Community. Included in this area is a village site, most likely Chumash, covering an area that is 300 by 1,000 feet, containing projectile points, scrapers, blades, drills, manos, milling stones, and trading beads. A cemetery, potentially Chumash, is also located in Saticoy.

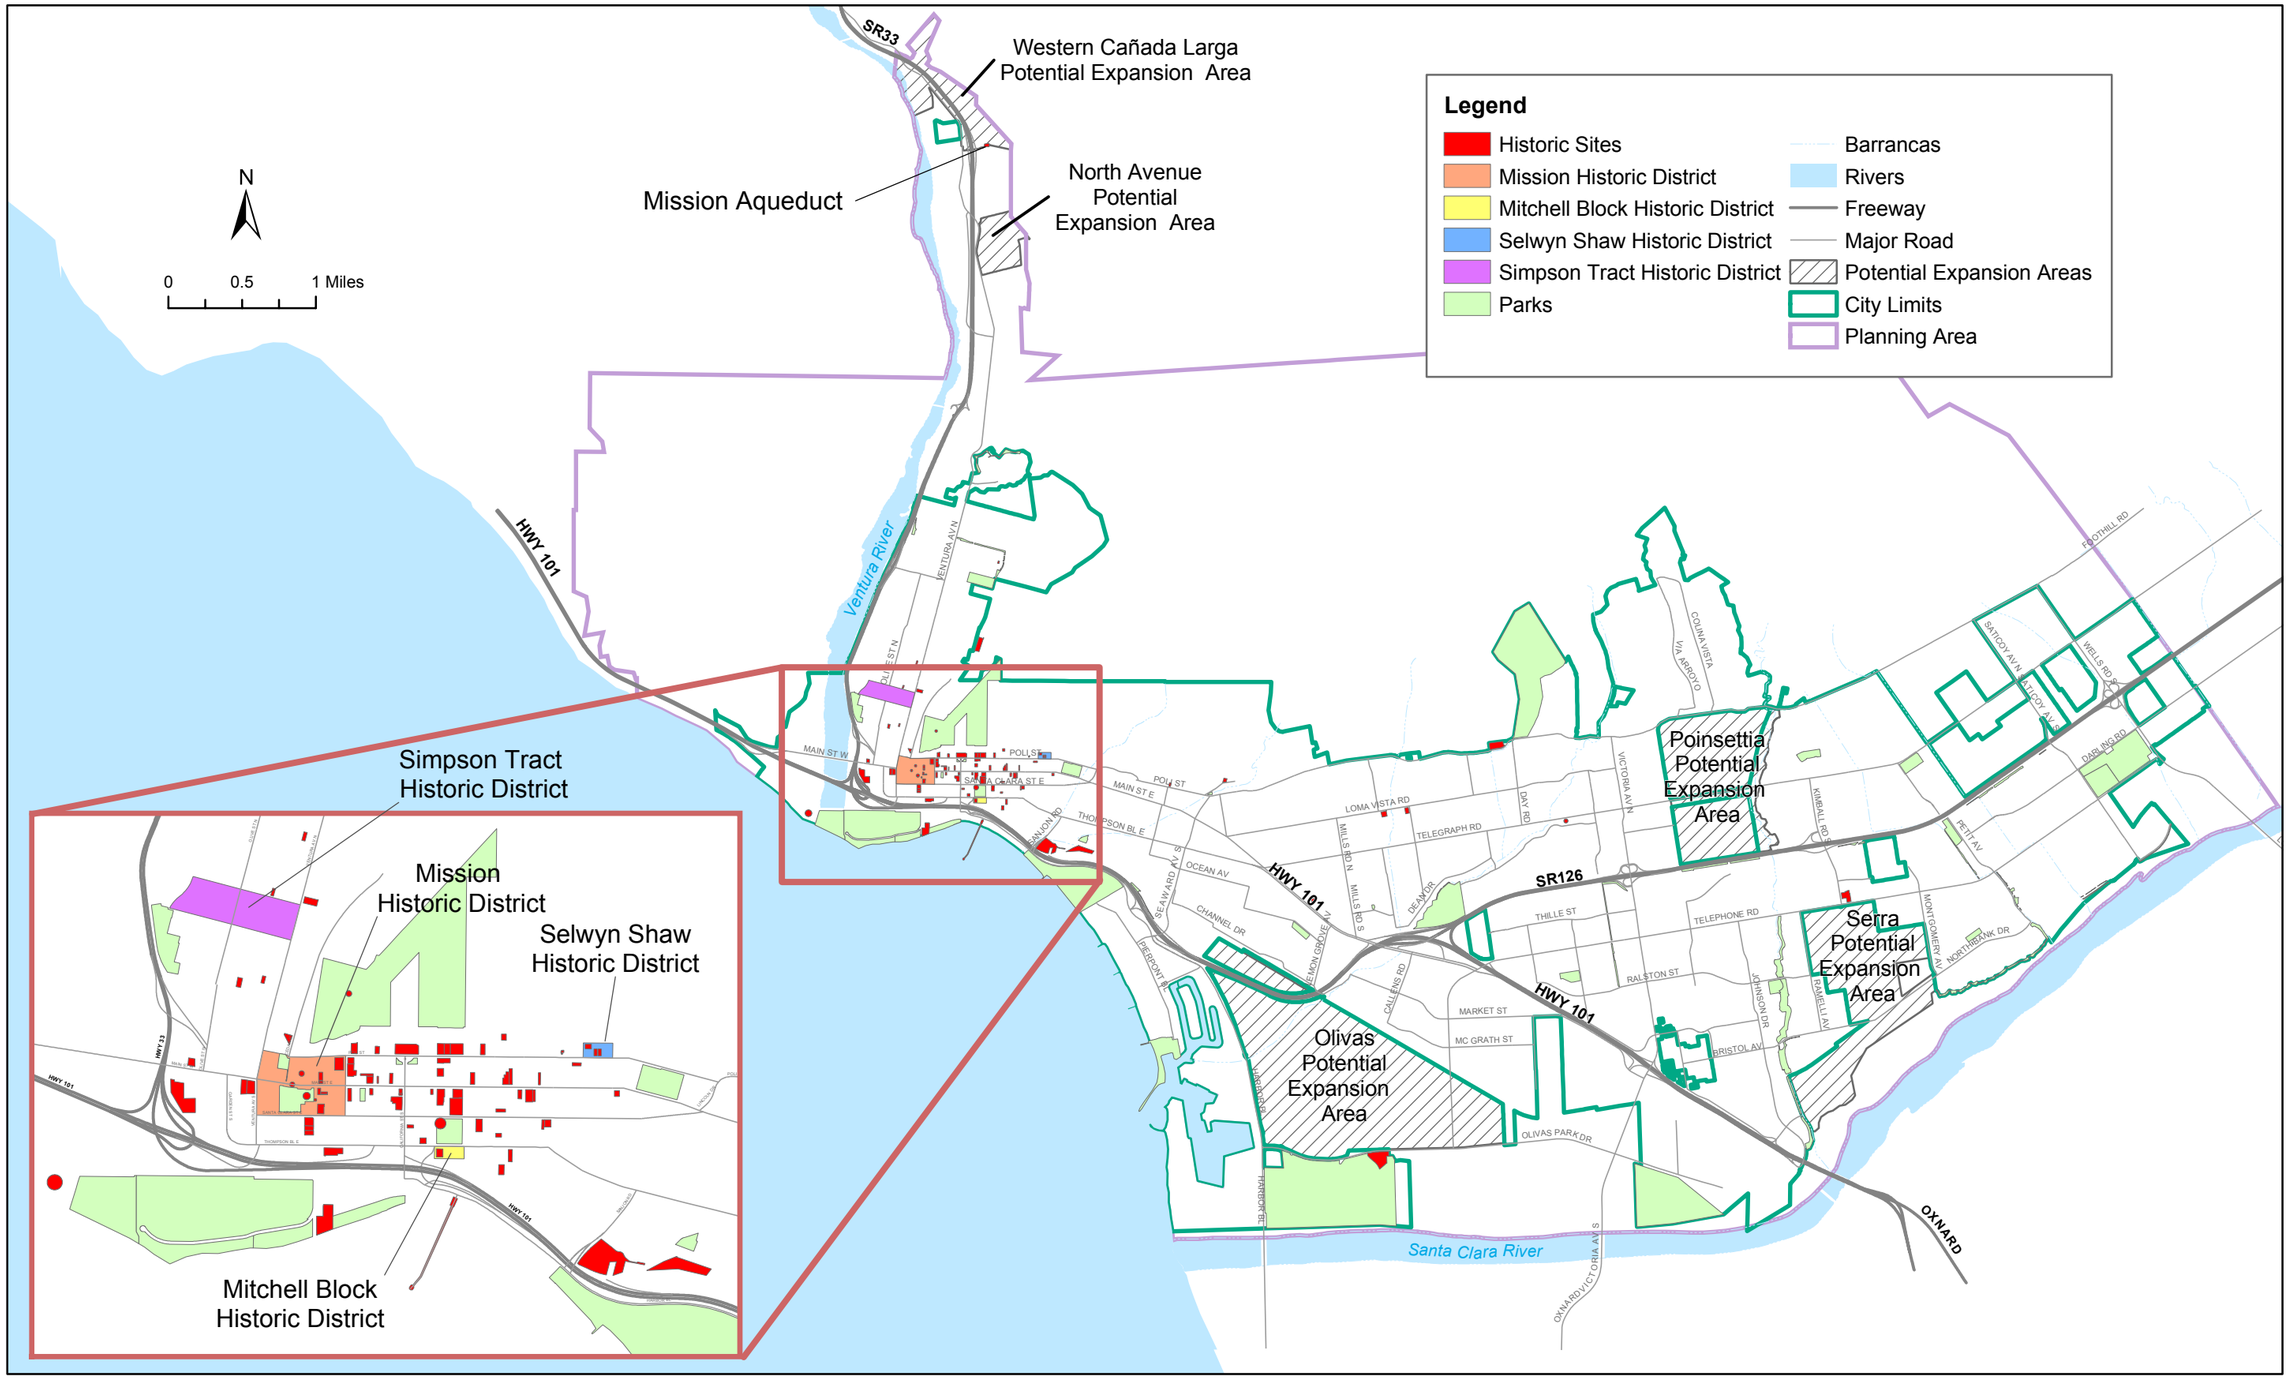
Taylor Ranch. A major village has been excavated at Taylor Ranch, which is located west of the Ventura River. This site has been deemed the "most prominent cultural resource within the area" *(*Singer and Atwood, 1987*)*. Estimated to be from the Oak Grove (Milling Stone) period, the site measures 500 by 1,000 feet, and includes the following artifacts: milling stones, hammerstones, and various flakes.

b. Historic Resources. There are a total of 96 designated historic sites/points of interest and four historic districts within the Planning Area. These include local, County, State, and National Register landmarks, landmark districts, and points of interest. The City owns several historic properties operated as sites open to the public and run by the Parks and Recreation Department. These include the Olivas Adobe, Ortega Adobe, Albinger Archaeological Museum, and other recorded archaeological sites in the Downtown area.

Historic sites include the Mission and its facilities, the Ortega adobe and the Olivas adobe, the Santa Gertrudis Chapel and San Miguel Chapels, and Chinatown. Historical landmarks that may also contain significant archaeological resources are mainly the nineteenth and early twentieth century residences of Ventura citizens, or early commercial buildings such as the Ferraud and Peirano stores downtown or the Bard Hospital on North Fir Street.

In 1982, the City received a grant from the State Office of Historic Preservation to conduct a comprehensive survey of the Downtown and Ventura Avenue areas. This study, combined with the Historical Architectural Survey completed in 1980 as part of the Downtown San Buenaventura Redevelopment Study Area, created a list of potential landmark sites in the downtown and Avenue areas of the City. Many of these proposed landmarks have since been designated.

The identification and designation of landmarks and points of interest outside City limits is the responsibility of the Ventura County Cultural Heritage Board. Landmarks include structures, natural features, sites, or areas having historical, archaeological, cultural, or aesthetic significance. The Ventura County Cultural Heritage Board also has designated a number points of interest, which include: sites of historical events; sites of historical resources or



Source: City of San Buenaventura and Rincon Consultants, Inc., 2005.

Historic Districts and Sites Figure 4.5-1

City of Ventura

structures that no longer exist; and, natural features or areas having historical significance. Ventura County landmarks and points of interests that are located within the Planning Area include "Five Trees," the Saticoy Walnut Growers Association Warehouse, the Saticoy Bean Warehouse, and the Farmers and Merchants Bank of Santa Paula.

In addition to the properties identified through the Cultural Heritage Survey, the Ventura Historic Preservation Committee is continually considering other sites eligible for landmark status. After recommendation from the Historic Preservation Committee, the Ventura Planning Commission holds a public hearing and sends the subject application to the City Council. If the proposed landmark meets the applicable standards set forth in the Ventura City Code 1971, Section 3.310.170, then the Council may vote to adopt a resolution approving a landmark or point of interest and refer such recommendation to the County Clerk's office.

Appendix D includes a complete list of designated historic sites, points of interest, and historic districts within the Planning Area.

c. Regulatory Setting. A property may be designated as historic by National, State, or local authorities. In order for a building to qualify for listing in the National Register of Historic Places, the California Register of Historical Resources, or as a locally significant property in the City of Ventura, it must meet one or more identified criteria of significance. If the designation is for a building, the structure should also retain sufficient architectural integrity to continue to evoke the sense of place and time with which it is historically associated. An explanation of these designations follows.

National Register of Historic Places. The National Register of Historic Places (NRHP), which is administered by the National Park Service, is "an authoritative guide to be used by federal, state, and local governments, private groups, and citizens to identify the nation's cultural resources and to indicate what properties should be considered for protection from destruction or impairment." However, the federal regulations explicitly provide that National Register listing of private property "does not prohibit under federal law or regulation any actions which may otherwise be taken by the property owner with respect to the property."

Listing in the National Register assists in preservation of historic properties through the following actions: recognition that a property is of significance to the nation, the state, or the community; consideration in planning for Federal or federally assisted projects; eligibility for Federal tax benefits; consideration in the decision to issue a federal permit; and qualification for Federal assistance for historic preservation grants, when funds are available. Properties may qualify for NRHP listing if they:

A. *Are associated with events that have made a significant contribution to the broad patterns of our history*
B. *Are associated with the lives of persons significant in our past*
C. *Embody the distinctive characteristics of a type, period, or method of construction or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction*
D. *Have yielded, or may be likely to yield, information important in prehistory or history*

According to the NRHP guidelines, the essential physical features of a property must be present for it to be considered significant. Further, in order to qualify for the NRHP, a resource must retain its integrity, or the "ability to convey its significance." The seven aspects of integrity are:

1. ***Location*** *(the place where the historic property was constructed or the place where the historic event occurred);*
2. ***Design*** *(the combination of elements that create the form, plan, space, structure, and style of a property);*
3. ***Setting*** *(the physical environment of a historic property);*
4. ***Materials*** *(the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property);*
5. ***Workmanship*** *(the physical evidence of the crafts of a particular culture or people during any given period of history or prehistory);*
6. ***Feeling*** *(a property's expression of the aesthetic or historic sense of a particular period of time); and*
7. ***Association*** *(the direct link between an important historic event or person and a historic property).*

The relevant aspects of integrity depend upon the NRHP criteria applied to the property. For example, a property nominated under the location criterion would be likely to convey its significance primarily through integrity of location, setting, and association. A property nominated solely under the design criterion would usually rely primarily on integrity of design, materials, and workmanship. The California Register procedures include similar language with regard to integrity.

California Register of Historic Resources. The California Register of Historic Resources is an authoritative guide in California used by State and local agencies, private groups, and citizens to identify the State's historical resources and to indicate which properties are to be protected, to the extent prudent and feasible, from substantial adverse change. A resource is eligible for listing on the California Register if it meets any of the following criteria for listing:

A. *It is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;*
B. *It is associated with the lives of persons important in our past;*
C. *It embodies the distinctive work of an important creative individual, or possesses high artistic values; or*
D. *It has yielded, or may be likely to yield, information important in prehistory or history.*

The California Register may also include properties listed in "local registers" of historic properties. A "local register of historic resources" is broadly defined in Public Resources Code Section 5020.1(k) as "a list of properties officially designated or recognized as historically significant by a local government pursuant to a local ordinance or resolution." Local registers of historic properties come in two forms: (1) surveys of historic resources conducted by a local agency in accordance with Office of Historic Preservation procedures and standards, adopted by the local agency and maintained as current; and (2) landmarks designated under local ordinances or resolutions (Public Resources Code Sections 5024.1, 21804.1, 15064.5).

By definition, the California Register of Historic Resources also includes all "properties formally determined eligible for, or listed in, the National Register of Historic Places," (NRHP) and certain specified State Historical Landmarks. The majority of formal determinations of NRHP eligibility occur when properties are evaluated by the State Office of Historic Preservation in connection with federal environmental review procedures (Section 106 of the Historic Preservation Act of 1966). Formal determinations of eligibility also occur when properties are nominated to the NRHP, but are not listed due to owner objection. The minimum age criterion for the NRHP and the California Register is 50 years. Properties less than 50 years old may be eligible for listing on the NRHP if they can be regarded as "exceptional", as defined by the NRHP procedures, or in terms of the California Register, if "it can be demonstrated that sufficient time has passed to understand its historical importance."

City of Ventura Criteria. The City of Ventura Municipal Code, Chapter 24.455, *Historic Preservation Regulations*, establishes the procedures for identifying, designating, and preserving historic landmarks or points of interest. Pursuant to §24.455.120.2, a building, structure, archaeological excavation, or object that is unique or significant because of its location, design, setting, materials, workmanship, or aesthetic feeling may qualify as a landmark if it is marked by any of the following:

A. *Events that have made a meaningful contribution to the nation, state, or community*
B. *Lives of persons who made a meaningful contribution to national, state, or local history*
C. *Embodying the distinctive characteristics of a type, period, or method of construction*
D. *Reflecting or exemplifying a particular period of the national, state, or local history*
E. *The work of one or more master builders, designers, artists, or architects whose talents influenced their historical period, or work that otherwise possesses high artistic value*
F. *Representing a significant and distinguishable entity whose components may lack individual distinction*
G. *Yielding or likely to yield, information important to national, state, or local history or prehistory*

Pursuant to §24.455.120.3, any real property or object may qualify as a point of interest if:

A. *It is the site of a building, structure, or object that no longer exists but was associated with historic events, important persons, or embodied a distinctive character of architectural style.*
B. *It has historic significance, but was altered to the extent that the integrity of the original workmanship, materials, or style is substantially compromised.*
C. *It is the site of a historic event which has no distinguishable characteristics other than that a historic event occurred there and the historic significance is sufficient to justify the establishment of a historic landmark.*

Potential landmarks or points of interests are first considered by the Historic Preservation Committee at a noticed public hearing and with the property owner's permission. The Historic Preservation Committee then makes a recommendation to the Planning Commission. After consideration of the Historic Preservation Committee's recommendation, the Planning Commission is responsible for making a recommendation to the City Council, which, after consideration at a noticed public hearing, has sole authority to designate landmarks or points of interest.

In addition to the designation of individual historical landmarks and points of interest, the Historic Preservation Committee, Planning Commission, and, ultimately, the City Council may designate certain areas of the City as Historic District (HD) Overlay Zones, pursuant to the City of Ventura Municipal Code, Chapter 23.340 and §24.455.310. The purpose of the HD Overlay Zone is to regulate a landmark, point of interest, or any combination thereof in order to:

A. *Protect against destruction or encroachment upon such areas and structures*
B. *Encourage uses which promote the preservation, maintenance, or improvement of landmarks and points of interest*
C. *Assure that new structures and uses within such areas will be in keeping with the character to be preserved or enhanced*
D. *Promote the educational and economic interests of the entire City*
E. *Prevent creation of environmental influences adverse to such purposes*

The procedure for establishing an HD Overlay Zone is similar to that required for designating a historical landmark or point of interest and includes recommendations by the Historic Preservation Committee and Planning Commission to the City Council for consideration at noticed public hearings. After designation as a historical landmark, point of interest, or Historic District, future development that might have an impact on designated buildings, structures, or areas is subject to design review for compliance with any architectural and development guidelines that the City Council has adopted as a part of the designation process.

The City has adopted the Mills Act, a state law that grants local governments the authority to directly implement a historic preservation program to encourage the preservation and restoration of designated Historic Landmarks. In exchange for property tax relief, property owners agree to maintain and preserve the exterior of their properties according to the Secretary of the Interior's Standards for the Treatment of Historical Properties guidelines

4.5.2 Impact Analysis

a. Methodology and Significance Thresholds. Evaluation of significance under the California Environmental Quality Act is based on eligibility for listing on the National Register of Historic Places (NRHP) or the California Register of Historical Resources. The NRHP is an effective planning tool for both long- and short-term cultural resource management considerations. An evaluation of significance in pre-historic and historic sites is usually measured by a number of variables, which reflect their applicability to present and future research questions posed by scientists in describing and explaining culture change.

Comprehensively, a project that follows the Secretary of the Interior's *Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings* (1992) or *the Secretary of the Interior's Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings* (1995), shall be considered as mitigated to a level of less than significant impact on the historical resource.

Archaeological materials are extremely fragile and non-renewable. Thus, any activity that alters the surface of the land, inducing archaeological pursuits, can affect these resources. The cultural resource evaluation process requires that a resource, or the information it represents, be

related to some framework held in common by all archaeologists, and thus provide a measure of reference for determining the potential significance of similar resources. This framework usually addresses research orientation, and geographic, cultural, and temporal questions within the context of significance.

The fact that a resource is not listed in, or determined to be eligible for listing in the California Register of Historical Resources, not included in a local register of historical resources [pursuant to section 5020.1(k) of the Public Resources Code], or identified in an historical resources survey [meeting the criteria in section 5024.1(g) of the Public Resources Code] does not preclude a lead agency from determining that the resource may be an historical resource as defined in Public Resources Code sections 5020.1(j) or 5024.1.

If development conducted pursuant to the 2005 General Plan could potentially cause damage to a significant archaeological resource, implementation of the General Plan may have a significant effect on the environment. Section 15064.5 of CEQA pertains to the determination of the significance of impacts to archaeological and historic resources. CEQA §15126.4(b) provides guidelines that assist in determining appropriate mitigation measures when it is determined that a project has the potential to create a significant impact on archaeological resources. Achieving CEQA compliance with regard to treatment of impacts to significant cultural resources requires that a mitigation plan be developed for the resource(s). Preservation in place is the preferred manner of mitigating impacts to significant archaeological resources.

Direct impacts may occur by:

- *Physically damaging, destroying, or altering all or part of the resource*
- *Altering characteristics of the surrounding environment that contribute to the resource's significance*
- *Neglecting the resource to the extent that it deteriorates or is destroyed. Indirect impacts primarily result from the effects of project-induced population growth. Such growth can result in increased construction as well as increased recreational activities that can disturb or destroy cultural resources*
- *The incidental discovery of cultural resources without proper notification*

Direct impacts can be assessed by identifying the types and locations of proposed development, determining the exact locations of cultural resources, assessing the potential significance of the resources that may be affected, and determining the appropriate mitigation.

Indirect impacts primarily result from the effects of growth accommodated under the General Plan. Such growth can result in increased construction as well as increased recreational activities that can disturb or destroy cultural resources. Due to their nature, indirect impacts are much harder to assess and quantify.

b. Project Impacts and Mitigation Measures. The matrix on the following page provides a summary comparison of impacts to cultural and historic resources for each of the scenarios under consideration. A discussion of the impacts follows.

Impact CR-1	**Growth accommodated under any of the six scenarios could adversely affect previously identified and unidentified pre-historic archaeological resources. However, implementation of policies and actions included in the 2005 General Plan would reduce impacts to a Class III, *less than significant*, level for any of six land use scenarios.**

A number of archaeological resource areas have been identified within the Planning Area. Notable sites include the Shisholop Village at the foot of Figueroa Street, the Mission area, two different parts of a Chumash Village in the North Avenue area, a village site and cemetery in Saticoy, and a village on Taylor Ranch. In general, the areas where future development intensification and reuse are likely to occur would not affect these known sites. Although there is the possibility that as yet undiscovered resources could be present at any location, based on the fact that most of the intensification/reuse sites have been previously graded, the likelihood of finding intact resources is considered low. Areas with the greatest potential for intact resources that could potentially be disturbed include portions of the North Avenue area (e.g., the area south of the Brooks Institute that is not developed), portions of the Downtown neighborhood, and Saticoy.

None of the potential expansion areas have been formally surveyed for archaeological resources. No known archaeological resources are present in any of the expansion areas and all of the areas have been substantially disturbed by past grading and agricultural activities. Therefore, the likelihood that significant archaeological resources are present is not considered high. Nevertheless, the Serra and Poinsettia areas are located within the vicinity of archaeologically sensitive areas, as resources have been identified on other sites in the East Ventura area, particularly near Saticoy. In addition, the Mission Aqueduct, which stretched from Cañada Larga to the San Buenaventura Mission and south through the Downtown area, is thought to cross through the western portion of the North Ventura Avenue expansion area, though it is not known whether any trace of that resource remains. Although archaeological resources are not expected to be a major constraint to possible future development in any of the expansion areas, archaeological investigations would be needed on a case-by-case basis for any of the areas in order to confirm the presence or absence of archaeological remains.

The 2005 General Plan includes the following policy and actions that address potential impacts to archaeological resources:

Policy 9D	*Ensure proper treatment of archaeological and historic resources.*
Action 9.14	*Require archaeological assessment for projects proposed in the Coastal Zone and other areas where cultural resources are likely to be located.*

Summary Comparison of Impacts for EIR Scenarios

	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
Archaeological Resources (Impact CR-1)	Future development could potentially disturb previously unknown archaeological resources. However, implementation of policies and actions in the 2005 General Plan would reduce impacts to Class III, less than significant.	Impacts similar to Scenario 1. North Avenue and Serra expansion areas are in areas of archaeological significance. Impacts are Class III, less than significant, with implementation of 2005 General Plan policies and actions.	Impacts similar to Scenario 1. North Avenue expansion area is in an area of archaeological significance. Impacts are Class III, less than significant, with implementation of 2005 General Plan policies and actions.	Impacts similar to Scenario 1. North Avenue and Serra expansion areas are in areas of archaeological significance. Impacts are Class III, less than significant, with implementation of 2005 General Plan policies and actions.	Impacts similar to Scenario 1. North Avenue and Western Cañada Larga expansion areas are in an area of archaeological significance. Impacts are Class III, less than significant, with implementation of 2005 General Plan policies and actions.	Impacts similar to Scenario 1. North Avenue expansion area is in an area of archaeological significance. Impacts are Class III, less than significant, with implementation of 2005 General Plan policies and actions.
Historic Resources (Impact CR-2)	Possible impacts to existing Historical Districts and historical landmarks due to intensification and reuse. However, implementation of proposed 2005 General Plan policies and actions would reduce impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Possible impacts relating to future demolition of farmhouses and ancillary structures in North Avenue, Olivas, and Serra expansion areas. North Avenue area potentially includes remnants of the Mission Aqueduct. Implementation of General Plan policies and actions reduces impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Possible impacts relating to future demolition of farmhouses and ancillary structures in North Avenue and Olivas expansion areas. North Avenue area potentially includes remnants of the Mission Aqueduct. Implementation of General Plan policies and actions reduces impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Possible impacts relating to future demolition of farmhouses and ancillary structures in North Avenue and Serra expansion areas. North Avenue area potentially includes remnants of the Mission Aqueduct. Implementation of General Plan policies and actions reduces impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Possible impacts relating to future demolition of farmhouses and ancillary structures in North Avenue expansion area. North Avenue and Western Cañada Larga areas potentially include remnants of the Mission Aqueduct. Implementation of General Plan policies and actions reduces impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Possible impacts relating to future demolition of farmhouses and ancillary structures in North Avenue expansion area. North Avenue area potentially includes remnants of the Mission Aqueduct. Implementation of General Plan policies and actions reduces impacts to Class III, less than significant.

Action 9.15 *Suspend development activity when archaeological resources are discovered, and require the developer to retain a qualified archaeologist to oversee handling of the resources in coordination with the Ventura County Archaeological Society and local Native American organizations as appropriate.*

Scenario 1 - Intensification/Reuse Only

Scenario 1 emphasizes intensification and reuse of areas within the existing SOI that are already urbanized or designated for urban uses, and does not include expansion areas. Due to the extensive ground disturbance associated with urbanization and agricultural activity that has occurred throughout most of the SOI, it is unlikely that development that would be accommodated under this scenario would disturb any known significant archaeological resources. However, as discussed above, development could occur within the vicinity of known archaeological sites, particularly within the North Avenue, Downtown, and Saticoy districts. As such, grading and trenching activities associated with new development that would occur under Scenario 1 have the potential to disturb previously unknown archaeological resources. Potentially significant impacts would be mitigated through implementation of 2005 General Plan Actions 9.14 and 9.15.

Scenario 2 - Intensification/Reuse + North Avenue + Olivas + Serra

Impacts associated with intensification and reuse would be the same as those identified for Scenario 1. In addition, Scenario 2 would accommodate the possible future development of the North Avenue, Olivas, and Serra expansion areas. The Serra and North Avenue expansion areas are located within the vicinity of known archaeological resources in the east Ventura/Saticoy and North Avenue areas, respectively. The Olivas expansion area consists primarily of agricultural lands that have experienced ground disturbance activities and is in an area that is not known to be of archaeological significance; nevertheless, the potential remains for previously unknown archaeological resources to be present within the Olivas area. Development under Scenario 2 has the potential to disturb previously unknown archaeological resources. Potentially significant impacts would be mitigated through implementation of 2005 General Plan Actions 9.14 and 9.15.

Scenario 3 – Intensification/Reuse + North Avenue + Olivas

Impacts associated with intensification and reuse would be the same as those identified for Scenario 1. In addition, Scenario 2 would accommodate the possible future development of the North Avenue and Olivas expansion areas. As discussed above under Scenarios 1 and 2, known resources are present in portions of the City, notably the North Avenue, Downtown, and Saticoy districts. No known archaeological deposits are present in the North Avenue or Olivas expansion areas, though the North Avenue expansion area is within an area of archaeological significance. Development accommodated under this scenario has the potential to disturb previously unknown archaeological resources. Potentially significant impacts would be mitigated through implementation of 2005 General Plan Actions 9.14 and 9.15.

Scenario 4 – Intensification/Reuse + North Avenue + Serra

Impacts associated with intensification and reuse would be the same as those identified for Scenario 1. In addition, Scenario 4 would accommodate the possible future development of the North Avenue and Serra expansion areas. As discussed above under Scenarios 1 and 2, known resources are present in portions of the City, notably the North Avenue, Downtown, and Saticoy districts. No known archaeological deposits are present in the North Avenue or Serra expansion areas; however, both of these expansion areas are within portions of the Planning Area that are known to be of archaeological significance. Development accommodated under this scenario has the potential to disturb previously unknown archaeological resources. Potentially significant impacts would be mitigated through implementation of 2005 General Plan Actions 9.14 and 9.15.

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga

Impacts associated with intensification and reuse would be the same as those identified for Scenario 1. In addition, Scenario 5 would accommodate the possible future development of the North Avenue and Western Cañada Larga expansion areas. As discussed above under Scenarios 1 and 2, known resources are present in portions of the City, notably the North Avenue, Downtown, and Saticoy districts. No known archaeological deposits are present in the North Avenue or Western Cañada Larga expansion areas, though both areas are within a general area that is known to be of archaeological significance. Development accommodated under Scenario 5 has the potential to disturb previously unknown archaeological resources. Potentially significant impacts would be mitigated through implementation of 2005 General Plan Actions 9.14 and 9.15.

Scenario 6 – Intensification/Reuse + North Avenue + Poinsettia

Impacts associated with intensification and reuse would be the same as those identified for Scenario 1. In addition, Scenario 6 would accommodate the possible future development of the North Avenue and Poinsettia expansion areas. As discussed above under Scenarios 1 and 2, known resources are present in portions of the City, notably the North Avenue, Downtown, and Saticoy districts. No known archaeological deposits are present in the North Avenue or Poinsettia expansion areas, though the North Avenue expansion area is within a general area that is known to be of archaeological significance. Development accommodated under Scenario 6 has the potential to disturb previously unknown archaeological resources. Potentially significant impacts would be mitigated through implementation of 2005 General Plan Actions 9.14 and 9.15.

MITIGATION MEASURES

Implementation of Policy 9D and Actions 9.14 and 9.15 would reduce potential archaeological resource impacts to a less than significant level for all six land use scenarios. Mitigation is not required.

SIGNIFICANCE AFTER MITIGATION

Implementation of policies and actions included in the 2005 General Plan would reduce the potential for impacts to archaeological resources to a less than significant level for any of the six land use scenarios.

Impact CR-2	**Several of the growth districts and corridors include identified historic resources, as does the Western Cañada Larga expansion area. The other expansion areas also include structures that meet the minimum age criterion for eligibility for the National and California Registers of Historic Places. However, implementation of proposed 2005 General Plan policies and actions, in combination with existing regulatory requirements, would reduce impacts to a Class II, *less than significant,* level for Scenarios 1-6.**

There are 96 designated historic resources within the current SOI. Among the notable historic resources are San Buenaventura Mission, the Ortega and Olivas Adobes, and the Santa Gertrudis and San Miguel chapels. (See Appendix D for a complete list and description of historic resources within the Planning Area.)

Four historic districts have also been established in the City. These include the Mission District, the Mitchell Block District (south of Thompson Boulevard and East of California Street), the Selwyn Shaw District (north of Poli Street between Ann Street and Hemlock Street), and the Simpson Tract District (west of Ventura Avenue and between Ramona Street and Center Street). Several of the designated Growth Districts and Corridors, where intensification and reuse would occur, contain identified historic resources.

A portion of the Mission Aqueduct, a designated County historic landmark, is located within the Western Cañada Larga expansion area. As the Mission Aqueduct at one time extended from the Mission Historic District north along the eastern foothills of the Ventura Avenue corridor approximately eight miles to the north, it is possible that portions of the Mission Aqueduct might remain within these areas. In addition, although it has not been formally designated as a historic landmark, the Fraser House is located adjacent to the North Avenue expansion area and meets at least three criteria for designation as a County historic landmark (Westside Elementary School Final EIR, 2002). There are no designated historic sites in the Olivas, Poinsettia, and Serra expansion areas; however, all of these areas include older farmhouses and other buildings that likely meet the minimum age criterion to qualify for the National Register of Historic Places. Meeting the minimum age criterion does not necessarily mean that the structures are eligible for listing on the National Register and, based on preliminary observations, it is not likely that structures would meet the other criteria for eligibility. However, analysis of the historic significance of the structures would be warranted in the event that development is proposed within any of these areas.

The 2005 General Plan includes the following actions that would help reduce the potential for impacts to cultural and historic resources throughout the City under Scenarios 1-6:

Action 9.16 *Pursue funding to preserve historic resources.*

Action 9.17 *Provide incentives to owners of eligible structures to seek historic landmark status and invest in restoration efforts.*

Action 9.18 *Require that modifications to historically-designated buildings maintain their character.*

Action 9.19 *For any project in a historic district or that would affect any potential historic resource or structure more than 40 years old, require an assessment of eligibility for State and federal register and landmark status and appropriate mitigation to protect the resource.*

Action 9.20 *Seek input from the City's Historic Preservation Commission on any proposed development that may affect any designated or potential landmark.*

Action 9.21 *Update the inventory of historic properties.*

Action 9.22 *Create a set of guidelines and/or policies directing staff, private property owners, developers, and the public regarding treatment of historic resources that will be readily available at the counter.*

Action 9.23 *Complete and maintain historic resource surveys containing all the present and future components of the historic fabric within the built, natural, and cultural environments.*

Action 9.24 *Create a historic preservation element.*

Implementation of the City of Ventura Historic Preservation Regulations and HD Overlay Zone regulations described in the *Setting* would also reduce impacts to historical resources within designated Historic Districts under Scenarios 1-6.

Scenario 1 – Intensification/Reuse Only

Scenario 1 emphasizes intensification and reuse of properties within the existing SOI that are either urbanized or designated for urban uses, and does not include expansion areas. Development under Scenario 1 would most likely result in development on, or adjacent to, several of the designated Historic Districts and landmarks that are located throughout the City—especially within the Downtown district, which includes the Mission, Selwyn Shaw, and Mitchell Block Historic Districts. Although impacts to historic buildings and districts could be avoided, growth accommodated under Scenario 1 would have the potential to adversely affect historic buildings and districts through either direct removal of structures or by changing the historic setting of the communities/neighborhoods in which historic buildings and other resources are located. Potentially significant impacts could be mitigated through implementation of 2005 General Plan Action 9.19.

Scenario 2 – Intensification/Reuse + North Avenue + Olivas + Serra

Impacts associated with intensification and reuse would be the same as those identified for Scenario 1. In addition, Scenario 2 would accommodate the possible future development of the North Avenue, Olivas, and Serra expansion areas. The North Avenue expansion area could include vestiges of the Mission Aqueduct, a designated historic landmark. In addition, all three

Photo 1 - Farmhouse fronting Ventura Avenue in the North Avenue expansion area.

Photo 2 - Farmhouse and ancillary structures fronting Telephone Road in the Serra expansion area.

Farmhouses in the
North Ventura Avenue and
Serra Expansion Areas

Figure 4.5-2

expansion areas either have, or are located adjacent to, farmhouses and other structures that likely meet the minimum age criterion to qualify for the National Register of Historic Places. Figure 4.5-2 shows onsite structures in the North Avenue and Serra areas. Although no structures in any of these areas have been determined to be eligible for the National or California Registers, analysis of the historic significance of the North Avenue, Olivas, and Serra areas would be warranted at such time as any development of the areas is proposed. Potentially significant impacts could be mitigated through implementation of 2005 General Plan Action 9.19.

Scenario 3 – Intensification/Reuse + North Avenue + Olivas

Impacts associated with intensification and reuse would be the same as those identified for Scenario 1. In addition, Scenario 3 would accommodate the possible future development of the North Avenue and Olivas expansion areas. As discussed under Scenario 2, the North Avenue area could include vestiges of the Mission Aqueduct and both expansion areas either have, or are located adjacent to, farmhouses and other buildings that likely meet the minimum age criterion to qualify for the National Register of Historic Places. Although no structures in any of these areas have been determined to be eligible for the National or California Registers, analysis of the historic significance of the North Avenue, Olivas, and Serra areas would be warranted at such time as any development of the areas is proposed. Potentially significant impacts could be mitigated through implementation of 2005 General Plan Action 9.19.

Scenario 4 – Intensification/Reuse + North Avenue + Serra

Impacts associated with intensification and reuse would be the same as those identified for Scenario 1. In addition, Scenario 4 would accommodate the possible future development of the North Avenue and Serra expansion areas. As discussed under Scenario 2, the North Avenue area could include vestiges of the Mission Aqueduct and both expansion areas either have, or are located adjacent to, farmhouses and other buildings that likely meet the minimum age criterion to qualify for the National and California Registers of Historic Places. Although no structures in any of these areas have been determined to be eligible for the National or California Registers, analysis of the historic significance of the North Avenue and Serra areas would be warranted at such time as any development of the areas is proposed. Potentially significant impacts could be mitigated through implementation of 2005 General Plan Action 9.19.

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga

Impacts associated with intensification and reuse would be the same as those identified for Scenario 1. In addition, Scenario 5 would accommodate the possible future development of the North Avenue and Western Cañada Larga expansion areas. A portion of the Mission Aqueduct is located in the vicinity of the Western Cañada Larga expansion area. The North Avenue expansion area could include vestiges of the Mission Aqueduct and includes buildings that likely meet the minimum age criteria to qualify for the National and California Registers of Historic Places. Although no structures have been determined to be eligible for the National or California Registers, analysis of the historic significance of the North Avenue and Western Cañada Larga areas would be warranted at such time as any development of the areas is

proposed. Potentially significant impacts could be mitigated through implementation of 2005 General Plan Action 9.19.

Scenario 6 – Intensification/Reuse + North Avenue + Poinsettia

Impacts associated with intensification and reuse would be the same as those identified for Scenario 1. In addition, Scenario 6 would accommodate the possible future development of the North Avenue and Poinsettia expansion areas. As discussed under Scenario 2, the North Avenue expansion area could include vestiges of the Mission Aqueduct, a designated historic landmark and also includes buildings that likely meet the minimum age criterion to qualify for the National Register of Historic Places. The Poinsettia area does not appear to contain any buildings or other resources that meet eligibility criteria for federal or state register consideration. Potentially significant impacts could be mitigated through implementation of 2005 General Plan Action 9.19.

MITIGATION MEASURES

Implementation of the City of Ventura Historic Preservation Regulations and HD Overlay Zone regulations would reduce impacts to historical resources within designated Historic Districts under Scenarios 1-6. These existing requirements, in combination with the policies included in the 2005 General Plan, would reduce historic resource impacts to a less than significant level. Mitigation is not required.

SIGNIFICANCE AFTER MITIGATION

Implementation of the policies and actions included in the 2005 General Plan, in combination with the Historic Preservation Regulations and HD Overlay Zone regulations, would reduce potential impacts to historic resources to a less than significant level for Scenarios 1-6.

4.6 GEOLOGIC HAZARDS

This section discusses potential seismic and geologic hazards in the Ventura Planning Area.

4.6.1 Setting

a. Seismic Hazards. Ventura lies in a highly active earthquake region of southern California and thus is subject to various seismic and geologic hazards, including ground shaking, surface rupture, and landslides. Each potential geological hazard is described below.

Seismically Induced Ground Shaking. Faults produce comprehensive damage in two ways: ground shaking and surface rupture. Seismically induced ground shaking covers a wide area and is greatly influenced by the distance of the site to the seismic source, soil conditions, and depth to groundwater. Surface rupture is limited to very near the fault. Other hazards associated with seismically induced ground shaking include earthquake-triggered landslides and liquefaction.

Alquist-Priolo (A-P) Earthquake Fault Zones encompass surface traces of active faults that have potential for future surface fault rupture. A-P Fault Zones are designated within 500 feet from a known fault trace. Per the Alquist-Priolo legislation, no structure for human occupancy is permitted on the trace of an active fault. The term "structure for human occupancy" is defined as any structure used or intended for supporting or sheltering any use or occupancy, which is expected to have a human occupancy rate of more than 2,000 person-hours per year. If development is proposed within an A-P Fault Zone, a geologic study must be conducted for developments of four units or more to determine the location of the fault trace. Based on the findings in the geologic study, all structures for human occupancy must be set back a minimum of 50 feet from the fault trace because, unless proven otherwise, an area within 50 feet of an active fault is presumed to be underlain by active traces of the fault.

The U.S. Geological Survey defines active faults as those that have had surface displacement within Holocene time (about the last 11,000 years). Holocene surface displacement can be recognized by the existence of cliffs in alluvium, terraces, offset stream courses, fault troughs and aligned saddles, sag ponds, and the existence of steep mountain fronts. Potentially active faults are those that have had surface displacement during Quaternary time, within the last 1.6 million years. Inactive faults have not had surface displacement within the last 1.6 million years. A fault is a plane or surface in the earth along which failure has occurred and materials on opposite sides have moved relative to one another in response to the accumulation and release of stress. Faults that are known to have moved in recent history (the last 200 years) are considered historically active. Faults that have exhibited signs of activity during the last 11,000 years are considered active, and faults that have exhibited signs of activity within 11,000 years to 2 to 3 million years ago are considered potentially active. Ground surface displacement along a fault, although more limited in area than the ground shaking associated with it, can have disastrous consequences when structures are located across or near the fault zone.

Amounts of movement during an earthquake can range up to tens of feet. Fault displacement may also occur gradually, not as a result of earthquakes, but as the nearly imperceptible

continual movement known as creep. Creep can produce the rupture or bending of buildings, fences, railroads, streets, pipelines, curbs, and other linear structures.

Faults in the Planning Area. Areas on or around active and potentially active fault traces are potentially subject to surface rupture. Major faults in the Planning Area that may produce damaging ground shaking in the City are shown on Figure 4.6-1. They include the Ventura-Foothill, Oak Ridge/McGrath, Red Mountain, and Country Club Faults.

The **Ventura-Foothill Fault** zone is considered active and was designated as an Alquist-Priolo Earthquake Fault Zone by the State Geologist in 1978. This designation requires a geological investigation to determine if a site is threatened by surface displacement from future fault movement prior to the approval of a development permit. The Ventura-Foothill Fault trends east-west across the northern section of the City near the base of the foothills. Properties along this fault trace have the greatest potential for surface rupture in the City.

The **Country Club Fault** is a northwest-southeast trending zone in the eastern portion of the City between Kimball Road and Wells Road to the west and east, and Telegraph and Telephone Roads to the north and south. This fault is considered potentially active but was evaluated in 1976 and not designated as an Alquist-Priolo Special Studies Zone.

The **Oak Ridge** and **McGrath Faults** comprise a zone that trends northeast-southwest and across the southern portion of the City. The fault has thousands of feet of subsurface displacement but is poorly defined at the surface. This fault zone is considered at least potentially active and probably active.

The **Red Mountain Fault Zone** lies north of and adjacent to the City water filtration plant on North Ventura Avenue. This fault is considered active and portions outside the Planning Area are Alquist-Priolo Earthquake Fault Zones.

Effects of Seismicity. Table 4.6-1 shows the estimated maximum earthquake that may occur due to activity along the most significant faults that could affect the Planning Area. It includes active regional faults such as the San Andreas and the Anacapa that are known to produce tremors sufficient in magnitude to affect large areas.

In the event of a strong earthquake (magnitude 6.0 to 7.5) originating in southern Ventura County, or a major earthquake (8.0 magnitude) along the San Andreas Fault, damage to many existing structures could be severe and some loss of life could occur.

b. Landslides. A landslide is the perceptible downslope movement of earth mass. It is part of the continuous, natural, gravity-induced movement of soil, rock and debris. Landsliding can range from downslope creep of soil and rock material to sudden failure of entire hillsides. Landslides include rockfalls, slumps, block glides, mudslides, debris flows, and mud flows. Landsliding or slope instability may be caused by natural factors such as fractured or weak bedrock, heavy rainfall, erosion, earthquake activity, and fire, as well as by human alteration of topography and water content in the soil.

The hillsides north of Poli Street/Foothill Road and east of Ventura Avenue and Cedar Street contain a number of existing landslides and are likely to experience future landslide activity. Although landslides generally occur on slopes 30% or steeper, they may also occur on slopes that are less steep. Slope stability conditions vary locally in the hillside area based on soil and rock type and groundwater depth. Figure 4.6-2 depicts existing areas with landslide morphology in the Planning Area.

Figure 4.6-3 shows the area addressed in the City Hillside Management Program, which ties the amount, distribution, and quality of future development to topographical, geological, and hydrological constraints in an effort to retain natural and scenic character and to minimize the danger to life and property from landsliding, erosion, fire, flooding, and water pollution.

c. Secondary Seismic and Soil Related Hazards. Secondary seismic and soil related hazards include liquefaction, expansive soils, settlement, subsidence, and hydrocompaction. These types of hazards, and the areas within the City and/or expansion areas that have the potential for such failure, are discussed as follows.

Liquefaction. Liquefaction is a temporary, but substantial, loss of shear strength in granular solids, such as sand, silt, and gravel, usually occurring during or after a major earthquake. This occurs when the seismic waves, from an earthquake of sufficient magnitude and duration, shear a soil deposit that has a tendency to decrease in volume. If drainage cannot occur, this reduction in soil volume will increase the pressure exerted on the water contained in

the soil. This process can transform stable granular material into a fluid-like state. The potential for liquefaction to occur is greatest in areas with loose, granular, low-density soil, where the water table is within the upper 40 to 50 feet of the ground surface. Liquefaction can result in slope and/or foundation failure, and also post-liquefaction settlement. Liquefaction hazards are present in large portions of the Planning Area, primarily in coastal areas and along rivers. Areas classified by the State of California as being subject to liquefaction are depicted on Figure 4.6-4.

Expansive Soil. Expansive soils are generally clayey and swell when wetted and shrink when dried. Wetting can occur naturally in a number of ways, (e.g., absorption from the air, rainfall, groundwater fluctuations, lawn watering and broken water or sewer lines). In hillside areas, as expansive soils expand and contract, gradual downslope creep may occur, eventually causing landsliding. Clay soils also retain water and may act as lubricated slippage planes between other soil/rock strata, also producing landslides, often during earthquakes or by unusually moist conditions.

Expansive soils are also often prone to erosion. Foundations of structures placed on expansive soils may rise during the wet season and fall during the succeeding dry season. Zones of highly expansive soils occur in the hillsides and located west of the intersection of Harbor Boulevard and Olivas Park Drive and around the intersection of Victoria Avenue and Olivas Park Drive. Figure 4.6-5 shows expansive soil zones in the Planning Area.

Settlement, Lateral Spreading, Subsidence, and Hydroconsolidation. Extreme settling or ground subsidence may result from post-liquefaction reconsolidation. Ground settlement often occurs differentially because liquefiable deposits and ground water elevations are seldom distributed evenly over broad areas. If the ground surface slopes even gently, liquefaction may lead to lateral spreading or low angle landsliding of soft saturated soils. This can result in the rapid or gradual loss of strength in the foundation materials, so that structures built upon them settle or break up as the foundation soils flow out from beneath them.

Subsidence may be caused by post-liquefaction reconsolidation. It may also be caused by groundwater withdrawal, oil or gas withdrawal, and hydroconsolidation. Groundwater withdrawal subsidence generally occurs in valley areas underlain by alluvium. This type of subsidence results from extraction of a large quantity of water from an unconsolidated aquifer. As water is removed from the aquifer, the total weight of the overburden, which the water had helped support, is placed on the alluvial structure and it is compressed. If fine-grained silts and clays make up portions of the aquifer, the additional load can squeeze the water out of these layers and into the coarser-grained portions of the aquifer. All of this compaction produces a net loss in volume and hence a subsidence of the land surface. A very similar sequence of events leads to subsidence with the oil and gas withdrawals. Hydroconsolidation subsidence can occur in dry, unconsolidated, porous, semi-arid and arid deposits that, when wetted, lose their strength and develop spontaneous settling, slumping, or cracking.

Expansive Soil Areas Figure 4.6-5

City of Ventura

Damage caused by subsidence generally is not immediate or violent in nature. The consolidation of alluvium and settling of the land surface is a process that tends to take many years, except when prompted by seismic shaking or wetting of highly collapsible soils. However, subsidence that results from groundwater or oil and gas withdrawal can be responsible for numerous structural effects. Most seriously affected are long surface infrastructure facilities that are sensitive to slight changes in gradient, such as wells, sewers, and other underground utility lines. Hydroconsolidation is one of the most destructive forms of subsidence because it can cause severe damage to pipelines, roads, buildings, and other structures over shorter time periods. Hydroconsolidation has been known to occur in and around the Ventura College vicinity (Ventura Comprehensive Plan Update Background Report, 2002).

Gradual inundation by surface water is a potentially serious secondary effect of subsidence in the City as both the ocean and the Santa Clara River could flow into depressed areas. In the case of the coastal portion of Ventura, beach erosion may extend inland due to the loss of elevation caused by subsidence. Any area where probable subsidence is on the order of 0.05 feet/year is considered highly susceptible. In Ventura, this category extends along the coast roughly from Pierpont to the intersection of Highway 101 with the Santa Clara River (Ventura Comprehensive Plan Update Background Report, 2002).

Tsunamis and Seiche. Tsunamis are large ocean surges that are generated by submarine landslides, volcanic eruptions, or earthquakes. Tsunamis originate in deep water and have a long wavelength (distance from the crest of one wave to the crest of the succeeding wave), normally over 100 miles, and a very low amplitude (height from crest to trough). As these waves approach shallow water, the speed decreases from a deep water speed of over 600 mph to less than 30 mph, as they move across the beach. The wave energy is transferred from wave speed (velocity) to wave height (amplitude) and waves as high as 100 feet can be formed. Although the arrival time of a wave generated far out at sea can be predicted quite accurately, the intensity of the wave when it reaches the shore is difficult to predict. The duration of a tsunami threat can sometimes last up to ten to twelve hours.

The tsunami threat is mainly confined to immediate beach areas and river channels. See Figure 4.6-6 for the areas within the City of Ventura that would be the most susceptible to a tsunami threat. Beach areas have historically been affected up to a mile or more inland in very flat areas. Tsunamis can also travel considerable distances inland on waterways, particularly those with shallow gradients. The effects of the tsunami are most noticeable on manmade features, but the waves can also change river channels and modify coastal landforms.

A seiche is a wave, or series of waves, set up in an enclosed or partially enclosed body of water by wind, earthquake, or landslide. Earthquakes are the most common cause of most seiches in lakes and bays, either directly or indirectly. Seiches are similar to tsunamis, but the waves are generally smaller and of lower energy. The extent of most seiches is small, usually no more than 10 to 20 feet above water level, and the duration is short, usually only a few minutes. The threat to the City from seiches is considered remote. Only facilities in or very near enclosed bodies of water could be immediately affected.

4.6.2 Impact Analysis

a. Methodology and Significance Thresholds. The General Plan Update would result in potentially significant impacts if development under the General Plan through the year 2025 would result in substantial adverse physical impacts associated with any of the following conditions:

- *Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, strong seismic ground shaking, seismic-related ground failure, including liquefaction, or landslides, or seismic-related inundation from tsunami or seiche*
- *Result on substantial soil erosion or the loss of topsoil*
- *Result in the loss of a unique geologic feature*
- *Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse*
- *Be located on expansive soil, creating substantial risks to life or property*

b. Project Impacts and Mitigation Measures. The matrix on the following page provides a summary comparison of geologic hazard impacts for each of the scenarios under consideration. A discussion of the impacts follows. When appropriate, the differing impacts of the six scenarios are discussed individually. However, for certain issues (landsliding and tsunami), impacts are the same for all scenarios.

The 2005 General Plan includes the following policy and actions relating to minimizing geologic and seismic hazards:

Policy 7B *Minimize risks from geologic and flood hazards.*

Action 7.6 *Adopt updated editions of the California Construction Codes and International Codes as published by the State of California and the International Code Council respectively.*

Action 7.7 *Require project proponents to perform geotechnical evaluations and implement mitigation prior to development of any site:*

- *With slopes greater than 10% or that otherwise have potential for landsliding*
- *Along bluffs, dunes, beaches, or other coastal features*
- *In an Alquist-Priolo earthquake fault zone or within 100 feet of an identified active or potentially active fault*
- *In areas mapped as having moderate or high risk of liquefaction, subsidence, or expansive soils*
- *In areas within 100-year flood zones, in conformance with all Federal Emergency Management Agency regulations.*

Summary Comparison of Impacts for EIR Scenarios

	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
Ground Shaking/ Surface Rupture (Impact GEO-1)	Ventura-Foothill Alquist-Priolo fault zone may affect development within Downtown and Arundell. Compliance with General Plan Action 7.7, CBC, and A-P requirements reduce impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Oak Ridge Fault may affect Olivas and Serra expansion areas. McGrath fault may affect Serra area. Compliance with General Plan policies and CBC requirements reduce impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Oak Ridge Fault may affect Olivas expansion area. Compliance with General Plan policies and CBC requirements reduce impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Oak Ridge and McGrath Faults may affect Serra expansion area. Compliance with General Plan policies and CBC requirements reduce impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Red Mountain Fault may affect Western Cañada Larga expansion area. Compliance with General Plan policies and CBC requirements reduce impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Ventura-Foothill Alquist-Priolo fault zone may also affect Poinsettia expansion area. Compliance with General Plan policies and CBC requirements reduce impacts to Class III, less than significant.
Landslide (Impact GEO-2)	No potential landslide areas in designated growth districts or corridors; landslide potential in limited to small area above Foothill. Landslide impacts are Class III, less than significant.	No landslide potential in North Avenue, Olivas, or Serra expansion areas. Impacts similar to Scenario 1 and Class III, less than significant.	No landslide potential in North Avenue or Olivas expansion areas. Impacts similar to Scenario 1 and Class III, less than significant.	No landslide potential in North Avenue or Serra expansion areas. Impacts similar to Scenario 1 and Class III, less than significant.	No landslide potential in North Avenue expansion area; minor landslide potential in Western Cañada Larga. Impacts similar to Scenario 1 and Class III, less than significant.	No landslide potential in North Avenue or Poinsettia expansion areas. Impacts similar to Scenario 1 and Class III, less than significant.
Liquefaction (Impact GEO-3)	Liquefaction hazards present in the Ventura Avenue, Saticoy, and Harbor Districts. Compliance with General Plan Action 7.7 pertaining to high-risk liquefaction areas reduces impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Portions of North Avenue, Olivas, and Serra expansion areas subject to moderate to high liquefaction risk. Compliance with City policies and CBC reduce impacts	Intensification/reuse impacts similar to Scenario 1. Portions of North Avenue and nearly all of Olivas expansion area subject to moderate to high liquefaction risk. Compliance with City policies and CBC reduce	Intensification/reuse impacts similar to Scenario 1. Portions of North Avenue and Serra expansion areas subject to moderate to high liquefaction risk. Compliance with City policies and CBC reduce impacts to Class III,	Intensification/reuse impacts similar to Scenario 1. Moderate liquefaction risk in portions of North Avenue and Western Cañada Larga expansion areas. Compliance with City policies and CBC reduce	Intensification/reuse impacts similar to Scenario 1. Portions of North Avenue expansion area subject to moderate liquefaction risk; no liquefaction hazard in Poinsettia area. Compliance with City policies and

Summary Comparison of Impacts for EIR Scenarios

	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
		to Class III, less than significant.	impacts to Class III, less than significant.	less than significant.	impacts to Class III, less than significant.	CBC reduce impacts to Class III, less than significant.
Expansive Soil (Impact GEO-4)	High expansive soil hazards present within portions of the North Avenue, North Bank, and Montalvo districts and possible hillside development area above Foothill (Mariano Ranch). Harbor district is susceptible to subsidence. With implementation of CBC and General Plan policies, impacts are Class III, less than significant.	Intensification/reuse hazards similar to Scenario 1. High-risk expansive soils present in portions of Olivas and Serra expansion areas. With implementation of CBC and General Plan policies, impacts are Class III, less than significant.	Intensification/reuse hazards similar to Scenario 1. High-risk expansive soils present in portions of Olivas expansion area. With implementation of CBC and General Plan policies, impacts are Class III, less than significant.	Intensification/reuse hazards similar to Scenario 1. High-risk expansive soils present in portions of Serra expansion area. With implementation of CBC and General Plan policies, impacts are Class III, less than significant.	Intensification/reuse hazards similar to Scenario 1. Western Cañada Larga expansion area contains pockets of highly expansive soil potential along Ventura Avenue and near Cañada Larga Road. With implementation of CBC and General Plan policies, impacts are Class III, less than significant.	Intensification/reuse hazards similar to Scenario 1. No expansive soil conditions in North Avenue or Poinsettia expansion areas. With implementation of CBC and General Plan policies, impacts are Class III, less than significant.
Tsunami (Impact GEO-5)	Development along the coast and near rivers may be susceptible to inundation from a tsunami, particularly the Harbor and parts of Downtown. Continued participation in the SSWWS and SEMS Multihazard Response Plan reduces impacts to Class III, less than significant.	Impacts similar to Scenario 1 and Class III, less than significant.	Impacts similar to Scenario 1 and Class III, less than significant.	Impacts similar to Scenario 1 and Class III, less than significant.	Impacts similar to Scenario 1 and Class III, less than significant.	Impacts similar to Scenario 1 and Class III, less than significant.

Action 7.8 *To the extent feasible, require new critical facilities (hospital, police, fire, and emergency service facilities, and utility "lifeline" facilities) to be located outside of fault and tsunami hazard zones, and require critical facilities within hazard zones to incorporate construction principles that resist damage and facilitate evacuation on short notice.*

Action 7.9 *Maintain and implement the Standardized Emergency Management System (SEMS) Multihazard Functional Response Plan.*

Impact GEO-1	**Future seismic events could produce groundshaking throughout the Planning Area as well as surface rupture in some areas where future development could be accommodated. Groundshaking and surface rupture could damage structures and/or create adverse safety effects. However, compliance with City policies, in combination with the requirements of the CBC and the Alquist-Priolo legislation, would reduce the risk associated with groundshaking and surface rupture to a Class III, *less than significant*, level for all six scenarios.**

The entire Planning Area is subject to severe groundshaking from any of a number of faults in the region. As shown in Table 4.6-1 in the *Setting*, the largest ground-shaking event in Planning Area would occur from a maximum earthquake on the Arroyo Parida-More Ranch, Mid Channel, Santa Ynez (East), and Malibu Coast Faults. The Ventura-Foothill Fault, which generally runs along Foothill Road, is the only fault within the Planning Area that the State of California has officially designated as "active" (i.e., one having ruptured within the last 11,000 years). Other potentially active faults in the Planning Area include the Oak Ridge, McGrath, Red Mountain, and Country Club faults. Surface rupture could potentially occur along these fault lines.

All new development within the City would conform to the California Building Code (CBC) (as amended at the time of permit approval), as required by law. This addresses potential impacts relating to ground shaking. In addition, the 2005 General Plan contains policies that address risks from fault rupture. Action 7.7 requires geotechnical evaluation and mitigation prior to development of any site within an Alquist-Priolo earthquake fault zone or within 100 feet of a potentially active fault. Action 7.8 require new critical facilities (hospital, police, fire, and emergency service facilities, and utility "lifeline" facilities) to be located outside of fault zones.

Scenario 1 – Intensification/Reuse Only

Scenario 1 emphasizes intensification and reuse of properties within the existing developed City and does not include expansion areas. All future development within the Planning Area would potentially be subject to severe groundshaking. Although nothing can ensure that structures do not fail under seismic stress, proper engineering, including compliance with the CBC, can

minimize the risk to life and property, resulting in a less than significant impact to new development from ground shaking.

Several possible development areas are potentially subject to surface rupture due to the presence of active or potentially active faults. The Ventura-Foothill Fault Alquist-Priolo Hazard Zone runs along the Foothill Road corridor, through the northern section of the Downtown district, the western end of the Main Street corridor, and the northern portion of the Loma Vista corridor. Per the Alquist-Priolo legislation, a geologic study would be needed for any development of four or more residential units proposed within this zone to determine the location of the fault trace. All structures for human occupancy would have to be set back a minimum of 50 feet from the fault trace unless it can be shown that no trace is present. Compliance with the Alquist-Priolo legislation requirements would reduce ground-rupture impacts associated with the Ventura-Foothill Fault to a less than significant level.

The Oak Ridge, McGrath, and Country Club faults also cross through the Planning Area. The Oak Ridge fault crosses the Arundell district (including the northern portion of the McGrath property) and the Victoria Avenue corridor. The McGrath fault crosses the North Bank district and the Johnson Drive corridor. Traces of the Country Club fault cross portions of the Saticoy area, including a neighborhood center on Telephone Road. Impacts in these areas are considered potentially significant. However, implementation of the General Plan policies discussed above would reduce ground-rupture impacts to a less than significant level.

Scenario 2 – Intensification/Reuse + North Avenue + Olivas + Serra

Impacts associated with intensification and reuse would be the same as those identified for Scenario 1. In addition, Scenario 2 would accommodate the possible future development of the North Avenue, Olivas, and Serra expansion areas. The potentially active Oak Ridge Fault, with an estimated maximum earthquake of magnitude of 7.2, bisects the Olivas expansion area and is in the northern section of the Serra expansion area. The potentially active McGrath Fault is located along the southern boundary of the Serra expansion area, near the Santa Clara River. Impacts in these areas are considered potentially significant. However, General Plan policies that address compliance with the CBC and that require fault studies for development projects on or adjacent to active and potentially active faults would reduce risk from ground shaking and surface rupture to a less than significant level.

Scenario 3 – Intensification/Reuse + North Avenue + Olivas

Impacts associated with intensification and reuse would be the same as those identified for Scenario 1. In addition, Scenario 3 would accommodate the possible future development of the North Avenue and Olivas expansion areas. As mentioned under Scenario 2, the potentially active Oak Ridge Fault bisects the Olivas expansion area and is in the northern section of the Serra expansion area. Impacts in this area are considered potentially significant. However, General Plan policies that address compliance with the CBC and that require fault studies for development projects on or adjacent to active and potentially active faults would reduce risk from ground shaking and surface rupture to a less than significant level.

Scenario 4 – Intensification/Reuse + North Avenue + Serra

Impacts associated with intensification and reuse would be the same as those identified for Scenario 1. Scenario 4 would also accommodate the possible future development of the North Avenue and Serra expansion areas. The potentially active Oak Ridge Fault crosses the northern section of the Serra expansion area. In addition, the potentially active McGrath Fault is located along the southern boundary of the Serra expansion area. Impacts in these areas are considered potentially significant. However, General Plan policies that address compliance with the CBC and that require fault studies for development projects on or adjacent to active and potentially active faults would reduce risk from ground shaking and surface rupture to a less than significant level.

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga

Impacts associated with intensification and reuse would be the same as those identified for Scenario 1. Scenario 5 would also accommodate the possible future development of the North Avenue and Western Cañada Larga expansion areas. The Red Mountain Fault, which is an active fault with an estimated maximum credible earthquake of 7.3, crosses through the northern portion of the Western Cañada Larga expansion area. Impacts in this area are considered potentially significant. However, General Plan policies that address compliance with the CBC and that require fault studies for development projects on or adjacent to active and potentially active faults would reduce risk from ground shaking and surface rupture to a less than significant level.

Scenario 6 – Intensification/Reuse + North Avenue + Poinsettia

Impacts associated with intensification and reuse would be the same as those identified for Scenario 1. Scenario 5 would also accommodate the possible future development of the North Avenue and Poinsettia expansion areas. The active Ventura-Foothill Fault runs through the Poinsettia expansion area, which poses an additional ground-shaking hazard to future development. Impacts associated with this fault are considered potentially significant. However, General Plan policies that address compliance with the CBC and that require fault studies for development projects on or adjacent to active and potentially active faults would reduce risk from ground shaking and surface rupture to a less than significant level.

MITIGATION MEASURES

Compliance with the California Building Code and General Plan Action 7.7 would reduce impacts to a less than significant level. No mitigation measures are required in addition to proposed General Plan Update policies.

SIGNIFICANCE AFTER MITIGATION

Implementation of State requirements and proposed General Plan policies on all new development would reduce impacts associated with ground shaking and fault rupture to a less than significant level for any of the six land use scenarios.

Impact GEO-2	**The Planning Area contains several steep slopes that present a potential slope stability hazards. However, none of the General Plan land use scenarios encourage substantial new development in areas of high landslide risk. In addition, General Plan actions require geotechnical analysis and case-by-case mitigation for any development in an area with a high potential for landslides. Therefore, impacts due to landslide risk are considered Class III, *less than significant,* for all scenarios.**

The Planning Area contains several steep slopes, which present a moderate slope stability hazard, as seen in Figure 4.6-2. Slope instability may result in landslides, mudslides, or debris flows that can cause substantial damage to structures, roadways, and other improvements as well as to deflect and block drainage channels, causing further damage and erosion. Soil slumping can damage or destroy structures and lead to erosion problems.

The hillside areas located north of Poli Street/ Foothill Road and east of Ventura Avenue and Cedar Street contain existing landslides and are likely to experience future landslide activity. The major concentration of existing landslides occurs within the northern portions of the Hall and Barlow Canyon drainage areas. Other landslide areas are scattered throughout the hillside areas and generally occur on hillsides with slopes of 30% or greater, although slides may occur in areas less steep. The areas within the City Hillside Management Program, as shown on Figure 4.6-3, would require detailed studies that would apply to any potential future development on local hillside areas. The 2005 General Plan contains a policy that would reduce the risk from landslides. Action 7.7 requires geotechnical analysis and mitigation prior to development of any site within an area with slopes greater than 10% or with the potential for landsliding.

The majority of potential landslide areas are in the hills outside the City limits, but within the Planning Area. It is anticipated that the hillside areas outside the City limits would be removed from the City's Sphere of Influence under any of the six land use scenarios, suggesting that the City does not intend to extend services to those areas. In practical terms, this means that these areas likely will not be developed. Though the Western Cañada Larga area includes steeper topography than the other expansion areas, none of the five expansion areas includes any land with high landslide potential.

Limited additional hillside development could occur in areas within the City limits, notably within the upper portion of the Downtown District, north of Poli Street, known as Mariano Ranch. However, these areas are within the Hillside Management Program Area. Any development proposed within that area would require a detailed geologic study prior to development. Implementation of existing requirements for any new development in the hillsides would reduce landslide impacts to a less than significant level.

MITIGATION MEASURES

Compliance with applicable General Plan policies/actions and the City Hillside Management Program would reduce potential impacts from development in hillside areas to a less than significant level. No mitigation would be required.

SIGNIFICANCE AFTER MITIGATION

Implementation of State requirements and proposed General Plan policies on all new development would reduce impacts associated with landsliding to a less than significant level for any of the six land use scenarios.

Impact GEO-3 **Future seismic events could result in liquefaction of soils in portions of the Planning Area. Development in certain areas within the City could be subject to liquefaction hazards under any of the 2005 General Plan land use scenarios. However, compliance with City General Plan policies would reduce potential impacts to Class III, *less than significant*, for all six scenarios.**

Liquefaction, a process in which soils liquefy during ground shaking, is of greatest concern in areas with high water tables. As shown on Figure 4.6-4, areas along and adjacent to the Ventura and Santa Clara Rivers, barrancas, and along the coast are subject to liquefaction hazards. Intensification/reuse areas with relatively high liquefaction potential include much of West Ventura Avenue (Ventura Avenue corridor and the North Avenue and Upper North Avenue districts), Downtown, Midtown (Main Street and Thompson Boulevard corridors), Saticoy, the Harbor, the North Bank and Montalvo districts, and the Johnson Drive corridor. Much of the southern portion of the Serra expansion area also has a high water table and relatively high potential for liquefaction. The southwest area of the Olivas potential expansion area is also within a high water table area while the remainder of the site is in a moderate water table area. Although engineering solutions (most commonly, densification of site soils) typically can adequately reduce liquefaction hazards to acceptable levels, liquefaction hazards would warrant further investigation for development proposals in areas with high water tables.

The 2005 General Plan contains an action that would reduce the risks from liquefaction. Action 7.7 requires a geotechnical analysis and mitigation prior to development of any site within an area mapped as having high or moderate risk for liquefaction.

Scenario 1 – Intensification/Reuse Only

This land use scenario emphasizes intensification and reuse of properties within the existing developed City and does not include expansion areas. Liquefaction hazards are present primarily in areas adjacent to the Ventura and Santa Clara Rivers. All of Downtown, Midtown, and Ventura Harbor are in an area of liquefaction risk, as is most of West Ventura, including the North Avenue and Upper North Avenue districts and the Ventura Avenue corridor. Portions of the Arundell, North Bank, Montalvo, and Saticoy districts and the Johnson Drive corridor are

also at liquefaction risk. New development in areas at liquefaction risk would be subject to City policy requirements for geotechnical evaluation. Provided that any pending development complies with the requirements of General Plan Action 7.7, impacts would be reduced to a less than significant level.

Scenario 2 – Intensification/Reuse + North Avenue + Olivas + Serra

Liquefaction impacts associated with intensification and reuse would be the same as those identified for Scenario 1. In addition, Scenario 2 would accommodate the possible future development of the North Avenue, Olivas, and Serra expansion areas. The southwest corner of the North Avenue area, the northwestern portion of the Olivas area, and the southeastern portion of the Serra area are within the liquefaction hazard zone. New development within the liquefaction hazard zone would be subject to Action 7.7, which requires a geotechnical analysis and mitigation. Compliance with this action would reduce impacts to a less than significant level.

Scenario 3 – Intensification/Reuse + North Avenue + Olivas

Liquefaction impacts associated with intensification and reuse would be the same as those identified for Scenario 1. In addition, Scenario 3 would accommodate the possible future development of the North Avenue and Olivas expansion areas. As discussed under Scenario 2, the southwest corner of the North Avenue area and the northwestern portion of the Olivas area are within the liquefaction hazard zone. New development within the liquefaction hazard zone would be subject to Action 7.7, which requires a geotechnical analysis and mitigation. Compliance with this action would reduce impacts to a less than significant level.

Scenario 4 – Intensification/Reuse + North Avenue + Serra

Liquefaction impacts associated with intensification and reuse would be the same as those identified for Scenario 1. In addition, Scenario 4 would accommodate the possible future development of the North Avenue and Serra expansion areas. As discussed under Scenario 2, the southwest corner of the North Avenue area and the southeastern portion of the Serra area are within the liquefaction hazard zone. New development within the liquefaction hazard zone would be subject to Action 7.7, which requires a geotechnical analysis and mitigation. Compliance with this action would reduce impacts to a less than significant level.

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga

Liquefaction impacts associated with intensification and reuse would be the same as those identified for Scenario 1. In addition, Scenario 5 would accommodate the possible future development of the North Avenue and Western Cañada Larga expansion areas. The southwest corner of the North Avenue area and the western portion of the Western Cañada Larga area are within the liquefaction hazard zone. New development within the liquefaction hazard zone would be subject to Action 7.7, which requires a geotechnical analysis and mitigation. Compliance with this action would reduce impacts to a less than significant level.

Scenario 6 – Intensification/Reuse + North Avenue + Poinsettia

Liquefaction impacts associated with intensification and reuse would be the same as those identified for Scenario 1. In addition, Scenario 6 would accommodate the possible future development of the North Avenue and Poinsettia expansion areas. The southwest corner of the North Avenue area and the eastern edge of the Poinsettia area are within the liquefaction hazard zone. New development within the liquefaction hazard zone would be subject to Action 7.7, which requires a geotechnical analysis and mitigation. Compliance with this action would reduce impacts to a less than significant level.

MITIGATION MEASURES

Compliance with the California Building Code and implementation of General Plan Action 7.7 would reduce impacts due to liquefaction risk to a less than significant level. Additional mitigation is not required.

SIGNIFICANCE AFTER MITIGATION

Implementation of State requirements and proposed General Plan policies/actions on all new development would reduce impacts associated with ground shaking and fault rupture to a less than significant level for any of the six land use scenarios.

Impact GEO-4	**Expansive soil or other soil conditions leading to subsidence could result in foundation and building distress problems and cracking of concrete slabs. Areas that could accommodate development could be subject to subsidence hazards under any of the six land use scenarios. However, compliance with 2005 General Plan policies would reduce potential impacts to Class III, *less than significant,* for all six scenarios.**

Expansive soil or other conditions that could lead to subsidence or settlement may result in loss of strength in foundation materials, such that structures built upon them gradually settle or break up. Expansive soils may contribute to downslope creep, landslides, and erosion. The seasonal expansion and contraction of soils may cause foundations, walls, and ceilings to crack and various structural portions of building to warp and distort. Expansive soils are generally clayey and swell when wetted and shrink when dried. Several zones of highly expansive soils are in the hillsides of the Planning Area. Two other significant areas of high shrink-swell potential are located west of the intersection of Harbor Boulevard and Olivas Park Drive and near the Victoria Avenue/Highway 101 intersection. Figure 4.6-5 depicts high, moderate, and low expansive soil zones in the Planning Area.

Subsidence may be caused by post-liquefaction reconsolidation, groundwater/oil/gas withdrawal, or hydroconsolidation. Groundwater withdrawal subsidence generally occurs in areas underlain by alluvium deposits. Subsidence issues generally exist along the coast and adjacent to the Santa Clara River. If extraction of fluids from this general area is increased, subsidence rates could possibly increase. Damage caused by subsidence occurs over a long

period of time except when prompted by seismic shaking or wetting of highly collapsible soils. The most severe subsidence zone extends roughly from the Pierpont area on the west to the intersection of U.S. 101 with the Santa Clara River. Probable subsidence in this zone is on the order of 0.05 feet/year (Ventura Comprehensive Plan Update Background Report, 2002). Gradual inundation of depressed areas by the ocean and the Santa Clara River could occur only as a secondary effect of subsidence, possibly the result of flooding.
Detailed geotechnical studies at a site-specific level would be necessary prior to development to evaluate the potential for geologic and soil hazards, including expansive soils, for these conditions to be minimized or corrected during construction. Large-scale settlement problems would not be significant provided that adequate soil and foundation studies are performed prior to construction and that CBC guidelines and appropriate site-specific mitigation are followed.

Scenario 1 – Intensification/Reuse Only.

Scenario 1 emphasizes intensification and reuse of properties within the existing developed City and does not include expansion areas. Most of the Planning Area has moderately expansive soils. There are several pockets of high-risk expansive soil within the North Avenue and Upper North Avenue, North Bank, and Montalvo districts, as well as in a hillside area known as Mariano Ranch where limited hillside development could occur. The Harbor growth district is also highly susceptible to subsidence hazards. The risk to development in these areas would be reduced to a less than significant level through compliance with CBC standards and implementation of General Plan Action 7.7, which requires geotechnical analysis and mitigation for developments within high-risk expansive soil areas or other areas prone to subsidence.

Scenario 2 – Intensification/Reuse + North Avenue + Olivas + Serra

Impacts associated with intensification and reuse would be the same as those identified for Scenario 1. In addition, Scenario 2 would accommodate the possible future development of the North Avenue, Olivas, and Serra expansion areas. High-risk expansive soils are present in portions of the Serra and Olivas expansion areas. In addition, any development within the Olivas expansion area may be susceptible to subsidence hazards. The risk to property in these areas would be reduce to a less than significant level through compliance with CBC standards and implementation of General Plan Action 7.7, which requires geotechnical analysis and mitigation for developments within high-risk expansive soil areas or other areas prone to subsidence.

Scenario 3 – Intensification/Reuse + North Avenue+ Olivas

Impacts associated with intensification and reuse would be the same as those identified for Scenario 1. Scenario 3 would also accommodate the possible future development of the North Avenue and Olivas expansion areas. High-risk expansive soils are present in portions of the Olivas area. In addition, any development within the Olivas expansion area may be susceptible to subsidence hazards. The risk to property in these areas would be reduced to a less than significant level through compliance with CBC standards and implementation of General Plan Action 7.7, which requires geotechnical analysis and mitigation for developments within high-risk expansive soil areas or other areas prone to subsidence.

Scenario 4 – Intensification/Reuse + North Avenue+ Serra

Impacts associated with intensification and reuse would be the same as those identified for Scenario 1. Scenario 4 would also accommodate the possible future development of the North Avenue and Serra expansion areas. High-risk expansive soils are present in portions of the Serra area. The risk to property in these areas would be reduced to a less than significant level through compliance with CBC standards and implementation of General Plan Action 7.7, which requires geotechnical analysis and mitigation for developments within high-risk expansive soil areas or other areas prone to subsidence.

Scenario 5 – Intensification/Reuse + North Avenue+ Western Cañada Larga

Impacts associated with intensification and reuse would be the same as those identified for Scenario 1. Scenario 5 would also accommodate the possible future development of the North Avenue and Western Cañada Larga expansion areas. The North Avenue expansion area contains low and moderate expansive soil potential, but no areas of high risk. The Western Cañada Larga expansion area contains pockets of high expansive soil potential along Ventura Avenue and near Cañada Larga Road. The risk to property in these areas would be reduced to a less than significant level through compliance with CBC standards and implementation of General Plan Action 7.7, which requires geotechnical analysis and mitigation for developments within high-risk expansive soil areas or other areas prone to subsidence.

Scenario 6 – Intensification/Reuse + North Avenue+ Poinsettia

Impacts associated with intensification and reuse would be the same as those identified for Scenario 1. Scenario 6 would also accommodate the possible future development of the North Avenue and Poinsettia expansion areas. The North Avenue expansion area contains moderate expansive soil potential, but no areas of high risk. The Poinsettia area has low to moderate expansive soil hazards. The risk to property is considered potentially significant, but can be minimized through compliance with CBC standards and the requirement that the recommendations of detailed soil and foundation studies for projects within high-risk expansive soil areas are implemented.

MITIGATION MEASURES

Compliance with the California Building Code and implementation of General Plan Action 7.7 would reduce impacts due to expansive soils to a less than significant level. Additional mitigation is not required.

SIGNIFICANCE AFTER MITIGATION

Impacts related to expansive soils or soils prone to settlement would be reduced to a less than significant level for any of the six land use scenarios with implementation of CBC requirements and proposed General Plan policies.

Impact GEO-5	**Development along the coast and near rivers may be susceptible to inundation from tsunamis. However, provided that the City continues its participation in the Seismic Sea Wave Warning System and the SEMS Multihazard Functional Response Plan, impacts would be Class III, *less than significant*, for all six scenarios.**

All of the coastal areas in the City, including areas near the mouth of the Ventura River, are susceptible to tsunamis. A tsunami from the north Pacific could move down the Santa Barbara Channel and affect the northerly coastal areas. A tsunami originating from the South Pacific or from South America could strike the coastal areas from the south to southwest. A Santa Barbara Channel tsunami could affect much of the mainland coastal areas, because the Channel Islands would not provide any protection for the mainland (City of Ventura, 1989).

The worst recorded tsunami to hit California was in 1812. An earthquake occurred in the Santa Barbara Channel, and the resulting waves are reported by some sources to have been up to 15 feet above sea level in Ventura (SEMS Multihazard Functional Response Plan, 1999). The historic record indicates that there is a small probability of occurrence of a major tsunami in Ventura County. The recurrence interval for large tsunamis in California is approximately 100 years (USGS, 1985). This historical record is not extensive enough to develop recurrence predictions for the City.

The Seismic Sea Wave Warning System (SSWWS), directed by the U.S. Coast and Geodetic Survey, is the primary source of tsunami detection. This system has been in operation since 1948. The SSWWS and other cooperating countries operate a system of seismographs and tide stations. The purpose of this system is to provide early warning to low lying areas of the approach of tsunamis. In addition to the SSWWS, the Ventura County Sheriff's department has the responsibility to alert coastal areas, and work with local police departments should an evacuation be necessary.

The Ventura Fire Department has devised and maintains a comprehensive Standardized Emergency Management System (SEMS) Multihazard Functional Response Plan (1999) that addresses the City's planned response to extraordinary emergency situations associated with natural disasters, including tsunamis. The plan provides operational concepts, identifies sources of outside support that would be provided through mutual aid agreements, State and Federal agencies, and the private sector.

All of the coastal areas in Ventura County are susceptible to tsunamis. Within the City of Ventura, the most threatened areas would be along the coast and rivers, as shown in Figure 4.6-6. In particular, the Harbor and parts of the Downtown district are within the Tsunami Hazard Zone. New development in these areas would be subject to tsunami-related damage.

Due to its proximity to the coast and relatively low elevation, the Olivas expansion area would appear to be the most susceptible to tsunami hazards among the five potential expansion areas. However, none of the potential expansion areas under consideration are within the designated

Tsunami Hazard Zone. Therefore, each scenario would essentially be equally susceptible to tsunami inundation. General Plan Action 7.8 would require new critical facilities (hospital, police, fire, and emergency service facilities, and utility "lifeline" facilities) to be located outside of tsunami hazard zones. Action 7.9 requires the City to continue to maintain and implement the SEMS Multihazard Functional Response Plan. In addition, it is anticipated that the City will continues its participation in the Seismic Sea Wave Warning System. Thus, area residents should have ample warning about pending tsunamis and impacts related to tsunami risk would be less than significant.

MITIGATION MEASURES

Continuing participation in the Seismic Sea Wave Warning System and maintenance of the SEMS Multihazard Functional Response Plan would reduce impacts related to tsunami risk to less than significant. No additional mitigation would be required.

SIGNIFICANCE AFTER MITIGATION

Impacts would be less than significant with continued implementation of current warning programs, though the emphasis on development in coastal areas such as the Harbor and Downtown would place additional buildings and infrastructure at risk of tsunami-related damage.

4.7 HAZARDS and HAZARDOUS MATERIALS

This section analyzes the impacts associated with exposure to hazards and hazardous materials. Impacts relating to hazardous materials use, transportation, and development on brownfield sites are addressed. Potential hazards associated with wildland fires are discussed in Section 4.11, *Public Services*.

4.7.1 Setting

a. Regulatory Setting. The federal government defines a hazardous material as a substance that is toxic, flammable/ignitable, reactive, or corrosive. Extremely hazardous materials are substances that show high or chronic toxicity, carcinogenic, bioaccumulative properties, persistence in the environment, or that are water reactive.

Use, Storage, and Handling of Hazardous Materials. Numerous federal, state, and local regulations regarding use, storage, transportation, handling, processing and disposal of hazardous materials and waste have been adopted since the passage of the federal Resource Conservation and Recovery Act (RCRA) of 1976. The goal of RCRA is to assure adequate tracking of hazardous materials from generation to proper disposal. California Fire Codes (CFC) Articles 79, 80 et al., which augment RCRA, are the primary regulatory guidelines used by the City to govern the storage and use of hazardous materials. The CFC also serves as the principal enforcement document from which corresponding violations are written.

Pursuant to SB 1082 (1993), the State of California has adopted regulations to consolidate six hazardous materials management programs under a single, local agency, known as the Certified Unified Program Agency (CUPA). In 1997, the Ventura County Hazardous Materials Program was approved by the California Environmental Protection Agency (EPA) to be a Certified Unified Program Agency (CUPA). The CUPA provides regulatory oversight for the following program elements:

- *Hazardous Materials Reporting and Response Planning Program*
- *Uniform Fire Code Business Plan*
- *Hazardous Waste Generator Program*
- *Accidental Release Prevention*
- *Underground Storage Tanks*
- *Aboveground Storage Tanks*

In addition to conducting annual facility inspections, the Hazardous Materials Program is involved with hazardous materials emergency response, investigation of the illegal disposal of hazardous waste, public complaints, and stormwater illicit discharge inspections. The City Fire Department has been designated as the administering agency for CUPA. Accordingly, the City Fire Department compiles and maintains a list of businesses that meet the threshold criteria for use, storage, or disposal of hazardous materials, compressed gases and/or hazardous waste. Threshold quantities are defined as hazardous materials equal to or exceeding 55 gallons or 500 pounds, 200 cubic feet of compressed gas, and/or hazardous waste in any amount.

Soil Contamination. Regulatory agencies such as the United States Environmental Protection Agency (EPA) set forth guidelines that list at what point concentrations of certain contaminants pose a risk to human health. The EPA combines current toxicity values of contaminants with exposure factors to estimate what the maximum concentration of a contaminant can be in environmental media before it is a risk to human health. These concentrations set forth by the EPA are termed Preliminary Remediation Goals (PRGs) for various pollutants in soil, air, and tap water (USEPA Region IX, Preliminary Remediation Goals Tables, 2002). PRG concentrations can be used to screen pollutants in environmental media, trigger further investigation, and provide an initial cleanup goal.

The Los Angeles Regional Water Quality Control Board (RWQCB) has developed an interim guidance document that contains numerical site screening levels to determine the need for remediation of gasoline and volatile organic compound (VOC) contaminated soils (Los Angeles RWQCB, 1996). The guidance document has been used to determine when a site may require remedial action or to establish an acceptable clean up standard for a particular constituent.

Groundwater Contamination. Both the EPA and the California Department of Health Services (DHS) regulate the concentration of various chemicals in drinking water. The DHS thresholds are generally stricter than the EPA thresholds. Primary maximum contaminant levels (MCLs) are established for a number of chemical and radioactive contaminants (Title 22, Division 4, Chapter 15 California Code of Regulations). MCLs are often used by regulatory agencies to determine cleanup standards when groundwater is affected with contaminants.

Large-Scale Hazardous Material Upset. The Ventura Fire Department has devised and maintains a comprehensive Standardized Emergency Management System (SEMS) Multihazard Functional Response Plan (1999) that addresses the city's planned response to extraordinary emergency situations associated with natural disasters, technological incidents, or national security emergencies, including incidents involving major hazardous material upset. The plan provides operational concepts, identifies sources of outside support that would be provided through mutual aid agreements, State and Federal agencies, and the private sector.

Hazardous material incidents differ from other emergency response situations because of the wide diversity of causative factors and the pervasiveness of the potential threat. Circumstances such as the prevailing wind and geographic features in the vicinity of emergency incidents are relevant factors that may greatly increase the hazardous chemical dangers. Incidents may occur at fixed facilities where, most likely, the occupants have filed site-specific emergency response contingency and evacuation plans. However, incidents may also occur at any place along any land, water, or air transportation routes, and may occur in unpredictable areas, relatively inaccessible by ground transportation.

The Ventura City Fire Department responds to all hazardous materials calls within the City of Ventura. The city maintains a hazardous materials (HAZMAT) team at Fire Station 6, located at 10979 Darling Road. The HAZMAT team is specially trained and equipped to respond to emergencies involving potentially hazardous materials. As partners to a region wide Hazardous Materials Response Plan, additional fire protection equipment and staffing specifically designed for hazardous materials incidents is available from the City of Oxnard, the

Ventura County Fire Protection District and the U.S. Naval Construction Battalion Center in Port Hueneme.

b. Hazardous Materials. Improper use, storage, transport, and disposal of hazardous materials and waste may result in harm to humans, surface and groundwater degradation, air pollution, fire, and explosion. The risk of hazardous material exposure can come from a range of sources; these may include household uses, agricultural/commercial/industrial uses, transportation of hazardous materials, and abandoned industrial sites known as brownfields.

Household Products. By far the most common hazardous materials are those found or used in the home. Waste oil is a common hazardous material that is often improperly disposed of and can contaminate surface water through runoff. Other household hazardous wastes (used paint, pesticides, cleaning products and other chemicals) are common and often improperly stored in garages and homes throughout the community. Because of their prevalence and proximity to residents, household products constitute the most pervasive health hazard facing residents of the community.

Commercial and Industrial Uses. The City and County of Ventura (per CUPA) regulate several hundred facilities in the planning area that meet specified threshold quantities for hazardous materials. Under Chapter 6.95, Section 25503 of the California Health and Safety Code, Business Plans are required from California businesses that handle a hazardous material. As part of the Business Plan, emergency response plans must be developed and training sessions provided to employees. Businesses are routinely inspected by the Ventura County Environmental Health Division to ensure that handling, storage, and waste disposal practices conform to appropriate laws and regulations.

Larger users of hazardous materials include commercial manufacturing, petroleum exploration, industrial fabrication, biotechnology, and agribusinesses. These businesses are confined primarily to the Ventura Avenue area from Thompson Avenue to Stanley Avenue, the North Avenue area, and the Arundell district. Potentially hazardous materials used by businesses in these areas include petroleum based fuels, chlorinated solvents, acrylic coatings, corrosive or caustic additives, and to a lesser extent, chemical fertilizers, pesticides and herbicides.

Agricultural Pesticide Use. Scattered agricultural operations are located throughout the East Ventura and portions of West Ventura. Orchards in particular are often sprayed with various pesticides, which can contaminate the soils. In general, pesticide use can result in health impacts to those who come in contact with such chemicals and are unprotected. The County of Ventura requires that pesticides be applied so as to prevent substantial pesticide drift onto nearby properties. The Ventura County Agricultural Commissioner's office retains a registry of pesticides used on individual agricultural parcels in the County. Please refer to Section 4.1, *Agriculture*, for further discussion of potential conflicts between agricultural and potential new development.

Major Rail and Truck Transportation Corridors. The most likely cause of a major hazardous materials (HAZMAT) incident is a transportation accident involving a vehicle carrying hazardous materials. Historically, HAZMAT incidents frequently occur on the heaviest traveled streets, freeway interchanges, and railroad crossings. Although the odds of occurrence are less for a railroad HAZMAT incident, the severity is potentially greater because of the

numerous rail tanker cars involved and the potential for chemicals and explosive substances being mixed together. Hazardous materials are also transported by vessel. Vessels transporting hazardous materials are confined to the ocean and harbor areas of the city.

The main arteries in the City utilized by transporters of hazardous materials and waste are State Route 33, U.S. 101, State Route 126, and the Union Pacific Railroad (see Figure 4.7-1). The City does not currently restrict travel ways for hazardous materials transportation. Trains and trucks commonly carry a variety of hazardous materials, including gasoline and various crude oil derivatives, and other chemicals known to cause human health problems. When properly contained, these materials present no hazard to the community. But in the event of an accident or derailment, such materials may be released, either in liquid or gas form. In the case of some chemicals (such as chlorine), highly toxic fumes may be carried far from the accident site.

Pipelines. Underground pipelines are located throughout the City. Natural gas, crude oil, and refined petroleum products are transported in these lines. The failure of these pipelines can expose the adjacent population and improvements to the dangers of potential fire and explosion from the ignition of materials release. Pipelines are inspected on a regular basis per state and federal requirements, and normally present no hazard to the community.

Brownfield Sites. "Brownfield" sites are areas with actual or perceived contamination and that may have potential for redevelopment or reuse. Brownfields are often former industrial facilities that were once the source of jobs and economic benefits to the community, but lie abandoned due to fears about contamination and potential liability. Table 4.7-1 lists potential contaminants that may exist in brownfield areas. The United States Environmental Protection Agency (EPA) has selected the Ventura Westside neighborhood as part of a two-year Brownfield Assessment Demonstration Pilot Program (see Figure 4.7-2). The program calls for environmental assessments on former industrial properties to leverage their cleanup and redevelopment, make the sites more attractive to prospective developers, and generate employment and tax revenue. A 2001 study by West Coast Environmental Engineering identified properties potentially eligible for funding for site assessments (if the property owner is willing to participate in the pilot program.

The EPA granted the City $200,000 in 1999 for the pilot program that can be used for Phase I and Phase II site assessments, but may not be used for remediation. It is difficult to locate property owners interested in participating in the program, possibly due to concerns regarding liability for site remediation under the federal Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).

CERCLA was amended in January of 2002 with passage of the Small Business Liability Relief and Brownfields Revitalization Act. This Act provides some relief for small businesses from liability under CERCLA. It authorizes $200 million per fiscal year through 2006 to provide financial assistance for brownfield revitalization. While some exclusions exist (such as for facilities at which there has been a release of PCBs), there are essentially four distinct funding opportunities available to the City under this Act beginning in fall 2002: (1) up to $350,000 for site characterization; (2) $200,000 for remediation of a brownfield site; (3) $200,000 for environmental employment and training for residents impacted by brownfields; and (4) $1,000,000 in revolving loan funds for remediation.

Areas Within Brownfield Assessment Demonstration Pilot Program Figure 4.7-2

City of Ventura

Table 4.7-1
Potential Environmental Contaminants by Industry

Industry Type	Typical Operations	Potential Contaminants
Oilfield and Oilfield Service	Oil production and handling, oil tool, welding, and machine shops, vacuum truck services, equipment storage yards, waste disposal, wireline, perforation	Toxic metals, petroleum solvents, chlorinated solvents, semivolatile hydrocarbons, polychlorinated biphenyls (PCBs)
Scrap Metal and Salvage Yards	Metal recycling, equipment scrapping, waste disposal, auto salvage, vehicle scrapping	Toxic metals, petroleum solvents, chlorinated solvents, semivolatile hydrocarbons, PCBs
Chemical Facilities	Chemical supply, refineries, natural gas processing/compression plants, bulk fuel storage/sales	Toxic metals, petroleum solvents, chlorinated solvents, semivolatile hydrocarbons, caustics and acids, PCBs
Quarry Sites	Rock quarries, mining, processing, mixing	Toxic metals, petroleum solvents, chlorinated solvents, semivolatile hydrocarbons, explosive charges

Source: West Coast Environmental and Engineering, 2001.

Although the funding already granted to the City is restricted to sites not contaminated by petroleum, it can still be used for Phase I (and possibly part of Phase II) activities, as it may not be readily apparent that petroleum contamination exists at a particular site, and commingling of substances may allow for the funding to be utilized at certain sites. The 2002 legislation allows greater flexibility in the use of future funds. Other potential federal funding sources include:

- *The Department of Housing and Urban Development Empowerment Zone/Enterprise Community program*
- *The Department of Transportation Livable Communities program*
- *The Department of Commerce Economic Development Administration*
- *Various Department of the Interior programs*
- *The State Department of Toxic Substances Control Cleanup Loans and Environmental Assistance to Neighborhoods (CLEAN) Brownfield Loan Program*

The CLEAN Program (enacted in 2000) establishes financial incentives to encourage property owners, developers, community groups and local governments to redevelop abandoned and underutilized urban properties in California. Initially $85 million was available through this program; however, only $6 million is currently available in revolving loan funds. Some restrictions on the use of this funding exist (e.g., the property may not be previously owned by the government).

4.7.2 Impact Analysis

a. Methodology and Thresholds of Significance. For the purpose of this analysis, a significant impact would occur if the project would:

- *Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials*
- *Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment*
- *Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances or waste within one-quarter mile of an existing or proposed school*
- *Be located on a site included on a list of hazardous material sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment*
- *Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan*

b. Project Impacts and Mitigation Measures. The matrix on the following page provides a summary comparison of hazardous material impacts for each of the scenarios under consideration. A discussion of the impacts follows.

The 2005 General Plan includes the following policy and actions intended to minimize human exposure to hazardous substances:

Policy 7D *Minimize exposure to air pollution and hazardous substances.*

Action 7.20 *Require air pollution point sources to be located safe distances from sensitive sites such as homes and schools.*

Action 7.24 *Only approve projects involving sensitive land uses (such as residences, schools, daycare centers, playgrounds, medical facilities) within or adjacent to industrially designated areas if an analysis provided by the proponent demonstrates that the health risk will not be significant.*

Action 7.25 *Adopt new development code provisions that ensure uses in mixed-use projects do not pose significant health effects.*

Action 7.26 *Seek funding for cleanup of sites within the Brownfield Assessment Demonstration Pilot Program and other contaminated areas in West Ventura.*

Action 7.27 *Require proponents of projects on or immediately adjacent to lands in industrial, commercial, or agricultural use to perform soil and groundwater contamination assessments in accordance with American Society for Testing and Materials standards, and if contamination exceeds regulatory action levels, require the proponent to undertake remediation procedures prior to grading and development under the*

Summary Comparison of Impacts for EIR Scenarios

	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
Hazardous Material Use and Storage (Impact HAZ-1)	The Ventura Avenue corridor, the western portion of the Downtown district, the Arundell district, and the northwest portion of the North Bank districts contain relatively high concentrations of hazardous material users. Compliance with General Plan policies and actions reduces impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. All expansion areas under this scenario include agricultural activity and associated pesticide/herbicide use and storage. Compliance with General Plan policies and actions reduces impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Potential expansion impacts similar to Scenario 2. Compliance with General Plan policies and actions reduces impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Potential expansion impacts similar to Scenario 2. Compliance with General Plan policies and actions reduces impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Potential expansion impacts similar to Scenario 2, though the Western Cañada Larga area is primarily open land. Compliance with General Plan policies and actions reduces impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Potential expansion impacts similar to Scenario 2. Compliance with General Plan policies and actions reduces impacts to Class III, less than significant.
Transportation of Hazardous Materials (Impact HAZ-2)	Development adjacent to major transportation corridors may be at risk of exposure to hazardous materials in the event of an accident on these routes. Continued participation in the SEMS Multihazard Functional Response Plan reduces impacts to Class III, less than significant.	Intensification/reuse hazards similar to Scenario 1. The North Avenue, Olivas, and Serra expansion areas are adjacent to U.S. 101, SR 33, and/or the railroad. Continued participation in the SEMS Multihazard Functional Response Plan reduces impacts to Class III, less than significant.	Intensification/reuse hazards similar to Scenario 1. The North Avenue expansion area is adjacent to SR 33, and the railroad is adjacent to the Olivas expansion area. Continued participation in the SEMS Multihazard Functional Response Plan reduces impacts to Class III, less than significant.	Intensification/reuse hazards similar to Scenario 1. The North Avenue expansion area is adjacent to SR 33, and the railroad bisects the Serra expansion area. Continued participation in the SEMS Multihazard Functional Response Plan reduces impacts to Class III, less than significant.	Intensification/reuse hazards similar to Scenario 1. The North Avenue and Western Cañada Larga expansion areas are adjacent to SR 33, which is a major truck transportation corridor. Continued participation in the SEMS Multihazard Functional Response Plan reduces impacts to Class III, less than significant.	Intensification/reuse hazards similar to Scenario 1. The North Avenue expansion area is adjacent to SR 33, and SR 126 forms the southern boundary of the Poinsettia expansion area. Continued participation in the SEMS Multihazard Functional Response Plan reduces impacts to Class III, less than significant.

Summary Comparison of Impacts for EIR Scenarios

	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
Brownfield Sites (Impact HAZ-3)	Future development on brownfields and other sites with a potential for contamination, particularly in the Ventura Avenue corridor could create a public safety hazard. Compliance with General Plan Action 7.22, which requires soil and groundwater assessment, would reduce impacts to Class III, less than significant.	Intensification/reuse hazards similar to Alternative 1. No identified brownfield sites in North Avenue, Olivas, or Serra expansion areas. Compliance with General Plan Action 7.22 would reduce impacts to Class III, less than significant.	Intensification/reuse hazards similar to Alternative 1. No identified brownfield sites in North Avenue or Olivas expansion areas. Compliance with General Plan Action 7.22 would reduce impacts to Class III, less than significant.	Intensification/reuse hazards similar to Alternative 1. No identified brownfield sites in North Avenue or Serra expansion areas. Compliance with General Plan Action 7.22 would reduce impacts to Class III, less than significant.	Intensification/reuse hazards similar to Alternative 1. No identified brownfield sites in North Avenue or Western Cañada Larga expansion areas. Compliance with General Plan Action 7.22 would reduce impacts to Class III, less than significant.	Intensification/reuse hazards similar to Alternative 1. No identified brownfield sites in North Avenue or Poinsettia expansion areas. Compliance with General Plan Action 7.22 would reduce impacts to Class III, less than significant.

supervision of the County Environmental Health Division, County Department of Toxic Substances Control, or Regional Water Quality Control Board (depending upon the nature of any identified contamination).

Action 7.28 *Educate residents and businesses about how to reduce or eliminate the use of hazardous materials, including by using safer non-toxic equivalents.*

Action 7.29 *Require non-agricultural development to provide buffers of 50 feet or more from agricultural operations to minimize the potential for pesticide drift.*

Action 7.30 *Require all users, producers, and transporters of hazardous materials and wastes to clearly identify the materials that they store, use, or transport, and to notify the appropriate City, County, State and Federal agencies in the event of a violation.*

Action 7.31 *Work toward voluntary reduction or elimination of aerial and synthetic chemical application in cooperation with local agricultural interests and the Ventura County agricultural commissioner.*

Impact HAZ-1	**Some industrial and agricultural operations within the Planning Area use hazardous materials to which current and future residents could be exposed. Potential development near hazardous material users could expose individuals to health risks due to soil/groundwater contamination or emission of hazardous materials into the air. However, compliance with proposed General Plan policies and actions, in combination with existing regulations, would reduce potential impacts associated with hazardous material use to a Class III, *less than significant*, level for any of the six land use scenarios.**

The development of residential uses in proximity to commercial and industrial uses that use or store hazardous materials increases the risk of exposure to deleterious health effects. Areas where users of large quantities of hazardous materials are located are confined primarily to industrial areas along Ventura Avenue from Thompson Avenue to Stanley Avenue, in the North Avenue area, and in the Arundell district, and in agricultural lands in and around the Planning Area. Development or redevelopment in these areas would have the potential for exposure of hazardous materials to the public. The magnitude of hazards for individual projects would depend upon the location, type, and size of development and the specific hazards associated with individual sites.

There are numerous federal, state, and local regulations regarding use, storage, transportation, and disposal of hazardous materials and waste. In addition, the 2005 General Plan contains policies that aim to minimize adverse impacts to health and quality of life associated with

exposure to hazardous materials. Action 7.24 allows projects involving sensitive land uses only if a health risk analysis indicates that the health risk would not be significant. Action 7.27 requires proponents of projects on or immediately adjacent to lands in industrial, commercial or agricultural use to undertake soil and groundwater contamination assessment in accordance with ATSM standards, and requires remediation if necessary. Action 7.25 states that the updated development code should specify that mixed use projects may not include uses that pose significant health effects.

Scenario 1 - Intensification/Reuse Only

This land use scenario emphasizes intensification and reuse of properties within the urbanized areas of the City. By adding mixed use and residential development in areas where there are users of hazardous materials, the potential for exposure may increase due to: (1) potential soil/groundwater contamination due to past practices; and (2) the proximity of new residential development to ongoing activity involving the use of hazardous materials. Areas that would be most affected are the Upper North Avenue, North Avenue, Downtown (western part), and Arundell districts, and the Ventura Avenue corridor. Other areas of possible concern due to possible soil or groundwater contamination are the agricultural lands in the Saticoy, Thille, and Arundell areas that could be developed under this scenario.

Residential development within the Upper North Avenue, North Avenue, and Arundell districts would largely be limited to live/work or work/live housing and the number of new residences in these areas is not expected to be substantial. The Downtown district and the Ventura Avenue corridor are expected to accommodate larger numbers of housing units, which may be located adjacent to or near existing industrial facilities. The introduction of residential components in these areas of the City could potentially increase exposure to hazardous materials. However, the policies described above would require appropriate evaluation and, if necessary, remediation of significant health risks. Implementation of proposed 2005 General Plan policies and actions on all new development would reduce health and safety risks to a less than significant level.

Development on agricultural lands could potentially expose construction workers and area residents to agricultural chemicals that could be present in site soils. However, implementation of the requirements of Action 7.27 would reduce such impacts to a less than significant level.

Scenario 2 - Intensification/Reuse + North Avenue + Olivas + Serra

Intensification/reuse impacts under this scenario would be similar to those of Scenario 1. In addition, each of the expansion areas included in this scenario is currently used for agriculture, which likely involves the use of various pesticides and herbicides. However, as noted above, 2005 General Plan Action 7.27 requires proponents of projects on or adjacent to agricultural lands to perform soil and groundwater assessments and, if necessary, remediation. Compliance with these requirements would reduce impacts to a less than significant level.

Scenario 3 - Intensification/Reuse + North Avenue + Olivas

Impacts associated with this scenario would be similar to those of Scenario 2. Compliance with proposed 2005 General Plan policies and actions would reduce impacts to a less than significant level.

Scenario 4 - Intensification/Reuse + North Avenue + Serra

Impacts associated with this scenario would be similar to those of Scenario 2. Compliance with proposed 2005 General Plan policies and actions would reduce impacts to a less than significant level.

Scenario 5 - Intensification/Reuse + North Avenue + Western Cañada Larga

Intensification/reuse impacts under this scenario would be similar to those of Scenario 1. In addition, the North Avenue expansion area is primarily used for agricultural purposes as is a small portion of the Western Cañada Larga expansion area. These agricultural activities likely involve the use of various pesticides and herbicides. As noted above, 2005 General Plan Action 7.27 requires proponents of projects on or adjacent to agricultural lands to perform soil and groundwater assessments and, if necessary, remediation. Compliance with these requirements would reduce impacts to a less than significant level.

Scenario 6 - Intensification/Reuse + North Avenue + Poinsettia

Impacts associated with this scenario would be similar to those of Scenario 2. Compliance with proposed 2005 General Plan policies and actions would reduce impacts to a less than significant level.

MITIGATION MEASURES

Compliance with federal, state, and local regulations, in combination with the proposed 2005 General Plan policies and actions, would reduce impacts to a less than significant level. No mitigation is required.

SIGNIFICANCE AFTER MITIGATION

Compliance with existing regulations and proposed General Plan policies and actions would reduce potential impacts associated with risk through the use, storage, or disposal of hazardous materials to a less than significant level for any of the six land use scenarios.

Impact HAZ-2	**The transportation of hazardous materials could potentially create a public safety hazard for new development that could be accommodated along major transportation corridors under the General Plan Update. Provided that the City continues its participation in the SEMS Multihazard Functional Response Plan, impacts would be Class III, *less than significant*, for any of the six land use scenarios.**

While incidents related to hazardous materials spills are infrequent, accidents along major transportation corridors are a possibility. Hazardous materials are transported along U.S. 101, SR 126, and/or SR 33, as well as the railroad lines throughout the City (see Figure 4.7-1). Although the odds of occurrence are less for a hazardous materials incident along a railroad, the severity is potentially greater because of the numerous rail tanker cars involved and the potential for chemicals and explosive substances being mixed together. When properly contained, these materials present no hazard to the community. However, in the event of an accident or derailment, such materials may be released, either in liquid or gas form.

The Ventura Fire Department has devised and maintains a comprehensive Standardized Emergency Management System (SEMS) Multihazard Functional Response Plan that addresses the city's planned response to extraordinary emergency situations including incidents involving major hazardous material upset. The plan provides operational concepts, identifies sources of outside support that would be provided through mutual aid agreements, State and Federal agencies, and the private sector.

Scenario 1 - Intensification/Reuse Only

Scenario 1 emphasizes development within districts and corridors that are already urbanized, some of which are adjacent to major transportation corridors that may be used to transport hazardous materials. U.S. 101 bisects the Downtown district and is adjacent to the Pacific View Mall district, Victoria Avenue corridor, North Bank district, Montalvo district, and Johnson Drive corridor. SR 126 is adjacent to the Victoria Avenue and Wells Road corridors. SR 33 bisects the Downtown and Upper North Avenue districts and is adjacent to the Ventura Avenue corridor and North Avenue district. The railroad bisects the Downtown, North Bank, Montalvo, and Saticoy districts and is adjacent to the Arundell district. By increasing the density of development in these areas, more people would be at risk of exposure to hazardous materials in the event of an accident on these routes. However, provided that the City continues implementation of the SEMS Multihazard Functional Response Plan, impacts related to risk of upset along major transportation corridors would not be significant.

Scenario 2 - Intensification/Reuse + North Avenue + Olivas + Serra

Intensification/reuse impacts would be similar to those of Scenario 1. New development within the potential expansion areas could also put more people at risk. U.S. 101 crosses the Olivas expansion area and SR 33 is adjacent to the North Avenue potential expansion areas. The railroad bisects the Serra area and forms the northeast boundary of the Olivas expansion area.

Although the line that crosses through the Serra area is not currently in use, the line adjacent to the Olivas area carries both passenger and freight traffic. As with Scenario 1, additional risks associated with intensification and reuse could potentially expose more people to hazardous materials in the event of a major upset along these transportation routes. However, provided that the City continues implementation of the SEMS Multihazard Functional Response Plan and maintains a regional hazmat response program that meets State and Federal requirements, impacts related to risk of upset along major transportation corridors would be mitigated.

Scenario 3 - Intensification/Reuse + North Avenue + Olivas

Intensification/reuse impacts would be similar to those of Scenario 1. New development within the potential expansion areas could also put more people at risk. U.S. 101 crosses the Olivas expansion area and SR 33 is adjacent to the North Avenue potential expansion areas. The railroad forms the northeast boundary of the Olivas expansion area. As with Scenario 1, additional risks associated with intensification and reuse could potentially expose more people to hazardous materials in the event of a major upset along these transportation routes. However, provided that the City continues implementation of the SEMS Multihazard Functional Response Plan, impacts related to risk of upset along major transportation corridors would not be significant.

Scenario 4 - Intensification/Reuse + North Avenue + Serra

Intensification/reuse impacts would be similar to those of Scenario 1. New development within the potential expansion areas could also put more people at risk. U.S. 101 crosses the Olivas expansion area and SR 33 is adjacent to the North Avenue potential expansion areas. The railroad bisects the Serra area and forms the northeast boundary of the Olivas expansion area. Although the line that crosses through the Serra area is not currently in use, it potentially could be used at some point in the future. As with Scenario 1, additional risks associated with intensification and reuse could potentially expose more people to hazardous materials in the event of a major upset along these transportation routes. However, provided that the City continues implementation of the SEMS Multihazard Functional Response Plan, impacts related to risk of upset along major transportation corridors would not be significant.

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga

Intensification/reuse impacts would be similar to those of Scenario 1. New development within the potential expansion areas could also put more people at risk. Both the North Avenue and Western Cañada Larga potential expansion areas are adjacent to SR 33, which is a major truck transportation corridor. As with Scenario 1, additional risks associated with intensification and reuse could potentially expose more people to hazardous materials in the event of a major upset along these transportation routes. However, provided that the City continues implementation of the SEMS Multihazard Functional Response Plan, impacts related to risk of upset along major transportation corridors would not be significant.

Scenario 6 - Intensification/Reuse + North Avenue + Poinsettia

Intensification/reuse impacts would be similar to those of Scenario 1. New development within the potential expansion areas could also put more people at risk. The North Avenue expansion

area is adjacent to SR 33 and SR 126 forms the southern boundary of the Poinsettia expansion area. In addition to the potential impacts discussed under Scenario 1, new development in these areas would be subject to risk of hazardous materials exposure if an accident were to occur on these routes. Compliance with hazardous materials transport regulations and the SEMS Multihazard Functional Response Plan would reduce the risk to less than significant.

MITIGATION MEASURES

Compliance with existing hazardous materials transportation regulations as well as continuing participation and maintenance of the SEMS Multihazard Functional Response Plan would reduce impacts related to hazardous material upset risk to a less than significant level. No mitigation would be required.

SIGNIFICANCE AFTER MITIGATION

With implementation of the SEMS and 2005 General Plan policies and actions, impacts would be less than significant for any of the six land use scenarios.

Impact HAZ-3	**Future development on brownfields and other sites with potential soil or groundwater contamination could create a public safety hazard. However, compliance with City policies requiring soil and groundwater assessments on these sites would reduce impacts to Class III, *less than significant*, for any of the six land use scenarios.**

Any developed property has the potential for soil contamination due to operation of motor vehicles and use of solvents and other materials that could have been spilled over the years. Generally speaking, the risk of significant contamination requiring remedial action is low through most of the Planning Area. However, portions of West Ventura have been identified as brownfields with a high likelihood of significant contamination issues. Generally speaking, soil contamination does not pose an unmitigable obstacle to development or redevelopment insofar as proper treatment or removal of contaminated soils can usually mitigate potential health hazards. Testing of site soils, and removal of any contaminated soils, would be warranted prior to grading or development in these areas.

The 1.7-square mile Westside neighborhood is believed to contain approximately 30 brownfield sites, many of which have unknown levels of contamination. There are approximately 19 potential hazardous waste sites per square mile in the Westside, compared to just one per square mile in the rest of the City. The sites include an ammonia nitrate plant, a large salvage and metal recycling operation, an abandoned rocklite mine, and various heavy commercial and industrial operations, and oil industry facilities. Some of the brownfield parcels are adjacent to residential neighborhoods, a school, parks and open space, and the Ventura River.

The northern section of the study area has historically been dominated by oil production and the businesses that support this industry. Currently, this area consists of a mix of land use dominated to some degree by industrial uses. Figure 4.7-2 highlights the parcels most likely to

contain brownfield sites in this area (where previous businesses were clustered): the north side of Stanley Avenue, along Ventura Avenue near the intersection of Franklin Lane, and west of Ventura Avenue north of Barry Lane.

Businesses in the central section included a refinery in the northwest portion of this area, rock quarries at the end of Rocklite Road and at the west end of Stanley Avenue in the Ventura River bottom, and an oil tool/machine shop in the area of Kellogg Street that eventually converted to a steel company. These businesses are clustered along the south side of Stanley Avenue, both sides of Rocklite Road, between Olive Street and State Route 33 (north of West Lewis Street), and at various locations along Ventura Avenue.

The southern section included oilfield service companies (wireline, perforating and well workovers), chemical suppliers, bulk fuel storage and sales, commercial laundries, auto salvage yards, and metal fabrication. These businesses were centered on the north Main Street along Julian and Peking Streets, along West Park Row and Dubbers Street, along Olive Street immediately north and south of Main Street, and along Ventura Avenue north of Thompson Boulevard.

The EPA granted the City $200,000 in 1999 for the pilot program that can be used for Phase I and Phase II site assessments, but may not be used for remediation. It is difficult to locate property owners interested in participating in the program, possibly due to concerns regarding liability for site remediation under the federal Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).

CERCLA was amended in January of 2002 with passage of the Small Business Liability Relief and Brownfields Revitalization Act. This Act provides some relief for small businesses from liability under CERCLA. It authorizes $200 million per fiscal year through 2006 to provide financial assistance for brownfield revitalization. While some exclusions exist (such as for facilities at which there has been a release of PCBs), there are essentially four distinct funding opportunities available to the City under this Act beginning in fall 2002: (1) up to $350,000 for site characterization; (2) $200,000 for remediation of a brownfield site; (3) $200,000 for environmental employment and training for residents impacted by brownfields; and (4) $1,000,000 in revolving loan funds for remediation.

Although the funding already granted to the City is restricted to sites not contaminated by petroleum, it can still be used for Phase I (and possibly part of Phase II) activities, as it may not be readily apparent that petroleum contamination exists at a particular site, and commingling of substances may allow for the funding to be utilized at certain sites. The 2002 legislation allows greater flexibility in the use of future funds. Other potential federal funding sources include:

- *The Department of Housing and Urban Development Empowerment Zone/Enterprise Community program*
- *The Department of Transportation Livable Communities program*
- *The Department of Commerce Economic Development Administration*
- *Various Department of the Interior programs*
- *The State Department of Toxic Substances Control Cleanup Loans and Environmental Assistance to Neighborhoods (CLEAN) Brownfield Loan Program*

Scenario 1 - Intensification/Reuse Only

Scenario 1 emphasizes intensification and reuse of already urbanized areas. As discussed above, some of these areas, particularly West Ventura, have been used for industrial operations in the past and contamination associated with those uses may pose a threat to future users of the site. Potential brownfield sites are concentrated in the area around Ventura Avenue. Specifically, parcels in the Downtown district and the Ventura Avenue corridor are within the Brownfield Assessment Demonstration Pilot Program and include parcels that are likely to contain brownfields. Development that involves intensification and reuse of land in this area would require testing and possibly soil remediation actions. Impacts in these areas are considered potentially significant. However, Action 7.27 requires soil and groundwater sampling and, if necessary, remediation under the appropriate oversight agency to reduce risk from possible contamination. In addition, under Action 7.26, the City would continue to seek funding for cleanup of potentially contaminated sites in the West Ventura area. Compliance with 2005 General Plan policies and actions would reduce impacts associated with brownfield redevelopment to a less than significant level. In the long term, remediation of brownfield sites would be expected to improve environmental conditions in the West Ventura area.

Scenarios 2 through 6

Impacts relating to intensification and reuse would be similar to those of Scenario 1. None of the expansion areas included in Scenarios 2-6 are identified as potential brownfield sites. As with Scenario 1, impacts associated with brownfield redevelopment could be reduced to a less than significant level with implementation of proposed 2005 General Plan policies and actions and would be beneficial in the long term.

MITIGATION MEASURES

Compliance with General Plan Action 7.27 would reduce impacts to a less than significant level. No mitigation measures are required.

SIGNIFICANCE AFTER MITIGATION

Implementation of proposed 2005 General Plan policies and actions would reduce impacts associated with brownfield redevelopment to a less than significant level for any of the six land use scenarios.

4.8 HYDROLOGY AND WATER QUALITY

This section addresses impacts to the City's drainage infrastructure as well as surface water quality impacts.

4.8.1 Setting

a. Watershed Hydrology. Drainage patterns within the Planning Area generally begin in the hills north of the City and terminate in the Ventura River, Santa Clara River or the Pacific Ocean. The Ventura County Watershed Protection District (VCWPD) has jurisdiction over and/or maintains about 20 natural and concrete-lined barrancas that serve as major drainage courses in the Planning Area. Watercourses under VCWPD control are listed below by major tributary:

Discharging to the Santa Clara River

- *Franklin Barranca is a concrete channel from SR 126 south to the Santa Clara River. Above SR 126, the barranca is a channelized earth ditch, with erosion stabilization.*
- *Brown Barranca is, for the most part, a stabilized earthen ditch. One segment, from Telegraph Road to SR 126, is partially unstabilized and subject to severe erosion. The sections from SR 126 to the Santa Clara River also have severe bank erosion.*
- *Sudden and Clark Barrancas are mostly concrete lined channels. Sudden Barranca has an unlined portion between Telegraph Road and SR 126.*
- *Harmon and Ondulando Barrancas are primarily natural channels. A portion of Ondulando is a box culvert and Harmon is natural to Telegraph Road then box culvert, dirt, natural, and rip-rap sides as it proceeds downstream.*
- *Moon Ditch is a concrete channel and culvert system.*

Discharging to the Pacific Ocean

- *Arundell Barranca is a stabilized natural channel above U.S. 101, with the exception of channelized portions south of Foothill Road to Telegraph Road and in the Hidden Valley subdivision above Foothill Road.*
- *Barlow and Reservoir Barrancas are concrete-lined south of Foothill Road.*
- *Prince and San Jon Barrancas are concrete-lined above Poli Street to the Pacific Ocean, with the exception of a small segment of San Jon Barranca from Main Street to Poli Street.*

Discharging to the Ventura River

- *Dent Drain is a pipe culvert system.*
- *School House Canyon is a natural channel.*
- *Cañada De San Joaquin is a natural channel east of Ventura Avenue, and is a concrete-lined channel for a short segment west of the Avenue.*
- *Los Encinas Barranca is a natural channel east of Ventura Avenue, and a concrete channel to the west.*
- *Cañada Larga Creek is a natural channel east of SR 33.*

VCWPD has permit authority for construction of drainage systems that connect to these barrancas and watercourses, and is responsible for providing adequate hydraulic capacity. VCWPD watercourses are designed to have capacity to safely carry the runoff from a 100-year storm (which has a 1% probability of occurring each year). The barrancas in the City are identified on Figure 4.8-1 (with the exception of Ondulando, Moon Ditch, and the creeks draining to the Ventura River).

The Ventura Vision states that the City should work with county, state, and federal agencies and the VCWPD to maintain the remaining unlined barrancas as natural flood channels and seasonal recreational trails. Concrete-lined barrancas should be restored to their natural conditions where feasible and safe. Where feasible, natural drainage and flood control systems (e.g., wildlife ponds and wetlands) should be utilized over cement retention basins and lined channels.

The City owns and/or maintains local drainage facilities in the City as well as portions of Brown and Clark Barrancas, including approximately 20 miles of major facilities with a diameter equal to or greater than 48 inches. City drainage facilities range from 6 to 96 inches in diameter. The remaining City drainage system connects to these major facilities. Most City facilities are designed to convey the runoff generated from a 10-year storm event within the storm drain, while city streets convey flows above the 10-year storm.

The 1971 Drainage Master Plan notes that many of the tributaries to the major existing storm drains lacked adequate inlet capacity and are undersized. A 1996 deficiency study identified public improvements needed in the Franklin and Brown Barrancas to support future development in the Wells and Saticoy neighborhoods.

Figure 4.8-1 shows major City drainage facilities, and Figure 4.8-2 identifies deficiencies in major drainage facilities (greater than 48"). Correction of these deficiencies ranges in complexity from minor maintenance improvements to major capital improvements. Most of the City's trunk drainage system is adequately sized. The Ventura Avenue neighborhood has the majority (75%) of undersized or inadequate facilities in the City. The Downtown area also has a number of deficiencies that are currently being studied and addressed as part of the Downtown Specific Plan. Figure 4.8-3 compares the linear feet of major storm drains with the linear feet of deficiencies by neighborhood, as reported in the 2003 Master Drainage Needs Assessment Study. Neighborhoods not listed have no documented deficiencies.

As noted on Figure 4.8-2, approximately 50 deficiencies that pertain to drainage facilities 48-inches in diameter or larger are identified in the Draft Master Drainage Needs Assessment Study. These deficiencies include street and private property flooding, corrugated metal storm drain pipes that need replacement, undersized storm drains, and mud/debris problems in agricultural and hillside areas.

There are four lift station facilities in the storm drain system:

- *Dover Lift Station*
- *Weymouth Lift Station*

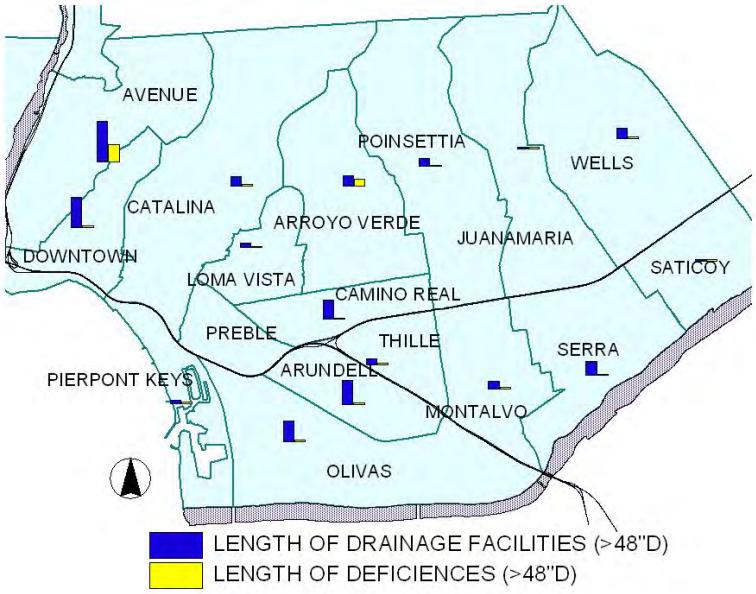
Existing Major Drainage Facilities (48″ Diameter and Larger) with Deficiencies

Figure 4.8-2

Figure 4.8-3
Relative Trunk Deficiencies by Neighborhood



- *Johnson Lift Station*
- *San Jon & Prince Barranca Lift Station*

The San Jon Lift Station contributes to flooding that sometimes occurs on Harbor Boulevard, primarily because tidal action blocks drainage from the outlet. Structural improvements have been completed on two of the four lift stations - Weymouth and Dover Lift Stations. Johnson Lift Station is newly online and sufficient. Deferred maintenance has become an issue in the City due to aging drainage facilities. Corrugated metal pipe drains in the older parts of the City are older than 50 years and need to be replaced.

b. Flood Hazards. A flood is a temporary rise in stream flow that results in water overtopping stream banks and inundating adjacent areas not normally covered with water. The floodplain is the relatively flat or lowland area adjoining a stream that is subject to periodic inundation by floodwater. Flooding is a naturally occurring event with some long-range beneficial effects, such as the replenishment of beach sand and nutrients to agricultural lands and the ocean. However, flooding creates a hazard when structures are placed in the floodplain. The Federal Emergency Management Agency (FEMA) describes floods in terms of their frequency of occurrence. For example, the 100-year flood is the flood magnitude that has a one-percent chance of being equaled or exceeded in any given year. This type of designation is based on probability. According to statistical averages, a 25-year flood should occur an average of once every 25 years, but two 25-year floods could conceivably occur in any one-year period. For planning purposes, the 100-year flood is most often used to delineate flood plain boundaries.

Flooding is basically a direct response to the amount, distribution and intensity of precipitation. Most storms are relatively small and do not create flooding. The magnitude and frequency of flood events can be influenced by many factors, including alterations to the characteristics of a drainage basin or a floodplain. Such changes include growth of brush and trees in the flood plain, denudation of vegetation (including by fire), construction of impervious surfaces, channelization, and installation bridges and other stream crossings.

The extent of damage caused by any flood depends on many factors including: topography of the area flooded; depth, duration and velocity of the floodwaters; extent and type of development in the floodplain; and effectiveness of forecasting, warning and emergency operations.

The largest and most damaging recorded natural floods in the Ventura and Santa Clara River watersheds occurred in 1969, with 100-year peak discharges being exceeded in both river channels. Property damage was estimated at $60 million and 13 people were killed. The City wastewater treatment facility was severely damaged, resulting in the discharge of raw sewage onto local beaches. The floods also caused sediment to flow into Ventura Harbor, which had to be dredged to restore use of the waterways. After the 1969 floods, the sediment from the harbor was moved to the Olivas Park golf course, which elevated the golf course enough to act as a dam, narrowing the extent of the Santa Clara River floodplain. Flood events in 1992, 1995 and 1998 along the Ventura River resulted in closure of SR 33 and rescue of persons from the river. The 1992 flood washed out an RV Park south of U.S. 101 and resulted in substantial loss of property. Flood damage also occurred during the severe winter storms of 2004-05.

Figure 4.8-4 shows areas in the City subject to inundation by the 100-year and 500-year floods. FEMA requires that owners of property located in the 100-year flood inundation area maintain flood protection insurance. The 100-year flood hazard area for the Ventura River is relatively small due to construction of a levee along the east bank of the river by the U.S. Army Corps of Engineers in 1948. A 100-year flood along the Santa Clara River would affect a fairly limited area of the City just north of the river near the Olivas Park and Buenaventura golf courses. Other areas that could potentially experience flooding impacts as a result of a 100-year event include land adjacent to the Arundell, Harmon, and Brown Barrancas.

Dam Inundation**.** Table 4.8-1 lists the six dams that could flood portions of the Planning Area if they failed. All of these dams meet applicable safety requirements and, with the exception of Casitas Dam (which is regulated by the Bureau of Reclamation), are inspected by the Division of Dam Safety, California Department of Water Resources, twice per year to ensure they meet all safety requirements and that necessary maintenance is performed. The Bureau of Reclamation has stated that Casitas Dam is in satisfactory condition for normal operations and a safety evaluation is ongoing. Matilija Dam is in the process of being decommissioned. Figure 4.8-5 shows areas that would be inundated in the event of dam failure. The Casitas Dam inundation area includes most of the Ventura River Valley and portions of Downtown. The Castaic and Pyramid Dam inundation area lies north of Olivas Park Drive and south of U.S. 101 and SR 126.

A proposal is currently under review to construct a new debris basin and dam in Lake Canyon that would alleviate flooding problems along the Arundell Barranca. Geotechnical design parameters are intended to ensure that the dam is not likely to fail, and the State Division of

Table 4.8-1
Existing Dams with Potential to Affect the Planning Area

Dam	Location	Construction Material	Capacity (Acre Feet)
Matilija	West fork of Matilija Creek above Matilija Hot Springs	Concrete	1,800
Casitas Dam	Coyote Creek west of Casitas Springs	Earth Fill	250,000
Bouquet Dam (two dams)	Adjacent to Bouquet Canyon Road about 17 miles north of the Santa Clarita Sheriff's Station (Valencia)	Earth Fill	36,505
Castaic Dam	Castaic Creek one mile northeast of town of Castaic	Earth Fill	325,000
Pyramid Dam	Piru Creek 15 miles north of Castaic	Earth and Rock Fill	179,000
Santa Felicia (Piru) Dam	Piru Creek 5 miles north of the town of Piru	Earth Fill	100,000

Source: McClelland Consultants (West), Inc. Environmental Services, 1989.

Safety of Dams will conduct a technical review of the final design. Division engineers and geologists will perform inspections throughout the construction period to verify design assumptions and ensure adherence to the plans and specifications.

In the event of a dam failure or other flood event, the County would follow an emergency response and evacuation plan set forth in the Multi-hazard Functional Plan managed by the Ventura County Sheriff's Office of Emergency Services. The County bilingual alert system includes mobile emergency vehicle sirens and loudspeakers, and door-to-door notification. The City flood emergency warning systems also includes public alerts by television service providers.

c. Surface Water Quality. As noted in Ventura Vision, siltation in the Keys is a problem. The Arundell Barranca carries sediment to the Pierpont Keys area. This results in the need to dredge the Keys approximately every seven to ten years. Ventura Vision recommends the City work with the Watershed Protection District to continue to mitigate silt and drainage problems in the Keys.

With regard to the increase in erosion potential, the 2000 Ventura Countywide Stormwater Quality Urban Impact Mitigation Plan (SQUIMP) requires proposed developments to "control the post-development peak storm water runoff discharge rates to maintain or reduce pre-development downstream erosion and to protect stream habitat." This affects both large and small storm water flows. Storm water quality requirements, as well as downstream erosion impacts, rather than drainage facility capacity, however, may be the controlling factor for future developments in the City.
The City, County, Watershed Protection District, and nine other local cities are co-permittees on National Pollutant Discharge Elimination System (NPDES) Permit No. CAS004002 issued by the

Regional Water Quality Control Board in 2000. NPDES is a Federal Environmental Protection Agency (EPA) program administered by the states to control water pollution by regulating point sources. In California, the State Water Quality Control Board is responsible for ensuring compliance with the provisions of the Federal Clean Water Act and the State Water Quality Control Act. The Los Angeles Regional Water Quality Control Board ensures local compliance with the countywide NPDES permit. The Ventura County SQUIMP is included as an attachment to the permit. The two primary municipal permit objectives are to:

1. *Effectively prohibit non-storm water discharges; and*
2. *Reduce the discharge of pollutants from storm water conveyance systems to the maximum extent practicable.*

The SQUIMP addresses storm water pollution from new development and redevelopment by the private sector, and contains a list of the minimum required Best Management Practices (BMPs) required for a designated project. A BMP is defined as any program, technology, process, siting criteria, operating method, measure, or device that controls, prevents, removes, or reduces pollution. Per the SQUIMP, BMPs can be used for minimizing the introduction of pollutants of concern that may result in significant impacts to the storm water conveyance system from site runoff. Treatment Control BMPs are required for eight categories of development. Additional BMPs may be required by ordinance or code adopted by the City and applied generally or on a case-by-case basis. The City is required to implement the requirements of the SQUIMP, and developers are required to comply with those provisions.

Table 4.8-2 lists the pollutants of concern for the two rivers that run through the City, per the 2003 California 303(d) List for Ventura and Santa Clara Rivers. Water quality is subject to seasonal variation. Sources of water quality degradation in the region include surface runoff from oil fields, agricultural areas, urban land uses and natural sedimentation. Pollutant loads are expected to correspond to tributary land uses. BMPs must be selected consistent with both anticipated pollutant loads and water quality objectives (pollutants of concern).

The primary sources of pollution to surface and groundwater resources include stormwater runoff from paved areas, which can contain hydrocarbons, sediments, pesticides, herbicides, toxic metals, and coliform bacteria. Seepage from sewage treatment lagoons can further contribute to degraded water quality in the form of elevated nitrate levels. Improperly placed septic tank leach fields can cause similar types of contamination. Illegal waste dumping can introduce contaminants such as gasoline, pesticides, herbicides and other harmful chemicals. Septic tanks are also a source of pollution to some wells in both alluvial and granitic rocks. Septic tanks discharging into alluvium have a high potential to pollute wells producing from the same deposit because of high permeability and low gradient. In the winter, the rains raise the water table in these areas, which can exacerbate possible contamination.

d. Regulatory Framework. Development in the Planning Area is subject to various local, state, and federal regulations and permits regarding the use of water resources. The Ventura County Watershed Protection District, the California Department of Water Resources, and the Los Angeles Regional Water Quality Control Board are the primary agencies responsible for the protection of watersheds, floodplains, and water quality. The Ventura County Department of Health is the primary agency responsible for establishing design

Table 4.8-2
Water Quality Issues of Concern

Name	Pollutant/Stressor	TMDL Priority	Estimated Size Affected
Ventura Harbor (Ventura Keys)	High Coliform Count	Medium	179 acres
Ventura River Estuary	Algae	Low	0.2 miles
	Eutrophic	Low	0.2 miles
(Stables & horse property may be the sources)	Fecal Coliform	Low	0.2 miles
(Stables & horse property may be the sources)	Total Coliform	Low	0.2 miles
	Trash	Medium	0.2 miles
Ventura River Bach 1 and 2 (Estuary to Weldon Canyon)	Algae	Medium	4.5 miles
Surfers Point at Seaside (area affected is the end of access path via a wooden gate)	Bacteria Indicators	Low	0.53 miles
Santa Clara River Estuary	ChemA	Medium	49 acres
	High Coliform Count	Medium	49 acres
	Toxaphene	Medium	49 acres
Santa Clara River Reach 3 (Freeman Diversion to A Street)	Ammonia	High	31 miles
	Chloride	High	31 miles
San Buenaventura Beach (area affected is south of drain at Kalorama Street, and south of drain at Sanjon Road)	Bacteria Indicators	Low	0.3 miles
Promenade Park Beach (area affected is at Oak Street, Redwood Apartments, and south of drain at California Street)	Bacteria Indicators	Low	0.37 miles
Cañada Larga – Ventura River (horse stables, land use, cattle, and wildlife may be the sources)	Fecal Coliform	Low	8 miles
	Low Dissolved Oxygen	Low	8 miles
Brown Barranca/Long Canyon	Nitrate and Nitrite	High	2.6 miles

standards and permitting of septic tanks and wells. The federal government administers the National Pollutant Discharge Elimination System (NPDES) permit program, which regulates discharges into surface waters. Section 404 of the Clean Water Act prohibits the discharge of dredged or fill materials into Waters of the United States or adjacent wetlands without a permit from the U.S. Army Corps of Engineers. As discussed above under the subheading, "Flood Hazards", the Federal Emergency Management Agency (FEMA) establishes base flood heights for the 100-year and 500-year flood zones.

The primary regulatory control relevant to the protection of water quality is the Federal National Pollution Discharge Elimination System (NPDES) permit administered by the State Water Resources Control Board. This board establishes requirements prescribing the quality of point sources of discharge and establishes water quality objectives. These objectives are

established based on the designated beneficial uses (e.g., water supply, recreation, and habitat) for a particular surface water or groundwater. The NPDES permits are issued to point source dischargers of pollutants to surface waters and are issued pursuant to Water Code Chapter 5.5 that implements the Federal Clean Water Act. Examples include, but are not limited to, public wastewater treatment facilities, industries, power plants, and groundwater cleanup programs discharging to surface waters (State Water Resources Control Board, Title 23, Chapter 9, Section 2200). Discharge limits, under the NPDES permits, for minerals and pollutants are established and regulated by the California Regional Water Quality Control Board.

4.8.2 Impact Analysis

a. Methodology and Significance Thresholds. Impacts would be considered significant if development under the 2005 General Plan through the year 2025 would:

- *Potentially degrade surface or groundwater quality below standards established by the Regional Water Quality Control Board (these standards are usually in accordance with the California EPA's maximum contaminant levels (MCLs) for drinking water)*
- *Substantially interfere with groundwater recharge*
- *Substantially alter the existing drainage pattern of the area such that substantial erosion or siltation occurs*
- *Substantially alter the existing drainage pattern or substantially increase the rate or amount of surface runoff in a manner which results in flooding*
- *Substantially add additional sources of polluted runoff to a water body*
- *Place housing within a 100-year floodplain*

b. Project Impacts and Mitigation Measures. The matrix on the following page provides a summary comparison of impacts for each of the six 2005 General Plan land use scenarios. A discussion of the impacts for each scenario follows.

Impact HWQ-1	**Most of the areas within the Planning Area that could accommodate new development are outside the 100-year flood zone. Limited portions of the Planning Area that could accommodate new development under any of the six land use scenarios are within the 100-year flood zones. However, compliance with the City Flood Plain Ordinance and proposed General Plan actions would reduce impacts to a Class III, *less than significant*, level for any of the six land use scenarios.**

The primary effect of flooding, where urban encroachment on flood plains has occurred, is the threat to life and property. Floods may also create health and safety hazards and disruption of vital public services. Economic costs may include a variety of flood relief expenses, as well as investment in flood control facilities to protect endangered development. The extent of damage caused by any flood depends on the topography of the area flooded; depth, duration, and velocity of floodwaters; the extent of development in the floodplain; and the effectiveness of

Summary Comparison of Impacts for EIR Scenarios

	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
100-Year Flood Zone (Impact HWQ-1)	Portions of the North Avenue, Upper North Avenue, Arundell, and Auto Center districts are within the 100-year flood zone. Compliance with the existing Flood Plain Ordinance and proposed General Plan actions reduce impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Portions of the Olivas expansion area (along Arundell Barranca) also fall within the 100-year flood zone. Compliance with the existing Flood Plain Ordinance and proposed General Plan actions reduce impacts to Class III, less than significant.	Impacts similar to Scenario 2 and Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Expansion areas are outside the 100-year flood zone. Impacts are Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Portions of the Western Cañada Larga expansion area west of SR 33 also fall within the 100-year flood zone. Compliance with the existing Flood Plain Ordinance and proposed General Plan actions reduce impacts to Class III, less than significant.	Intensification/reuse impacts similar to Scenario 1. Expansion areas are outside the 100-year flood zone. Impacts are Class III, less than significant.
Storm Water Runoff/ Hydrological Changes (Impact HWQ-2)	Increased stormwater generated by new development can be addressed through implementation of existing regulations. The General Plan does not address existing storm drain system deficiencies. Impacts are Class II, significant but mitigable.	Impacts similar to Scenario 1. Expansion area impacts address through existing regulations, but existing system deficiencies not addressed. Impacts are Class II, significant but mitigable.	Impacts similar to Scenario 1. Expansion area impacts address through existing regulations, but existing system deficiencies not addressed. Impacts are Class II, significant but mitigable.	Impacts similar to Scenario 1. Expansion area impacts address through existing regulations, but existing system deficiencies not addressed. Impacts are Class II, significant but mitigable.	Impacts similar to Scenario 1. Expansion area impacts address through existing regulations, but existing system deficiencies not addressed. Impacts are Class II, significant but mitigable.	Impacts similar to Scenario 1. Expansion area impacts address through existing regulations, but existing system deficiencies not addressed. Impacts are Class II, significant but mitigable.
Surface and Ground Water Quality (Impact HWQ-3)	Implementation of Ventura County SQUIMP requirements on all new development address water quality. Impacts are Class III, less than significant.	Impacts similar to Scenario 1 and Class III, less than significant. Development of expansion areas offers opportunities to improve surface water quality.	Impacts similar to Scenario 1 and Class III, less than significant. Development of expansion areas offers opportunities to improve surface water quality.	Impacts similar to Scenario 1 and Class III, less than significant. Development of expansion areas offers opportunities to improve surface water quality.	Impacts similar to Scenario 1 and Class III, less than significant. Development of expansion areas offers opportunities to improve surface water quality.	Impacts similar to Scenario 1 and Class III, less than significant. Development of expansion areas offers opportunities to improve surface water quality.

forecasting, warnings, and emergency operations. Encroachment onto floodplains, such as artificial fills and structures, reduces the capacity of the flood plain and increases the height of floodwater upstream of the obstructions. Impacts associated with each General Plan land use scenario are discussed below. The 2005 General Plan includes the following actions relating to flood hazards:

Action 7.7 *Require project proponents to perform geotechnical evaluations and implement mitigation prior to development of any site:*

- *With slopes greater than 10 percent or that otherwise have potential for landsliding,*
- *Along bluffs, dunes, beaches, or other coastal features*
- *In an Alquist-Priolo earthquake fault zone or within 100 feet of an identified active or potentially active fault,*
- *In areas mapped as having moderate or high risk of liquefaction, subsidence, or expansive soils,*
- *In areas within 100-year flood zones, in conformance with all Federal Emergency Management Agency regulations.*

Action 7.10 *Require proponents of any new developments within the 100-year floodplain to implement measures, as identified in the Flood Plain Ordinance, to protect structures from 100-year flood hazards (e.g., by raising the finished floor elevation outside the floodplain).*

Scenario 1 – Intensification/Reuse Only

Most of the infill/intensification areas under this scenario are outside the 100- flood zone. However, portions of the North Avenue, Upper North Avenue, Arundell, and Auto Center districts are within the 100-year flood zone. General Plan Action 7.10 require proponents of any new developments within the 100-year floodplain to implement measures, as identified in the Flood Plain Ordinance, to protect structures from 100-year flood hazards. As required by the Flood Plain Ordinance, any future development within the 100-year flood zone would require a hydrologic/hydraulic analysis to show that they are protected from flood flows and a Letter of Map Revision (LOMR) filed and approved by FEMA prior to development approval. Compliance with these requirements would reduce flooding impacts to a less than significant level.

Scenario 2 – Intensification/Reuse + North Avenue + Olivas + Serra

Intensification/reuse impacts would be the same as those of Scenario 1. In addition, portions of the Olivas expansion area (along Arundell Barranca) fall within the 100-year flood zone. The Serra area is adjacent to, but outside, the 100-year flood zone associated with the Santa Clara River. If future developers elect to pursue development within the designated flood zone, further analysis would be needed in order to demonstrate that any future development is outside the flood plain and a Letter of Map Revision (LOMR) may need to be filed and approved by FEMA prior to development approval. However, these expansion areas should have adequate land to provide retention on-site to limit any increase in peak drainage discharge to the design capacity of the downstream facility and/or should have the financial capacity to provide mitigation by improving downstream infrastructure capacity. No portion of the North

Avenue expansion area is within the 100-year flood zone. Compliance with existing requirements and proposed 2005 General Plan actions would reduce flooding impacts to a less than significant level.

Scenario 3 – Intensification/Reuse + North Avenue + Olivas

Intensification/reuse impacts would be the same as those of Scenario 1. As noted under Scenario 2, portions of the Olivas expansion area adjacent to Arundell Barranca are within the 100-year flood zone. However, this area should have adequate land to provide retention on-site to limit any increase in peak drainage discharge to the design capacity of the downstream facility and/or should have the financial capacity to provide mitigation by improving downstream infrastructure capacity. Compliance with existing requirements and proposed 2005 General Plan actions would reduce flooding impacts to a less than significant level.

Scenario 4 – Intensification/Reuse + North Avenue + Serra

Intensification/reuse impacts would be the same as those of Scenario 1. As noted under Scenario 2, portions of the Serra expansion area are adjacent to, but outside of the Santa Clara River 100-year flood zone. This area should have adequate land to provide retention on-site to limit any increase in peak drainage discharge to the design capacity of the downstream facility and/or should have the financial capacity to provide mitigation by improving downstream infrastructure capacity. Compliance with existing requirements and proposed 2005 General Plan actions would reduce flooding impacts to a less than significant level.

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga

Intensification/reuse impacts would be the same as those of Scenario 1. In addition, much of the area west of SR 33 within the Western Cañada Larga expansion area is within the 100-year flood zone, as is a small area east of SR 33 adjacent to Cañada Larga Creek. Compliance with existing requirements and proposed 2005 General Plan actions would reduce flooding impacts to a less than significant level, though available land to provide on-site retention is more limited than for the other scenarios that include expansion areas.

Scenario 6 – Intensification/Reuse + North Avenue + Poinsettia

Intensification/reuse impacts would be the same as those of Scenario 1. No portion of the North Avenue or Poinsettia expansion areas is within the 100-year flood zone. Compliance with existing requirements and proposed 2005 General Plan actions would reduce flooding impacts to a less than significant level.

MITIGATION MEASURES

As noted above, proposed 2005 General Plan actions require continued compliance with the City's Flood Plain Ordinance and other applicable requirements. Additional mitigation is not needed.

SIGNIFICANCE AFTER MITIGATION

Compliance with the City Flood Plain Ordinance and the proposed 2005 General Plan actions would reduce flooding impacts to a less than significant level for any of the six land use scenarios.

Impact HWQ-2	**Development accommodated through the year 2025 under any of the land use scenarios under consideration for the 2005 General Plan would increase the amount of impervious surfaces within the Planning Area, potentially increasing surface runoff in areas where existing storm drain systems are deficient. This is considered a Class II, *significant but mitigable,* impact for all scenarios.**

The 2005 General Plan includes the following actions aimed at minimizing impacts to the local storm drain system and surface and groundwater quality. As discussion of the impacts of each land use scenario follows.

Action 1.16 *Comply with directives from regulatory authorities to update and enforce stormwater quality and watershed protection measures that limit impacts to aquatic ecosystems and that preserve and restore the beneficial uses of natural watercourses and wetlands in the city.*

Action 5.2 *Use natural features such as bioswales, wildlife ponds, and wetlands for flood control and water quality treatment when feasible.*

Scenario 1 – Intensification/Reuse Only

This scenario would have the least impact on existing drainage facilities insofar as much of the development would not increase the amount of impervious surface over existing conditions. The larger vacant and agricultural parcels that could be converted under this scenario (primarily in the North Avenue, Saticoy, and Arundell districts) include sufficient acreage to provide onsite detention or retention facilities. Where infill of vacant parcels occurs, localized runoff could increase incrementally. However, such increases can be addressed on a case-by-case basis and individual developers will be required to implement solutions to address their projects' impacts. Even with limited acreage, on-site solutions could be employed to minimize runoff such as detention facilities constructed under parking lots and/or utilization of impervious paving methods. In the event that on-site solutions are unavailable, individual developers may contribute to the funding of regional-type solutions downstream, such as off-site detention basins and/or drainage facility capacity enhancement projects. It is anticipated that potential cumulative impacts to the local drainage system can be reduced to a less than significant level through implementation of applicable City and Watershed Protection District regulations on a case-by-case basis. Implementation of the applicable regulatory requirements, in combination with the proposed 2005 General Plan actions, would be expected to reduce potential impacts to groundwater recharge to a less than significant level and, in some instances, may improve recharge as compared to current conditions.

As discussed in the *Setting*, several areas of the Planning Area currently have drainage system deficiencies. The Ventura Avenue neighborhood has the majority (75%) of undersized or inadequate facilities in the City, though various system deficiencies have been identified in the Downtown area as well. The storm drain system in the Downtown area is being addressed in detail in conjunction with the Downtown Specific Plan. Deferred maintenance is also an issue throughout the older parts of the City due to aging drainage facilities. Corrugated metal pipe drains in older areas such as Downtown, the Ventura Avenue corridor, and Midtown are generally more than 50 years old and need replacement. Therefore, although the impacts of individual developments can be addressed on a case-by-case basis, the lack of a mechanism to address existing City storm drain deficiencies is considered a potentially significant impact under any land use scenario.

Scenario 2 – Intensification/Reuse + North Avenue + Olivas + Serra

Intensification/reuse impacts would be similar to those of Scenario 1. The impacts of new development can be addressed on a case-by-case basis, but the lack of a mechanism to address existing storm drain system deficiencies is considered a potentially significant impact.

This scenario also includes the possible future development of the North Avenue, Olivas, and Serra expansion areas. The North Avenue expansion area discharges eventually to the Ventura River and detention/water quality basins could be incorporated in the development of this area. These basins would not only maintain current levels of runoff to the downstream facilities but also could also reduce silt and sediment transport and contribute to improving water quality in the Ventura River and eventually the ocean.

The Olivas expansion area drains to the Harbor and the development of this area offers significant potential for improving localized drainage facilities as well as water quality in the Harbor. Due to the significant size of the area, there is the potential for setting up a fee program or other funding mechanism to improve some local drainage deficiencies, such as the existing Harbor/Olivas storm drain. This area includes sufficient land to accommodate the construction of combination detention/desilting/water quality basins that would not offer the ability to contain peak discharges, improve runoff water quality, and reduce siltation problems in the Ventura Keys.

The Serra expansion area drains to the Santa Clara River and like the North Avenue area should incorporate detention/water quality basins within the proposed development to maintain current drainage discharge levels and also reduce sediment transport and improve water quality from existing and proposed urbanized areas and existing agricultural runoff to the river and eventually the ocean.

Future development within any of the expansion areas would be subject to local regulatory requirements, as described under Scenario 1. In its drainage requirements, the Watershed Protection District requires that "the outlet discharge should not cause any increase of flood flow for any frequency flow rate less than the peak design flow rate." Therefore, peak flow runoff from proposed developments must not exceed the design flows of the existing system. Compliance with these requirements in any future expansion area development would address any potential increase in surface runoff or reduction in groundwater percolation.

Scenario 3 – Intensification/Reuse + North Avenue + Olivas

Intensification/reuse impacts would be similar to those of Scenario 1. This scenario also includes the possible future development of the North Avenue and Olivas expansion areas, but with more intense development than in Scenario 2. Higher densities could equate to slightly higher runoff volumes if impervious surfaces are increased, but detention basins could be sized to mitigate these slightly higher runoff volumes in these two areas. Therefore, the only difference would be that the opportunities that go along with the development of the Serra expansion area discussed above would not occur.

As discussed under Scenario 2, compliance with Watershed Protection District requirements in any future expansion area development would address any potential increase in surface runoff or reduction in groundwater percolation.

Scenario 4 – Intensification/Reuse + North Avenue + Serra

Intensification/reuse impacts would be similar to those of Scenario 1. This scenario also includes the possible future development of the North Avenue and Serra expansion areas, but with more intense development than in Scenario 2. As discussed above, slightly higher runoff volumes could result from these higher densities, but detention basins could be sized to mitigate this. Without the development of the Olivas area, the opportunity to mitigate existing drainage deficiencies in the Harbor area or mitigate water quality and siltation in the Keys would not occur.

As discussed under Scenario 2, compliance with Watershed Protection District requirements in any future expansion area development would address any potential increase in surface runoff or reduction in groundwater percolation.

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga

Intensification/reuse impacts would be similar to those of Scenario 1. This scenario also includes the possible future development of the North Avenue and Western Cañada Larga expansion areas with more intense development in the North Avenue area (higher densities plus additional commercial development) than under Scenarios 3 and 4. The Western Cañada Larga expansion area discharges to the Ventura River and detention/water quality basins should be incorporated in the development of this area. As discussed above, detention basins in the North Avenue area would need to be sized appropriately to handle any increased runoff volumes over and above the other scenarios.

As discussed under Scenario 2, compliance with Watershed Protection District requirements in any future expansion area development would address any potential increase in surface runoff or reduction in groundwater percolation.

Scenario 6 – Intensification/Reuse + North Avenue + Poinsettia

Intensification/reuse impacts would be similar to those of Scenario 1. This scenario also includes the possible future development of the North Avenue and Poinsettia expansion areas, but with more intense development than in Scenario 2. The North Avenue area is expected to

be developed to the same intensity as in Scenarios 3 and 4 so impacts would be identical to those scenarios. The Poinsettia area drains to the County's reinforced box culvert in Telephone Road that has been shown to have capacity deficiencies and then eventually to the Harbor. Development of the Poinsettia area, which is currently in agriculture, would provide the opportunity to make improvements to this facility. In addition, as with the other expansion areas, combination detention/ siltation/water quality basins could be constructed in this area. These basins would not only mitigate development impacts, but would also improve existing water quality and siltation issues in the Ventura Keys.

As discussed under Scenario 2, compliance with Watershed Protection District requirements in any future expansion area development would address any potential increase in surface runoff or reduction in groundwater percolation.

MITIGATION MEASURES

Although the 2005 General Plan includes several policies and actions that address storm runoff and water quality, the following additional actions are needed to address existing system deficiencies.

HWQ-2 **Additional Drainage Actions**. The following actions shall be added to the 2005 General Plan to address existing storm drain system deficiencies:

- Develop a financing program for the replacement of failing corrugated metal storm drain pipes in the City.
- Adopt assessment districts or other financing mechanisms to address storm drain system deficiencies in areas where new development is anticipated and deficiencies exist (e.g., Downtown district, Ventura Avenue corridor, and Harbor district).

The following actions are recommended to minimize the impact of future development on the local storm drain system and implement City goals regarding sustainable infrastructure:

- As feasible, require new developments to incorporate stormwater treatment practices that allow percolation to the underlying aquifer and minimize offsite surface runoff. Such methods may include, but are not limited to, (1) the use of pervious paving material within parking lots and other paved areas to facilitate rainwater percolation; and (2) construction of retention/detention basins to limit runoff to pre-development levels and to encourage infiltration into the groundwater basin.
- Where deemed appropriate, require new developments adjacent to Ventura County Watershed Protection District channels to dedicate necessary right-of-way to meet future District needs.

SIGNIFICANCE AFTER MITIGATION

With implementation of the proposed 2005 General Plan policies and action items, and above mitigation measures, impacts to the area storm drain system would be reduced to a less than significant level. It is anticipated that implementation of storm drain system improvements in accordance with current requirements would not have significant secondary environmental effects and would generally reduce pollutants in storm runoff.

Impact HWQ-3	**Development accommodated under any of the General Plan land use scenarios would incrementally increase the generation of urban pollutants in surface runoff. Point and non-point sources of contamination could affect water quality in the Ventura and Santa Clara Rivers, the Pacific Ocean, and groundwater. However, implementation of existing regulatory requirements and proposed General Plan policies and actions would reduce impacts to a Class III, *less than significant*, level for all scenarios.**

Water quality impacts from new development are directly related to specific site drainage patterns and stormwater runoff. Development within the City and expansion areas would increase the amount of impermeable surface over current conditions. Most areas proposed for new development are largely comprised of impervious surfaces. Development of these areas would place impervious surfaces, such as commercial and residential structures, parking lots, walkways, roadways, and other paved areas within these areas. These surfaces would increase the amount of runoff following storm events. As rainwater passes overland, contaminants become suspended within the flow. In particular, stormwater runoff from landscaped areas, roadways and parking lots contains various pollutants associated with motor vehicles, including petroleum compounds, heavy metals, asbestos, and rubber, as well as, fertilizers and pesticides from landscaped areas. During storm events, these pollutants are transported into drainage systems by surface runoff. The pavement of individual sites reduces the amount of exposed, erodable dirt, resulting in a reduction in sediment loading. With no prior treatment of stormwater runoff, any pollutants retained from the impervious roadway surfaces would directly enter the surface water bodies in and near the City.

Construction activities could result in the pollution of natural watercourses or underground aquifers. The types of pollutant discharges that could occur as a result of construction include accidental spillage of fuel and lubricants, discharge of excess concrete, and an increase in sediment runoff.

It should be noted that agricultural uses within the expansion areas and within the City limits may involve the application of pesticides and other chemicals. Storm runoff from these agricultural fields recharges groundwater and also discharges into local water bodies. The replacement of agricultural land with urban uses could result in the reduction in discharge of agriculturally-related pollutants, including pesticide runoff, into nearby surface water-bodies and the placement of impervious surfaces at the sites would reduce the amount of sediment

conveyed to surface water through stormwater runoff.

Discharge of pollutants from any point source is prohibited unless it is in compliance with a National Pollutant Discharge Elimination System (NPDES) Permit issued by the Regional Water Quality Control Board. Point sources of pollutants of greatest concern include nutrients (ammonia and nitrate), heavy metals, toxic chemicals, chlorine, and salts.

Non-point sources of pollutants, which are also regulated under NPDES permits, include both construction-related runoff and operational runoff associated with urban uses. Surface runoff from individual sites is carried to City storm drains and/or natural drainages.

Regulations under the federal Clean Water Act require that a NPDES general construction storm water permit be obtained for projects that would disturb greater than one acre during construction. Acquisition of a NPDES permit is dependent on the preparation of a Storm Water Pollution Prevention Plan (SWPPP) that contains specific actions, termed Best Management Practices (BMPs), to control the discharge of pollutants, including sediment, into the local surface water drainages. In the State of California, Regional Water Quality Control Boards administer the NPDES permit process.

As discussed in the *Setting*, the Ventura County SQUIMP applies to the operational runoff and requires new developments and redevelopment projects to implement various BMPs to minimize the amount of pollutants entering surface waters. All projects that fall into one of eight categories are identified in the Ventura Countywide Municipal Permit as requiring SQUIMPs. These categories include: (1) single family hillside residences; (2) 100,000 square foot commercial developments; (3) automotive repair shops; (4) retail gasoline outlets; (5) restaurants; (6) home subdivisions with 10 or more housing units; (7) location within or directly adjacent to or discharging directly to an environmentally sensitive area; and (8) parking lots with 5,000 square foot or more impervious parking or access surfaces with 25 or more parking spaces and potentially exposed to stormwater runoff.

Future developments with the Planning Area that fall into any of these categories would be subject to SQUIMP requirements for implementing stormwater BMPs. Per the SQUIMP, structural or treatment control BMPs must meet the following design standards:

- *Volume based post-construction structural or treatment control BMPs shall be designed to mitigate (infiltrate or treat) storm water runoff from the volume of annual runoff to achieve 80% volume capture (Ventura County Land Development Guidelines); or*
- *Flow-based post-construction structural or treatment control BMPs shall be sized to handle the flow generated from 10% of the 50-year design flow rate.*

Implementation of these standards on future development and redevelopment projects within the Planning Area would address impacts on a project-by-project basis, thus reducing surface water quality impacts to a less than significant level.

In addition these standards, the 2005 General Plan includes the actions described under Impact HWQ-2, as well as the following actions aimed at preservation of riparian habitat and improvement of water quality.

Action 1.8	*Buffer barrancas and creeks that retain natural soil slopes from development according to State and Federal guidelines.*
Action 1.9	*Prohibit placement of material in watercourses other than native plants and required flood control structures, and remove debris periodically.*
Action 1.10	*Remove concrete channel structures as funding allows, and where doing so will fit the context of the surrounding area and not create unacceptable flood or erosion potential.*

The above actions as they relate to impacts to biological resources are discussed in detail in Section 4.4, *Biological Resources*.

Scenario 1 – Intensification/Reuse Only

This scenario would have relatively little impact on water quality because it would emphasize intensification and reuse of already urbanized areas. In many instances, replacement of older development with new development built in accordance with current runoff and water quality control standards may reduce contaminants entering surface water and groundwater. Several large agricultural parcels in the Saticoy area, the McGrath property, and other isolated agricultural lands could be developed under this scenario. Development of these properties would be expected to reduce erosion and sedimentation, but may incrementally reduce percolation and increase urban pollutants. Installation of water quality BMPs in conjunction with new development, as required by the Ventura County SQUIMP (as discussed above), would mitigate potential urban runoff pollutants with this scenario.

Scenario 2 – Intensification/Reuse + North Avenue + Olivas + Serra

Intensification/reuse impacts would be similar to those described for Scenario 1 and could be reduced to a less than significant level with implementation of Ventura County SQUIMP requirements. This scenario would also accommodate the future development of the North Avenue, Olivas, and Serra expansion areas.

The North Avenue expansion area discharges eventually to the Ventura River and detention/water quality basins could be incorporated in the development of this area. These basins would reduce silt and sediment transport and contribute to improving water quality in the Ventura River and eventually the ocean.

The Olivas expansion area drains to the Harbor and the development of this area offers significant potential for improving localized drainage facilities as well as water quality in the Harbor. This area would offer the ability to construct combination detention/desilting/water quality basins that would improve runoff water quality and significantly reduce siltation problems in the Keys.

The Serra expansion area drains to the Santa Clara River and like the North Avenue area should incorporate detention/water quality basins within the proposed development to reduce sediment transport and improve water quality from existing and proposed urbanized areas and existing agricultural runoff to the River and eventually the ocean.

Ventura County SQUIMP requirements and standards would apply to any future development within any of the expansion areas and General Plan Action 1.16 directs the City to comply with directives from regulatory authorities to update and enforce stormwater quality and watershed protection measures. Implementation of existing water quality regulations and proposed General Plan actions would reduce potential impacts to a less than significant level.

Scenario 3 – Intensification/Reuse + North Avenue + Olivas

This scenario is similar to Scenario 2 without the development of the Serra expansion area but with more intense development (higher densities) in the North Avenue and Olivas areas. A slightly higher level of water quality BMPs should go along with these higher densities. Otherwise, the only difference would be that the opportunities that go along with the development of the Serra expansion area discussed above would not occur.

As discussed under Scenario 2, any expansion area development would be required to comply with the Ventura County SQUIMP. Implementation of these existing regulations, in combination with proposed 2005 General Plan actions, would reduce potential impacts to a less than significant level.

Scenario 4 – Intensification/Reuse + North Avenue + Serra

This scenario is similar to Scenario 2 without the development of the Olivas expansion area but with more intense development in the North Avenue and Serra areas. As discussed above, a slightly higher level of water quality BMPs should go along with these higher densities. Without the development of the Olivas area, the opportunity to mitigate water quality and siltation in the Keys would not occur.

As discussed under Scenario 2, any expansion area development would be required to comply with the Ventura County SQUIMP. Implementation of these existing regulations, in combination with proposed 2005 General Plan actions, would reduce potential impacts to a less than significant level.

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga

This scenario is similar to Scenario 2 without the development of the Olivas or Serra expansion areas but with the development of the Western Cañada Larga area and with more intense development in the North Avenue area (higher densities plus additional commercial development than with Scenarios 3 and 4). The Western Cañada Larga expansion area discharges to the Ventura River and detention/water quality basins could be incorporated in the development of this area.

As discussed under Scenario 2, any expansion area development would be required to comply with the Ventura County SQUIMP. Implementation of these existing regulations, in

combination with proposed 2005 General Plan actions, would reduce potential impacts to a less than significant level.

Scenario 6 – Intensification/Reuse + North Avenue + Poinsettia

This scenario is similar to Scenario 2 except with only the development of the North Avenue and Poinsettia expansion areas. The North Avenue area is anticipated to be developed to the same intensity as in Scenario 3 and 4 so impacts would be identical to those scenarios. As with the other expansion areas, combination detention/siltation/water quality basins could be constructed in the Poinsettia area. Such facilities could improve existing water quality and siltation issues in the Keys.

As discussed under Scenario 2, any expansion area development would be required to comply with the Ventura County SQUIMP. Implementation of these existing regulations, in combination with proposed 2005 General Plan actions, would reduce potential impacts to a less than significant level.

MITIGATION MEASURES

Implementation of the requirements of the Ventura County SQUIMP, in combination with proposed 2005 General Plan policies and actions, would reduce water quality impacts to a less than significant level.

SIGNIFICANCE AFTER MITIGATION

The impacts of future development on water quality would be less than significant given compliance with State and local regulations and proposed 2005 General Plan actions.

4.9 MINERAL RESOURCES

This section addresses potential impacts to mineral resources. Both direct impacts to mineral resource production and indirect land use compatibility impacts are discussed.

4.9.1 Setting

Mineral resources are usually mineral derivatives but can include geothermal and natural gas deposits. Because mineral resources can take millions of years to replenish naturally after extraction, they are considered "nonrenewable" resources. The two principal mineral resources within the Planning Area are aggregate and petroleum resources, each of which is discussed below.

a. Aggregate. Aggregate resources comprise the basic ingredients for a large variety of rock products including fill, construction-grade concrete, and riprap. Aggregate resources include sand, gravel, and rock material.

The Planning Area is located in the Western Ventura production-consumption region (PCR), as designated by the California Geological Survey (CGS). Aggregate mining sites located within the vicinity of the Planning Area existed along the Santa Clara River, and consisted primarily of the extraction of Portland cement concrete (PCC)-grade aggregate (which has a high enough quality for use in Portland cement concrete). However, currently there are no active aggregate mining activities within this area; "red line" restrictions imposed by a joint resolution of the Ventura County Board of Supervisors has removed the portion of the Santa Clara River downstream of Highway 118 from consideration as an area for possible future mining activities (AMEC Earth and Environmental, January 2004).

b. Petroleum. Oil production has played an integral role in the development of the west Ventura area, where oil was discovered in 1885 during the drilling of a water well. By the late 1920s, a total of 113 wells were in place in west Ventura, producing approximately 57,000 barrels of oil and 213 million cubic feet of gas per day. By the 1930s, the population of the west Ventura area had doubled and the neighborhood became home to industries that supported oil production. By the 1980s, a drop in local oil production rates and a general decline in the oil production industry resulted in a substantial reduction in oil field related activity.

The only remaining petroleum fields in the Planning Area are in the foothills and the Ventura Avenue Corridor (see Figure 4.9-1). These areas are currently within the County's jurisdiction.

c. Regulatory Framework. Surface mines are regulated by the state of California in accordance with the Surface Mining and Reclamation Act (SMARA), PRC § 2710 et seq., and through the County's land use permitting processes. Adopted in 1975, SMARA has two basic objectives: (1) to safeguard access to mineral resources of regional and statewide significance in the face of competing land uses and urban expansion; and, (2) to ensure the proper reclamation of surface mining operation. Pursuant to SMARA, the California State Mining and Geology Board oversees the Mineral Resource Zone (MRZ) classification system. The MRZ system characterizes both the location and known/presumed economic value of underlying mineral resources. Typically, the lead agency under SMARA is the city or county within which the

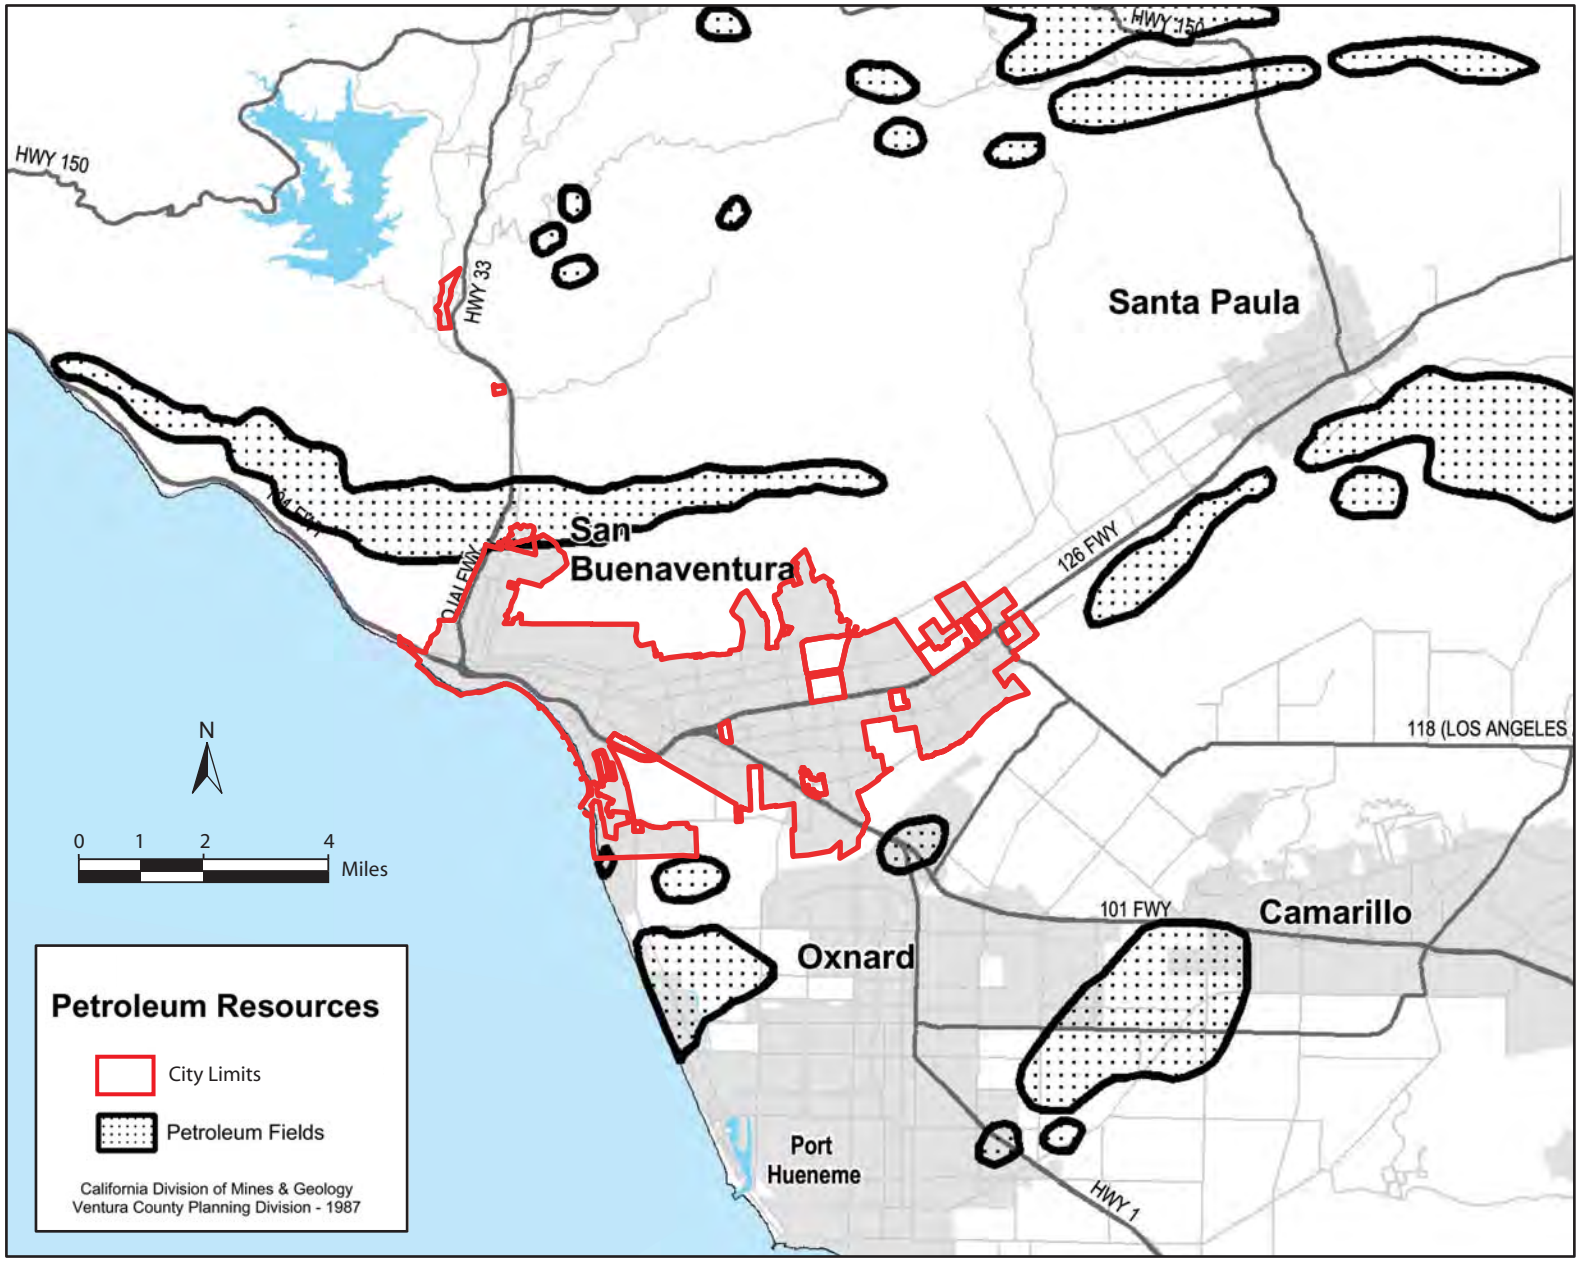
mining operation is located; however, the State Mining and Geology Board (SMGB) assumed "lead agency" status from the County on June 14, 2001, pursuant to SMARA §2774.4. The assumption of SMARA powers does not include the County's authority to review and revise, issue, enforce, and revoke mining permits. The SMGB retains the authority to review and approve reclamation plans, review and approve financial assurances, conduct annual mine inspections, and enforce compliance with SMARA regulations.

Mineral resource areas are shown on Figure 4.9-2. Areas designated as MRZ-3, or areas containing mineral deposits the significance of which cannot be determined, are located within the foothills located to the north of the City, the Serra PEA, and the Saticoy District. Areas designated as MRZ-3a, or areas with higher potential for aggregate resources than other deposits classified as MRZ-3, are located along the northern City limits and south of the Ventura Harbor. Finally, areas designated as MRZ-2, or areas designated by the state which have regional or statewide significance, are located along the Santa Clara River floodplain.

Mining operations in the County jurisdiction are regulated through the County's permitting process. Unless a mine operates as a vested operation (having been initiated before the County requirement to obtain a permit to operate), a conditional use permit must be obtained before mining operations begin. SMARA encourages consideration of values relating to recreation, watershed, wildlife, range and forage, and aesthetics in the production and conservation of minerals [§2712(b)]; and requires elimination of hazards to the public health and safety [§2712(c)]. As discussed above, there are no active conditional use permits for aggregate mining activities within areas under consideration for the 2005 General Plan Update.

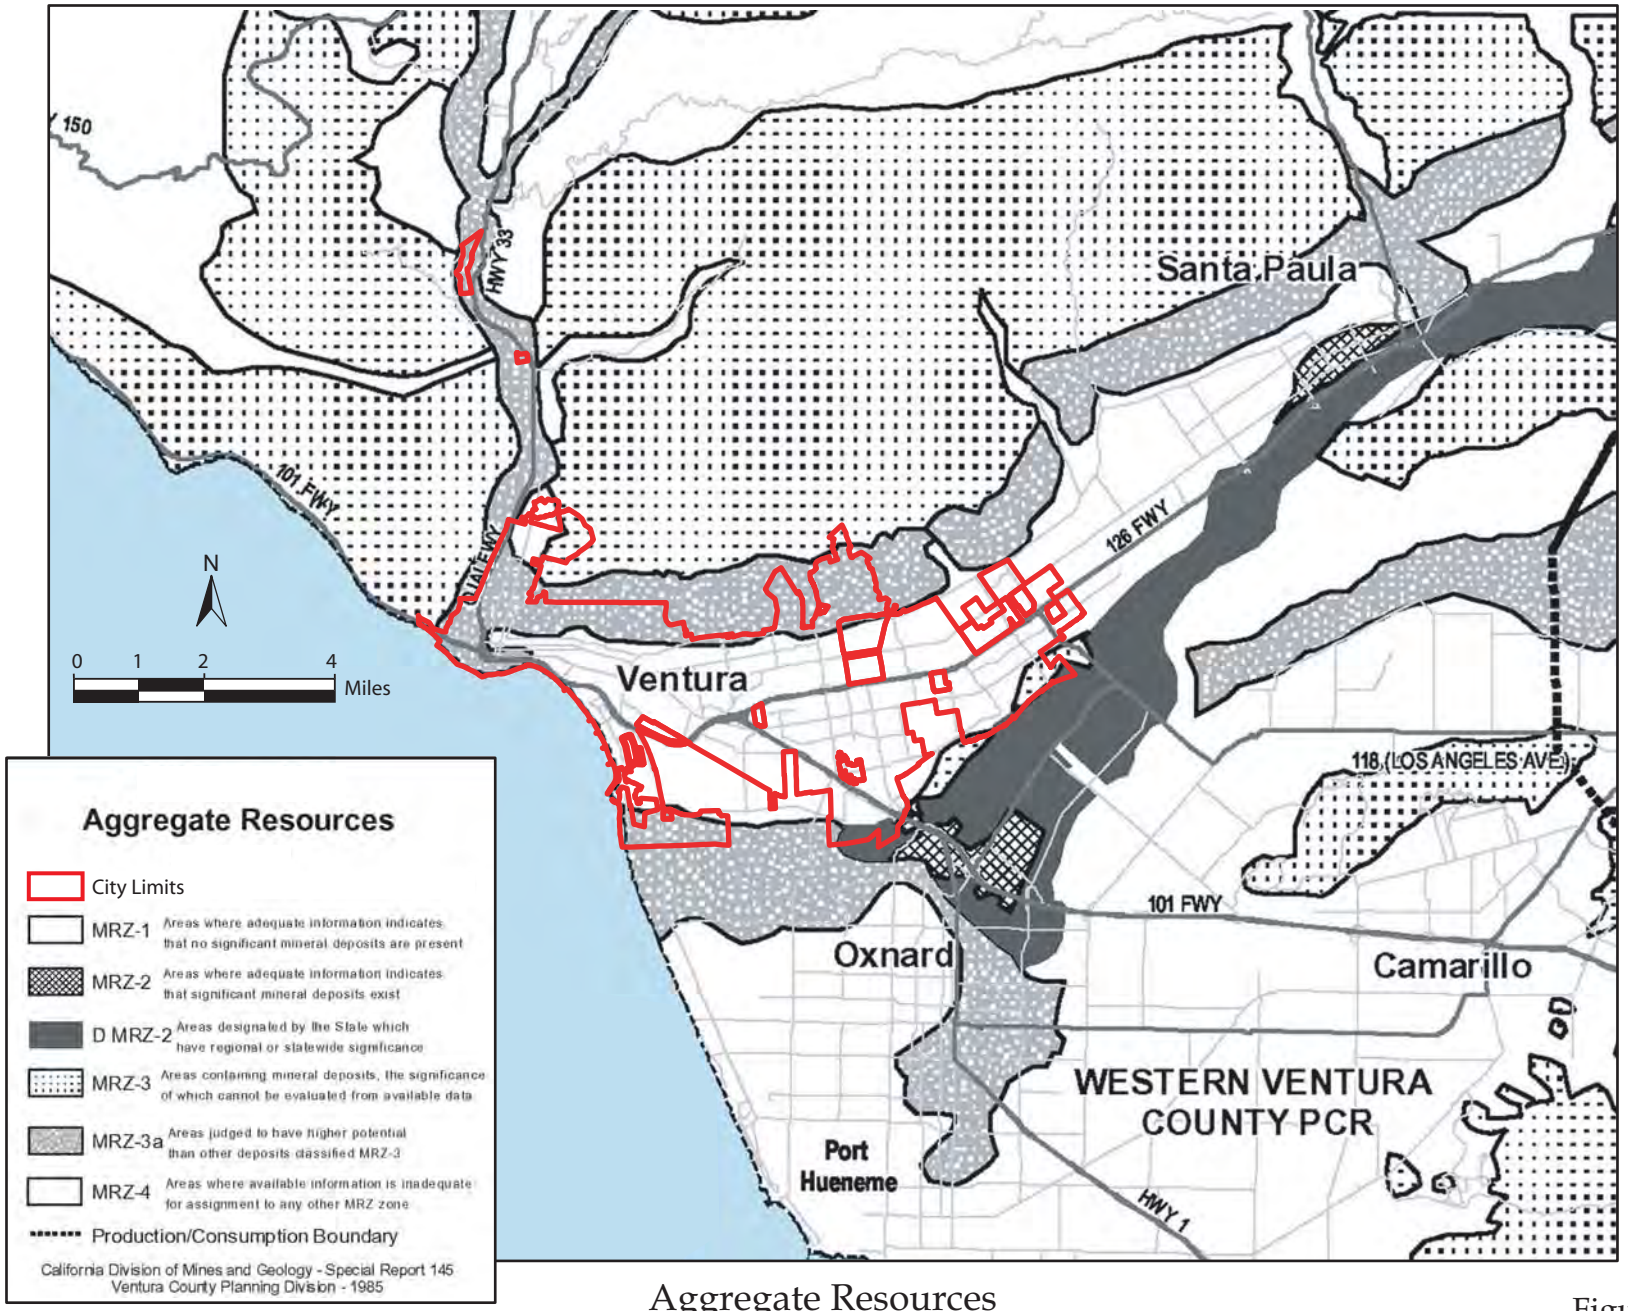
CCR Title 14, Division 2, Chapter 8, Subchapter 1 implements portions of SMARA, particularly in relation to reclamation plans, mineral resource management, and financial assurances. CCR §3502(b) specifies required components of the reclamation plan beyond PRC §2772. Section 3503 defines the minimum acceptable practices to be followed in surface mining operations related to erosion control, water quality and watershed control, protection of fish and wildlife habitat, disposal of mine waste rock and overburden, erosion and drainage, resoiling, and revegetation. Sections 3504(b) and 3702 both require that financial assurances be provided by mining/reclamation proponents to ensure that reclamation is "... performed in accordance with the approved reclamation plan ..." Sections 3703–3713 provide performance standards for wildlife habitat; backfilling, re-grading, slope stability, and re-contouring; re-vegetation; drainage, diversion structures, waterways, and erosion control; prime agricultural land reclamation; other agricultural land; building structure, and equipment removal; stream protection, including surface and groundwater; topsoil salvage, maintenance, and redistribution; tailing and mine waste management; and, closure of surface openings.

Sections 3800–3806.2 specify the process and types of financial assurances that must be provided for reclamation. CCR §3675 defines land uses that are compatible and incompatible with mining areas. Compatible land uses are defined as those that are"... inherently compatible with mining and/or that require a minimum public or private investment in structures, land improvements, and which may allow mining because of the relative economic value of the land and its improvements." Examples of compatible land uses include very low-density residential, recreational, agricultural, and grazing uses. Incompatible uses are defined as "inherently incompatible with mining and/or require public or private investment in structures, land



Petroleum Resources

Figure 4.9-1



Aggregate Resources

Figure 4.9-2

City of Ventura

improvements, and landscaping and that may prevent mining because of the greater economic value of the land and its improvements." These include high-density residential uses, public facilities, and other uses.

CCR §3676 specifies the content of mineral resource policies adopted by lead agencies pursuant to PRC §2762. Specifically, lead agencies' mineral resource policies must contain at least the following:

- *A summary of mineral resource information in relation to state policies*
- *Statements of policy in accordance with any state-classified mineral resource area*
- *Implementation measures that identify mineral deposit areas and areas targeted for conservation and possible future extraction, and General Plan policies related to those areas*

No state conservation program equivalent to SMARA exists for petroleum resources.

4.8.2 Impact Analysis

a. Methodology and Significance Thresholds. Potential impacts were assessed by comparing the land uses for each of the General Plan scenarios to the locations of existing mineral resource extraction areas. Impacts would be considered significant if development under the 2005 General Plan through the year 2025 would result in either of the following:

- *The loss of availability of a known mineral resource that would be of value to the region and the residents of the state*
- *Land use conflicts between mining operations and other land uses*

b. Project Impacts and Mitigation Measures. The matrix on the following page provides a summary comparison of mineral resource impacts for each of the scenarios under consideration. A discussion of the impacts follows.

Impact M-1	**None of the 2005 General Plan land use scenarios would significantly reduce access to mineral resources. Impacts under Scenarios 1-6 are considered to be Class III, *less than significant*.**

The Planning Area currently does not have active aggregate mining operations. The Ventura County Board of Supervisors removed areas along the Santa Clara River that have been subject to aggregate mining operations from consideration for future mining activities.

Petroleum fields in the Planning Area are in the foothills and located in the North Avenue district. An existing, inoperative oil refinery is located west of the North Avenue expansion area on the west side of SR 33. All of the oil wells and facilities are currently located within the County's jurisdiction.

Summary Comparison of Impacts for EIR Scenarios

	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
Restriction in Access to Mineral Resources (Impact M-1)	No restriction in accessibility to petroleum or aggregate resources. Impacts are Class III, less than significant.	Impact similar to Scenario 1 as expansion areas would not create impacts. Impacts are Class III, less than significant.	Impact similar to Scenario 1 as expansion areas would not create impacts. Impacts are Class III, less than significant.	Impact similar to Scenario 1 as expansion areas would not create impacts. Impacts are Class III, less than significant.	Impact similar to Scenario 1 as expansion areas would not create impacts. Impacts are Class III, less than significant.	Impact similar to Scenario 1 as expansion areas would not create impacts. Impacts are Class III, less than significant.
Compatibility Conflicts with Mineral Resource Operations (Impact M-2)	Possible introduction of residential uses that pose compatibility conflicts with existing oil operations in the Ventura Avenue Corridor. With actions included in the 2005 General Plan, impacts are Class III, less than significant.	Impacts similar to Scenario 1 as the expansion areas would not pose compatibility conflicts. Impacts are Class III, less than significant.	Impacts similar to Scenario 1 as the expansion areas would not pose compatibility conflicts. Impacts are Class III, less than significant.	Impacts similar to Scenario 1 as the expansion areas would not pose compatibility conflicts. Impacts are Class III, less than significant.	Impacts similar to Scenario 1 as the expansion areas would not pose compatibility conflicts. Impacts are Class III, less than significant.	Impacts similar to Scenario 1 as the expansion areas would not pose compatibility conflicts. Impacts are Class III, less than significant.

Scenario 1 – Intensification/Reuse Only

This land use scenario focuses on intensification and reuse of properties within the existing Sphere of Influence (SOI) and does not include expansion areas. Development under Scenario 1 involves intensification of land uses and creation of a more densely settled, urban landscape. It is anticipated that areas designated as MRZ-3a within the foothills north of the City would be removed from the SOI under Scenario 1. As this area is currently designated as Hillside Planned Residential, aggregate mining activities are not currently allowed; therefore, removal of this area from the SOI would not provide new restrictions on access to aggregate resources that might be located within this area. Similarly, MRZ-3a areas south of the Ventura Harbor would continue to have a Parks and Recreation land use designation under Scenario 1 and, therefore, the 2005 General Plan would not impose new restrictions on access to aggregate resources that might be located within this area.

Future development within the North Avenue and Upper North Avenue districts could occur within the vicinity of existing oil wells within these areas. However, as discussed in the *Setting*, oil production in the North Ventura Avenue area has dropped dramatically since its peak production several decades ago and only a limited number of oil wells remain within these growth districts. It is anticipated that the limited remaining wells could continue to produce as long as they are financially viable and would be replaced by new industrial development only as they are tapped out. Therefore, impacts relating to the accessibility of mineral resources are not considered significant.

Scenario 2 – Intensification/Reuse + North Avenue + Olivas + Serra

Impacts associated within intensification/reuse would be the same as those identified for Scenario 1. In addition, Scenario 2 would accommodate the possible future development of the North Avenue, Olivas, and Serra expansion areas. As discussed under Scenario 1, intensification and reuse of land would not reduce access to existing oil resources. The North Avenue, Olivas, and Serra expansion areas are currently in agriculture use and have no identified mineral resources onsite. The North Avenue expansion area is located approximately one mile north/northeast of existing oil wells in the North Avenue area, but would not obstruct access to the existing oil well sites. Therefore, impacts relating to the accessibility of mineral resources under Scenario 2 are considered to be less than significant.

Scenario 3 – Intensification/Reuse + North Avenue + Olivas

Impacts associated within intensification/reuse would be the same as those identified for Scenario 1. In addition, Scenario 3 would accommodate the possible future development of the North Avenue and Olivas expansion areas. As discussed under Scenarios 1 and 2, future development within these areas would not restrict access to mineral resources. No significant impacts would occur.

Scenario 4 – Intensification/Reuse + North Avenue + Serra

Impacts associated within intensification/reuse would be the same as those identified for Scenario 1. In addition, Scenario 4 would accommodate the possible future development of the North Avenue and Serra expansion areas. As discussed under Scenarios 1 and 2, future

development within these areas would not restrict access to mineral resources. No significant impacts would occur.

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga

Impacts associated within intensification/reuse would be the same as those identified for Scenario 1. In addition, Scenario 5 would accommodate the possible future development of the North Avenue and Western Cañada Larga expansion areas. As discussed under Scenarios 1 and 2, future development within the growth districts and corridors and the North Avenue expansion area would not restrict access to mineral resources. The 110-acre Western Cañada Larga expansion area is currently used for grazing and no identified mineral resources are present within the area. Moreover, the Western Cañada Larga area is located more than a mile to the north of existing oil wells within the North Avenue area. At this distance, development would not restrict access to operating oil wells. No significant impacts would occur.

Scenario 6 – Intensification/Reuse + North Avenue + Poinsettia

Impacts associated within intensification/reuse would be the same as those identified for Scenario 1. In addition, Scenario 6 would accommodate the possible future development of the North Avenue and Poinsettia expansion areas. As discussed under Scenarios 1 and 2, future development within the growth districts and corridors and the North Avenue expansion area would not restrict access to mineral resources. The 418-acre Poinsettia expansion area is currently used for agriculture. No identified mineral resources are located on, or in the vicinity of, this site. No significant impacts would occur.

MITIGATION MEASURES

Scenarios 1-6 would not reduce access to mineral resources; therefore, mitigation is not required.

SIGNIFICANCE AFTER MITIGATION

Significant impacts are not anticipated for any of the six 2005 General Plan land use scenarios.

Impact M-2	**Scenarios 1-6 could introduce new development that is located adjacent to, and potentially incompatible with, existing oil production activity in the North Avenue and Upper North Avenue districts. However, policies and actions included in the 2005 General Plan would address potential incompatibilities. Impacts would be Class III, *significant but mitigable*, for any of the six land use scenarios.**

As there are no active aggregate mining operations within the areas under consideration for each scenario, land use incompatibilities could only occur adjacent to the limited number of oil facilities. Consequently, future development within the Planning Area would generally create minimal conflicts with such operations. However, any of the land use scenarios under

consideration could introduce potentially incompatible land uses adjacent to oil wells within the Upper North Avenue and North Avenue districts. Noise and health and safety issues associated with oil facilities could create conflicts for new residential or commercial uses that are introduced within the vicinity of such sites.

The 2005 General Plan includes the following policies and actions that are relevant to compatibility between residential uses and oil production:

> ***Action 7.24*** *Only approve projects involving sensitive land uses (such as residences, schools, daycare centers, playgrounds, medical facilities) within or adjacent to industrially designated areas if an analysis provided by the proponent demonstrates that the health risk will not be significant.*
>
> ***Action 7.32*** *Require acoustical analyses for new residential developments within the mapped 60 decibel (dBA) CNEL contour, or within any area designated for commercial or industrial use, and require mitigation necessary to ensure that:*
>
> - *Exterior noise in exterior spaces of new residences and other noise sensitive uses that are used for recreation (such as patios and gardens) does not exceed 65 dBA CNEL, and*
> - *Interior noise in habitable rooms of new residences does not exceed 45 dBA CNEL with all windows closed.*

An analysis of the impacts of each land use scenario follows.

Scenario 1 – Intensification/Reuse Only

Scenario 1 includes intensification and reuse of properties within the existing SOI and does not include any expansion areas. The Upper North Avenue and North Avenue districts include a limited number of oil wells. The Upper North Avenue district also includes the closed Petrochem refinery. These districts are primarily designated for industrial uses, which generally would not conflict with oil or aggregate operations. However, it is anticipated that limited live-work or work-live residential development could be components of future industrial development. Depending upon the proximity of residential components to mineral resource extraction activities, the introduction of residential uses could pose significant compatibility conflicts relating to noise and health and safety. However, as noted above, the 2005 General Plan includes specific actions requiring analysis, and mitigation as necessary, of noise and health/safety issues for any project involving a sensitive land use within industrially-designated areas. Implementation of these actions and application of appropriate mitigation measures on a case-by-case basis would reduce compatibility conflicts to a less than significant level.

Scenario 2 – Intensification/Reuse + North Avenue + Olivas + Serra

Compatibility impacts associated within intensification/reuse would be the same as those identified for Scenario 1 and would be reduced to a less than significant level with implementation of actions included in the 2005 General Plan. In addition, this scenario would

accommodate the possible future development of the North Avenue, Olivas, and Serra expansion areas.

All three expansion areas are currently in agricultural use and none include or are adjacent to any mineral resource extraction activities. The North Avenue expansion area is located approximately one mile north of the oil wells located in the North Avenue district. Therefore, development within the North Avenue, Olivas, and Serra expansion areas would not create any compatibility conflicts with mineral resource extraction operations.

Scenario 3 – Intensification/Reuse + North Avenue + Olivas

Compatibility impacts associated within intensification/reuse would be the same as those identified for Scenario 1 and would be reduced to a less than significant level with implementation of actions included in the 2005 General Plan. As discussed under Scenario 2, neither the North Avenue expansion area nor the Olivas expansion area poses any potential compatibility conflicts with mineral resource extraction operations.

Scenario 4 – Intensification/Reuse + North Avenue + Serra

Compatibility impacts associated within intensification/reuse would be the same as those identified for Scenario 1 and would be reduced to a less than significant level with implementation of actions included in the 2005 General Plan. As discussed under Scenario 2, neither the North Avenue expansion area nor the Olivas expansion area poses any potential compatibility conflicts with mineral resource extraction operations.

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga

Compatibility impacts associated within intensification/reuse would be the same as those identified for Scenario 1 and would be reduced to a less than significant level with implementation of actions included in the 2005 General Plan. As discussed under Scenario 2, the North Avenue expansion area does not pose any potential compatibility conflicts with mineral resource extraction operations. No mineral resource extraction operations are located on or adjacent to the Western Cañada Larga expansion area. Therefore, development within that area would not pose the potential for significant compatibility impacts with mineral resource extraction activities.

Scenario 6 – Intensification/Reuse + North Avenue + Poinsettia

Compatibility impacts associated within intensification/reuse would be the same as those identified for Scenario 1 and would be reduced to a less than significant level with implementation of actions included in the 2005 General Plan. As discussed under Scenario 2, the North Avenue expansion area does not pose any potential compatibility conflicts with mineral resource extraction operations. No mineral resource extraction operations are located on or adjacent to the Poinsettia expansion area. Therefore, development within that area would not pose the potential for significant compatibility impacts with mineral resource extraction activities.

MITIGATION MEASURES

Actions included in the 2005 General Plan would reduce compatibility conflicts between residential uses and mineral extraction activity to a less than significant level. Mitigation is not required.

SIGNIFICANCE AFTER MITIGATION

Future project- and site-specific environmental review and mitigation for individual development projects that present potential incompatibility issues, as required by 2005 General Plan policies and actions, would reduce potential compatibility impacts between residential uses and mineral resource extraction activities to a less than significant level for any of the six land use scenarios.

4.10 NOISE

This section analyzes the impacts associated with exposure to noise. Impacts relating to noise from traffic, railroad activity, industrial and agricultural uses, and recreational uses are addressed.

4.10.1 Setting

a. Regulatory Setting. Guidelines for noise compatible land use, based upon the California Office of Planning and Research (OPR) Noise Element Guidelines, are shown on Figure 4.10-1. The objective of noise compatibility guidelines is to provide the community with a means of judging the noise environment that it deems to be generally acceptable.

Denotation of a land use as "clearly acceptable" implies that the highest noise level in that band is the maximum desirable for existing or conventional construction that does not incorporate any special acoustical treatment. In general, evaluation of land use that fall into the "normally acceptable," "conditionally acceptable," or "normally unacceptable" noise environments should analyze other potential factors that would affect the noise environment. These include consideration of the type of noise source, the sensitivity of the noise receptor, the noise reduction likely to be provided by structures, and the degree to which the noise source ay interfere with speech, sleep, or to other activities characteristic of the land use.

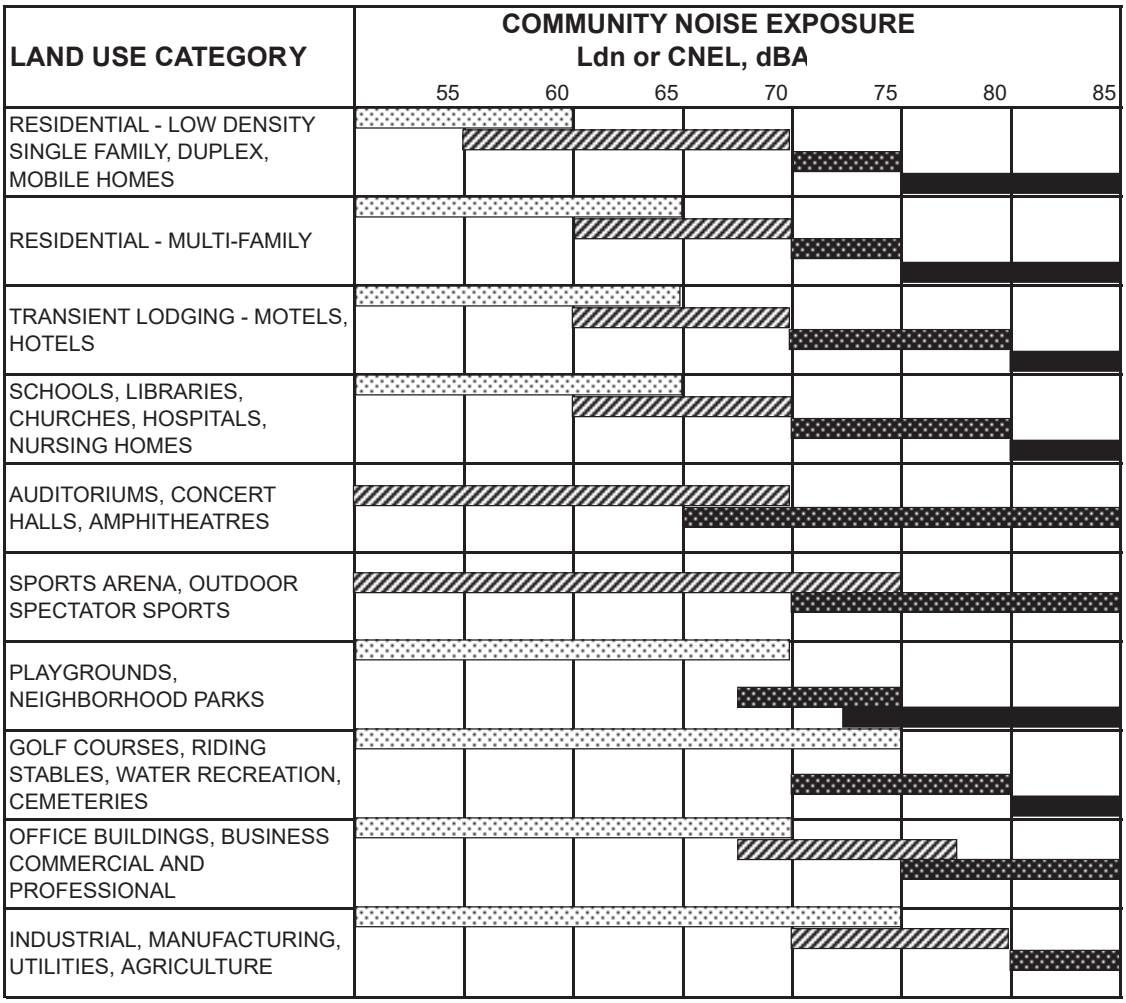
Ventura Noise Ordinance. The City of Ventura Noise Ordinance (Municipal Code § 10.650) prohibits unnecessary, excessive, or annoying noise in the City. The Ordinance does not control traffic noise, but applies to all noise sources located on private property including traffic noise. As part of this ordinance, properties within the City are assigned a noise zone based on their corresponding land use. "Noise-sensitive" properties are designated as Noise Zone I; residential properties are designated Noise Zone II; commercial properties are included in Noise Zone III, and industrial/agricultural districts are designated as Noise Zone IV. The Ordinance also limits the amount of noise generated by uses during normal operation that may affect the surrounding areas. Table 4.10-1 shows the allowable noise levels and corresponding times of day for each of the identified noise zones.

Table 4.10-1
Exterior Noise Levels

Time Period	ZONE I	ZONE II	ZONE III	ZONE IV
7 A.M. to 10 P.M.	50 dBA	50 dBA	60 dBA	70 dBA
10 P.M. to 7 A.M.	45 dBA	45 dBA	55 dBA	70 dBA

Source: City of Ventura Municipal Code § 10.650.130B.

The noise standards shown in Table 4.10-1 apply to any noise-generating activity that exceeds the applicable level for a cumulative period of more than 30 minutes in any hour. For noise levels that last less than 30 minutes, the following standards apply: maximum noise levels equal to the value of the noise standard plus 5 dBA for a cumulative period of no more than 15 minutes in any hour, 10 dBA for a cumulative period of no more than 5 minutes in any hour, 15



NORMALLY ACCEPTABLE
Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction, without any special noise insulation requirements.

NORMALLY UNACCEPTABLE
New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design

CONDITIONALLY ACCEPTABLE
New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning will normally suffice.

CLEARLY UNACCEPTABLE
New construction or development should generally not be undertaken.

Source: Guidelines for the Preparation and Content of Noise Elements of the General Plan, California Office of Planning and Research, 1998.

Noise Compatibility Matrix

Figure 4.10-1

City of Ventura

dBA for a cumulative period of no more than 1 minute in any hour, or 20 dBA for any period of time. If the ambient sound level exceeds the allowable exterior standard, the ambient levels become the standard.

The following noise standards for interior noise levels apply for all multifamily residential units within Zones I or II. Daytime (7 a.m.–10 p.m.) noise levels shall not exceed 45 dBA and nighttime (10pm-7am) shall not exceed 40 dBA (Section 10.650.130 C.1).

Section 10.650.150 of the Ordinance exempts construction activities from the above standards, provided that they are conducted between 7 A.M. and 8 P.M. Construction activity is permitted between the hours of 8 pm and 7 am, provided that the noise levels do not exceed the standards specified in Table 4.10-1.

b. Overview of Sound Measurement. Noise level (or volume) is generally measured in decibels (dB) using the A-weighted sound pressure level (dBA). The A-weighting scale is an adjustment to the actual sound power levels to be consistent with that of human hearing response, which is most sensitive to frequencies around 4,000 Hertz (about the highest note on a piano) and less sensitive to low frequencies (below 100 Hertz). In addition to the actual instantaneous measurement of sound levels, the duration of sound is important since sounds that occur over a long period of time are more likely to be an annoyance or cause direct physical damage or environmental stress. One of the most frequently used noise metrics that considers both duration and sound power level is the equivalent noise level (Leq). The Leq is defined as the single steady A-weighted level that is equivalent to the same amount of energy as that contained in the actual fluctuating levels over a period of time. Typically, Leq is summed over a one-hour period.

The sound pressure level is measured on a logarithmic scale with the 0 dB level based on the lowest detectable sound pressure level that people can perceive (an audible sound that is not zero sound pressure level). Decibels cannot be added arithmetically, but rather are added on a logarithmic basis. Based on the logarithmic scale, a doubling of sound energy is equivalent to an increase of 3 dB. Because of the nature of the human ear, a sound must be about 10 dB greater than the reference sound to be judged as twice as loud. In general, a 3 dB change in community noise levels is noticeable, while 1-2 dB changes generally are not perceived. Quiet suburban areas typically have noise levels in the range of 40-50 dBA, while those along arterial streets are in the 50-60+ dBA ranges. Normal conversational levels are in the 60-65 dBA range, and ambient noise levels greater than that can interrupt conversations.

Noise levels typically attenuate at a rate of 6 dBA per doubling of distance from point sources such as industrial machinery. For example, a person standing 25 feet from an industrial machine may experience noise levels of 75 dBA, while a person standing 50 feet from the same noise source would experience noise levels of 69 dBA, and a person standing 100 feet from the source would experience noise levels of 63 dBA. Noise from lightly traveled roads typically attenuates at a rate of about 4.5 dBA per doubling of distance. Noise from heavily traveled roads typically attenuates at about 3 dBA per doubling of distance.

The actual time period in which noise occurs is also important since noise that occurs at night tends to be more disturbing than that which occurs during the daytime. The Day-Night average level (L_{DN}) recognizes this characteristic by weighting the hourly Leqs over a 24-hour

period. The weighting involves the addition of 10 dBA to actual nighttime (10 PM to 7 AM) noise levels, accounting for the greater amount of disturbance associated with noise during that time period. The Community Noise Equivalent Level (CNEL) is also commonly used to specify noise standards. The CNEL is identical to the L_{DN} except that it also adds 5 dB to sound levels occurring from 7 p.m. to 10 pm. The two measures of noise exposure, Ldn and CNEL, are basically equivalent; there is generally less than 1 dBA difference between their values.

c. Existing Noise Environment. The City of Ventura is affected by several different sources of noise, including automobile traffic, agricultural or industrial activity, the Ventura County Fairgrounds, and periodic nuisances such as construction, loud parties, and other events. The major sources of noise in Ventura include the following:

- *Highway Traffic on Interstate 101, State Routes 33 and 126*
- *Traffic Along Major Arterials*
- *Union Pacific Railroad*
- *Ventura County Fairgrounds*
- *Ventura Shooting Range*
- *Ventura Raceway at Seaside Park*

Various locations within Ventura were surveyed from October 2001 to April 2002 to establish existing levels of noise. These measurement sites were selected to determine the impact from major sources of noise within the City. A total of 34 measurements were taken, which provide a basis for understanding the overall existing noise environment of the city. Table 4.10-2 summarizes the noise monitoring results at each of the 34 locations. The L_{eq} values for each location are shown on Figure 4.10-2. It should be noted that the sound level at any location fluctuates during the day. Therefore, the results of the measurements are not necessarily indicative of long-term average daily noise exposures at the measurement positions.

Roadway Noise. Vehicle traffic on local freeways and major roads is by far the greatest generator of noise throughout the planning area. Major road noise sources include three freeways (U.S. 101, SR 126, and SR 33) and several major arterial streets with high levels of traffic (Victoria Avenue, Main Street, Telephone Road, Telegraph Road). Four measurement locations (Sites 2, 3, 16, and 23) were subject primarily to noise originating from freeway traffic. The Leq value for these sites ranged from 63.7 to 72.6 dBA. Site 3 had a significantly lower Leq than the other three, most likely because of the existence of a sound barrier protecting that location from freeway noise. Four measurement sites (Sites 4, 9, 13, and 19) correspond to principal arterials. Noise levels (Leq) for these roadways ranged from 62.3 to 72.6 dBA.

A study completed in 2000 assessed noise levels in Ventura County and provided recommendations for noise barrier locations along Highways 101, 33, and 126. Based upon these measurements, using either 66 or 67 dBA Peak Hour Leq as the threshold (depending on activity land use category), and considerations such as the potential effectiveness of a noise barrier in the proposed project areas, specific areas were recommended for further consideration of noise barriers. Those areas with the highest Peak Hour dBA (exceeding 70 dBA) where noise barriers were recommended for further consideration are summarized in Table 4.10-3.

Railroad Operations. The Union Pacific Railroad (UPRR) operates one rail line through the City. The UPRR corridor runs parallel to Highway 101 crossing over the highway in the northern portion of the City. The eastern spur of the railroad line that runs from Ventura east towards Fillmore where the tracks diverge near Highway 101 is no longer actively used for freight or passenger transport. Train pass-bys can be disturbing to nearby receivers, particularly at night, as evidenced by the maximum sound level (Lmax) of 83.7 dBA measured at Site 5. Trains also generate ground-borne vibration and noise, which varies depending on the type of train, weight of load haulage, track conditions, and other factors.

Rail transit service is provided by Metrolink and AMTRAK. Metrolink provides rail service between Ventura and Union Station in Los Angeles on the Ventura County line. Presently, two trains in both the daytime and evening operate the entire length of the route between Ventura and Union Station. Rail service is also provided by AMTRAK via the Pacific Surfliner, which runs between San Luispo to the north and San Diego to the south. Four trains operate daily, with one additional train on the weekends and one additional train during the weekdays.

Commercial, Industrial and Agricultural Operations. Commercial and industrial activity can produce noise from heavy traffic, deliveries, and machinery. While industrial activity primarily occurs along Ventura Avenue and parts of the Arundell District, commercial activity occurs throughout the City, particularly along major roadways. Measurements near commercial and industrial activity include Sites 25, 27, 28, 29, and 30. Noise levels at these sites ranged from 58 to 74 dBA, although higher noise levels were mainly a result of heavy traffic.

Agricultural operations produce noise associated with equipment such as diesel engines, aerial application aircrafts (crop dusters), bird frightening devices, and tractors. Many of these noise sources are related to seasonal operations.

Recreational Activity. Certain recreational activities that occur within the City may be considered substantial noise generators. Noise-generating events occur periodically, but may produce high levels of noise that are audible at nearby locations. Three main sources of recreational nuisance noise include the Ventura Shooting Range, the Ventura Raceway at Seaside Park, and the Ventura County Fairgrounds.

The outdoor Ventura Shooting Range in the northern part of Grant Park has been the source of occasional noise complaints in the Downtown and West Ventura areas. In response, the City Parks Department completed a study in 1998 that measured noise levels generated by various ammunition types. Table 4.10-4 describes the highest sound levels measured at four sites.

Measurements recorded during the community noise survey in West Ventura (Sites 31, 32, and 33) while the shooting range was open indicated firing range could be heard only from Site 33. This may be due to installation of sound barriers on the north side of the range since the 1998 study; however, the 1998 measurements were obtained at locations slightly farther north, where the range may still be audible. The range will be closed to the public in January 2006, but will continue to be used by the Ventura Police Department.

The Ventura Raceway at Seaside Park hosts auto races on Saturday evenings. A measurement taken near the end of S. Figueroa Street (Site 34) during a race registered maximum noise levels of

Table 4.10-4

80.1 dBA. The Ventura County Fairgrounds holds events, such as music concerts, fireworks, and other events that create noise audible to residential areas.

d. Noise Sensitive Uses. Noise-sensitive locations include areas where an excessive amount of noise would interfere with normal operations or activities and where a high degree of noise control may be necessary. Examples include schools, hospitals, and residential areas. Recreational areas may be considered noise-sensitive where quiet and solitude may be an important aspect of the specific recreational experience (such as a garden or campground). In most instances, recreational areas are tolerant of higher noise levels.

A number of residential areas in Ventura are located adjacent to freeways or along major arterials. The community noise survey included measurements at eight residential sites (1, 6, 7, 10, 12, 17, 20, and 24). Residential areas experienced sound levels ranging from 52.3 to 70.0 dBA. The highest measured residential noise levels were along Telegraph Road, though levels exceeding 60 dBA were also measured along Poli Street, Channel Drive, Aurora Drive, and Nightingale Street.

Many schools in the Planning Area are located adjacent to major roads, with resultant elevated noise levels. In particular, Buena High School and Mound Elementary School are located directly adjacent to SR 126, while Sheridan Way Elementary is located adjacent to SR 33. Several other area schools are located on major arterials with relatively high noise levels. The community noise survey included measurements at four schools (sites 11, 14, 15, and 21), with sound level measurements ranging from 60.9 to 73.6 dBA.

The two hospitals in Ventura (Community Memorial and the County Medical Center) are both located on Loma Vista Road, a relatively highly traveled arterial. However, with the exception of the road frontage, the hospital sites are relatively quiet due to shielding by onsite structures, and interior noise levels are not known to exceed acceptable levels at either facility. The community noise survey included a measurement at Community Memorial Hospital (site 18).

4.10.2 Impact Analysis

a. Methodology and Thresholds of Significance. The analysis of noise impacts focuses upon the project's impact to surrounding noise-sensitive land uses and the impact of existing noise sources upon residents of the Planning Area.

The roadway noise contours were calculated using the Federal Highway Administration's Highway Traffic Noise Prediction Model, U.S. Department of Transportation (1998). Model input data included existing and projected average daily traffic levels, day/evening/night percentages of automobiles, medium and heavy trucks, vehicle speeds; evening peak hour traffic levels, and roadway widths. A general estimation of freeway height with respect to adjacent land (elevated, level or depressed) is also considered. The average daily traffic assumptions and distances to the roadway 60, 65, 70, and 75 dBA CNEL contours are provided in the Appendix.

For the purpose of this analysis, a significant impact would occur if growth accommodated under the 2005 General Plan would result in any of the following conditions:

- *Exposure of persons to or generation of noise levels in excess of standards established in the General plan or noise ordinance*
- *Exposure of persons to or generation of excessive ground-borne noise levels*
- *A substantial permanent increase in ambient noise levels above levels existing without the project*
- *A substantial temporary or periodic increase in ambient noise levels above levels existing without the project*

For purposes of defining a "substantial" increase in traffic noise, the Federal Interagency Committee on Noise (FICON) recommendations were used. These are as follows:

Significance of Changes in Operational Roadway Noise Exposure

Ambient Noise Level (CNEL)	Significant Impact
< 60 dB	+ 5.0 dB or more
60 – 65 dB	+ 3.0 dB or more
> 65 dB	+ 1.5 dB or more

Temporary or periodic noise increases associated with General Plan implementation would primarily result from future construction activity. A temporary increase in noise is considered "substantial" if it would be in conflict with the City Noise Ordinance, which allows noise-generating construction activity between the hours of 7 AM and 8 PM.

b. Project Impacts and Mitigation Measures. The matrix on the following page provides a summary comparison of noise impacts for each of the scenarios under consideration. A discussion of project impacts follows.

Impact N-1	**Growth accommodated through 2025 under any of the six land use scenarios would incrementally increase noise along area roadways and potentially expose new noise sensitive uses to noise exceeding City standards. Implementation of proposed General Plan policies would address potential exposure to excessive noise for new development. Noise levels would generally increase for existing uses adjacent to transportation corridors. Impacts on most roadways would not be significant, but a potentially significant noise increase could occur along North Ventura Avenue under any scenario and along Johnson Drive under Scenario 6. Impacts are therefore considered Class II, *significant but mitigable,* for all six scenarios.**

Noise contours for major transportation sources in Ventura have been generated for current and future conditions. The noise contours represent bands of equal noise exposure. They are used to provide a general visualization of sound levels, not absolute lines of demarcation. For example, a 65 dBA CNEL level describes an area as having a time-average constant sound level of roughly 65 dBA even though the area would experience individual sound events with higher and lower sound levels. Noise contours present a worst-case scenario in which no structures, sound walls, or other barriers intervene between the source and receiver; actual noise levels may be considerably lower than indicated. Figure 4.10-3 shows noise contours that were developed using existing daily traffic data.

In order to generate noise contours for 2025 conditions, data from the traffic analysis described in Section 4.12, *Transportation and Circulation,* was used to represent the most intensification, and therefore the most conservative estimate of future noise levels. The future noise contour map is shown on Figure 4.10-4. The map shows several possible roadway extensions that could be constructed if either the Olivas expansion area or Serra expansion area is developed at some point in the future. Contours generated from estimated traffic levels on these roadways would only apply if the roadway were constructed.

As seen on the existing noise contour map, areas near freeways and major arterials are routinely exposed to noise levels that exceed 60 dBA CNEL. In 2025, expected increases in traffic levels would result in a greater overall area (about half of the entire city) within the 60 dBA contour, as compared to existing conditions. In particular, the increased traffic levels on SR 126 expected in 2025 would extend the 60 dBA contour to include almost the entire area between Telegraph Road and Telephone Road. Traffic increases on Wells Road, Olivas Park Drive, and Foothill Road also result in extending the boundaries of the 60 dBA contour along those roads. It should be noted that these contours do not account for the presence of sounds walls and other barriers, which are present in many locations. The purpose of the contour map

Summary Comparison of Impacts for EIR Scenarios

	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
Traffic Noise Impacts on Existing and Proposed Noise-sensitive Development (Impact N-1)	Projected traffic growth would increase noise along all major transportation corridors. Compliance with Action 7.32 reduces impacts to future development to less than significant. Impacts to existing development generally are not significant, but could be significant along N. Ventura Avenue. Impacts are considered Class II, significant but mitigable.	Intensification/reuse impacts similar to Scenario 1. Expansion areas are exposed to noise from various road sources (SR 33, U.S. 101, Olivas Park Drive, Telephone Road). Action 7.32 addresses possible impacts to new development. Impacts to sensitive uses along North Ventura Avenue are Class II, significant but mitigable.	Impacts similar to Scenario 2 except no development would occur in the Serra expansion area and traffic noise would be incrementally greater in and adjacent to the Olivas expansion area. Action 7.32 addresses possible impacts to new development. Impacts to sensitive uses along North Ventura Avenue are Class II, significant but mitigable.	Impacts similar to Scenario 2 except no development would occur in the Olivas expansion area and traffic noise would be incrementally greater in and adjacent to the Serra expansion area. Action 7.32 addresses possible impacts to new development. Impacts to sensitive uses along North Ventura Avenue are Class II, significant but mitigable.	Intensification/reuse impacts would be similar to Scenario 1. Action 7.32 addresses possible impacts to new development. Traffic generation along North Ventura Avenue would be greater than under the other scenarios. Impacts to sensitive uses along North Ventura Avenue are Class II, significant but mitigable.	Impacts similar to Scenario 2 except noise increases would be greater along portions of Victoria Avenue and Johnson Drive. Action 7.32 addresses possible impacts to new development. Impacts to sensitive uses along North Ventura Avenue and Johnson Drive are Class II, significant but mitigable.
Construction Noise Impacts on Noise-sensitive Uses (Impact N-2)	Construction of individual projects in the Planning Area could intermittently generate high noise levels. Compliance with Noise Ordinance restrictions on construction timing reduce this impact to Class III, less than significant.	Impacts similar to Scenario 1. Compliance with Noise Ordinance restrictions on construction timing reduce this impact to Class III, less than significant.	Impacts similar to Scenario 1. Compliance with Noise Ordinance restrictions on construction timing reduce this impact to Class III, less than significant.	Impacts similar to Scenario 1. Future Noise Contours (CNEL) Figure 4.10-4

is to identify areas where noise is a potential concern. In many instances, actual sound levels may be lower than shown on Figure 4.10-4 and mitigation may not be required in all cases.

The 2005 General Plan would accommodate development of new residential uses (and other sensitive receptors) in areas exceeding the 60 dBA CNEL noise standard. In addition, projected traffic growth would increase noise levels along area roadways.

General Plan Action 7.32 requires an acoustical analysis and mitigation prior to development of any residential development within the 60 dBA CNEL contour, as shown on Figure 4.10-4, and incorporation of appropriate mitigation to reduce exterior noise at residences to 65 dBA CNEL or lower and reduce interior noise levels at residences to 45 dBA CNEL or lower. In addition, Action 7.33 calls for the construction of sound walls along U.S. 101, SR 126, and SR 33 in areas where existing residences are exposed to exterior noise exceeding 65 dBA CNEL, as funding becomes available.

Scenario 1 - Intensification/Reuse Only

As discussed in Section 4.12, *Transportation and Circulation*, overall citywide growth in average daily traffic (ADT) through 2025 is estimated at 18.7% under this scenario. Traffic growth would be somewhat higher or lower on certain roadways, but most of the roadways in the Planning Area are projected to experience traffic growth of 25% or less. A large portion of the Planning Area is already within the 60 dBA CNEL contour, and in the 2025 scenario, a larger portion of the Planning Area would potentially be exposed to noise levels of 60 dBA CNEL or higher. Noise levels are and would remain highest along portions of U.S. 101, SR 126, and SR 33 that lack sound walls.

For areas where noise levels already exceed the City's 65 dBA CNEL exterior standard for residential uses, growth accommodated under Scenario 1 would further this exceedance. However, the increase in noise associated with traffic increases of 25% or less would be less than 1 dBA, an increase that would not be audible to most listeners and is less than the FICON standards described above (3 dBA increase if ambient noise is 60-65 dBA CNEL and 1.5 dBA increase if ambient noise exceeds 65 dBA CNEL). The possible extensions of roadways such as Floral Drive, Cedar Street, and North Bank Drive would create a new noise source for adjacent residences; however, the relatively low traffic volumes anticipated for these road extensions would not be expected to generate noise exceeding City standards. Thus, although traffic growth would increase overall noise exposure in the community, increased exposure to noise generally is not considered a significant impact of growth accommodated under this scenario. The possible exception is North Ventura Avenue, which could potentially experience noise level increases of over 1.5 dBA. Such increases would affect relatively few sensitive receivers; nevertheless, this is considered a potentially significant impact.

Much of the future development that could be accommodated within districts, corridors, and neighborhood centers would be located along main travel corridors with relatively high noise levels. With the exception of portions of the Arundell district, all residential development within districts and corridors would potentially be exposed to noise exceeding 60 dBA CNEL. Noise levels in portions of the Downtown, North Avenue, Upper North Avenue, Arundell, North Bank, and Montalvo districts are projected to exceed 65 dBA CNEL. Noise levels along portions of the Main Street, Thompson Boulevard, Telegraph Road, Victoria Avenue, Johnson

Drive, and Wells Road corridors may also exceed 65 dBA CNEL. Redesignation of industrial properties adjacent to SR 33 in West Ventura for residential use could also expose residences to noise over 65 dBA CNEL. Exposure to excessive noise levels in these areas would be addressed through Action 7.32, which requires acoustical analysis for projects within areas exposed to noise levels exceeding 60 dBA CNEL and implementation of appropriate mitigation to reduce exterior noise levels to below 65 dBA CNEL and interior levels to below 45 dBA CNEL. Depending upon the project and location, mitigation could consist of site design to shield exterior areas, construction of sound walls or other barriers, and/or incorporation of building features (double paned windows, solid core doors, special building materials) that reduce interior noise. Compliance with this action would reduce noise impacts for future developments to a less than significant level.

Scenario 2 - Intensification/Reuse + North Avenue + Olivas + Serra

Traffic noise impacts to existing uses would be similar to those described under Scenario 1. Overall citywide growth in average daily traffic (ADT) through 2025 is estimated at 22.5% under this scenario. Traffic growth would be somewhat higher or lower on certain roadways, but most of the roadways in the Planning Area are projected to experience traffic growth of 25% or less. Certain areas of the City – notably, areas adjacent to U.S 101, SR 126, and SR 33 that lack sound walls – will continue to be exposed to noise exceeding 65 dBA CNEL. However, the increase in noise associated with future traffic increases is generally expected to be less than 1 dBA, which is less than the FICON standards described above. Noise sensitive uses are not located adjacent to most of the roads projected to experience higher increases in traffic and associated noise, such as Olivas Park Drive, Wells Road, Stanley Avenue, Mills Road south of Telegraph Road, and Victoria Avenue south of U.S. 101. Thus, although noise levels may audibly increase on these roads, such increases would not substantially affect noise sensitive uses.

An approximately 50% increase in traffic is projected on the segment of Kimball Road between SR 126 and Telephone Road as the extension of Kimball Road that would accompany Serra area development attracts traffic to that roadway. This could generate noise level increases of over 1.5 dBA; however, the only noise-sensitive uses along that road segment (single family residences along the east side of Kimball Road) are protected by a sound wall. A relatively high increase in traffic – approximately 44% - is also projected along Harbor Boulevard south of Seaward Avenue (which is fronted by residential uses). However, the noise level increase associated with such an increase is estimated at 1.2 dBA, which is less than the 1.5 dBA threshold that would apply along that roadway.

Although traffic growth would increase overall noise exposure in the community, increased exposure to noise generally is not considered a significant impact of growth accommodated under this scenario. As with Scenario 1, the potential exception is North Ventura Avenue. Noise level increases of more than 1.5 dBA could occur along that roadway, which is a potentially significant impact. Implementation of 2005 General Plan Action 7.33 could potentially address exposure of existing residences to freeway noise through construction of sound walls along U.S. 101, SR 126, and SR 33 where residences are exposed to noise exceeding 65 dBA CNEL.

Similar to Scenario 1, much of the future development that could be accommodated within districts, corridors, and neighborhood centers under this scenario would be located along main travel corridors with relatively high noise levels. In addition, as shown on Figure 4.10-4, portions of the North Avenue, Olivas, and Serra expansion areas would also be exposed to noise in excess of 60 dBA CNEL. The westernmost portion of the North Avenue expansion area and the northernmost portion of the Olivas expansion area would potentially be exposed to noise in excess of 65 dBA CNEL. Exposure to excessive noise levels would be addressed through the General Plan Action 7.32, which requires acoustical analysis for projects within areas exposed to noise levels exceeding 60 dBA CNEL and implementation of appropriate mitigation to reduce exterior noise levels to below 65 dBA CNEL and interior levels to below 45 dBA CNEL. Compliance with this action would reduce noise impacts for future developments to a less than significant level.

Scenario 3 - Intensification/Reuse + North Avenue + Olivas

Impacts to existing uses related to traffic growth would be similar to those described under Scenario 1. Overall citywide growth in average daily traffic (ADT) through 2025 is estimated at 21.9% under this scenario. Traffic growth would be somewhat higher or lower on certain roadways, but most of the roadways in the Planning Area are projected to experience traffic growth of 25% or less. Certain areas of the City – notably, areas adjacent to U.S 101, SR 126, and SR 33 that lack sound walls – will continue to be exposed to noise exceeding 65 dBA CNEL. However, the increase in noise associated with future traffic increases is generally expected to be less than 1 dBA, which is less than the FICON standards described above. As with Scenario 2, a relatively high increase in traffic – approximately 52% - is projected along Harbor Boulevard south of Seaward Avenue (which is fronted by residential uses). However, the noise level increase associated with such an increase is estimated at 1.3 dBA, which is less than the 1.5 dBA threshold that would apply along that roadway.

Traffic growth would increase overall noise exposure in the community, but increased exposure to noise generally is not considered a significant impact of growth accommodated under this scenario. As with Scenarios 1 and 2, the potential exception is North Ventura Avenue. Noise level increases of more than 1.5 dBA could occur along that roadway, which is a potentially significant impact. Implementation of General Plan Action 7.33 could address exposure of existing residences to freeway noise through construction of sound walls along U.S. 101, SR 126, and SR 33 where residences are exposed to noise exceeding 65 dBA CNEL.

Similar to Scenario 1, much of the future development that could be accommodated within districts, corridors, and neighborhood centers under this scenario would be located along main travel corridors with relatively high noise levels. In addition, as shown on Figure 4.10-4, portions of the North Avenue and Olivas expansion areas would also be exposed to noise in excess of 60 dBA CNEL. The westernmost portion of the North Avenue expansion area and the northernmost portion of the Olivas expansion area would potentially be exposed to noise in excess of 65 dBA CNEL. Exposure to excessive noise levels would be addressed through the General Plan Action 7.32, which requires acoustical analysis for projects within areas exposed to noise levels exceeding 60 dBA CNEL and implementation of appropriate mitigation to reduce exterior noise levels to below 65 dBA CNEL and interior levels to below 45 dBA CNEL. Compliance with this action would reduce noise impacts for future developments to a less than significant level.

Scenario 4 - Intensification/Reuse + North Avenue + Serra

Impacts to existing uses related to traffic growth would be similar to those described under Scenario 1. Overall citywide growth in average daily traffic (ADT) through 2025 is estimated at 21.7% under this scenario. Traffic growth would be somewhat higher or lower on certain roadways, but most of the roadways in the Planning Area are projected to experience traffic growth of 25% or less. Certain areas of the City – notably, areas adjacent to U.S 101, SR 126, and SR 33 that lack sound walls – will continue to be exposed to noise exceeding 65 dBA CNEL. However, the increase in noise associated with future traffic increases is generally expected to be less than 1 dBA, which is less than the FICON standards described above. Noise sensitive uses are not located adjacent to most of the roads projected to experience higher increases in traffic and associated noise, such as Olivas Park Drive, Wells Road, Stanley Avenue, and Victoria Avenue south of U.S. 101. Noise levels may audibly increase on these roads, but such increases would not substantially affect noise sensitive uses. Similar to Scenario 2, Kimball Road between SR 126 and Telephone Road would experience an approximately 50% increase in traffic under this scenario. This could generate noise level increases of over 1.5 dBA; however, the only noise-sensitive uses along that road segment (single family residences along the east side of Kimball Road) are protected by a sound wall.

Traffic growth would increase overall noise exposure in the community, but increased exposure to noise generally is not considered a significant impact of growth accommodated under this scenario. As with Scenarios 1-3, the potential exception is North Ventura Avenue. Noise level increases of more than 1.5 dBA could occur along that roadway, which is a potentially significant impact. Implementation of 2005 General Plan Action 7.33 could address exposure of existing residences to freeway noise through construction of sound walls along U.S. 101, SR 126, and SR 33 where residences are exposed to noise exceeding 65 dBA CNEL.

Similar to Scenario 1, much of the future development that could be accommodated within districts, corridors, and neighborhood centers under this scenario would be located along main travel corridors with relatively high noise levels. In addition, as shown on Figure 4.10-4, portions of the North Avenue and Serra expansion areas would be exposed to noise in excess of 60 dBA CNEL. The westernmost portion of the North Avenue expansion area would potentially be exposed to noise in excess of 65 dBA CNEL. Exposure to excessive noise levels would be addressed through the 2005 General Plan Action 7.32, which requires acoustical analysis for projects within areas exposed to noise levels exceeding 60 dBA CNEL and implementation of appropriate mitigation to reduce exterior noise levels to below 65 dBA CNEL and interior levels to below 45 dBA CNEL. Compliance with this action would reduce noise impacts for future developments to a less than significant level.

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga

Impacts to existing uses related to traffic growth would be similar to those described under Scenario 1. Overall citywide growth in average daily traffic (ADT) through 2025 is estimated at 20.6% under this scenario. Traffic growth would be somewhat higher or lower on certain roadways, but most of the roadways in the Planning Area are projected to experience traffic growth of 25% or less. Certain areas of the City – notably, areas adjacent to U.S 101, SR 126, and SR 33 that lack sound walls – will continue to be exposed to noise exceeding 65 dBA CNEL. However, the increase in noise associated with future traffic increases is generally expected to

be less than 1 dBA, which is less than the FICON standards described above. Noise sensitive uses are not located adjacent to most of the roads projected to experience higher increases in traffic and associated noise, such as Olivas Park Drive, Wells Road, Stanley Avenue, and Victoria Avenue south of U.S. 101. Although noise levels may audibly increase on these roads, such increases would not substantially affect noise sensitive uses. Traffic levels are projected to more than double along Ventura Avenue north of Shell Road under this scenario, from about 6,000 ADT to 15,000 ADT. This would increase noise along that road segment by more than 3 dBA, which is a potentially audible increase. Although the number of sensitive uses along that roadway is limited, residential development fronting Ventura Avenue would potentially be exposed to noise exceeding the 1.5 dBA threshold. Implementation of General Plan Action 7.33 could reduce overall noise exposure of existing residences in the North Avenue area through construction of a sound wall along SR 33; however, because there is no assurance that funding would be available for a sound wall, impacts associated with this scenario are considered significant.

Similar to Scenario 1, much of the future development that could be accommodated within districts, corridors, and neighborhood centers under this scenario would be located along main travel corridors with relatively high noise levels. In addition, as shown on Figure 4.10-4, most of the North Avenue and Western Cañada Larga expansion areas would be exposed to noise in excess of 60 dBA CNEL and portions of both expansion areas would potentially be exposed to noise in excess of 65 dBA CNEL. Exposure to excessive noise levels would be addressed through the 2005 General Plan Action 7.32, which requires acoustical analysis for projects within areas exposed to noise levels exceeding 60 dBA CNEL and implementation of appropriate mitigation to reduce exterior noise levels to below 65 dBA CNEL and interior levels to below 45 dBA CNEL. Compliance with this action would reduce noise impacts for future developments to a less than significant level.

Scenario 6 - Intensification/Reuse + North Avenue + Poinsettia

Impacts to existing uses related to traffic growth would be similar to those described under Scenario 1. Overall citywide growth in average daily traffic (ADT) through 2025 is estimated at 21.7% under this scenario. Traffic growth would be somewhat higher or lower on certain roadways, but most of the roadways in the Planning Area are projected to experience traffic growth of 25% or less. Certain areas of the City – notably, areas adjacent to U.S 101, SR 126, and SR 33 that lack sound walls – will continue to be exposed to noise exceeding 65 dBA CNEL. However, the increase in noise associated with future traffic increases is generally expected to be less than 1 dBA, which is less than the FICON standards described above. Noise sensitive uses are not located adjacent to most of the roads projected to experience higher increases in traffic and associated noise, such as Olivas Park Drive, Wells Road, Stanley Avenue, and Victoria Avenue south of U.S. 101. Although noise levels may audibly increase on these roads, such increases would not substantially affect noise sensitive uses. Victoria Avenue would experience a substantially greater increase in traffic and related noise under this scenario than the other scenarios, with overall projected traffic increases of more than 40% on some segments. This would increase noise exposure as compared to the other scenarios; however, the increase would still be about 1 dBA, which is less than the 1.5 dBA threshold.

Impacts associated with traffic noise increases generally would not be significant under this scenario. As with the other scenarios, one potential exception is North Ventura Avenue. Noise

level increases of more than 1.5 dBA could occur along that roadway, which is a potentially significant impact. In addition, it is assumed that Johnson Drive would be extended across SR 126 to Foothill Road under this scenario. This road extension would be expected to substantially increase traffic levels along the length of Johnson Drive as that roadway would provide a direct link between SR 126 and U.S. 101. The new segment north of Telephone Road would handle a projected 32,000 ADT in 2025, while the traffic level is projected to more than double (from 10,000 ADT existing to 26,000 ADT in 2025) under this scenario. It is anticipated that sound walls would be constructed along new segments, but noise levels would increase by more than 3 dBA along the existing segments of Johnson Drive, portions of which are fronted by single and multiple family residences. This is a significant impact. It should be noted that the extended Johnson Drive anticipated under this scenario would be expected to divert traffic from portions of Foothill Road and Kimball Road, thus reducing noise levels along those roadways.

Similar to Scenario 1, much of the future development that could be accommodated within districts, corridors, and neighborhood centers under this scenario would be located along main travel corridors with relatively high noise levels. In addition, as shown on Figure 4.10-4, portions of the North Avenue and Poinsettia expansion areas would be exposed to noise in excess of 60 dBA CNEL. The westernmost portion of the North Avenue expansion area would potentially be exposed to noise in excess of 65 dBA CNEL. The southernmost portion of the Poinsettia expansion area adjacent to SR 126 would also be exposed to noise exceeding 65 dBA CNEL. Exposure to excessive noise levels would be addressed through 2005 General Plan Action 7.32, which requires acoustical analysis for projects within areas exposed to noise levels exceeding 60 dBA CNEL and implementation of appropriate mitigation to reduce exterior noise levels to below 65 dBA CNEL and interior levels to below 45 dBA CNEL. Compliance with this action would reduce noise impacts for future developments to a less than significant level.

MITIGATION MEASURES

Compliance with existing regulations and proposed 2005 General Plan policies and actions would reduce potential noise impacts in most locations to a less than significant level. Construction of a sound wall along SR 33 as indicated under General Plan Action 7.33 could address noise exposure along North Ventura Avenue by reducing noise from the nearby SR 33. However, because funding and construction of a sound wall cannot be assured and such mitigation is not available for the potential significant impact along Johnson Drive under Scenario 6, the following measure is recommended.

N-1 Rubberized Asphalt. The following action shall be added to the 2005 General Plan to reduce general traffic noise:

- As feasible, use rubberized asphalt or other sound reducing material for paving and re-paving of City streets.

Studies have indicated that rubberized asphalt can reduce overall roadway noise by 3-5 dBA as compared to conventional asphalt.

SIGNIFICANCE AFTER MITIGATION

Roadway noise levels would generally rise as traffic levels increase under any of the General Plan land use scenarios. However, implementation of proposed policies and actions, in combination with the additional action recommended above, would reduce impacts associated with projected development to a less than significant level for any of the six land use scenarios. It is presumed that use of rubberized asphalt or other noise attenuation methods would be feasible for Ventura Avenue (which could experience a significant noise increase under any scenario) and Johnson Drive (which could experience a significant noise increase under Scenario 6).

Impact N-2	**Construction of individual projects throughout the Planning Area could intermittently generate high noise levels under any of the land use scenarios. This may affect sensitive receptors near construction sites. However, compliance with Noise Ordinance restrictions on construction timing would reduce this impact to a Class III, *less than significant* level.**

Construction noise from individual projects through 2025 could have noise impacts on adjacent noise-sensitive land uses. Since there are no specific plans or time scales for individual development projects, it is not possible to determine exact noise levels, locations, or time period for construction.

As shown in Table 4.10-5, the noise level associated with heavy equipment typically ranges from about 78 to 88 dBA at 50 feet from the source. Such noise levels can be disturbing, particularly to noise-sensitive uses such as residences, schools, and hospitals. The grading/excavation phase of project construction tends to create the highest construction noise levels because of the operation of heavy equipment.

Noise levels similar to those shown in Table 4.10-5 would be expected to occur with individual development projects under any of the land use scenarios. Impacts related to intensification/ reuse would be essentially the same under any of the six scenarios and could occur throughout the Planning Area. Noise levels due to construction activity in expansion areas would also be similar. Development of the Serra and Poinsettia expansion areas would have the highest likelihood of creating noise disturbance because of their proximity to noise-sensitive uses (residences for Serra, residences and schools for Poinsettia).

Section 10.650.150 of the Ventura Noise Ordinance exempts construction activities from the standards shown in Table 4.10-1 in the *Setting*, provided that they are conducted between 7 A.M. and 8 P.M. Assuming compliance with these timing restrictions, noise associated with construction of individual projects would not be significant.

MITIGATION MEASURES

Compliance with the Ventura Noise Ordinance would reduce temporary impacts associated with construction noise to less than significant.

Table 4.10-5
Typical Noise Levels at Construction Sites

Construction Phase	Average Noise Level at 50 Feet	
	Minimum Required Equipment On-Site	All Pertinent Equipment On-Site
Clearing	84 dBA	84 dBA
Excavation	78 dBA	88 dBA
Foundation/Conditioning	88 dBA	88 dBA
Laying Subbase, Paving	78 dBA	79 dBA
Finishing and Cleanup	84 dBA	84 dBA

Source: Bolt, Beranek and Newman, "Noise from Construction Equipment and Operations, Building Equipment, and Home Appliances," prepared for the U.S. Environmental Protection Agency, 1971.

SIGNIFICANCE AFTER MITIGATION

Any of the scenarios would accommodate construction activity that would potentially create temporary noise disturbance to uses adjacent to individual construction sites. However, assuming compliance with the City Noise Ordinance, impacts would be less than significant for any of the six scenarios.

Impact N-3	**The placement of residential and other noise-sensitive uses in proximity to industrial and commercial uses could potentially expose such uses to high noise levels. The City Noise Ordinance restrictions do not apply to noise-sensitive uses within commercial or industrial zones. Therefore, impacts would be Class II, *significant but mitigable*, for any of the six land use scenarios.**

Commercial and industrial activity can produce noise from heavy traffic, deliveries, and machinery. While industrial activity primarily occurs along Ventura Avenue and parts of the Arundell District, commercial activity occurs throughout the City, particularly along major roadways. Agricultural operations produce noise associated with equipment such as aerial application aircrafts (crop dusters), diesel engines, and tractors. Many of these noise sources are related to seasonal operations. Development of residential uses adjacent to or near industrial, commercial, or agricultural uses could result in potential impacts due to noise from these operations.

The City of Ventura Noise Ordinance (Municipal Code § 10.650) prohibits unnecessary, excessive, or annoying noise in the City. As part of this ordinance, properties within the City are assigned a noise zone based on their corresponding land use. Properties zoned for residential and other noise-sensitive uses have an exterior noise limit of 50 dBA, commercially zoned properties have an exterior noise limit of 60 dBA, and industrially/agriculturally zoned properties have an exterior noise limit of 70 dBA.

Scenario 1 - Intensification/Reuse Only

Scenario 1 emphasizes intensification and reuse of properties within the existing developed City. Mixed use development accommodated under this scenario could involve the development of residential uses in proximity to industrial and commercial uses, particularly along the Ventura Avenue, Thompson Boulevard, and Main Street corridor, within the Downtown District, and near the Pacific View Mall District. As noted above, the City Noise Ordinance has exterior noise limits of 50 dBA for residential zones, but allows noise of up to 60 dBA and 70 dBA for industrial zones. As such, residential projects or residential components of mixed use projects within commercial or industrial zones could be exposed to exterior noise exceeding residential limits. This is a potentially significant impact.

Scenario 2 - Intensification/Reuse + North Avenue + Olivas + Serra

Intensification/reuse impacts would be similar to those described for Scenario 1 and are considered potentially significant. In addition, this scenario includes three expansion areas: North Avenue, Olivas, and Serra. Development of these expansion areas with urban uses would reduce conflicts associated with the agricultural/residential interface, though development of the Olivas expansion area could add noise sensitive uses adjacent to remaining agricultural activity to the east and south. None of the expansion areas are anticipated to include industrial uses; however, each of the areas, if developed in the future, is expected to include a mix of residential and commercial uses. The placement of residential uses adjacent to commercial uses could potentially create noise conflicts relating to commercial operations (loading docks, parking lots, evening activity). However, provided that the City Noise Ordinance continues to be enforced, noise impacts would not be significant.

Scenario 3 - Intensification/Reuse + North Avenue + Olivas

Impacts associated with this scenario would be similar to those described for Scenario 2 except that agricultural operations in the Serra area would remain. Noise impacts are considered potentially significant.

Scenario 4 - Intensification/Reuse + North Avenue + Serra

Impacts associated with this scenario would be similar to those described for Scenario 2 except that agricultural operations in the Olivas area would remain. Noise impacts are considered potentially significant.

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga

Intensification/reuse impacts would be similar to those described for Scenario 1 and are considered potentially significant. Under Scenario 5, mixed residential and commercial development could occur within North Avenue and Western Cañada Larga expansion areas. While this may result in reduced potential conflict between the agricultural/residential interface, impacts may still occur if residential development is proposed near industrial or commercial operations. In the portion of the Western Cañada Larga expansion area west of SR 33, residential development could potentially be affected by industrial activity within the adjacent Upper North Avenue district.

Scenario 6 - Intensification/Reuse + North Avenue + Poinsettia

Intensification/reuse impacts would be similar to those described for Scenario 1 and are considered potentially significant. Development of the North Avenue and Poinsettia expansion areas with urban uses would reduce conflicts associated with the agricultural/residential interface. Neither of the expansion areas are anticipated to include industrial uses; however, each of the areas, if developed in the future, is expected to include a mix of residential and commercial uses. The placement of residential uses adjacent to commercial uses could potentially create noise conflicts relating to commercial operations (loading docks, parking lots, evening activity).

MITIGATION MEASURES

The following measure is required for any of the six land use scenarios.

N-3 **Noise Ordinance Update.** The following action shall be added to the 2005 General Plan:

- Update the Noise Ordinance in conjunction with the new development code to provide noise standards for residential projects and residential components of mixed use projects within commercial and industrial zones.

SIGNIFICANCE AFTER MITIGATION

Update of the Noise Ordinance and enforcement of new standards for residential projects within commercial and industrial zones would reduce impacts to a less than significant level.

Impact N-4	**Noise-sensitive land uses near the UPRR corridor may be exposed to noise exceeding City noise standards. However, proposed General Plan actions require acoustical analysis for any development in an area with a built within the 60 dBA CNEL contour. Therefore, impacts due to railroad noise are considered Class III, *less than significant*, for all six scenarios.**

The use of the corridor for rail traffic causes high noise levels intermittently as trains pass through the City. Freight trains can be louder than passenger trains because they typically use more engines and contain more rail cars. Residences and other sensitive land uses already located along the rail line would experience high noise levels from train traffic. Noise contours for the Union Pacific Railroad are shown on Figure 4.10-4. Generally, areas within about 240 feet of the railroad tracks are within the 60 dBA CNEL contour.

The 2005 General Plan contains a policy that would reduce excessive noise exposure to existing and proposed residential uses. Action 7.32 requires an acoustical analysis and mitigation prior to development of any residential development within the 60 dBA contour, as shown on Figure 4.10-4.

Scenario 1 - Intensification/Reuse Only

Scenario 1 emphasizes intensification and reuse of properties within the existing developed City and does not include expansion areas. The UPRR railroad corridor generally follows the same area as the 60 dBA contour generated from U.S. 101 traffic. Any proposed residential development within the 60 dBA railroad corridor, where the alignment follows U.S. 101 would be subject to noise from the railroad. Districts and corridors that are potentially subject to railroad noise include Downtown, Thompson Boulevard, Arundell, North Bank, Montalvo, and Johnson Drive. Noise from individual trains may be disturbed to noise-sensitive receivers. However, compliance with the requirements for acoustical analysis and mitigation in Action 7.32 would reduce noise impacts to a less than significant level.

Scenarios 2 and 3

Intensification/reuse impacts would be similar to those described for Scenario 1. Potential development in either the North Avenue or Serra expansion areas would not be affected by railroad noise. However, either of these scenarios would accommodate development in the Olivas expansion area. The UPRR railroad is adjacent to the eastern boundary of the Olivas expansion area, and noise-sensitive development proposed within the 60 dBA contour of the railroad may incur impacts due to railroad noise. However, compliance with Action 7.32 would reduce noise impacts to a less than significant level.

Scenarios 4, 5, and 6

Intensification/reuse impacts would be similar to those described for Scenario 1. The North Avenue, Western Cañada Larga, and Poinsettia expansion areas are not subject to railroad noise. Compliance with Action 7.32 would reduce noise impacts to a less than significant level.

MITIGATION MEASURES

None required assuming implementation of 2005 General Plan Action 7.32.

SIGNIFICANCE AFTER MITIGATION

Implementation of 2005 General Plan Action 7.32 would reduce impacts to a less than significant level for any of the six scenarios.

Impact N-5	**Operation of recreational uses, including the Ventura County Fairgrounds, Ventura Shooting Range, and the Ventura Raceway could continue to create noise disturbance for existing and planned noise-sensitive uses. City policies pursue termination, relocation, or restriction of these noise-generating activities. Impacts due to recreational uses are considered Class III, *less than significant.***

The Ventura Raceway at Seaside Park hosts auto races on Saturday evenings. Engine sounds can be heard through much of Downtown, Midtown, and West Ventura, and residents have expressed

a high level of annoyance. A measurement taken near the end of S. Figueroa Street (Site 34) during a race registered maximum noise levels of 80.1 dBA. Noise levels associated with racing do not exceed community standards based on the CNEL, but are a source of noise disturbance to some residents in nearby neighborhoods.

The outdoor Ventura Shooting Range in the northern part of Grant Park has been the source of occasional noise complaints. As discussed in the Setting, noise from the Ventura Shooting Range resulted in noise levels that varied from 71-74 dBA during the Pistol Range Sound Test in 1998. Noise readings from the community noise survey, however, resulted in noise levels ranging from 45.6 dBA to 62.7 dBA at nearby locations. The lower noise levels are likely the result of noise walls that were built since the Pistol Sound Test was conducted. Nevertheless, the Shooting Range is a source of disturbance to some residents in the Westside and Downtown areas.

The 2005 General Plan includes actions to address noise from the Fairgrounds. Action 7.34 requests that the 31st Agricultural District limit sound levels associated with concerts to 70 dBA at the eastern edge of the Ventura County Fairgrounds. Action 7.35 requests that auto racing be discontinued at the Fairgrounds.

Scenario 1 - Intensification/Reuse Only

Portions of the Downtown District and the Ventura Avenue corridor are within areas where noise emanating from the Ventura Shooting Range, located in Grant Park is audible. Southwestern areas within the Downtown District are exposed to noise from the Ventura County Fairgrounds and the Ventura Raceway at Seaside Park. Therefore, new residential development that could be accommodated in the Ventura Avenue corridor and the Downtown district may be subject to noise associated with these activities.

The maximum noise levels for the Shooting Range and the Ventura Raceway described in the Setting may cause periodic disturbance to sensitive receivers. However, such noise events occur only periodically and do not exceed community standards based upon the CNEL (a time-weighted 24-hour average sound level). Therefore, impacts associated with the Shooting Range and the Ventura Raceway are not considered significant. Nevertheless, as discussed above, the 2005 General Plan includes actions requesting the termination of auto racing at the Fairgrounds and requesting sound limitations on Fairgrounds concerts. As discussed in the *Setting*, the Shooting Range will be closed to the public in January 2006. Although the Shooting Range will continue to be used by the Ventura Police Department, it is anticipated that the frequency of noise events will decline after that time.

Scenarios 2 through 6

Intensification/reuse impacts would be similar to those of Scenario 1 and are not considered significant. None of the expansion areas are subject to noise impacts from either the Ventura Shooting Range or the Fairgrounds.

MITIGATION MEASURES

Impacts are not significant for any scenario. Therefore, mitigation is not required.

Implementation of proposed 2005 General Plan policies may eliminate and/or reduce noise associated with activities at the Ventura Fairgrounds.

SIGNIFICANCE AFTER MITIGATION

Impacts would be less than significant for any of the six land use scenarios. Implementation of proposed actions could reduce potential noise disturbance associated with activities at the Ventura Fairgrounds.

4.11 PUBLIC SERVICES

This section assesses potential impacts to public services, including fire and police protection, public schools, libraries, parks, and solid waste collection and disposal. Impacts to water and wastewater infrastructure are discussed in Section 4.13, *Utilities and Service Systems*.

4.11.1 Setting

a. Fire Protection and Emergency Medical Service.

Personnel, Facilities, and Equipment. The City of Ventura Fire Department (VFD) provides fire protection services to areas within the City's corporate boundary. The VFD responds to fire, rescue, medical, and hazardous materials emergencies. The VFD operates six fire stations in Ventura, with administrative offices at 1425 Dowell Drive. Figure 4.11-1 shows the locations of fire stations serving the City.

The VFD is comprised of three Divisions—Operations, Administration, and Inspection Services. The Operations Division is responsible for activities and emergency responses of the Department's firefighting force. Station 5, the most centrally located (near the intersection of U.S. 101 and SR 126), has a truck company and engine company. In addition, there is one battalion chief on duty at a time (assigned as the shift manager). The shift manager's quarters are adjacent to Station 2. The VFD plans to relocate Fire Station #4 from its current location at 8303 Telephone Road to the Community Park property located at the corner of Telephone Road and Kimball Road.

Fire Administration is made up of the Fire Chief and his support staff. Their offices are located in the Police/Fire Headquarters, located at 1425 Dowell Drive, Ventura, CA 93003. Their primary responsibility is to oversee all aspects of the delivery of services and ensure the smooth function of the Fire Department.

Inspection Services consists of the Construction Services and Preservation Services Divisions. The Inspection Services Division oversees all phases of new building construction, performs a variety of inspections, and provides code enforcement. Construction Services provides building permit plan check, permit issuance, and inspection services for new buildings, additions, and tenant improvements. Preservation Services is responsible for: code enforcement to support the enforcement of policies and programs within the Public Works, Community Development, Fire and Administrative Services Departments; fire prevention services to provide fire alarm and fire sprinkler plan review, permitting, and inspection; annual State Fire Marshal inspections of high-rise, institutional, and educational occupancies; facilitation of a complete weed abatement program; and, coordinating the City's hazardous materials enforcement program. The City's Building Official/Fire Marshal is the manager of the Inspection Services Division and reports directly to the Fire Chief. The Inspection Services Division is staffed with non-sworn, civilian personnel. When needed, Ventura residents obtain fire permits and hazardous materials permits through the Fire Department.

The VFD maintains a hazardous materials response team (haz-mat team), which is handled as a collateral assignment by one of VFD's engine companies. The haz-mat team is specially trained

to respond to hazardous materials incidents with the requisite equipment, monitoring devices, and personal protection.

The VFD is staffed by 105.5 full-time employees, including 73 sworn firefighters, 3 support staff, and 29.5 employees in the Inspection Services Division. Of the 29.5 Inspection Services employees, 12 are primarily responsible for enforcing the Fire Code. The remaining 17.5 are primarily responsible for enforcing the Building Code.

The VFD has not officially adopted a standard for firefighter staffing levels; however, for jurisdictions that are comparable in size and population to the City of Ventura, staffing levels are typically about 0.98 fire fighters per 1,000 residents (Chief Mike Lavery, January 2005). The VFD is currently operating at approximately 0.69 firefighters per 1,000 residents.[1] Currently, staffing levels are stretched to provide fire protection services for today's population. Growth within the City will require additional personnel in order to meet future fire service demands (Chief Mike Lavery, January 2005).

Emergency Response. Response times vary (at least in part) according to fire personnel staffing levels, the placement of fire stations in relation to service areas, and the density/layout of land uses and development within a service area. The VFD has a response time goal of four minutes (for at least 90% of its responses); however, response times in certain areas of the City currently exceed four minutes. The Ventura Harbor area and surrounding neighborhoods, the Montalvo area, Johnson Drive/101, and the Auto Center currently do not meet VFD standards. For example, response times from Station #2 can be 10 minutes or more, especially for emergencies located at the end of Spinnaker Drive. In addition, response times from Fire Station #1 typically exceed four minutes for areas located north/northeast of the North Ventura Avenue and Seneca Drive intersection (Chief Mike Lavery, January 2005). The VFD has tentative plans to build a new fire station to serve the Ventura Harbor area. If annexation or significant development occurs North of Seneca Drive, evaluation of those development impacts on fire services will need to be undertaken.

Potential wild fire hazard areas present additional challenges to the VFD. Grass and brush, with scattered oak at lower elevations, are located on the Ventura hillsides and extend down into barrancas within the City. The general lack of rain from May to November causes this vegetation to become very dry, creating high fire hazards in the hillsides (see Figure 4.11-2). The California Department of Forestry has indicated this rating should be considered an average for the area, rather than a delineation of exact conditions. Variations in slope, weather, fuel load, aspect, elevation, and air movement may influence hazard conditions in a specific location. Risk to any individual structure also depends on factors such as access, water supply, clearance, and structural characteristics.

A number of residential areas in Ventura are located in, and adjacent to, the hazardous wildfire area. These include the residential developments located on and adjacent to hillsides in the Poinsettia, Arroyo Verde, Catalina, Downtown, and Ventura Avenue communities. Historical fires in the hills directly north of the City include: the 1956 Sexton Canyon Fire and the 1970

[1] Unlike the VFD, most fire protection districts do not include a building division that is responsible for enforcing the Uniform Building Code (which is typically found in public works or planning departments). As such, the 0.69 firefighters/1,000 residents ratio only includes the 73 sworn firefighters and is based on the 2004 City population of 104,952 residents.

Wildfire Risk Areas Figure 4.11-2

City of Ventura

Foothill Fire, which burned homes in Ventura; the 1992 Seneca Fire that originated near a west Ventura apartment complex and reached the edge of Hall Canyon, burning 529 acres; and the 1996 Poli Fire that originated near Grant Park and burned 362 acres. If a fire requires more than City resources to suppress, mutual aid agreements in effect with neighboring cities, counties, and State and Federal agencies call for additional assistance from the nearest facilities of these entities. For additional emergency response assistance, the VFD has Automatic Aid Agreements with the Ventura County Fire Protection District (VCFPD) and the Oxnard Fire Department. The VCFPD has two fire stations close to the City limits and other stations located throughout the County. The Automatic Aid Agreement, which specifies that whichever station or engine (City or County) is closest to the emergency is the first to respond, is intended to ensure that Ventura residents receive the most immediate response possible in emergency situations.

The VFD participates in the County Emergency Services Special Operations component, which is responsible for countywide response to emergencies requiring technically skilled operations. Some of the specialized emergency services provided include swift water rescue and confined space rescue (as might arise from collapsed buildings, caves, trench cave-ins, etc.).

The VFD follows several safety standards and safety programs. The City Standardized Emergency Management System Multi-hazard Functional Response Plan outlines City procedure in the event of a major catastrophe, while the Hazardous Materials Response Plan sets forth the protocol for handling hazardous waste spills. The Department's Weed Abatement Program aims to reduce the risk of wildfire in vegetated hillsides and canyon areas, especially the areas north of Poli Street / Foothill Road and east of Ventura Avenue.

b. Police Protection. The City of Ventura Police Department (VPD) provides law enforcement services in the incorporated City. VPD headquarters is located at 1425 Dowell Drive. The Department also has storefronts Downtown, on the West Side, at the Ventura Mall, and in Montalvo. Although these storefronts are not staffed with dedicated police department personnel, they provide an important Community Resource through the use of community volunteers. Figure 4.11-1 shows existing police facilities in the City.

The VPD is currently budgeted for 127 sworn officers and when fully staffed, this results in an allocated level of service of about 1.21 sworn officers per 1,000 residents based on the current population of about 105,000. The Department also employs 52 civilians as support personnel. Although the existing police station is large enough to accommodate the current police force, existing facilities are operating at maximum capacity. Therefore, any significant increase in staffing levels would eventually require facility expansion (Quinn Fenwick, March 2005).

The City has not adopted a specific standard for staffing levels; however, Table 4.11-1 compares police staffing levels in Ventura to those of the cities of Santa Barbara and Oxnard for comparative purposes. As indicated, the City's ratio of police officers to population is lower than that of Santa Barbara and Oxnard.

VPD is separated into two divisions: Operations and Services. The Operations Division is comprised of patrol officers, specialty assignment officers, and Police Service Officers (PSOs), as well as a traffic division, gang enforcement unit, and school liaison office. The Services Division

Table 4.11-1
Police Officers to Population Ratios (2004)

City	Number of Officers per 1,000 residents
Ventura	1.21
Santa Barbara	1.55
Oxnard	1.40

Sources: Population--California Department of Finance, City/County Population and Housing Estimates, 1/1/2004. Police officers for Ventura—Wayne Lewis, VPD Business Services Officer (March 1, 2005). Police officers for Santa Barbara—Officer Charles McChesney (February 3, 2005). Police officers for Oxnard—Lynn Hutton, Human Resources Manager (February 3, 2005).

consists of a Detective Bureau, an Information and Technology Bureau, and a Professional Standards Bureau.

The Department is equipped with 32 patrol cars, several unmarked sedans, six motorcycles, and four K-9 units. Most police cars are outfitted with mobile data computers, cell phones, and other technological tools to assist in responding to calls for service. Response time to Class I calls (crimes in progress or alarm soundings) averages less than 6 minutes. Response times for all other calls average less than 20 minutes.

The City is divided into four geographic beats, which are created based on the number of crimes reported and calls for service within the City of Ventura. Beat 1 includes the Ventura Avenue area extending down to California Street. Beat 2 generally includes the area between California Street and Mills Road. Beat 3 generally includes the area between Mills Road and Victoria Avenue. Finally, Beat 4 generally includes the area between Victoria Avenue and the eastern city limits.

Crime Rates. Crime statistics are reported to the Federal Bureau of Investigation on a regular basis so that comparisons can be made between cities with similar characteristics. Table 4.11-2 compares Ventura's crime rate from FBI files to that of other regional cities of similar size as well as to state and national averages.

In 2003, Ventura had a crime rate of 40.3 crimes per 1,000 persons. The crime rate for the City is roughly equivalent to the City of Santa Barbara, state, and national rates, but higher than that of the City of Oxnard.

c. Public Schools. The Ventura Unified School District (VUSD) provides public educational services throughout the Ventura planning area. Figure 4.11-3 shows the locations of school facilities in the Planning Area that are operated by the VUSD. Additional educational facilities include private schools and institutions of higher learning.

City of Ventura

Table 4.11-2
Crime Rates for Various Jurisdictions

Jurisdiction	Number of Crimes per 1,000 residents
City of Ventura	40.3
City of Santa Barbara	41.2
City of Oxnard	30.7
State of California	40.0
United States	40.7

Source: FBI, Uniform Crime Reports, 2003. Crimes reported are limited to violent crimes (murder, rape, robbery, and aggravated assault) and property crimes (burglary, larceny, theft, and motor vehicle theft). White collar crimes such as forgery and identity theft are not included in the FBI Uniform Crime Reports, but are a source of crime in the City of Ventura.

VUSD boundaries extend from the Santa Clara River west to include the entire City of Ventura, north along Highway 33 to include most of the Oak View community, and west to the Santa Barbara County line. District schools are organized as kindergarten through fifth grade elementary schools, sixth through eighth grade middle schools, and ninth through twelfth grade high schools. The VUSD manages 16 elementary schools in the City (and one elementary school in Oak View), four middle schools, three high schools, one continuation high school, Opportunity and Independent Study programs, and an adult education program.

The District has divided the City into four geographic attendance areas to direct a student's progression from elementary to high school: West Side, Midtown, Montalvo, and East End. All elementary schools except one serve a specific attendance area of one or more neighborhoods; the exception is Mound School, which is a District-wide math magnet school.

Current enrollment at VUSD elementary schools is 7,729 students. The total maximum capacity of the 17 elementary schools is 8,277 students. Thus, currently Ventura's elementary schools are operating at approximately 93% capacity. Table 4.11-3 shows the enrollment statistics for each of the VUSD elementary schools.

Elementary schools in the Planning Area range in size from fewer than 300 to more approximately 600 students, and populations of elementary-aged students in neighborhoods vary. Two elementary schools — Mound and Portola — are operating above planned enrollment capacity and several schools are operating at close to full capacity. The VUSD has purchased property for a proposed West End Elementary school site at 4584 North Ventura.

The District operates four middle schools in the City. Current enrollment for the four middle schools was 4,201 students, or 86% of the total capacity of 4,858 students. Table 4.11-4 shows enrollment figures for each VUSD middle school. One of the goals in the VUSD master plan is the construction of a new middle school in the Wells Road area.

Table 4.11-3
Current VUSD Elementary School Enrollment

School	Student Enrollment	Student Capacity	Utilization

Table 4.11-4
Current VUSD Middle School Enrollment

School	Student Enrollment	Student Capacity	Utilization
Anacapa	1,079	1,090	99%
Balboa	1,380	1,582	87%
Cabrillo	1,026	1,246	82%
De Anza	716	940	76%
Total	**4,201**	**4,858**	**86%**

Source: VUSD, "Room Use Analysis" Statistics (2005).

Unlike the elementary schools, the West Ventura middle school (De Anza) currently has sufficient space, but there is a need for a fifth middle school to serve other portions of the City. At the time it was built, Balboa was near the eastern edge of the City. However, the construction of new housing east of the school has led to high enrollment and a very large attendance area. Some students living close to Balboa are bused to Anacapa, which in turn results in some students living close to Anacapa being bused to Cabrillo. A cap of 1,000 students for a middle school has been recommended and endorsed by the Long Range Plan Committee, with a preferred size of 850-900 students. According to the District, a new middle school in eastern Ventura would balance enrollment geographically and eliminate some lengthy bus rides for students.

The VUSD manages three non-continuation high schools in Ventura. Enrollment for the 2004 school year was 5,267 students for the three high schools, or 94% of total capacity (5,586 students). Table 4.11-5 shows enrollment figures for each VUSD high school. Foothill Technology High School, which opened in 2001 to emphasize development of technology and health related skills, has eased crowding at Buena and Ventura High Schools.

Table 4.11-5
Current VUSD High School Enrollment

School	Student Enrollment	Student Capacity	Utilization
Buena	2,245	2,275	99%
Foothill Technology	924	884	96%[a]
Ventura	2,098	2,427	86%[a]
Total	**5,267**	**5,586**	**94%**

Source: VUSD, "Room Use Analysis" Statistics (2005).
[a]Maximum potential capacity at 110% of target.

The VUSD offers several special programs. Pacific Continuation High School occupies a former elementary school in central Ventura at 501 College Drive. Pacific Continuation had a 2004 school year enrollment of 218 students, or 77% of its 282 student capacity. Secondary alternative schools at Buena and Ventura High Schools, as well as the Opportunity Program and the Independent Study Program at the Pacific Continuation High School, enable students to make up units, get extra help, and transfer back to the mainstream schools. The current enrollment at the Adult Education Facility at the intersection of Valentine Road and Sperry Avenue is 3,160 students (Jorge Gutierrez, March 2005).

d. Community Libraries. The Ventura County Library Services Agency is currently organized as a special district county library. Revenue from the property tax supplies the majority of the income for the County Library. In addition, a portion of the City's general fund is contributed to the County Library Services Agency and is used to finance improvements to library facilities and services.

Three public libraries are located in Ventura and are a part of the Ventura County library

system: E.P. Foster, H.P. Wright, and Avenue Libraries. The characteristics of the three libraries are summarized in Table 4.11-6.

Table 4.11-6
Public Library Statistics

Library	Cardholders	Book Circulation	Hours Open Weekly	Facility Size (square feet)
E.P. Foster	29,110	169,598	54	33,000
H.P. Wright	28,317	201,227	39	12,000
Avenue	5,102	17,634	25	3,000

Source: Starrett Kreissman, Director, Ventura County Library System, personal communication, 1/21/05.

Located Downtown, E.P. Foster Library is open 54 hours per week. As of January 2005, the E.P. Foster Library had an estimated 29,110 cardholders. Based upon the most current circulation figures available, E.P. Foster Library has an annual circulation of 169,598 books. H.P. Wright Library on the Ventura College campus (a City-owned facility operated by the County on Ventura County Community College District leased land) is open 39 hours per week. H.P. Wright currently has an estimated 28,317 cardholders and an annual circulation of 201,227 books. Located on the West Side of Ventura, the Avenue Library is open 25 hours per week. The Avenue Library currently has an estimated 5,102 cardholders and had an annual circulation of 17,634 books.

e. Recreation. The Ventura recreation system includes 27 City parks, a linear park system, beaches, special recreation facilities and programs, community-wide activities, and senior services. Park and recreational facilities in the City are shown on Figure 4.11-4.

Park Standards. State and national organizations and government agencies have established a range of definitions and standards for provision of park and recreation areas and facilities based on type, size or area, access and site development. State and federal financial assistance is often predicated on the development of specific local criteria. Such standards represent a long-range measure for provision of a complete park and recreation system. The use of standards as reference measures does not imply that park acreage must necessarily be met entirely by City-owned facilities. In addition to recreation areas under City jurisdiction, substantial acreage within or adjacent to the Planning Area is held by public schools or county and state parks.

Park standards in the current Comprehensive Plan are principally derived from the National Parks and Recreation Association, statewide or other local jurisdictions. These standards are used as measures to determine the overall sufficiency of existing facilities in the City of Ventura, and as guidelines to plan for the needs of the future population. Table 4.11-7 shows that the City has adopted higher standards than those set forth by the National Recreation and Park Association.

Note: Alignments for future linear parks are conceptual. Final alignments will be determined during project review. Linear parks through agricultural or open lands would need to be acquired or obtained through dedication.

City Parks. The City of Ventura public park system includes neighborhood parks, service area parks, citywide parks, and a linear park system. Existing City park facilities are listed in Tables 4.11-8 and 4.11-9. With the new Ventura Community Park, the City operates about 856 acres of park facilities, or about 8 acres per 100,000 residents. A discussion of the various types of facilities follows.

Neighborhood Parks. A neighborhood park is a small park (preferably a minimum of five acres), which serves a specific neighborhood within a planning community. The City's neighborhood park standard is 2 acres of parkland for every 1,000 people. Provision of neighborhood parks close to the user population is an ongoing City objective. These types of facilities are currently available to residents in many City neighborhoods, though neighborhood parks are lacking in portions of West Ventura, Midtown, the Ventura College area, and the Wells/Saticoy area. As shown in Table 4.11-8, there are 18 neighborhood park sites in the City, totaling about 73 acres.

Service Area Parks. Service area parks are intended to provide opportunities and facilities of a special nature to a broad segment of the population. Service area parks preferably have a minimum size of 35-40 acres, although unique features or developments may be more important to a service area park than size alone. The City's standard for service area parks is 3 acres per 1,000 population. Amenities within may include athletic fields, courts, recreation buildings, preschool and youth play apparatus, group and individual picnic areas, and landscaped areas for informal activities and passive use. Six existing sites totaling about 95 acres currently serve service area park functions.

The City's service area park acreage will be substantially increased by the full construction of the new Ventura Community Park. In March 1998, the City selected Thille Ranch, a 100-acre site at the intersection of Telephone Road and Kimball Road, for the development of a community park. Plans for the park include a community center, gymnasium, aquatics center, police storefront, and fire station. The park will also include areas for passive and active recreation, as well as permanent, indoor/outdoor sports fields and courts. These facilities will be able to accommodate informal community use, in addition to organized league practice and

Table 4.11-8

tournament games.

Citywide Parks. A citywide park is an area or facility that offers recreational opportunities of such a variety that it attracts a wide range of local age groups and interests from inside and outside the City. Citywide parks are usually at least 100 acres in size, and the City standard is 5 acres per 1,000 residents. Citywide parks often feature large open space areas or unique natural or cultural areas, as well as group picnic areas, interpretive centers, riding, bicycling and hiking trails, formal sports facilities, and other unique features. Citywide parks

allow for the preservation of quality leisure spaces, and efforts are made to include large scenic open spaces, where possible. Two existing sites in Ventura – Arroyo Verde Park and Grant Park - serve as citywide parks. The Ventura Community Park will also serve citywide park functions.

Special Use Facilities. The City has not adopted specific standards for special use facilities, but operates eight such facilities totaling just over 330 acres. These facilities provide unique amenities that permit a single or specialized recreational activity. Special use facilities include two golf courses, the Seaside Wilderness Park, the Olivas Adobe Historical Park, and the Albinger Archaeological Museum.

Linear Parks. The City has not adopted specific standards for linear parks; however, such facilities can serve many of the functions of both neighborhood and service area parks. Since 1974, with the adoption of a Linear Park System depicted on Land Use and Circulation Plan maps, it has been the City's intent to create a linear park around the perimeter of the City that preserves public access and vistas. This network of greenways and barrancas in the City provides natural recreational opportunities for Ventura pedestrians. Linear parks are also a valuable component of the alternative transportation system as they include trails and bikeways for commuting and recreation. As shown in Table 4.11-9, the 24 linear park facilities total about 46 acres. The linear park system includes such features as bike paths, greenbelts, picnic tables, and tot lots.

Resources available for constructing the linear park and trail system are acquired through conditions placed on developers who plan to build in areas within the linear park network.

Beaches & Other Non-City Special Use Recreational Facilities. In addition to City-owned parks, a number of other recreational facilities are available within the planning area. Foremost among these are the seven miles of beach that line the western boundary of the City. Although not owned by the City, the waterfront open space provides valuable recreational opportunities for Ventura residents. Other non-City facilities include the County Fairgrounds and the Saticoy Regional Golf Course. In addition, the Ventura Unified School District and Ventura College have joint-use agreements with the City so that residents have access to their sports fields, pools, and gymnasiums after school hours. Table 4.11-10 lists non-City recreational facilities that are available to community residents.

Special use facilities, parks within the Planning Area belonging to other jurisdictions, and state beach property outside the City limits help make up for the shortage of park area in Ventura. While these facilities meet some citywide needs, they are not considered as contributors to citywide park acreage.

Park Funding. The development of parks is funded through various fee programs on new development in the City. Quimby fees are charged on all single family and condominium developments. Service Area Park Fees are charged on all new development in the City (including rental housing and non-residential development) for the development of new community facilities (such as the new community park). SIDS fees are charged on new development in the Wells/Saticoy area for the development of new facilities to offset the current deficiency of parks in that part of the Planning Area.

Table 4.11-10
Non-City Special Use Parks and Recreational Facilities

Facility Name	Acres	Ownership

** Acreage based on estimate of turf area at all VUSD sites.*

f. Solid Waste/Recycling. The Environmental Services Office (ESO) in the City Public Works Department manages collection and disposal of solid waste. The Office also develops methods of waste diversion. The City has a franchise agreement with Harrison Industries for residential and commercial solid waste removal. This arrangement includes curbside collection, with three residential disposal options (trash, recyclables, and yard waste), plus the "Unicycling Recycling Program" for businesses that allow bagged trash and recyclables to share a single container. An additional no-fee salvager permitting system allows other companies to collect recyclable materials from Ventura businesses.

After collection, waste is sorted at the Gold Coast Material Recovery Facility and Transfer Station. What cannot be recycled is sent to landfills. In 2003, the City of Ventura produced approximately 143,584 tons of waste that was sent to landfills and diverted approximately 224,579 tons. The majority of Ventura's non-recycled waste (88.1%) goes to Toland Road Landfill, while approximately 10.5% is sent to the Simi Valley Landfill. The remaining approximately 1.4% is shipped to either the Azusa Land Reclamation Company, Inc., Chiquita Canyon Sanitary Landfill, and Nu-Way Live Oak Landfill (Joe Yahner, January 2005). The Toland Road Landfill, which is operated by the Ventura Regional Sanitation District, has a permitted throughput of 1,500 tons of waste per day. Current throughput ranges from about 1,200-1,400 tons per day. The landfill's total permitted capacity is 30 million cubic yards of waste, and it is projected to reach capacity in 2027. The Simi Valley Landfill, which is operated by Waste Management of California, has a permitted throughput of 3,000 tons of waste per day, and a current maximum daily throughput of about 2,750 tons per day. The total permitted capacity is 43.5 million cubic yards, and the landfill is projected to reach capacity in 2022. Table 4.11-11 compares maximum daily capacity and current throughput at the Toland Road and Simi Valley landfills.

Table 4.11-11
Maximum Daily Capacity and Current Daily Throughput at Area Landfills

Landfill	Permitted Daily Capacity (tons)	Maximum Daily Throughput (tons)	Available Daily Capacity (tons)
Toland Road	1,500	1,400	100
Simi Valley	3,000	2,750	250
Total	**4,500**	**4,150**	**350**

The current daily waste that reaches the Toland Landfill ranges from 1,200 to 1,400 tons/day, Monday through Saturday (Gary Haden, personal communications, 1/24/04); therefore, 1,400 tons/day was assumed as a worst case scenario. The Simi Valley Landfill currently accepts an average of approximately: 2,750 tons/day, Monday through Friday; 1,200 tons/day on Saturday; and, 20 tons on one Sunday per month (Scott Tignac, personal communications, 1/24/04); therefore, 2,750 tons/day was used to assess project impacts under a worst case scenario.

State law requires cities to divert at least 50% of the solid waste they generate from landfills through source reduction, reuse of materials, and recycling. The ESO has initiated a series of projects that have resulted in a comprehensive waste reduction and recycling program. Each year, the amount of waste diverted from local landfills has increased. In 2003, the City of Ventura achieved a 61% diversion rate.

ESO provides several household hazardous waste disposal and recycling options for residents and small businesses. In the 2003-2004 period, Gold Coast Recycling and ESO programs collected a total of 250,721 pounds of household hazardous waste and used oil. Gold Coast Recycling collected approximately 71,778 tons of household hazardous wastes, while paint stores collected approximately 45,900 tons of paint and ESO Household Hazardous Waste Events collected approximately 98,333 tons of household hazardous wastes. Finally, oil centers collected approximately 34,710 tons of used oil. Household hazardous waste collection programs are funded by California Assembly Bill 939 (AB 939) funds that are paid by customers to E.J. Harrison and then distributed to the City (Joe Yahner, January 2005).

ESO is currently constructing a new household hazardous waste facility that is anticipated to be in operation by May 2005. Currently, ESO provides four household hazardous waste collection events per year. Upon completion of the new facility, ESO household hazardous waste collection events are anticipated to increase to 11 events per year (Joe Yahner, January 2005).

4.12.2 Impact Analysis

a. Methodology and Significance Thresholds. The following thresholds have been used to determine the impacts to fire protection services, police protection services, public schools, libraries, recreation, and solid waste disposal.

The 2005 General Plan would result in potentially significant impacts relating to public services if development accommodated under any of the General Plan land use scenarios would:

- *Involve substantial adverse physical impacts associated with provision of new or physically altered governmental facilities*
- *Create the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives.*
- *Directly remove or otherwise adversely affect the operation of an existing or planned park or recreational facility*
- *Increase the use of existing parks and recreational facilities such that substantial physical deterioration would occur or be accelerated. The potential for physical deterioration of existing parks may be considered substantial if the amount of new parkland in the City is insufficient to meet the projected demand associated with projected population growth (based on the current City standard, park demand is 10 acres per 1,000 new residents).*
- *Require the construction or expansion of parks or other recreational facilities that might have adverse effects on the environment*
- *Generate an increase in solid waste that exceeds the capacity of the current and planned solid waste disposal facilities serving the City. Impacts are also considered significant if the amount of solid waste generated by new development that is diverted from landfills is projected to be less than the State-mandated 50% diversion rate.*

With respect to school enrollment, impacts associated with new development would be considered significant if it is anticipated that individual developers would not pay State-mandated school impact fees (pursuant to Section 65995(h) of the California Government Code [Senate Bill 50, chaptered August 27, 1998], the payment of statutory fees "...is deemed to be full and complete mitigation of the impacts of any legislative or adjudicative act, or both, involving, but not limited to, the planning, use, or development of real property, or any change in governmental organization or reorganization")

b. Project Impacts and Mitigation Measures. The matrix on the following page provides a summary comparison of impacts for each of the EIR scenarios. A detailed discussion of each environmental impact follows.

Impact PS-1	**Development under any of the 2005 General Plan land use scenarios would increase the City's population and density of development, and introduce new development into high fire hazard areas. This would increase demand for fire protection services and potentially create the need for new fire protection facilities. With proposed General Plan policies, impacts for Scenario 1 are Class III, *less than significant*. Impacts for Scenarios 2-6 are considered Class II, *significant but mitigable.***

The 2005 General Plan includes the following policies that address fire protection service:

Policy 7C *Optimize firefighting and emergency response capabilities.*

Summary Comparison of Impacts for EIR Scenarios

Impact	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
Fire Protection (Impact PS-1)	30 new firefighters needed to alleviate current deficiencies; one to two new fire stations and 9 to 18 new firefighters needed to serve the Ventura Harbor and Ventura Avenue areas; limited new development introduced adjacent to high fire hazard areas. With proposed General Plan policies and actions, impacts are Class III, less than significant.	30 new firefighters needed to alleviate current deficiencies; nine new firefighters and a new fire station needed in Ventura Harbor area to serve Harbor and Olivas areas; nine new firefighters and a new fire station needed in North Avenue area to serve North Avenue expansion area; relocation of Station 4 would provide adequate service in Serra expansion area. Impacts are Class II, significant but mitigable.	Impacts similar to Scenario 2 and Class II, significant but mitigable.	Same new facilities needed as under Scenario 2; relocation of Station 4 would provide adequate service in Serra expansion area. Impacts are Class II, significant but mitigable.	Same new facilities needed as under Scenario 2; new station in North Avenue area would provide adequate service to the Western Cañada Larga expansion areas. Impacts are Class II, significant but mitigable.	Same new facilities needed as under Scenario 2. In addition, Station 3 may need to be relocated east of Victoria Avenue to serve the Poinsettia expansion area. Impacts are Class II, significant but mitigable.
Police Protection (Impact PS-2)	An additional 26 police officers needed to maintain current officers-residents ratio in 2025. New or expanded police facilities needed since the current headquarters is at capacity; Downtown storefront station also needed. Impacts are Class II, significant but mitigable.	An additional 34 police officers needed to maintain current officers-residents ratio in 2025. New or expanded police facilities facilities since the current headquarters is at capacity; Downtown storefront station also needed. Impacts are Class II, significant but mitigable.	Impacts similar to Scenario 2 and Class II, significant but mitigable.	Impacts similar to Scenario 2 and Class II, significant but mitigable.	Impacts similar to Scenario 2 and Class II, significant but mitigable.	Impacts similar to Scenario 2 and Class II, significant but mitigable.
Schools (Impact PS-3)	An estimated 3,486 new VUSD students projected by 2025 under this scenario. Based on	An estimated 4,620 new VUSD students projected by 2025 under this scenario.	Impacts similar to Scenario 2 and Class III, less than significant.	Impacts similar to Scenario 2 and Class III, less than significant.	Student generation and future school needs similar to Scenario 2. Impacts	Impacts similar to Scenario 2 and Class III, less than significant.

Summary Comparison of Impacts for EIR Scenarios

	Department of Education criteria, 2-3 new elementary schools needed and possibly a new middle school and new high school. Payment of State-mandated fees reduces impacts to Class III, less than significant, per State law; nevertheless, limited available land for new schools may necessitate condemnation of property for new school sites and/or more intensive use of existing facilities.	Based on Department of Education criteria, 4-5 new elementary schools needed and possibly a new middle school and new high school. Payment of State-mandated fees reduces impacts to Class III, less than significant, per State law. Expansion area acreage is sufficient to provide schools to meet expansion-related demand and partially offset demand related to intensification/reuse.			are Class III, less than significant, per State law. However, expansion areas do not provide sufficient acreage for school facilities that meet the needs of expansion-related student population growth.	
Libraries (Impact PS-4)	An additional 78,153 square feet of library facilities needed to achieve desired 1 square foot/capita ratio in 2025. Funding needed for new facilities, but facilities could likely be provided without significant environmental effects. Impacts are Class III, less than significant.	An additional 85,160 square feet of library facilities needed to achieve desired 1 square foot/capita ratio in 2025. Funding needed for new facilities, but facilities could likely be provided without significant environmental effects. Impacts are Class III, less than significant.	Impacts similar to Scenario 2 and Class III, less than significant.	Impacts similar to Scenario 2 and Class III, less than significant.	Impacts similar to Scenario 2 and Class III, less than significant.	Impacts similar to Scenario 2 and Class III, less than significant.
Solid Waste (Impact PS-5)	Projected growth would increase solid waste sent to landfills by an estimated 84 tons per day by 2025. This is within the current available daily capacity, but area landfills are	Projected growth would increase solid waste sent to landfills by an estimated 110 tons per day by 2025. This is within the current available daily capacity, but area	Impacts similar to Scenario 2 and Class I, unavoidably significant.	Impacts similar to Scenario 2 and Class I, unavoidably significant.	Impacts similar to Scenario 2 and Class I, unavoidably significant.	Impacts similar to Scenario 2 and Class I, unavoidably significant.

Summary Comparison of Impacts for EIR Scenarios

	projected to close in the 2022-2027 time period. Absent an alternative means/location for disposing of waste, impacts are Class I, unavoidably significant.	landfills are projected to close in the 2022-2027 time period. Absent an alternative means/location for disposing of waste, impacts are Class I, unavoidably significant.				
Recreation/Parks (Impact PS-6)	Projected population growth would generate demand for 212 acres of new parks by 2025 based on 10 acres/ 1,000 residents standard. Continued collection of required park fees and requirement of land dedication for parks could reduce impacts to Class III, less than significant. However, parks in older areas of the City (Downtown, Ventura Avenue corridor, Midtown area) where available land is lacking and population growth is projected may experience shortages of neighborhood parks absent land dedication with larger projects. Large sites to accommodate citywide park facilities are also lacking under this scenario.	Projected population growth would generate demand for 282 acres of new parks by 2025 based on 10 acres/1,000 residents standard. Continued collection of required park fees and requirement of land dedication for parks could reduce impacts to Class III, less than significant. Expansion areas provide sufficient acreage to meet 2025 demand for all types of facilities.	Impacts similar to Scenario 2 and Class III, less than significant.	Park demands in 2025 similar to Scenario 2. Continued collection of required fees and requirement of land dedication for parks could reduce impacts to Class III, less than significant. Expansion areas provide sufficient acreage to meet expansion-related demand and partially offset demand related to intensification/ reuse.	Park demands in 2025 similar to Scenario 2. Continued collection of required park fees and requirement of land dedication for parks could reduce impacts to Class III, less than significant. However, expansion areas do not provide sufficient acreage to meet expansion-related demand.	Park demands in 2025 similar to Scenario 2. Continued collection of required park fees and requirement of land dedication for parks could reduce impacts to Class III, less than significant. Expansion areas provide sufficient acreage to meet expansion-related demand and partially offset demand related to intensification/ reuse.

Action 7.12 *Refer development plans to the Fire Department to assure adequacy of structural fire protection, access for firefighting, water supply, and vegetation clearance.*

Action 7.13 *Resolve extended response time problems by:*

- *Adding a fire station at the Pierpont/Harbor area,*
- *Relocating Fire Station #4 to the Community Park site,*
- *Increasing firefighting and support staff resources, and*
- *Reviewing and conditioning annexations and development applications, and*
- *Requiring the funding of new services from fees, assessments, or taxes as new subdivisions are developed.*

Table 4.11-12 compares population increases and the increase in demand for facilities and firefighting personnel needed in order to maintain an adequate emergency response time of four minutes for Scenarios 1-6. As discussed in the *Setting*,. the City has not officially adopted a standard for firefighter staffing levels; however, for jurisdictions that are comparable in size and population to the City of Ventura, staffing levels are typically about 0.98 fire fighters per 1,000 residents which would indicate current staffing deficiencies of 30 firefighters. Facility and staffing levels are based on achieving the desired four-minute response time, which varies (at least in part) according to fire personnel staffing levels, the placement of fire stations in relation to service areas, and the density/layout of land uses and development within a service area. Impacts associated with each scenario are discussed below.

Table 4.11-12
Projected Increase in Demand for Firefighting Personnel and Facilities[a]

	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
Current Staffing	73	73	73	73	73	73
Current Staffing Deficiencies	30	30	30	30	30	30
New Staff needed for anticipated growth.	9-18	27	27	27	27	27
Total Staff Needed in 2025 to Maintain Desired Staffing Ratio[b]	**112-121[c]**	**130**	**130**	**130**	**130**	**130**
Existing Facilities	6	6	6	6	6	6
Needed New Facilities	1-2	2	2	2	2	2
Total Facilities Needed in 2025	**7-8**	**8**	**8**	**8**	**8**	**8**

[a] Staffing levels are based on the number of sworn firefighters and do not include Inspection Services' employees (cf setting discussion above). Facilities are measured in terms of number of fire stations.
[b] This analysis is based on a desired staffing ratio of 0.98 firefighters/1,000 residents.
[c] Approximately 121 firefighters would be required to achieve the desired staffing ratio; however, the actual number of new firefighters that would be hired would be based on whether or not an additional fire station is built in the North Ventura Avenue area under Scenario 1. Please see the Scenario 1 impact analysis below for a more detailed discussion of the requisite number of new fire stations and firefighters required under Scenario 1.

Scenario 1 – Intensification/Reuse Only

As shown in Table 4.11-12, there are currently 73 sworn firefighters and six fire stations serving the City. Scenario 1 would not include any expansion areas, but the addition of an estimated 21,201 new residents would require additional fire protection facilities and fire stations.

As discussed in the Setting, the VFD plans to relocate Fire Station #4 from its current location at 8303 Telephone Road to the Community Park property located at the corner of Telephone Road and Kimball Road in order to better serve the fire protection needs of Fire Sector #4. With this relocation, adequate fire protection service could be provided in all portions of Fire Sector #4. Neither the Ventura Harbor area nor areas along North Ventura Avenue currently falls within the VFD's desired four-minute response time. Two new fire stations—one to serve the Harbor area and one to serve the North Ventura Avenue area—would be needed to achieve the desired response time for these areas. The VFD has tentative plans to construct a new fire station in the Harbor area and General Plan Action 7.13 calls for a new station in this area; therefore, the new fire station is expected to be added in this area. The need for a new fire station within the North Ventura Avenue area under Scenario 1 would be based on the actual intensity of development that occurs within this area over the next 20 years. As stated above, currently response times for much of the North Ventura Avenue area exceed the desired four-minute response time; intensification of development—especially in the northern region of the North Ventura Avenue area—would most likely require the construction of a new fire station to serve this area.

As stated above, approximately 30 new firefighters are currently required to alleviate current staffing deficiencies and achieve the desired 0.98 firefighters/1,000 residents ratio. In order to adequately staff the new fire station and serve the Harbor area, an estimated nine new firefighters would be required; if an additional fire station is built to serve the North Ventura Avenue area, an additional nine firefighters would be required (Chief Mike Lavery, January 2005), thus resulting in a total of 121 firefighters or approximately 0.97 firefighters/1,000 residents.

Although an exact location for the new fire station to serve the Harbor area has not been identified, given the availability of land within this area, the construction of the new fire station would most likely occur adjacent to the Harbor along Harbor Boulevard. Similarly, a new fire station would most likely be built within the North Ventura Avenue corridor to serve this area. Funding sources for the new personnel and new facilities would be required, as well as site- and project-specific environmental review once project sites are identified for new facilities. It is anticipated that the new stations could be constructed without creating significant environmental effects.

Scenario 1 also could accommodate (under existing zoning and 1989 Comprehensive Plan land use designations) limited residential development above Foothill Road. Development in hillside areas could introduce new residences that would be located within, or directly adjacent to, high fire hazard areas. General Plan Action 7.12 would reduce potential impacts to a less than significant level through VFD review of development proposals in areas subject to wildland fire hazards. Potential secondary biological impacts associated with any clearance or setback requirements would be addressed through implementation of various policies and actions, as discussed in Section 4.4, *Biological Resources*.

Scenario 2 – Intensification/Reuse + North Avenue + Olivas + Serra

Impacts relating to intensification and reuse would be the same as those of Scenario 1. In addition, this scenario includes the possible future development of the North Avenue, Olivas, and Serra expansion areas. A discussion of possible impacts associated with the development of these areas follows.

New development within the North Avenue expansion area would be outside the City's four minute response time within this area. Development of the North Avenue expansion area would also be located adjacent to a high fire hazard area. Implementation of General Plan Action 7.12 would ensure that adequate wildland fire protections are incorporated into new developments. However, a new fire station would be needed to provide adequate fire response to the North Avenue expansion area.

The Olivas expansion area currently lacks adequate fire protection services. As discussed above, response times to the Harbor area can be 10 minutes or more, thereby exceeding the desired four minute response time. Development of the Olivas expansion area could introduce a mix of uses that currently lack adequate fire protection. However, as discussed under Scenario 1, the VFD has tentative plans for a new station adjacent to the Harbor and Action 7.13 calls for a new station in the Harbor area. This new station would provide adequate service to the Olivas expansion area.

Fire Station #4 would have primary responsibility for responding to calls within the Serra expansion area. Development of the Serra area could introduce a mix of new uses at a somewhat higher density than currently exists within this area. Although Fire Station #4 is adequate to serve the Serra expansion area, relocation of Fire Station #4 to the Community Park (as currently planned) would shorten response times and help better serve Fire Sector #4. Adequate fire protection service is expected to be available in this area.

As discussed under Scenario 1, an estimated nine new firefighters would be needed to staff a new fire station near the Harbor. About nine new firefighters would be needed to staff a second fire station to serve the North Ventura expansion area and surrounding areas (Chief Mike Lavery, January 2005). With 18 new firefighters to staff the new stations and correcting for the current staffing deficiencies, the VFD would have a total of approximately 130 firefighters. Based on the projected 2025 population, this would represent a ratio of 0.98 firefighters/1,000 residents. Funding sources for the new personnel and new facilities would be required, as well as site- and project-specific environmental review, once sites are identified for new facilities. It is anticipated that new facilities could be constructed without creating significant environmental effects.

Scenario 3 – Intensification/Reuse + North Avenue + Olivas

Impacts relating to intensification and reuse would be the same as those of Scenario 1. In addition, Scenario 3 includes the possible future development of the North Avenue and Olivas expansion areas. As discussed under Scenario 2, the planned new fire station in the Harbor area would provide for adequate fire protection service in the Olivas area. However, the North

Avenue expansion area would be outside the four-minute response time; therefore, a new station would be needed to serve that area as well as adjacent areas.

As discussed under Scenario 1, an estimated nine new firefighters would be needed to staff a new fire station near the Harbor, while about nine new firefighters would be needed to staff a second fire station to serve the North Ventura expansion area and surrounding areas (Chief Mike Lavery, January 2005). With 18 new firefighters to staff the new stations and correcting the current staffing deficiencies, the VFD would have a total of approximately 130 firefighters. Based on the projected 2025 population, this would represent a ratio of 0.98 firefighters/1,000 residents. Funding sources for the new personnel and new facilities would be required, as well as site- and project-specific environmental review, once sites are identified for new facilities.

Scenario 4 – Intensification/Reuse + North Avenue + Serra

Impacts relating to intensification and reuse would be the same as those of Scenario 1. In addition, Scenario 3 includes the possible future development of the North Avenue and Olivas expansion areas. As discussed under Scenario 2, fire protection service is adequate for the Serra area. However, the North Avenue expansion area would be outside the four-minute response time; therefore, a new station would be needed to serve that area as well as adjacent areas.

An estimated nine new firefighters would be needed to staff the new fire station near the Harbor, while an estimated nine new firefighters would be required to provide additional staffing for a second fire station to serve the North Ventura expansion area and surrounding areas. With 18 new firefighters to staff the new stations and correcting for the current staffing deficiencies, the VFD would have a total of approximately 130 firefighters. Based on the projected 2025 population, this would represent a ratio of 0.98 firefighters/1,000 residents. Funding sources for the new personnel and new facilities would be required, as well as site- and project-specific environmental review, once sites are identified for the new facilities.

Scenario 5 - Intensification/Reuse + North Avenue + Western Cañada Larga

Impacts relating to intensification and reuse would be the same as those of Scenario 1. In addition, Scenario 3 includes the possible future development of the North Avenue and Western Cañada Larga expansion areas.

Both the North Avenue and Western Cañada Larga expansion areas are outside the desired four-minute response time for the VFD. In addition, both areas are adjacent to high fire hazard areas. General Plan Action 7.12 would ensure that adequate wildland fire protections are incorporated into new developments. However, a new fire station would be needed to provide adequate fire response to these areas.

An estimated nine new firefighters would be needed to staff the new fire station near the Harbor, while an estimated nine new firefighters would be required to provide additional staffing for a second fire station to serve the North Ventura expansion area and surrounding areas. With 18 new firefighters to staff the new stations and correcting the current staffing deficiencies, the VFD would have a total of approximately 130firefighters. Based on the projected 2025 population, this would represent a ratio of 0.98 firefighters/1,000 residents.

Funding sources for new personnel and new facilities would be required, as well as site- and project-specific environmental review, once sites are identified for the new facilities.

Scenario 6 - Intensification/Reuse + North Avenue + Poinsettia

Impacts relating to intensification and reuse would be the same as those of Scenario 1. In addition, Scenario 3 includes the possible future development of the North Avenue and Poinsettia expansion areas.

As discussed under Scenario 2, the North Avenue expansion area is outside the desired four-minute response time for the VFD. In addition, it is adjacent to high fire hazard areas. Therefore, a new fire station would be needed to provide adequate fire protection services to this expansion area.

Fire Station #3 would have primary responsibility for serving new development within the Poinsettia expansion area. Fire Station #3 is located near the Telegraph Road/Victoria Avenue intersection. The most direct response route from Fire Station #3 to the Poinsettia expansion area and development along Foothill Road would require traveling east down Telegraph Road through the Telegraph Road/Victoria Avenue intersection. With the projected increase in traffic at that intersection, the response times to the Poinsettia area and adjacent neighborhoods east of Victoria Avenue could exceed the desired four minute response time. As such, Fire Station #3 would most likely need to be relocated east of the Telegraph Road/Victoria Avenue intersection (Chief Mike Lavery, January 2005).

An estimated nine new firefighters would be needed to staff the new fire station near the Harbor, while an estimated nine new firefighters would be required to provide additional staffing for a second fire station to serve the North Ventura expansion area and surrounding areas. With 18 new firefighters to staff the new stations and correcting for the current staffing deficiencies, the VFD would have a total of approximately 130 firefighters. Based on the projected 2025 population, this would represent a ratio of 0.98 firefighters/1,000 residents. Funding sources for the new personnel and new facilities would be required, as well as site- and project-specific environmental review, once sites are identified for the new facilities.

MITIGATION MEASURES

Implementation of 2005 General Plan Action 7.13 would provide the requisite funding for new facilities and equipment needed to serve new development through 2025. Site- and project-specific environmental review would be required for new fire stations once sites for the new facilities are identified. Action 7.12 would minimize impacts associated with new development adjacent to, or within, high fire hazard areas for Scenarios 1-6. Action 7.13, which calls for a new fire station in the Harbor area, would provide for adequate fire response in the Harbor district and the Olivas expansion area. The following actions are recommended to address potential impacts relating to fire response times in the event that possible development of the North Avenue, Western Cañada Larga, or Poinsettia expansion areas is included in the General Plan.

PS-1(a) North Avenue and Western Cañada Larga Expansion Areas. The following action shall be added to the 2005 General Plan if any land use scenario that includes possible future development of the North Avenue expansion area or the Western Cañada Larga expansion area is adopted:

- *Add a fire station in the North Avenue area as determined necessary by the Ventura Fire Department. Consider an assessment district for the North Avenue area to fund a new station.*

PS-1(b) Poinsettia Expansion Area. The following action shall be added to the 2005 General Plan if any land use scenario that includes possible future development of the Poinsettia expansion area is adopted:

- *Include a fire station site in any future specific plan for the Poinsettia expansion area if determined necessary by the Ventura Fire Department.*

SIGNIFICANCE AFTER MITIGATION

With implementation of proposed policies and action items and the additional action items recommended above, impacts relating to fire protection service would be reduced to a less than significant level for Scenarios 1-6. It is anticipated that needed new facilities could be built without creating significant environmental impacts.

Impact PS-2	**Possible future development under Scenarios 1-6 would increase the City's population and density of development, thereby resulting in the need to construct new facilities in order to provide effective police protection service. Impacts would be Class II, *significant but mitigable,* for any of the six land use scenarios.**

The 2005 General Plan includes the following policies that address police service:

Policy 7D *Improve community safety through enhanced police service.*

Action 7.15 *Increase public access to police services by:*

- *Increasing police staffing to coincide with increasing population, development, and calls for service, and*
- *Increasing community participation by creating a Volunteers in Policing Program, and*
- *Requiring the funding of new services from fees, assessments, or taxes as new subdivisions are developed.*

Action 7.16 *Provide education about specific safety concerns such as gang activity, senior-targeted fraud, and property crimes.*

Action: 7.17 *Establish a nexus between police department resources and increased service demands associated with new development.*

Police protection services are not "facility-driven;" that is, police protection services are not as reliant on facilities in order to effectively patrol a beat. An expansion of, or intensification of development within, a beat does not necessarily result in the need for additional facilities if police officers and patrol vehicles are equipped with adequate telecommunications equipment in order to communicate with police headquarters. However, if the geographical area of a beat is expanded, population increases, or intensification/redevelopment of an existing beat results in the need for new police officers, new or expanded facilities could be needed.

Table 4.11-13 compares population increases and the increase in demand for additional police personnel needed to maintain the current ratio of 1.21 police officers per 1,000 residents. Impacts associated with increased demand for police protection service are discussed below.

Table 4.11-13
Projected Increase in Demand for Police Department Personnel

	Scenario 1 (Intensification/ Reuse Only)	Scenarios 2-6
Projected population increase	21,201	28,208
Additional police officers needed to maintain current 1.21 officers/1,000 residents ratio	26	34

Scenario 1 – Intensification/Reuse Only

Approximately 26 additional police personnel would be needed to maintain the current 1.21 police officers per 1,000 residents ratio with the projected increase of 21,201 new residents under Scenario 1. Implementation of General Plan Action 7.15 would provide for increased staffing as necessary to serve the community.

As the existing police headquarters is currently at maximum capacity, the addition of 26 police personnel would require either an addition/expansion of the existing headquarters or the construction of a new headquarters large enough to accommodate the projected increase in police personnel and provide effective police protection services for the entire community. Intensification and redevelopment of the Downtown area, as well as the likely increase in population in this area, would require the creation of a new beat in order to provide effective police protection service for this area (Quinn Fenwick, March 2005). Of the approximately 26 new police officers required for Scenario 1, at least six of these officers would be required to patrol the new beat created for the Downtown area. In addition, a new storefront within the Downtown area would be needed.

New development that could occur outside of the existing City limits (e.g., the Upper North Avenue, North Avenue corridors, or Saticoy corridors) would not require the construction of new facilities. However, additional telecommunications equipment (e.g., radios, cell phones, and computers) would be required to effectively patrol these areas. As the construction of new

facilities would not be required to effectively patrol these areas, impacts would not be significant.

Scenario 2 – Intensification/Reuse + North Avenue + Olivas + Serra

Approximately 34 additional VPD personnel would be needed to maintain the 1.21 police officers per 1,000 residents ratio with the projected increase of 28,208 new residents under Scenario 2. Impacts relating to the intensification, redevelopment, and increase in population within the Downtown area would be the same as Scenario 1.

New development in the North Avenue, Olivas, and Serra expansion areas would not require the construction of new facilities. However, additional telecommunications equipment would be required to effectively patrol these areas (Quinn Fenwick, March 2005).

Scenario 3 – Intensification/Reuse + North Avenue + Olivas

Approximately 34 additional VPD personnel would be needed to maintain the 1.21 police officers per 1,000 residents ratio with the projected increase of 28,208 new residents under Scenario 3. Impacts relating to the intensification, redevelopment, and increase in population within the Downtown area would be the same as those of Scenario 1. Impacts from new development that could be accommodated in the North Avenue and Olivas expansion areas would be the same as those described under Scenario 2.

Scenario 4 – Intensification/Reuse + North Avenue + Serra

Approximately 34 additional VPD personnel would be needed to maintain the 1.21 police officers per 1,000 residents ratio with the projected increase of 28,208 new residents under Scenario 4. Impacts relating to the intensification, redevelopment, and increase in population within the Downtown area would be the same as those described under Scenario 1. Impacts from new development that could be accommodated in the North Avenue and Serra expansion areas would be the same as those described under Scenario 2.

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga

Approximately 34 additional VPD personnel would be needed to maintain the 1.21 police officers per 1,000 residents ratio with the projected increase of 28,208 new residents under Scenario 5. Impacts relating to the intensification, redevelopment, and increase in population within the Downtown area would be the same as those of Scenario 1. Impacts from new development that could be accommodated in the North Avenue and Serra expansion areas would be the same as under Scenario 2. Possible new development within the Western Cañada Larga expansion area would not require the construction of new facilities. However, new telecommunications equipment would be required.

Scenario 6 – Intensification/Reuse + North Avenue + Poinsettia

Approximately 34 additional VPD personnel would be needed to maintain the 1.21 police officers per 1,000 residents ratio with the projected increase of 28,208 new residents under

Scenario 6. Impacts relating to the intensification, redevelopment, and increase in population within the Downtown area would be the same as Scenario 1. New development in the North Avenue and Poinsettia expansion areas would not require the construction of new facilities. However, additional telecommunications equipment would be required to effectively patrol these areas.

MITIGATION MEASURES

New facilities (e.g., construction of a new storefront within the Downtown area and expansion of the existing police headquarters) would be subject to site- and project-specific environmental review and mitigation measures at such time as specific new facilities are proposed. In addition, the following mitigation measure is required.

PS-2 Police Protection Service. The following actions shall be added to the 2005 General Plan:

- *Establish a new Downtown storefront to meet the needs of the growing Downtown population*
- *Expand the Police Department headquarters as necessary to accommodate staff growth.*

SIGNIFICANCE AFTER MITIGATION

With implementation of proposed General Plan policies and actions, the above additional action items, and future site- and project-specific environmental review for the construction of new facilities, impacts relating to police protection service would be reduced to a less than significant level. It is anticipated that needed facility expansions and new facilities can be constructed with creating significant environmental effects.

Impact PS-3	**Projected enrollment growth under the 2005 General Plan would exceed the capacity of existing schools within the Ventura Unified School District, thereby creating the need to construct additional facilities. However, payment of State-mandated school impact fees is presumed to provide funding for needed new school facilities. Therefore, although available land for new schools may be limited (particularly for Scenarios 1 and 5), impacts to schools would be reduced to a Class III, *less than significant*, level for any of the six land use scenarios.**

Table 4.11-14 compares the anticipated post-project school enrollment for Scenarios 1-6, based on the existing school capacity for elementary schools, middle schools, and high schools in the Ventura Unified School District. Table 4.11-5 compares the estimated number and acreage of new schools needed to serve the projected increases in student populations at the VUSD. A discussion of impacts associated with each of the six land use scenarios follows.

Table 4.11-14
Projected School Enrollment and Capacity

Grade Level	Current Capacity	Current School Enrollment	New Students from Additional Growth Through 2025*	Projected 2025 Student Enrollment	Students Over Current Capacity	Capacity Utilization
Scenario 1						
K-5	8,277	7,729	1,826	9,555	1,278	115%
6-8	4,858	4,201	747	4,948	90	102%
9-12	5,586	5,267	913	6,180	594	111%
Scenario 1 Total	**18,721**	**17,197**	**3,486**	**20,683**	**1,962**	**110%**
Scenarios 2-6						
K-5	8,277	7,729	2,420	10,149	1,872	123%
6-8	4,858	4,201	990	5,191	333	107%
9-12	5,586	5,267	1,210	6,477	891	116%
Scenarios 2-6 Total	**18,721**	**17,197**	**4,620**	**21,817**	**3,096**	**117%**

** Calculated based upon rates of 0.22 elementary school students per unit, 0.09 middle school students per unit, and 0.11 high school students per unit. Numbers are rounded to the nearest whole number. The total increase in students is based upon the number of new dwelling units shown in Table 2-6 in Section 2.0 (approximately 8,300 units for Scenario 1 and 11,000 units for Scenarios 2-6).*

Scenario 1 - Intensification/Reuse Only

Under Scenario 1, the anticipated addition of 8,300 residential units through 2025 would generate an estimated 3,486 new students at the Ventura Unified School District. This total includes 1,826 elementary, 747 middle, and 913 high school students. With this increase in enrollment, overall enrollment would exceed the capacity of existing VUSD schools by an estimated 1,962 students.

Based on California Department of Education recommended standards, projected student growth associated with Scenario 1 would generate the need for an estimated 2-3 new elementary schools, and potentially a new middle school and high school. Overall acreage needed to accommodate new facilities would range from about 29 to 93 acres, depending primarily upon whether or not new middle or high school facilities are needed.
Pursuant to Section 65995(h) of the California Government Code (Senate Bill 50, chaptered August27, 1998), the payment of statutory fees "...is deemed to be full and complete mitigation of the impacts of any legislative or adjudicative act, or both, involving, but not limited to, the planning, use, or development of real property, or any change in governmental organization or reorganization." Therefore, pursuant to CGC §65994(h), impacts relating to school capacity would not be significant if future developers within the VUSD continue to pay State-mandated school impact fees. Site- and project-specific environmental review would be required for

Table 4.11-15
Projected School Demand

School Type	Students Over Current Capacity (from Table 4.11-14)	Students/ School[a]	New Schools Needed[a]	School Acres Needed[b]
Scenario 1				
Elementary	1,278	450	2-3	19-29
Middle	90	900	0-1	0-21
School	594	1,200	0-1	0-34
Total	**1,962**		**3-6**	**29-93**
Scenarios 2-6				
Elementary	1,872	450	4-5	38-48
Middle	333	900	0-1	0-21
School	891	1,200	0-1	0-34
Total	**3,096**		**4-7**	**38-103**

[a] Recommended school size from the California Department of Education.
[b] Total students over capacity divided by the number of students per school.
[C] Based on recommended school size from the California Department of Education: 9.6 acres for elementary schools, 20.9 acres for middle schools, and 33.5 acres for high schools.

individual school sites as they are identified in the future.

Although impacts would not be significant under CEQA, it should be noted that Scenario 1 includes only limited land that could be used for the development of new school facilities. Development of the planned West End Elementary site would partially meet the elementary school demand. However, other sites of sufficient size to accommodate new schools are designated for other uses.

One alternative to developing new schools would be to expand existing schools. Enrollment and current capacity at several VUSD schools are currently under the CDE's recommended recommended 450-student school size. However, it should be noted that the VUSD has indicated that existing playground facilities are already overused and more intensive use of facilities would exacerbate this condition. Another option would be to acquire properties that are currently designated for other uses and converting them to school sites. Depending upon owners' willingness to sell properties, this approach could require VUSD condemnation of properties to meet school needs.

Scenario 2 – Intensification/Reuse + North Avenue + Olivas + Serra

Under Scenario 2, the anticipated addition of 11,000 residential units through 2025 would generate an estimated 4,620 new students at the Ventura Unified School District. This total includes 2,420 elementary, 990 middle, and 1,210 high school students. With this increase in enrollment, overall enrollment would exceed the capacity of existing VUSD schools by an estimated 3,096 students.

Based upon California Department of Education recommended standards, projected student growth associated with Scenario 2 would generate the need for an estimated 4-5 new elementary schools and potentially a new middle school and high school. Overall acreage needed to accommodate new facilities would range from about 38 to 103 acres, depending primarily upon whether or not new middle or high school facilities are needed.

As with Scenario 1, site- and project-specific environmental review would be required for individual school sites as they are identified in the future and collection of State-mandated school impact fees would reduce school capacity impacts to a less than significant level.

Scenario 2 includes the North Avenue, Olivas, and Serra expansion areas, which have a combined 1,449 acres. Based on the estimated 2,700 total new residences in the expansion areas, the expansion areas themselves would generate an estimated 594 elementary school students, 243 middle school students, and 297 high school students. The 1,449 combined acres provide sufficient land to meet demands associated with expansion and at least partially offset demands associated with intensification/reuse.

Scenario 3 – Intensification/Reuse + North Avenue + Olivas

Projected VUSD enrollment increases and demand for new school facilities would be identical to those identified for Scenario 2. Site- and project-specific environmental review would be required for individual school sites as they are identified in the future and collection of State-mandated school impact fees would reduce school capacity impacts to a less than significant level.

Scenario 3 includes the North Avenue and Olivas expansion areas, which have a combined 985 acres. This acreage is sufficient to meet school acreage demands associated with expansion and at least partially offset demands associated with intensification/reuse.

Scenario 4 – Intensification/Reuse + North Avenue + Serra

Projected VUSD enrollment increases and demand for new school facilities would be identical to those identified for Scenario 2. Site- and project-specific environmental review would be required for individual school sites as they are identified in the future and collection of State-mandated school impact fees would reduce school capacity impacts to a less than significant level.

Scenario 4 includes the North Avenue and Serra expansion areas, which have a combined 511 acres. This acreage is sufficient to meet school acreage demands associated with expansion and at least partially offset demands associated with intensification/reuse.

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga

Projected VUSD enrollment increases and demand for new school facilities would be identical to those identified for Scenario 2. Site- and project-specific environmental review would be required for individual school sites as they are identified in the future and collection of State-mandated school impact fees would reduce school capacity impacts to a less than significant level.

Scenario 5 includes the North Avenue and Western Cañada Larga expansion areas, which have a combined 176 acres, about of 146 of which are developable. This amount of acreage is not sufficient to accommodate any school facilities given that it is assumed that 2,700 residences would be built in the limited amount of land available. Thus, the expansion areas would not be able to provide schools to meet demand associated with expansion area development. Even if sufficient land were available to accommodate schools, the Western Cañada Larga area is not located adjacent to the more densely populated residential areas of the Planning Area and would not serve as a preferred location for new schools.

Scenario 6 – Intensification/Reuse + North Avenue + Poinsettia

Projected VUSD enrollment increases and demand for new school facilities would be identical to those identified for Scenario 2. Site- and project-specific environmental review would be required for individual school sites in the future and collection of State-mandated school impact fees would reduce school capacity impacts to a less than significant level.

Scenario 6 includes the North Avenue and Poinsettia expansion areas, which have a combined 473 acres. This acreage is sufficient to meet school acreage demands associated with expansion and at least partially offset demands associated with intensification/reuse.

MITIGATION MEASURES

As discussed above, site- and project-specific environmental review would be required for schools if, or when, new sites are proposed for development in the future. As previously noted, pursuant to Section 65995(h) of the California Government Code (Senate Bill 50, chaptered August 27, 1998), the payment of statutory fees "...is deemed to be full and complete mitigation of the impacts of any legislative or adjudicative act, or both, involving, but not limited to, the planning, use, or development of real property, or any change in governmental organization or reorganization." Therefore, mitigation is not required for any scenario. Nevertheless, the following is recommended.

PS-3(a) **School Coordination.** The following action should be added to the 2005 General Plan:

- Work with the Ventura Unified School District to ensure that school facilities can be provided to serve new development.

PS-3(b) **Expansion Area Schools.** The following action should be added to the 2005 General Plan if any land use scenario that includes an expansion area is adopted:

- Require expansion area specific plans to be prepared in coordination with the Ventura Unified School District and set aside land needed for new school facilities.

SIGNIFICANCE AFTER MITIGATION

Continued collection of State-mandated school impact fees would fund the construction of new school facilities that would be required to accommodate projected increases in school enrollment and would reduce school impacts to a less than significant level for any of the six scenarios. Nevertheless, it should be noted that land available for school development would be limited under Scenario 1; therefore, selection of that scenario may require intensification of the use of existing schools or VUSD condemnation of property to provide needed school facilities. In addition, the expansion areas considered for Scenario 5 (North Avenue and Western Cañada Larga) do not include sufficient acreage to provide for school facility demands generated by projected expansion area development.

Impact PS-4	**Ventura libraries are currently undersized to serve the City's existing population and, given the projected population growth rates for Scenarios 1-6, the existing library services would be inadequate to serve the future service area population. Although new facilities would be needed to meet projected demand under Scenarios 1-6, facilities could be constructed without causing significant environmental impacts. This is considered to be a Class III, *less than significant*, impact for all six scenarios.**

Table 4.11-16 compares the anticipated demand for library services for Scenarios 1-6. Project demand is measured in terms of books per capita, as well as size of facilities (in square feet) per capita. Although the Ventura County Library currently does not have an adopted standard for these two measures, two books per capita and one square foot of facilities per capita were used, as they reflect the standards used for recently approved projects within Ventura County (e.g., the Camarillo library). The needs assessment includes E.P. Foster Library, H.P. Wright Library, and Avenue Library.

It is important to note that other factors besides the number of books and size of facilities have an impact on the quality of library services. Staffing levels, computer equipment, internet access, and age of books, for example, also play a key role in the quality of library services. However, in order to assess impacts on library facilities for Scenarios 1-6, books per capita and

Table 4.11-16
Projected Demand for Library Services

	Current Books[a]	Books Needed in 2025 at 2 Books/ Capita[b]	Additional Books Required to Maintain 2 Books/ Capita	Current Facilities (square feet)[c]	Facilities Needed in 2025 to Achieve 1 Square Foot/Capita Ratio (square feet)[b]	Additional Facilities Required to Meet 1 Square Foot/Capita Ratio[d]
Scenario 1	227,565	252,306	24,741	48,000	126,153	78,153
Scenarios 2-6	227,565	266,320	38,755	48,000	133,160	85,160

[a] *Bood estimates from Starrett Kreissman, personal communication, 1/24/05.*
[b] *Based on population of 126,153 for Scenario 1 and 133,160 for Scenarios 2-6.*
[c] *Size of facilities from Starrett Kreissman, personal communication, 1/24/05.*

library facilities per capita were used as they are directly related to the need for new or physically altered facilities. A discussion of impacts for each scenario follows.

Scenario 1 – Intensification/Reuse Only

Although there is no officially adopted books per capita ratio, 2 books per capita is considered an appropriate standard for the City of Ventura (Starrett Kreissman, January 2005). With a total of 227,565 books and a population of 104,952 residents, E.P. Foster Library, H.P. Wright Library, and Avenue Library currently maintain 2.16 books per capita, thereby exceeding the 2 books per capita standard. Under Scenario 1, the projected 2025 population would be 126,153 residents. Therefore, 252,306 books would be needed to maintain 2 books per capita, which would require the acquisition of an estimated 24,741 additional books.

Similar to the books per capita ratio, there is no officially adopted facilities per capita ratio; however, one square foot per capita is considered an appropriate standard (Starrett Kreissman, January 2005). With a total of 48,000 square feet of facilities and a population of 104,952, the current ratio is 0.46 square feet of facilities per capita. In order to achieve one square foot of facilities per capita, an additional 78,153 square feet of library facilities would be required by 2025 based on the 0.88% annual population growth projection.

Additional facilities would likely be provided within already urbanized areas of the Planning Area. Options for providing additional facilities could include the leasing of existing buildings, expanding existing library facilities, and/or building new facilities, any of which could likely be implemented without creating significant environmental impacts.

Scenarios 2 – 6

Because impacts would be the same for Scenarios 2-6, these scenarios are not discussed

individually. Under Scenarios 2-6, the projected 2025 population would be 133,160 residents. Therefore, 266,320 books would be needed to maintain 2 books per capita, which would require the acquisition of an estimated 38,755 additional books.

In order to achieve one square foot of library facilities per capita in 2025, an additional 85,160 square feet of facilities would be required by 2025 based on the 1.14% annual population growth projection assumed for Scenarios 2-6. Additional facilities could be provided within already urbanized areas of the Planning Area through leasing of existing buildings, expanding existing library facilities, and/or building new facilities. Expansion areas could also be used to wholly or partially meet new library demands under any of the five scenarios. Any of the options for providing new library facilities could likely be implemented without creating significant environmental impacts.

MITIGATION MEASURES

As discussed above, Scenarios 1-6 could accommodate the construction of new library facilities without creating any significant environmental impacts. Mitigation is not needed, though increased funding of libraries would be needed if new facilities are to be developed.

SIGNIFICANCE AFTER MITIGATION

Impacts would not be significant for any of the six land use scenarios. Projected overall demand for additional library facilities and services would be greater under Scenarios 2-6 than under Scenario 1 because of the higher projected population.

Impact PS-5	**Existing landfills have adequate capacity to accommodate projected citywide increases in solid waste generation for the next 15-17 years. However, regional waste generation increases could exceed the daily capacity of area landfills. In addition, area landfills are projected to close in the 2022-2027 period; therefore, expanded or new facilities will be needed to accommodate solid waste generated in the City through 2025. Although the identification of new facilities is physically feasible, the City cannot ensure that new facilities are sited. Impacts are therefore considered Class I, *unavoidably significant*, for all six land use scenarios.**

The 2005 General Plan includes the following policies and actions related to reducing solid waste generation:

Policy 5B	*Improve services in ways that respect and even benefit the environment.*
Action 5.10	*Utilize existing waste source reduction requirements, and continue to expand and improve composting and recycling options.*
Policy 1D	*Expand the use of green practices.*
Action 1.25	*Purchase and use recycled materials and alternative and renewable*

energy sources as feasible in City operations.

Action 1.27 *Utilize green waste as biomass/compost in City operations.*

Action 1.30 *Provide information to businesses about how to reduce waste and pollution and conserve resources.*

Table 4.11-17 shows the estimated increase in solid waste generation anticipated for Scenarios 1-6. A discussion of the impacts associated with each scenario follows.

Table 4.11-17
Current and Projected Solid Waste Generation (tons per day)

	Current Citywide (2003) [a]			2025 Citywide			Projected Increase (2003-2025)		
	Tons Generated Per Day	Tons Diverted from Landfills	Tons Sent to Landfills	Tons Generated Per Day [b]	Tons Diverted from Landfills [c]	Tons Sent to Landfills [c]	Increase in Tons Per Day	Additional Tons Diverted from Landfills	Additional Tons Sent to Landfills
Scenario 1	1,009	616	393	1,224	747	477	215	131	84
Scenarios 2-6	1,009	616	393	1,291	788	503	282	172	110

[a] *From Gary Haden, City of Ventura Environmental Services Office, personal communication, 1/24/04.*
[b] *Based on the current per capita rate of 0.0096 tons/person/day applied to the projected population of 126,153 (Scenario 1) and 133,160 (Scenarios 2-6).*
[c] *Assumes the City's 2003 diversion rate of 61%.*

Scenario 1 – Intensification/Reuse Only

Under Scenario 1, daily citywide solid waste generation is projected to increase by about 215 tons per day by 2025. Assuming that the current 61% diversion rate is maintained, 39% of this total, about 84 tons per day, would be sent to area landfills. This is within the 350-ton combined currently available capacity at the Toland Road and Simi Valley Landfills (100 tons at Toland Road and 250 tons at Simi Valley). Adequate landfill capacity could potentially be available for the next 15-17 years. However, the Simi Valley Landfill is a less desirable alternative to Toland Road because of its long distance from Ventura. In addition, that landfill is currently projected to close by 2022. This would reduce available capacity to 100 tons per day. Though the projected 84-ton increase for the City is within this amount, the cumulative increase in solid waste sent by Ventura and other cities in the region is anticipated to exceed 100 tons given that waste generated in Ventura makes up only about 25-30% of the total waste currently going to Toland Road Landfill. In addition, the Toland Road Landfill is projected to close by 2027. Consequently, a new or expanded solid waste disposal facility is expected to be needed over the next 20 years to accommodate waste generated in Ventura. Impacts relating to solid waste disposal are considered significant.

As discussed in the *Setting*, household hazardous waste collection programs resulted in the collection of approximately 250,721 pounds of household hazardous waste and oil during 2003-2004. Using the City of Ventura 2003 population of approximately 104,300 residents, household

hazardous waste collection programs collected approximately 2.4 pounds of household hazardous waste and oil per person per year. Using this per capita rate, population growth under Scenario 1 would increase household hazardous waste generation by approximately 50,882 pounds per year. The Environmental Services Office is currently constructing a household hazardous waste facility that would allow the number of household hazardous waste collection events to increase from four to eleven events per year. Construction of the new household hazardous waste facility and the anticipated increase in collection events could accommodate the anticipated increase in household hazardous waste and oil under Scenario 1. Therefore, impacts relating to household hazardous waste are not considered significant.

Scenarios 2 – 6

Because solid waste generation and impacts would be the same for Scenarios 2-6, those scenarios are not discussed individually. Under Scenarios 2-6, daily citywide solid waste generation is projected to increase by about 282 tons per day by 2025. Assuming that the current 61% diversion rate is maintained, 39% of this total, about 110 tons per day, would be sent to area landfills. This is within the 350-ton combined currently available capacity at the Toland Road and Simi Valley Landfills (100 tons at Toland Road and 250 tons at Simi Valley). Therefore, adequate landfill capacity could potentially be available for the next 15-17 years. However, as noted previously, the Simi Valley Landfill is a less desirable alternative than Toland because of its distance from Ventura and is currently projected to close by 2022. This would reduce available capacity to 100 tons per day, which is not sufficient to accommodate the 110-increase associated with growth under Scenarios 2-6 or the combined increase in solid waste generation in all cities that take solid waste to Toland Road Landfill. In addition, the Toland Road Landfill is projected to close by 2027. Consequently, a new or expanded solid waste disposal facility is expected to be needed over the next 20 years to accommodate solid waste generated in Ventura. Impacts relating to solid waste disposal are considered significant.

Using the per capita rate of 2.4 pounds of household hazardous waste per year (see discussion under Scenario 1), population growth under Scenarios 2-6 would increase household hazardous waste generation by approximately 67,700 pounds per year. As noted above, the Environmental Services Office is currently constructing a household hazardous waste facility that would allow the number of household hazardous waste collection events to increase from four to eleven events per year. Construction of the new household hazardous waste facility and the anticipated increase in collection events could accommodate the anticipated increase in household hazardous waste and oil under Scenarios 2-6. Therefore, impacts relating to household hazardous waste are not considered significant.

MITIGATION MEASURES

The policies and actions listed at the beginning of this impact discussion would serve to reduce solid waste generation and landfilling to the maximum degree feasible, but would not address the potential landfill capacity shortfall. The following measure is recommended to address the potential lack of available landfill capacity in 2025 for all six scenarios.

PS-5 Solid Waste Disposal Facilities. The following actions shall be added to the 2005 General Plan:

- *Coordinate with the Ventura Regional Sanitation District and the County to expand the capacity of existing landfills, site new landfills, or develop alternative means of disposing of solid waste that will provide sufficient capacity for waste generated in the City.*
- *Develop incentives for new residences and businesses to incorporate recycling and waste diversion practices using guidelines provided by the Environmental Services Office.*

SIGNIFICANCE AFTER MITIGATION

Implementation of the recommended action would provide a mechanism for identifying landfill space or other means of disposing of solid waste that would meet the City's needs through 2025 and beyond. However, because siting of new landfills and waste disposal facilities is subject to the approval of another agency (the Regional Sanitation District), the City cannot guarantee the siting of a new landfill within the timeframe of the 2005 General Plan. In addition, though any new or expanded facility would likely be subject to separate environmental review under CEQA, the siting of a new facility would likely have unavoidably significant secondary environmental impacts. As such, impacts relating to solid waste disposal facilities are considered unavoidably significant for any of the six scenarios.

Impact PS-6	**Population growth accommodated under any of the 2005 General Plan land use scenarios would increase demand for recreational facilities and programs. With continued payment of Quimby fees and parkland dedication in conjunction with new development, impacts could be reduced to a Class III, *less than significant*, level for all six scenarios. It should be noted, however, that Scenario 1 does not include land that could accommodate new citywide park facilities, while the expansion areas included in Scenario 5 do not include sufficient land to provide park acreage meeting the demands of projected expansion area population growth.**

The 2005 General Plan includes the following policies and actions relating to the provision of parks.

Policy 6A *Expand the park and trail network to link shoreline, hillside, and watershed areas.*

Action 6.1 *Develop new neighborhood parks, pocket parks, and community gardens as feasible and appropriate to meet citizen needs, and require them in new development.*

Action 6.2 *Require higher density development to provide pocket parks, tot lots, seating plazas, and other aesthetic green spaces.*

Action 6.3 *Require development to include trails when appropriate.*

Action 6.4 *Request Flood Control District approval of public access along unchannelized watercourses for hiking.*

Action 6.5 *Seek landowner permission to allow public access on properties adjacent to open space where needed to connect trails.*

Action 6.6 *Update plans for and complete the linear park system as resources allow.*

Action 6.7 *Work with the County of Ventura to initiate efforts to create public trails in the hillsides.*

Action 6.8 *Update the Park and Recreation Workbook as necessary to reflect City objectives and community needs.*

Action 6.9 *Require dedication of land identified as part of the City Linear Park System in conjunction with new development.*

Action 6.10 *Evaluate and incorporate, as feasible, linear park segments in the General Bikeway Plan.*

Action 6.11 *Update standards for citywide public parks and open space to include an expanded menu of shared park types, and identify locations and potential funding sources for acquiring new facilities in existing neighborhoods.*

Action 6.12 *Update and carry out the Grant Park Master Plan.*

Action 6.13 *Foster the partnership between the City and Fair Board to improve Seaside Park.*

Action 6.13 *Foster the partnership between the City and Fair Board to improve Seaside Park.*

Policy 6B *Ensure equal access to facilities and programs.*

Action 6.14 *Improve facilities at City parks to respond to the requirements of special needs groups.*

Action 6.15 *Adjust and subsidize fees to ensure that all residents have the opportunity to participate in recreation programs.*

Action 6.16 *Update the project fee schedule as necessary to ensure that development provides its fair share of park and recreation facilities.*

Policy 6C *Provide additional gathering spaces and recreation opportunities.*

Action 6.17 *Update and create new agreements for joint use of school and City recreational and park facilities.*

Action 6.18 *Offer programs that highlight natural assets, such as surfing, sailing, kayaking, climbing, gardening, and bird watching.*

Action 6.19 *Provide additional boating and swimming access as feasible.*

Action 6.20 *Earmark funds for adequate maintenance and rehabilitation of existing skatepark facilities, and identify locations and funding for new development of advanced level skatepark facilities.*

Table 4.11-18 compares the parkland demand that would result from growth projected for Scenarios 1-6. A discussion of each scenario follows.

Table 4.11-18
Current and Projected Parkland Demand

	Current Demand for Parkland[a]	Increased Parkland Demand Due to Projected Population Growth[a]	Total Parkland Demand in 2025[a]	Total Existing Parkland[b]	Additional Parkland Required to Meet 10/Acres per 1,000 Residents in 2025
Scenario 1	1,050 acres	212 acres	1,262 acres	866-870 acres	392-396 acres
Scenarios 2-6	1,050 acres	282 acres	1,332 acres	866-870 acres	462-466 acres

[a]Demand for parkland is based on the City's current standard of 10 acres/1,000 residents.
[b]Total existing parkland includes Community, Montalvo, and Fill Parks, as well as City-owned linear parks. The total existing parkland varies, as the size of Surfers Point at Seaside Park and Seaside Wilderness Park fluctuate according to the mean high tide line. In addition, approximately 65% of Seaside Wilderness Park is located in the Ventura Riverbed.

Scenario 1 – Intensification/Reuse Only

Parkland demand is based on the City standard of 10 acres per 1,000 residents. Using the 2004 population of 104,952, total existing parkland is deficient by approximately 180-184 acres. With an annual population growth rate of 0.88%, Scenario 1 would generate an estimated 21,201 new residents. Based on the 10 acres/1,000 residents standard, this would generate the need for approximately 212 acres of additional parkland. Therefore, citywide demand for parkland in2025 would be 1,262 acres. Because the current parkland inventory includes 866-870 acres, approximately 392-396 acres of new parkland would be needed to meet the 10 acres/1,000 residents standard.

Scenario 1 does not include any expansion areas and would emphasize intensification of development and the reuse of existing lands within already developed areas. Site- and project-specific environmental review would be required as sites are identified for new facilities. Dedication of parklands for new development and continued payment of required park fees to purchase lands that could be converted into parklands within the City would help offset the demand in new parklands under Scenario 1. Moreover, non-city special use facilities (e.g., state beaches, the Ventura County Fairgrounds, and Ventura Unified School District sports fields) would continue to provide approximately 600 acres of additional recreational parks and facilities that could be utilized by current and new residents.

Dedication of parkland for new development and continued collection of required park fees on new development would allow the City to address increased demand for parks associated with population growth. Specific environmental impacts associated with individual new park facilities would need to be addressed on a case-by-case as new facilities are proposed.

The intensification of residential development in certain areas of the City – notably portions of Saticoy, the Downtown District, and the Ventura Avenue, Main Street, and Thompson

Boulevard, and Telegraph Road corridors – could substantially increase demand for parks in these areas, which are largely lacking in local park facilities. Available land for new park facilities, particularly citywide facilities, is largely lacking in these areas. Therefore, the development of new parks may require land dedication in conjunction with the development of large properties in order to provide park facilities in areas where substantial residential growth is anticipated. General Plan Action 6.1 addresses this issue, calling for new neighborhood parks, pocket parks, and community gardens, and requiring new development to incorporate park facilities. In addition, Action 6.2 requires higher density development to provide pocket parks, tot lots, seating plazas, and other aesthetic green spaces. It should be noted, however, that large parcels of 100 acres or more that could accommodate citywide park facilities are lacking under Scenario 1. Consequently, the development of new citywide facilities may require future consideration of SOI expansion. Such expansion would be subject to environmental review under CEQA and, depending upon which areas, if any, are considered, voter approval.

Scenario 2 – Intensification/Reuse + North Avenue + Olivas + Serra

Based on a projected annual population growth rate of 1.14%, Scenario 2 would accommodate an estimated 28,208 new residents. Based on the 10 acres/1,000 residents standard, this would generate the need for approximately 282 acres of additional parkland. Therefore, the citywide demand for parkland in 2025 would be 1,262 acres. The current parkland inventory includes 866-870 acres; therefore, approximately 462-466 acres of new parkland would be required to meet the 10 acres/1,000 residents standard in 2025.

Dedication of parkland for new development and continued collection of required park fees on new development would allow the City to address increased demand for parks associated with population growth. Specific environmental impacts associated with individual new park facilities would need to be addressed on a case-by-case as new facilities are proposed.

Park issues associated with intensification and reuse would be similar to those described for Scenario 1. This scenario would also include the North Avenue, Olivas, and Serra expansion areas, which include a combined 1,449 acres. If developed in the future, these areas are projected to accommodate up to about 2,700 new residences. Based on the current 2.57 persons/household, the expansion areas would accommodate a population of just under 7,000. Thus, about 70 acres of parks would be needed in order to meet demand associated with expansion area development. Specific plans have not been developed for any of the expansion areas. However, as noted in the "Expansion Area Acres by Use" estimates provided in Appendix B, it is anticipated that less than 500 acres of land would be needed to accommodate the amount of development projected for the expansion areas. Thus, more than 900 expansion area acres would potentially be available for new park facilities. This acreage would more than meet the demands associated with expansion area residential development and could be used to offset the current citywide shortfall of park acreage as well as the lack of space for citywide park facilities in intensification/reuse areas.

Scenario 3 – Intensification/Reuse + North Avenue + Olivas

The increase in park demand associated with Scenario 3 would be identical to that of Scenario 2

- 282 acres. Citywide demand for parkland in 2025 would be 1,262 acres. As with Scenario 2, approximately 462-466 acres of new parkland would be required to meet the 10 acres/1,000 residents standard in 2025.

Dedication of parkland for new development and continued collection of required park fees on new development would allow the City to address increased demand for parks associated with population growth. Specific environmental impacts associated with individual new park facilities would need to be addressed on a case-by-case as new facilities are proposed.

Park issues associated with intensification and reuse would be similar to those described for Scenario 1. This scenario would also include the North Avenue and Olivas expansion areas, which include a combined 985 acres and, if developed, could accommodate about 7,000 new residents. Similar to Scenario 2, about 70 acres of parks would be needed in order to meet demand associated with expansion area development. As noted in the "Expansion Area Acres by Use" estimates provided in Appendix B, it is anticipated that more than 500 expansion area acres would potentially be available for new park facilities under this scenario. This acreage would more than meet the demands associated with expansion area residential development and potentially could be used to offset the current citywide shortfall of park acreage as well as the lack of space for citywide park facilities in intensification/reuse areas.

Scenario 4 – Intensification/Reuse + North Avenue + Serra

The increase in park demand associated with Scenario 4 would be identical to that of Scenario 2 - 282 acres. Citywide demand for parkland in 2025 would be 1,262 acres. As with Scenario 2, approximately 462-466 acres of new parkland would be required to meet the 10 acres/1,000 residents standard in 2025.

Dedication of parkland for new development and continued collection of required park fees on new development would allow the City to address increased demand for parks associated with population growth. Specific environmental impacts associated with individual new park facilities would need to be addressed on a case-by-case as new facilities are proposed.

Park issues associated with intensification and reuse would be similar to those described for Scenario 1. This scenario would also include the North Avenue and Serra expansion areas, which include a combined 519 acres and, if developed, could accommodate about 7,000 new residents. Similar to Scenario 2, about 70 acres of parks would be needed in order to meet demand associated with expansion area development. As noted in the "Expansion Area Acres by Use" estimates provided in Appendix B, it is estimated that 147 expansion area acres would potentially be available for new park facilities under this scenario. This acreage would more than meet the demands associated with expansion area residential development and could be used to partially offset some of the current citywide shortfall of park acreage as well as the lack of space for citywide park facilities in intensification/reuse areas.

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga

The increase in park demand associated with Scenario 5 would be identical to that of Scenario 2 - 282 acres. Citywide demand for parkland in 2025 would be 1,262 acres. As with Scenario 2,

approximately 462-466 acres of new parkland would be required to meet the 10 acres/1,000 residents standard in 2025.

Dedication of parkland for new development and continued collection of required park fees on new development would allow the City to address increased demand for parks associated with population growth. Specific environmental impacts associated with individual new park facilities would need to be addressed on a case-by-case as new facilities are proposed.

Park issues associated with intensification and reuse would be similar to those described for Scenario 1. This scenario would also include the North Avenue and Western Cañada Larga expansion areas, which include a combined 176 acres and, if developed, could accommodate about 7,000 new residents. Similar to Scenario 2, about 70 acres of parks would be needed in order to meet demand associated with expansion area development. As noted in the "Expansion Area Acres by Use" estimates provided in Appendix B, it is estimated that only about 32 expansion area acres would potentially be available for new park facilities under this scenario. This acreage would not be adequate to meet the demands associated with expansion area residential development.

Scenario 6 – Intensification/Reuse + North Avenue + Poinsettia

The increase in park demand associated with Scenario 6 would be identical to that of Scenario 2 - 282 acres. Citywide demand for parkland in 2025 would be 1,262 acres. As with Scenario 2, approximately 462-466 acres of new parkland would be required to meet the 10 acres/1,000 residents standard in 2025.

Dedication of parkland for new development and continued collection of required park fees on new development would allow the City to address increased demand for parks associated with population growth. Specific environmental impacts associated with individual new park facilities would need to be addressed on a case-by-case as new facilities are proposed.

Park issues associated with intensification and reuse would be similar to those described for Scenario 1. This scenario would also include the North Avenue and Poinsettia expansion areas, which include a combined 473 acres and, if developed, could accommodate about 7,000 new residents. Similar to Scenario 2, about 70 acres of parks would be needed in order to meet demand associated with expansion area development. As noted in the "Expansion Area Acres by Use" estimates provided in Appendix B, it is estimated that 113 expansion area acres would potentially be available for new park facilities under this scenario. This acreage would more than meet the demands associated with expansion area residential development and could be used to partially offset some of the current citywide shortfall of park acreage as well as the lack of space for citywide park facilities in intensification/reuse areas.

MITIGATION MEASURES

Continued payment of required park fees and dedication of land for parks on a case-by-case basis would reduce impacts to a less than significant level. Mitigation is not required for any of the six scenarios.

SIGNIFICANCE AFTER MITIGATION

Impacts would be less than significant for any of the six scenarios with continued payment of applicable park fees and dedication of parkland on a case-by-case basis. Possible environmental impacts associated with the development of new parks would depend upon the local and type of facility and would need to be addressed on case-by-case basis. It should be noted that Scenarios 2, 3, 4, and 6 would provide greater opportunities for the development of new parks, particularly citywide facilities, than would Scenarios 1 or 5. Scenario 5 includes insufficient expansion area acreage to provide enough parkland to meet the parkland demand associated with that scenario.

4.12 TRANSPORTATION and CIRCULATION

This section discusses the impacts of the 2005 General Plan upon the local transportation and circulation system. Impacts relating to the roadway system, public transit, and bicycle and pedestrian facilities are evaluated. The analysis summarizes the findings and conclusions of the Circulation Element Update Traffic Study prepared by Austin-Foust Associates. The entire text of that study, dated May 2005, is included in Appendix E. Intersection capacity utilization worksheets and other traffic study backup data are available for review at the City of Ventura Community Development Department.

4.12.1 Setting

a. Street System Performance Criteria. To evaluate the Circulation Element arterial street system in relation to the Land Use Element, use is made of performance criteria. These criteria include "performance standards" and "thresholds of significance," the latter being used for identifying project impacts.

Performance Criteria Definitions. The analysis of the arterial road system is based on intersection capacity since this is the defining capacity limitation on an arterial highway system. Levels of service for arterial roadway intersections are determined based on operating conditions during the AM and PM peak hours. The intersection capacity utilization (ICU) methodology is applied using peak hour volumes and the geometric configuration of the intersection. This methodology sums the V/C ratios for the critical movements of an intersection and is generally compatible with the intersection capacity analysis methodology outlined in the 2000 Highway Capacity Manual (HCM 2000).

The ICU calculation methodology and associated impact criteria used for the study area arterial system are summarized in Table 4.12-1. Action 4.11 of the 2005 General Plan directs the City to "refine level of service standards to encourage use of alternative modes of transportation while meeting state and regional mandates." To this end, the standards for analyzing the performance of the City's circulation system are established as level of service "D" or "E" depending on location. This constitutes a relaxation of the current City standard (LOS C citywide except for LOS D for intersections in the Downtown, Midtown, and Westside areas). The calculation methodology, which includes saturation flow rate and clearance interval parameters that are representative values for planning purposes, could change over time in response to changes in technical procedures used for such purposes.

b. Arterial Street System. The citywide street system is illustrated on Figure 4.12-1, which shows the intersections analyzed in this EIR. Traffic conditions on the street network are described in terms of traffic volumes on the individual streets and also in terms of intersection operation. The former uses average daily traffic (ADT) as the measure of traffic usage, while the latter examines peak hour volumes to determine how well an intersection performs during rush hours.

Existing ADT volumes on the arterial street system are shown on Figure 2-2 of the traffic study in Appendix E. Estimates of current traffic volumes are based on counts taken in 2004 and represent two-direction 24-hour vehicles on an average weekday. Such volumes are not used

Table 4.12-1
Arterial Intersection Performance Criteria

V/C Calculation Methodology [a]

Level of service to be based on peak hour intersection capacity utilization (ICU) values calculated using the following values:

Saturation Flow Rate: 1,600 vehicles/hour/lane.

Clearance Interval: none

Performance Standard

Level of Service E (peak hour ICU less than or equal to 1.00) for freeway ramp intersections.
Level of Service D (peak hour ICU less than or equal to 0.90) for all other Principal Intersections*.

Threshold of Significance (for impact analyses)

For an intersection that is forecast to operate worse than it's performance standard, the impact of a given project is considered to be significant if the project increases the ICU by more than 0.01. An ICU increase of more than .01 does not cause the threshold of significance to be exceeded if the with-project ICU does not exceed the maximum ICU value.

Level of Service

Level of service ranges are as follows:

ICU	LEVEL OF SERVICE (LOS)
0.00 – 0.60	A
0.61 – 0.70	B
0.71 – 0.80	C
0.81 – 0.90	D
0.91 – 1.00	E
Above 1.00	F

* Principal Intersections are intersections to be regularly monitored as a gauge of the operation of the City's circulation system. These intersections are illustrated on Figure 4-5 of the traffic study in Appendix E.
[a] Methodology is consistent with that recommended in the Ventura County Congestion Management Program

directly in level of service criteria, but serve a number of purposes relative to evaluating the use of the arterial street system. In particular, they provide one of the criteria for determining functional classification.

Level of service (LOS) on the arterial street system is defined according to peak hour intersection performance using ICU values. Figure 4.12-1 shows the intersections included in this evaluation and Table 4.12-2 lists the ICUs and corresponding LOS values for year 2004. The ICUs and LOS values are illustrated on Figure 4.12-2, which shows the highest of the AM or PM ICU values at each intersection. One location does not meet the City's performance standard. The deficiency identified at the Ventura Boulevard/North Bank Drive intersection is a consequence of assuming the location to be signalized and is not an indicator of traffic operations at this location. The uncontrolled single lane off-ramp from northbound U.S. 101

feeds into three lanes on eastbound North Bank Drive and the other movements are stop-sign controlled.

c. Transit. The bus routes currently serving the City are illustrated on Figure 4.12-3. Service is provided by South Coast Area Transit (SCAT), with all six routes operating on both weekdays and weekend days. The routes serve major activity centers throughout the City, and as discussed in the bicycle section later in this chapter, buses are able to transport bicycles by means of special racks mounted on the buses.

Ventura Intercity Service Transit Authority (VISTA) provides bus service between Ventura and Santa Barbara via the transit center at Pacific View Mall. Greyhound buses connect Ventura with other statewide and national destinations. The Greyhound Station is located at 291 East Thompson Boulevard near Palm Street, and is located in a small undersized building.

Rail transit service is provided by Metrolink and AMTRAK. Figure 4.12-3 shows the station locations.

Metrolink provides rail service between Ventura and Union Station in Los Angeles on the Ventura County line. A Metrolink station operates in the City of Ventura at Ventura Boulevard and Inez Street (the Montalvo Station). Presently, three trains in both the AM and PM operate the entire length of the route between Ventura and Union Station.

Rail service to Ventura is also provided by AMTRAK via the Pacific Surfliner, which runs between San Luis Obispo to the north and San Diego to the south. The station is an unstaffed facility located at Harbor Boulevard and Figueroa Street adjacent to the Ventura County Fairgrounds (Seaside Park). Four trains operate daily, with one additional train on the weekends and one additional train that operates only during the weekdays.

d. Bicycle/Pedestrian Travel. The non-motorized components of the City's circulation system include bicycle and pedestrian facilities. These are discussed below.

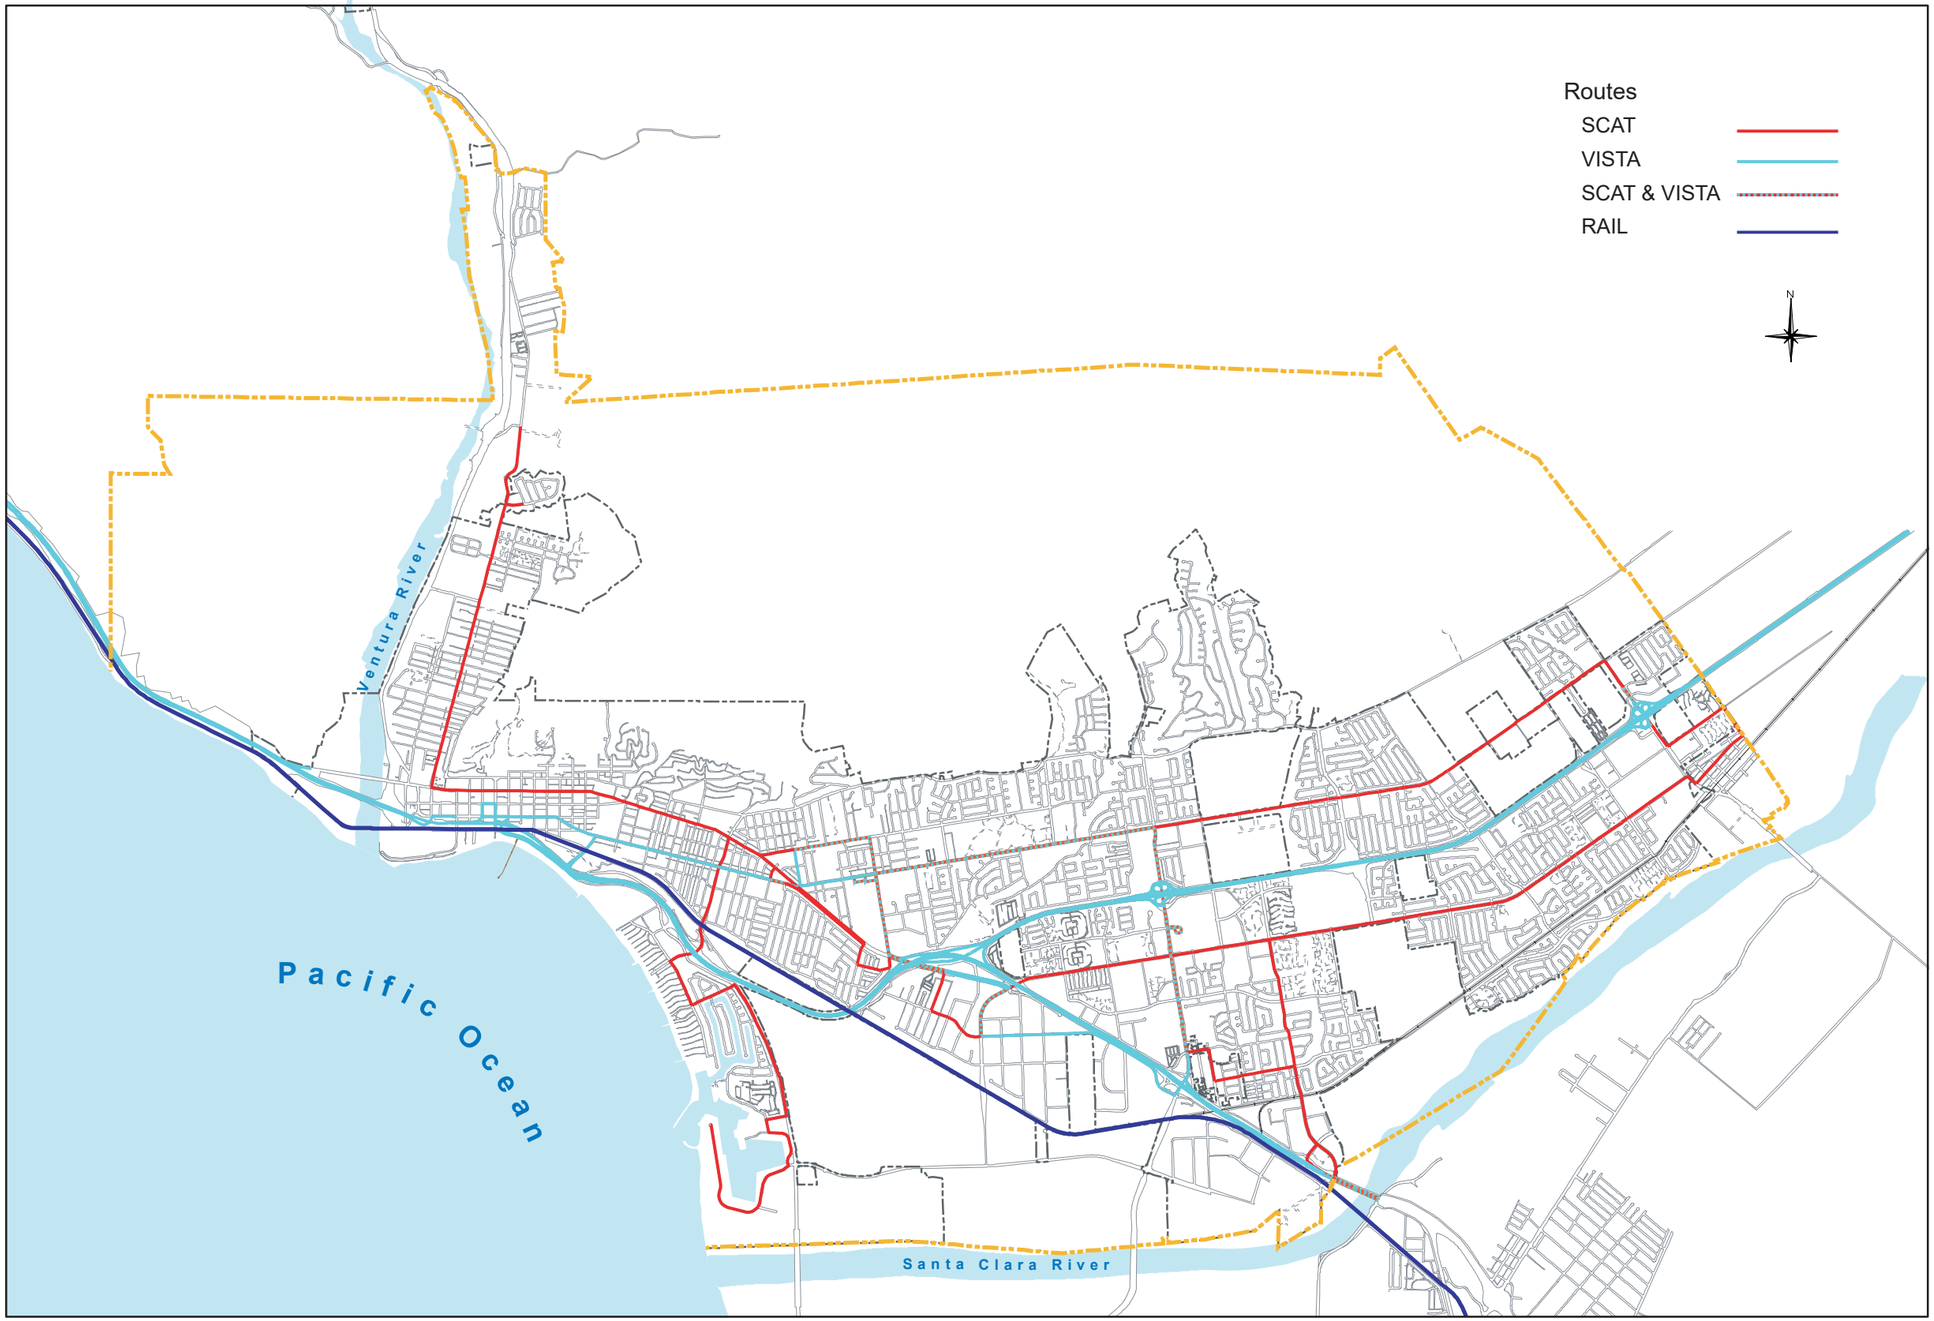
Bicycle Facilities. The City General Bikeway Plan, adopted in December 1999, provides detailed information regarding the current bikeway network and an implementation program for augmenting the existing system. The plan envisions a "citywide bikeway system that serves the needs of both commuter and recreational cyclists." The Select System of Bikeways Map, shown on Figure 4.12-4, delineates existing and proposed bikeways that connect major destinations such as schools, businesses, public facilities, transit centers, and regional trails. The map also indicates the locations of amenities such as bike racks, restrooms, and shower facilities. The General Bikeway Plan is designed to facilitate the following actions:

- *Address and expand upon existing City policies and establish related goals*
- *Recommend bikeway design standards*
- *Evaluate existing bicycle safety and education programs and make recommendations for enhancement*
- *Identify priorities and a phasing plan for implementation of the Select System of Bikeways Map*
- *Identify and recommend potential funding alternatives and other opportunities for inter-agency cooperation*

The General Bikeway Plan serves as a flexible, comprehensive and long-range guide for future bicycle planning, design and budgetary decisions, and helps ensure that the community's bicycle transportation and recreational needs are met.

City bikeways conform to standards and designations established by the California Department of Transportation (Caltrans), which are described below.

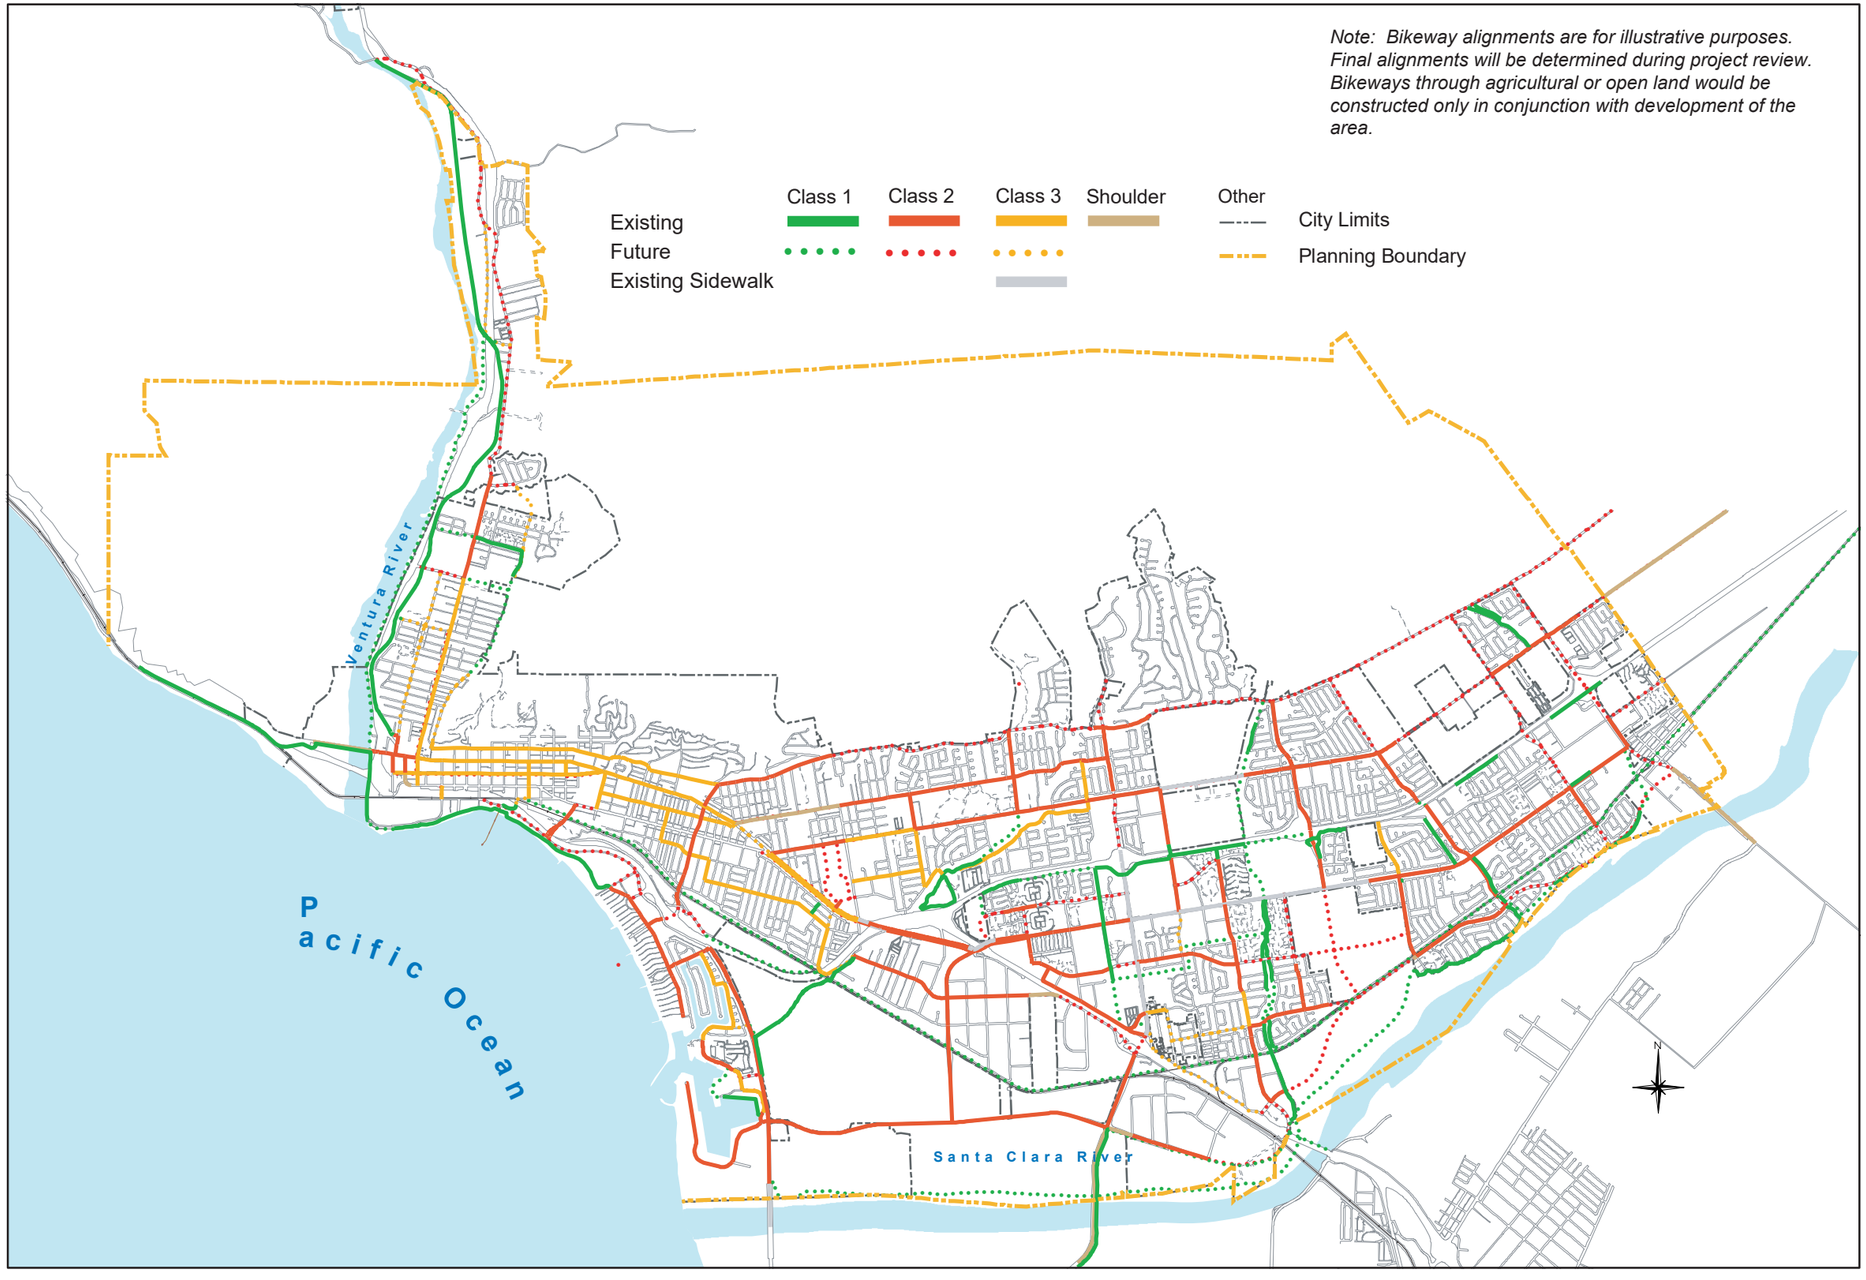
- ***Bike Path (Class I)*** *– Class I bike paths are separated from roads by distance or barriers, and cross-traffic by motor vehicles is minimized. Bike paths offer opportunities not provided by the road system and can provide recreational opportunities or serve as desirable commuter routes. Design standards require two-way bicycle paths to be a minimum of eight feet wide plus shoulders. Bike paths are usually shared with pedestrians, and if pedestrian use is expected to be significant, the desirable width is 12 feet.*



Existing Transit Routes

Figure 4-12-3

Source: Austin-Foust Associates, Inc., May 2005



Existing System of Bikeways

Figure 4-12-4

Source: Austin-Foust Associates, Inc., May 2005

- ***Bike Lane (Class II)*** *– A Class II bikeway is a lane on a road that is reserved for bicycles. The lane is painted with pavement lines and markings and is signed. The lane markings decrease the potential for conflicts between motorists and bicyclists. Bike lanes are one-way, with a lane on each side of the roadway between the travel lane and the edge of paving or, if parking is permitted, between the travel lane and the parking lane. The lanes are at least four feet wide, five feet if parking is permitted.*
- ***Bike Route (Class III)*** *– Class III bike routes share existing roads and provide continuity to other bikeways or designated preferred routes through high traffic areas. There is no separate lane and bike routes are established by placing signs that direct cyclists and warn drivers of the presence of bicyclists. Since bicyclists are permitted on all roads, the decision to sign a road as a bike route is based on factors including the advisability of encouraging bicycle travel on the route, the need to meet bicycle demand, and the desire to connect discontinuous segments of bike lanes.*

Pedestrian Facilities and Programs. Figure 4.12-5 shows primary pedestrian facilities in Ventura, which are described below.

Sidewalks. Sidewalks are the most important component of the City's pedestrian system. The City maintains 283 centerline miles of streets (one centerline mile is 5,280 feet by 10 feet) and 2 million square feet of sidewalks. Most city streets have sidewalks, but some neighborhood streets do not. For example, portions of the Arundell area that were developed in the 1970s and 1980s lack sidewalks. During that period, it was assumed industrial uses would not need sidewalks. Some hillside neighborhoods also lack sidewalks, including portions of Hobson Heights and Ondulando. Finally, there are stretches of arterial streets, such as Foothill Road and Telephone Road that lack sidewalks. Maintenance of the sidewalk system is a large cost item for the City. As of January 2002, the City had recorded 11,249 damaged segments of sidewalk.

Access Ramps. Access ramps are sloped sidewalks at intersections that provide transitions into street crosswalks for wheelchairs, strollers, and other wheeled vehicles like bicycles. The need for access ramps was codified with the 1990 Americans with Disabilities Act (ADA), which intends to make American society more accessible to people with disabilities. It contains requirements for new construction, alterations or renovations to buildings and facilities, and access to existing facilities of private companies that provide public goods or services. ADA requires access ramps at each street intersection from the sidewalk to the street level to permit safe movement for people with disabilities. Access ramps are currently being retrofitted into City sidewalks.

Crosswalks. The California Vehicle Code defines a crosswalk as the portion of a roadway at an intersection that is an extension of the curb and property lines of the intersecting street, or is any other portion of a roadway that is marked as a pedestrian crossing location by painted lines. A marked crosswalk is delineated by white or yellow painted markings on the pavement. Crosswalks adjacent to or within 600 feet of a school building or grounds or along a suggested route to school are painted yellow; all other painted crosswalks are white. Although drivers legally must yield to pedestrians in any crosswalk (marked or unmarked), marking encourages pedestrians to use particular crossings. The City maintains marked crosswalks at intersections:

- *Where there is substantial conflict between vehicle and pedestrian movement*
- *Where significant pedestrian concentrations occur*
- *Where pedestrians could not otherwise recognize the proper place to cross*
- *Where traffic movements are controlled*

Such locations include school crossings and signalized and four way stop intersections.

In an effort to improve the "pedestrian friendliness" of the local circulation system, the City has undertaken a number of programs. These are summarized below.

- ***Lowered Speed Limits.*** *In January 2001, the State revised the criteria used to determine speed limits to include consideration of adjacent residential density and bicycle and pedestrian safety. Many City streets have been re-surveyed under the new criteria and speed limits have been lowered. This ongoing effort will continue to evaluate and adjust the speed limit.*
- ***Restriping Streets.*** *The City has been studying the advantages, disadvantages, and feasibility of narrowing selected segments of arterials and collector streets from four lanes to two to make them more pedestrian and bicycle friendly, as well as to calm traffic. Pierpont Boulevard was restriped from four lanes to two, narrowing the field of car travel while affording pedestrians more buffer area from through-lanes of vehicle traffic. Class II bike lanes on the street were widened and clearly painted, while cars were aligned more toward the center of the street. Similar efforts have been implemented on portions of Main Street, Santa Clara Street, and Loma Vista Road between Main Street and Mills Road.*
- ***Neighborhood Traffic Management and Calming Program.*** *In June 1997, the City adopted a Comprehensive Neighborhood Traffic Management Program aimed at reducing traffic volumes and speeds on local residential streets carrying 800 or more vehicles per day. The Program, which was updated in December 2004, includes a four-tiered approach offering 25 different options to citizens wanting to implement traffic measures on their streets. Levels 1 and 2, which do not involve major physical changes to the street, are implemented by the City. Posting 25 mph speed limits and directing Police Department enforcement are two traffic-claming approaches at these levels. Levels 3 and 4 options, which are funded by citizens, involve physical changes to the street such as traffic circles, speed humps, and chokers, to calm traffic speeds and/or reduce traffic volumes. A report describing the Neighborhood Traffic Management and Calming Program is available at City Hall or online at www.ci.ventura.ca.us/cityhall/publicworks/traffic.htm.*
- ***School Traffic Safety Programs.*** *The Ventura Unified School District and the City have been working together to maintain a Comprehensive Suggested Route to School Program. In addition, the City has developed a manual entitled, "School Area Traffic Safety Guidelines." The guidelines include safe routes to school maps for all elementary and middle schools in the Ventura Unified District, information on the adult/assistant crossing guard program, traffic control devices that can potentially be used in school zones, and walking/biking safety education programs.*

  Assembly Bill 1886 allows for a doubling of the base fines in the case of misdemeanors or infractions, respectively, occurring in specially posted school zones. The program was implemented by a vote of the city council. The enhanced portion of

The map is a product of the City of San Buenaventura, California and Rincon Consultants, Inc. It was created for illustration purposes only; its accuracy cannot be guaranteed.

the fine imposed, pursuant to Section 42011 of the Vehicle Code, is used exclusively to pay for the cost of school pedestrian-bicyclist safety programs. Currently double fine school zones have been installed throughout the City at all of the elementary and middle school locations.

The City uses specialized funding through the State Safe Routes to School (SR2S) program. It is a safety program that uses federal transportation funds for construction of school access-related bicycle/pedestrian safety and traffic calming projects.

- ***Improved Pedestrian Signals.*** *The City is working to improve pedestrian accessibility at signalized intersections. There are several different programs being worked on to retrofit all existing pedestrian push buttons with ADA compliant accessible push buttons and install audible pedestrian signals (APS) at several intersection locations where visually impaired pedestrians routinely cross. Lastly, the City is putting in "countdown timers" which indicate the time remaining until the flashing "Don't Walk" phase of the signal is terminated.*

Pedestrian System Deficiencies. The main deficiency of Ventura's pedestrian system is its discontinuity. Many sections of streets lack sidewalks, and pedestrian connections between key use areas are rare and often in need of repair. A pedestrian environment is lacking in a number of locations throughout the City. There are limited crosswalks in some key use areas, and, in some instances, the pedestrian signal phases may be too short for some walkers. Traffic-calming measures would also improve the walkability of many Ventura neighborhoods. Table 4.12-3 lists specific pedestrian system deficiencies by neighborhood.

Table 4.12-3
Neighborhood Pedestrian System Concerns

Community	Concern
Westside	• Few sidewalk and pedestrian amenities such as street trees, lights, benches • Conflict between bicycles on sidewalks and pedestrians
Downtown	• Inadequate and unsafe Beach connections
Midtown	• Few sidewalk and pedestrian amenities such as street trees • Limited marked or signalized crosswalks • Signal phases for crossing wide streets too short • Cars drive too fast despite 35 mph posted speed limit
Pierpont	• Residential driveways too short, and sidewalks too narrow (5 feet) • Mixed-use area (lower Seaward) not attracting as many pedestrians as it could
Harbor	• Frequent disconnections of inner-harbor pedestrian path
Arundell	• Large portions of missing sidewalks along streets • No sidewalk and pedestrian amenities where sidewalks are present
East Ventura	• Several main streets very wide with high traffic volumes • Cars drive too fast (posted speed limit between 40 and 55 mph) • Sidewalks lacking in some areas • Few sidewalk amenities where sidewalks are present • Bicycle lanes on sidewalks on parts of Telephone Road and Victoria Avenue
Foothill Area	• Foothill Road dangerous (few sidewalks/crossings, too many cars, drive too fast) • Some neighborhoods lack sidewalks

4.12.2 Impact Analysis

a. Methodology and Significance Thresholds. The analysis of impacts uses long-range traffic forecast data based on projected growth in accordance with the General Plan land uses through 2025 to assess future needs and thereby identify a future street network that is adequate to serve those needs.

The approach used in this analysis is to apply year 2025 traffic forecasts to the existing system plus committed improvements (i.e., those that are funded and planned for implementation). The resulting information is then used to identify where deficiencies can be anticipated. Additional or expanded roadways are then added to the committed arterial street system until there is adequate capacity to serve the future traffic demands (these are referred to as non-committed improvements). Where appropriate, alternative strategies for achieving a balanced system were tested and evaluated.

Traffic forecast data presented here was produced using the Ventura citywide traffic forecasting model. The model uses future land use and circulation system assumptions to derive corresponding traffic forecast data. A detailed description of the modeling procedures can be found in the traffic model documentation report, which is available for review at the City of Ventura Community Development Department.

The evaluation of land use and circulation system alternatives uses the performance criteria described in the *Setting*. As discussed there, the procedure is based on peak hour intersection performance with emphasis on the Principal Intersections identified throughout the City (and as illustrated on Figure 4-5 of the traffic study in Appendix E). Peak hour intersection capacity utilization (ICU) values are calculated using a "Baseline" set of roadway system improvements. As discussed in the *Setting*, level of service (LOS) "E" (ICU not to exceed 1.00) is the performance standard for freeway ramp intersections and LOS "D" (ICU not to exceed .90) is the performance standard for all other Principal Intersections. Locations not operating at an acceptable LOS with the Baseline Network assumptions are considered deficient, and improvements needed to mitigate the projected deficiencies are identified. Impacts relating to transportation and circulation would also be considered potentially significant if development allowed under the 2005 General Plan through 2025 would:

- *Result in a change in air traffic patterns*
- *Substantially increase traffic-related hazards due to a design feature or incompatible uses*
- *Result in inadequate emergency access*
- *Conflict with adopted policies relating to alternative transportation modes, including transit, walking, and bicycling*

b. Project Impacts and Mitigation Measures. The matrix on the following page provides a summary comparison of transportation and circulation impacts for each of the six 2005 General Plan land use scenarios. A discussion of the impacts for each scenario follows.

Summary Comparison of Impacts for EIR Scenarios

	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
Roadway System Impacts (Impact TC-1)	One location - Wells Road and Darling Road intersection - requires additional (non-committed) improvements. Because feasible improvements are available for this deficiency, impacts are Class II, significant but mitigable.	Four locations require additional (non-committed) improvements, with one deficiency under the Baseline Network and four deficiencies under the Alternative Network. Deficient locations are: Baseline Network • Wells Road at Darling Road Alternative Network • Mills Road at Main Street • Johnson Drive at North Bank Drive • Wells Road at Darling Road • Ventura Boulevard at North Bank Drive Feasible improvements are available for all deficiencies except Johnson Drive/North Bank Drive. Impacts at that location are Class I, unavoidably significant.	Two locations require additional (non-committed) improvements, with one deficiency under the Baseline Network and two under the Alternative Network. Deficient locations are: Baseline Network • Wells Road at Darling Road Alternative Network • Mills Road at Main Street • Wells Road at Darling Road Because feasible improvements are available for these deficiencies, impacts are Class II, significant but mitigable.	Four locations require additional (non-committed) improvements, with three deficiencies under each network scenario (Baseline and Alternative). Deficient locations are: Baseline Network • Johnson Drive at Telephone Road • Johnson Drive at North Bank Drive • Wells Road at Darling Road Alternative Network • Johnson Drive at North Bank Drive • Wells Road at Darling Road • Ventura Boulevard at North Bank Drive Because feasible improvements are available for these deficiencies, impacts are Class II, significant but mitigable.	Two locations require additional (non-committed) improvements, with both deficiencies under each network scenario (Baseline and Alternative). Deficient locations are: Baseline Network • SR-33 Ramps at Shell Road • Wells Road at Darling Road Alternative Network • SR-33 Ramps at Shell Road • Wells Road at Darling Road Because feasible improvements are available for these deficiencies, impacts are Class II, significant but mitigable.	One location requires additional (non-committed) improvements, with the deficiency under both network scenarios (Baseline and Alternative). The deficient location is: Baseline Network • Wells Road at Darling Road Alternative Network • Wells Road at Darling Road Because feasible improvements are available for this deficiency, impacts are Class II, significant but mitigable.

Summary Comparison of Impacts for EIR Scenarios

	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
Alternative Transportation Modes (Impact TC-2)	Emphasis on intensification/reuse and mixed use development, in combination with proposed General Plan policies, generally enhance opportunities for alternative transportation modes. Impacts are Class IV, beneficial.	Impacts similar to Scenario 1 and Class IV, beneficial. Expansion areas served by existing bus routes. Olivas and Serra areas would improve connections between existing neighborhoods.	Impacts similar to Scenario 1 and Class IV, beneficial. Expansion areas served by existing bus routes. Olivas area would improve connections between existing neighborhoods.	Impacts similar to Scenario 1 and Class IV, beneficial. Expansion areas served by existing bus routes. Serra area would improve connections between existing neighborhoods.	Impacts similar to Scenario 1 and Class IV, beneficial. Expansion areas served by existing bus routes.	Impacts similar to Scenario 1 and Class IV, beneficial. Expansion areas served by existing bus routes. Poinsettia area would improve connections between existing neighborhoods.
Traffic-Related Hazards (Impact TC-3)	Mixed use development along main traffic corridors (Main Street, Thompson Boulevard, Ventura Avenue, etc.) creates some potential for pedestrian hazards. Proposed General Plan policies/actions and existing City programs reduce impacts to Class III, less than significant.	Impacts similar to Scenario 1 and Class III, less than significant. Expansion areas pose no obvious traffic hazards.	Impacts similar to Scenario 1 and Class III, less than significant. Expansion areas pose no obvious traffic hazards.	Impacts similar to Scenario 1 and Class III, less than significant. Expansion areas pose no obvious traffic hazards.	Impacts similar to Scenario 1 and Class III, less than significant. Expansion areas pose no obvious traffic hazards.	Impacts similar to Scenario 1 and Class III, less than significant. Expansion areas pose no obvious traffic hazards.
Air Traffic (Impact TC-4)	No airports are located within or adjacent to the Ventura Planning Area. Air traffic impacts are Class III, less than significant.	Impacts similar to Scenario 1 and Class III, less than significant.	Impacts similar to Scenario 1 and Class III, less than significant.	Impacts similar to Scenario 1 and Class III, less than significant.	Impacts similar to Scenario 1 and Class III, less than significant.	Impacts similar to Scenario 1 and Class III, less than significant.

Impact TC-1	**Growth accommodated under any of the General Plan land use scenarios could result in deficiencies to the local circulation system based on recommended level of service standards. The number of locations that could have deficiencies based on the projected growth scenarios ranges from one (for Scenario 1) to four (for Scenarios 2 and 4). Feasible improvements are available to address all projected deficiencies for Scenarios 1, 3, 4, 5, and 6; therefore, impacts associated with those scenarios are considered Class II, *significant but mitigable*. For Scenario 2, implementation of feasible improvements would not achieve performance standards at the Johnson Drive/North Bank Drive intersection. The impact at that location is considered Class I, *unavoidably significant*, for Scenario 2.**

Scenario 1 – Intensification/Reuse Only

The overall trip generation increase citywide through 2025 is estimated at 172,290 ADT under this scenario (see Table 3-1 in the traffic study in Appendix E). This represents an increase of 18.7% over existing conditions, and the growth is generally spread throughout the Planning Area. ADTs for specific roadways are shown on Figure 3-2 of the traffic study in Appendix E.

Year 2025 ICUs are illustrated on Figure 4.12-6. Transportation improvements to provide adequate capacity for this scenario are shown in Table 4.12-4. Year 2025 ICUs are listed in Table 4.12-5, which shows the ICU values under Baseline improvements only, and then the values obtained by adding the recommended additional improvements (labeled "non-committed" improvements). Scenario 1 results in one location requiring additional (non-committed) improvements. This location is the Wells Road and Darling Road intersection.

Table 4.12-4
Roadway Improvements – Scenario 1

Location	Improvement
I. Baseline	
1. Streets	
A Street (Saticoy Avenue to Wells Road)	New two-lane roadway
Harbor Boulevard Bridge over the Santa Clara River	Widen to four lanes
Hill Road (Moon Drive to Ralston Street)	Extend as two-lane roadway
Johnson Drive (North Bank Drive to Bristol Road)	Widen to six lanes
North Bank Drive (City limits to Wells Road)	New two-lane roadway
North Bank Drive (Current terminus to Saticoy Avenue)	New two-lane roadway
Telegraph Road (Saticoy Avenue to Wells Road)	Widen to four lanes
Thille Street (Telephone Road to current terminus)	Extend as two-lane roadway
US-101 Off-ramp to California Street	Relocate to Oak Street
Victoria Avenue (US-101 to City limits)	Widen to six lanes
Wells Road (SR 126 to City limits)	Widen to six lanes
Wells Road (Foothill Road to SR 126)	Widen to four lanes
2. Intersections	
20. Harbor Boulevard and Olivas Park Drive	Add second southbound left-turn lane
33. US-101 NB ramps at Telephone Road	Convert southbound left-turn lane to shared left-turn/right-turn lane
35. Saratoga Avenue at Telephone Road	Convert separate westbound right-turn lane to shared through/right-turn lane and add separate southbound right-turn lane
85. Victoria Avenue at Olivas Park Drive	Add second northbound and southbound left-turn lanes, third northbound and southbound through lanes, second eastbound left-turn lane and second westbound through lane
86. Telephone Road at Olivas Park Drive	Add double southbound left-turn lanes, second eastbound left-turn lane and second eastbound and westbound through lanes
91. Johnson Drive at Ralston Street	Add second northbound and southbound through lanes
92. Johnson Drive at Bristol Road	Add second northbound and southbound through lanes
94. Johnson Drive at North Bank Drive	Convert southbound right-turn lane to shared through/right-turn lane
104. Wells Road at SR 126 EB Ramps	Add third northbound and southbound through lanes
105. Wells Road at Darling Road	Add third northbound and southbound through lanes
106. Wells Road at Telephone Road	Add third northbound and southbound through lanes
160. Victoria Avenue at US 101 NB Ramps	Convert westbound shared left-turn/right-turn lane to dedicated left-turn lane and add third westbound right-turn lane
175. Ventura Boulevard at North Bank Drive	Add second eastbound through lane
II. Non-Committed	
2. Intersections (Baseline Network)	
105. Wells Road at Darling Road	Add eastbound left-turn lane, second southbound left-turn lane and second westbound left-turn lane

194. Wells & A Street	.43	A	.41	A	--		--	

(a) LOS E (ICU less than or equal to 1.00) is acceptable at this location (freeway ramps). LOS D (ICU less than or equal to .90) is the recommended performance standard for all other intersection locations.
Note: Gray shading denotes intersection locations that exceed the performance standard.

Scenario 2 – Intensification/Reuse + North Avenue + Olivas + Serra

This scenario adds to the intensification and infill development of Scenario 1 by adding residential and non-residential development in the North Avenue, Olivas, and Serra expansion areas. The overall trip generation increase citywide through 2025 is estimated at 206,905 ADT under this scenario (see Table 3-4 in the traffic study in Appendix E). This represents an increase of 22.5% over existing conditions. ADTs for specific roadways are shown on Figure 3-5 of the traffic study in Appendix E.

Year 2025 ICUs are depicted on Figure 4.12-7. To serve this scenario, it is anticipated that the following new roadway links would be added as an alternative to the Baseline Network along with selected intersection improvements:

1. Mills Road extension to Harbor Boulevard (connection at Schooner Drive)
2. New collector between Mills Road and Telephone Road in the Olivas expansion area
3. North Bank Drive extension from Johnson Drive to Bristol Road
4. Kimball Road extension from Telephone Road to North Bank Drive
5. Ralston Street extension from Ramelli Avenue to Montgomery Avenue

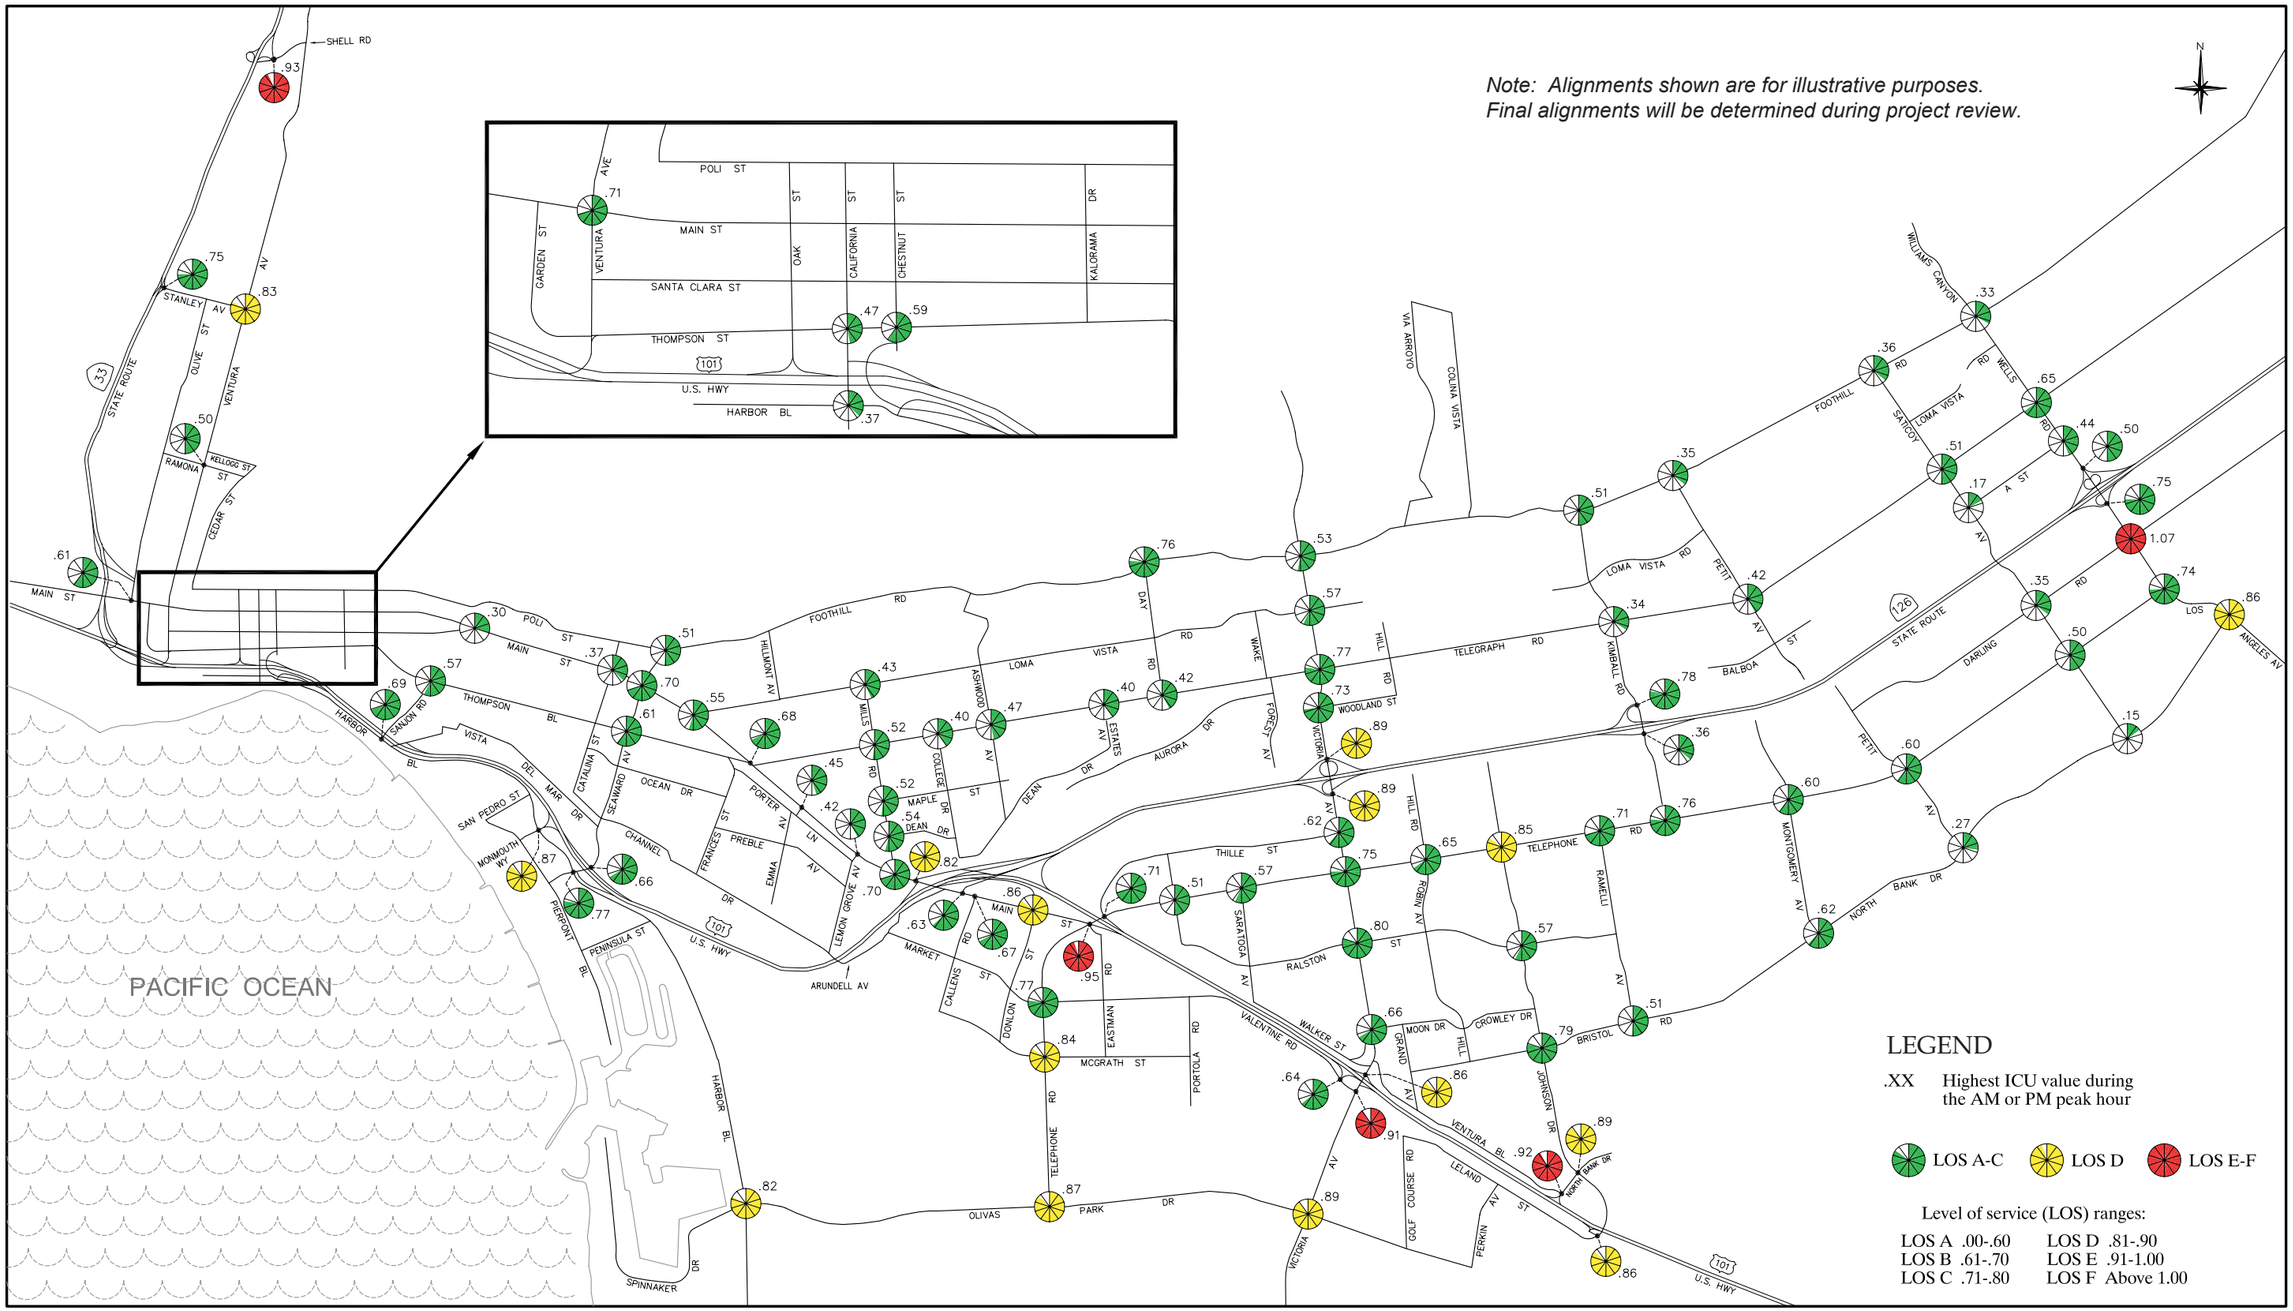
Table 4.12-6 summarizes the overall roadway and intersection improvements for this scenario, and Table 4.12-7 lists the ICU values with Baseline Improvements and with the recommended additional improvements. It should be noted that with North Bank Drive extended from Johnson Drive to Bristol Road in the Alternative Network, the six-lane widening of Johnson Drive between North Bank Drive and Bristol Road that is assumed in the Baseline Network is not needed.

Scenario 2 results in a total of four locations that require additional (non-committed) improvements, with one deficiency occurring under the Baseline Network and four deficiencies occurring under the Alternative Network. The deficient locations are as follows:

Baseline Network
- Wells Road at Darling Road

Alternative Network
- Mills Road at Main Street
- Johnson Drive at North Bank Drive
- Wells Road at Darling Road
- Ventura Boulevard at North Bank Drive

This page intentionally left blank.



2025 Intersection Capacity Utilization (ICU)

Table 4.12-6
Roadway Improvements – Scenario 2

Location	*Improvement*
I. Baseline	
1. Streets	
A Street (Saticoy Avenue to Wells Road)	New two-lane roadway
Harbor Boulevard Bridge over the Santa Clara River	Widen to four lanes
Hill Road (Moon Drive to Ralston Street)	Extend as two-lane roadway
Johnson Drive (North Bank Drive to Bristol Road)	Widen to six lanes (a)
North Bank Drive (City limits to Wells Road)	New two-lane roadway
North Bank Drive (Current terminus to Saticoy Avenue)	New two-lane roadway
Telegraph Road (Saticoy Avenue to Wells Road)	Widen to four lanes
Thille Street (Telephone Road to current terminus)	Extend as two-lane roadway
US-101 Off-ramp to California Street	Relocate to Oak Street
Victoria Avenue (US-101 to City limits)	Widen to six lanes
Wells Road (SR 126 to City limits)	Widen to six lanes
Wells Road (Foothill Road to SR 126)	Widen to four lanes
2. Intersections	
20. Harbor Boulevard and Olivas Park Drive	Add second southbound left-turn lane
33. US-101 NB ramps at Telephone Road	Convert southbound left-turn lane to shared left-turn/right-turn lane
35. Saratoga Avenue at Telephone Road	Convert separate westbound right-turn lane to shared through/right-turn lane and add separate southbound Right-turn lane
85. Victoria Avenue at Olivas Park Drive	Add second northbound and southbound left-turn lanes, third northbound and southbound through lanes, second eastbound left-turn lane and second westbound through lane
86. Telephone Road at Olivas Park Drive	Add double southbound left-turn lanes, second eastbound left-turn lane and second eastbound and westbound through lanes
91. Johnson Drive at Ralston Street	Add second northbound and southbound through lanes
92. Johnson Drive at Bristol Road	Add second northbound and southbound through lanes
94. Johnson Drive at North Bank Drive	Convert southbound right-turn lane to shared through/right-turn lane
104. Wells Road at SR 126 EB Ramps	Add third northbound and southbound through lanes
105. Wells Road at Darling Road	Add third northbound and southbound through lanes
106. Wells Road at Telephone Road	Add third northbound and southbound through lanes
160. Victoria Avenue at US 101 NB Ramps	Convert westbound shared left-turn/right-turn lane to dedicated left-turn lane and add third westbound right-turn lane
175. Ventura Boulevard at North Bank Drive	Add second eastbound through lane
II. Non-Committed	
1a. Streets (Alternative Network)	
B Street (Mills Road to Telephone Road)	New two-lane roadway
Kimball Road (Telephone Road to North Bank Drive)	New four-lane roadway
Mills Road (Arundell Avenue to Harbor Boulevard)	New four-lane roadway
North Bank Drive (Johnson Drive to Bristol Road)	New four-lane roadway
Ralston Street (Ramelli Avenue to Montgomery Avenue)	New two-lane roadway

Table 4.12-6
Roadway Improvements – Scenario 2

Location	*Improvement*
2. Intersections (Baseline Network)	
105. Wells Road at Darling Road	Add eastbound left-turn lane, second southbound left-turn lane and second westbound left-turn lane
2a. Intersections (Alternative Network)	
27. Mills Road at Main Street	Add northbound left-turn lane and second northbound and southbound through lanes
94. Johnson Drive at North Bank Drive	Improve eastbound approach to provide two left-turn lanes, three through lanes and a separate right-turn lane, and improve westbound approach to provide three left-turn lanes and two through lanes
105. Wells Road at Darling Road	Add eastbound left-turn lane, second southbound left-turn lane and second westbound left-turn lane
175. Ventura Boulevard at North Bank Drive	Add third eastbound through lane

(a) This widening is not needed in the Alternative Network for this scenario, which includes an extension of North Bank Drive from Johnson Drive to Bristol Road.

202. Telephone & B St	--		--		--		--		.48	A	.65	B	--		--	

(a) LOS E (ICU less than or equal to 1.00) is acceptable at this location (freeway ramps). LOS D (ICU less than or equal to .90) is the recommended performance standard for all other intersection locations.

Note: Gray shading denotes intersection locations that exceed the performance standard.

Scenario 3 – Intensification/Reuse + North Avenue + Olivas

This scenario adds to the intensification and infill development of Scenario 1 by adding residential and non-residential development in the North Avenue and Olivas expansion areas. The overall trip generation increase citywide through 2025 is estimated at 201,998 ADT under this scenario (see Table 3-7 of the traffic study in Appendix E). This represents an increase of 21.9% over existing conditions. ADTs for specific roadways are shown on Figure 3-8 of the traffic study in Appendix E.

Year 2025 ICUs are depicted on Figure 4.12-8. Deficiencies shown here are addressed by selected intersection improvements and by new roadway links serving the Olivas expansion area (the Mills Road extension and a new collector between the extension of Mills Road and Telephone Road). Table 4.12-8 summarizes the overall roadway and intersection improvements for this scenario. Table 4.12-9 lists the ICU values with Baseline improvements and with the recommended additional improvements.

Scenario 3 results in two locations that require additional (non-committed) improvements, with one deficiency occurring under the Baseline Network and two occurring under the Alternative Network. The deficient locations are as follows:

Baseline Network
- Wells Road at Darling Road

Alternative Network
- Mills Road at Main Street
- Wells Road at Darling Road

Table 4.12-8
Roadway Improvements – Scenario 3

Location	*Improvement*
I. Baseline	
1. Streets	
A Street (Saticoy Avenue to Wells Road)	New two-lane roadway
Harbor Boulevard Bridge over the Santa Clara River	Widen to four lanes
Hill Road (Moon Drive to Ralston Street)	Extend as two-lane roadway
Johnson Drive (North Bank Drive to Bristol Road)	Widen to six lanes
North Bank Drive (City limits to Wells Road)	New two-lane roadway
North Bank Drive (Current terminus to Saticoy Avenue)	New two-lane roadway
Telegraph Road (Saticoy Avenue to Wells Road)	Widen to four lanes
Thille Street (Telephone Road to current terminus)	Extend as two-lane roadway
US-101 Off-ramp to California Street	Relocate to Oak Street
Victoria Avenue (US-101 to City limits)	Widen to six lanes
Wells Road (SR 126 to City limits)	Widen to six lanes
Wells Road (Foothill Road to SR 126)	Widen to four lanes
2. Intersections	
20. Harbor Boulevard and Olivas Park Drive	Add second southbound left-turn lane
33. US-101 NB ramps at Telephone Road	Convert southbound left-turn lane to shared left-turn/right-turn lane
35. Saratoga Avenue at Telephone Road	Convert separate westbound right-turn lane to shared through/right-turn lane and add separate southbound right-turn lane
85. Victoria Avenue at Olivas Park Drive	Add second northbound and southbound left-turn lanes, third northbound and southbound through lanes, second eastbound left-turn lane and second westbound through lane
86. Telephone Road at Olivas Park Drive	Add double southbound left-turn lanes, second eastbound left-turn lane and second eastbound and westbound through lanes
91. Johnson Drive at Ralston Street	Add second northbound and southbound through lanes
92. Johnson Drive at Bristol Road	Add second northbound and southbound through lanes
94. Johnson Drive at North Bank Drive	Convert southbound right-turn lane to shared through/right-turn lane
104. Wells Road at SR 126 EB Ramps	Add third northbound and southbound through lanes
105. Wells Road at Darling Road	Add third northbound and southbound through lanes
106. Wells Road at Telephone Road	Add third northbound and southbound through lanes
160. Victoria Avenue at US 101 NB Ramps	Convert westbound shared left-turn/right-turn lane to dedicated left-turn lane and add third westbound right-turn lane
175. Ventura Boulevard at North Bank Drive	Add second eastbound through lane
II. Non-Committed	
1a. Streets (Alternative Network)	
B Street (Mills Road to Telephone Road)	New two-lane roadway
Mills Road (Arundell Avenue to Harbor Boulevard)	New four-lane roadway
2. Intersections (Baseline Network)	
105. Wells Road at Darling Road	Add second southbound left-turn lane, second westbound left-turn lane and eastbound left-turn lane
2a. Intersections (Alternative Network)	
27. Mills Road at Main Street	Add northbound left-turn lane and second northbound and southbound through lanes
105. Wells Road at Darling Road	Add second southbound left-turn lane, second westbound left-turn lane and eastbound left-turn lane

Table 4.12-9
2025 ICU Summary – Scenario 3

Intersection	Baseline Network								Alternative Network							
	Baseline Improvements				Non-Committed Improvements				Baseline Improvements (including non-committed alternative network streets)				Non-Committed Improvements			
	AM Peak		PM Peak		AM Peak		PM Peak		AM Peak		PM Peak		AM Peak		PM Peak	
	ICU	LOS	ICU	LOS	ICU	LOS	ICU	LOS	ICU	LOS	ICU	LOS	ICU	LOS	ICU	LOS
193. Saticoy & A St	.16	A	.13	A	--		--		.16	A	.13	A	--		--	
194. Wells & A St	.44	A	.42	A	--		--		.44	A	.41	A	--		--	
200. Harbor & Mills	--		--		--		--		.42	A	.64	B	--		--	
201. Mills & B St	--		--		--		--		.77	C	.83	D	--		--	
202. Telephone & B St	--		--		--		--		.49	A	.65	B	--		--	

(a) LOS E (ICU less than or equal to 1.00) is acceptable at this location (freeway ramps). LOS D (ICU less than or equal to .90) is the recommended performance standard for all other intersection locations.

Note: Gray shading denotes intersection locations that exceed the performance standard.

Scenario 4 – Intensification/Reuse + North Avenue + Serra

This scenario adds to the intensification and infill development of Scenario 1 by adding residential and non-residential development in the North Avenue and Serra expansion areas. The overall trip generation increase citywide through 2025 is estimated at 199,798 ADT under this scenario (see Table 3-10 of the traffic study in Appendix E). This represents an increase of 21.7% over existing conditions. ADTs for specific roadways are shown on Figure 3-11 of the traffic study in Appendix E.

Year 2025 ICUs are shown on Figure 4.12-9. To serve this scenario, it is anticipated that the following new roadway links would be added as an alternative to the Baseline Network along with selected intersection improvements:

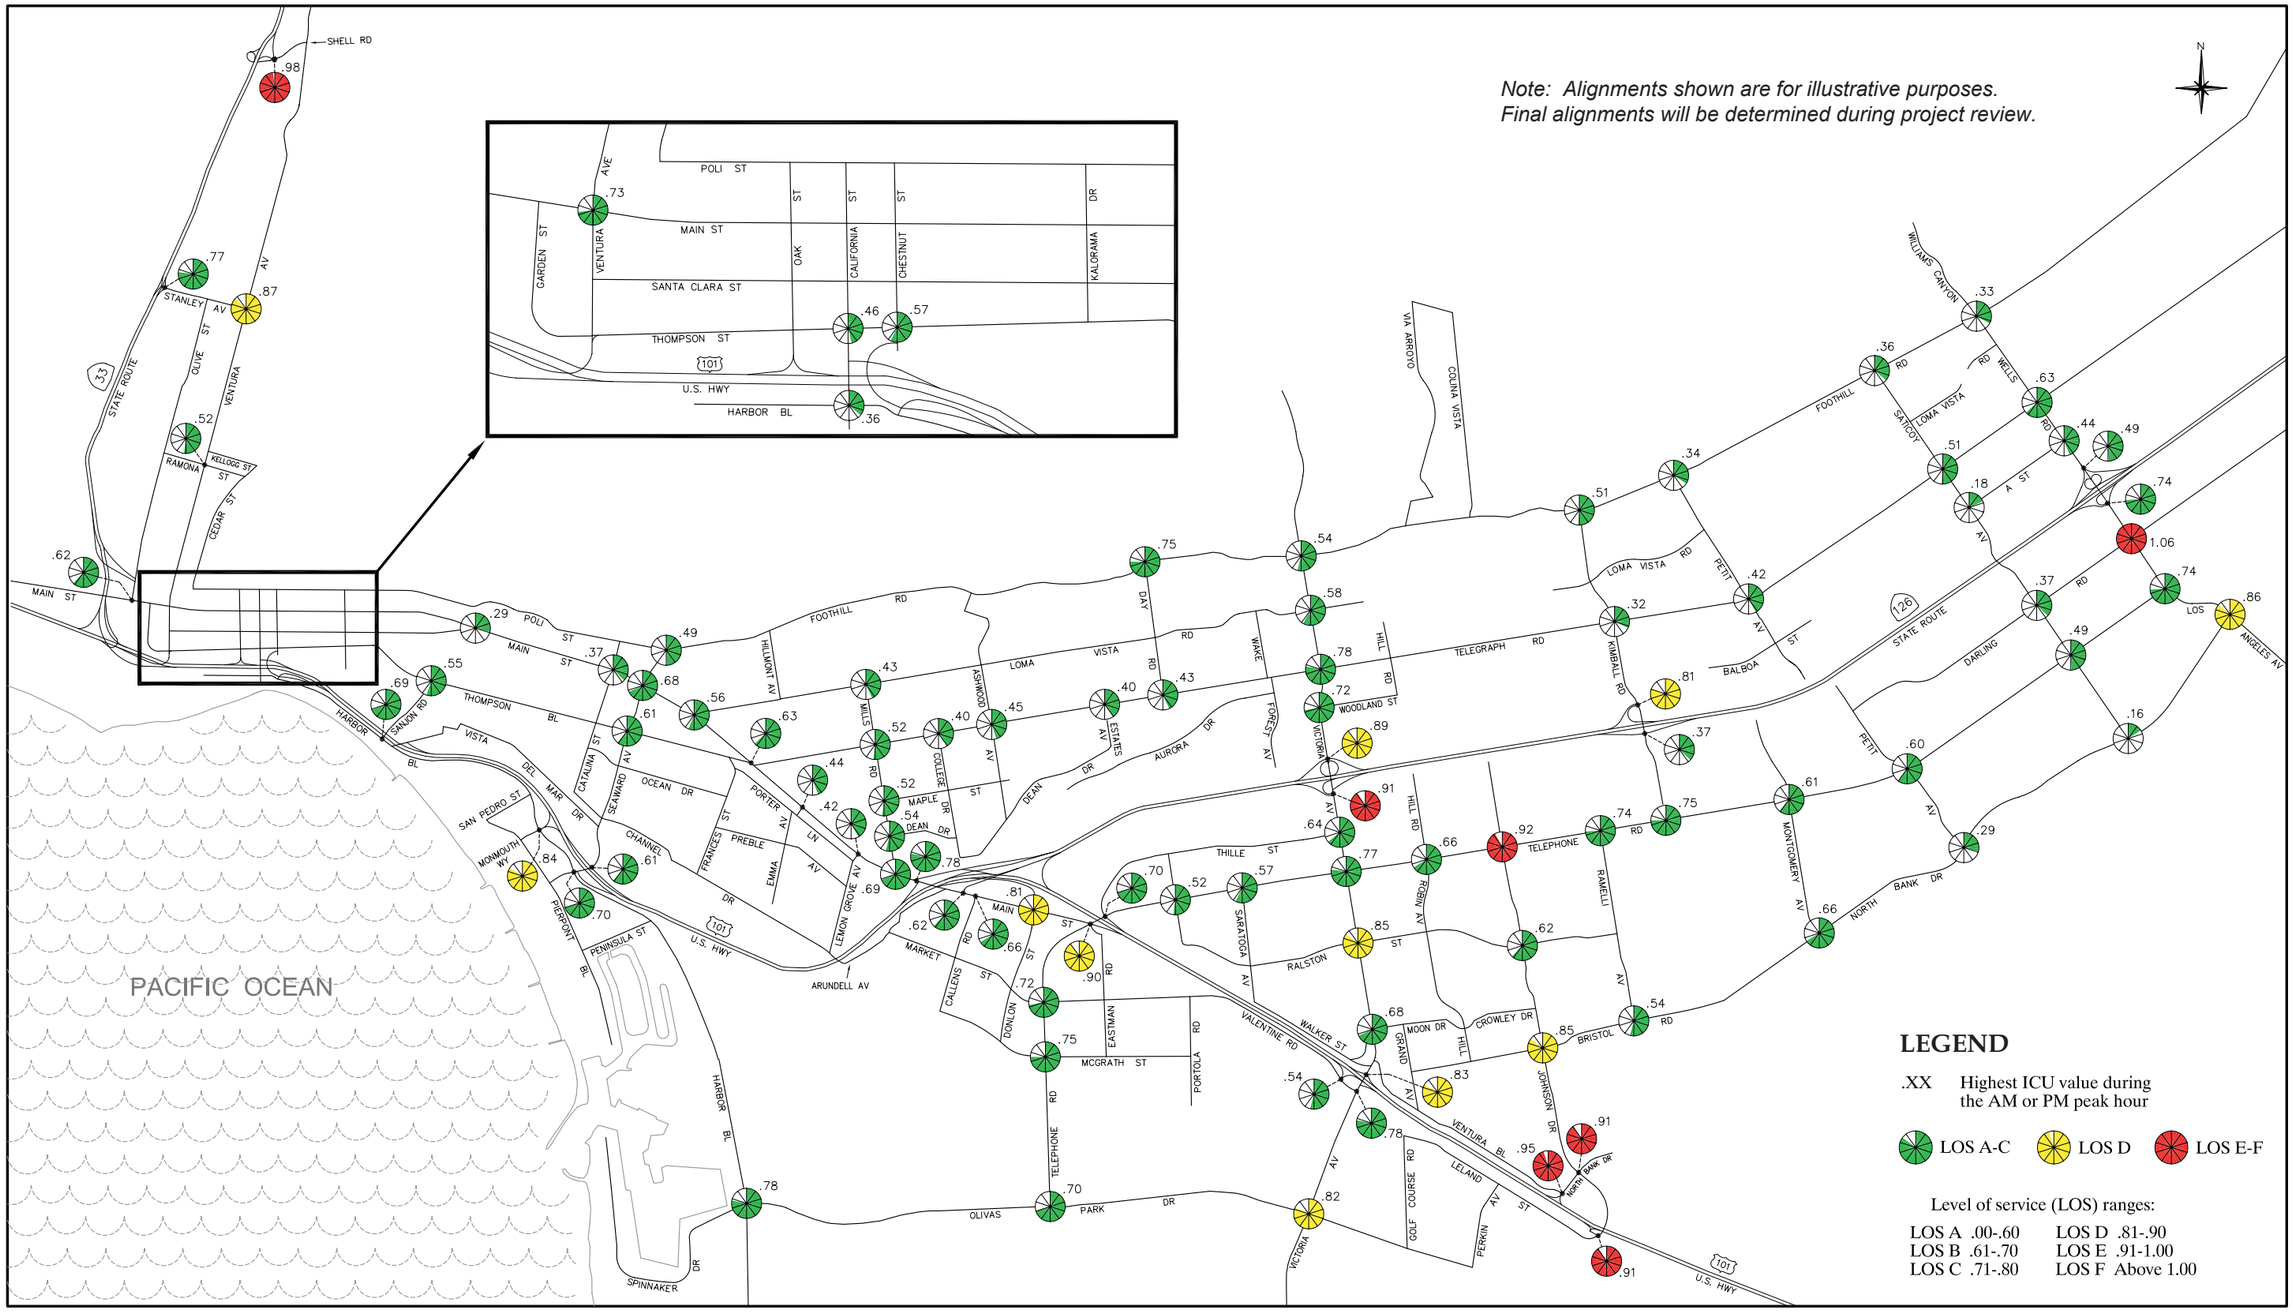
1. North Bank Drive extension from Johnson Drive to Bristol Road
2. Kimball Road extension from Telephone Road to North Bank Drive
3. Ralston Street extension from Ramelli Avenue to Montgomery Avenue

Table 4.12-10 summarizes the overall roadway and intersection improvements for this scenario, and Table 4.12-11 lists the ICU values with Baseline Improvements and with the recommended additional improvements. It should be noted that with North Bank Drive extended from Johnson Drive to Bristol Road in the Alternative Network, the six-lane widening of Johnson Drive between North Bank Drive and Bristol Road that is assumed in the Baseline Network is not needed.

Scenario 4 results in four locations that require additional (non-committed) improvements, with three deficiencies occurring under each network scenario (Baseline and Alternative). The deficient locations are as follows:

Baseline Network
- Johnson Drive at Telephone Road
- Johnson Drive at North Bank Drive
- Wells Road at Darling Road

Alternative Network
- Johnson Drive at North Bank Drive
- Wells Road at Darling Road
- Ventura Boulevard at North Bank Drive



2025 Intersection Capacity Utilization (ICU)
Scenario 4 (Baseline Network)

Figure 4-12-9

Source: Austin-Foust Associates, Inc., May 2005

Table 4.12-10
Roadway Improvements – Scenario 4

Location	*Improvement*
I. Baseline	
1. Streets	
A Street (Saticoy Avenue to Wells Road)	New two-lane roadway
Harbor Boulevard Bridge over the Santa Clara River	Widen to four lanes
Hill Road (Moon Drive to Ralston Street)	Extend as two-lane roadway
Johnson Drive (North Bank Drive to Bristol Road)	Widen to six lanes (a)
North Bank Drive (City limits to Wells Road)	New two-lane roadway
North Bank Drive (Current terminus to Saticoy Avenue)	New two-lane roadway
Telegraph Road (Saticoy Avenue to Wells Road)	Widen to four lanes
Thille Street (Telephone Road to current terminus)	Extend as two-lane roadway
US-101 Off-ramp to California Street	Relocate to Oak Street
Victoria Avenue (US-101 to City limits)	Widen to six lanes
Wells Road (SR 126 to City limits)	Widen to six lanes
Wells Road (Foothill Road to SR 126)	Widen to four lanes
2. Intersections	
20. Harbor Boulevard and Olivas Park Drive	Add second southbound left-turn lane
33. US-101 NB ramps at Telephone Road	Convert southbound left-turn lane to shared left-turn/right-turn lane
35. Saratoga Avenue at Telephone Road	Convert separate westbound right-turn lane to shared through/right-turn lane and add separate southbound right-turn lane
85. Victoria Avenue at Olivas Park Drive	Add second northbound and southbound left-turn lanes, third northbound and southbound through lanes, second eastbound left-turn lane and second westbound through lane
86. Telephone Road at Olivas Park Drive	Add double southbound left-turn lanes, second eastbound left-turn lane and second eastbound and westbound through lanes
91. Johnson Drive at Ralston Street	Add second northbound and southbound through lanes
92. Johnson Drive at Bristol Road	Add second northbound and southbound through lanes
94. Johnson Drive at North Bank Drive	Convert southbound right-turn lane to shared through/right-turn lane
104. Wells Road at SR 126 EB Ramps	Add third northbound and southbound through lanes
105. Wells Road at Darling Road	Add third northbound and southbound through lanes
106. Wells Road at Telephone Road	Add third northbound and southbound through lanes
160. Victoria Avenue at US 101 NB Ramps	Convert westbound shared left-turn/right-turn lane to dedicated left-turn lane and add third westbound right-turn lane
175. Ventura Boulevard at North Bank Drive	Add second eastbound through lane
II. Non-Committed	
1a. Streets (Alternative Network)	
Kimball Road (Telephone Road to North Bank Drive)	New four-lane roadway
North Bank Drive (Johnson Drive to Bristol Road)	New four-lane roadway
Ralston Street (Ramelli Avenue to Montgomery Avenue)	New two-lane roadway
2. Intersections (Baseline Network)	
15. Johnson Drive & Telephone Road	Add separate eastbound right-turn lane

Table 4.12-10
Roadway Improvements – Scenario 4

Location	***Improvement***
94. Johnson Drive at North Bank Drive	Add southbound right-turn lane
105. Wells Road at Darling Road	Add eastbound left-turn lane, second southbound left-turn lane and second westbound left-turn lane
2a. Intersections (Alternative Network)	
94. Johnson Drive at North Bank Drive	Improve eastbound approach to provide two left-turn lanes, three through lanes and a separate right-turn lane, and improve westbound approach to provide three left-turn lanes and two through lanes
105. Wells Road at Darling Road	Add eastbound left-turn lane, second southbound left-turn lane and second westbound left-turn lane
175. Ventura Boulevard at North Bank Drive	Add third eastbound through lane

(a) This widening is not needed in the Alternative Network for this scenario, which includes an extension of North Bank Drive from Johnson Drive to Bristol Road.

199. Kimball & North Bank	--		--		--		--		.71	C	.64	B	--		--	

(a) LOS E (ICU less than or equal to 1.00) is acceptable at this location (freeway ramps). LOS D (ICU less than or equal to .90) is the recommended performance standard for all other intersection locations.

Note: Gray shading denotes intersection locations that exceed the performance standard.

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga

This scenario adds to the intensification and infill development of Scenario 1 by adding residential and non-residential development in the North Avenue and Western Cañada Larga expansion areas. The overall trip generation increase citywide through 2025 is estimated at 190,050 ADT under this scenario (see Table 3-13 of the traffic study in Appendix E). This represents an increase of 20.6% over existing conditions. ADTs for specific roadways are shown on Figure 3-14 of the traffic study in Appendix E.

Year 2025 ICUs are shown on Figure 4.12-10. To serve this scenario, it is anticipated that the following new roadway links would be added as an alternative to the Baseline Network along with selected intersection improvements:

1. Kimball Road extension from Johnson Drive to Bristol Road
2. Ralston Street extension from Ramelli Avenue to Montgomery Avenue
3. Cedar Street extension from Kellogg Street to Stanley Avenue
4. Stanley Avenue extension from Ventura Avenue to Cedar Street

Table 4.12-12 summarizes the overall roadway and intersection improvements for this scenario, and Table 4.12-13 lists the ICU values with Baseline improvements and with the recommended additional improvements.

Scenario 5 results in two locations that require additional (non-committed) improvements, with both deficiencies occurring under each network scenario (Baseline and Alternative). The deficient locations are as follows:

Baseline Network
- SR 33 Ramps at Shell Road
- Wells Road at Darling Road

Alternative Network
- SR 33 Ramps at Shell Road
- Wells Road at Darling Road

Table 4.12-12
Roadway Improvements – Scenario 5

Location	*Improvement*
I. Baseline	
1. Streets	
A Street (Saticoy Avenue to Wells Road)	New two-lane roadway
Harbor Boulevard Bridge over the Santa Clara River	Widen to four lanes
Hill Road (Moon Drive to Ralston Street)	Extend as two-lane roadway
Johnson Drive (North Bank Drive to Bristol Road)	Widen to six lanes
North Bank Drive (City limits to Wells Road)	New two-lane roadway
North Bank Drive (Current terminus to Saticoy Avenue)	New two-lane roadway
Telegraph Road (Saticoy Avenue to Wells Road)	Widen to four lanes
Thille Street (Telephone Road to current terminus)	Extend as two-lane roadway
US-101 Off-ramp to California Street	Relocate to Oak Street
Victoria Avenue (US-101 to City limits)	Widen to six lanes
Wells Road (SR 126 to City limits)	Widen to six lanes
Wells Road (Foothill Road to SR 126)	Widen to four lanes
2. Intersections	
20. Harbor Boulevard and Olivas Park Drive	Add second southbound left-turn lane
33. US-101 NB ramps at Telephone Road	Convert southbound left-turn lane to shared left-turn/right-turn lane
35. Saratoga Avenue at Telephone Road	Convert separate westbound right-turn lane to shared through/right-turn lane and add separate southbound right-turn lane
85. Victoria Avenue at Olivas Park Drive	Add second northbound and southbound left-turn lanes, third northbound and southbound through lanes, second eastbound left-turn lane and second westbound through lane
86. Telephone Road at Olivas Park Drive	Add double southbound left-turn lanes, second eastbound left-turn lane and second eastbound and westbound through lanes
91. Johnson Drive at Ralston Street	Add second northbound and southbound through lanes
92. Johnson Drive at Bristol Road	Add second northbound and southbound through lanes
94. Johnson Drive at North Bank Drive	Convert southbound right-turn lane to shared through/right-turn lane
104. Wells Road at SR 126 EB Ramps	Add third northbound and southbound through lanes
105. Wells Road at Darling Road	Add third northbound and southbound through lanes
106. Wells Road at Telephone Road	Add third northbound and southbound through lanes
160. Victoria Avenue at US 101 NB Ramps	Convert westbound shared left-turn/right-turn lane to dedicated left-turn lane and add third westbound right-turn lane
175. Ventura Boulevard at North Bank Drive	Add second eastbound through lane
II. Non-Committed	
1a. Streets (Alternative Network)	
Cedar Street (Kellogg Street to Stanley Avenue)	New two-lane roadway
Kimball Road (Telephone Road to North Bank Drive)	New four-lane roadway
Ralston Street (Ramelli Avenue to Montgomery Avenue)	New two-lane roadway
Stanley Avenue (Cedar Street to Ventura Avenue)	New two-lane roadway

Table 4.12-12
Roadway Improvements – Scenario 5

Location	*Improvement*
2. Intersections (Baseline Network)	
105. Wells Road at Darling Road	Add eastbound left-turn lane, second southbound left-turn lane and second westbound left-turn lane
179. SR-33 Ramps at Shell Road	Add southbound right-turn lane, second westbound through lane and separate westbound right-turn lane
2a. Intersections (Baseline Network)	
105. Wells Road at Darling Road	Add eastbound left-turn lane, second southbound left-turn lane and second westbound left-turn lane
179. SR-33 Ramps at Shell Road	Add southbound right-turn lane, second westbound through lane and separate westbound right-turn lane

199. Kimball & North Bank	--		--		--		--		.44	A	.47	A	--		--	

(a) LOS E (ICU less than or equal to 1.00) is acceptable at this location (freeway ramps). LOS D (ICU less than or equal to .90) is the recommended performance standard for all other intersection locations.

Note: Gray shading denotes intersection locations that exceed the performance standard.

Scenario 6 – Intensification/Reuse + North Avenue + Poinsettia

This scenario adds to the intensification and infill development of Scenario 1 by adding residential and non-residential development in the North Avenue and Poinsettia expansion areas. The overall trip generation increase citywide through 2025 is estimated at 199,936 ADT under this scenario (see Table 3-16 of the traffic study in Appendix E). This represents an increase of 21.7% over existing conditions. ADTs for specific roadways are shown on Figure 3-17 of the traffic study in Appendix E.

Year 2025 ICUs are shown on Figure 4.12-11. To serve this scenario, it is anticipated that the following new roadway links would be added as an alternative to the Baseline Network along with selected intersection improvements:

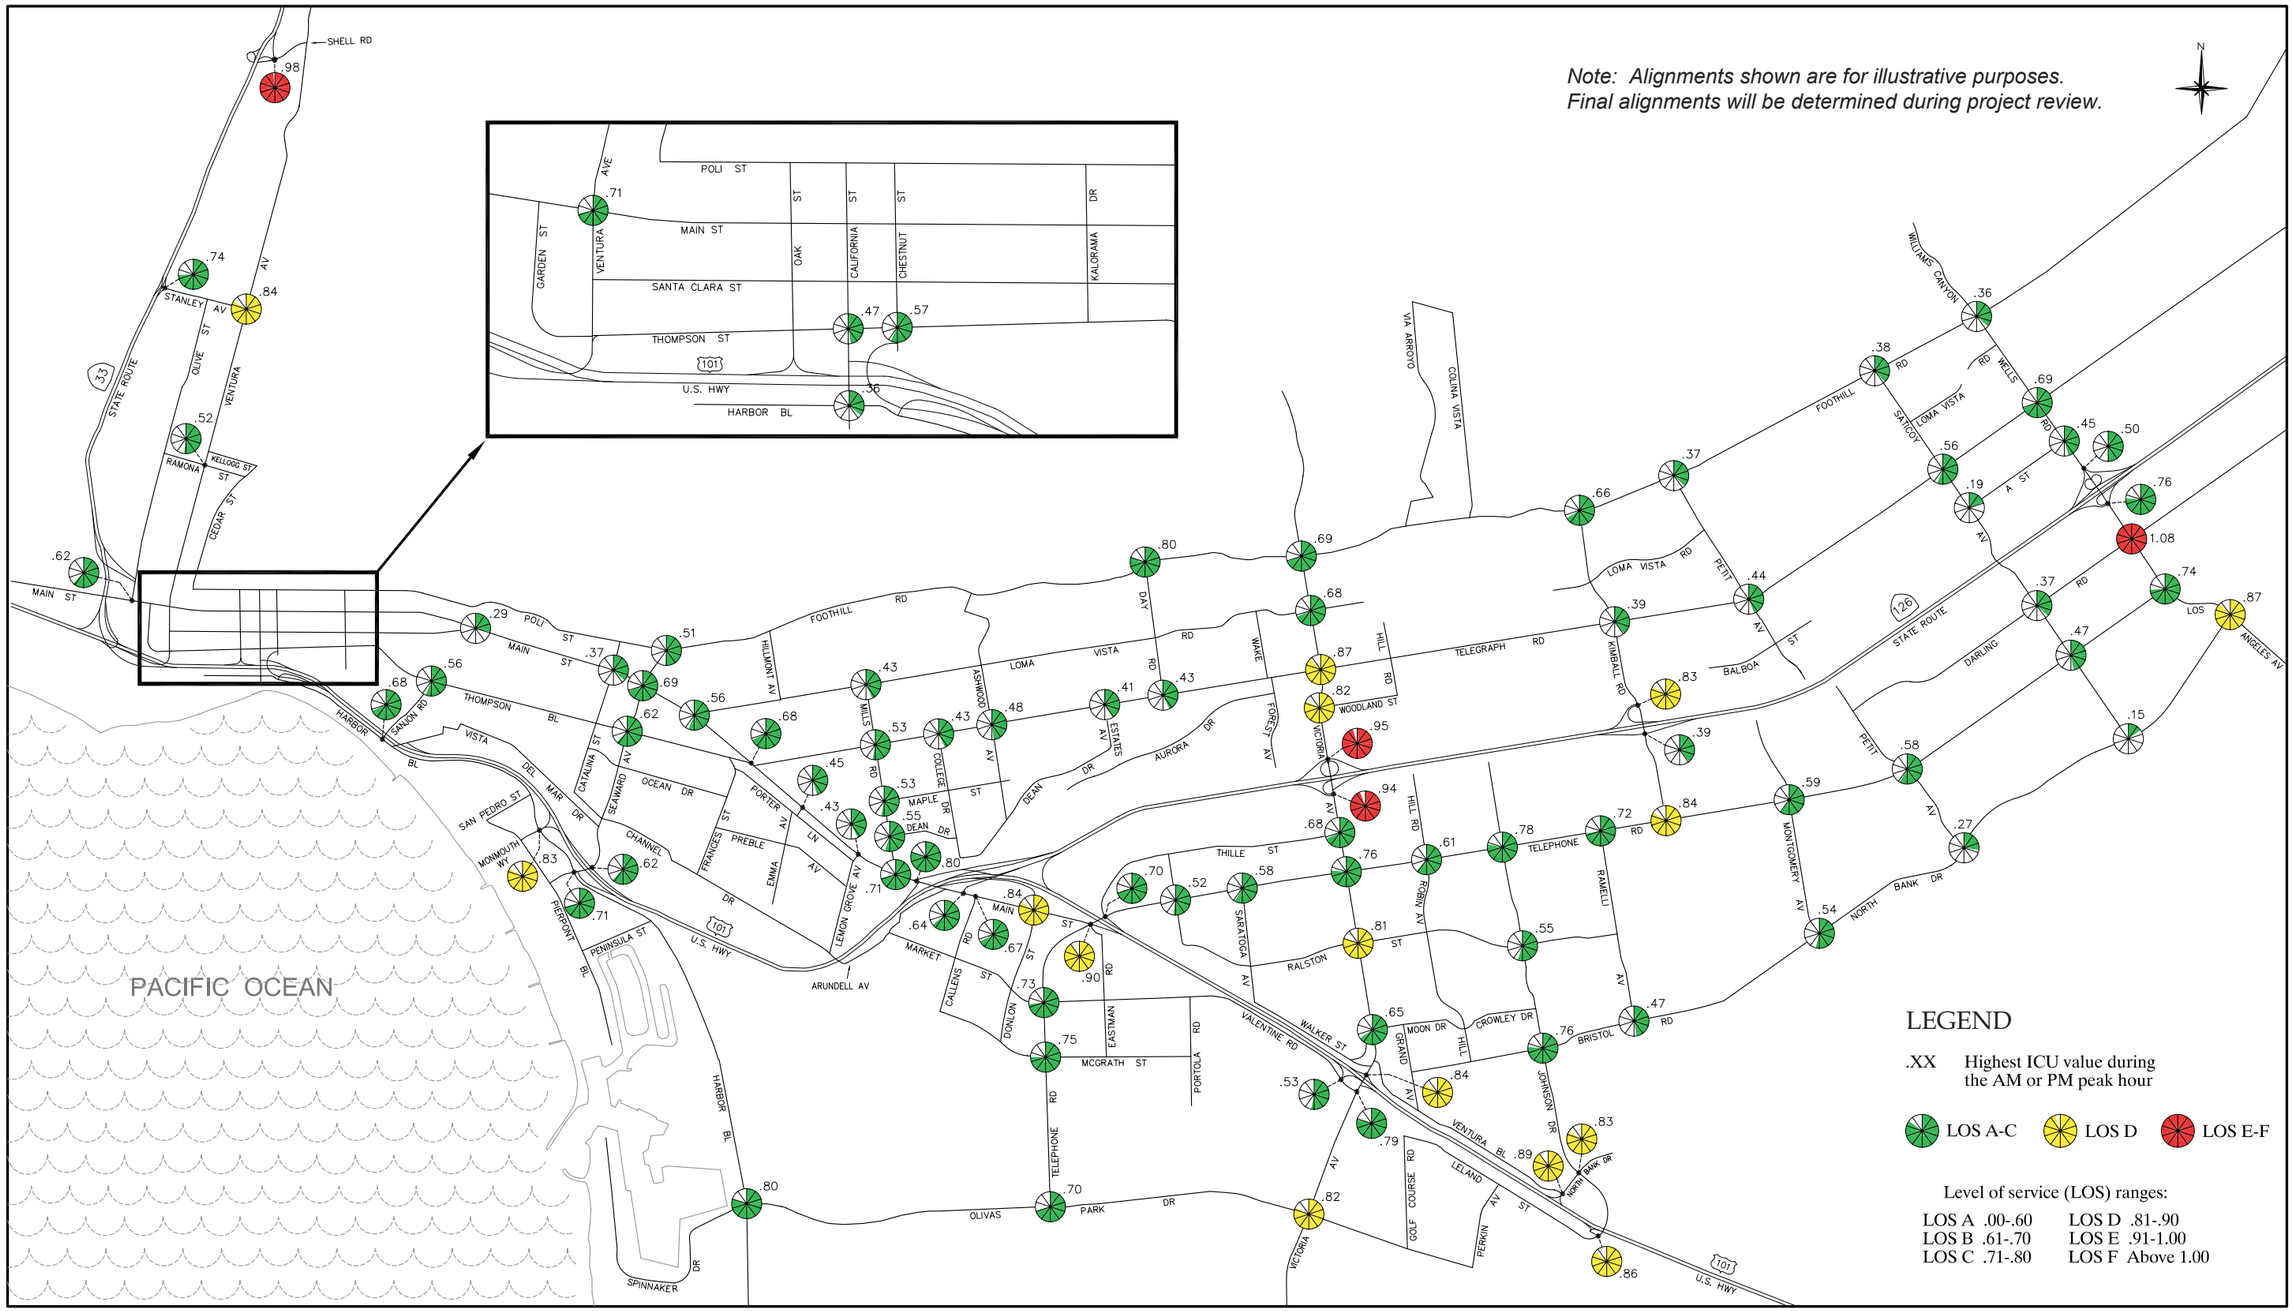
1. Johnson Drive extension from SR 126 to Foothill Road
2. Loma Vista Road extension from Victoria Avenue to Kimball Road
3. Woodland Street extension from Hill Road to Johnson Drive

Table 4.12-14 summarizes the overall roadway and intersection improvements for this scenario, and Table 4.12-15 lists the ICU values with Baseline improvements and with the recommended additional improvements.

Scenario 6 results in one location that will require additional (non-committed) improvements, with the deficiency occurring under both network scenarios (Baseline and Alternative). The deficient location is as follows:

Baseline Network
- Wells Road at Darling Road

Alternative Network
- Wells Road at Darling Road



2025 Intersection Capacity Utilization (ICU)
Scenario 6 (Baseline Network)

Figure 4-12-11

Table 4.12-14
Roadway Improvements – Scenario 6

Location	*Improvement*
I. Baseline	
1. Streets	
A Street (Saticoy Avenue to Wells Road)	New two-lane roadway
Harbor Boulevard Bridge over the Santa Clara River	Widen to four lanes
Hill Road (Moon Drive to Ralston Street)	Extend as two-lane roadway
Johnson Drive (North Bank Drive to Bristol Road)	Widen to six lanes
North Bank Drive (City limits to Wells Road)	New two-lane roadway
North Bank Drive (Current terminus to Saticoy Avenue)	New two-lane roadway
Telegraph Road (Saticoy Avenue to Wells Road)	Widen to four lanes
Thille Street (Telephone Road to current terminus)	Extend as two-lane roadway
US-101 Off-ramp to California Street	Relocate to Oak Street
Victoria Avenue (US-101 to City limits)	Widen to six lanes
Wells Road (SR 126 to City limits)	Widen to six lanes
Wells Road (Foothill Road to SR 126)	Widen to four lanes
2. Intersections	
20. Harbor Boulevard and Olivas Park Drive	Add second southbound left-turn lane
33. US-101 NB ramps at Telephone Road	Convert southbound left-turn lane to shared left-turn/right-turn lane
35. Saratoga Avenue at Telephone Road	Convert separate westbound right-turn lane to shared through/right-turn lane and add separate southbound right-turn lane
85. Victoria Avenue at Olivas Park Drive	Add second northbound and southbound left-turn lanes, third northbound and southbound through lanes, second eastbound left-turn lane and second westbound through lane
86. Telephone Road at Olivas Park Drive	Add double southbound left-turn lanes, second eastbound left-turn lane and second eastbound and westbound through lanes
91. Johnson Drive at Ralston Street	Add second northbound and southbound through lanes
92. Johnson Drive at Bristol Road	Add second northbound and southbound through lanes
94. Johnson Drive at North Bank Drive	Convert southbound right-turn lane to shared through/right-turn lane
104. Wells Road at SR 126 EB Ramps	Add third northbound and southbound through lanes
105. Wells Road at Darling Road	Add third northbound and southbound through lanes
106. Wells Road at Telephone Road	Add third northbound and southbound through lanes
160. Victoria Avenue at US 101 NB Ramps	Convert westbound shared left-turn/right-turn lane to dedicated left-turn lane and add third westbound right-turn lane
175. Ventura Boulevard at North Bank Drive	Add second eastbound through lane
II. Non-Committed	
1a. Streets (Alternative Network)	
Johnson Drive (Current terminus to Telegraph Road)	New four-lane roadway
Johnson Drive (Telegraph Road to Foothill Road)	New two-lane roadway
Loma Vista Road (Kimball Road to Victoria Avenue)	New two-lane roadway
Woodland Street (Hill Road to Johnson Drive)	New two-lane roadway

Table 4.12-14
Roadway Improvements – Scenario 6

Location	*Improvement*
2. Intersections (Baseline Network)	
105. Wells Road at Darling Road	Add eastbound left-turn lane, second southbound left-turn lane and second westbound left-turn lane
2a. Intersections (Alternative Network)	
105. Wells Road at Darling Road	Add eastbound left-turn lane, second southbound left-turn lane and second westbound left-turn lane

(a) LOS E (ICU less than or equal to 1.00) is acceptable at this location (freeway ramps). LOS D (ICU less than or equal to .90) is the recommended performance standard for all other intersection locations.

Note: Gray shading denotes intersection locations that exceed the performance standard.

MITIGATION MEASURES

The 2005 General Plan includes the following actions intended to maintain and improve traffic circulation in the Planning Area.

Action 4.2	*Develop a prioritized list of projects needed to improve safety for all travel modes and provide needed connections and multiple route options.*
Action 4.5	*Utilize existing roadways to meet mobility needs, and only consider widening roads when other alternatives are not feasible.*
Action 4.7	*Update the traffic mitigation fee program to fund necessary citywide circulation system and mobility improvements needed in conjunction with new development.*
Action 4.10	*Modify traffic signal timing to ensure safety and minimize delay for all users.*

In addition, as discussed in the *Setting* and in subsection a of the Impact Analysis ("Methodology and Significance Thresholds"), 2005 General Plan Action 4.11 directs the City to "refine level of service standards to encourage use of alternative modes of transportation while meeting state and regional mandates." Although no specific level of service (LOS) is defined in the 2005 General Plan, the local Congestion Management Program (CMP) establishes a minimum LOS of E for CMP intersections. Using this a guide, the analysis contained in this EIR uses LOS standards of "E" (ICU not to exceed 1.00) for freeway ramp intersections and "D" (ICU not to exceed .90) for all other Principal Intersections. This represents a relaxation of the current Comprehensive Plan standards of LOS "C" citywide and LOS "D" for intersections along Ventura Avenue. This relaxation of standards is consistent with the overall circulation goal of reducing dependence on the automobile and improving opportunities for other modes of transportation. However, it should be recognized that this relaxation of standards would allow for higher levels of traffic congestion at City intersections before implementing improvements to ease congestion.

As discussed in the "Impact Analysis," certain intersections within the Planning Area are projected to experience levels of service below the performance standards used for this analysis (LOS "D" or "E" depending on the location. The discussion for each of the scenarios identifies specific locations where deficiencies are projected to occur and specific feasible improvements that could be implemented at those intersections to achieve the level of service standards. For Scenarios 1, 3, 4, 5, and 6, feasible improvements are available to achieve performance standards at all intersections. For Scenario 2, feasible improvements are available for all of the intersections other than the Johnson Drive/North Bank Drive intersection. However, even with implementation of feasible improvements, that intersection would not meet the performance standard of LOS D. Therefore, the impact at that location is considered unavoidably significant under Scenario 2.

Because the analysis of Year 2025 impacts is out of necessity based upon predictions about the level of development that will occur and where such development will be, it cannot be determined with certainty which of the identified improvements which actually be needed over the next 20 years. As such, it would not be appropriate to adopt actual physical improvements

at this time. Rather, the purpose of the EIR analysis is to determine whether mitigation is possible, if actually needed in the future.

To provide a mechanism for addressing impacts as they occur and implementing the improvements identified in this EIR (or other feasible improvements that achieve the same objectives) as needed, the following measure is required:

TC-1 **Additional Circulation Actions.** The following actions shall be added to the 2005 General Plan to ensure that traffic impacts of future developments are addressed and mitigated:

- Require project proponents to analyze traffic impacts and implement mitigation as appropriate prior to development. Depending upon the nature of the impacts and improvements needed, mitigation may either consist of implementing needed physical improvements, contributing "fair share" fee toward implementation of needed improvements, or some combination thereof.
- Update the traffic mitigation fee program to fund necessary citywide circulation and mobility system improvements needed in conjunction with new development.

SIGNIFICANCE AFTER MITIGATION

Implementation of the above action would provide a mechanism for implementation of transportation system improvements as needed. Thus, impacts would be reduced to a less than significant level for Scenarios 1, 3, 4, 5, and 6. However, as noted above, the level of service at the Johnson Drive/North Bank Drive is not projected to meet the performance standard of LOS D under Scenario 2. Therefore, the impact at that location is considered unavoidably significant for Scenario 2.

The identified roadway system improvements primarily consist of re-striping of existing roads and addition of lanes at specific intersections. In most locations, improvements would not require the acquisition of additional right-of-way and would generally have only minor secondary effects. However, at certain locations, additional right-of-way may be needed. In addition, at a limited number of locations, road extensions or widenings are anticipated. For example, under any scenario, it is anticipated that A Street would be built between Saticoy Avenue and Wells Road, Hill Road would be extended from Moon Drive to Ralston Street, North Bank Drive would be extended to Wells Road, and Thille Street would be extended to Telephone Road. In addition, it is anticipated that Victoria Avenue from U.S. 101 to the southern City limit would be widened to six lanes and Wells Road would be widened (from two to four lanes north of SR 126 and from four to six lanes south of SR 126). These types of improvements may cause temporary traffic disruption and minor land disturbances, though it is anticipated that they can be implemented without significant secondary effects.

It should again be noted that it is anticipated that implementation of the 2005 General Plan will involve a relaxation of current level of service standards. This would minimize secondary

impacts relating to the construction of roadway improvements, but would allow for higher levels of traffic congestion than would be anticipated under the current level of service standards.

Impact TC-2	**Implementation of any of the 2005 General Plan land use scenarios would be expected to generally enhance the use of alternative transportation modes, including transit, bicycling, and walking. Impacts relating to alternative transportation are considered Class IV, *beneficial*, under any scenario.**

The 2005 General Plan includes a range of policies and actions aimed at enhancement of alternative transportation mode opportunities throughout the Planning Area. These include:

Policy 4A	*Ensure that the transportation system is safe and easily accessible to all travelers.*
Action 4.2	*Develop a prioritized list of projects needed to improve safety for all travel modes and provide needed connections and multiple route options.*
Action 4.3	*Provide transportation services that meet the special mobility needs of the community including youth, elderly, and disabled persons.*
Action 4.6	*Require new development to be designed with interconnected transportation modes and routes.*
Action 4.8	*Implement the City's Neighborhood Traffic Management Program and update as necessary to improve livability in residential areas.*
Action 4.11	*Refine level of service standards to encourage use of alternative modes of transportation while meeting state and regional mandates.*
Action 4.12	*Design roadway improvements and facility modifications to minimize the potential for conflict between pedestrians, bicycles, and automobiles.*
Policy 4B	*Help reduce dependence on the automobile.*
Action 4.14	*Provide development incentives to encourage projects that reduce automobile trips.*
Action 4.15	*Encourage the placement of facilities that house or serve elderly, disabled, or socioeconomically disadvantaged persons in areas with existing public transportation services and pedestrian and bicycle amenities.*
Action 4.16	*Install roadway, transit, and alternative transportation improvements along existing or planned multi-modal corridors, including primary bike and transit routes, and at land use intensity nodes.*
Action 4.17	*Prepare and periodically update a Mobility Plan that integrates a variety of travel alternatives to minimize reliance on any single mode.*
Action 4.18	*Promote the development and use of recreational trails as transportation routes to connect housing with services, entertainment, and employment.*

Action 4.19 *Adopt new development code provisions that establish vehicle trip reduction requirements for all development.*

Action 4.20 *Develop a transportation demand management program to shift travel behavior toward alternative modes and services.*

Action 4.21 *Require new development to provide pedestrian and bicycle access and facilities as appropriate, including connected paths along the shoreline and watercourses.*

Action 4.22 *Update the General Bikeway Plan as needed to encourage bicycle use as a viable transportation alternative to the automobile and include the bikeway plan as part of a new Mobility Plan.*

Action 4.23 *Upgrade and add bicycle lanes when conducting roadway maintenance as feasible.*

Action 4.24 *Require sidewalks wide enough to encourage walking that include ramps and other features needed to ensure access for mobility-impaired persons.*

Action 4.25 *Adopt new development code provisions that require the construction of sidewalks in all future projects, where appropriate.*

Policy 4C *Increase transit efficiency and options.*

Action 4.28 *Require all new development to provide for citywide improvements to transit stops that have sufficient quality and amenities, including shelters and benches, to encourage ridership.*

Action 4.29 *Develop incentives to encourage City employees and local employers to use transit, rideshare, walk, or bike.*

Action 4.30 *Work with public transit agencies to provide information to riders at transit stops, libraries, lodging, and event facilities.*

Action 4.31 *Work with public and private transit providers to enhance public transit service.*

Action 4.32 *Coordinate with public transit systems for the provision of additional routes as demand and funding allow.*

Action 4.33 *Work with Amtrak, Metrolink, and Union Pacific to maximize efficiency of passenger and freight rail service to the City and to integrate and coordinate passenger rail service with other transportation modes.*

Action 4.34 *Lobby for additional transportation funding and changes to Federal, State, and regional transportation policy that support local decision-making.*

All of the General Plan land use scenarios emphasize intensification and reuse of already developed areas of the City prior to the conversion of agricultural or open space lands at the City's periphery, focusing future development in particular on the districts and corridors identified on Figures 2-3 through 2-8 in Section 2.0, *Project Description*. Higher intensity land use patterns are generally supportive of alternative transportation since residences, employment centers, and services are generally closer together. Research indicates that in compact neighborhoods, where destinations are nearer to one another, people are more willing to walk, bicycle and ride transit. According to one study, every time a neighborhood doubles in

compactness, the number of vehicle trips residents make is reduced by 20% to 30% (Holtzclaw, 1991).

Implementation of the policies and actions included in the 2005 General Plan is expected to improve the availability of sidewalks, bike paths, and transit over time. By making these transportation alternatives more attractive, General Plan implementation is expected to foster a gradual transition toward greater use of alternatives to the single-occupant automobile.

The districts and corridors where development is to be emphasized under any of the land use scenarios are generally located along or in close proximity to existing SCAT bus routes (see Figure 4.12-3). Similarly, all of the expansion areas included in Scenarios 2-6 are located along existing SCAT bus routes, as follows:

- *North Avenue – Routes 6B, and 16*
- *Olivas – Route 12*
- *Serra – Routes 10/11*
- *Western Cañada Larga – Routes 6B and 16*
- *Poinsettia – Routes 10/11*

Any of the land use scenarios would emphasize development that could be served by existing alternative transportation and it is anticipated that the type of development envisioned, in combination with implementation of proposed General Plan policies and actions, would enhance alternative transportation mode opportunities under any scenarios. Consequently, conflicts with policies relating to alternative transportation are not anticipated. As discussed in Section 4.14, *Land Use and Planning*, any of the land use scenarios could also be found to be consistent with relevant alternative transportation policies of the Southern California Association of Governments' Regional Comprehensive Plan and Guide.

MITIGATION MEASURES

None required.

SIGNIFICANCE AFTER MITIGATION

Implementation of any of the 2005 General Plan land use scenarios is expected to generally enhance opportunities for the use of alternative transportation.

Impact TC-3	**None of the 2005 General Plan land use scenarios would accommodate design features that would create traffic hazards. The placement of new residential development along highly traveled thoroughfares may incrementally increase hazards for pedestrians; however, implementation of proposed policies relating to traffic calming and improving walkability would reduce such impacts to a Class III, *less than significant*, level for any of the General Plan land use scenarios.**

By emphasizing intensification and reuse of developed areas of the City, any of the General Plan land use scenarios would accommodate new mixed use and residential development along relatively highly traveled corridors. Among the corridors anticipated to accommodate substantial new mixed use development are Main Street, Thompson Boulevard, Ventura Avenue, and Telegraph Road. Other heavily traveled roads throughout the City may also accommodate new mixed use development, though likely to a lesser degree.

The placement of residences along main travel corridors is expected to generally increase pedestrian activity in these areas, with the potential for increased hazards for pedestrians. However, the 2005 General Plan includes a range of policies and actions specifically intended to enhance the walkability of neighborhoods and corridors throughout the Planning Area. These include Policy 4A and Actions 4.11, 4.12, 4.24, and 4.25 listed under Impact TC-2 as well as the following:

Policy 3E *Ensure the appropriateness of urban form through modified development review.*

Action 3.23 *Develop and adopt a form-based Development Code that emphasizes pedestrian orientation, integration of land uses, treatment of streetscapes as community living space, and environmentally sensitive building design and operation.*

Implementation of proposed policies and actions, in combination with continued application of standard safety requirements and ongoing City programs described in the *Setting* (lowering of speed limits, re-striping of streets, neighborhood traffic management and calming) is expected to generally improve overall safety conditions for pedestrians throughout the Planning Area. Implementation of General Plan policies, actions, and ongoing City programs on any future development in any of the potential expansion areas would also minimize traffic-related hazards associated with the development of those areas. Therefore, significant traffic safety impacts are not anticipated for any of the 2005 General Plan land use scenarios.

MITIGATION MEASURES

None required.

SIGNIFICANCE AFTER MITIGATION

Impacts relating to traffic hazards would be less than significant for any of the 2005 General Plan land use scenarios.

Impact TC-4 **None of the 2005 General Plan land use scenarios would affect air traffic patterns. Impacts relating to air traffic are considered Class III, *less than significant*, under any scenario.**

No airports are located within the Ventura Planning Area. The nearest airports are Oxnard Airport (more than two miles from the southern boundary of the Planning Area), Santa Paula

Airport (more than six miles from the eastern boundary of the Planning Area), and Camarillo Airport (approximately five miles from the southern boundary of the Planning Area). Development within the Ventura Planning Area would not affect air traffic at any of these facilities or at any other airports within the region. Impacts to air traffic would not be significant under any of the General Plan land use scenarios.

MITIGATION MEASURES

None required.

SIGNIFICANCE AFTER MITIGATION

Impacts to air traffic would be less than significant for any of the 2005 General Plan land use scenarios.

4.13 UTILITIES and SERVICE SYSTEMS

Public utilities provided by the City include water services, and wastewater conveyance and treatment facilities. These public utilities are described below. Section 4.8, *Hydrology and Water Quality,* addresses potential impacts to storm drain infrastructure and surface water quality.

4.13.1 Setting

a. Water. This section presents detailed information about the City of Ventura water system as of April 2002, with critical information updated as of the date of this EIR. Facilities discussed include water treatment, wells, reservoirs, pump stations, and pipelines. The City water system consists of approximately 30,000 service connections. The City receives supplemental water from Casitas Municipal Water District and United Water Conservation District. The City water system provides water to residential, commercial, industrial, petroleum recovery, irrigation, and municipal users. Raw water is used in the North Ventura Avenue area for irrigation and injected into the ground for oil recovery. All other customers receive treated potable water.

The western portion of the City obtains water predominantly from Lake Casitas and the Ventura River diversion near Foster Park north of the City. The eastern portion of the City obtains water predominantly from wells drawing on three groundwater basins. Because of an agreement between the Casitas Water District and the U.S. Bureau of Reclamation and the method of financing the Lake Casitas project, water from Lake Casitas cannot be used outside the Casitas District boundaries. Only City-generated water diverted from the Ventura River at Foster Park can be used to service the eastern area of the City.

The 1993 City Water Master Plan provides a detailed analysis of the water system and future needs. The study, which is incorporated by reference, evaluated water quality, supply and storage capacity, the distribution system, system reliability, and operational flexibility. The study identified alternative sources of supply, recommended system improvements, and provided an implementation plan for meeting future demand.

The water system consists of four treatment facilities, 30 tanks and reservoirs (active) on 20 sites, 22 pump stations, and 12 groundwater wells. One of the treatment facilities has been decommissioned. The service area is divided into 14 pressure zones. These zones have been established based on the growth pattern, topography, and physical capability of the water pipelines, storage, and pumping facilities. Figure 4.13-1 shows the location of water distribution facilities, and Table 4.13-1 lists the water treatment facilities and their capacities.

Table 4.13-1
Water Treatment Facilities

Treatment Facilities	Capacity	Remarks
Avenue Water Treatment Plant	10 MGD	In Service
Seaward Water Conditioning Plant	6 MGD	Decommissioned
Bailey Water Conditioning Facility	4 MGD	In Service
Saticoy Water Conditioning Facility	4 MGD	In Service

Source: City of Ventura Public Works Department.

Table 4.13-2 shows that City water storage facilities, consisting of tanks and reservoirs, have a total capacity of 49.68 million gallons (MG).

Table 4.13-2
Water Storage Facilities

Reservoir	Status	Zone	Capacity
Power Reservoir	Active	210	15.17 MG
Pistol Range Tank	Active	210	1.0 MG

Elizabeth Tank	Active	605W	1.0 MG
Total Storage Capacity (Active)			**49.68 MG**

The City's distribution system mains fall into two categories: (1) distribution mains ranging in size from 4-inches to 12-inches in diameter; and (2) transmission mains ranging in size from 14-inches to 36-inches in diameter. Table 4.13-3 provides a breakdown of the composition of the City's distribution system. Figure 4.13-1 shows the locations of water distribution mains.

Table 4.13-3
Distribution Mains

Material	Amount (Percent)	Size (Inches)
Cast Iron – Cement Lined	40	4-36
Ductile Iron	5	4-20
Asbestos Cement	40	6-10

The City's system is divided into 14 pressure zones (see Table 4.13-5 and Figure 4.13-1), which range from 210 to 1,035 feet above sea level. These zones were established based on the land use pattern, topography and the ability to optimize system pressure. The pressure zone numbers refer to the storage facility and high water elevations serving that zone. The City does not experience any low pressures.

Table 4.13-5
Pressure Zones

The City has five different well groups with a total of 12 wells, as shown in Table 4.13-6. The Golf Course Wells, Victoria Well, and Nye Wells are used extensively. Victoria Well #2 and Saticoy Well #2 located at the Saticoy Water Conditioning facility are the most recent wells added to the system.

There are presently five water sources that provide water to the City water system.

- *Casitas Municipal Water District*
- *Ventura River Surface Water Intake, Subsurface Water and Wells (Foster Park)*
- *Mound Groundwater Basin*
- *Oxnard Plain Groundwater Basin (Fox Canyon Aquifer)*
- *Santa Paula Groundwater Basin*

Table 4.13-7 summarizes historic and projected water supply from these sources, as detailed in the 2000 City Urban Water Management Plan. The historic delivery values shown represent the capacity of available sources. The projected numbers in the table estimate available water supply levels under normal, non-drought conditions. Actual water supply levels in any given year may be significantly higher or lower than these averages.

Source: City of Ventura Urban Water Management Plan, December 2000
City of Ventura 2004 Biennial Water Supply Report as amended, September 2004 (see Appendix F).

The City generally uses its water supplies in the following order: (1) Ventura River; (2) Lake Casitas; and (3) groundwater basins. Water is used in this order to maximize the amount of surface water that would otherwise be lost to runoff before using stored groundwater.

The City also utilizes recycled water supply from the Ventura Water Reclamation Facility to augment its municipal water supply. The tertiary-level treatment plant produces effluent that meets the requirements of Title 22 of the California Administrative Code at an average daily flow to 9.5 million gallons per day. Recycled water is currently used at two golf courses, for landscaping at the Olivas Adobe City Park, and for landscaped medians in the Ventura marina area. Treated effluent is also used for wildlife enhancement in the Santa Clara River estuary. The City recycled water system consists of five miles of pipelines and two pumping facilities. The total recycled water delivery for 1999 was 329 million gallons.

The 1992 City Reclaimed Water Master Plan, which guides future expansion of reclaimed water service, recommends pursuit of landscape irrigation opportunities adjacent to or within reasonable distances of existing reclaimed water distribution systems. A 1999 City review of the Plan noted that implementation of all of the recommended improvements was not justified at that time because the amount of available effluent supply was less than estimated in the Master Plan due to the fact that most of the reclaimed water is required to be discharged into the estuary, and that the proposed expansion of the golf courses currently using reclaimed water would utilize most or all of the estimated available supply. The analysis also found that reclaimed water fees did not generate enough revenue to allow significant expansion and/or upgrades to the existing reclaimed water system. The City Council adopted a reclaimed water policy in 1999 whereby new developments located near existing reclaimed water mains or within the defined reclaimed water focus area, as shown as part of the policy, are required to use reclaimed water in lieu of potable water for irrigation and other uses as appropriate. Each development is required to pay for upgrades to the existing reclaimed water facilities and/or new facilities required to meet their reclaimed water demands.

To enhance system reliability, the City, pursuant to regulations set by the Fox Canyon Groundwater Management Agency has established a water bank for emergency purposes. This water is reserved for significant water shortage such as drought or catastrophic events and is not available for normal use. State Water Project water became available in 1971 through an agreement with the Casitas Water District and the Department of Water Resources that is valid until 2038. However, the City has not yet received delivery of its entitlement, and it is not certain if or when facilities will be constructed to transport State Water Project water to the City.

Water consumption in the City has decreased as a result of successful water conservation efforts. Demand management programs include plumbing retrofits, mandatory conservation ordinances affecting new and existing homes and businesses, water system optimization, and higher cost of water through increasing block rates. Existing and proposed conservation programs are intended to reduce per capita water use through more efficient water consumption by all users.

Table 4.13-8 presents historic and projected water production in the service area. The City does not currently experience water supply shortages and, with the upcoming addition of the Saticoy Yard Well, does not anticipate the need for additional supplies within a 20-year horizon.

Table 4.13-8

City of Ventura 2004 Biennial Water Supply Report as amended, September 2004 (see Appendix F).
(1) Per capita use excludes raw water and oil use.

Water Quality. The following terms are used to describe water quality:

- *Maximum Contaminant Level (MCL): The highest level of a contaminant allowed in drinking water. Primary MCLs are set as close to the Federal Public Health Goals or State Maximum Contaminant Level Goals as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste and appearance of drinking water.*
- *Primary Drinking Water Standard: MCLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.*
- *Maximum Contaminant Level Goal: The level of contaminant in drinking water below which there is no known or expected risk to the health; set by EPA.*
- *Public Health Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health; set by the California EPA.*

- *Regulatory Action Level (RAL): The concentration of a contaminant, which, if exceeded, triggers treatment or other requirements that a water system must follow.*

In late 2002, the City completed changes to its water supply disinfection program for the use of chloramines for disinfection rather than chlorine primarily because the Casitas District also switched to chloramine disinfection and the two methods can't be utilized where the water would be commingled. This process was selected because chloramines have less odor and taste. The City owns and maintains a full scale, state certified laboratory where water quality is monitored. All treatment plants are run by State certified operators who consistently monitor water quality constituents.

In order to ensure tap water is safe to drink, the U.S. Environmental Protection Agency (EPA) and the California Department of Health Services prescribe regulations that limit the amount of certain contaminants allowed in water provided by public water systems. The City of Ventura treats its water according to the Department's regulations. Table 4.13-9 shows 2001 water quality test results for Ventura. The system meets all primary drinking water standards including state and federal water quality requirements. However, as shown in Table 4.13-9, the average total dissolved solid concentration from groundwater sources was slightly higher than the Maximum Contaminant Level (MCL) for secondary standards.

The Department of Heath Services also conducts an annual inspection of the public water systems. Table 4.13-10 shows water quality testing results for the distribution system and wells. An inspection report prepared in 2001 indicated a history of high nitrate levels in the following Eastside well: standby Victoria Well No. 1 (44.3 mg/l). Monthly sampling is required at this well to monitor nitrate. The City obtained additional samples at Victoria Well No. 1 with nitrate results around 10 ppm in June 2001, and 8.1 ppm in January 2002. The MCL is 10 ppm. Since this time, levels have stayed below the MCL but if levels increase above the MCL, the City could make adjustments by blending or wellhead treatment to meet the MCL as mandated by the Department of Heath Services. Mound Well No. 1 has experienced increased TDS levels of late, but nothing that would make it infeasible for use.

b. Wastewater. This section presents detailed information from evaluation of the City of Ventura sewer system as of April 2002, with critical information updated as of the date of this EIR. Sewer system components discussed are treatment facilities, lift stations, pipelines and new facilities and services. The majority of residents receive sewer service directly from the City; however, three separate sanitary sewer agencies provide service to specific areas: Montalvo Municipal Improvement District, Saticoy Sanitary Sewer District, and Ojai Valley Sanitary District. Each agency has its own treatment facility. There are a few pockets in the City currently served by individual septic tanks, which typically have been annexed to the City since 1979 and have been slowly connecting to the sewer system as failures of private septic tank systems occur.

The Ventura Water Reclamation Facility, located in the harbor area, treats most of the wastewater for the City. This plant was originally designed with a capacity of 14 mgd and provides tertiary treatment, effluent filtration and chlorination/de-chlorination. The effluent then discharges into the Santa Clara River Estuary. Solids handling consists of thickening, anaerobic digestion and

dewatering by filter presses prior to land application. Plant flow for 2001 averaged 9.3 mgd and in 2004 averaged just under 9.0 mgd.

A minimum of 5.6 mgd of the effluent is discharged to the Santa Clara Estuary as required by the existing Regional Water Quality Control Broad (RWQCB) Permit. The remaining effluent is either transferred to recycling ponds, where a portion is delivered as reclaimed water, or lost through percolation or evaporation.

Table 4.13-11 shows monthly average wastewater flows for 2001. Peak monthly flow in 2001 occurred in March (10.8 mgd). Peak flow in 2000 occurred in June (12.7 mgd) and in 1999 in September (9.4 mgd).

The reclamation facility operates under a RWQCB permit for production of reclaimed water (issued 1987). In 2002, the RWQCB initiated a review of the City's effluent permit. This review and a new permit are pending.

The Ojai Valley Sanitary District Treatment Plant was constructed in 1963 with a capacity of 1.4 million gallons per day. It was expanded to the current capacity of 3.0 mgd in 1965. A major rehabilitation and upgrade project financed by an EPA Clean Water Construction Grant was carried out in 1982 to bring effluent into compliance with requirements established by the Los

Angeles Regional Water Quality Control Board. Reduction of ammonia-nitrogen was the most important of these requirements. Current flows as of 2004 averaged about 2.0 mgd and this treated effluent is discharged to the Ventura River.

The Montalvo Municipal Improvement District Treatment Plant is a secondary treatment plant, with a capacity of 0.36 mgd, and serves the Montalvo Community. The Saticoy Sanitary District Treatment Plant has a capacity of 2.2 million gallons per day and is currently undergoing expansion and upgrading to tertiary treatment.

Table 4.13-12 lists wastewater generation factors applied to new development in Ventura.

The City collection system includes seven major tributary, or planning, areas (see Figure 4.13-2) with a total service area of 31,309 acres: Ventura Avenue; Vista Del Mar; Woolsey Trunk; Pierpont Bay; Olivas-Bristol Trunk; Wells Road Valley; and, Santa Clara River area. The downtown area has sewer pipes that were installed as early as 1905. Some of the most recently installed pipes comprise the southern portion of the sewer system in the Ventura Harbor area.

The City also provides wastewater treatment for tributary collections systems operated by others. These include the North Coast Communities (Ventura County Service Area 29), where the system is owned by the County and operated by the Ventura County Regional Sanitation District, and McGrath State Beach, owned and operated by the State.

Table 4.13-12
Wastewater Generation Factors

Land Use	Average Flow
Residential	0.00013 cfs/capita
Industrial	0.0081 cfs/acre
Commercial	0.0061 cfs/acre
Public Structures	0.0061 cfs/acre
Recreation	0.00031 cfs/acre
Hospital	0.039 cfs/100 beds
School	0.031 cfs/1,000 students
College	0.031 cfs/1,000 students

The City collection system consists of nearly 60 miles of main collector sewer pipeline with about 450 miles of total gravity sewer pipe, 3 miles of force mains, 8,700 manholes, and 14 lift stations, two of which have been abandoned indefinitely. Sewer system lines range in diameter from 4 to 48 inches. Figure 4.13-2 shows the locations of sewage collection and treatment Facilities. Table 4.13-13 summarizes the lift station capacities.

Improvement Program. One such project is the North Bank replacement, which is scheduled to be in operation by the end of 2003 and when completed will eliminate the Topaz, Harper and Wells Road Lift Stations as well as the old North Bank Lift Station.

4.9.2 Impact Analysis

a. Methodology and Significance Thresholds. The following thresholds have been used to determine the impacts to water provision, wastewater treatment, and solid waste disposal.

The 2005 General Plan would result in potentially significant impacts if growth accommodated by the Plan would result in substantial adverse physical impacts associated with provision of new or physically altered governmental facilities, or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios or other performance objectives.

Water. The 2005 General Plan would have a significant effect on water supplies if demand associated with projected growth exceeds the available supply, thereby causing water shortages during average or peak demand periods. Impacts related to the proposed 2005 General Plan would be considered substantial if growth under the Plan would:

- *Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted);*
- *Require or result in the construction of new water facilities or expansion of existing facilities, the construction of which could cause significant environmental effects; or*
- *Fail to have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed.*

Wastewater. Impacts to the sewer system are considered significant if sewage generated by growth that could be accommodated under the 2005 General Plan would exceed the existing or planned capacity of the sewage collection or treatment system, or require extension of a trunk line with capacity to serve new development. Impacts related to the 2005 General Plan would be considered substantial if growth accommodated under the Plan would:

- *Require or result in the construction of new wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects; or*
- *Result in a determination that the wastewater treatment provider (the City or the Ojai Valley Sanitary District) that it does not have adequate capacity to serve projected demand in addition to existing commitments.*

b. Project Impacts and Mitigation Measures. The matrix on the following page provides a summary comparison of impacts for each of the six 2005 General Plan land use scenarios. A discussion of impacts for each scenario follows.

Impact U-1	**Development accommodated under any of the 2005 General Plan land use scenarios would increase water demand, with net increases in demand ranging from about 2,700 acre-feet per year (AFY) to 5,900 AFY. The total estimated water available from Lake Casitas, the Ventura River diversion, and groundwater basins of approximately 28,300 acre-feet per year is sufficient to meet these projected demand increases. Therefore, water supply impacts are considered Class III, *less than significant*, for all six scenarios .**

Agriculture Water Credit

There are areas within the City's SOI, such as the McGrath property, that are currently in agricultural use. Although not being served by the City water system, these areas utilize water from private wells drawing from the same groundwater basin as the City and when taken out of agricultural production will increase the available supply that can be extracted from existing City wells or from new wells installed by the City. Although water use will vary depending on such elements as crop type and soil characteristics, the average agricultural irrigation use is assumed to be 2.5 feet per year (30 inches).

The six land use scenarios would accommodate the conversion of varying amounts of agricultural land to urban uses, thus creating an additional source of groundwater for the overall scenario development. This includes both agricultural acreage within the current SOI that is already designated for non-agricultural uses and, for Scenarios 2-6, agricultural lands within the expansion areas under consideration for future conversion. The total acreage, location, and water credit for these agricultural areas for conversion to urban development are discussed below.

Scenario 1 – Intensification/Reuse Only

Under Scenario 1, there are no expansion areas that would be taken out of agriculture; therefore, no credits for additional groundwater sources available for new development in these areas. However, as discussed previously, agricultural lands within the existing SOI that are already designated for non-agricultural uses could be converted under this scenario. Using the agricultural irrigation factor of 2.5 feet per year, the total amount of water credit is 1,278 acre-feet per year (AFY) (see Table 4.13-14). This amount is credited against the total projected water demand calculation for intensification/reuse that could occur under every scenario.

Projected water demands for the various land uses and cumulative totals for Scenario 1 are shown in Table 4.13-15. As indicated in the table, growth accommodated under this Scenario would increase current water demand by 5.18 million gallons per day (mgd) or about 5,806 acre-feet per year (AFY).

Summary Comparison of Impacts for EIR Scenarios

	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
Water Supply and Delivery (Impact U-1)	Net demand increase of 4,528 AFY, resulting in overall demand of approximately 26,028 AFY in 2025. This is within projected supply. System upgrades needed in older parts of the City to improve pressure and fire flow, but can be achieved with significant secondary impacts. Impacts are Class III, less than significant.	Net demand increase of 2,710 AFY, resulting in overall demand of approximately 24,210 AFY in 2025. This is within projected supply. Minor infrastructure extensions needed for expansion areas, but water mains are adjacent; new reservoir needed for North Avenue area. Impacts are Class III, less than significant.	Net demand increase of 3,877 AFY, resulting in overall demand of approximately 25,377 AFY in 2025. This is within projected supply. Minor infrastructure extensions needed for expansion areas, but water mains are adjacent; new reservoir needed for North Avenue area. Impacts are Class III, less than significant.	Net demand increase of 5,035 AFY, resulting in overall demand of approximately 26,535 AFY in 2025. This is within projected supply. Minor infrastructure extensions needed for expansion areas, but water mains are adjacent; new reservoir needed for North Avenue area. Impacts are Class III, less than significant.	Net demand increase of 5,880 AFY, resulting in overall demand of approximately 27,380 AFY in 2025. This is within projected supply. Minor infrastructure extensions needed for expansion areas, but water mains are adjacent; new reservoir needed for North Avenue and Western Cañada Larga areas and possible new well for Western Cañada Larga. Impacts are Class III, less than significant.	Net demand increase of 5,150 AFY, resulting in overall demand of approximately 26,650 AFY in 2025. This is within projected supply. Minor infrastructure extensions needed for expansion areas, but water mains are adjacent; new reservoir needed for North Avenue area. Impacts are Class III, less than significant.
Wastewater Conveyance and Treatment (Impact U-2)	Projected increase in flow of 2.88 million gallons per day (mgd) at VWRF and 0.18 mgd at OVSD plant. Increases are within the capacities of both plants. Sewer line upgrades needed in many older neighborhoods, but can be achieved without significant secondary impacts. Impacts are Class III, less than significant.	Projected increase in flow of 3.72 mgd at VWRF and 0.28 mgd at OVSD plant. Increases are within the capacities of both plants. Sewer line upgrades needed in many older neighborhoods, but can be achieved without significant secondary impacts. Sewer mains adequate for expansion areas. Impacts are Class III, less than significant.	Projected increase in flow of 3.67 mgd at VWRF and 0.33 mgd at OVSD plant. Increases are within the capacities of both plants. Sewer line upgrades needed in many older neighborhoods, but can be achieved without significant secondary impacts. Sewer mains adequate for expansion areas. Impacts are Class III, less than significant.	Projected increase in flow of 3.67 mgd at VWRF and 0.33 mgd at OVSD plant. Increases are within the capacities of both plants. Sewer line upgrades needed in many older neighborhoods, but can be achieved without significant secondary impacts. Sewer mains adequate for expansion areas. Impacts are Class III, less than significant.	Projected increase in flow of 2.98 mgd at VWRF and 1.01 mgd at OVSD plant. Increase at OVSD plant exceeds capacity. Sewer line upgrades needed in many older neighborhoods, but can be achieved without significant secondary impacts. Sewer mains adequate for expansion areas. Impacts are Class II, significant but mitigable.	Projected increase in flow of 3.67 mgd at VWRF and 0.33 mgd at OVSD plant. Increases are within the capacities of both plants. Sewer line upgrades needed in many older neighborhoods. Possible upgrade of SR 126 sewer main needed for Poinsettia area, but can be achieved without significant secondary impacts. Impacts are Class III, less than significant.

Table 4.13-14 Agriculture Water Credit (Lands with Non-Agricultural Designations)

	Acres	Water Demand (acre-feet/ year/acre)	Water Credit (AFY)
Districts			
Saticoy	280	2.5	700
Arundell	75	2.5	188
Auto Center	66	2.5	165
SOI/Other Infill			
101/126 Agriculture	25	2.5	63
Pending Developments			
West Ventura	25	2.5	63
Telephone/Kimball	40	2.5	100
Total	**511**		**1,278**

Current water production has totaled approximately 19,000 to 21,500 AFY over the past few years, with the range due to seasonal climate and rainfall variations. Using the higher value to be conservative, adding the projected increase of 5,806 AFY to the current water production (21,500 AFY), and subtracting the 1,278 AFY of agricultural credit results in overall demand of approximately 26,028 AFY in 2025. This represents a net increase of 4,528 AFY.

Projected overall 2025 demand is lower than the long-term projected supply of 28,262 AFY from the City's 2004 Biennial Water Supply Report and the City's 2000 Urban Water Management Plan projected demand of 27,624 AFY for the year 2020 (five years earlier). Therefore, water supply impacts associated with this scenario are not considered significant. Additional wastewater reclamation and/or water conservation efforts could further reduce this demand.

Connection fees would be paid by all new developments, and these would cover each project's "buy-in" to existing City supply, storage and transmission/distribution systems. In addition, developers would be responsible for constructing all local on and off-site distribution improvements necessary to bring the particular development up to current standards. In some areas of the City, particularly older neighborhoods such as Downtown and the Ventura Avenue corridor where substantial intensification is anticipated may require upgrades to older water distribution infrastructure to improve pressure and fire flow. In the upper Ventura Avenue area, providing water service would be predicated on annexation. Distribution system looping would be needed in the upper reaches. In the College area, fire flow will likely be weak in Loma Vista. In the Harbor area, fire flow could require improvements and the Seaward Drive area may need strengthening. Replacement of existing lines, which are located underneath City streets, would involve temporary disruption of traffic as well as temporary noise and air quality impacts. However, such impacts could be reduced to a less than significant level through implementation of standard traffic, noise, and dust controls.

Scenario 2 – Intensification/Reuse + North Avenue + Olivas + Serra

Projected water demands for the various land uses and cumulative totals for Scenario 2 are shown in Table 4.13-16. As indicated in the table, growth accommodated under this scenario would increase current water demand by 6.79 mgd, or about 7,611 AFY.

In addition to the 1,278 AFY of agricultural water credit common to all scenarios, Scenario 2 would accommodate the conversion of 1,449 acres of agricultural areas in the North Avenue, Olivas and Serra expansion areas. Using the same assumptions for agricultural water use described under Scenario 1, these areas would generate an agricultural water credit of 3,623 AFY, bringing the total agricultural water use credit to 4,901 AFY. Therefore, it is assumed that any new water requirement for development in this scenario can be reduced or adjusted down by this amount to determine the net demand required from new water sources.

Adding the projected increase of 7,611 AFY to current water production (21,500 AFY), and subtracting the total water credit of 4,901 AFY for current agricultural use results in overall demand of approximately 24,210 AFY in 2025. This represents a net increase of 2,710 AFY.

Projected overall demand in 2025 is lower than the long-term projected supply of 28,262 AFY from the City's 2004 Biennial Water Supply Report and the City's 2000 Urban Water Management Plan projected demand of 27,624 AFY for the year 2020 (five years earlier). Thus, water supply impacts associated with this scenario are not considered significant. As with Scenario 1, additional wastewater reclamation and/or water conservation efforts could further reduce this demand.

As noted in the Scenario 1 discussion, connection fees would be charged to new development to cover City expenses for upgrade and maintenance of storage and transmission/distribution systems. Impacts relating to replacement of water distribution infrastructure in the older neighborhoods of the City would be similar to those described for Scenario 1 and would be less than significant. Development of any of the three expansion areas included in this scenario would require extension of water distribution infrastructure. Development of the North Avenue expansion area would require extension of the Valley Vista Reservoir system and an additional reservoir within the development. The Olivas area would require an extension of the 210 Zone and would offer the opportunity to loop systems across U.S. 101, thus adding reliability to the Harbor area. The Serra area would require new east-west pipelines that would strengthen the water systems on either side of this area. As described above, existing water mains are adjacent to all three potential expansion areas and it is anticipated that needed extensions could be achieved without disruption of service or significant secondary environmental impacts.

Scenario 3 – Intensification/Reuse + North Avenue + Olivas

Projected water demands for the various land uses and cumulative totals for Scenario 3 are shown in Table 4.13-17. As indicated in the table, growth accommodated under this scenario would increase current water demand by 6.80 mgd or about 7,618 AFY, almost exactly the same as Scenario 2 and 1,812 AFY more than Scenario 1.

Scenario 3 would accommodate the conversion of the North Avenue and Olivas areas from agriculture to urban development. Using the same rationale and assumptions as described above under the previous scenarios, the combined 985 acres of agricultural land that could be converted in these two expansion areas equates to an agricultural demand of 2,463 AFY. Additionally, there would be the 1,278 AFY agricultural water credit common to all scenarios, as discussed above. Therefore, it is assumed that any new water demand requirement can be reduced or adjusted down by the sum of these two or 3,741 AFY to determine the net demand required from new water sources.

Adding the projected increase of 7,618 AFY to the current water production (21,500 AFY), and subtracting the total water credit of 3,741 AFY for current agricultural use results in overall demand of approximately 25,377 AFY in 2025. This represents a net increase of 3,877 AFY.

Projected overall 2025 demand is lower than the long-term projected supply of 28,262 AFY from the City's 2004 Biennial Water Supply Report and the City's 2000 Urban Water Management Plan projected demand of 27,624 AFY for the year 2020 (five years earlier). Thus, water supply impacts are not considered significant. As with the other scenarios, additional wastewater reclamation and/or water conservation efforts could further reduce this demand.

As noted in the Scenario 1 discussion, connection fees would be charged to new development to cover City expenses for upgrade and maintenance of storage and transmission/distribution systems. Impacts relating to replacement of water distribution infrastructure in the older neighborhoods of the City would be similar to those described for Scenario 1 and would be less than significant. Development of either the North Avenue expansion area or the Olivas expansion area would require extension of water distribution infrastructure, as described under Scenario 2. As discussed previously, existing water mains are adjacent to both potential expansion areas and it is anticipated that needed extensions could be achieved without disruption of service or significant secondary environmental impacts.

Scenario 4 – Intensification/Reuse + North Avenue + Serra

Projected water demands for the various land uses and cumulative totals for Scenario 4 are shown in Table 4.13-18. As indicated in the table, growth accommodated under this scenario would increase current water demand by 6.79 mgd, or about 7,611 AFY. This is almost exactly the same as Scenarios 2 and 3 and 1,805 AFY more than Scenario 1.

Scenario 4 would accommodate the conversion of the North Avenue and Serra expansion areas from agriculture to urban development. Using the same rationale and assumptions as described above under Scenario 2, the total 519 acres of agricultural land that could be converted in these two expansion areas equates to an agricultural demand of 1,298 AFY. Combining this with the agricultural water credit common to all scenarios, as discussed above, equates to a total credit of 2,576 AFY. Therefore, it is assumed that any new water demand requirement for development under this scenario can be reduced or adjusted down by this amount to determine the net demand required from new water sources.

Adding the projected increase of 7,611 AFY to the current water production (21,500 AFY), and subtracting the credit of 2,576 AFY for agricultural land conversion results in overall demand of 26,535 in 2025. This represents a net increase in demand of approximately 5,035 AFY.

Projected overall 2025 demand is lower than the long-term projected supply of 28,262 AFY from the City's 2004 Biennial Water Supply Report and the City's 2000 Urban Water Management Plan projected demand of 27,624 AFY for the year 2020 (five years earlier). Thus, impacts to water supply associated with this scenario are not considered significant. As with the other scenarios, additional wastewater reclamation and/or water conservation efforts could further reduce this demand.

As noted in the Scenario 1 discussion, connection fees would be charged to new development to cover City expenses for upgrade and maintenance of storage and transmission/distribution systems. Impacts relating to replacement of water distribution infrastructure in the older neighborhoods of the City would be similar to those described for Scenario 1 and would be less than significant. Development of either the North Avenue expansion area or the Serra expansion area would require extension of water distribution infrastructure, as described under Scenario 2. As discussed previously, existing water mains are adjacent to both potential expansion areas and it is anticipated that needed extensions could be achieved without disruption of service or significant secondary environmental impacts.

Totals (Intensification + Expansion + Pending)	**11,020**	**5,558**	**1,211,919**	**1,908,432**	**2,760,133**	**450,000**	**6,330,484**	**2,053**	**7,611**

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga

Projected water demands for the various land uses and cumulative totals for Scenario 5 are shown in Table 4.13-19. As indicated in the table, growth accommodated under this scenario would increase current water demand by 6.78 mgd or about 7,598 AFY, nearly the same as Scenario 2, 3, and 4 and 1,792 AFY more than Scenario 1.

Scenario 5 calls for the conversion of the North Avenue and Western Cañada Larga areas from agriculture to development. Using the same rationale and assumptions as described above under the previous scenarios, the total 176 acres of agricultural land scheduled for conversion into development in these two expansion areas equates to an annual agricultural demand of 440 acre-feet or 0.39 mgd. Combining this with the agricultural water credit common to all scenarios, as discussed above, equates to a total credit of 1,718 AFY. Therefore, it is assumed that any new water demand requirement for development under this scenario can be reduced or adjusted down by this amount to determine the net demand required from new water sources.

Adding the projected increase of 7,598 AFY to the current water production (21,500 AFY), and subtracting the water credit of 1,718 AFY for agricultural land conversion results in overall 2025 demand of 27,380 AFY. This represents a net increase of 5,880 AFY.

Overall projected 2025 demand is lower than the long-term projected supply of 28,262 AFY from the City's 2004 Biennial Water Supply Report and slightly lower than the City's 2000 Urban Water Management Plan projected demand of 27,624 AFY for the year 2020 (five years earlier). Thus, impacts to water supply associated with this scenario are not considered significant. As with the other scenarios, additional wastewater reclamation and/or water conservation efforts could further reduce this demand.

As noted in the Scenario 1 discussion, connection fees would be charged to new development to cover City expenses for upgrade and maintenance of storage and transmission/distribution systems. Impacts relating to replacement of water distribution infrastructure in the older neighborhoods of the City would be similar to those described for Scenario 1 and would be less than significant. Water distribution infrastructure needed for development of the North Avenue expansion area is discussed under Scenario 2. The Western Cañada Larga expansion area would also require extension of water distribution infrastructure, including a pump station from the existing Power Reservoir, a new reservoir within the development, and possibly a new well site in or adjacent to the development. Existing water mains are adjacent to both potential expansion areas and it is anticipated that needed extensions could be achieved without disruption of service or significant secondary environmental impacts.

Scenario 6 – Intensification/Reuse + North Avenue + Poinsettia

Projected water demands for the various land uses and cumulative totals for Scenario 6 are shown in Table 4.13-20. As indicated in the table, growth accommodated under this scenario would increase current water demand by 6.79 million mgd or about 7,611 AFY, almost exactly the same as Scenario 2, 3, 4, and 5, and 1,805 AFY more than Scenario 1.

Scenario 6 calls for the conversion of the North Avenue and Poinsettia areas from agriculture to development. Using the same rationale and assumptions as described above under the other scenarios, the total 473 acres of agricultural land that could be converted in these two expansion areas equates to an annual agricultural demand of 1,183 acre-feet or 1.06 mgd. Combining this with the agricultural water credit common to all scenarios, as discussed above, equates to a total credit of 2,461 AFY. Therefore, it is assumed that any new water demand requirement for development on these areas can be reduced or adjusted down by this amount to determine the net demand required from new water sources.

Adding the projected increase of 7,611 AFY to current water production (21,500 AFY), and subtracting the water credit of 2,461 AFY for agricultural land conversion results in overall 2025 demand of 26,650 AFY. This represents a net increase of 5,150 AFY.

Projected overall demand is lower than the long-term projected supply of 28,262 AFY from the City's 2004 Biennial Water Supply Report and also lower than the City's 2000 Urban Water Management Plan projected demand of 27,624 AFY for the year 2020 (five years earlier). Thus, water supply impacts associated with this alternative are not considered significant. As with the other scenarios, additional wastewater reclamation and/or water conservation efforts could further reduce this demand.

As noted in the Scenario 1 discussion, connection fees would be charged to new development to cover City expenses for upgrade and maintenance of storage and transmission/distribution systems. Impacts relating to replacement of water distribution infrastructure in the older neighborhoods of the City would be similar to those described for Scenario 1 and would be less than significant. Water distribution infrastructure needed for development of the North Avenue expansion area is discussed under Scenario 2. The Poinsettia expansion area would require connection to the existing 430 Zone to the east and west. Existing water mains are adjacent to both potential expansion areas and it is anticipated that needed extensions could be achieved without disruption of service or significant secondary environmental impacts.

MITIGATION MEASURES

The 2005 General Plan includes the following policies and actions relating to water conservation.

Policy 5A *Follow an approach that contributes to resource conservation.*

Action 5.1 *Require low flow fixtures, leak repair, and drought tolerant landscaping (native species if possible), plus emerging water conservation techniques, such as reclamation, as they become available.*

Action 5.3 *Demonstrate low water use techniques at community gardens and city-owned facilities.*

Action 5.4 *Update the Urban Water Management plan as necessary in compliance with the State 1983 Urban Water Management Planning Act.*

Policy 5B *Improve services in ways that respect and even benefit the environment.*

Action 5.8 *Locate new development in or close to developed areas with adequate public services, where it will not have significant adverse effects, either individually or cumulatively, on coastal resources.*

Action 5.9 *Update development fee and assessment district requirements as appropriate to cover the true costs associated with development.*

Action 5.11 *Increase emergency water supply capacity through cooperative tie-ins with neighboring suppliers.*

Additional mitigation beyond these proposed policies and actions is not required, but the following measure is recommended.

U-1 **Water System Analysis.** The following action shall be added to the 2005 General Plan:

- Require project proponents to conduct evaluations of the existing water distribution system, pump station, and storage requirements for the proposed development in order to determine if there are any system deficiencies or needed improvements for the proposed development.

SIGNIFICANCE AFTER MITIGATION

Impacts related to water supply and reliability would not be significant for any of the six land use scenarios. Implementation of the proposed General Plan policies and action items would further minimize the potential for impacts.

Impact U-2	**New development under any of the 2005 General Plan land use scenarios would increase wastewater generation. Projected future wastewater flows to the City's wastewater treatment plant are projected to remain within the current capacity for all six scenarios. Projected flows to the Ojai Valley Sanitary District plant would be within the capacity of the plant for all scenarios except Scenario 5 (Intensification/Reuse + North Avenue + Western Cañada Larga). Therefore, the impacts of Scenarios 1-4 and 6 are considered Class III, *less than significant*, while the impact of Scenario 5 is considered Class II, *significant but mitigable*.**

Scenario 1 – Intensification/Reuse Only

As shown in Table 4.13-21, growth accommodated under Scenario 1 is projected to generate an additional 3.06 mgd of wastewater flow. The flow generated from land north of Dakota Street in the Ventura Avenue area is outside of the City's service area and would likely be collected and treated by Ojai Valley Sanitary District (OVSD). The only developments in Scenario 1 that are within this OVSD area and would not flow to the Ventura Wastewater Reclamation Facility (VWRF) are assumed to be the Upper North Avenue and North Avenue districts, which are projected to generate approximately 0.18 mgd. The 1.0 mgd of capacity at the OVSD plant is adequate to meet this flow increase. OVSD should also be advised of the development proposed under this scenario so that they can plan for expansion of their plant if this, along with other development plans in their service area, requires the need for additional capacity, but the small flow projected to flow to the OVSD plant should be able to be accommodated by their existing plant.

The additional flow to the VWRF through 2025 is estimated at 2.88 mgd. The flow at the Ventura Wastewater Reclamation Plant for 2004 averaged just under 9.0 mgd and the rated capacity is 14 mgd, leaving capacity for an additional 5.0 mgd before expansion would be required. Thus, an adequate buffer is available for the projected flow.

Some intensification/reuse development, especially in the Downtown area, may cause localized sewer capacity deficiencies that require upgrades of older, undersized sewer infrastructure, primarily the smaller diameter north-south lines. Intensification/reuse within the Midtown area could cause capacity constraints in the East Thompson and East Main sewers. The Ventura Avenue sewer may also have capacity constraints. In the College area, some 8-inch diameter lines may require upgrading. In the East End, portions of the Victoria Avenue and Telephone Road sewer may require upgrading. In the Harbor area, the Marin Lift Station is currently at capacity and could not handle additional flow with upgrades.

Sewer lines that may need replacement are generally located underneath existing streets; therefore, line replacement would involve temporary traffic disruption as well as temporary noise and air quality impacts. However, such impacts could be reduced to a less than significant level through implementation of standard traffic, noise, and dust controls.

Scenario 2 – Intensification/Reuse + North Avenue + Olivas + Serra

Table 4.13-22 shows that the growth accommodated under Scenario 2 through 2025 is projected to generate an additional 4.00 mgd of wastewater flow. The flow generated and treated by developments in the Upper North Avenue and North Avenue districts and the North Avenue expansion area are expected to flow to the OVSD. Future development in these areas is projected to generate approximately 0.28 mgd, which is within the 1.0 mgd of available capacity at the OVSD plant. Nevertheless, the OVSD should be advised of the development and coincident sewage flow proposed under this scenario so that they can plan for expansion of their plant if this, along with other development plans in their service area, requires the need for additional capacity.

The additional flow to the VWRF through 2025 is estimated at 3.72 mgd. As discussed under Scenario 1, the VWRF currently has capacity for an additional 5.0 mgd before expansion would be required. Thus, an adequate buffer is available for the projected flow increase under this scenario and impacts to wastewater treatment facilities would not be significant.

As noted in the Scenario 1 discussion, some intensification/reuse development may cause localized sewer pipeline capacity constraints. Impacts relating to replacement of wastewater infrastructure in the older neighborhoods of the City would be similar to those described for Scenario 1 and would be less than significant. Development of the North Avenue, Olivas, or Serra expansion areas would require extension of sewer lines. However, large diameter trunk sewers exist adjacent to all three areas and it is anticipated that needed extensions could be achieved without capacity constraints, disruption of service, or significant secondary environmental impacts.

Scenario 3 – Intensification/Reuse + North Avenue + Olivas

Table 4.13-23 shows that the growth accommodated under Scenario 3 through 2025 is projected to generate an additional 4.00 mgd of wastewater flow. The flow generated and treated by developments in the Upper North Avenue and North Avenue districts and the North Avenue expansion area are expected to flow to the OVSD. Future development in these areas is projected to generate approximately 0.33 mgd, which is within the 1.0 mgd of available capacity at the OVSD plant. Nevertheless, the OVSD should be advised of the development and coincident sewage flow proposed under this scenario so that they can plan for expansion of their plant if this, along with other development plans in their service area, requires the need for additional capacity.

The additional flow to the VWRF through 2025 is estimated at 3.67 mgd. As discussed under Scenario 1, the VWRF currently has capacity for an additional 5.0 mgd before expansion would be required. Thus, an adequate buffer is available for the projected flow increase under this scenario.

As noted in the Scenario 1 discussion, some intensification/reuse development may cause localized sewer pipeline capacity constraints. Impacts relating to replacement of wastewater infrastructure in the older neighborhoods of the City would be similar to those described for Scenario 1 and would be less than significant. Development of the North Avenue or Olivas expansion areas would require extension of sewer lines. However, as discussed under Scenario 2, large diameter sewer mains exist adjacent to both potential expansion areas and it is anticipated that needed extensions could be achieved without capacity constraints, disruption of service, or significant secondary environmental impacts.

Scenario 4 – Intensification/Reuse + North Avenue + Serra

Table 4.13-24 shows that the growth accommodated under Scenario 4 is projected to generate an additional 4.00 mgd of wastewater flow. The flow generated and treated by developments in the Upper North Avenue and North Avenue districts and the North Avenue expansion area are expected to flow to the OVSD. Similar to Scenario 3, future development in these areas is projected to generate approximately 0.33 mgd, which is within the 1.0 mgd of available capacity at the OVSD plant. Nevertheless, the OVSD should be advised of the development and coincident sewage flow proposed under this scenario so that they can plan for expansion of their plant if this, along with other development plans in their service area, requires the need for additional capacity.

Similar to Scenario 3, the additional flow to the VWRF through 2025 is estimated at 3.67 mgd. As discussed under Scenario 1, the VWRF currently has capacity for an additional 5.0 mgd before expansion would be required. Thus, an adequate buffer is available for the projected flow increase under this scenario.

As noted in the Scenario 1 discussion, some intensification/reuse development may cause localized sewer pipeline capacity constraints. Impacts relating to replacement of wastewater infrastructure in the older neighborhoods of the City would be similar to those described for Scenario 1 and would be less than significant. Development of the North Avenue or Serra expansion areas would require extension of sewer lines. However, as discussed under Scenario 2, large diameter sewer mains exist adjacent to both areas and it is anticipated that needed extensions could be achieved without capacity constraints, disruption of service, or significant secondary environmental impacts.

Totals (Intensification + Expansion + Pending)	**11,020**	**2.369**	**1,211,919**	**1,908,432**	**2,760,133**	**450,000**	**6,330,484**	**1.626**	**3.996**

Scenario 5 – Intensification/Reuse + North Avenue + Western Cañada Larga.

Table 4.13-25 shows that the growth accommodated under Scenario 5 is projected to generate an additional 3.99 mgd of wastewater flow. The flow generated and treated by developments in the Upper North Avenue and North Avenue districts and the North Avenue and Western Cañada Larga expansion areas are expected to flow to the OVSD. Future development in these areas is projected to generate approximately 1.01 mgd, which is essentially equal to the 1.0 mgd of available capacity at the OVSD plant. Impacts are therefore considered potentially significant, though OVSD staff has indicated that they would be able to expand their plant with revenues collected from connection fees as long as they have adequate time to plan, design, permit and construct this plant expansion, which can take on the order of five years. The OVSD should be advised of the level of development and coincident sewage flow proposed under this scenario so that they can plan for expansion of their plant since this, along with other development plans in their service area, would likely require the need for additional capacity.

The additional flow to the VWRF through 2025 is estimated at 2.98 mgd. As discussed under Scenario 1, the VWRF currently has capacity for an additional 5.0 mgd before expansion would be required. Thus, an adequate buffer is available for the projected flow increase under this scenario.

As noted in the Scenario 1 discussion, some intensification/reuse development may cause localized sewer pipeline capacity constraints. Impacts relating to replacement of wastewater infrastructure in the older neighborhoods of the City would be similar to those described for Scenario 1 and would be less than significant. Development of the North Avenue or Western Cañada Larga expansion areas would require extension of sewer lines. Lines in the Western Cañada Larga area could most likely gravity flow to the Ojai Valley Sanitary District plant. Large diameter sewer mains exist adjacent to both potential expansion areas and it is anticipated that needed extensions could be achieved without capacity constraints, disruption of service, or significant secondary environmental impacts.

Table 4.13-25
Wastewater Generation

Scenario 6 – Intensification/Reuse + North Avenue + Poinsettia

Table 4.13-26 shows that the growth accommodated under Scenario 6 is projected to generate an additional 4.00 mgd of wastewater flow. The flow generated and treated by developments in the Upper North Avenue and North Avenue districts and the North Avenue expansion area are expected to flow to the OVSD. Similar to Scenarios 3 and 4, future development in these areas is projected to generate approximately 0.33 mgd, which is within the 1.0 mgd of available capacity at the OVSD plant. Nevertheless, the OVSD should be advised of the development and coincident sewage flow proposed under this scenario so that they can plan for expansion of their plant if this, along with other development plans in their service area, requires the need for additional capacity.

Similar to Scenarios 3 and 4, the additional flow to the VWRF through 2025 is estimated at 3.67 mgd. As discussed under Scenario 1, the VWRF currently has capacity for an additional 5.0 mgd before expansion would be required. Thus, an adequate buffer is available for the projected flow increase under this scenario.

As noted in the Scenario 1 discussion, some intensification/reuse development, especially in the Downtown area, may cause localized sewer pipeline capacity constraints. Impacts relating to replacement of wastewater infrastructure in the older neighborhoods of the City would be similar to those described for Scenario 1 and would be less than significant. The North Avenue area is discussed under Scenario 2. Development of the Poinsettia expansion area would require extension of sewer lines to connect to the Highway 126 sewer and could require replacement of portions of that sewer. Existing large diameter sewer mains are adjacent to the North Avenue expansion area and further downstream of the Poinsettia area. It is anticipated that needed sewer infrastructure extensions could be achieved without significant capacity constraints, disruption of service, or significant secondary environmental impacts.

Wastewater Comparison by Scenario

The six scenarios discussed above would have varying impacts on existing wastewater plants as summarized in the Table 4.13-27. Scenario 1 has the lowest wastewater flow and, along with Scenario 5, would provide a substantial buffer (approximately 2.0 mgd) with regard to total capacity at the VWRF. Scenario 3, 4 and 6 are virtually identical in terms of their impacts and Scenario 2 is only slightly higher in its impact on the VWRF but slightly lower in its impact on the OVSD plant. Scenario 5 would have the highest impact on the OVSD plant. Additionally, future water conservation measures implemented by these new developments as well as on-going measures by existing customers could reduce per capita water use inside the home, thus generating less sewage and providing additional wastewater capacity. These flows can be monitored in the future to determine whether they are tracking on or below projections and adjustments made, if necessary, for planning purposes.

Table 4.13-27
Projected Wastewater Flow Summary

	VWRF	OVSD
	(mgd)	(mgd)
Scenario 1	2.85	0.18
Scenario 2	3.72	0.28
Scenario 3	3.67	0.33
Scenario 4	3.67	0.33
Scenario 5	2.98	1.01
Scenario 6	3.67	0.33

MITIGATION MEASURES

The 2005 General Plan includes the following policies and actions relating to minimizing impacts associated with wastewater generation.

Policy 5B *Improve services in ways that respect and even benefit the environment.*

Action 5.8 *Locate new development in or close to developed areas with adequate public services, where it will not have significant adverse effects, either individually or cumulatively, on coastal resources.*

Action 5.9 *Update development fee and assessment district requirements as appropriate to cover the true costs associated with development.*

Action 5.10 *Utilize existing waste source reduction requirements, and continue to expand and improve composting and recycling options.*

Action 5.12 *Apply new technologies to increase the efficiency of the wastewater treatment system.*

In addition to the above policy and actions, the following measure is recommended for all six scenarios.

U-2(a) **Sewer System Analyses.** The following action should be added to the 2005 General Plan:

- Require project proponents to conduct sewer collection system analysis to determine if downstream facilities are adequate to handle the proposed development.

In addition, the following measure is required for Scenario 5.

U-2(b) **Ojai Valley Sanitary District Capacity.** The following action shall be added to the 2005 General Plan if Scenario 5 or any other scenario that includes both the North Avenue and Western Cañada Larga expansion areas is selected:

- Allow development within the North Avenue expansion area or Western Cañada Larga expansion only when the Ojai Valley Sanitary District has adequate treatment capacity for projected wastewater flows or other mitigation is approved by the City Engineer.

SIGNIFICANCE AFTER MITIGATION

With implementation of the proposed General Plan policies and action items, and above mitigation measures, impacts related wastewater collection and treatment would be less than significant for any of the six land use scenarios.

4.14 LAND USE and PLANNING

This section analyzes the 2005 General Plan's consistency with, and potential environmental impacts resulting from, applicable local, regional, and state land use policies. Consistency with the Ventura County Air Quality Management Plan (AQMP) is discussed in Section 4.3, *Air Quality*. Land use compatibility conflicts associated with growth accommodated under the 2005 General Plan are discussed in Sections 4.1, *Aesthetics and Community Design*, 4.2, *Agriculture*, 4.3, *Air Quality*, 4.7, *Hazards and Hazardous Materials*, and 4.10, *Noise*, 4.11.

4.14.1 Setting

Ventura is subject to the land use regulatory policies of various state and regional agencies. These agencies and the corresponding state and regional policy documents that affect land use planning in Ventura are discussed below.

a. Regulatory Agencies. State, regional, and local agencies with roles in establishing and implementing land use policy in Ventura include the California Coastal Commission, the Southern California Association of Governments, and the Ventura County Local Agency Formation Commission (LAFCO).

California Coastal Commission. The California Coastal Commission was established by voter initiative in 1972 (Proposition 20) and later made permanent by the Legislature through adoption of the California Coastal Act of 1976. The mission of the Coastal Commission is to protect, conserve, restore, and enhance environmental and human-based resources of the California coast and ocean for environmentally sustainable and prudent use by current and future generations.

In partnership with coastal cities and counties, the Coastal Commission plans and regulates the use of land and water within the coastal zone.[1] Development activities, which are broadly defined by the Coastal Act to include (among others) construction of buildings, divisions of land, and activities that change the intensity of use of land or public access to coastal waters, generally require a coastal permit from either the Coastal Commission or the local government.

Southern California Association of Governments (SCAG). The City of Ventura is located within the planning area of the Southern California Association of Governments (SCAG). SCAG functions as the Metropolitan Planning Organization for Los Angeles, Orange, San Bernardino, Riverside, Ventura and Imperial Counties. The region encompasses a population exceeding 15 million persons in an area of more than 38,000 square miles. As the designated Metropolitan Planning Organization, SCAG is mandated by the federal government to research and draw up plans for transportation, growth management, hazardous waste management, and air quality. Also functioning as the Metropolitan Transportation Authority, SCAG administers the state-mandated Regional Transportation Plan (RTP), designed to address the regional impact of urban congestion.

[1] *The "coastal zone" includes all offshore islands and extends inland generally 1,000 yards from the mean high tide line of the Pacific Ocean. In significant coastal estuarine, habitat, and recreational areas, the coastal zone extends inland to the first major ridgeline paralleling the sea or five miles from the mean high tide line of the sea, whichever is less, and in developed urban areas the zone generally extends inland less than 1,000 yards.*

Ventura County Local Agency Formation Commission (LAFCO). The Ventura LAFCO was formed and operates according to the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000 (California Government Code §56000 et seq.). State law provides for LAFCOs to be formed as independent agencies in each county in California. LAFCOs implement state requirements and state and local policies relating to boundary changes for cities and most special districts, including spheres of influence, incorporations, annexations, reorganizations and other changes of organization. In this capacity, the Ventura LAFCO is the boundary agency for cities and most special districts in Ventura County.

b. Applicable Plans and Policies. Plans, regulations, and policies of the above agencies that are relevant to the proposed 2005 General Plan are described below.

California Coastal Act. The California Coastal Act of 1976 (Public Resources Code 30000 et. seq.) establishes policies guiding development and conservation along the California coast. Coastal Act policies fall into six general categories: (1) public access; (2) recreation; (3) marine environment; (4) land resources; (5) development; and (6) industrial development. Specific policies and their relevance to the 2005 General Plan are discussed under Impact LU-2, beginning on page 4.14-10.

The Coastal Act requires local jurisdictions that are located (wholly or partly) in the coastal zone to prepare a Local Coastal Program (LCP) for the portion of the local jurisdiction that lies within the Coastal Zone. The LCP consists of a Land Use Plan (such as this General Plan) and an Implementation Plan (i.e., Zoning Regulations). The Coastal Commission must approve (i.e., "certify") a City's LCP in order to ensure that the LCP is consistent with, and achieves the objectives of, the Coastal Act. As the LCP is being updated as part of the 2005 General Plan, the LCP will require certification by the Coastal Commission.

Regional Comprehensive Plan and Guide. SCAG's Regional Comprehensive Plan and Guide (RCPG) contains a general overview of federal, state, and regional plans applicable to the southern California region and serves as a comprehensive planning guide for future regional growth. The primary goals of the RCPG are to improve the standard of living, enhance the quality of life, and promote social equity. The RCPG was adopted in 1994 by the member agencies of SCAG to set broad goals for the Southern California region and identify strategies for agencies at all levels of government to use in their decision making. It includes input from each of the 13 subregions that make up the Southern California region and includes Los Angeles, Orange, San Bernardino, Riverside, Imperial, and Ventura Counties.

Regional Transportation Plan (RTP). SCAG's RTP is a long range transportation plan that looks ahead 20+ years and provides a vision for the future of the regional multi-modal transportation system. The RTP identifies major challenges as well as potential opportunities associated with growth, transportation finances, the future of airports in the region, and impending transportation system deficiencies that could result from growth that is anticipated in the region.

Growth Vision Report. In an effort to provide local decision-makers with the tools they need to plan more effectively for the six million new residents projected to live in Southern California by 2030, SCAG undertook a growth visioning initiative called *Southern California*

Compass. The objective of this effort was to develop a comprehensive new vision for Southern California over the next 30 years by taking a more all-encompassing, inclusive approach to planning at both the local and regional levels. The SCAG Growth Vision Report begins with a general discussion of the challenges facing Southern California as it prepares to accommodate an estimated 6.3 million additional people by 2030. It studies historical trends in demographics, housing, jobs, and other key aspects essential to understanding how the region will evolve and grow. Looking forward, the report explores how emerging trends and conditions will affect future growth in the region. It also discusses the challenges of continuously developing and refining the Growth Vision.

Guidelines for Orderly Development. The Guidelines for Orderly Development make Ventura County unique in the State in terms of County/City development issues. Originally adopted in 1969 by the Ventura LAFCO, Ventura County, and each of the cities in the County, the Guidelines for Orderly Development are statements of local policies which provide that urban development should occur, whenever and wherever practical, within incorporated cities.

4.14.3 Impact Analysis

a. Methodology and Significance Thresholds. The discussion of land use impacts analyzes the proposed 2005 General Plan's consistency with applicable policies of the various state and regional plan's for the purposes of assessing the proposed project's environmental impacts related to land use.

The proposed 2005 General Plan is a citywide plan intended to provide for the orderly development of the community over the next 20 years. As such, it would not physically divide an established community. Therefore, the proposed 2005 General Plan would result in a potentially significant land use impact if it would:

- *Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including SCAG's Regional Comprehensive Plan and Guide and the California Coastal Act) adopted for the purpose of avoiding or mitigating an environmental effect*
- *Conflict with an applicable habitat conservation plan or natural community conservation plan*

Although the analysis that follows evaluates consistency with various regulatory policies, it should be noted that each individual agency (California Coastal Commission, SCAG, Ventura County LAFCO) ultimately has the discretion to determine consistency of the 2005 General Plan with the policies, plans, and/or programs that fall within that agency's purview.

b. Project Impacts and Mitigation Measures. The following matrix provides a summary comparison of impacts for each of the EIR scenarios. A detailed discussion of each environmental impact follows.

Summary Comparison of Impacts for EIR Scenarios

	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
State and LAFCO Boundary Adjustment Policies (Impact LU-1)	Generally consistent with applicable policies; LAFCO will determine consistency of individual future adjustments on a case-by-case basis. Impacts are Class III, less than significant.	Generally consistent with applicable policies; LAFCO will determine consistency of individual future adjustments on a case-by-case basis. Impacts are Class III, less than significant.	Generally consistent with applicable policies; LAFCO will determine consistency of individual future adjustments on a case-by-case basis. Summary Comparison of Impacts for EIR Scenarios

	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
(Impact LU-4)	Impacts are Class III, less than significant.	III, less than significant.	III, less than significant.	III, less than significant.	III, less than significant.	Impacts are Class III, less than significant.
SCAG Growth Visioning Report (Impact LU-5)	Generally consistent with Growth Visioning Report policies. Impacts are Class III, less than significant.	Generally consistent with Growth Visioning Report policies. Impacts are Class III, less than significant.	Generally consistent with Growth Visioning Report policies. Impacts are Class III, less than significant.	Generally consistent with Growth Visioning Report policies. Impacts are Class III, less than significant.	Generally consistent with Growth Visioning Report policies. Impacts are Class III, less than significant.	Generally consistent with Growth Visioning Report policies. Impacts are Class III, less than significant.

Impact LU-1	**No boundary adjustments are being sought at this time and all of the General Plan scenarios emphasize intensification and reuse over expansion of the City. Annexations and Sphere of Influence adjustments could be sought at some point in the future under any of the scenarios and certain possible annexations/Sphere of Influence adjustments could potentially conflict with relevant State and LAFCO policies. However, because any conflicts would need to be resolved prior to LAFCO approval of any boundary adjustment, impacts can be reduced to a Class III, *less than significant*, level for all six scenarios.**

The State of California possesses the exclusive power to regulate boundary changes, which means that no local government has the right to change its own boundary without State approval. The Legislature has prescribed a "uniform process" for boundary changes for both cities and special districts that is now embodied in the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000 (California Government Code Section 56000 et seq.). This Act delegates the Legislature's boundary powers to local agency formation commissions (LAFCOs).

The Ventura LAFCO is responsible for reviewing and approving proposed jurisdictional boundary changes in Ventura County, including the annexation and detachment of territory to and/or from cities and most special districts, incorporations of new cities, formations of new special districts, and consolidations, mergers, and dissolutions of existing districts. In addition, LAFCOs must review and approve contractual service agreements, conduct service reviews, and determine spheres of influence for each city and district.

In addition to the Cortese-Knox-Hertzberg Act, the Ventura LAFCO has adopted local policies that it considers in its review of projects. The LAFCO also enforces the County's Guidelines for Orderly Development. A complete listing of policies that LAFCO considers in its review of proposed boundary changes can be found in the LAFCO website (www.ventura.lafco.ca.gov).

No adjustments to the City's corporate boundaries or Sphere of Influence (SOI) are proposed at this time. However, all of the 2005 General Plan scenarios could accommodate the development of lands that are outside the current City boundaries and SOI. Specific analysis of individual proposals would be needed at the time such possible future boundary adjustments are proposed, but boundary adjustment policies are discussed below as they relate to the 2005 General Plan.

Conformance with Local Plans and Policies. Unless exceptional circumstances are shown, LAFCO will not approve a proposal unless it is consistent with the applicable general plan and any applicable specific plan. No boundary adjustments are being sought at this time. Although boundary adjustments may be sought in the future under any of the EIR scenarios, it is anticipated that such adjustments would be consistent with the 2005 General Plan, regardless of which of the EIR scenarios is adopted.

LAFCO will not approve a proposal unless it is consistent with ordinances requiring voter approval. Scenarios 2-6 all includes potential expansion areas that are subject to voter approval. No land use designated or boundary adjustment is being sought at this time for any of the expansion areas. If such adjustments are sought at some point in the future, they will be sought only after voter approval of a land use designation change for the property in question.

Guidelines for Orderly Development. LAFCO encourages proposals that involve urban development or that result in urban development to include annexation to a city wherever possible. All of the EIR scenarios emphasize intensification/reuse over expansion of the City's boundaries and no boundary adjustments are being sought at this time. Nevertheless, all of the scenarios would accommodate development in lands that are outside the current corporate boundaries and the SOI. Development of such areas could be found to be in conflict with the Guidelines for Orderly Development, particularly with respect to the North Avenue and Western Cañada Larga expansion areas, which are not contiguous with the existing City corporate boundary. However, no development would occur until such time as the property in question is annexed and, if necessary, included in the SOI. Such adjustments could be made only with LAFCO approval and, in the case of the expansion areas, voter approval under SOAR. Given that future boundary adjustments would only be made at such time as they are deemed consistent with the Guidelines for Orderly Development, any of the scenarios could be found to be consistent with the Guidelines.

Greenbelts. LAFCO will not approve a proposal for a city that is in conflict with any Greenbelt Agreement unless exceptional circumstances are shown to exist. Scenarios 1, 4, 5, and 6 do not include any lands that are subject to existing Greenbelt Agreements. However, the Olivas expansion area that is included in Scenarios 2 and 3 is within the Oxnard-Ventura Greenbelt. As such, the Olivas area could be brought into the SOI and annexed to the City only if it is removed from the Greenbelt. Such an amendment to the Greenbelt Agreement could be made only with the consent of the City of Oxnard. Moreover, approval of a land use designation change could only be made with voter approval under the SOAR Ordinance.

Agricultural and Open Space Preservation. LAFCO will approve a proposal for a change of organization that is likely to result in the conversion of Prime agricultural land or open space land only if it finds that the proposal will lead to planned, orderly, and efficient development. For a development to be deemed planned, orderly, and efficient, all of the following criteria must be met: (1) the territory involved is contiguous with lands developed with an urban use or that have received approvals for urban development; (2) the territory is likely to be developed within 5 years and has been pre-zoned for non-agricultural use; (3) insufficient non-Prime agricultural land or vacant land exists within the existing boundaries of the agency that is planned and developable for the same general type of use; (4) the territory is not subject to voter approval for the extension of services or changing of land use designations; and (5) the proposal will have no significant adverse effects on the integrity of other Prime agricultural or open space lands.

All of the EIR scenarios emphasize intensification and reuse of existing urban lands prior to the development of agricultural lands. Nevertheless, as discussed in Section 4.2, Agricultural Resources, any of the six scenarios would potentially accommodate the conversion of some Prime agricultural lands if the City's planning objectives cannot be met through intensification

and reuse. All of the areas that could potentially be converted are contiguous with existing urban uses and, in many instances, are surrounded by urban uses. Although the North Avenue, Olivas, Serra, and Poinsettia expansion areas are subject to voter approval under the SOAR Ordinance, voter approval would have to be received prior to any LAFCO action. In addition, it is anticipated that inclusion within the SOI and/or annexation would not be sought unless development were planned within five years. In the case of large developments that could potentially be accommodated under Scenarios 2, 3, 4, and 6, development and annexation may need to be phased. Any of the agricultural lands that could be converted under Scenarios 1-6 could be found to be consistent with LAFCO's agricultural and open space preservation policies, though LAFCO's determination would need to be at the time of individual proposals based upon current (at that time) circumstances and the nature of the proposals.

School Capacity. LAFCO will not favor a change of organization where any affected school district certifies that there is no sufficient existing school capacity to serve the territory involved. As discussed in Section 4.11, Public Services, many VUSD schools are at or near capacity and would be over capacity in 2025 with the growth projected under any of the EIR scenarios. Scenario 1 would only accommodate a minor SOI adjustment that would not bring any residential development, though the annexation of individual properties that may be sought in the future under Scenario 1 could generate new VUSD students. The expansion areas included in Scenarios 2, 3, 4, and 6 include sufficient acreage to accommodate new schools that would be needed to serve the areas. However, the expansion areas included in Scenario 5 may lack sufficient land to accommodate the development of new schools. The impacts of individual developments on schools will need to be addressed on a case-by-case basis as such impacts depend upon the nature of the project and the circumstances for the VUSD at the time of the individual application.

Annexation of Unincorporated Island Areas. Any approval of a proposal for a change of organization for an area of 40 acres or more will be conditioned to provide that the proceedings will not be completed until and unless a subsequent proposal is filed with LAFCO initiating proceedings for the change of organization of all unincorporated island areas that meet the provisions of Government Code Section 56375.3. This policy means that LAFCO will not approve annexations of 40 acres or more unless the City has filed an application to annex all of the island areas in the City, which include eight separate islands in the Montalvo area totaling about 55 acres. Therefore, no additional annexations will be completed until an application for annexation of these island areas has been filed.

Mitigation Measures. No mitigation is required. Individual boundary adjustment proposals will need to be addressed by the City and the Ventura LAFCO on a case-by-case basis.

Significance After Mitigation. As the City is not seeking any boundary adjustments at this time, no inconsistencies would occur with respect to any of the six scenarios. Certain areas that may be considered for future annexation and/or inclusion within the SOI would not be eligible under current conditions; however, it is assumed that boundary adjustments would not be sought until such time as such adjustments could be found to be consistent with state and local requirements.

Impact LU-2	**Scenarios 1, 4, 5, and 6 could be found to be consistent with applicable policies of the California Coastal Act. Impacts would be Class III, *less than significant*. However, Scenarios 2 and 3 would potentially accommodate the conversion of Prime agricultural land within the Olivas expansion area, which is within the Coastal Zone. Such conversion could be found inconsistent with California Coastal Act policies relating to the maintenance of Prime agricultural land within the coastal zone. Impacts for these two scenarios would be Class I, *unavoidably significant*.**

The coastal zone boundary with the Ventura Planning Area is shown on Figure 4.14-1. Areas within the existing City limits that are located within the Coastal Zone generally include Emma Wood State Beach, the majority of the Downtown District, the southwestern portion of the Catalina neighborhood, San Buenaventura State Beach Park, Pierpont Keys, Ventura Harbor, and the open space areas located south/southeast of the Ventura Harbor that extend to the southern City limits and include a portion of McGrath State Beach. As intensification and reuse could occur within these areas of the City under Scenarios 1-6, these areas are included in the following policy consistency analysis. Moreover, the Olivas expansion area, which is roughly bisected by the Coastal Zone boundary, is the only expansion area under consideration that is located within the Coastal Zone. As Scenarios 2 and 3 include the Olivas expansion area, the following discussion includes an analysis of the Olivas expansion area under Scenarios 2 and 3 as well.

The following analysis assesses the proposed project's consistency with applicable policies of the Coastal Act that were adopted for the purpose of avoiding or mitigating an environmental effect. The final determination of the proposed 2005 General Plan's consistency with the Coastal Act ultimately resides with the Coastal Commission as a part of the certification process for the City of Ventura's Local Coastal Program (LCP). The LCP component relevant to the DEIR is the land use plan. The Coastal Commission will review the land use plan component of the LCP for consistency with the Coastal Act.

Article 2—Public Access. Article 2 of the Coastal Act provides a number of policies designed to ensure the public's constitutionally endowed right of access to coastal resources. More specifically, Article 2 coastal access policies include, but are not limited to, the following: (1) access must be provided to coastal resources (Section 30210); (2) new development shall not interfere with existing public access to coastal resources (Section 30211); and (3) public access shall be provided in specific situations involving new development between the nearest public roadway and the shoreline (Section 30212).

The 2005 General Plan does not include substantial future development near the coast that would prevent public access to coastal resources. None of the six development scenarios include development that would hinder access to the coast and some future developments in the Downtown and Harbor areas may enhance coastal access. In particular, possible future hotel development in the Downtown area and planned improvements to Harbor facilities in accordance with the Ventura Harbor Master Plan could generally improve public access to the

coast. Public access would continue to be provided at Emma Woods State Beach, San Buenaventura State Beach Park, the Pierpont Keys, Ventura Harbor, and McGrath State Beach under each of the scenarios. The 2005 General Plan includes following policies and actions relating to coastal access:

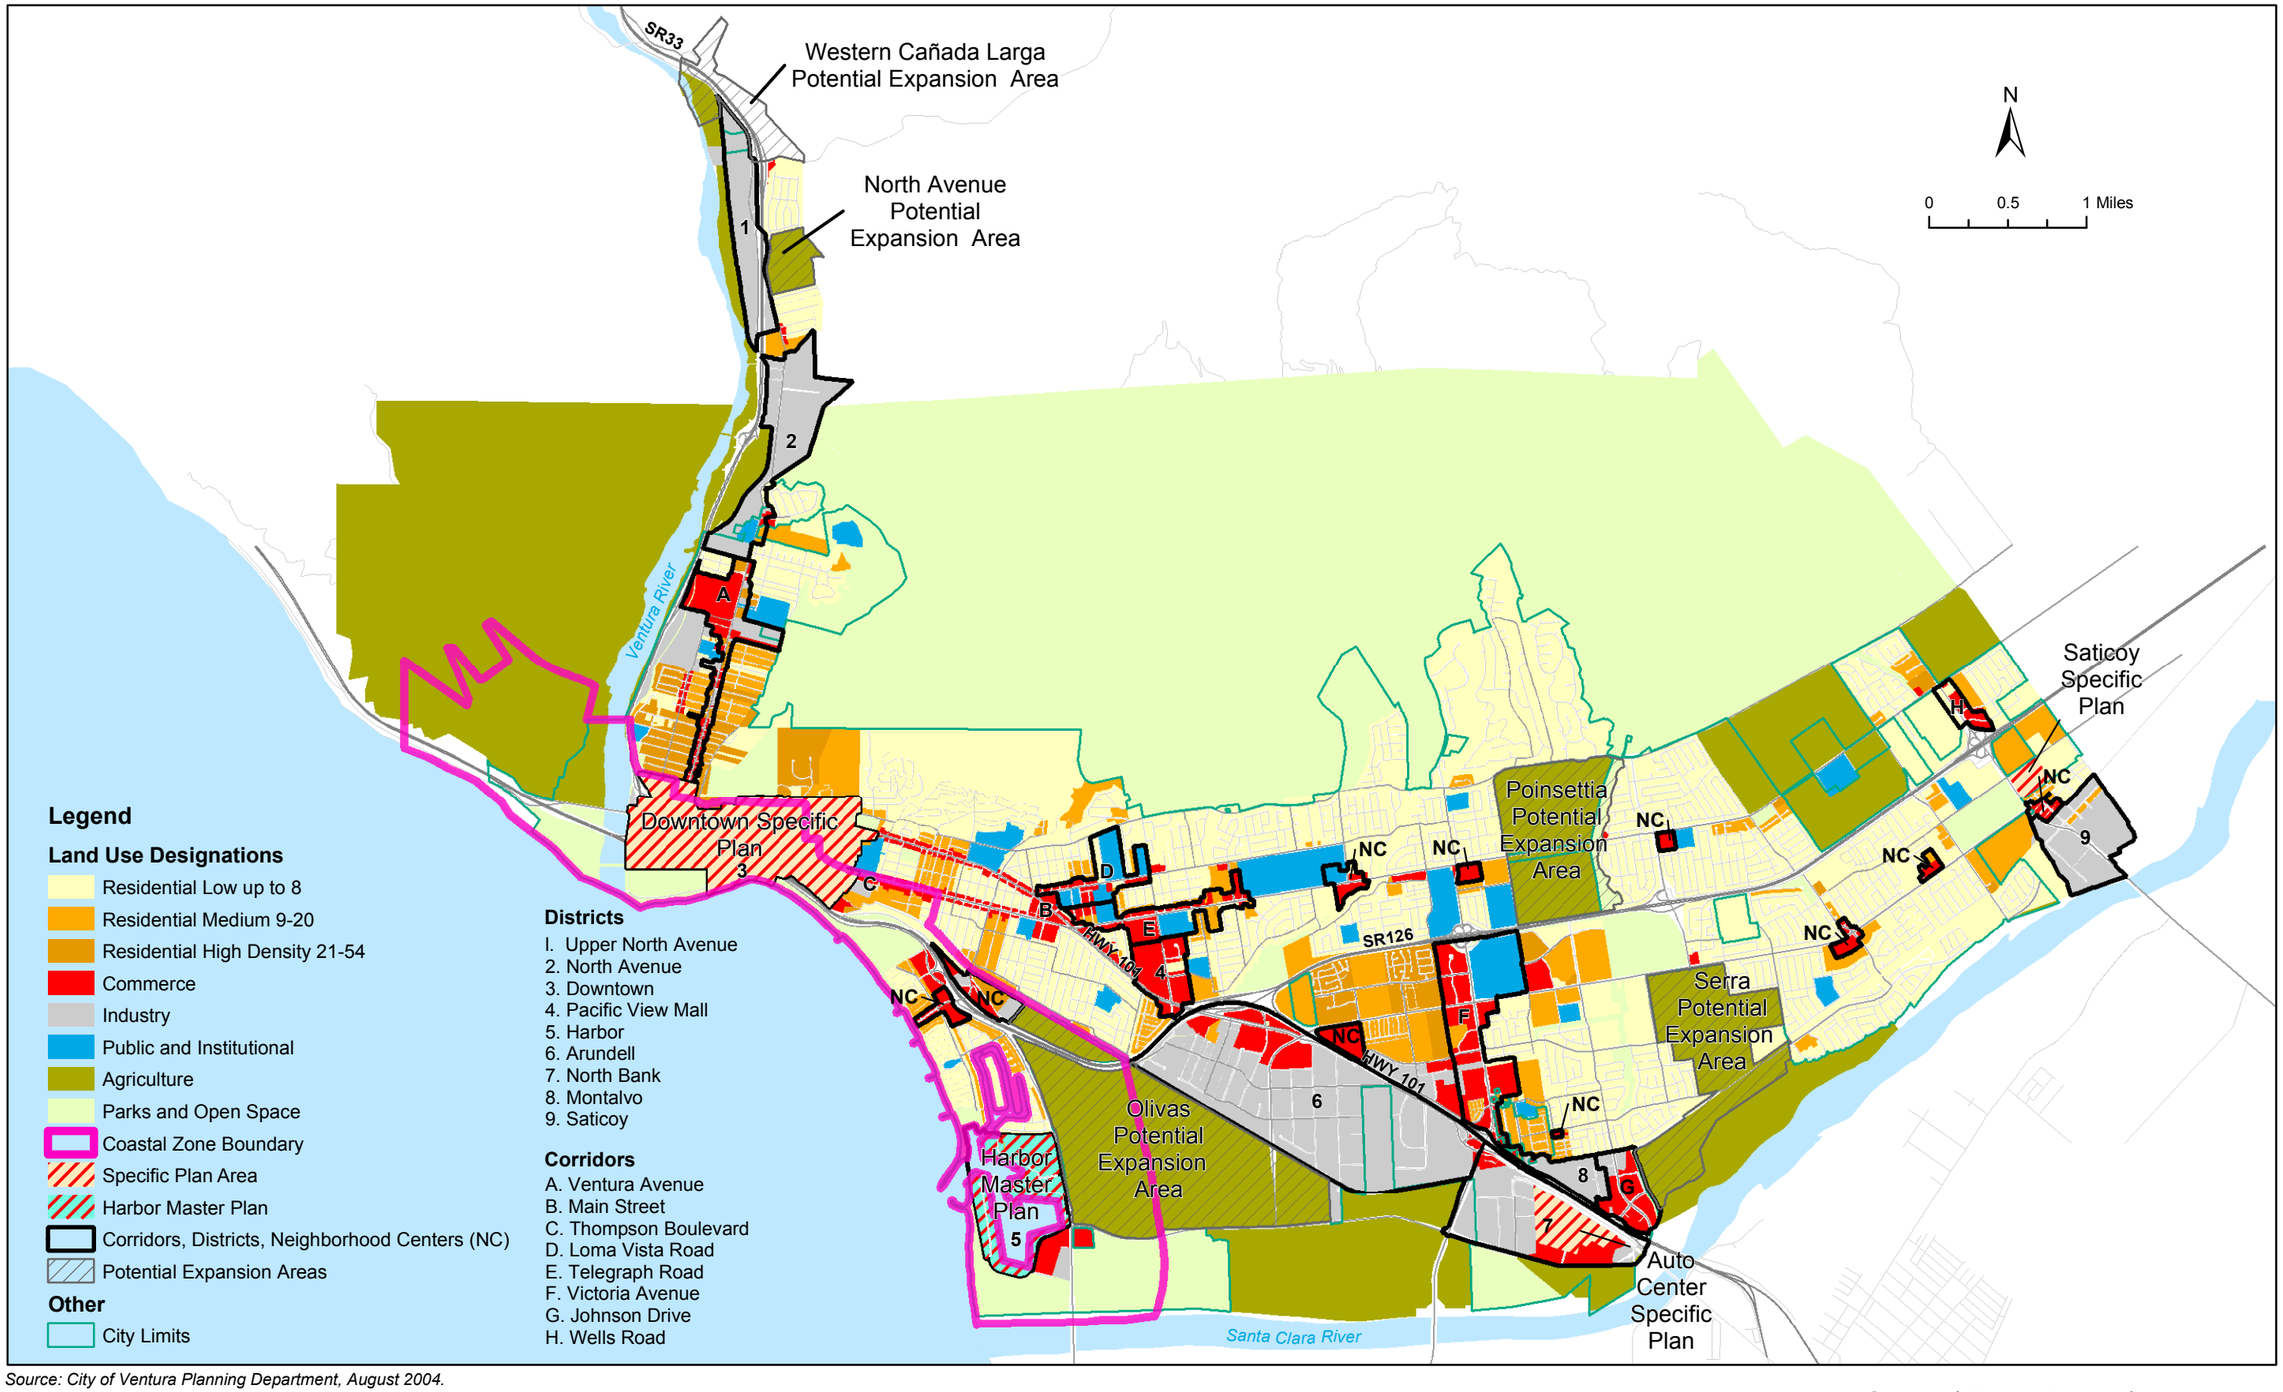
> ***Action 3.4*** *Require all shoreline development (including anti-erosion or other protective structures) to provide public access to and along the coast, unless it would duplicate adequate access existing nearby, adversely affect agriculture, or be inconsistent with public safety, military security, or protection of fragile coastal resources.*
>
> ***Policy 6A*** *Expand the park and trail network to link shoreline, hillside, and watershed areas.*

With implementation of Action 3.4 and Policy 6A, development under Scenarios 1-6 could be found to be consistent with the public access requirements of the Coastal Act.

Article 3 – Recreation. Article 3 of the California Coastal Act includes a number of policies designed to protect and enhance coastal-related recreational activities and facilities. Article 3 includes, but is not limited to, policies regulating the following recreational activities and facilities: (1) coastal areas suited for water-oriented recreational activities that cannot readily be provided at inland water areas (Section 30220); (2) oceanfront land suitable for recreational use (Section 30221); (3) private lands suitable for visitor-serving commercial recreational facilities (Section 30222); and (4) facilities designed to enhance recreational boating use of coastal waters (Section 30224). Scenarios 1-6 would all maintain the existing parks and recreational facilities located within the City limits, which include Emma Wood State Beach, the Promenade, San Buenaventura State Beach Park, beaches adjacent to the Pierpont Keys, and McGrath State Beach. These areas, which include biking and pedestrian paths, day-use facilities, camping facilities, boating facilities, the Ventura Pier, and the Channel Islands National Monument, would continue to facilitate coastal recreational activities. The Ventura Harbor would continue to provide facilities that provide for public and commercial recreational boating activities.

Action 3.4, discussed above, would require new development to provide access to coastal resources for recreational activities. Therefore, Scenarios 1-6 could be consistent with the requirements of the Coastal Act recreational policies and impacts would be less than significant.

Article 4 - Marine Environment. Article 4 of the Coastal Act is designed to maintain, enhance, and restore marine resources. More specifically, Article 4 includes, but is not limited to, policies intended to achieve the following: (1) maintenance of the biological productivity and quality of coastal waters, streams, wetlands, estuaries, and lakes (Section 30231); (2) provisions for diking, filling, or dredging of open coastal waters, wetlands, estuaries, and lakes where there is no feasible less environmentally damaging alternative (Section 30233); (3) protection of commercial fishing and recreational boating facilities (Section 30234); and, (4) development of water supply and flood control projects within rivers and streams using the best mitigation measures feasible (Section 30236).



Source: City of Ventura Planning Department, August 2004.

Coastal Zone Boundary
Figure 4.14-1

As discussed in Section 4.4, *Biological Resources*, Ventura maintains a diverse range of coastal biological habitats including coastal strand habitat, rocky shore habitat, salt and fresh water estuaries/marshes, and coastal sage scrub habitat. Moreover, man-made revetments located at the Harbor, Pierpont, Fairgrounds, and Beachfront Promenade require maintenance activities that include filling and dredging of open coastal waters. Finally, the Ventura Pier and Ventura Harbor provide important recreational and commercial fishing and boating facilities.

The 2005 General Plan includes the following resource protection policies and actions aimed at the preservation and enhancement of marine resources.

Policy 1A	*Reduce beach and hillside erosion and threats to coastal ecosystem health.*
Action 1.1	*Adhere to the policies and directives of the California Coastal Act in reviewing and permitting any proposed development in the Coastal Zone.*
Action 1.2	*Prohibit non coastal-dependent energy facilities within the Coastal Zone, and require any coastal-dependent facilities including pipelines and public utility structures to avoid coastal resources (including recreation, habitat, and archaeological areas) to the extent feasible, or to minimize any impacts if development in such areas is unavoidable.*
Action 1.3	*Work with the State Department of Parks and Recreation, Ventura County Watershed Protection Agency, and the Ventura Port District to determine and carry out appropriate methods for protecting and restoring coastal resources, including by supplying sand at beaches under the Beach Erosion Authority for Control Operations and Nourishment (BEACON) South Central Coast Beach Enhancement program.*
Action 1.4	*Require new coastal development to provide non-structural shoreline protection that avoids adverse impacts to coastal processes and nearby beaches.*
Action 1.5	*Collect suitable material from dredging and development, and add it to beaches as needed and feasible.*
Action 1.11	*Require that sensitive wetland and coastal areas be preserved as undeveloped open space wherever feasible and that future developments result in no net loss of wetlands or "natural" coastal areas.*
Action 1.19	*Require projects near watercourses, shoreline areas, and other sensitive habitat areas to include surveys for State and/or federally listed sensitive species and to provide appropriate buffers and other mitigation necessary to protect habitat for listed species.*
Action 1.20	*Conduct coastal dredging in accordance with the U.S. Army Corps of Engineers and California Department of Fish and Game requirements in order to avoid impacts to sensitive fish and bird species.*

These policies and actions would provide protection and restoration of environmentally sensitive habitat, including coastal waters, wetlands, and estuaries. With the proposed 2005

General Plan policies and actions, Scenarios 1-6 could be found consistent with Coastal Act policies relating to the marine environment.

The 2005 General Plan does not include any policies or actions that would restrict commercial fishing or recreational boating. It includes the following actions aimed at improving boating opportunities:

Action 6.18 *Offer programs that highlight natural assets, such as surfing, sailing, kayaking, climbing, gardening, and bird watching.*

Action 6.19 *Provide additional boating and swimming access as feasible.*

The 2005 General Plan includes the following actions aimed at applying appropriate approaches to flood control:

Action 1.6 *Support continued efforts to decommission Matilija Dam to improve the sand supply to local beaches.*

Action 1.10 *Remove concrete channel structures as funding allows, and where doing so will fit the context of the surrounding area and not create unacceptable flood or erosion potential.*

Action 1.16 *Comply with directives from regulatory authorities to update and enforce stormwater quality and watershed protection measures that limit impacts to aquatic ecosystems and that preserve and restore the beneficial uses of natural watercourses and wetlands in the city.*

With implementation of the above policies and actions, the 2005 General Plan could be found to be consistent with the requirements of the Coastal Act recreational policies and impacts would be less than significant.

Article 5 - Land Resources. Article 5 of the Coastal Act applies to development and local regulatory actions that involve environmentally sensitive habitat (Section 30240), the maintenance or conversion of agricultural lands (Section 30241-30243), and archaeological or paleontological resources (Section 30244). Section 30240 limits development within environmentally sensitive habitat areas to uses dependent on resources found within those areas. In addition, Section 30240 limits development adjacent to environmentally sensitive habitat areas, parks, and recreational areas to activities that will not degrade, or be incompatible with, such habitat and recreation areas. The 2005 General Plan includes policies and actions that direct the City to monitor the condition of environmentally sensitive habitat and regulate future development on, or adjacent to, such areas under Scenarios 1-6. Therefore, Scenarios 1-6 could be found to be consistent with the environmentally sensitive habitat policies of the Coastal Act and impacts would be less than significant.

Section 30241 of the Coastal Act is designed to maintain the maximum amount of Prime agricultural land in production to protect the agricultural economy and to avoid conflicts between agricultural and urban land uses. In addition, Section 30242 states that lands suitable for agricultural use shall not be converted to non-agricultural uses unless:

- *Continued or renewed agricultural use is infeasible;*
- *Conversion would preserve Prime agricultural land; or*
- *Conversion would allow for the concentration of new residential, commercial, or industrial development located contiguous with, or in close proximity to, existing developed areas able to accommodate it or, where such areas are not able to accommodate it, in other areas with adequate public services and where it will not have significant adverse effects, either individually or cumulatively, on coastal resources (Section 30250)*

As discussed in Section 4.2, *Agriculture,* Scenarios 2 and 3 include an estimated 876 acres of prime agricultural land within the Olivas expansion area, approximately half of which is located within the coastal zone and subject to Coastal Act policies regulating the conversion of agricultural lands. The Olivas expansion area currently has an Agricultural Use designation under the 1989 Comprehensive Plan and this designation would remain under any of the 2005 General Plan land use scenarios. However, Scenarios 2 and 3 would accommodate the possible future conversion of Prime farmland within the coastal zone by identifying the Olivas area as an area for possible future expansion.

As discussed in Section 4.2, *Agriculture,* the Olivas expansion area is subject to the City's SOAR initiative and would require approval by a majority of voters in order to change from an agricultural to a non-agricultural land use designation. Pursuant to the procedures outlined in the Coastal Act (Section 30241.5) for determining the economic viability of existing agricultural uses, an economic feasibility evaluation would be required to demonstrate that the conversion of agricultural lands is warranted due to conflicts with urban uses, or because the conversion of agricultural lands would complete a logical and viable neighborhood and contribute to the establishment of a stable limit to urban development. The conversion of agricultural lands within the Olivas expansion area to urban uses could be considered to be a logical way to accommodate future regional population and economic growth, as well as housing needs. Development of the Olivas expansion area would be adjacent to existing urban development and public services located to the north and west in the Preble and Pierpont Keys neighborhoods, would connect the Midtown and Arundell areas to Ventura Harbor, and would not be located within an area marked by steep slopes and high fire hazards. Development of this area could also potentially fulfill other Coastal Act objectives, such as improving coastal access and restoring the channelized Arundell Barranca to a more natural condition. Neverthelesss, the conversion of Prime farmland within the Olivas area to a non-agricultural use could be found to be inconsistent with Section 30241 of the Coastal Act.

Section 30244 of the Coastal Act states, "Where development would adversely impact archaeological or paleontological resources as identified by the State Historic Preservation Officer, reasonable mitigation measures shall be required." As discussed in Section 4.5, *Cultural and Historic Resources*, Scenarios 1-6 could include development within the vicinity of areas of known archaeological sensitivity. However, due to previous ground disturbance related to existing urban development within the existing City limits and agricultural activities within the Olivas expansion area, it is unlikely that significant archaeological or paleontological resources are present within areas of possible future development. As discussed in Section 4.5, the 2005 General Plan includes several policies aimed at the preservation and protection of

archaeological resources. Therefore, Scenarios 1-6 could all be found to be consistent with the requirements of this policy.

Article 6 - Development. Article 6 of the Coastal Act, which applies to new development in the Coastal Zone, includes, but is not limited to, policies and regulations intended to: (1) locate new residential, commercial, or industrial development (with the exception of certain new hazardous industrial development and visitor-serving facilities) such that the new development is contiguous with, or in close proximity to, existing developed areas able to accommodate the new development (Section 30250); (2) protect scenic and visual qualities of coastal areas (Section 30251); (3) minimize adverse impacts to life and property (Section 30253); and (5) establish coastal-dependent development as a priority on or near the shoreline (Section 30255).

The proposed 2005 General Plan does not include site- or project-specific proposals for new development under Scenarios 1-6; however, the 2005 General Plan include various policies and actions to which future new development would be subject. As discussed above under Impact LU-1, LAFCO Policy 2, Policy 3C of the 2005 General Plan would encourages the utilization of available land in the City prior to allowing expansion outside of the existing City limits under Scenarios 1-6. Moreover, as discussed in Section 4.1, *Aesthetics and Community Design*, the 2005 General Plan includes the following policy and actions that would preserve and enhance the visual qualities of new development within the Coastal Zone:

Policy 3A	*Sustain and complement cherished community characteristics.*
Action 3.3	*Require preservation of public view sheds and solar access.*
Action 3.4	*Require all shoreline development (including anti-erosion or other protective structures) to provide public access to and along the coast, unless it would duplicate adequate access existing nearby, adversely affect agriculture, or be inconsistent with public safety, military security, or protection of fragile coastal resources.*
Action 3.5	*Establish land development incentives to upgrade the appearance of poorly maintained or otherwise unattractive sites, and enforce existing land maintenance regulations.*

With implementation of the proposed design-related policies and actions of the 2005 General Plan, Scenarios 1-6 could be found consistent with the scenic and visual resource policies of the Coastal Act and impacts would be less than significant.

Section 30253 of the Coastal Act provides for the minimization of adverse impacts relating (but not limited) to the following: geologic, flood, and fire hazards; stability and structural integrity of buildings and structures—especially those on beaches, bluffs, and cliffs; and, air quality. A discussion of the proposed 2005 General Plan's potential to create adverse impacts under Scenarios 1-6 can be found in Section 4.3, *Air Quality*, 4.6, *Geologic Hazards*, 4.7, *Hazards*, and 4.8, *Hydrology and Water Quality*. None of the land use scenarios are expected to create unavoidably significant geologic, flood, or fire impacts, or adversely affect beaches, bluffs, or cliffs. The impact of any of the land use scenarios to regional air quality is identified as unavoidably significant because population projections for the City exceed those contained in the Ventura

County AQMP. However, as discussed in Section 4.3, this is primarily because the population projections in the AQMP have not been updated to reflect current conditions. In a general sense, the emphasis on intensification and reuse of existing developed areas within the City is expected to reduce future air pollutant emissions as compared to continued low density suburban development at the urban fringe. Therefore, any of the land use scenarios could be found to be consistent with Coastal Act Section 30253.

Article 7 - Industrial Development. Article 7 includes policies that apply to coastal-dependent industrial development, including refineries and petrochemical facilities, thermal electric generating plants, and offshore oil transportation. The existing Ventura Water Reclamation Facility, located in the Ventura Harbor area, is the only area within the coastal zone that would have an industrial land use designation according to the 2005 General Plan; however, sewage treatment facilities are not regulated pursuant to Article 7 of the Coastal Act. Therefore, Scenarios 1-6 would be consistent with Article 7 of the Coastal Act.

MITIGATION MEASURES

With implementation of the proposed policies and actions of the 2005 General Plan, development under Scenarios 1, 4, 5, and 6 could be found consistent with all applicable Coastal Act policies. However, the possible conversion of prime agricultural lands to urban uses within the Olivas expansion area that could occur under Scenarios 2 and 3 could be found to be inconsistent with Coastal Act policies relating to the maintenance of Prime agricultural lands. Implementation of Policy 3C and associated actions would minimize the premature conversion of productive agriculture land to non-agricultural uses.

SIGNIFICANCE AFTER MITIGATION

Implementation of the policies and actions mentioned above would minimize the premature conversion of Prime agricultural lands within the Olivas expansion area to non-agricultural uses. Nevertheless, Scenarios 2 and 3 could be found to be inconsistent with Coastal Act policies discouraging the conversion of Prime agricultural land to non-agricultural uses due to the inclusion of the Olivas expansion area.

Impact LU-3	**Scenarios 1-6 could be found to be consistent with SCAG Regional Comprehensive Plan and Guide (RCPG) Growth Management, Air Quality, Outdoor Recreation, and Water Quality policies. Impacts would be Class III, *less than significant*, for any of the six 2005 General Plan land use scenarios.**

SCAG's Regional Comprehensive Plan and Guide (RCPG) serves as a framework for decision-making with respect to regional growth and changes that can be anticipated during the next 20 years and beyond. The RCPG provides a general view of regional plans that will affect local governments, responses to significant issues facing Southern California, and a summary of how the region will meet certain federal and state requirements with respect to Transportation, Growth Management, Air Quality, Housing, Hazardous Waste Management, and Water

Quality Management. Relevant goals and policies contained within the Growth Management, Air Quality, and Open Space chapters are discussed below, with cross-references to sections of this EIR that are applicable to specific issue areas. RCPG Policies relating to population and housing are discussed in Section 4.15, *Population and Housing*.

Growth Management

The RCPG includes, but is not limited to, Growth Management goals that seek to develop urban forms that minimize public and private development costs, enable firms to be more competitive, and stimulate the regional economy. The following policies are intended to guide efforts toward achievement of these goals.

> *3.03 The timing, financing, and location of public facilities, utility systems, and transportation systems shall be used by SCAG to implement the region's growth policies.*

Environmental impacts associated with public services, public facilities, transportation, and utilities for the 2005 General Plan are discussed in Sections 4.11, *Public Services*, 4.12, *Transportation and Circulation*, and, 4.13, *Utilities and Service System;* SCAG could use the analysis provided in each of those sections for Scenarios 1-6 to implement the region's growth policies. Therefore, Scenarios 1-6 could be found to be consistent with RCPG Policy 3.03.

> *3.05 Encourage patterns of urban development and land use, which reduce costs of infrastructure construction and make better use of existing facilities.*
>
> *3.09 Support local jurisdictions' efforts to minimize the costs of infrastructure and public service delivery, and efforts to seek new sources of funding for development and the provision of services.*
>
> *3.10 Support local jurisdictions' actions to minimize red tape and expedite the permitting process to maintain economic vitality and competitiveness.*

As discussed above under Impact LU-1, Scenarios 1-6 would be subject to Policy 3C and associated actions, which encourage reuse and intensification within existing urban areas prior to development of expansion areas outside of the existing City limits. This compact land use pattern is intended to utilize existing infrastructure to the maximum extent feasible and minimize costs associated with significant infrastructure extensions. Although the 2005 General Plan is not a budgeting document, several policies and actions provide general guidance for the funding of public services and facilities. Similarly, although the 2005 General Plan does not address specific procedural requirements for permitting development, it includes a range of policies and actions intended to foster economic vitality. Scenarios 1-6 could be found to be consistent with the requirements of RCPG Policies 3.5, 3.9, and 3.10.

> *3.12 Encourage existing or proposed local jurisdictions' programs aimed at designing land uses which encourage the use of transit and thus reduce the need for roadway expansion, reduce the number of auto trips and vehicle miles traveled, and create opportunities for residents to walk and bike.*

3.13 Encourage local jurisdictions' plans that maximize the use of existing urbanized areas accessible to transit through infill and redevelopment.

3.16 Encourage development in and around activity centers, transportation corridors, underutilized infrastructure systems, and areas needing recycling and redevelopment.

3.18 Encourage planned development in locations least likely to cause environmental impact.

The 2005 General Plan includes numerous policies and actions that encourage reliance on transit facilities, reduce the need for roadway expansion, reduce the number of auto trips and vehicle miles traveled, and facilitate walking and biking. Among these are:

Action 3.25 *Establish first priority growth areas to include the districts, corridors, and neighborhood centers as identified on the General Plan Diagram; and second priority areas to include vacant undeveloped land when a community plan has been prepared for such (within the City limits).*

Action 4.6 *Require new development to be designed with interconnected transportation modes and routes.*

Action 4.15 *Encourage the placement of facilities that house or serve elderly, disabled, or socioeconomically disadvantaged persons in areas with existing public transportation services and pedestrian and bicycle amenities.*

Action 4.16 *Install roadway, transit, and alternative transportation improvements along existing or planned multi-modal corridors, including primary bike and transit routes, and at land use intensity nodes.*

Action 4.29 *Develop incentives to encourage City employees and local employers to use transit, rideshare, walk, or bike.*

As discussed under Impact LU-1, Scenarios 1-6 would be subject to Policy 3C and associated actions, which encourage new development, reuse, or intensification within existing urban areas prior to development of expansion areas outside of the existing City limits.

Finally, development that could occur under Scenarios 1-6 would be subject to a number of policies and actions that encourage development in locations least likely to cause environmental impacts. As discussed under Impact LU-1, Scenarios 1-6 would include adjustments to the existing SOI such that the northern boundary would be coterminous with the existing northern City limits, thereby removing the hills above the City from the SOI. In doing so, Scenarios 1-6 would remove the possibility for urban development within the foothills area, which is marked by high fire hazards, steep slopes, and sensitive biological resources. Although any of the six scenarios would accommodate the conversion of Prime agricultural land to non-agricultural uses within potential expansion areas, these areas would be located adjacent to urban, developed areas with existing public services, utilities, and infrastructure, the expansion of which could result in fewer environmental impacts than that which would likely occur in order to accommodate growth within the existing SOI (i.e., in the hillsides above the current City limits). Therefore, Scenarios 1-6 could be found to be consistent with RCPG Policies 3.12, 3.13, 3.16, and 3.18.

3.20 Support the protection of vital resources such as wetlands, groundwater recharge areas, woodlands, production lands, and land containing unique and endangered plants and animals.

3.21 Encourage the implementation of measures aimed at the preservation and protection of recorded and unrecorded cultural resources and archaeological sites.

3.22 Encourage mitigation measures that reduce noise in certain locations, measures aimed at preservation of biological and ecological resources, measures that would reduce exposure to seismic hazards, minimize earthquake damage, and to develop emergency response and recovery plans.

The potential impacts of Scenarios 1-6 relating to biological resources, cultural and archaeological resources, noise, seismic hazards, and emergency response plans are discussed in detail in Sections 4.4, *Biological Resources*, 4.5, *Cultural and Historic Resources*, 4.10, *Noise*, 4.6, *Geologic Hazards*, and 4.7, *Hazards and Hazardous Materials* (respectively). As discussed in those sections, Scenarios 1-6 would be subject to a number of policies and actions that would protect and enhance important biological habitats (e.g., wetlands, riparian habitat, and sensitive species), avoid impacts to cultural and archaeological resources, protect noise-sensitive uses, minimize exposure to hazards resulting from seismic events, and provide adequate resources for emergency response plans. Therefore, Scenarios 1-6 could be found to be consistent with SCAG Policies 3.20, 3.21, and 3.22.

3.23 Discourage development, or encourage the use of special design requirements, in areas with steep slopes, high fire, flood, and seismic hazards.

As discussed under Impact LU-1, Scenarios 1-6 would involve an adjustment to the SOI boundary that would remove the foothills to the north of the City from the SOI, which is an area marked by steep slopes and high fire hazards. Moreover, as discussed in detail in Sections 4.6, *Geologic Hazards,* 4.7, *Hazards and Hazardous Materials,* and 4.8, *Hydrology and Water Quality*, Scenarios 1-6 would be subject to a number of policies and actions that would discourage or avoid development within areas with steep slopes or subject to high fire, flood, or seismic hazards. Therefore, Scenarios 1-6 could be found to be consistent with RCPG Policy 3.23.

Air Quality

The Air Quality chapter of the RCPG discusses SCAG's air quality planning responsibilities and also describes plans and policies developed by regional, state, and federal air agencies. Specific air quality impacts of the proposed project and consistency with the Ventura County APCD AQMP are discussed in Section 4.3, *Air Quality*. The following core actions described in the RCPG that are related to the 2005 General Plan include:

5.07 Determine specific programs and associated actions needed (e.g. indirect source rules, enhanced use of telecommunications, provision or community based shuttle services, provision of demand management based programs, or vehicle-miles-traveled/emission fees) so that options to command and control regulations can be assessed.

5.11 Through the environmental document review process, ensure that plans at all levels of government (regional, air basin, county, subregional and local) consider

air quality, land use, transportation and economic relationships to ensure consistency and minimize conflicts.

Scenarios 1-6 would be subject to a number of policies and actions designed to reduce reliance on automobiles and improve air quality within the Ventura County portion of the South Central Coast Air Basin, without reliance on command and control regulations. However, as discussed in Section 4.3, *Air Quality*, population projections for Scenarios 1-6 exceed those of the Air Quality Management Plan (AQMP) for Ventura County and would likely result in an increase in air pollutant emissions within the Ventura County portion of the South Central Coast Air Basin that exceed AQMP standards.

The significance of air quality impacts associated with individual projects will depend upon the characteristics of the projects and the availability of feasible mitigation measures. As discussed in Section 4.3, *Air Quality,* mitigation measures for future construction activities, as well as compliance with the Ventura County APCD Transportation Control Measures, would reduce impacts to air quality resulting from possible development under Scenarios 1-6.

As discussed in Section 4.3, *Air Quality,* although the policies and actions would reduce impacts to air quality, impacts under Scenarios 1-6 would remain significant. However, this EIR analyzes land use, economic, air quality, and transportation relationships in order to ensure consistency and minimize conflicts of the 2005 General Plan with other governmental plans and programs. Therefore, the 2005 General Plan could be found to be consistent with RCPG Policies 5.07 and 5.11.

Open Space

The purpose of the Open Space and Conservation Chapter is to assist local governments in planning for local and regional open space. The Chapter recommends alternative approaches, and strategies that can be useful to local officials as they address future open space needs in their community and ensure a high quality of life and equity for Southern California residents. The following actions described in the RCPG that are related to the 2005 General Plan include:

Outdoor Recreation

9.01 Provide adequate land resources to meet the outdoor recreation needs of the present and future residents in the region and to promote tourism in the region.

9.02 Increase the accessibility to open space lands for outdoor recreation.

9.03 Promote self-sustaining regional recreation resources and facilities.

As discussed in Section 4.11, *Public Services*, Scenarios 1-6 would increase demand for recreational facilities and programs. The expansion areas included in Scenarios 2, 3, 4, and 6 all provide sufficient acreage to meet expansion area needs and at least partially address the current shortage of park space based on the City's 10 acres/1,000 residents standard. Scenarios 1 and 5 do not include additional acreage that could specifically set aside for parks. Nevertheless, continued collection of required park fees and required parkland dedication in conjunction with new development, in combination with implementation of the parks and recreation policies and action items proposed in the 2005 General Plan, could provide parks to

meet future needs. Therefore, any of the six scenarios could be found to be consistent with these RCPG policies.

Public Health and Safety

9.04 Maintain open space for adequate protection of lives and properties against natural and man-made hazards.

9.05 Minimize potentially hazardous developments in hillsides, canyons, areas susceptible to flooding, earthquakes, wildfire and other known hazards, and areas with limited access for emergency equipment.

9.06 Minimize public expenditure for infrastructure and facilities to support urban type uses in areas where public health and safety could not be guaranteed.

As discussed under Impact LU-1, Scenarios 1-6 would involve an adjustment to the SOI boundary that would remove the hillside areas to the north of the City from the SOI. This area is marked by steep slopes and high fire hazards. Moreover, as discussed in detail in Sections 4.6, *Geologic Hazards,* 4.7, *Hazards and Hazardous Materials,* and 4.8, *Hydrology and Water Quality*, Scenarios 1-6 would be subject to a number of policies and actions that would discourage or avoid development within areas with steep slopes and high fire, flood, and seismic hazards. Therefore, Scenarios 1-6 could be found consistent with SCAG Policies 9.04-9.06.

Resource Protection

9.08 Develop well-managed viable ecosystems or known habitats of rare, threatened and endangered species, including wetlands.

As discussed in Section 4.4, *Biological Resources*, Scenarios 1-6 would be subject to a number of policies and actions that would protect and enhance important biological habitats (e.g., wetlands, riparian habitat, and sensitive species). Therefore, Scenarios 1-6 could be found consistent with SCAG Policy 9.08.

Water Quality

The Water Quality chapter is intended to provide a regional perspective on current water quality issues and the plans and programs for addressing these issues, and to better clarify the relationship between water quality and other regional concerns. The following actions described in the RCPG Water Quality chapter that are related to the 2005 General Plan include:

11.07 Encourage water reclamation throughout the region where it is cost-effective, feasible, and appropriate to reduce reliance on imported water and wastewater discharges. Current administrative impediments to increased use of wastewater should be addressed.

Scenarios 1-6 would all be subject to the 2005 General Plan policies and actions. The feasibility of using water reclamation techniques for individual development projects would be required at the time at which specific proposals for development are submitted to the City for review. Although it cannot be predicted with any certainty whether reclaimed water will be available

for future project sites under Scenarios 1-6, the City will continue to seek ways to conserve water resources. Scenarios 1-6 could be found consistent with SCAG Policy 11.07.

MITIGATION MEASURES

With implementation of the policies and actions of the 2005 General Plan, Scenarios 1-6 could be found to be consistent with RCPG policies. No mitigation measures would be required.

SIGNIFICANCE AFTER MITIGATION

Any of the 2005 General Plan land use scenarios could be found to be consistent with applicable policies of the RCPG.

Impact LU-4	**Scenarios 1-6 could be found to be consistent with the Southern California Association of Governments' Regional Transportation Plan (RTP). Impacts would be Class III, *less than significant,* for any of the six land use scenarios.**

The SCAG 2004 Regional Transportation Plan (RTP) links the goal of sustaining mobility with the goals of fostering economic development, enhancing the environment, reducing energy consumption, promoting transportation-friendly development patterns, and encouraging fair and equitable access to residents affected by socio-economic, geographic, and commercial limitations. The goals of the RTP relevant to the 2005 General Plan include:

- *Maximize mobility and accessibility for all people and goods in the region.*
- *Ensure travel safety and reliability for all people and goods in the region.*
- *Preserve and ensure a sustainable regional transportation system.*
- *Maximize the productivity of our transportation system.*
- *Protect the environment, improve air quality and promote energy efficiency.*
- *Encourage land use and growth patterns that complement our transportation investments.*

These goals are supported by the policies listed below. A discussion of the 2005 General Plan's consistency with each of the policies follows.

> *Policy 1: Transportation investments shall be based on SCAG's adopted Regional Performance Indicators.*

Table 4.14-1 identifies the RTP performance indicators, which are used to identify transportation investments to achieve RTP goals.

Table 4.14-1
Regional Performance Indicators

Performance Indicator	Purpose
Mobility	Increase mobility within the region.
Accessibility	Increase accessibility within the region.
Reliability	Reduce variability in travel time.
Safety	Increase safety by reducing accident rates.
Cost-Effectiveness	Ensure benefits of RTP investments exceed investment costs.
Productivity	Increase the efficiency of transportation infrastructure and provided services.
Sustainability	Sustain current system performance.
Preservation	Maintain current conditions.
Environmental	Reduce air emissions.
Environmental Justice	Avoid disproportionate impacts to any ethnic group.

Although overall traffic levels are likely to increase under Scenarios 1-6, the 2005 General Plan includes policies and actions that would at least partially attenuate likely increases in traffic and could be found consistent with the performance indicators and goals of the RTP. As discussed under Impact LU-1, development under Scenarios 1-6 would be subject to Policy 3C of the proposed 2005 General Plan, thereby promoting new development that focuses on intensification and reuse of existing lands within the existing City limits and SOI prior to expansion. In addition, as discussed under Impact AQ-1 in Section 4.3, *Air Quality*, recent research indicates that infill development reduces vehicle miles traveled (VMT) and associated air pollutant emissions as compared to development on sites in the periphery of metropolitan areas, also known as "greenfield" sites. A 1999 simulation study conducted for the U.S. Environmental Protection Agency comparing infill development to greenfield development found that infill development results in substantially less VMT per capita and generates fewer emissions of most air pollutants and greenhouse gases (see Table 4.3-5 in Section 4.3). Similarly, a 1991 study presented to the California Energy Resources Conservation and Development Commission found that a doubling of residential densities is associated with a 20-30% reduction in per capita VMT.

A reduction in VMT would be consistent with the RTP performance indicators as it is likely to result in the following:

- *A reduction in congestion on busy roadways and intersections, thereby reducing travel time and delays, as well as variability in travel time*
- *A reduction in automobile accident rates*
- *A reduction in maintenance costs resulting from wear and tear on existing*

infrastructure

- *A reduced need to construct new roadways or expand existing roadways, thereby resulting in a more efficient use of existing roadways*
- *A reduction in air emissions*

New development also would be subject to various 2005 General Plan transportation policies and actions aimed at strengthening and balancing vehicle, bicycle, pedestrian, and transit connections in the City and surrounding region. With implementation of the 2005 General Plan policies and actions, Scenarios 1-6 could be found to be consistent with the Regional Performance Indicators of SCAG RTP Policy 1.

> *Policy 2: Ensuring safety, adequate maintenance, and efficiency of operations on the existing multi-modal transportation system will be RTP priorities and will be balanced against the need for system expansion investments.*
>
> *Policy 3: RTP land use and growth strategies that are different from currently expected trends will require a collaborative implementation program that identifies required actions and policies by all affected agencies and sub-regions.*
>
> *Policy 4: High Occupancy Vehicle (HOV) gap closures that significantly increase transit and rideshare usage will be supported and encouraged, subject to Policy #1.*

As discussed under Impact LU-3, the 2005 General Plan includes a number policies and actions that are designed to ensure the safety, adequate maintenance, and efficiency of operations on the portion of the multi-modal transportation system that lies within the City of Ventura. By promoting intensification and reuse prior to expansion as well as mixed-use and pedestrian-oriented urban development, implementation of the 2005 General Plan would result in a diverse, safe, and efficient transportation system that minimizes the need for system expansion investments. Moreover, the growth projections, policies, and actions under Scenarios 1-6 are generally consistent with RTP land use and growth strategies and, therefore, would not require significant changes to the RTP implementation plan. Finally, none of the scenarios under consideration for the 2005 General Plan include HOV gap closures. Therefore, Scenarios 1-6 could be found to be consistent with SCAG RTP Policies 2-4.

MITIGATION MEASURES

With implementation of the proposed 2005 General Plan policies and actions, Scenarios 1-6 could all be found to be consistent with the SCAG 2004 RTP. No mitigation is required.

SIGNIFICANCE AFTER MITIGATION

Any of the six land use scenarios could be found to be consistent with applicable goals and policies of the Regional Transportation Plan.

Impact LU-5	**Scenarios 1-6 could all be found to be consistent with the Southern California Association of Governments' Growth Visioning Report. Impacts would be Class III, *less than significant*, for any of the six 2005 General Plan land use scenarios.**

SCAG has prepared the Growth Visioning Report to provide a framework for local and regional decision making that improves the quality of life for all SCAG residents. The following principles are guidelines for promoting and sustaining for future generations the region's mobility, livability, and prosperity. A discussion of the 2005 General Plan's (and each scenario's) consistency with these principles follows.

Principle 1: Improve mobility for all residents

- *Encourage transportation investments and land use decisions that are mutually supportive.*
- *Locate new housing near existing jobs and new jobs near existing housing.*
- *Encourage transit-oriented development.*
- *Promote a variety of travel choices.*

As discussed above under Impacts LU-1 LU-2, LU-3, and LU-4, Scenarios 1-6 would be subject to a number of policies and actions that would: (1) include transportation investments and land use decisions that are mutually supportive; (2) provide mixed-use development that would locate housing and jobs near one another; (3) encourage transit-oriented development; and (4) promote new development that would facilitate a variety of travel choices, including automobile, bicycle, pedestrian, and mass-transit forms of transportation. Therefore, Scenarios 1-6 could all be found to be consistent with SCAG's Growth Visioning Report Principle 1.

Principle 2: Foster livability in all communities

- *Promote infill development and redevelopment to revitalize existing communities.*
- *Promote developments, which provide a mix of uses.*
- *Promote "people scaled," walkable communities.*
- *Support the preservation of stable, single-family neighborhoods.*

As discussed under Impact LU-1, Scenarios 1-6 would encourage intensification and reuse development within the existing urban areas of the City before development occurs outside of the existing City limits, and would promote development that meets the goals for single-family housing identified in the Housing Element. Moreover, as discussed under Impact LU-2, Coastal Act Article 6, and Impact LU-4, Scenarios 1-6 would be subject to a number of 2005 General Plan policies and actions that promote mixed-use development, as well as building and streetscape layout and design that promote walkable communities and development at a human scale.

Principle 3: Enable prosperity for all people

- *Support educational opportunities that promote balanced growth.*
- *Ensure environmental justice regardless of race, ethnicity or income class.*

- *Support local and state fiscal policies that encourage balanced growth.*
- *Encourage civic engagement.*

As discussed under Impact LU-1, Scenarios 1-6 would be subject to Action 3.10, which promotes a mix of housing to meet the needs of the community, as identified in the Housing Element. Moreover, as discussed in Section 4.11, *Public Services*, Scenarios 1-6 would be able to provide adequate school and library facilities for projected population growth through 2025. Finally, the 2005 General Plan has been a product of multiple public workshops and hearings where citizens were given the opportunity to participate in the planning process. With implementation of this goal and the supporting policies and actions, Scenarios 1-6 could be found to be consistent with SCAG's Growth Visioning Report Principle 3.

Principle 4: Promote sustainability for future generations

- *Focus development in urban centers and existing cities.*
- *Develop strategies to accommodate growth that uses resources efficiently, eliminates pollution and significantly reduces waste.*
- *Utilize "green" development techniques.*

As discussed under Impact LU-1, Scenarios 1-6 would be subject to various policies and actions that encourage new development, reuse, or intensification within existing urban areas prior to development outside of the existing City limits. Moreover, as discussed in Section 4.11, *Public Services*, Scenarios 1-6 would be subject to 2005 General Plan policies and actions that promote waste source reduction, recycling, and "green" development techniques. Therefore, Scenarios 1-6 could be found to be consistent with SCAG's Growth Visioning Report Principle 4.

MITIGATION MEASURES

With implementation of the 2005 General Plan policies and actions, Scenarios 1-6 could be found to be consistent with SCAG's Visioning Report. No mitigation is required.

SIGNIFICANCE AFTER MITIGATION

Any of the six land use scenarios for the 2005 General Plan could be found to be consistent with SCAG's Visioning Report.

4.15 POPULATION AND HOUSING

This section analyzes the 2005 General Plan's potential environmental impacts related to population and housing.

4.15.1 Setting

a. Current Population, Housing, and Employment. Since its incorporation in 1866, the City of Ventura has grown from a small settlement of less than 1,000 residents to a city of over 104,000 residents in 2004. Ventura's population grew most dramatically during the 1950s and 1960s, and has slowed since 1970; the number of City residents increased by 27% in the 1970s and 24% in the 1980s, in contrast to 76% and 99% in the 1950s and 1960s, respectively (City of San Buenaventura 2000-2006 Housing Element, 2004). The California Department of Finance (2004) estimated the City of Ventura's 2004 population at 104,952.

A variety of housing types are currently available in Ventura, including single-family homes, town homes, apartments, condominium developments, and mobile homes. According to the California Department of Finance, *City/County Population and Housing Estimates* (2004), in 2004 the City of Ventura had approximately 40,880 dwelling units, which consisted of the following: approximately 26,476 single family dwelling units; approximately 11,781 units within multi-family buildings; and, approximately 2,623 mobile homes.

Local and regional economic forces play a pivotal role in shaping the City's physical character and determining its tax and employment bases. Efforts to attract and retain businesses that can thrive in Ventura depend largely on the ability to find appropriate and affordable sites. The city's climate, location, and prominent visibility and accessibility along U.S. 101 and SR 126 appeal to a variety of commercial and industrial enterprises; however, the limited supply of larger parcels is a constraint for many companies. Major employers within the City of Ventura include local government (e.g., the County of Ventura, Ventura County Health Care Agency, and the City of Ventura), the Ventura Unified School District, Community Memorial Hospital, Ventura College, Southern California Edison, Bank of America, and Meditech Health Services, Incorporated.

b. Regulatory Setting.

2000-2006 Housing Element. The 2000-2006 Housing Element is one of nine elements of Ventura's Comprehensive Plan, which identifies and analyzes existing and projected housing needs and includes a statement of goals, policies, and scheduled programs for the preservation, improvement, and development of housing. The Housing Element identifies strategies and programs that focus on: (1) maintaining and improving existing housing and neighborhoods; (2) providing a range of housing types and adequate housing sites; (3) assisting in the provision of affordable housing; (4) removing governmental and other constraints to housing production and affordability; and (5) promoting fair and equal housing opportunities.

Pursuant to Government Code §65300.5, the policies, data, assumptions, and projections (e.g., for population, housing, and jobs) provided in the proposed 2005 General Plan must be consistent with those found in the Housing Element. Unlike other elements of the proposed

2005 General Plan, which cover a 20-year time period, Government Code §65588 dictates that the Housing Element must be updated at least once every five years and, thus, the current Housing Element covers the period extending from 2000 to 2006. The geographic area covered by the Housing Element encompasses only the current City limits, while unincorporated areas within the City's planning area are covered by the Ventura County Housing element.

Residential Growth Management Program (Municipal Code Chapter 24R.115). In order to assist in implementing the Land Use Element of the 1989 Comprehensive Plan, the City Council adopted a Residential Growth Management Program (RGMP), which provides an allocation schedule for the review and evaluation of residential growth in the City of Ventura's Planning Area. The allocation schedule, which is adopted by resolution of the City Council at least once each year, is based on population data from the California Department of Finance and identifies how many dwelling units are potentially available for allocation in four categories of projects (i.e., "Larger Projects," "Downtown Projects," "Public Benefit Projects," and "Exempt Projects," as defined in the Municipal Code, §24R.115.210).

The RGMP allocation schedule specifies: (1) the overall number of dwelling units available through the year 2010 for Downtown and Exempt Projects; (2) the number of units available during two-year cycles for Larger Projects; and (3) allocations from the Larger Projects or Downtown Projects categories for Public Benefit Projects. The RGMP provides specific criteria for evaluating projects to determine eligibility for an allocation.

Southern California Association of Governments (SCAG). As discussed in Section 4.14, *Land Use,* the City of Ventura is located within the planning area of the Southern California Association of Governments (SCAG). SCAG functions as the Metropolitan Planning Organization for Los Angeles, Orange, San Bernardino, Riverside, Ventura and Imperial Counties, and is responsible for implementing the Regional Comprehensive Plan and Guide (RCPG), Regional Transportation Plan (RTP), and the Growth Visioning Report (GVR), each of which addresses regional issues associated with population growth, housing, and employment.

4.15.2 Impact Analysis

a. Methodology and Significance Thresholds. Impacts relating to population and housing are considered significant if growth accommodated under the 2005 General Plan would:

- *Induce substantial population growth either directly or indirectly*
- *Create an imbalance of jobs and housing in the City*
- *Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere*
- *Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere*

For purposes of analysis, "substantial" population growth is defined as growth exceeding SCAG or Ventura County APCD population projections for the City. "Substantial" displacement would occur if allowed land uses would displace more residences than would be accommodated through growth accommodated by the General Plan.

b. Project Impacts and Mitigation Measures. The matrix on the following page provides a summary comparison of impacts for each of the EIR scenarios. A detailed discussion of each environmental impact follows.

Impact PH-1	**Scenarios 1-6 would not result in the displacement of substantial numbers of people or housing. Any displacement would be more than offset by new housing that would be accommodated under the 2005 General Plan. Impacts would be Class III, *less than significant*, for any of the General Plan land use scenarios.**

Scenarios 1-6, which are described in detail in Section 2.0, *Project Description*, all emphasize the intensification and reuse of lands that are already developed with urban uses. By emphasizing reuse of developed lands, any of the scenarios would have the potential to displace existing housing or people. However, the 2005 General Plan does not re-designate any areas currently designated for and developed with housing under the 1989 Comprehensive Plan to a non-residential use. Moreover, the focal points for growth in the City under all six scenarios would be the nine districts and eight corridors shown on Figures 2-3 through 2-8 in Section 2.0, *Project Description*. All of these districts and corridors are designated for and primarily occupied by commercial and industrial uses, with only a limited amount of existing housing. Consequently, the primarily displacement would be of existing commercial and industrial uses rather than housing or people. Limited housing is present within several of the districts and corridors, notably the Downtown district and the Ventura Avenue, Main Street, and Thompson Boulevard corridors. It is possible that such housing could be displaced; however, the intent of the 2005 General Plan is to accommodate additional housing and mixed use development in these areas. Under any scenario, it is anticipated that the development of new housing would more than offset the minimal displacement of housing that could occur within the districts and corridors. For Scenario 1, it is anticipated that a net increase of about 8,300 housing units would occur citywide through 2025. For Scenarios 2-6, it is estimated that a net increase of about 11,000 housing units would occur citywide over that same time frame.

All of the expansion areas under consideration for Scenarios 2-6 are primarily in agricultural use or open grazing land. Housing within all of the expansion areas is limited to isolated farmhouses. As such, substantial displacement of people or housing would not occur as a result of development of any of the expansion areas.

MITIGATION MEASURES

No significant impacts relating to displacement would occur under any scenario. Mitigation is not required.

SIGNIFICANCE AFTER MITIGATION

Impacts relating to the displacement of people and housing would be less than significant for any of the six scenarios.

Summary Comparison of Impacts for EIR Scenarios

	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5	Scenario 6
Displacement (Impact PH-1)	No substantial displacement of population or housing; Scenario 1 would accommodate substantially more new housing than would be displaced. Impacts are Class III, less than significant.	Impacts similar to Scenario 1 and Class III, less than significant. Expansion areas are agricultural and include little existing housing.	Impacts similar to Scenario 1 and Class III, less than significant. Expansion areas are agricultural and include little existing housing.	Impacts similar to Scenario 1 and Class III, less than significant. Expansion areas are agricultural and include little existing housing.	Impacts similar to Scenario 1 and Class III, less than significant. Expansion areas are agricultural and open space and include little existing housing.	Impacts similar to Scenario 1 and Class III, less than significant. Expansion areas are agricultural and include little existing housing.
SCAG Growth Projections (Impact PH-2)	Projected 2025 population (126,153 persons) exceeds SCAG projection of 123,645 persons. Though emphasis on intensification/reuse minimizes population-related impacts, exceedance of regional forecast is a Class I, unavoidably significant, impact.	Projected 2025 population (133,160 persons) exceeds SCAG projection of 123,645 persons. Though emphasis on intensification/reuse minimizes population-related impacts, exceedance of regional forecast is a Class I, unavoidably significant, impact.	Impacts identical to Scenario 2 and Class I, unavoidably significant.	Impacts identical to Scenario 2 and Class I, unavoidably significant.	Impacts identical to Scenario 2 and Class I, unavoidably significant.	Impacts identical to Scenario 2 and Class I, unavoidably significant.
SCAG Visioning Report – Housing Needs (Impact PH-3)	Scenario 1 provides for a variety of housing types, thus complying with SCAG policy. Impact is Class III, less than significant.	Scenario 2 provides for a variety of housing types. Impact is Class III, less than significant.	Impacts similar to Scenario 2 and Class III, less than significant.	Impacts similar to Scenario 2 and Class III, less than significant.	Impacts similar to Scenario 2 and Class III, less than significant.	Impacts similar to Scenario 2 and Class III, less than significant.
Jobs/Housing Balance (Impact PH-4)	Growth projections result in jobs/housing ratio of 1.41 jobs/dwelling unit. This is considered a balanced ratio. Impacts are Class III, less than significant.	Growth projections result in jobs/housing ratio of 1.45 jobs/dwelling unit. This is considered a balanced ratio. Impacts are Class III, less than significant.	Impacts similar to Scenario 2 and Class III, less than significant.	Impacts similar to Scenario 2 and Class III, less than significant.	Impacts similar to Scenario 2 and Class III, less than significant.	Impacts similar to Scenario 2 and Class III, less than significant.

Impact PH-2	**Proposed General Plan policies implement most SCAG policies relating to growth. However, growth accommodated under Scenarios 1-6 exceeds SCAG's Regional Comprehensive Plan and Guide and Ventura County AQMP population forecasts. This is largely because regional growth forecasts have not been updated to reflect current conditions in the City. Nevertheless, exceedance of regional forecasts is considered a Class I, *unavoidably significant*, impact of any of the six scenarios.**

SCAG's Regional Comprehensive Plan and Guide (RCPG) serves as a framework for decision-making with respect to regional growth anticipated during the next 20 years. The RCPG includes growth management goals that seek to develop urban forms that minimize public and private development costs, enable firms to be more competitive, and stimulate the regional economy. These are discussed below.

3.01 The population, housing, and jobs forecasts, which are adopted by SCAG's Regional Council and that reflect local plans and policies, shall be used by SCAG in all phases of implementation and review.

The SCAG population, housing, and job forecasts, which are based on the RTP Population, Household, and Employment (April 2004) forecasts for the Ventura Council of Governments (VCOG) subregion and the City of Ventura are shown in Table 4.15-1.

Table 4.15-1
SCAG Population, Household, and Employment Forecasts for the Ventura Council of Governments (VCOG) Subregion

VCOG Subregion	2000	2005	2010	2015	2020	2025
Population	758,054	821,045	865,149	897,295	929,181	960,025
Household	244,476	260,357	275,352	289,318	303,596	317,831
Employment	337,247	346,770	381,680	403,000	424,470	445,193
City of Ventura	**2000**	**2005**	**2010**	**2015**	**2020**	**2025**
Population	101,002	109,087	116,959	119,247	121,488	123,645
Household	38,573	40,711	44,053	45,355	46,696	48,034
Employment	58,900	59,717	62,703	65,237	67,787	70,238

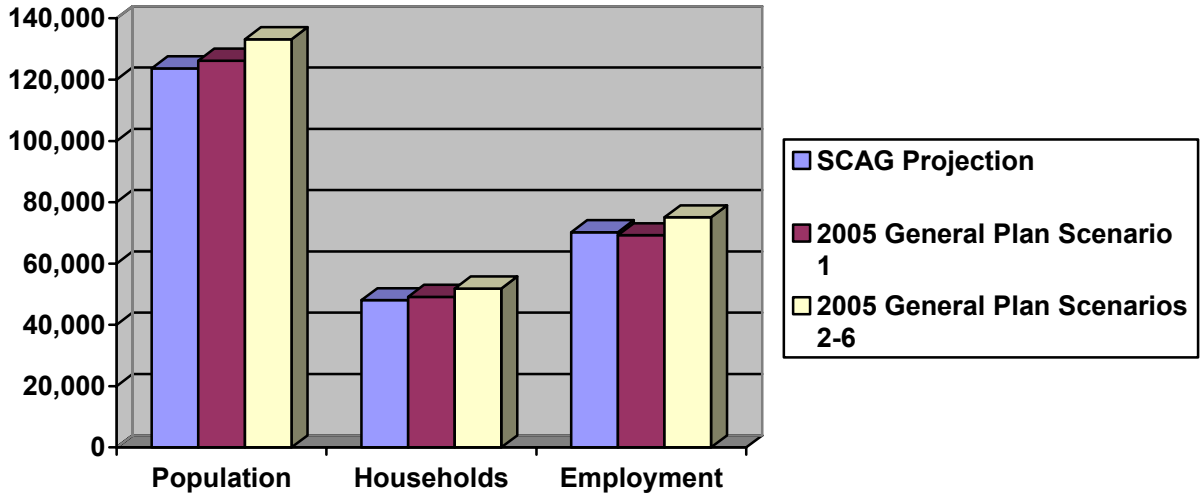
Figure 4.15-1 compares SCAG's projected 2025 population, housing, and employment totals for the City to the projections used for this EIR. Table 4.15-2 compares SCAG population, housing, and employment growth rate projections to those used in this EIR.

Figure 4.15-1
SCAG Population, Housing, and Employment Projections



SCAG projects a citywide population of 123,645 in 2025, which represents an annual growth rate of 0.78%. Both of the growth scenarios considered in this EIR assume higher average annual growth rates. For Scenario 1, an annual growth rate of 0.88% is assumed, which would result in a 2025 population of 126,153. For Scenarios 2-6, a 1.14% annual growth rate is assumed, which would result in a 2025 population of 133,160. Because 2005 General Plan growth projections are higher than SCAG's forecasts, the population impact of any of the six land use scenarios could be found to be outside SCAG regional growth forecasts.

The exceedance of SCAG's population growth forecast is considered a significant population impact. It should be noted, however, that SCAG's growth forecast for the City assumes a slowdown in population growth in Ventura after 2015. From 2005-2010, SCAG actually forecasts a higher annual growth rate (1.4% annually) than is projected for any of the General Plan land use scenarios. By comparison, SCAG projects only a 0.35% growth rate for the City from 2020-2025. This rate is lower than the current annual "natural" growth rate (births minus deaths) for the area (which is about 0.6%). In addition, it should be recognized that the projections used in this EIR have been developed for analytical purposes only; actual growth rates may be higher or lower than the projections used for this analysis. It is important to recognize that growth could occur in the City regardless of whether or not the 2005 General Plan is adopted as the 1989 Comprehensive Plan that currently applies in the City could accommodate similar levels of growth as could be accommodated under any of the 2005 General Plan land use scenarios. To that end, one of the fundamental purposes of the 2005

Table 4.15-2
Comparison of Population, Housing, and Employment Growth Projections

	Population			Households			Employment		
Current (2004) Estimates	104,952			40,880			54,732		
	SCAG Projection	2005 General Plan Scenario 1 Projection	2005 General Plan Scenarios 2-6 Projection	SCAG Projection	2005 General Plan Scenario 1 Projection	2005 General Plan Scenarios 2-6 Projection	SCAG Projection	2005 General Plan Scenario 1 Projection	2005 General Plan Scenarios 2-6 Projection
2025 Estimate	123,645	126,153	133,160	48,034	49,138	51,867	70,238	69,211	75,060
Projected Growth (2004-2025)	18,693	21,201	28,208	7,154	8,258	10,987	15,506	14,479	20,328
Annual % Growth	0.78%	0.88%	1.14%	0.77%	0.88%	1.14%	1.19%	1.12%	1.51%

Employment forecasts for the 2005 General Plan scenarios are from Stanley R. Hoffman Associates, 2003. Estimated growth from 2004-2025 is based upon the 2025 projections and the 2004 population, housing, and employment estimates shown in Tables 2-3 and 2-4 in Section 2.0, Project Description.

General Plan is to direct future development in such a way as to minimize the impacts of growth by, among other things, emphasizing the intensification and reuse of already developed areas, thus minimizing pressure to develop agricultural and undeveloped lands at the City's periphery, notably in the hillsides above the City.

3.24 Encourage efforts of local jurisdictions in the implementation of programs that increase the supply and quality of housing and provide affordable housing as evaluated in the Regional Housing Needs Assessment.

3.27 Support local jurisdictions and other service providers in their efforts to develop sustainable communities and provide, equally to all members of society, accessible and effective services such as: public education, housing, health care, social services, recreational facilities, law enforcement, and fire protection.

As stated above, Scenario 1 would accommodate an estimated 8,258 new dwelling units, bringing the citywide total to approximately 49,136 units by 2025. Scenarios 2-6 could accommodate an estimated 10,987 new dwelling units, for a total of approximately 51,867 units citywide by 2025. Any of the six scenarios would be subject to the following policies, and actions that would complement existing Housing Element goals, policies, and actions (2000-2006 Housing Element, Chapter 2) in providing affordable housing and housing equally to all members of society:

Policy 3C *Maximize use of land in the city before considering expansion.*

Action 3.14 *Utilize infill development to accommodate the targeted number and type of housing units described in the Housing Element.*

Action 3.15 *Adopt new development code provisions to ensure compliance with Housing Element objectives.*

Action 3.16 *Renew and modify greenbelt agreements as necessary to direct development to already urbanized areas.*

Action 3.17 *Continue to support the Guidelines for Orderly Development as a means of implementing the General Plan, and encourage adherence to these Guidelines by all the cities, the County of Ventura, and the Local Agency Formation Commission (LAFCO); and work with other nearby cities and agencies to avoid sprawl and preserve the rural character in areas outside the urban edge.*

The 2000-2006 Housing Element sets programs and initiatives for providing housing at affordable rates. The 2000-2006 Housing Element contains housing programs for preserving existing housing, assisting homebuyers, rehabilitating rental units, and facilitating the development of second units and non-traditional housing which will encourage the development of affordable housing in the City.

As discussed in Section 4.3, *Air Quality*, the 2005 General Plan includes numerous policies and actions aimed at reducing vehicle miles traveled and improving access to alternative transportation modes.

Section 4.11, *Public Services*, addresses the 2005 General Plan's potential environmental impacts under Scenarios 1-6 relating to education, recreational facilities, law enforcement, and fire protection. As discussed in Section 4.11, Scenarios 1-6 would not result in significant impacts relating to education, law enforcement, and fire protection. In addition, 2005 General Plan policies are specifically intended to help provide equal access to recreational resources. Therefore, Scenarios 1-6 could be found to be consistent with SCAG RCPG Policies 3.20 and 3.27.

MITIGATION MEASURES

The 2005 General Plan includes various policies that encourage mixed use and infill development and would be expected to reduce vehicle miles traveled (VMT) and associated air pollutant emissions as compared to continued low density development at the City's periphery. Additional mitigation beyond restricting growth to SCAG forecasts is not available.

SIGNIFICANCE AFTER MITIGATION

Scenarios 1-6 could be found to be inconsistent with SCAG Policy 3.01 because citywide population growth projections for any of the six scenarios exceed SCAG forecasts. Though 2005 General Plan policies, in combination with mitigation measures recommended elsewhere in this EIR, would reduce the environmental effects associated with population growth to the degree feasible, the potential exceedance of SCAG's population forecast cannot be avoided outside of implementing a growth control policy that restricts growth to SCAG forecast levels.

Impact PH-3	**The 2005 General Plan could be found to be consistent with the Southern California Association of Governments Growth Visioning Report. Impacts would be Class III, *less than significant*, for any of the six land use scenarios.**

As discussed in detail in Section 4.14, *Land Use*, SCAG has prepared the Growth Visioning Report (GVP) to provide a framework for local and regional decision-making that improves the quality of life for all SCAG residents. Principle 3 of the GVP, which is related to potential population and housing impacts under Scenarios 1-6, states:

> *Principle 3: Enable prosperity for all people*
>
> - *Provide, in each community, a variety of housing types to meet the housing needs of all income levels.*

As discussed under Impact PH-2, SCAG RCPG Policies 3.24 and 3.27, the land use changes accommodated by the 2005 General Plan under Scenarios 1-6 encourage intensification and reuse development that would provide a variety of housing types and would complement the 2000-2006 Housing Element programs that encourage the preservation, redevelopment, and development of rental, assisted living, mobile home, and alternative housing types. Therefore, Scenarios 1-6 could be found to be consistent with Principle 3 of SCAG's GVP.

Though not a significant impact, it should be noted that because Scenario 1 would not accommodate development of any of the expansion areas, it may restrict the types of housing available as compared to Scenarios 2, 3, 4, and 6. By focusing almost exclusively on intensification and reuse within developed areas of the City and, in particular, in the districts and corridors identified on Figure 2-3 in Section 2.0, *Project Description*, it is likely that implementation of Scenario 1 would result in a higher proportion of multiple family housing than would occur under the other scenarios. To a lesser degree, implementation of Scenario 5 may also emphasize multiple family housing in the future by restricting the amount of land available for future single family residential development.

MITIGATION MEASURES

Impacts would be less than significant for any of the six scenarios. No mitigation measures are required.

SIGNIFICANCE AFTER MITIGATION

Impacts relating to consistency with SCAG's Growth Visioning Report would be less than significant for any of the six 2005 General Plan land use scenarios.

Impact PH-4	**Any of the 2005 General Plan land use scenarios would provide for a balance of jobs and housing through 2025. Impacts relating to jobs/housing balances would be Class III, *less than significant*, for any of the six land use scenarios.**

Table 4.15-3 compares the current (2004) ratio of jobs and housing in Ventura to the projected ratios in 2025 under each of the 2005 General Plan land use scenarios. As indicated, the current ratio is estimated at 1.34 jobs per residential unit. Under either land use scenario, the number of jobs relative to housing is projected to rise slightly by 2025.

Table 4.15-3
Current and Projected Future Jobs/Housing Ratios

2004 Citywide Ratio of Jobs to Housing		1.34 jobs/unit
Projected 2025 Citywide Ratio of Jobs to Housing	Scenario 1	1.41 jobs/unit
	Scenarios 2-6	1.45 jobs/unit

Ratios are based on estimates of employment and housing in Table 4.15-2.

According to the California Employment Development Department (EDD), the current (January 2005) workforce in Ventura County is about 415,250 (www.labormarketinfo.edd). The California Department of Finance estimates the current (2004) number of housing units in the County at 264,583. This suggests that a "balance" of jobs and housing in the Ventura County

region is about 1.57 jobs/residential unit (415,250 divided by 264,583) as there are about 1.57 workers per housing unit countywide. The current ratio of jobs and housing in the City is roughly equivalent to the countywide ratio and would get incrementally closer to this countywide "balanced" ratio under either growth scenario. Any of the land use scenarios would accommodate residential and non-residential development that would maintain a balance of jobs and housing in the City. Thus, significant impacts are not anticipated for any of the six land use scenarios.

MITIGATION MEASURES

Impacts related to the jobs/housing balance would be less than significant for any of the six scenarios. Mitigation is not required.

SIGNIFICANCE AFTER MITIGATION

Significant impacts relating to the jobs/housing balance are not anticipated under any of the six 2005 General Plan land use scenarios.

5.0 OTHER CEQA-REQUIRED DISCUSSIONS

This section discusses other issues for which CEQA requires analysis in addition to the specific issue areas discussed in Section 4.0, *Environmental Impact Analysis*. These additional issues include: (1) the potential to induce growth; and (2) significant and irreversible impacts on the environment.

5.1 GROWTH INDUCING EFFECTS

Section 15126.2(d) of the *CEQA Guidelines* requires that EIRs discuss the potential for projects to induce population or economic growth, either directly or indirectly. CEQA also requires a discussion of ways in which a project may remove obstacles to growth.

As discussed in Section 2.0, *Project Description*, it is anticipated that between about 8,300 residential units (Scenario 1) and 11,000 residential units (Scenarios 2-6) could be added within the Ventura Planning Area through 2025 under the 2005 General Plan. This number of units would accommodate about 21,000-28,000 new residents in Ventura, which would bring the City's population to between about 126,000 and 133,000. Such growth represents an approximately 20-27% increase in population over the 20-year timeframe of the 2005 General Plan. As discussed in Sections 4.3, *Air Quality*, and 4.15, *Population and Housing*, the 2025 population projections considered in this EIR exceed the forecasts upon which SCAG's Regional Transportation Plan and the Ventura County APCD's Air Quality Management Plan are based. The exceedance of these forecasts is largely because the SCAG and APCD forecasts have not been updated to reflect current City conditions and planning policies. In addition, it is not expected that the level of population growth projected for the City would hinder attainment of state or federal air quality standards. Nevertheless, the exceedance of regional growth forecasts is identified as an unavoidably significant impact of any of the six land use scenarios.

The 2005 General Plan also includes various policies and actions intended to attract businesses to the City and any of the land use plans would accommodate economic and job growth through 2025. As discussed in Section 2.0, citywide job growth through 2025 is projected to range from about 14,000 to 20,000 jobs, which represents growth of about 26-37% over the current level of employment in the City. As discussed in Section 4.15, such job growth is similar to SCAG forecasts for the City. The economic growth that could be accommodated under the 2005 General Plan would have economic benefits in terms of jobs and City tax revenues, but would contribute to various environmental effects, including increased traffic, noise, and air pollution.

It is the specific purpose of the 2005 General Plan to accommodate the orderly development of Ventura. Therefore, by its nature, the General Plan is intended to reduce the potential for uncontrolled growth and associated environmental impacts. This intent would be reinforced by the anticipated future relocation of the Sphere of Influence (SOI) boundary to exclude the hillside areas above the City, which are currently designated for residential development under the 1989 Comprehensive Plan.

The 2005 General Plan is specifically intended to focus future development in certain areas of the Planning Area – primarily, in the districts and corridors shown on Figures 2-3 through 2-8 in

Section 2.0 and other areas already designated for urban development under the 1989 Comprehensive Plan. Plan implementation could therefore induce growth in these areas. This is expected to result in an overall intensification of land use within the districts and corridors, with the potential for compatibility conflicts relating to traffic, aesthetics, and noise. However, incorporation of appropriate design techniques on future developments is expected to minimize the potential for conflicts. In addition, by focusing on the intensification and reuse of already urbanized areas of the community, it is anticipated that implementation of any of the General Plan land use scenarios would reduce the potential for growth pressure in undeveloped areas at the periphery of the City. This would be expected to generally reduce the potential for impacts relating to such issues as biological resources, regional traffic, and air quality as compared to continued low density development on agricultural or open space lands. The reuse of industrial properties in certain areas of the City, particularly along Ventura Avenue, also offers the opportunity to remediate existing soil contamination and generally enhance aesthetic conditions.

Depending upon the land use scenario selected, the 2005 General Plan could potentially accommodate the future development of certain agricultural lands within the Planning Area that are currently designated for continued agricultural or open space use. These include the North Avenue, Olivas, Serra, Western Cañada Larga, and Poinsettia expansion areas. Inclusion of one or more of these areas on the General Plan land use map as an area for possible future development would indicate the intent to consider future conversion of these areas to non-agricultural uses. As discussed in Section 4.2, *Agriculture*, the conversion of agricultural lands within the expansion areas would be considered an unavoidably significant impact to agricultural resources. However, because all of the areas are to retain their current land use designations, a future General Plan amendment would be needed prior to conversion to another use. Such an amendment would require voter approval under the SOAR Ordinance. Annexation of any of these areas to the City would also require the approval of the Ventura County Local Agency Formation Commission (LAFCO).

Development of any of the expansion areas would require the extension of infrastructure to serve new development. Two of the expansion areas under consideration – Serra and Poinsettia – are essentially surrounded by urban areas on all sides. The Poinsettia area is also entirely within the current SOI and most of the Serra area is also within the SOI. As such, extension of infrastructure to these areas would not expand the geography of the area that is already planned to receive City services. The Olivas area is outside the SOI, but is between the urbanized Midtown and Arundell communities and Ventura Harbor. The North Avenue and Western Cañada Larga expansion areas are near the Planning Area's northern periphery and the Western Cañada Larga area is outside the current SOI. These areas would require expansion of City services, which may accommodate additional growth in areas between the current northern City limit and the expansion areas. However, road and other infrastructure are available to serve all three areas. With implementation of policies and actions proposed in the 2005 General Plan, in combination with additional actions recommended in this EIR, service and infrastructure needs could be met for all of the expansion areas. Moreover, it is a specific goal of any of the General Plan land use scenarios to accommodate new industrial park development in the North Avenue area.

5.2 IRREVERSIBLE ENVIRONMENTAL EFFECTS

The CEQA *Guidelines* require that EIRs evaluating projects involving amendments to public plans, ordinances, or policies contain a discussion of significant irreversible environmental changes. CEQA also requires decisionmakers to balance the benefits of a proposed project against its unavoidable environmental risks in determining whether to approve a project. This section addresses non-renewable resources, the commitment of future generations to the proposed uses, and irreversible impacts associated with the proposed development.

Construction activity that would be accommodated under any of the 2005 General Plan land use scenarios would involve the use of building materials and energy, some of which are non-renewable resources. Consumption of these resources would occur with any development in the region and are not unique to the City of Ventura or the General Plan. The addition of new residential and non-residential development in the City through 2025 would irreversibly increase local demand for non-renewable energy resources such as petroleum and natural gas. Increasingly efficient building fixtures and automobile engines, as well as implementation of policies included in the 2005 General Plan, are expected to offset the demand to some degree. It is not anticipated that growth accommodated under the General Plan would significantly affect local or regional energy supplies.

As discussed in Section 4.2, *Agriculture*, implementation of any of the General Plan land use scenarios would accommodate the conversion of Prime agricultural lands to non-agricultural uses. Scenario 1 (Intensification/Reuse) would have the least impact to agriculture and would limit conversion to lands already designated for non-agricultural uses. Scenarios 2-6 would all also accommodate the possible future conversion of agricultural lands that are currently designated "Agricultural Use," though any future change in land use designation would require a public vote under the SOAR Initiative. For Scenarios 2 and 3, the possible conversion of agricultural land within the Olivas expansion area may also conflict with California Coastal Act policy since that expansion area is within the coastal zone. Impacts to agriculture are considered unavoidably significant for any of the six land use scenarios. Though any of the six land use scenarios are expected to generally enhance visual conditions in much of the City, this conversion of agricultural land that is highly visible from important view corridors (including U.S. 101, SR 126, and SR 33) is also considered an unavoidably significant aesthetic impact of any of the six scenarios.

Growth accommodated under any of the land use scenarios would require an irreversible commitment of law enforcement, fire protection, water supply, wastewater treatment, and solid waste disposal services. As discussed in Sections 4.11 and 4.13, impacts to public services and utilities generally can be reduced to a less than significant level with implementation of policies included in the 2005 General Plan and additional actions recommended in this EIR. However, because the lifespan of solid waste disposal facilities that currently serve the City is less than the 20-year timeframe of the General Plan, the availability of solid waste disposal facilities cannot be assured. This is considered an unavoidably significant impact under any of the six scenarios.

The additional vehicle trips associated with growth through 2025 would incrementally increase local traffic and noise levels and regional air pollutant emissions. As discussed in Section 4.10,

Noise, implementation of proposed policies and actions, in combination with the additional recommended action, could reduce the noise impacts associated with future growth to a less than significant level. As discussed in Section 4.12, *Transportation/Traffic*, proposed intersection level of service performance standards could be met at all locations for Scenarios 1, 3, 4, 5, and 6 with implementation of recommended circulation improvements and 2005 General Plan policies and actions. However, for Scenario 2, the proposed performance standard of D could not be achieved at the Johnson Drive/North Bank Drive intersection even with implementation of feasible improvements; therefore, the impact at that location would be unavoidably significant under Scenario 2. As discussed in Section 4.3, *Air Quality*, the continued collection of transportation demand management (TDM) fees on new development for implementation of regional air pollution programs could reduce the air pollutant emissions associated with individual future development projects to below significance thresholds. However, because the projected increase in population through 2025 exceeds SCAG and Ventura County APCD forecasts, growth accommodated under the General Plan is outside the parameters of the Ventura County AQMP and SCAG's Regional Transportation Plan. Although the 1989 Comprehensive Plan could potentially accommodate similar levels of population growth, this is considered a significant effect of implementation of the any of the 2005 General Plan scenarios.

6.0 ALTERNATIVES

As required by Section 15126.6 of the State *CEQA Guidelines,* this EIR examines a range of alternatives to the 2005 General Plan. Included in this analysis are two versions of the CEQA-required "no project" alternative (no further development and growth in accordance with the 1989 Comprehensive Plan), one alternative that addresses possible impacts if all expansion areas were developed, and four alternative plans that would address issues raised in NOP responses or impacts associated with one or more of the General Plan scenarios described in Section 2.0, *Project Description*, and analyzed in Section 4.0, *Environmental Impact Analysis*. The alternatives are listed below:

- *No Project (no further development)*
- *No Project (1989 Comprehensive Plan)*
- *Restricted Growth (0.78% annual growth rate)*
- *No Important Farmland Conversion*
- *Upper North Avenue District Housing*
- *Intensification/Reuse + Minor Map Clean-up*
- *All Expansion Areas*

Table 6-1 provides a summary comparison of the development characteristics of the four alternatives. A more detailed description of the various alternatives is included in the impact analysis for each alternative.

As required by CEQA, this section also includes a discussion of the "environmentally superior alternative" among those studied.

6.1 NO PROJECT (NO FURTHER DEVELOPMENT)

6.1.1 Description

This version of the "no project" alternative assumes that no further residential or non-residential development would occur in the City and that environmental conditions would not change. No new roadway infrastructure improvements, parks, or other City facilities would be constructed. It is assumed that the current population (approximately 105,000) would not change, though it should be recognized that the City cannot in reality control whether or not population growth occurs. Absent additional housing, any population growth in the City would be accommodated through increasing the number of persons per household.

6.1.2 Impact Analysis

Implementation of this alternative would not result in any physical changes as it would not accommodate any new development. As such, it would not have any of the positive changes anticipated to occur as a result of development under the 2005 General Plan or any of the significant adverse effects associated with new development. This alternative would avoid the unavoidably significant impacts of the 2005 General Plan relating to aesthetics, exceedance of the Ventura County AQMP and SCAG population forecasts, solid waste disposal facilities, traffic (Scenario 2 only), inconsistency with the Guidelines for Orderly Development (Scenario

Table 6-1
Comparison of Alternatives' 2025 Development Characteristics

Characteristic	Alternative						
	No Project (no further development)	**No Project (1989 Comprehensive Plan)**	**Restricted Growth (0.78% Annual Growth)**	**No Important Farmland Conversion**	**Upper North Avenue Housing**	**Intensification/ Reuse + Minor Map Cleanup**	**All Expansion Areas**
Estimated Annual Population Growth Rate	0%	1.14%	0.78%	0.88%	1.14%	1.14%	1.6%
Projected 2025 Population	105,000	133,160	123,645	126,153	133,160	126,153	146,329
Projected New Housing Units in 2025	0	11,000	7,200	8,300	11,000	8,300	16,100
Expansion Areas Included	None	None, but development accommodated in hillsides	None	None	North Avenue, Western Cañada Larga	None	North Avenue, Olivas, Serra, Western Cañada Larga, Poinsettia

5 only), and inconsistency with the California Coastal Act policy regarding conversion of Prime farmland (Scenarios 2 and 3 only). On the other hand, this alternative would not address any of the infrastructure deficiencies in the City or address possible impacts relating to regional traffic growth, which the City does not control. Failure to provide additional housing and non-residential development could result in overcrowded conditions within the existing housing stock and lack of jobs for local residents.

6.2 NO PROJECT (1989 COMPREHENSIVE PLAN)

6.2.1 Description

This version of the "no project" alternative is assumed to be growth accommodated through 2025 under the 1989 Comprehensive Plan. The land use map for the 1989 Comprehensive Plan is shown on Figure 2-2 in Section 2.0, *Project Description*. This map works in conjunction with the current zoning map.

Based on recent observed growth rates (see section 2.5.5), it is presumed that the 1989 Comprehensive Plan would accommodate a level of growth and development through 2025 similar to that which could occur under Scenarios 2-6. The difference between Scenarios 2-6 and continued implementation of the 1989 Comprehensive Plan would be not in how much growth could occur, but rather where and how growth might occur. The key differences between the 1989 Comprehensive Plan land use map and the 2005 General Plan land use map are as follows:

- *The 1989 Comprehensive Plan land use map does not include the districts, corridors, or neighborhood centers that are part of all six 2005 General Plan land use scenarios. The districts, corridors, and neighborhood centers may be less of a focal point for future development under this scenario and live/work housing would not be allowed within industrial districts. However, this alternative does include the Downtown Specific Plan designation, which calls for a mix of uses in the Downtown area. In addition, because the current Zoning Code allows multi-family residential development within commercially zoned areas, many of the areas anticipated to be the focal point of future intensification and reuse (e.g., Ventura Avenue, Main Street, and Thompson Boulevard corridors) could also undergo similar intensification under the 1989 Comprehensive Plan.*
- *The 1989 Comprehensive Plan land use map designates the North Avenue, Olivas, Serra, and Poinsettia expansion areas as Agricultural Use and does not contemplate their conversion to non-agricultural use. The Western Cañada Larga expansion area is outside the current SOI and also is not contemplated for conversion. Therefore, it is anticipated that all of these areas would remain in their current agricultural/open space use.*
- *The 1989 Comprehensive Plan land use map includes over 3,000 thousand acres of hillside land above the City within the SOI and designates the entire area as Hillside Planned Residential, a designation that could accommodate residential development at varying densities. Although the hillside area is subject to voter approval under Measure P, residential development could be approved in any portion of this area (similar to the voter approval needed for four of the five expansion areas under the SOAR Ordinance).*

It is assumed that the 1989 Comprehensive Plan could accommodate about 11,000 residential units and a similar amount of non-residential development as could be accommodated under Scenarios 2-6 of the 2005 General Plan. It is anticipated that 8,300 units would be built within the general boundaries of the SOI included in 2005 General Plan Scenario 1 and that the remaining 2,700 units would be built in the hillsides above the City rather than in one or more of the expansion areas.

6.2.2 Impact Analysis

Aesthetics

This alternative would convert a similar amount of agricultural land as would be converted under 2005 General Plan Scenario 1 and less agricultural land than would be converted under Scenarios 2-6. Impacts to freeway view corridors may be lower from some vantage points, depending upon the 2005 General Plan scenario selected. However, this alternative would accommodate up to 2,700 residences in the hillsides above the City. Although development could be partially hidden from view, it is anticipated that grading and development in the hillsides would have unavoidably significant visual impacts.

Agriculture

Impacts relating to agricultural conversion would be similar to those of 2005 General Plan Scenario 1. An estimated 674 acres of Prime, Unique, and Statewide Importance farmlands could be converted. Impacts would be unavoidably significant, but this alternative would involve less agricultural conversion than would occur under Scenarios 2-6. On the other hand, the compatibility conflicts relating to agricultural-urban interface associated with the expansion areas – the Serra and Poinsettia areas, in particular – would remain under this alternative.

Air Quality

Long-term air quality impacts would be generally similar to those of 2005 General Plan Scenarios 2-6. Overall vehicle miles traveled and associated air pollutant emissions may be incrementally higher due to increased travel distances. In addition, construction activity in the hillsides could generate greater amounts of construction-related dust.

Biological Resources

By accommodating development in the hillsides, this alternative would have greater potential to disturb sensitive plant and animals species and habitats than any of the six 2005 General Plan land use scenarios. In addition, development in the hillsides would likely have substantially greater impacts to wildlife movement. This alternative would be expected to have unavoidably significant biological resource impacts.

Cultural Resources

By potentially accommodating substantial hillside development, this alternative may have somewhat greater potential to disturb as yet undiscovered cultural resource remains than the 2005 General Plan scenarios. However, as with the 2005 General Plan, implementation of

appropriate historic and archaeological resource policies could avoid significant impacts to cultural resources.

Geologic Hazards

By potentially accommodating substantial hillside development, this alternative would potentially entail greater levels of grading and associated topographical changes than could occur under the 2005 General Plan land use scenarios. Adding up to 2,700 residences in the hillsides above the City would also increase the potential for property damage associated with landslides, mudslides, and seismic activity.

Hazards and Hazardous Materials

Impacts relating to hazards would be similar to those of the 2005 General Plan land use scenarios. It is presumed that standard practices to address soil and groundwater contamination issues would continue to be implemented and that the City would continue to pursue funding for remediation of brownfield sites. Though potential impacts relating to industrial-residential compatibility associated with the 2005 General Plan land use scenarios can be addressed on a case-by-case basis, this alternative would be expected to reduce the potential for such conflicts since live/work residential components would not be allowed within industrially-designated properties.

Hydrology and Water Quality

Hydrology and water quality impacts would be similar to those associated with the 2005 General Plan land use scenarios and could be addressed through standard engineering practices. Development in the hillsides would, however, be subject to greater erosion potential than development that could be accommodated under the 2005 General Plan.

Mineral Resources

Similar to the 2005 General Plan scenarios, this alternative would not create conflicts with existing mineral resource extraction activity. This alternative would not create compatibility conflicts with oil production in the North Avenue area as residential development would not be allowed within industrially designated areas.

Noise

Overall increases in noise and exposure to noise would be similar to those associated with General Plan Scenarios 2-6. However, the hillside areas that would accommodate 2,700 units under this alternative are not subject to significant noise constraints, whereas all of the expansion areas under consideration are subject to noise constraints associated with roadways and/or railroads. Therefore, although implementation of proposed 2005 General Plan policies and actions, in combination with the additional action recommended in this EIR, could achieve City noise standards, the potential for noise conflicts associated with future development may be incrementally lower under this alternative.

Public Services

The overall increase in demand for public services would be about the same as under Scenarios 2-6. Impacts relating to police protection service, solid waste, libraries would be the same as those described for Scenarios 2-6 in Section 4.11, *Public Services*. Solid waste impacts would be unavoidably significant.

With respect to fire protection, a new fire station in the North Avenue area likely would not be needed; however, a new station in or adjacent to the hillsides likely would be needed. The addition of up to 2,700 residences in the hillside areas above the City, which have high wildland fire risk, would also substantially increase the risk of fire-related property damage and loss of life as compared to the 2005 General Plan land use scenarios.

Similar to 2005 General Plan Scenario 2, this alternative provides ample acreage to meet future citywide school and park needs as the hillside areas include more than 3,000 acres. The possible locations of future park facilities may not be convenient for current City residents, but this alternative would not have the land constraints for new facilities that would occur under 2005 General Plan Scenarios 1 and 5.

Transportation and Circulation

Overall traffic increases would be similar to those associated with 2005 General Plan Scenarios 2-6. It is generally anticipated that planned enhancements to the circulation system would generally achieve the City's level of service standards. The roadway that may experience significantly greater impacts under this alternative is Foothill Road, which would likely accommodate much of the traffic generated by hillside residential development. It is anticipated that service levels on Foothill Road would drop below City standards if this alternative were implemented, possibly warranting widening or other capacity enhancements.

Utilities and Service Systems

Although the increase in urban water demand would be similar to Scenarios 2-6, this alternative would convert undeveloped hillside land (which currently does not consume water) rather than irrigated agricultural land. Thus, it would receive less agricultural water credit and net 2025 demand within Planning Area would be somewhat higher than for Scenarios 2-6. Nevertheless, it is anticipated that future water demand would remain within the City's projected water supplies. As with Scenarios 2, 3, 4, and 6, this alternative would not be expected to result in wastewater generation increases exceeding local treatment plant capacity.

Land Use and Planning

Like 2005 General Plan Scenarios 2-6, this alternative would generally be consistent with most regional land use plans and policies. This alternative would not pose the potential conflict with Coastal Act policies pertaining to the preservation of Prime farmland that would occur under 2005 General Plan Scenarios 2 and 3. On the other hand, this alternative could be found to be inconsistent with SCAG Regional Comprehensive Plan and Guide policies (which were adopted after the 1989 Comprehensive Plan) relating to developing compact communities, preservation

of biological resources, and focusing development in areas that are not subject to significant geologic or wildland fire hazards.

Population and Housing

Population and housing growth would be similar to that of General Plan Scenarios 2-6. The 2025 population is projected to exceed SCAG and Ventura County AQMP forecasts. Like the 2005 General Plan scenarios, it is anticipated that implementation of this alternative would maintain a balance of jobs and housing.

6.3 RESTRICTED GROWTH (0.78% ANNUAL GROWTH RATE)

6.3.1 Description

This alternative envisions a slower population growth rate than would occur under Scenarios 1-6. The 0.78% annual growth rate would result in a 2025 population of 123,645, which is equivalent to SCAG's 2025 population forecast for the City. The purpose of considering this growth rate is to assess an alternative that would be consistent with the growth projections upon which SCAG's Regional Transportation Plan and the Ventura County AQMP are based.

It is assumed that this alternative would not include any of the expansion areas under consideration. The land use map would be identical to the Scenario 1 map (see Figure 2-3 in Section 2.0, *Project Description*). Therefore, agricultural lands within the proposed SOI that are currently designated for non-agricultural uses could be converted under this alternative.

6.3.2 Impact Analysis

Aesthetics

This alternative would convert a similar amount of agricultural land as would be converted under 2005 General Plan Scenario 1 and less agricultural land than would be converted under Scenarios 2-6. Impacts to freeway view corridors would be about the same as those of Scenario 1. The overall intensity of development in the districts and corridors may be incrementally lower than under Scenario 1, but the overall magnitude of change would be about the same as would occur under any of the General Plan scenarios.

Agriculture

Impacts relating to agricultural conversion would be similar to those of 2005 General Plan Scenario 1. An estimated 674 acres of Prime, Unique, and Statewide Importance farmlands could be converted. Impacts would be unavoidably significant, but this alternative would involve less agricultural conversion than would occur under Scenarios 2-6. As with Scenario 1, the compatibility conflicts relating to agricultural-urban interface associated with the expansion areas – the Serra and Poinsettia areas, in particular – would remain under this alternative.

Air Quality

The overall increase in air pollutant emissions associated with this alternative would be generally similar to, but slightly lower than what would occur under 2005 General Plan Scenario 1. Overall vehicle miles traveled and associated air pollutant emissions would be incrementally lower due to the reduction in population growth. Because the projected population growth associated with this alternative would be within SCAG and Ventura County APCD forecasts, this alternative would be consistent with the Ventura County AQMP. Therefore, the unavoidably significant impact relating to the potential inconsistency with the AQMP would not occur under this alternative.

Biological Resources

This alternative's impacts to biological resources would be similar to those of 2005 General Plan Scenario 1. Implementation of proposed General Plan policies and actions would reduce biological resource impacts to a less than significant level.

Cultural Resources

This alternative's impacts to cultural resources would be similar to those of 2005 General Plan Scenario 1. Implementation of proposed 2005 General Plan policies and actions would reduce cultural resource impacts to a less than significant level.

Geologic Hazards

This alternative's impacts related to geologic hazards would be similar to those of 2005 General Plan Scenario 1. Implementation of proposed 2005 General Plan policies and actions would reduce geologic hazard impacts to a less than significant level.

Hazards and Hazardous Materials

This alternative's impacts related to hazardous materials would be similar to those of 2005 General Plan Scenario 1. Implementation of proposed 2005 General Plan policies and actions would reduce impacts relating to hazardous materials to a less than significant level.

Hydrology and Water Quality

This alternative's impacts related to hydrology and water quality would be similar to those of 2005 General Plan Scenario 1. Implementation of proposed 2005 General Plan policies and actions would reduce impacts to hydrological conditions and water quality to a less than significant level.

Mineral Resources

Similar to the 2005 General Plan scenarios, this alternative would not create conflicts with existing mineral resource extraction activity. Residential development in the North Avenue community could create conflicts with oil extraction activity, though implementation of

proposed 2005 General Plan policies/actions and appropriate safety and noise controls on a case-by-case basis would reduce potential impacts to a less than significant level.

Noise

Overall increases in noise and exposure to noise would be similar to, but slightly lower than, those associated with 2005 General Plan Scenario 1. The overall potential for exposure to noise would be incrementally lower since overall population growth would be lower. As with the 2005 General Plan scenarios, noise impacts could be addressed through implementation of 2005 General Plan policies/actions, the additional action recommended in this EIR, and incorporation of noise attenuation features into new development on a case-by-case basis.

Public Services

The overall increase in demand for public services would be similar to, but slightly lower than, that of 2005 General Plan Scenario 1 since the population increase through 2025 would be about 13% lower. The new station near Ventura Harbor would be needed, but a new fire station in the North Avenue area likely would not be needed. An estimated 23 new police officers would be needed to maintain the current officers/residents ratio and expansion of the police department headquarters would be needed.

The citywide increase in solid waste generation sent to landfills through 2025 is estimated at 74 tons per day for this alternative. This is within the currently available capacity of area landfills. However, because Toland Road and Simi Valley landfills are projected to close by 2027, alternate disposal facilities or methods will be needed.

Growth accommodated under this alternative would generate an estimated 3,024 new students at the VUSD (assuming 7,200 new housing units) and generate demand for an estimated 187 acres of parks based on the 10 acres/1,000 residents standard. Continued collection of school and park impact fees would reduce school and park impacts to less than significant under CEQA. However, it should be noted that, similar to 2005 General Plan Scenario 1, this alternative does not include large tracts of land that could be used for the development of new parks and schools.

Transportation and Circulation

Overall traffic increases would be about 13% lower than under 2005 General Plan Scenario 1 and traffic impacts would be commensurately lower. It is generally anticipated that planned enhancements to the circulation system would continue to achieve the City's level of service standards.

Utilities and Service Systems

Overall water demand and wastewater generation would be about 13% than that associated with 2005 General Plan Scenario 1. Similar to Scenario 1, it is anticipated that projected water supplies and the current capacity of the City's wastewater treatment plant would be adequate to serve development anticipated under this alternative.

Land Use and Planning

Like 2005 General Plan Scenario 1, this alternative would generally be consistent with most regional land use plans and policies. This alternative would not pose the potential conflict with the Guidelines for Orderly Development associated with Scenario 5 or the potential conflict with Coastal Act policies pertaining to the preservation of Prime farmland that would occur under Scenarios 2 and 3.

Population and Housing

Population and housing growth would be about 13% lower than under 2005 General Plan Scenario 1. The 2025 population would not exceed SCAG and Ventura County AQMP forecasts; therefore, the significant impact associated with exceedance of these forecasts that would occur under any of the 2005 General Plan scenarios would not occur. However, some form of growth control , such as the City's current RGMP would have to be established to keep population growth within these forecasts. As with the 2005 General Plan scenarios, implementation of this alternative would be expected to maintain a balance of jobs and housing, with a concomitant reduction in the overall number of jobs generated. Like Scenario 1, this alternative would be expected to accommodate mainly medium to high density multiple family housing, with new single family housing primarily limited to remnant agricultural properties in the Saticoy and Thille communities.

6.4 NO IMPORTANT FARMLAND CONVERSION

6.4.1 Description

Under this alternative, no agricultural lands within the Planning Area would be converted to a non-agricultural use. Therefore, none of the expansion areas would be included and all lands within the Planning Area that are have important farmlands (Prime, Statewide Importance, or Unique) and are currently in agricultural use, but designated for a non-agricultural use would be redesignated "Agricultural Use" and retained in agriculture. A total of approximately 674 acres would be redesignated. Affected areas include more than 300 acres in the Saticoy area, the 75-acre McGrath property in the Arundell community, a 25-acre agricultural property in the Thille community near the U.S. 101/SR 126 interchange, and other smaller agricultural lands throughout the Planning Area.

This alternative is essentially a derivative of 2005 General Plan Scenario 1. Its purpose is to provide an alternative that eliminates the unavoidably significant impact of the 2005 General Plan with respect to agricultural land conversion. It is assumed that the citywide growth rate would be 0.88% annually, similar to that described for Scenario 1. Thus, an estimated 8,300 residences are assumed to be added by 2025. Because the overall amount of land available for future development would be lower than under Scenario 1, it is assumed that greater levels of intensification would occur within the districts, corridors, and neighborhood centers.

6.4.2 Impact Analysis

Aesthetics

No agricultural land would be converted under this scenario. Impacts to views from freeways and other corridors would therefore be lower from some vantage points. By retaining all agricultural lands, it is anticipated that this alternative would eliminate the unavoidably significant aesthetic impacts relating to visual character of alteration of views. On the other hand, this alternative would be expected to result in higher intensity development in some parts of the City than would occur under the 2005 General Plan. Though careful site design would minimize potentially negative aesthetic effects, this alternative would be expected to create a somewhat more urban character in the districts and corridors.

Agriculture

No agricultural land within the Planning Area would be converted under this alternative. Thus, the unavoidably significant impact relating to agricultural land conversion would be eliminated. On the other hand, the compatibility conflicts relating to existing agricultural-urban interface that are present in portions of the community would remain, whereas conversion of agricultural lands that are surrounded by urban uses, as could occur under any of the 2005 General Plan scenarios, would eliminate many of the current conflicts.

Air Quality

Long-term air quality impacts would be generally similar to those of 2005 General Plan Scenario 1. Population growth projected for this alternative exceeds the growth forecast upon which the Ventura County AQMP is based. Overall vehicle miles traveled and associated air pollutant emissions may be incrementally lower than under Scenario 1 due to the generally higher density development and lower travel distances. On the other hand, the higher intensity of development may increase traffic congestion and associated emissions in certain parts of the City, notably Downtown and the Ventura Avenue corridor.

Biological Resources

By concentrating development in already developed areas, this alternative would largely avoid impacts to biological resources. The agricultural lands that would be preserved under this alternative generally do not have high biological resource value. Impacts would be similar to, but slightly lower than, those of 2005 General Plan Scenario 1.

Cultural Resources

The agricultural areas to be preserved under this alternative do not include known historic resources. Because they have been disturbed by agricultural activity, they are not expected to include significant archaeological resources. Nevertheless, because the agricultural lands in Saticoy are within an area of archaeological significance, the potential to disturb archaeological resources would be incrementally lower than under 2005 General Plan Scenario 1. As with the 2005 General Plan, implementation of appropriate historic and archaeological resource policies could avoid significant impacts to cultural resources.

Geologic Hazards

Geologic hazard impacts would be similar to those of 2005 General Plan Scenario 1. Compliance with 2005 General Plan policies/actions and UBC requirements on new development would reduce impacts to a less than significant level.

Hazards and Hazardous Materials

Impacts relating to hazards would be similar to those of the 2005 General Plan land use scenarios. It is presumed that standard practices to address soil and groundwater contamination issues would continue to be implemented and that the City would continue to pursue funding for remediation of brownfield sites.

Hydrology and Water Quality

Hydrology and water quality impacts generally would be similar to those associated with the 2005 General Plan land use scenarios and could be addressed through standard engineering practices and compliance with federal, state, and local runoff control requirements. However, leaving additional land in agricultural use may reduce the City's ability to control sedimentation and water quality as compared to General Plan Scenario 1.

Mineral Resources

Impacts relating to mineral resources would be similar to those of the 2005 General Plan scenarios. The agricultural lands that would be preserved under this scenario do not include any mineral resource extraction activity.

Noise

Overall increases in noise and exposure to noise would be similar to that associated with General Plan Scenario 1. The slightly higher intensity of development anticipated for the districts and corridors may incrementally increase noise levels on some roads and expose more new residences to urban noise. However, implementation of proposed 2005 General Plan policies/ actions, the additional action recommended in this EIR, and incorporation of appropriate noise attenuation features on new development could achieve City noise standards.

Public Services

The overall increase in demand for public services would be about the same as under 2005 General Plan Scenario 1. Impacts relating to police protection service, solid waste, libraries would be the same as those described for Scenario 1 in Section 4.11, *Public Services*. With respect to fire protection, a new fire station in the North Avenue area likely would not be needed under this alternative.

Continued collection of school and park impact fees would reduce school and park impacts to less than significant under CEQA. However, it should be noted that, similar to 2005 General Plan Scenario 1, this alternative does not include large tracts of land that could be used for the development of new parks and schools.

Transportation and Circulation

Overall traffic increases would be similar to those associated with 2005 General Plan Scenario 1. Planned enhancements to the circulation system would generally achieve the City's level of service standards, though the anticipated higher intensity of development in districts, corridors, and neighborhood centers may increase overall congestion along main City thoroughfares. On the other hand, the generally more compact development associated with this alternative may reduce overall vehicle miles traveled and increase transit use to some degree.

Utilities and Service Systems

Future urban water demand would be similar to that of Scenario 1. However, because an additional 674 acres of agricultural lands would remain in agricultural production, the net increase in Planning Area water demand would be about 1,278 AFY higher than for Scenario 1. Nevertheless, water demand would remain within projected future supply. Wastewater treatment plant capacity impacts would be similar to those of Scenario 1. No exceedance of plant capacity is anticipated.

Land Use and Planning

Like 2005 General Plan Scenarios 1, this alternative would generally be consistent with most regional land use plans and policies. This alternative would not pose the potential conflicts with the Guidelines for Orderly Development that would occur under Scenario 5 or with the Coastal Act policies pertaining to the preservation of Prime farmland that would occur under Scenarios 2 and 3.

Population and Housing

Population and housing growth would be similar to that of General Plan Scenario 1. The 2025 population is projected to exceed SCAG and Ventura County AQMP forecasts. It is anticipated that, like the 2005 General Plan scenarios, implementation of this alternative would maintain a balance of jobs and housing. To an even greater degree than under Scenario 1, this alternative would likely emphasize high density multiple family housing to meet future housing needs rather than single family housing since new housing development would be restricted almost exclusively to districts, corridors, and neighborhood centers.

6.5 UPPER NORTH AVENUE DISTRICT HOUSING

6.5.1 Description

This alternative is a variation of 2005 General Plan Scenario 5, the Intensification/Reuse + North Avenue + Western Cañada Larga scenario. As discussed in Section 2.0, *Project Description*, the two expansion areas included in Scenario 5 do not provide sufficient acreage to accommodate a mix of housing types or to accommodate parks, schools, or other public facilities. Consequently, this alternative considers a more realistic scenario in which some of the development that would occur within the North Avenue and Western Cañada Larga areas would instead occur within the Upper North Avenue District, adjacent to the Brooks Institute

and on the Petrochem Refinery site. This would entail changing the land use designation for these areas from Industrial to Residential.

It is anticipated that the Upper North Avenue District would accommodate the following development under this alternative in addition to the level of development anticipated for that area under Scenario 5:

- 300,000 square feet of office/retail development adjacent to Brooks Institute
- 300 units of student/rental housing adjacent to Brooks Institute
- 750 residences on the Petrochem site

Because this amount of development would be accommodated within the Upper North Avenue District, it is assumed that the amount of development within the North Avenue and Western Cañada Larga expansion areas would be reduced commensurately. This would leave the following amount of development within the two expansion areas combined:

- 1,650 residences
- Approximately 250,000 square feet of office/retail development

Other than this change, this alternative would be the same as 2005 General Plan Scenario 5.

6.5.2 Impact Analysis

Aesthetics

This alternative would convert a similar amount of agricultural land as would be converted under Scenario 5. The overall intensity of development within the North Avenue and Western Cañada Larga expansion areas would be lower under this alternative and more commensurate with the intensity of existing development in the area. This alternative would increase the intensity of development within the Upper North Avenue District, which may be considered an adverse effect. However, the visibility of most of this area from the SR 33 corridor is relatively low and implementation of this alternative would be expected to improve the visual character of the Petrochem site.

Agriculture

Impacts relating to agricultural conversion would be similar to those of 2005 General Plan Scenario 5. An estimated 681 acres of Prime, Unique, and Statewide Importance farmlands could be converted. Impacts would be unavoidably significant, but this alternative would involve less agricultural conversion than would occur under Scenarios 2, 3, 4, or 6.

Air Quality

Long-term air quality impacts would be generally similar to those of Scenarios 2-6. As with all of the 2005 General Plan Scenarios, projected population growth under this alternative exceeds the Ventura County AQMP forecast and therefore could be found to be inconsistent with the AQMP. The higher intensity of development in the North Avenue area as compared to 2005

General Plan Scenarios 1-4 and 6 may incrementally increase the transport of pollutants to the Ojai Valley.

Biological Resources

By reducing the overall intensity of development in the North Avenue and Western Cañada Larga areas as compared to 2005 General Plan Scenario 5, this alternative would incrementally reduce the potential for impacts to riparian resources in the these areas, including Cañada Larga and Manuel Creeks. On the other hand, development intensity in this areas would remain higher than would occur under Scenarios 1-4 and 6. In addition, this alternative could accommodate greater levels of human activity adjacent to the biologically sensitive Ventura River, with increased potential for impacts to riparian resources and associated sensitive species (e.g., Least Bell's vireo, steelhead trout).

Cultural Resources

The areas subject to future development are the same as those of 2005 General Plan Scenario 5. As with the 2005 General Plan scenarios, implementation of appropriate historic and archaeological resource policies could avoid significant impacts to cultural resources.

Geologic Hazards

Geologic hazard impacts would be similar to those of 2005 General Plan Scenario 5. Residential development in the Upper North Avenue area would potentially be subject to liquefaction and expansive soil hazards. However, compliance with 2005 General Plan policies/actions and UBC requirements on new development would reduce impacts to a less than significant level.

Hazards and Hazardous Materials

Hazard impacts would be similar to those of 2005 General Plan Scenario 5. This alternative could potentially increase safety conflicts relating to the placement of residential development in proximity to oil production in the Upper North Avenue area. On the other hand, redevelopment of the Petrochem refinery site would eliminate an existing brownfield. Compliance with 2005 General Plan policies and standard safety requirements on new development would reduce impacts relating to hazardous materials to a less than significant level.

Hydrology and Water Quality

Residential development within the Upper North Avenue District would be within the 100-year flood zone and would therefore be subject to the requirements of FEMA and the City's Floodplain Ordinance. Placing residential development within the Upper North Avenue district adjacent to the Ventura River would incrementally increase the potential for water quality impacts within the river. However, possible impacts could be addressed on a case-by-case basis through compliance with standard engineering practices and runoff control requirements. Overall, hydrology and water quality impacts would be somewhat greater than those associated with 2005 General Plan Scenario 5, but could be reduced to a less than significant level.

Mineral Resources

Similar to the 2005 General Plan scenarios, this alternative would not create conflicts with existing mineral resource extraction activity. This alternative could potentially increase compatibility conflicts with oil production in the Upper North Avenue area by adding accommodating residential development. However, as discussed under "Hazards and Hazardous Materials," compliance with 2005 General Plan policies and standard safety requirements on new development would reduce such conflicts to a less than significant level.

Noise

Overall increases in noise and exposure to noise would be similar to those associated with General Plan land use scenarios 2-6. Residential development within the Upper North Avenue area would be subject to noise from SR 33 and potentially from area industrial activity. However, implementation of 2005 General Plan actions and incorporation of appropriate noise attenuation on a case-by-case basis could achieve City noise standards.

Public Services

The overall increase in demand for public services would be about the same as under Scenarios 2-6. Impacts relating to police protection service, solid waste, libraries would be the same as those described for Scenarios 2-6 in Section 4.11, *Public Services*. A new fire station would likely be needed in the North Avenue area.

Continued collection of school and park impact fees would reduce school and park impacts to less than significant under CEQA. As compared to 2005 General Plan Scenario 5, this alternative would have somewhat more acreage available within the North Avenue and Western Cañada Larga expansion areas for schools and parks.

Transportation and Circulation

Overall traffic increases would be similar to those associated with 2005 General Plan Scenario 5. Feasible improvements such as those described for Scenario 5 in Section 4.12, *Transportation and Circulation*, are available to meet proposed traffic system performance standards. New residential development in the Upper North Avenue District would be expected to utilize the Cañada Larga and Shell Road interchanges on SR 33. With improvements to the Shell Road interchange identified in Section 4.12, these two interchanges have adequate capacity to accommodate traffic flows associated with Scenario 5 and would maintain extra capacity to meet the additional demand associated with this alternative.

Utilities and Service Systems

Overall water demand and wastewater generation would be similar to that associated with 2005 General Plan Scenario 5. Water supplies would be adequate to serve projected growth. No impact to the Ventura wastewater treatment plant is anticipated. The capacity of the Ojai Valley Sanitary District Plant could be exceeded, but impacts to that facility can be mitigated through implementation of a measure similar to Measure U-2(b) in Section 4.13, *Utilities*, which

allows development of the North Avenue area only at such time as adequate treatment capacity is available at the Ojai Valley Sanitary District plant.

Land Use and Planning

Like 2005 General Plan Scenarios 2-6, this alternative would generally be consistent with most regional land use plans and policies. This alternative would pose the same potential conflict with the Guidelines for Orderly Development associated with Scenario 5, but would not pose the potential conflict with Coastal Act policies pertaining to the preservation of Prime farmland that would occur under Scenarios 2 and 3.

Population and Housing

Population and housing growth would be similar to that of General Plan Scenarios 2-6. The 2025 population is projected to exceed SCAG and Ventura County AQMP forecasts. As with the 2005 General Plan scenarios, implementation of this alternative would be expected to maintain a balance of jobs and housing in the City.

6.6 INTENSIFICATION/REUSE + MINOR MAP CLEAN-UP

6.6.1 Description

This alternative is a variation of 2005 General Plan Scenario 15, the Intensification/Reuse Only scenario. The purpose of this alternative is to address three minor map clean-up issues identified following receipt of City Council direction on the recommended 2005 General Plan land use map. The first of these involves the re-designation of approximately five acres along the south side of Rosal Lane in the unincorporated area of Saticoy (APNs 90-142-11, 90-142-14, 90-143-13, and 90-143-17) that are designated "Industrial" on the draft General Plan land use map, but are designated "Residential Two Family" in the County of Ventura's Saticoy Area Plan. To achieve consistency with the Saticoy Area Plan, these lots would be redesignated "Residential Medium Density" under this alternative. The second change involves properties located on the Westside between Ramona (north), Simpson Street (south) and straddling Sheridan Way. This map change would include changing the proposed land use designation from low to high density residential to be consistent with the neighborhood and existing uses on the properties. A third change involves properties located in the Simpson Historic District located to the south of Simpson Street in generally the same area. The land use map would be changed from high to medium density, which is consistent with existing development in the Simpson Historic District and would generally allow 2 units per parcel.

Other than the three changes described above, this alternative is identical to 2005 General Plan Scenario 1. An estimated 8,300 residential units are projected to be added through 2025.

6.6.2 Impact Analysis

Other than issues pertaining to land use compatibility (aesthetics, noise, hazards), this alternative's impacts would be identical to those of Scenario 1. Re-designation of the five-acre area in Saticoy may incrementally increase the potential for compatibility conflicts with existing and future industrial uses in the area as properties to the south are designated "Industrial."

However, potential conflicts relating to lighting, noise, and hazards can be addressed through appropriate design, including, if necessary, the construction of solid block walls between residential and industrial uses. In addition, it should be noted that the properties along the north side of Rosal Lane, immediately across the street, are designated "Residential Medium Density." As such, developing the site along the south side of Rosal Lane with residential uses may reduce the potential for compatibility conflicts for those properties. In addition, the inclusion of additional residential land within the Saticoy district may provide a better mix of jobs and housing within the primarily industrial district. This re-designation would not create any significant environmental effects.

The two land use map changes in the West Ventura area would reflect the current development within the affected properties as well as the type of development in the surrounding area. The change to high density residential for the properties between Ramona and Simpson Street could theoretically allow for higher density development in the future; however, because such development would be consistent with the character of the area, no significant impacts would occur.

6.7 ALL EXPANSION AREAS

6.7.1 Description

This alternative includes all of the five expansion areas considered in the six 2005 General Plan land use scenarios. As such, it includes an estimated 1,977 acres of expansion areas. Because this alternative includes more land than any of the General Plan scenarios, it is presumed that it would accommodate more overall growth through 2025. It is assumed that the growth within the North Avenue, Olivas, Serra, and Poinsettia expansion areas would be similar to that assumed for Scenarios 3, 4, and 6 and that development in the Western Cañada Larga area would be similar to the North Avenue area. Overall expansion area development is assumed to be as follows:

- North Avenue – 300 residences
- Olivas – 2,400 residences
- Serra – 2,400 residences
- Western Cañada Larga – 300 residences
- Poinsettia – 2,400 residences

This results in a combined total of 7,800 expansion area residences. When added to the 8,300 intensification/reuse units, it is assumed that this alternative could accommodate about 16,100 new residences through 2025. This number of units would accommodate an estimated 41,377 additional residents, bringing the citywide population to 146,329. This represents an average annual growth rate of about 1.6%. It is assumed that non-residential growth would increase commensurately.

6.7.2 Impact Analysis

Aesthetics

This alternative would convert more agricultural land than would be converted under any of the General Plan scenarios and increase the overall intensity of development within the Plannin Area. As such, the overall change in the aesthetic character of the community would be greater. Aesthetic impacts would be greater than for Scenarios 1-6 and unavoidably significant.

Agriculture

Implementation of this alternative could convert nearly 2,500 acres of Prime, Statewide Importance, and Unique farmlands. Impacts relating to agricultural conversion would be greater than those of the General Plan scenarios and would be unavoidably significant. On the other hand, conversion of additional agricultural lands may reduce the potential for conflicts relating to the interface between agricultural and urban uses.

Air Quality

The overall increase in air pollutant emissions associated with this alternative would slightly higher than what would occur under the General Plan scenarios. Overall vehicle miles traveled and associated air pollutant emissions would be incrementally higher due to the increased population growth. As with Scenarios 1-6, the projected population growth associated with this alternative would exceed SCAG and Ventura County APCD forecasts, but to an even greater degree.

Biological Resources

This alternative's overall impacts to biological resources would be similar to those of 2005 General Plan scenarios, though the increased population and level of development may incrementally increase the potential for indirect impacts. Implementation of proposed General Plan policies and actions would reduce biological resource impacts to a less than significant level.

Cultural Resources

This alternative's impacts to cultural resources would be similar to those of the General Plan scenarios. Implementation of proposed 2005 General Plan policies and actions would reduce cultural resource impacts to a less than significant level.

Geologic Hazards

This alternative's impacts related to geologic hazards would be similar to those of the General Plan scenarios. Implementation of proposed 2005 General Plan policies and actions would reduce geologic hazard impacts to a less than significant level.

Hazards and Hazardous Materials

This alternative's impacts related to hazardous materials would be similar to those of the General Plan scenarios. Implementation of proposed 2005 General Plan policies and actions would reduce impacts relating to hazardous materials to a less than significant level.

Hydrology and Water Quality

Hydrology and water quality impacts generally would be similar to those associated with the 2005 General Plan land use scenarios and could be addressed through standard engineering practices and compliance with federal, state, and local runoff control requirements. Removing additional land in agricultural use may increase the City's ability to control sedimentation and water quality as compared to the General Plan scenarios.

Mineral Resources

Similar to the 2005 General Plan scenarios, this alternative would not create significant conflicts with existing mineral resource extraction activity.

Noise

Overall increases in noise and exposure to noise would be somewhat greater than those associated with the General Plan scenarios. For most areas, noise increases would not be significant, though potentially significant impacts would occur along portions of North Ventura Avenue and Johnson Drive. Other roadways, such as Harbor Boulevard, may also experience significant noise level increases. Implementation of 2005 General Plan actions and incorporation of appropriate noise attenuation on a case-by-case basis could achieve City noise standards.

Public Services

The overall increase in demand for public services would higher than for any of the General Plan scenarios since this alternative would result in a 2025 population that is about 16% higher than the projected population under Scenario 1 and 10% higher than the projected population under Scenarios 2-6. Impacts relating to police protection service, solid waste, libraries would be similar to, but somewhat greater than, those described for Scenarios 2-6 in Section 4.11, *Public Services*. A new fire station would likely be needed in the North Avenue area.

Continued collection of school and park impact fees would reduce school and park impacts to less than significant under CEQA. As compared to the General Plan scenarios, this alternative would have more overall acreage available for the development of schools and parks.

Transportation and Circulation

Overall traffic increases would be greater than those associated with any of the 2005 General Plan scenarios since the 2025 population would be about 16% greater than under Scenario 1 and 10% greater than under Scenarios 2-6. It is anticipated that the unavoidably significant impact

at Johnson Drive/North Bank Drive associated with Scenario 2 would occur. Additional unavoidably significant impacts may also occur due to the increased level of traffic citywide.

Utilities and Service Systems

Overall water demand and wastewater generation would be higher than that associated with any of the General Plan scenarios. Overall urban water demand would be higher for this alternative than for any of the General Plan scenarios – approximately 10,700 AFY; however, this alternative would also receive greater water credits for eliminating existing agricultural demand – approximately 5,900 AFY. The net increase in demand is within the projected City water supply. No impact to the Ventura wastewater treatment plant is anticipated. The capacity of the Ojai Valley Sanitary District Plant could be exceeded, but impacts to that facility can be mitigated through implementation of a measure similar to Measure U-2(b) in Section 4.13, *Utilities*, which allows development of the North Avenue area only at such time as adequate treatment capacity is available at the Ojai Valley Sanitary District plant.

Land Use and Planning

Like 2005 General Plan Scenarios 1-6, this alternative would generally be consistent with most regional land use plans and policies. However, this alternative would pose the potential conflict with the Guidelines for Orderly Development associated with Scenario 5 and the potential conflict with Coastal Act policies pertaining to the preservation of Prime farmland associated with Scenarios 2 and 3.

Population and Housing

Population and housing growth would be higher than that of any of the General Plan scenarios. As such, the 2025 population is projected to exceed SCAG and Ventura County AQMP forecasts by an even greater amount than under Scenarios 1-6. Similar to the 2005 General Plan scenarios, implementation of this alternative would be expected to maintain a balance of jobs and housing in the City.

6.8 ENVIRONMENTALLY SUPERIOR ALTERNATIVE

As required by CEQA, this section discusses the environmentally superior alternative. Each of the alternatives discussed in this section has certain advantages and disadvantages as compared to the 2005 General Plan, as summarized below.

- The **No Project (no further development)** alternative could be considered environmentally superior because it would result in no increase in traffic, air pollution or noise, and no increase in demand for utilities or services. It would result in no physical impacts. On the other hand, this alternative would not meet many of the 2005 General Plan objectives or address current service/infrastructure deficiencies, nor would it provide housing and jobs to meet projected growth.
- The **No Project (1989 Comprehensive Plan)** alternative would reduce agricultural land impacts as compared to 2005 General Plan Scenarios 1-6, but would be expected to substantially increase impacts relating to biological

resources, wildland fire, geologic hazards, and hydrology due to the potential for future development in the hillsides above the City.

- The **Restricted Growth** alternative would incrementally reduce traffic and noise impacts as well as future demand for utilities and services. It would also eliminate the unavoidably significant impact of the 2005 General Plan relating to exceedance of growth projections contained in the Ventura County AQMP and SCAG Regional Transportation Plan. On the other hand, this alternative may not provide sufficient additional housing to meet projected demand through 2025.
- The **No Important Farmland Conversion** alternative would eliminate the significant impact of the 2005 General Plan relating to the conversion of Prime, Statewide Importance, and Unique farmland. On the other hand, by focusing even more development in districts and corridors, it would not be expected to accommodate as broad a mix of housing types, nor would it provide adequate jobs/housing balance or meet the City's economic development objectives. In addition, all of the existing Planning Area conflicts relating to agricultural/urban interface would remain under this alternative.
- The **Upper North Avenue District Housing** alternative would reduce the development intensity in the North Avenue and Western Cañada Larga expansion areas as compared to General Plan Scenario 5 and would redevelop the Petrochem plant and other properties in the Upper North Avenue district. On the other hand, residential development within the Upper North Avenue district could be exposed to conflicts with adjacent industrial activity and SR 33.
- The **Intensification/Reuse + Minor Map Clean-Up** alternative could create the potential for residential-industrial compatibility conflicts in the Saticoy area, but such impacts can be addressed through site design and the property re-designation would achieve consistency with the Saticoy Area Plan.
- The **All Expansion Areas** alternative would provide the greatest flexibility for future City expansion and would provide options for meeting projected housing demand. However, by accommodating higher population growth and land development, it would result in generally greater environmental impacts than any of the 2005 General Plan land use scenarios.

Although the No Project (no further development) alternative is not feasible (from either a legal or practical standpoint) and may not be desirable in many respects, it can be considered environmentally superior overall since it would avoid all impacts associated with future growth. However, it would not meet RHNA requirements or housing needs identified in the City's Housing Element. Among the remaining alternatives, either the Restricted Growth or No Important Farmland Conversion alternative would be environmentally superior, depending upon which issue(s) are deemed most important. The Restricted Growth alternative would incrementally reduce impacts in most issues areas due to the overall reduction in future development and would avoid the significant impact of the 2005 General Plan relating to exceedance of Ventura County AQMP and SCAG Regional Transportation Plan population forecasts. It would, however, still result in significant agricultural resource impacts, similar to General Plan Scenario 1. The No Important Farmland Conversion alternative would avoid the significant impact relating to conversion of agricultural lands to urban uses. On the other hand,

the exceedance of regional population forecasts would still occur and all existing conflicts relating to the interface between agricultural and urban uses would remain. A combination of the Restricted Growth alternative and the No Important Farmland Conversion alternative would achieve both a reduction of agricultural land impacts, as well as AQMP and SCAG consistency.

Though not environmentally superior overall, it should be noted that 2005 General Plan Scenario 1 is considered the environmentally superior scenario among the six General Plan land use scenarios described in Section 2.0. This is due to the lower overall projected population growth as compared to the other scenarios and consequent reduction in impacts relating to traffic, noise, utilities and services, as well as the reduced amount of agricultural land conversion as compared to the other scenarios.

7.2 REPORT PREPARERS

This EIR was prepared by the City of Ventura with the assistance of Rincon Consultants, Inc., Austin-Foust Associates, Inc., and Psomas Associates, Inc. Kari Gialketsis, Senior Planner, managed the preparation of the EIR for the City. Consultant staff involved in the preparation of the EIR are listed below.

Rincon Consultants, Inc.
Joe Power, AICP, Principal
Duane Vander Pluym, D.ESE, Principal
Joanne Dramko, Senior Planner/Graphics Coordinator
Jamie King, Senior Biologist
Dan Klemann, Associate
Hilary Hodges, Associate (former)
Kathy Babcock, Graphics Technician
Katherine Warner, Graphics Technician/GIS Specialist

Austin-Foust Associates (traffic)
Terry Austin, Principal
Kendall Elmer, Associate
Cassandra Carlin, Transportation Planner
Phong Le, Traffic Analyst

Psomas Associates (utilities, hydrology)
Mike Swan, P.E., Project Manager
Greg Watanabe, P.E., Project Engineer
Brett Bennetts, Staff Engineer

Notice of Preparation and Responses

Notice of Preparation

TO: _____

_____

_____

FROM: City of San Buenaventura
Community Development Department
501 Poli Street
Ventura, CA 93001

Subject: **Notice of Preparation of a Draft Environmental Impact Report**

The City of San Buenaventura (Ventura) will be the Lead Agency for the preparation of an environmental impact report (EIR) for a proposed update of the City of Ventura Comprehensive Plan. The proposed project involves the update of the 1989 Comprehensive Plan that currently serves as the blueprint for the development of the City. Each of the Comprehensive Plan elements other than the Housing Element (an update of which was approved earlier this year) will be updated with goals, policies, and objectives that reflect the current needs and preferences of the community. The land use map will also be updated.

The City intends to emphasize infill development and reuse of developed lands within the current Sphere of Influence over the life of the Comprehensive Plan Update (through 2025) and has identified a number of growth districts and corridors where infill/reuse is to be focused. However, as part of the Comprehensive Plan update, the City is also considering inclusion of certain areas outside the current Sphere of Influence for future development. These include:

- **North Avenue** – an approximately 55-acre area on the east side of N. Ventura Avenue that is currently used as an orchard
- **Olivas** – an approximately 930-acre area between U.S. 101 and Harbor Boulevard that is currently used for row crops
- **Serra** – an approximately 464-acre area between Telephone Road and Bristol Road that is currently used for row crops and orchards
- **Western Cañada Larga** – an approximately 121-acre area along both sides of State Route 33 in the North Ventura Avenue area that is primarily open grazing land
- **Poinsettia** – an approximately 418-acre area between Foothill Road and State Route 126 that is currently an orchard

The potential growth districts and corridors and the potential expansion areas are shown on the attached land use diagram.

The Draft EIR will be a program EIR that examines each of the issue areas on the City's environmental checklist. Issues to be examined include:

- Aesthetics
- Air Quality
- Agricultural Resources
- Land Use and Planning
- Noise
- Population/Housing

- Biological Resources
- Cultural Resources
- Energy/Mineral Resources
- Geology/Soils
- Hazards/Hazardous Materials (including wildland fire hazards)
- Public Services (police, fire, schools)
- Recreation
- Utilities/Service Systems
- Transportation/Traffic
- Water (including Water Supply, Hydrology/Flooding, and Water Quality)

In addition to the CEQA-required "no project" alternative, the Draft will examine a minimum of four land use scenarios. These include:

1. **Staff Recommended Scenario** – This scenario assumes an emphasis on infill development, but includes the following expansion areas:

   - North Avenue (55 acres)
   - Olivas (930 acres)
   - Serra (464 acres)

2. **Infill/Reuse Only Scenario** – This scenario assumes infill/reuse of higher intensity than the Staff Recommended Scenario with no expansion beyond the current Sphere of Influence.

3. **Staff Recommended + Cañada Larga Scenario** – This scenario assumes less intensive infill development than the "Staff Recommended Scenario" and includes the following expansion areas:

   - Western Cañada Larga (121 acres)
   - North Avenue (55 acres)
   - Olivas (930 acres)
   - Serra (464 acres)

4. **Staff Recommended + Poinsettia Scenario** - This scenario assumes less intensive infill development than the "Staff Recommended Scenario" and includes the following expansion areas:

   - North Avenue (55 acres)
   - Olivas (930 acres)
   - Serra (464 acres)
   - Poinsettia (418 acres)

The EIR analysis will be based on growth projections through the year 2025. The EIR will consider two possible growth scenarios: (1) 1.14% annual population growth, which is equivalent to the annual growth rate in the City over the past 20 years; and (2) 0.88% annual population growth, which is equivalent to the annual growth over the past 10 years. The 2025 population and housing growth estimates for each of these scenarios are shown in the table on the following page.

We need to know the views of your agency as to the scope and content of the environmental information that is germane to your agency's statutory responsibilities in connection with the proposed project. Your agency may need to use the EIR prepared by our agency when considering your permit or other approval of certain aspects of the project.

Due to the time limits mandated by State law, your response must be sent at the earliest possible date but not later than 30 days after receipt of this notice.

Population Growth Projections

	2004 Levels[a]	2025 Estimates		Change from 2004-2025	
		0.88% Annual Growth	1.14% Annual Growth	0.88% Annual Growth	1.14% Annual Growth
Population	104,952	126,153	133,160	21,201	28,208
Housing Units[b]	40,880	49,138	51,867	8,258	10,987

[a] *Source: California Department of Finance, City/County Population and Housing Estimates, 1/1/2004.*

[b] *Housing unit estimates assume that the current ratio of 2.57 persons per household remains constant through 2025. In reality, the number of persons per unit could go up or down, depending upon housing costs, the types of housing built in the City, population growth, and other factors.*

Please send your response to Lisa Porras, Senior Planner, at the address shown above. Ms. Porras can be reached at (805) 654-7811. We will need the name for a contact person in your agency. Materials related to the Comprehensive Plan Update EIR are available for review at the City of Ventura Community Development Department, Ventura City Hall, 501 Poli Street in Ventura. Background materials can also be viewed online at http://www.ci.ventura.ca.us/depts/cd/cp/cp.asp.

The City will hold an EIR scoping meeting on the Comprehensive Plan Update on Wednesday, October 13 at the Community Meeting Room at Ventura City Hall, 501 Poli Street. The meeting will begin at 6 PM. The purpose of the meeting is to solicit input on the scope and content of the environmental analysis that will be included in the Draft EIR.

Revised
Notice of Preparation

TO: _____

_____

_____

FROM: City of San Buenaventura
Community Development Department
501 Poli Street
Ventura, CA 93001

Subject: **Revised Notice of Preparation of a Draft Environmental Impact Report**

The City of San Buenaventura (Ventura) will be the Lead Agency for the preparation of an environmental impact report (EIR) for a proposed update of the City of Ventura Comprehensive Plan. The City issued a Notice of Preparation (NOP) in September 2004. The original NOP described five alternative land use scenarios that were to be considered in the EIR; however, since that time, the way the alternatives are to be organized has changed and the number of alternative land use scenarios to be studied has increased from five to six. Therefore, although the areas under consideration and general approach to accommodating future development have not changed since the circulation of the original NOP, the City has reissued the NOP in order provide an opportunity to comment on the new EIR land use scenarios.

The proposed project involves the update of the 1989 Comprehensive Plan that currently serves as the blueprint for the development of the City. Each of the Comprehensive Plan elements other than the Housing Element (an update of which was approved earlier this year) will be updated with goals, policies, and objectives that reflect the current needs and preferences of the community. The land use map will also be updated.

The City intends to emphasize infill development and reuse of developed lands within the current Sphere of Influence over the life of the Comprehensive Plan Update (through 2025) and has identified a number of growth districts and corridors where infill/reuse is to be focused. However, as part of the Comprehensive Plan update, the City is also considering inclusion of certain areas outside the current Sphere of Influence for future development. These include:

- **North Avenue** – an approximately 55-acre area on the east side of N. Ventura Avenue that is currently used as an orchard
- **Olivas** – an approximately 930-acre area between U.S. 101 and Harbor Boulevard that is currently used for row crops
- **Serra** – an approximately 464-acre area between Telephone Road and Bristol Road that is currently used for row crops and orchards
- **Western Cañada Larga** – an approximately 121-acre area along both sides of State Route 33 in the North Ventura Avenue area that is primarily open grazing land
- **Poinsettia** – an approximately 418-acre area between Foothill Road and State Route 126 that is currently an orchard

The potential growth districts and corridors and the potential expansion areas are shown on the attached land use diagram.

The Draft EIR will be a program EIR that examines each of the issue areas on the City's environmental checklist. Issues to be examined include:

- Aesthetics
- Air Quality
- Agricultural Resources
- Biological Resources
- Cultural Resources
- Energy/Mineral Resources
- Geology/Soils
- Hazards/Hazardous Materials (including wildland fire hazards)
- Land Use and Planning
- Noise
- Population/Housing
- Public Services (police, fire, schools)
- Recreation
- Utilities/Service Systems
- Transportation/Traffic
- Water (including Water Supply, Hydrology/Flooding, and Water Quality)

In addition to the CEQA-required "no project" alternative, the Draft will examine a minimum of six land use scenarios. These include:

1. **Intensification/Reuse Only Scenario** – This scenario assumes that future development will be limited to areas within the current Sphere of Influence and that none of the possible expansion areas would be considered.

2. **City Council Preferred Scenario** – This scenario, which was selected by the City Council as the preferred scenario, assumes an emphasis on infill development at an intensity level similar to that of the Intensification/Reuse Only, but includes the following potential expansion areas:

   - North Avenue (55 acres)
   - Olivas (930 acres)
   - Serra (464 acres)

3. **Intensification/Reuse + North Avenue + Western Cañada Larga Scenario** – This scenario assumes intensification/reuse at a level similar to the other scenarios, but includes the following potential expansion areas:

   - North Avenue (55 acres)
   - Western Cañada Larga (121 acres)

4. **Intensification/Reuse + North Avenue + Serra Scenario** – This scenario assumes intensification/reuse at a level similar to the other scenarios, but includes the following potential expansion areas:

   - North Avenue (55 acres)
   - Serra (464 acres)

5. **Intensification/Reuse + North Avenue + Olivas Scenario** – This scenario assumes intensification/reuse at a level similar to the other scenarios, but includes the following potential expansion areas:

   - North Avenue (55 acres)
   - Olivas (930 acres)

6. **Intensification/Reuse + North Avenue + Poinsettia Scenario** - This scenario assumes intensification/reuse at a level similar to the other scenarios, but includes the following potential expansion areas:

   - North Avenue (55 acres)
   - Poinsettia (418 acres)

The EIR analysis will be based on growth projections through the year 2025. The EIR will consider two possible growth scenarios: (1) 1.14% annual population growth, which is equivalent to the annual growth rate in the City over the past 20 years; and (2) 0.88% annual population growth, which is equivalent to the annual growth over the past 10 years. For all six EIR scenarios, it is assumed that intensification/reuse within the current Sphere of Influence would accommodate growth through 2025 equivalent to the 0.88% annual growth rate. For Scenario 1 (Intensification/Reuse Only), it is assumed that growth through 2025 would be limited to an annual average of 0.88%. For the five scenarios that include expansion areas (Scenarios 2 through 6), it is assumed that the expansion areas would accommodate additional growth through 2025 equivalent to the 1.14% annual rate (i.e., the additional 0.26% annual growth beyond what is anticipated to occur within the current Sphere of Influence). The 2025 population and housing growth estimates for each of these scenarios are shown in the following table.

Population and Housing Growth Projections

	2004 Levels[a]	2025 Estimates		Change from 2004-2025	
		0.88% Annual Growth	1.14% Annual Growth	0.88% Annual Growth	1.14% Annual Growth
Population	104,952	126,153	133,160	21,201	28,208
Housing Units[b]	40,880	49,138	51,867	8,258	10,987

[a] *Source: California Department of Finance, City/County Population and Housing Estimates, 1/1/2004.*

[b] *Housing unit estimates assume that the current ratio of 2.57 persons per household remains constant through 2025. In reality, the number of persons per unit could go up or down, depending upon housing costs, the types of housing built in the City, population growth, and other factors.*

We need to know the views of your agency as to the scope and content of the environmental information that is germane to your agency's statutory responsibilities in connection with the proposed project. Your agency may need to use the EIR prepared by our agency when considering your permit or other approval of certain aspects of the project.

Due to the time limits mandated by State law, your response must be sent at the earliest possible date but not later than 30 days after receipt of this notice.

Please send your response to Lisa Porras, Senior Planner, at the address shown above. Ms. Porras can be reached at (805) 654-7811. We will need the name for a contact person in your agency. Materials related to the Comprehensive Plan Update EIR are available for review at the City of Ventura Community Development Department, Ventura City Hall, 501 Poli Street in Ventura. Background materials can also be viewed online at http://www.ci.ventura.ca.us/depts/cd/cp/cp.asp.

The City will hold an EIR scoping meeting on the Comprehensive Plan Update at 6 PM on Wednesday, January 12, 2005. The meeting will be held in the Santa Cruz Conference Room at Ventura City Hall, 501 Poli Street. The purpose of the meeting is to solicit input on the scope and content of the environmental analysis that will be included in the Draft EIR.

Project Title: City of Ventura Comprehensive Plan Update

NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT (EIR)

PROJECT TITLE: Preparation of an EIR for a proposed update of the City of Ventura Comprehensive Plan.

PROJECT APPLICANT: City of San Buenaventura
Planning Division
501 Poli Street,
Ventura, Ca 93001

PROJECT DESCRIPTION: The proposed project involves the update of the 1989 Comprehensive Plan that currently serves as the blueprint for the development of the City. Each of the Comprehensive Plan elements other than the Housing Element (an update of which was approved earlier this year) will be updated with goals, policies, and objectives that reflect the current needs and preferences of the community. The land use map will also be updated.

The City intends to emphasize infill development and reuse of developed lands within the current Sphere of Influence over the life of the Comprehensive Plan Update (through 2025) and has identified a number of growth districts and corridors where infill/reuse is to be focused. However, as part of the Comprehensive Plan Update, the City is also considering inclusion of certain areas outside the current Sphere of Influence for future development.

EIR SCOPING MEETING: The City will hold an EIR scoping meeting on the Comprehensive Plan Update on **Wednesday, October 13** at the **Community Meeting Room at Ventura City Hall, 501 Poli Street.** The meeting will begin at 6 PM. The purpose of the meeting is to solicit input on the scope and content of the environmental analysis that will be included in the Draft EIR.

LEAD AGENCY: City of San Buenanventura

RE: **Comments on the Notice of Preparation for a Draft Environmental Impact Report for the City of Ventura Comprehensive Plan – SCAG No. I 20040669**

Dear Ms. Porras:

Thank you for submitting the **Notice of Preparation for a Draft Environmental Impact Report for the City of Ventura Comprehensive Plan** to SCAG for review and comment. As areawide clearinghouse for regionally significant projects, SCAG reviews the consistency of local plans, projects, and programs with regional plans. This activity is based on SCAG's responsibilities as a regional planning organization pursuant to state and federal laws and regulations. Guidance provided by these reviews is intended to assist local agencies and project sponsors to take actions that contribute to the attainment of regional goals and policies.

We have reviewed the aforementioned **Notice of Preparation** and have determined that **the proposed Project is regionally significant per California Environmental Quality Act (CEQA) Guidelines (Section 15206).** The proposed Project considers a local general plan, element, or amendment for which an environmental impact report is being prepared. CEQA requires that EIRs discuss any inconsistencies between the proposed project and applicable general plans and **regional plans (Section 15125 [d]).** If there are inconsistencies, an explanation and rationalization for such inconsistencies should be provided.

Policies of SCAG's Regional Comprehensive Plan and Guide and Regional Transportation Plan, which may be applicable to your project, are outlined in the attachment. **We expect the Draft EIR to specifically cite the appropriate SCAG policies and address the manner in which the Project is consistent with applicable core policies or supportive of applicable ancillary policies. Please use our policy numbers to refer to them in your Draft EIR. Also, we would encourage you to use a side-by-side comparison of SCAG policies with a discussion of the consistency or support of the policy with the Proposed Project.**

Please provide a minimum of 45 days for SCAG to review the Draft EIR when this document is available. If you have any questions regarding the attached comments, please contact me at (213) 236-1867. Thank you.

Sincerely,

JEFFREY M. SMITH, AICP
Senior Regional Planner
Intergovernmental Review

COMMENTS ON THE PROPOSAL TO DEVELOP A DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE CITY OF VENTURA COMPREHENSIVE PLAN SCAG NO. I 20040669

PROJECT DESCRIPTION

The proposed Project considers an update of the City of Ventura Comprehensive Plan.

CONSISTENCY WITH REGIONAL COMPREHENSIVE PLAN AND GUIDE POLICIES

The **Growth Management Chapter (GMC)** of the Regional Comprehensive Plan and Guide (RCPG) contains the following policies that are particularly applicable and should be addressed in the Draft EIR for the City of Ventura Comprehensive Plan.

3.01 The population, housing, and jobs forecasts, which are adopted by SCAG's Regional Council and that reflect local plans and policies, shall be used by SCAG in all phases of implementation and review.

Regional Growth Forecasts

The Draft EIR should reflect the most current SCAG forecasts which are the 2004 RTP (April 2004) Population, Household and Employment forecasts for the Ventura Council of Governments (VCCOG) subregion and the City of Ventura. These forecast follows:

VCOG SUBREGION	2000	2005	2010	2015	2020	2025
POPULATION	758,054	821,045	865,149	897,295	929,181	960,025
HOUSEHOLD	244,476	260,357	275,352	289,318	303,596	317,831
EMPLOYMENT	337,247	346,770	381,680	403,000	424,470	445,193

CITY OF VENTURA	2000	2005	2010	2015	2020	2025
POPULATION	101,002	109,087	116,959	119,247	121,488	123,645
HOUSEHOLD	38,573	40,711	44,053	45,355	46,696	48,034
EMPLOYMENT	58,900	59,717	62,703	65,237	67,787	70,238

3.03 The timing, financing, and location of public facilities, utility systems, and transportation systems shall be used by SCAG to implement the region's growth policies.

GMC POLICIES RELATED TO THE RCPG GOAL TO IMPROVE THE REGIONAL STANDARD OF LIVING

The Growth Management goals to develop urban forms that enable individuals to spend less income on housing cost, that minimize public and private development costs, and that enable firms to be more competitive, strengthen the regional strategic goal to stimulate the regional economy. The evaluation of the proposed project in relation to the following policies would be intended to guide efforts toward achievement of such goals and does not infer regional interference with local land use powers.

3.05 Encourage patterns of urban development and land use, which reduce costs on infrastructure construction and make better use of existing facilities.

3.09 Support local jurisdictions' efforts to minimize the cost of infrastructure and public service delivery, and efforts to seek new sources of funding for development and the provision of services.

3.10 Support local jurisdictions' actions to minimize red tape and expedite the permitting process to maintain economic vitality and competitiveness.

GMC POLICIES RELATED TO THE RCPG GOAL TO IMPROVE THE REGIONAL QUALITY OF LIFE

The Growth Management goals to attain mobility and clean air goals and to develop urban forms that enhance quality of life, that accommodate a diversity of life styles, that preserve open space and natural resources, and that are aesthetically pleasing and preserve the character of communities, enhance the regional strategic goal of maintaining the regional quality of life. The evaluation of the proposed project in relation to the following policies would be intended to provide direction for plan implementation, and does not allude to regional mandates.

3.12 Encourage existing or proposed local jurisdictions' programs aimed at designing land uses which encourage the use of transit and thus reduce the need for roadway expansion, reduce the number of auto trips and vehicle miles traveled, and create opportunities for residents to walk and bike.

3.13 Encourage local jurisdictions' plans that maximize the use of existing urbanized areas accessible to transit through infill and redevelopment.

3.16 Encourage developments in and around activity centers, transportation corridors,

underutilized infrastructure systems, and areas needing recycling and redevelopment.

3.18 Encourage planned development in locations least likely to cause environmental impact.

3.20 Support the protection of vital resources such as wetlands, groundwater recharge areas, woodlands, production lands, and land containing unique and endangered plants and animals.

3.21 Encourage the implementation of measures aimed at the preservation and protection of recorded and unrecorded cultural resources and archaeological sites.

3.22 Discourage development, or encourage the use of special design requirements, in areas with steep slopes, high fire, flood, and seismic hazards.

3.23 Encourage mitigation measures that reduce noise in certain locations, measures aimed at preservation of biological and ecological resources, measures that would reduce exposure to seismic hazards, minimize earthquake damage, and to develop emergency response and recovery plans.

GMC POLICIES RELATED TO THE RCPG GOAL TO PROVIDE SOCIAL, POLITICAL, AND CULTURAL EQUITY

The Growth Management Goal to develop urban forms that avoid economic and social polarization promotes the regional strategic goal of minimizing social and geographic disparities and of reaching equity among all segments of society. The evaluation of the proposed project in relation to the policy stated below is intended guide direction for the accomplishment of this goal, and does not infer regional mandates and interference with local land use powers.

3.24 Encourage efforts of local jurisdictions in the implementation of programs that increase the supply and quality of housing and provide affordable housing as evaluated in the Regional Housing Needs Assessment.

3.27 Support local jurisdictions and other service providers in their efforts to develop sustainable communities and provide, equally to all members of society, accessible and effective services such as: public education, housing, health care, social services, recreational facilities, law enforcement, and fire protection.

REGIONAL TRANSPORTATION PLAN

The **2004 Regional Transportation Plan (RTP)** also has goals and policies that are pertinent to this proposed project. This RTP links the goal of sustaining mobility with the goals of fostering economic development, enhancing the environment, reducing energy consumption, promoting transportation-friendly development patterns, and encouraging fair and equitable access to residents affected by socio-economic, geographic and commercial limitations. The RTP continues to support all applicable federal and state laws in implementing the proposed project. Among the relevant goals and policies of the RTP are the following:

Regional Transportation Plan Goals

- Maximize mobility and accessibility for all people and goods in the region.
- Ensure travel safety and reliability for all people and goods in the region.
- Preserve and ensure a sustainable regional transportation system.
- Maximize the productivity of our transportation system.
- Protect the environment, improve air quality and promote energy efficiency.
- Encourage land use and growth patterns that complement our transportation investments.

Regional Transportation Plan Policies

- Transportation investments shall be based on SCAG's adopted Regional Performance Indicators.

Performance Indicator	Performance Measures	Definition	Performance Outcome
Mobility	• Average Daily Speed • Average Daily Delay	Speed-experienced by travelers regardless of mode. Delay-excess travel time resulting from the difference between a reference speed and actual speed. Total daily delay and daily delay per capita are indicators used.	10% Improvement 40% Improvement
Accessibility	• Percent PM peak work trips within 45 minutes of home • Distribution of work trip travel times		Auto 90% Transit 37% Auto 6% Improvement Transit 8% Improvement
Reliability	• Percent variation in travel time	Day-to-day change in travel times experienced by travelers. Variability results from accidents, weather, road closures, system problems and other non-recurrent conditions.	10% Improvement
Safety	• Accident Rates	Measured in accidents per million vehicle miles by mode.	0.3% Improvement

Performance Indicator	Performance Measures	Definition	Performance Outcome
Cost Effectiveness	• Benefit-to-Cost (B/C) Ratio	Ratio of benefits of RTP investments to the associated investments costs.	$3.08
Productivity	• Percent capability utilized during peak conditions	Transportation infrastructure capacity and services provided. • Roadway Capacity – vehicles per hour per lane by type of facility. • Transit Capacity – seating capacity utilized by mode	20% improvement at known bottlenecks N/A
Sustainability	• Total cost per capita to sustain current system performance	Focus in on overall performance, including infrastructure condition Preservation measure is a sub-set of sustainability.	$20 per capita, primarily in preservation costs
Preservation	• Maintenance cost per capita to preserve system at base year conditions	Focus is on infrastructure condition. Sub-set of sustainability.	Maintain current conditions
Environmental	• Emissions generated by travel	Measured/forecast emissions include CO, NOX, PM10, SOX and VOC. CO2 as secondary measure to reflect greenhouse emissions.	Meets conformity requirements
Environmental Justice	• Expenditures by quintile and ethnicity • Benefit vs. burden by quintiles	Proportionate share of expenditures in the 2004 RTP by each quintile. Proportionate share of benefits to each quintile ethnicity Proportionate share of additional airport noise by ethnic group	No disproportionate impact to any group or quintile

- Ensuring safety, adequate maintenance, and efficiency of operations on the existing multi-modal transportation system will be RTP priorities and will be balanced against the need for system expansion investments.

- RTP land use and growth strategies that differ from currently expected trends will require a collaborative implementation program that identifies required actions and policies by all affected agencies and sub-regions.

- HOV gap closures that significantly increase transit and rideshare usage will be supported and encouraged, subject to Policy #1.

AIR QUALITY CHAPTER CORE ACTIONS

The **Air Quality Chapter** core actions related to the proposed project includes:

5.07 Determine specific programs and associated actions needed (e.g., indirect source rules, enhanced use of telecommunications, provision of community based shuttle services, provision of demand management based programs, or vehicle-miles-traveled/emission fees) so that options to command and control regulations can be assessed.

5.11 Through the environmental document review process, ensure that plans at all levels of government (regional, air basin, county, subregional and local) consider air quality, land use, transportation and economic relationships to ensure consistency and minimize conflicts.

OPEN SPACE CHAPTER ANCILLARY GOALS

Outdoor Recreation

9.01 Provide adequate land resources to meet the outdoor recreation needs of the present and future residents in the region and to promote tourism in the region.

9.02 Increase the accessibility to open space lands for outdoor recreation.

9.03 Promote self-sustaining regional recreation resources and facilities.

Public Health and Safety

9.04 Maintain open space for adequate protection of lives and properties against natural and man-made hazards.

9.05 Minimize potentially hazardous developments in hillsides, canyons, areas susceptible to flooding, earthquakes, wildfire and other known hazards, and areas with limited access for emergency equipment.

9.06 Minimize public expenditure for infrastructure and facilities to support urban type uses in areas where public health and safety could not be guaranteed.

Resource Production

9.07 Maintain adequate viable resource production lands, particularly lands devoted to commercial agriculture and mining operations.

Resource Protection

9.08 Develop well-managed viable ecosystems or known habitats of rare, threatened and endangered species, including wetlands.

WATER QUALITY CHAPTER RECOMMENDATIONS AND POLICY OPTIONS

The **Water Quality Chapter** core recommendations and policy options relate to the two water quality goals: to restore and maintain the chemical, physical and biological integrity of the nation's water; and, to achieve and maintain water quality objectives that are necessary to protect all beneficial uses of all waters.

11.07 Encourage water reclamation throughout the region where it is cost-effective, feasible, and appropriate to reduce reliance on imported water and wastewater discharges. Current administrative impediments to increased use of wastewater should be addressed.

GROWTH VISIONING

The fundamental goal of the Growth Visioning effort is to make the SCAG region a better place to live, work and play for all residents regardless of race, ethnicity or income class. Thus, decisions regarding growth, transportation, land use, and economic development should be made to promote and **sustain** for future generations the region's **mobility, livability** and **prosperity.** The following "Regional Growth Principles" are proposed to provide a framework for local and regional decision making that improves the quality of life for all SCAG residents. Each principle is followed by a specific set of strategies intended to achieve this goal.

Principle 1: Improve **mobility** for all residents

- Encourage transportation investments and land use decisions that are mutually supportive.
- Locate new housing near existing jobs and new jobs near existing housing.
- Encourage transit-oriented development.
- Promote a variety of travel choices

Principle 2: Foster **livability** in all communities
- Promote infill development and redevelopment to revitalize existing communities.
- Promote developments, which provide a mix of uses.
- Promote "people scaled," walkable communities.
- Support the preservation of stable, single-family neighborhoods.

Principle 3: Enable **prosperity** for all people
- Provide, in each community, a variety of housing types to meet the housing needs of all income levels.
- Support educational opportunities that promote balanced growth.
- Ensure environmental justice regardless of race, ethnicity or income class.
- Support local and state fiscal policies that encourage balanced growth
- Encourage civic engagement.

Principle 4: Promote **sustainability** for future generations
- Preserve rural, agricultural, recreational and environmentally sensitive areas.
- Focus development in urban centers and existing cities.
- Develop strategies to accommodate growth that uses resources efficiently, eliminate pollution and significantly reduce waste.
- Utilize "green" development techniques.

CONCLUSIONS

All feasible measures needed to mitigate any potentially negative regional impacts associated with the proposed project should be implemented and monitored, as required by CEQA.

SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS

Roles and Authorities

THE SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS (SCAG) is a ***Joint Powers Agency*** established under California Government Code Section 6502 et seq. Under federal and state law, SCAG is designated as a Council of Governments (COG), a Regional Transportation Planning Agency (RTPA), and a Metropolitan Planning Organization (MPO). SCAG's mandated roles and responsibilities include the following:

SCAG is designated by the federal government as the Region's ***Metropolitan Planning Organization*** and mandated to maintain a continuing, cooperative, and comprehensive transportation planning process resulting in a Regional Transportation Plan and a Regional Transportation Improvement Program pursuant to 23 U.S.C. '134, 49 U.S.C. '5301 et seq., 23 C.F.R. '450, and 49 C.F.R. '613. SCAG is also the designated ***Regional Transportation Planning Agency***, and as such is responsible for both preparation of the Regional Transportation Plan (RTP) and Regional Transportation Improvement Program (RTIP) under California Government Code Section 65080 and 65082 respectively.

SCAG is responsible for developing the demographic projections and the integrated land use, housing, employment, and transportation programs, measures, and strategies portions of the ***South Coast Air Quality Management Plan***, pursuant to California Health and Safety Code Section 40460(b)-(c). SCAG is also designated under 42 U.S.C. '7504(a) as a ***Co-Lead Agency*** for air quality planning for the Central Coast and Southeast Desert Air Basin District.

SCAG is responsible under the Federal Clean Air Act for determining ***Conformity*** of Projects, Plans and Programs to the State Implementation Plan, pursuant to 42 U.S.C. '7506.

Pursuant to California Government Code Section 65089.2, SCAG is responsible for ***reviewing all Congestion Management Plans (CMPs) for consistency with regional transportation plans*** required by Section 65080 of the Government Code. SCAG must also evaluate the consistency and compatibility of such programs within the region.

SCAG is the authorized regional agency for ***Inter-Governmental Review*** of Programs proposed for federal financial assistance and direct development activities, pursuant to Presidential Executive Order 12,372 (replacing A-95 Review).

SCAG reviews, pursuant to Public Resources Code Sections 21083 and 21087, Environmental Impacts Reports of projects of regional significance for consistency with regional plans [California Environmental Quality Act Guidelines Sections 15206 and 15125(b)].

Pursuant to 33 U.S.C. '1288(a)(2) (Section 208 of the Federal Water Pollution Control Act), SCAG is the authorized ***Areawide Waste Treatment Management Planning Agency.***

SCAG is responsible for preparation of the ***Regional Housing Needs Assessment***, pursuant to California Government Code Section 65584(a).

SCAG is responsible (with the Association of Bay Area Governments, the Sacramento Area Council of Governments, and the Association of Monterey Bay Area Governments) for preparing the ***Southern California Hazardous Waste Management Plan*** pursuant to California Health and Safety Code Section 25135.3.

COMPREHSIVE PLAN UPDATE – RECYCLED WATER

The City of San Buenaventura (City) and the Saticoy Sanitary District (Saticoy) are cooperating in a water recycling effort. The long-range plan is for the City to send up to 700,000 gallons per day of its raw wastewater to the Jose Flores Wastewater Treatment Plant. Saticoy will remove the contaminants, including salt, and provide clean water for unrestricted irrigation uses, crops, parks, schools, etc.

The Comprehensive Plan could include a requirement to use recycled water wherever it is available.

If you have any questions, please call me at 647-6477 or Kelly Polk, District Manager, at 512-1363.

JAMES ACOSTA – CHAIRMAN

SATICOY SANITARY DISTRICT

October 19, 2004

Brian Brennan, Mayor
City of San Buenaventura
501 Poli Street
Ventura, CA 93001

COMPREHSIVE PLAN DISCONTIUITY

The City of San Buenaventura (City) is enforcing an industrial land use designation outside its boundaries where the County of Ventura has a residential designation. That is a small strip of land along the south side of Rosal Lane in old Saticoy. Please, acknowledge the County of Ventura's jurisdictional priority and remove blockage within your staff on residential development per the County Plan.

The Saticoy Sanitary District (Saticoy) is harmed by the City's actions. Saticoy relied on the County Plan when sizing the new treatment plant. It was only after Saticoy's new treatment plant was built that the conflicting land use plans were recognized.

The City and Saticoy are cooperating in a water recycling effort. The City's help in this area will further the City's interest in recycling water.

At the very least, consider this as a comment on your comprehensive plan update. If you have any questions, please call me at 647-6477 or Kelly Polk, District Manager, at 512-1363.

RE: NOTICE OF PREPARATION – COMPREHENSIVE PLAN UPDATE EIR

Dear Ms Porras:

Thank you for the opportunity to respond to the Notice of Preparation (NOP) for the program environmental impact report (EIR) for the proposed update of the City's Comprehensive Plan. To the extent the City will use this program EIR as a basis for initiating boundary changes, such as annexations, detachments or reorganizations, or requesting sphere of influence changes or out-of-agency service agreement approvals, the Ventura LAFCO will be a responsible agency under CEQA.

On behalf of the Ventura LAFCO comments about the scope and content of the EIR are:

1. As required by law, the Ventura LAFCO has adopted written policies. These policies are compiled in the Ventura LAFCO "Commissioner's Handbook." A complete version is posted as a PDF file on the Ventura LAFCO web site (see URL below). The EIR should consider all relevant LAFCO policies. Specifically, the EIR should address the consistency, or lack thereof, of each of the four growth scenarios (and any other growth scenario proposed as a result of responses to the NOP) with the following LAFCO policies:

   a. Consistency with ordinances requiring voter approval
   "For cities that have enacted ordinances that require voter approval for the extension of services or for changing general plan designations, LAFCO will not approve a proposal unless it is consistent with such ordinances and voter approval has first been granted, or unless exceptional circumstances are shown to exist."
   (Commissioner's Handbook Section 2.5.1.2)

   Except for the Infill/Reuse Only Scenario, the other three growth scenarios listed in the NOP involve properties covered by one or more City ordinances requiring voter approval for the extension of services or for changing existing general plan designations. To the extent the EIR may be used as a basis for future ballot measures by the City and/or private property owners to seek voter approved general plan and/or service extension changes, it should fully addresses the impacts of agricultural and/or open space land conversion and/or service extensions for each property now covered by the City's SOAR and Hillside Voter Protection Act ordinances, and, as may be appropriate, the County of Ventura's SOAR ordinance.

County Government Center • Hall of Administration • 800 S. Victoria Avenue • Ventura, CA 93009-1850
Tel (805) 654-2576 • Fax (805) 477-7101
http://www.ventura.lafco.ca.gov

b. Greenbelts
"The County of Ventura and various cities in the County have adopted Greenbelt Agreements for the purposes of preserving agriculture and/or open space, providing separation between cities, and/or limiting the extension of urban services. The Ventura LAFCO is not a direct party to these Greenbelt Agreements, but has endorsed them as statements of local policy. As such, LAFCO will not approve a proposal from a city that is in conflict with any Greenbelt Agreement unless exceptional circumstances are shown to exist. A Greenbelt Agreement shall be amended by all parties involved prior to any proposal which may be in conflict with the Agreement is considered by LAFCO." (Commissioner's Handbook Section 2.5.3; underlining emphasis added)

Note that any growth scenario that involves what the NOP calls the "Olivas Potential Expansion Area" affects the Ventura/Oxnard Greenbelt. The County of Ventura and the City of Oxnard have also adopted this Greenbelt. To the extent the EIR may be used as a basis for seeking to amend this Greenbelt, the County of Ventura and the City of Oxnard may also be responsible agencies.

c. Sphere of Influence consistent with voter approved growth boundaries
"For cities that have enacted ordinances that require voter approval for the extension of services or for changing general plan designations, sphere of influence boundaries should coincide with, or cover lesser area than, voter approved growth boundaries." (Commissioner's Handbook Section 4.1.2.3; underlining emphasis added)

LAFCO is now mandated to review and update, as necessary, the spheres of influence for each city and special district every five years. Based on the current schedule LAFCO will be updating the sphere of influence of the City of Ventura in late 2005, possibly in early 2006. The policy noted above will be the basis for this update. It is clear that the existing sphere of influence is not consistent with this policy in many areas, including the North Ventura Avenue area, the area covered by the Hillside Voter Protection Act, areas west of the Ventura River, the area south of the Ventura Auto Center, the Poinsettia Potential Expansion Area and the Serra potential Expansion Area listed in the NOP, the City owned property east of Petit Avenue between Telegraph and Foothill Roads, and areas northerly and easterly of the Southern California Edison property on Telegraph Road. To the extent that the EIR may be used as a basis for the City to request LAFCO to amend the City's sphere of influence to include any area outside voter approved growth boundaries, it should fully address the consistency with the above-noted LAFCO policy and impacts related to each issue area noted in the NOP, with special emphasis on agricultural resources, land use and planning, population/housing, public services, utilities/service systems and water.

Additionally, the Proposed Land Use Diagram attached to the NOP identifies a "Proposed Sphere of Influence Boundary." It is unclear which of the four growth scenarios this "Proposed Sphere of Influence Boundary" relates to or whether or not

it is intended to apply to all four growth scenarios or even the No Project scenario. This should be clarified. Specifically,

i. The EIR should address the impacts of different possible proposed sphere of influence boundaries based on each of the different growth scenarios based on their consistency with the above noted LAFCO policy.
ii. The EIR should address the policy basis, impacts and consistency with the above-noted LAFCO policy for any areas to be included in the City's proposed sphere of influence that are not being considered as potential expansion areas. These areas include portions of the North Ventura Avenue area, areas west of the Ventura River, areas in the flood plain southerly of the Ventura Auto Center, the City owned property east of Petit Avenue between Telegraph and Foothill Roads, and areas northerly and easterly of the Southern California Edison property on Telegraph Road.

d. Agriculture and Open Space Preservation

"Findings and criteria for prime agricultural and open space land conversion: LAFCO will approve sphere of influence amendments and updates which are likely to result in the conversion of prime agricultural or open space land use to other uses only if the Commission finds that the amendment or update will lead to planned, orderly, and efficient development. For the purposes of this policy, a sphere of influence amendment or update leads to planned, orderly, and efficient development only if all of the following criteria are met:

i. The territory is likely to be developed within 5 years and has been designated for non-agricultural or open space use by applicable general and specific plans.
ii. Insufficient non-prime agricultural or vacant land exists within the sphere of influence of the agency that is planned and developable for the same general type of use.
iii. The proposal will have no significant adverse effects on the physical and economic integrity of other prime agricultural or open space lands.
iv. The territory is not within an area subject to a Greenbelt Agreement adopted by a city and the County of Ventura. If a City proposal involves territory within an adopted Greenbelt area, LAFCO will not approve the proposal unless all parties to the Greenbelt Agreement amend the Greenbelt Agreement to exclude the affected territory.
v. The use or proposed use of the territory involved is consistent with local plan and policies." (Commissioner's Handbook Section 4.1.5.1)

"Findings that insufficient non-prime agricultural or vacant land exists: The Commission will not make affirmative findings that insufficient non-prime agricultural or vacant land exists within the sphere of influence of the agency unless the applicable jurisdiction has prepared a detailed alternative site analysis which at a minimum includes:

i. An evaluation of all vacant, non-prime agricultural lands within the sphere of influence and within the boundaries of the jurisdiction that could be developed for the same or similar uses.

ii. *An evaluation of the re-use and redevelopment potential of developed areas within the sphere of influence and within the boundaries of the jurisdiction for the same or similar uses.*
iii. *Determinations as to why non-prime agricultural and vacant lands and potential re-use and redevelopment sites are unavailable or undesirable for the same or similar uses, and why conversion of prime agricultural or open space lands are necessary for the planned, orderly, and efficient development of the jurisdiction."* (Commissioner's Handbook Section 4.1.5.2)

"Impacts on adjoining prime agricultural or open space lands: In making the determination whether conversion will adversely impact adjoining prime agricultural or open space lands, the Commission will consider the following factors:
i. *The prime agricultural and open space significance of the territory included in the sphere of influence amendment or update relative to other agricultural and open space lands in the region.*
ii. *The economic viability of the prime agricultural lands to be converted.*
iii. *The health and well being of any urban residents adjacent to the prime agricultural lands to be converted.*
iv. *Whether public facilities related to the proposal would be sized or situated so as to facilitate the conversion of prime agricultural or open space land outside of the agency's proposed sphere of influence, or will be extended through prime agricultural or open space lands outside the agency's proposed sphere of influence.*
v. *Whether natural or man-made barriers serve to buffer prime agricultural or open space lands outside of the agency's sphere of influence from the effects of the proposal.*
vi. *Applicable provisions of local general plans, applicable ordinances that require voter approval prior to the extension of urban services or changes to general plan designations, Greenbelt Agreements, applicable growth-management policies, and statutory provisions designed to protect agriculture or open space.*
vii. *Comments and recommendations by the Ventura County Agricultural Commissioner."* (Commissioner's Handbook Section 4.1.5.3)

e. Criteria for city sphere of influence amendments relating to schools
"City and School District Collaborative Planning: To ensure that the affected city and school district(s) have engaged in good faith, collaborative long range planning for school sites, LAFCO will consider the following criteria when reviewing proposals for city sphere of influence amendments:
i. *Whether a school site committee, made up of the affected city and school officials have been meeting to engage in discussions and long range planning and the meetings are ongoing.*
ii. *Whether the affected city has discussed all major development proposals with the school district.*
iii. *Whether the affected city has a policy of considering school capacity and location when reviewing major development proposals and long range plans.*

iv. *Whether an official inventory of all potential sites has been evaluated and has been subject to public review.*
v. *Whether the affected city general plan and specific plans include adequate and appropriate school locations.*
vi. *Whether school siting has been addressed in the last five years of development in the affected city.*
vii. *Whether the proposed sphere of influence change may be unnecessary if the affected city is considering expansions to the sphere of influence or city urban growth boundary."* (Commissioner's Handbook Section 4.1.6.1)

"Options Exhausted: To ensure that the affected school district(s) have exhausted options within the existing sphere of influence or city urban growth boundary, LAFCO will consider the following criteria when reviewing proposals for city sphere of influence amendments:

i. *Whether the affected school district(s) has a long-range facility plan.*
ii. *Whether the affected school district(s) has prepared an inventory and evaluation of all district-owned facilities.*
iii. *Whether the affected school district(s) has considered joint use facilities with other entities, cities, parks, and other public institutions.*
iv. *Whether the affected school district(s) has evaluated all undeveloped land within the affected city's sphere of influence or city urban growth boundary.*
v. *Whether the affected school district(s) has, after consideration of the safety and health of the children, considered asking for any appropriate exceptions from State of California school size guidelines.*
vi. *Whether the school district has considered and eliminated multi-story school buildings as an option."* (Commissioner's Handbook Section 4.1.6.2)

"Overall Planning Issues Addressed: To ensure that the affected city and school district(s) have addressed overall planning issues, LAFCO will consider the following criteria when reviewing proposals for city sphere of influence amendments:

i. *Whether there are unique safety and health concerns of the proposal.*
ii. *Whether the proposed new school site is considered growth inducing.*
iii. *Whether the proposal adversely affects agriculture and/or provides buffers between the school site and adjacent agriculture.*
iv. *Whether the proposed school site is the best site available when considering logical, orderly, and efficient city boundaries and adopted greenbelts.*
v. *Whether the affected city is willing to support expanding the urban growth boundary to accommodate the development site, including requesting a citizen's vote if necessary.*
vi. *Whether the affected school district(s), after an unsuccessful vote for approval, indicates that the school site must be sited outside the existing urban growth boundary."* (Commissioner's Handbook Section 4.1.6.3

2. Services outside boundaries and existing or proposed sphere of influence – The City provides some services outside its boundaries and outside the existing and proposed sphere of influence. With limited exceptions Government Code Section 56133 precludes any city or special district from providing new or extended services outside their

boundaries and spheres of influence. The program EIR should clearly identify the City's existing and proposed service areas for each City service, and analyze the impacts of providing any "out of boundary" services and the City's obligations for expanding these services. Of special interest to LAFCO is the provision of City water service outside the existing City boundary in the Saticoy community and to areas outside the existing and any proposed sphere of influence, especially east of Wells Road north of Telegraph Road and to the Saticoy Country Club. The program EIR should address the City's obligations, if any, to provide new connections in terms of capacity and consistency with Government Code Section 56133.

3. Services by other agencies within the existing and proposed sphere of influence – The Ojai Valley Sanitary District, and, to a limited extent, the Casitas Municipal Water District provide service to the North Ventura Avenue Area that is currently outside the City boundaries. The program EIR should address the overlap in boundaries and spheres of influence, and the service capacities for these Districts in this area. Included should an analysis of the service impacts of any agreements that may exist between the City and these Districts.

   The Montalvo Municipal Improvement District provides sanitary sewer collection and treatment services to areas within the City and areas outside the current City boundaries, but within the existing and proposed sphere of influence. The program EIR should address the boundary and sphere of influence overlaps, the service area and capacities of this District, and should analyze the service impacts of any agreements that may exist between the City and this District.

   The Saticoy Sanitary District provides sanitary sewer collection and treatment services to areas outside the current City boundaries, but within the existing and proposed sphere of influence. The program EIR should address the sphere of influence overlap and service area and capacities of this District, and should analyze the service impacts of any agreements that may exist between the City and this District.

Thank you again for the opportunity to review and comment on this NOP.

Sincerely,

Everett Millais
Executive Officer

October 28, 2004

Dear Ms. Porras:

Thank you for including the California Department of Transportation in the review process for the proposed update of the City's Comprehensive Plan Update. The Plan includes updates to the Transportation, Land Use and Planning, Population/Housing Balance Elements. We have reviewed the information provided and offer the following comments.

This Department as the State agency responsible for planning, operations, and maintenance of State highways shares the same transportation goals with the City. We hope to continue to work together in improving mobility in the region.

Caltrans is particularly interested in the transportation planning roles of local jurisdictions and suggests that the following areas be emphasized.
· Coordination of planning efforts between local agencies and Caltrans district 7.
· Preservation of transportation corridors for future system improvements; and
· Development of coordinated transportation system management plans that achieve the maximum use of present and proposed infrastructure."

TRANSPORTATION/TRAFFIC ELEMENT

It is widely known that Southern California highways are heavily congested especially during morning and evening peak periods. We realize that to improve mobility there is a need for capacity enhancing project as well as other innovative alternatives.

New development will continue to increase use of local and regional roadways. We ask that the Transportation/Traffic element identify strategies the City will pursue to maintain good levels of service.

As in the past, we look forward to being a part of the environmental review process for projects that have the potential to significantly impact traffic conditions on State highways. To assist us in evaluating impacts to the State highway system, we ask that traffic studies be prepared and include analysis of the nearest State highway facilities.

For State thresholds and guidance on the preparation of acceptable traffic studies, please refer to the Statewide Guide for the preparation of Traffic Impact Studies at: http://www.dot.ca.gov/hq/traffops/developserv/operationalsystems/reports/tisguide.pdf

If significant impacts are anticipated on the State highway system, the Department would work with the City and applicants to identify appropriate traffic mitigation measures.

We encourage the City to consider vehicular demand-reducing strategies. These include: incentives for commuters to use transit i.e. park-and-ride lots, discounts on monthly bus and rail passes, vanpools, etc. Other strategies may include transit- oriented development.

LAND-USE ELEMENT

As you are aware, there is a critical relationship between land use and transportation. The **quality of the State transportation system operation can affect the quality of the local circulation system operation.**

We ask that special attention be given to the jobs- and-housing balance concept. Communities with predominantly residential allocations should be encouraged to set aside areas for office, commercial/retail, and open space uses. Benefits of balanced communities include: reduction of long morning and evening commutes on State highways, shorter trips which in turn would reduce the consumption of fuel and air pollutants. It may also change direction of trips. Instead of most traffic traveling in one direction during peak periods, some trips may be diverted in the opposite direction.

BIOLOGICAL RESOURCES

We ask for consideration of natural corridors for dispersion of plant and animal wildlife on a regional basis. Of particular interest to Caltrans is some identification of and planning for locations where such corridors might run across or along transportation corridors

HOUSING ELEMENT

For large development projects, we ask that efforts be made to provide affordable housing for young workers and seniors to **ensure that substantial numbers of employees can afford to purchase homes and live in proposed projects.** We also ask that project proponents be encouraged to provide information on jobs along with housing development phases.

If you have any questions regarding our comments, you may contact the Project Engineer/Coordinator Mr. Yerjanian at (213) 897-6536 and refer to IGR/CEQA record number 041016NY. As the Comprehensive Plan Update program continues, we may offer additional comments. We look forward to discussing and/or meeting with you in the near future.

Sincerely,

SUBJECT: RMA 04-086, Notice of Preparation of Draft Environmental Impact Report
Update of 1989 Comprehensive Plan

Dear Ms Porras :

The subject document has been reviewed with respect to issues under the purview of the Ventura County Watershed Protection District (District). Development generally causes an increase in the rate and volume of stormwater flow in downstream facilities. The EIR needs to discuss stormwater management in such a manner as to prevent potentially significant environmental impacts which might arise downstream of any future development.
The EIR should explore the impacts future development will have on surface water quality and quantity both during the construction phase and throughout the life of developed projects. Specific surface water quality issues that need to be addressed in the EIR include the following :

1. Coverage of all future development projects under the National Pollution Discharge Elimination System (NPDES) State General Construction Permit and the requirement for a Stormwater Pollution Control Plan, or equivalent document, covering water quality protection during the construction phase of future projects.

2. Future project designs need to incorporate applicable Best Management Practices (BMPs) that intercept stormwater and effectively prohibit pollutants from discharging to the storm drain system. Permanent BMPs, including those developed by the Ventura Countywide Stormwater Quality Management Program, should be evaluated for appropriateness on all future projects.

Any future development projects that include existing or proposed direct drain connections to District jurisdictional facilities or encroach into District rights-of-way will be subject to District review and permitting. District jurisdictional areas within the City and the SOI should be mapped and the maps should be included in the EIR and labeled as Protective Overlay Zones.

If you have questions regarding this review, please call the undersigned at 654-2906.

Very truly yours,

Kevin Keivanfar, P.E.
Manager, Permit Section
Watershed Protection District

FROM: Bruce Smith, Manager, General Plan Section

SUBJECT: Notice of Preparation for Update of City of San Buenaventura Comprehensive Plan

---

The City of Ventura is involved in an update to its Comprehensive Plan. We suggest that the EIR for this project include a jobs/housing analysis that would determine whether or not the new employment created would be appropriately balanced with new housing at commensurately affordable rates. An appropriate jobs/housing balance will result in positive benefits with respect to transportation and air quality impacts of the Comprehensive Plan, whereas an imbalance between jobs and housing would result in significant environmental impacts (increases vehicle miles traveled, increased air pollution, waste of energy resources, etc.).

Secondly, we have recently become aware of an inconsistency between the County's Saticoy Area Plan and the City's plan for this area. For many years, the County has planned an approximately 5-acre area south of Rosal Lane (APNs 90-142-11 and 90-043-13) as "Residential Two Family" and zoned the site as "R-2" (Two-Family Residential). The City plan designates this property as "Industrial". The property is not contiguous with the City and therefore cannot be annexed at this time. The City provides water service and apparently cannot or will not provide water service for residential development. The County is reluctant to re-designate the site to industrial because of an existing jobs/housing imbalance in the area and because of the County's need for additional affordable housing sites (Housing Element requirement). In addition, existing industrial development south of the site was conditioned to provide a buffer in anticipation of future residential development to the north. Thus we request that as part of your Comprehensive Plan Update project, the City re-evaluate the residential/industrial boundary in this area to be consistent with the County's Saticoy Area Plan.

MEMORANDUM

DATE: November 1, 2004

TO: Resource Management Agency, Planning Division
Attention: Carl Morehouse

FROM: Nazir Lalani, Deputy Director NL

SUBJECT: Review of Document 04-086, Notice of Preparation of an EIR
Update of the 1989 Comprehensive Plan for the City of Ventura
Project involves updating the 1989 plan through the year 2025 with the current goals, policies and objectives that reflect the current needs and preferences of the community. The plan will also consider inclusion of certain areas outside the current Sphere of Influence for development.
Project Applicant: City of San Buenaventura
Lead Agency: **City of San Buenaventura**

The Transportation Department has reviewed the notice of preparation for a Draft Environmental Impact Report to update the City of Ventura Comprehensive Plan which serves as a blue print for development in the City. The EIR should address the following comments:

1. In accordance with the Ventura LAFCO Commissioner's Handbook, section 3.2.1, cities shall annex entire roadway sections adjacent to territory proposed to be annexed and shall include complete intersections. The EIR should require conditions for annexing county roadway section adjacent to the development, when the proposed expansion areas are developed.

2. The updated year 2025 comprehensive plan for the City should incorporate the island areas of the unincorporated area of the County within the City.

3. The cumulative impacts of the development of this project when considered with the cumulative impact of all other approved (or anticipated) development projects in the County will be potentially significant. To address the cumulative adverse impacts of traffic on the County Regional Road Network, the appropriate Traffic Impact Mitigation fees should be paid to the County when development occurs. With payment of the Traffic Impact Mitigation Fees, the Level of Service and safety of the existing roads would remain consistent with the County's General Plan.

4. Please provide us a copy of the draft EIR for review, when it becomes available.

Our review of this project is limited to the impacts this project may have on the County's Regional Road Network.

Please call me at 654-2080 if you have questions.

F:\transpor\LanDev\Non_County\04-0086 VEN.doc:sa

OCT 2 1 2004

VENTURA COUNTY
AIR POLLUTION CONTROL DISTRICT
Memorandum

TO: Carl Morehouse, Planning DATE: October 19, 2004

FROM: Andy Brown AB

SUBJECT: Review of a Notice of Preparation (NOP) for a proposed Draft Environmental Impact Report (EIR) for an update of the 1989 City of Ventura Comprehensive Plan (Reference No. 04-086)

Project Description

District staff has reviewed the subject project NOP of a Draft EIR for the proposed update to the City of Ventura's Comprehensive Plan. The proposed project involves the update of the 1989 Comprehensive Plan, which serves as the blueprint for the development of the City. Each of the Comprehensive Plan elements other than the Housing Element (an update of which was approved earlier this year) will be updated with goals, policies, and objectives that reflect the current needs and preferences of the community. The land use map will also be updated.

The City intends to emphasize infill development and reuse of developed lands within he current Sphere of Influence over the life of the Comprehensive Plan Update (through 2025), and has identified a number of growth districts and corridors where infill/reuse is to be focused. However, as part of the Comprehensive Plan update, the City is also considering inclusion of certain areas outside the current Sphere of Influence for future development.

Ventura County Air Quality Assessment Guidelines (2003 Guidelines)

APCD staff recommends that the air quality section of the Draft EIR be prepared in accordance with the *Ventura County Air Quality Assessment Guidelines* (2003 Guidelines). Please note that the 2003 Guidelines is the current advisory document for preparing air quality evaluations of environmental documents.

The air quality assessment should consider Reactive Organic Gases (ROG) and Nitrous Oxides (NO_X) emissions from all project-related motor vehicle trips. Additionally, the air quality assessment should consider potential impacts from fugitive dust, including PM_{10} that will be generated by construction activities. A copy of the 2003 Guidelines can be accessed from the downloadable materials section of the APCD website at www.vcapcd.org.

Local Air Quality Impacts

APCD recommends that the Draft EIR discuss potential local air quality impacts, and provide appropriate mitigation measures, if any are projected to be significant.

AQMP Consistency

The Draft EIR should address the project's consistency with the Ventura County Air Quality Management Plan (AQMP). A project that is determined to be inconsistent with the AQMP is also determined to have a significant cumulative adverse air quality impact. Chapter 4 – Air Quality Management Plan Consistency, of the District's 2003 Guidelines, provides guidance on determining a project's AQMP consistency.

Mitigation Measures

If the project is determined to have a significant impact on regional and/or local air quality, the Draft EIR should include all feasible mitigation measures, including project design features. Chapter 7 of the District's 2003 Guidelines discusses a number of mitigation measures that may be appropriate for this project. In addition, the District encourages other mitigation measures not currently included in the 2003 Guidelines be considered.

The Draft EIR should explicitly state that air quality mitigation measures would be implemented unless a feasibility analysis shows them to be infeasible or other, more effective, air quality mitigation measures become available and are applied to the project. All of the mitigation measures and project design elements that are incorporated into the project should be considered when evaluating and presenting the air quality impacts of the project in the Draft EIR. Mitigation of the project's impacts shall apply to all portions of the project.

If you have any questions, contact me by telephone at (805) 645-1439 or by email at andy@vcapcd.org.

Memo

To: Carl Morehouse, Resource Management Agency

From: Susan Johnson, Deputy Agricultural Commissioner

CC: Julie Bulla

Date: October 7, 2004

Re: Update of 1989 Comprehensive Plan RMA Reference Number 04-086

The Agricultural Commissioner has commented extensively to the county and to the City of Ventura regarding what we consider essential elements in the Comprehensive Plan Update of the City of Ventura. We will consider the Environmental Impact Report when and if it is developed to comment on certain aspects of the project. Just as a reminder the Agricultural Commissioner's primary concern continues to be the effect that any proposed development would have on the continued viability of surrounding agricultural parcels. Development proposed in the General Plan Update should adequately buffer existing agricultural operations from incompatible uses and no development should create further conflicts at the agricultural urban interface. We would support aspects of the project that propose expansion into areas where that expansion would mitigate existing areas of conflict and or would remove parcels from production that are no longer viable due to encroaching non-compatible uses.

RE: City of Ventura Comprehensive Plan Update

Dear Ms. Porras:

The Native American Heritage Commission has reviewed the Notice of Preparation (NOP) regarding the above referenced project. To adequately comply with this provision and mitigate project-related impacts on archaeological resources, the Commission recommends the following actions be required:

- ✓ Contact the appropriate Information Center for a record search to determine:
  - If a part or all of the area of project effect (APE) has been previously surveyed for cultural resources.
  - If any known cultural resources have already been recorded on or adjacent to the APE.
  - If the probability is low, moderate, or high that cultural resources are located in the APE.
- ✓ Contact the Native American Heritage Commission for:
  - A Sacred Lands File Check.
  - A list of appropriate Native American Contacts for consultation concerning the project site and to assist in the mitigation measures. **Native American Contacts List attached**
- ✓ Lack of surface evidence of archeological resources does not preclude their subsurface existence.
  - Lead agencies should include in their mitigation plan provisions for the identification and evaluation of accidentally discovered archeological resources, per California Environmental Quality Act (CEQA) §15064.5(f). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American, with knowledge in cultural resources, should monitor all ground-disturbing activities.
  - Lead agencies should include in their mitigation plan provisions for the disposition of recovered artifacts, in consultation with culturally affiliated Native Americans.
  - Lead agencies should include provisions for discovery of Native American human remains in their mitigation plan. Health and Safety Code §7050.5, CEQA §15064.5(e), and Public Resources Code §5097.98 mandates the process to be followed in the event of an accidental discovery of any human remains in a location other than a dedicated cemetery.

Sincerely,

RE: Update of 1988 Comprehensive Plan Revised Notice of Preparation: RMA #04-086-1

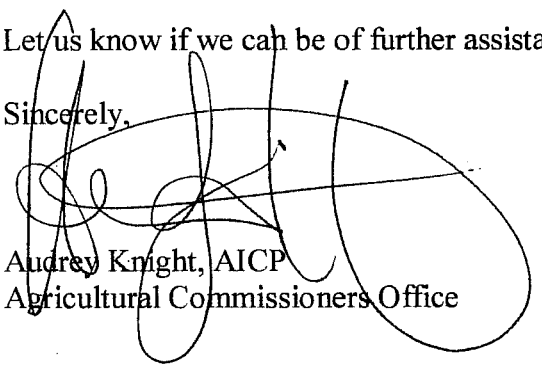
In reviewing the alternative potential expansion areas under consideration we have the following observations:

1. The city's current Sphere of Influence encompasses expansion areas identified as Poinsettia, Serra, and North Avenue, a total of 937 acres, currently also covered under SOAR. These agricultural properties are surrounded by residential, school and outdoor recreation uses that have given rise to complaints about farming activity . It may be appropriate for the SOAR effecting these properties to be lifted, creating a more natural progression of development for the city and enabling the compromised farming activities to be turned to more compatible land uses within the existing urban area.
2. Expansion of the SOI to 2025 beyond the above listed areas, into a large expanse of Prime Agriculture soils, specifically the area identified as Olivas (930 acres), is not in keeping with the city's stated infill and redevelopment policies for the central core, downtown, and Ventura Avenue. Nor would it be in keeping with the adopted Greenbelt (which the City of Oxnard intends to preserve), or the County policies for the preservation of agriculture. The removal of 930 acres of prime farmland does not appear to be justified and is in conflict with city, county, Coastal Commission and state adopted policies.
3. Alternative #3 appears to be most in keeping with all stated policies and goals of both the city and the County of Ventura. This scenario requires minimum expansion of the SOI, limited removal of prime agricultural soils and land protected under SOAR, and provides direction for growth to 2025.
4. The Agricultural Commissioners Office also supports alternatives #4 and/or #6. While removing active farm activity, as noted above, continuing to farm inside the existing urbanized area has become increasingly difficult, and in the long run, these areas provide the most logical loss of prime soils to urban development.

The Agricultural Policy Advisory Committee and the County Agricultural Commissioners Office have kept the position that normal farming activity is not compatible with residential, school and outdoor recreational uses if adequate buffers are not in place. The city needs to consider if it has a long-term desire to surround active farmland, and if so, the entirety of that land should remain intact, and not developed on a piecemeal basis. Additionally, adjacent property owners need to be informed about the "right-to-farm" ordinance and adequate distance and vegetative buffers need to be secured and maintained by neighboring urban uses.

Let us know if we can be of further assistance as you evaluate these alternatives.

Sincerely,



Audrey Knight, AICP
Agricultural Commissioners Office

SUBJECT: Revised Notice of Preparation of Draft EIR for Comp. Plan Update

Thank you for the opportunity to review and comment on the above subject document. Attached are the comments that we have received resulting from an intra-county review of the projects.

Any responses to these comments should be sent directly to the commenter, with a copy to Carl Morehouse, Ventura County Planning Division, L#1740, 800 S. Victoria Avenue, Ventura, CA 93009.

If you have any questions regarding any of the comments, please contact the appropriate respondent. Overall questions may be directed to Carl Morehouse at (805) 654-2476.

Sincerely,

Christopher Stephens
County Planning Director

County RMA Reference Number 04-086-1

DEC 3 0 2004

VENTURA COUNTY
AIR POLLUTION CONTROL DISTRICT
Memorandum

TO: Carl Morehouse, Planning DATE: December 28, 2004

FROM: Andy Brown AB

SUBJECT: Review of a Revised Notice of Preparation (NOP) for a proposed Draft Environmental Impact Report (EIR) for an update of the 1989 City of Ventura Comprehensive Plan (Reference No. 04-086-1)

Revised Project Description

The City issued a NOP in September 2004. The original NOP described five alternative land use strategies that were to be considered in the EIR. However, since then the way the alternatives are organized has changed, and the number of alternative land use strategies to be studied has increased from five to six.

The proposed project involves the update of the 1989 Comprehensive Plan, which serves as the blueprint for the development of the City. Each of the Comprehensive Plan elements other than the Housing Element (an update of which was approved earlier this year) will be updated with goals, policies, and objectives that reflect the current needs and preferences of the community. The land use map will also be updated.

The City intends to emphasize infill development and reuse of developed lands within he current Sphere of Influence over the life of the Comprehensive Plan Update (through 2025), and has identified a number of growth districts and corridors where infill/reuse is to be focused. However, as part of the Comprehensive Plan update, the City is also considering inclusion of certain areas outside the current Sphere of Influence for future development.

Ventura County Air Quality Assessment Guidelines (2003 Guidelines)

APCD staff recommends that the air quality section of the Draft EIR be prepared in accordance with the *Ventura County Air Quality Assessment Guidelines* (2003 Guidelines). Please note that the 2003 Guidelines is the current advisory document for preparing air quality evaluations of environmental documents.

The air quality assessment should consider Reactive Organic Gases (ROG) and Nitrous Oxides (NO_X) emissions from all project-related motor vehicle trips. Additionally, the air quality assessment should consider potential impacts from fugitive dust, including PM_{10} that

will be generated by construction activities. A copy of the 2003 Guidelines can be accessed from the downloadable materials section of the APCD website at www.vcapcd.org.

Local Air Quality Impacts

APCD recommends that the Draft EIR discuss potential local air quality impacts, and provide appropriate mitigation measures, if any are projected to be significant.

AQMP Consistency

The Draft EIR should address the project's consistency with the Ventura County Air Quality Management Plan (AQMP). A project that is determined to be inconsistent with the AQMP is also determined to have a significant cumulative adverse air quality impact. Chapter 4 – Air Quality Management Plan Consistency, of the District's 2003 Guidelines, provides guidance on determining a project's AQMP consistency.

Mitigation Measures

If the project is determined to have a significant impact on regional and/or local air quality, the Draft EIR should include all feasible mitigation measures, including project design features. Chapter 7 of the District's 2003 Guidelines discusses a number of mitigation measures that may be appropriate for this project. In addition, the District encourages other mitigation measures not currently included in the 2003 Guidelines be considered.

The Draft EIR should explicitly state that air quality mitigation measures would be implemented unless a feasibility analysis shows them to be infeasible or other, more effective, air quality mitigation measures become available and are applied to the project. All of the mitigation measures and project design elements that are incorporated into the project should be considered when evaluating and presenting the air quality impacts of the project in the Draft EIR. Mitigation of the project's impacts shall apply to all portions of the project.

If you have any questions, contact me by telephone at (805) 645-1439 or by email at andy@vcapcd.org.

PUBLIC WORKS AGENCY
TRANSPORTATION DEPARTMENT
Traffic, Advance Planning & Permits Division
MEMORANDUM

DATE: January 20, 2005

TO: Resource Management Agency, Planning Division
Attention: Carl Morehouse

FROM: Nazir Lalani, Deputy Director

SUBJECT: Review of Document 04-086-1, **Revised** Notice of Preparation of an EIR
Update of the 1988 Comprehensive Plan for the City of Ventura
Project involves updating the 1988 plan through the year 2025 with the current goals, policies and objectives that reflect the current needs and preferences of the community. The plan will also consider inclusion of certain areas outside the current Sphere of Influence for development.
Project Applicant/ Lead Agency: City of San Buenaventura

The Transportation Department has reviewed the revised notice of preparation for a Draft Environmental Impact Report to update the City of Ventura Comprehensive Plan which serves as a blue print for development in the City. Our comments are the same as in our memo dated November 1, 2004 and are as follows:

The EIR should address the following comments:

1. In accordance with the Ventura LAFCO Commissioner's Handbook, section 3.2.1, cities shall annex entire roadway sections adjacent to territory proposed to be annexed and shall include complete intersections. The EIR should require conditions for annexing county roadway section adjacent to the development, when the proposed expansion areas are developed.

2. The updated year 2025 comprehensive plan for the City should incorporate the island areas of the unincorporated area of the County within the City.

3. The cumulative impacts of the development of this project when considered with the cumulative impact of all other approved (or anticipated) development projects in the County will be potentially significant. To address the cumulative adverse impacts of traffic on the County Regional Road Network, the appropriate Traffic Impact Mitigation fees should be paid to the County when development occurs. With payment of the Traffic Impact Mitigation Fees, the Level of Service and safety of the existing roads would remain consistent with the County's General Plan.

4. Please provide us a copy of the draft EIR for review, when it becomes available.

Our review of this project is limited to the impacts this project may have on the County's Regional Road Network.

Please call me at 654-2080 if you have questions.

RE: City of Ventura Comprehensive Plan Update: SCH 2004101014

The California Department of Health Services (CDHS) Environmental Review Unit is in receipt of the Notice of Preparation for the above project. As a "responsible agency" under the California Environmental Quality Act (CEQA), we appreciate the opportunity to comment.

If the City finds it necessary to develop new water supply wells and/or make modifications to an existing domestic water system to serve the proposed developments, an application to amend the existing water system permit must be submitted to the CDHS Santa Barbara District Office.

These future developments and future infrastructure improvements may be subject to further environmental review pursuant to the requirements of CEQA as a result of this separate permitting process.

If you have any questions, please contact the Field Office at (805) 566-1326. We look forward to working with you in the future.

Sincerely,

Veronica L. Ramirez

RE: REVISED NOTICE OF PREPARATION – COMPREHENSIVE PLAN UPDATE EIR

Dear ~~Ms~~ Lisa Porras:

Earlier today we discussed the Revised Notice of Preparation (NOP) for the program environmental impact report (EIR) for the City's Comprehensive Plan update. Specifically, I inquired about the "Intensification/Reuse Only Scenario" listed in the revised NOP and the reference in the description to the *current* Sphere of Influence. You indicated that you thought it meant the *proposed* Sphere of Influence and would verify this with the City's EIR consultants. A short while later you called me back and left a message indicating that in fact the Intensification/Reuse Only Scenario in the Revised NOP applies to the *proposed* Sphere of Influence.

When we spoke about the Intensification/Reuse Only Scenario I did not intend to comment further about the NOP as at that time I thought that my October 25, 2004 comment letter would be sufficient. However, after reviewing the revised NOP in more detail, please consider the following additional comments in preparing the EIR:

1. The description of the Intensification/Reuse Only Scenario should be entirely revised for clarity. There is a substantial difference between the City's *current* sphere of influence and the *proposed* Sphere of Influence shown on the Proposed Land Use Diagram that accompanied both the original and revised NOPs. The City's *current* Sphere of Influence includes a large portion of the hillsides covered by the Hillside Voter Protection Act (HVPA), but does not include the "Olivas Potential Expansion Area." This difference is several thousand acres in area.

   If the Intensification/Reuse Only Scenario description is simply modified to substitute the word "proposed" for the word "current" when referring to the Sphere of Influence, I believe this will still be confusing. The description would then state that future development will be limited to areas within the *proposed* Sphere of Influence and that none of the possible expansion areas would be considered. This leaves the reader to figure out that this scenario does not include the North Avenue Potential Expansion Area, the Olivas Potential Expansion Area, the Poinsettia Potential Expansion Area, and/or the Serra Potential Expansion Area, and having to note that the Western Cañada Larga Potential Expansion Area is not in the *proposed* Sphere of Influence. Even though not mentioned, there are a number of properties covered by the City's SOAR Ordinance that are within the *proposed* Sphere of Influence that cannot readily be developed. The

description should be re-written so it is clear where future development will occur under this scenario and if areas covered by the City's SOAR Ordinance are included.

2. The first page of the revised NOP indicates the City is, "...considering inclusion of certain areas *outside* the *current* Sphere of Influence for future development." (emphasis added). This statement is followed by a list of five areas. It should be clearly noted that of these five areas, three – North Avenue, Serra and Poinsettia - are entirely *within* the *current* Sphere of Influence. Thus, the revised NOP is repeating an error from the original NOP. This error should not be repeated in the EIR. The EIR needs to clearly identify what is in the City's *current* Sphere of Influence and what is to be in the City's *proposed* Sphere of Influence.

3. The Western Cañada Larga Potential Expansion Area is outside both the current and the proposed Sphere of Influence. Scenario no. 3 in the revised NOP, the Intensification/Reuse + North Avenue + Western Cañada Larga Scenario – should discuss the effects and impacts, especially the service impacts, of having this area remain outside the City's Sphere of Influence. Note that with very limited exceptions the City cannot provide services to any area outside its Sphere of Influence unless it is already doing so.

4. Spheres of Influence are set by LAFCO, not the City. Amending or updating Spheres of Influence are projects under CEQA. If the City wants LAFCO, as a responsible agency, to utilize the Comprehensive Plan Update EIR to amend or update the City's current Sphere of Influence, or to use this EIR in the future for any City boundary change proposals, it is critical that the *proposed* Sphere of Influence be discussed in the context of the *current* Sphere of Influence and in the context of each scenario, including the no project scenario. In other words, what is the difference between the *current* Sphere of Influence and the *proposed* Sphere of Influence for each scenario, how is each consistent with the LAFCO policies identified in my October 25, 2004 comment letter, and what are the impacts associated with the Sphere of Influence changes proposed for each scenario?

5. None of the scenarios in the revised NOP include the Poinsettia Potential Expansion Area. Thus, based on the revised NOP the EIR will apparently not discuss any development or service extension impacts that may be associated with the Poinsettia area. This area is, however, apparently proposed to remain within the City's Sphere of Influence. Given this fact, the EIR should contain another scenario to provide for a discussion of the impacts of having the Poinsettia area, and any similar non-expansion or non-growth areas, remain in the City's Sphere of Influence contrary to the LAFCO policies noted in my October 25, 2005 comment letter.

   While it may not be possible as a matter of policy at this time, it would be preferable and easier in terms of the necessary CEQA analyses to revise the basic project description to have the proposed Sphere of Influence coincide with the boundaries of each scenario to be reviewed. Based on both the original and revised NOP, however, there is apparently only one proposed Sphere of Influence to be analyzed and it is independent of any of the scenarios. If this remains to be true, the EIR will need to discuss the related

impacts not just for the Poinsettia area, but also for any other area proposed to remain in the Sphere of Influence but where no growth is to occur or City services provided.

6. For overall clarity and analysis there should be a separate map or maps prepared for each scenario reviewed. Each such map or maps should clearly indicate the City's existing boundary, the current Sphere of Influence and the proposed Sphere of Influence.

Please accept these additional comments as being meant to assist in the preparation of an accurate, complete, clearly understandable and useable EIR.

Sincerely,

Everett Millais
Executive Officer

Re: EIR Scoping Meeting held on January 12, 2005

Dear Lisa,
Please find below a few comments from Ventura Citizens for Hillside Preservation on the scope of the EIR for the updated Comp Plan.

Given that the meeting was not noticed like the prior Comp Plan meetings would you mind if we submit further comments next week if we have any? Not everyone in our group has PowerPoint so very few of our directors could open the attachment I forwarded from you. I do not know if we will have further comments, but would like to know that you will accept them if we do.

1. We need to be noticed about any future meetings on the EIR or other topics related to the Comp Plan update.
2. The Intensification/Reuse scenario including Canada Larga should be removed from consideration since the area lies in a flood plain. Recent flooding in that area indicates that other scenarios would be more preferable for any required expansion.
3. Where is the Hillside Management Plan discussed? Will its implementation be the same? Will it be incorporated into the Comp Plan in this update?
4. What are the environmental impacts of compressing the old land-use categories (24+) down to the handful recommended by staff? What are the impacts on future development?
5. The EIR must examine <u>any</u> changes to the Comp Plan that will affect development in any hillside areas.

This is direct input from our meeting last evening. I hope to have a few more comments from everyone next week now that they've had a chance to review the PowerPoint presentation at our meeting. If I receive further comments I will pass them on to you. Please let me know if you will still be accepting comments through the first week of February.

Thank you.

Regards,
Kathy Bremer

10.9	Publish an annual report that evaluates City performance in such areas as conservation, housing, and economic development.	CD	Mid-term
10.10	Continue to improve the user-friendliness of the media that communicate information about the City, including the website, cable channels, newsletters, kiosks, and water billing statements.	CM [CE]	Short-term
10.11	Establish a clear policy toward the scope, role, boundaries, and jurisdiction of neighborhood Community Councils citywide, with the objectives of strengthening their roles in decision-making.	CD [LRP]	Mid-term

KEY TO ABBREVIATIONS	
AS = Administrative Services Department AS [P] = Purchasing CA = City Attorney CD = Community Development Department CD [A] = Administration CD [CP] = Current Planning CD [LRP] = Long Range Planning CD [ED] = Economic Development CD [LD] = Land Development CD [RDA] = Redevelopment Agency CC = City Council CM = City Manager's Department CM [CE] = Civic Engagement CS = Community Services Department CS [CR] = Community Recreation	CS [CA] = Cultural Affairs CS [GS/AS] = Golf Services/Adult Sports CS [SS] = Social Services FD = Fire Department FD [IS] = Inspection Services HR = Human Resources Department PD = Police Department PW = Public Works Department PW [E] = Engineering PW [P] = Parks PW [MS] = Maintenance Services PW [U] = Utilities Short-term = 0-5 years Mid-term = 5-10 years Long-term = 10-20 years Ongoing = May require short-, mid-, and long-term action
= Action included in the Land Use Plan of the City's Local Coastal Program	

Number	Action	Lead Entity	Timeframe
10.12	Establish stronger partnerships with neighborhood Community Councils to set area priorities for capital investment, community policing, City services, commercial investment, physical planning, education, and other concerns, to guide both City policies and day-to-day cooperation and problem-solving.	CD [LRP]	Ongoing
10.13	Recognizing that neighborhood empowerment must be balanced and sustained by overall City policies and citywide vision and resources – establish a citywide Neighborhood Community Congress where local neighborhood Community Councils can collaborate and learn from each other.	CM[CE]	Mid-term
10.14	Establish clear liaison relationships to foster communication, training, and involvement efforts between the City, neighborhood Community Councils and other community partners, including the Ventura Unified School District and business, civic, cultural and religious groups.	CM [CE]	Short-term

Appendix C

Project Description Information

Intensification/Reuse Only (Scenario 1)

	Residential Development (units)	Non-Residential Development (square feet)				
		Retail	Office	Industrial	Hotel	Total
Districts						
Upper North Avenue	100	10,000	50,000	150,000		210,000
North Avenue	50	10,000	50,000	250,000		310,000
Downtown	1,600	100,000	200,000		150,000	450,000
Pacific View Mall	25	25,000	0			25,000
Harbor	300	66,000			150,000	216,000
Arundell	200	25,000	300,000	1,000,000		1,325,000
Auto Center	50	300,000	50,000	300,000		650,000
Metrolink	50		50,000	25,000		75,000
Saticoy	50	0		25,000		25,000
Subtotals (Districts)	**2,425**	**536,000**	**700,000**	**1,750,000**	**300,000**	**3,286,000**

Totals (Intensification + Expansion + Pending)	**8,318**	**992,377**	**1,213,214**	**2,235,133**	**450,000**	**4,890,724**

Notes:

1. Overall residential growth is based on 0.88% annual growth through 2025. Overall non-residential growth is based on estimates provided by Stanley R. Hoffman Associates, Inc. All unit and square footage numbers are estimates of how future growth may be distributed based on available land, local land use practices, and recent Council and community direction and preferences. All figures are for analytical purposes only. The actual distribution of future growth in the City may vary based on market forces and other factors. Both the districts/corridors and expansion areas could accommodate more development and/or a different mix of development.

2. The distribution of growth in the districts and corridors is based on the following general assumptions: (a) The Downtown area and, to a lesser extent, the Ventura Avenue corridor will be the focus of future residential and commercial growth; (b) the Arundell, North Avenue, and Upper North Avenue areas will be the focus of future industrial growth; (c) other districts and corridors will not be the focus of growth, but will accommodate a certain amount of growth over time. When possible, knowledge of possible future plans or land availability has been used to estimate future growth. For example, the estimates of growth in the Downtown and Harbor Districts are based on the Downtown Specific Plan and Master Plan and staff knowledge of likely projects. Growth estimates for the Arundell community consider the likely development of the 75-acre McGrath property with a mix of uses and development of other vacant lands. Growth estimates for the Auto Center area consider the possibility of a "big box" retailer in that area.

3. Estimates of growth in the SOI/Other Infill sites are based on the following general assumptions: (a) 101/126 Orchard site will develop similarly to a project recently proposed for that site; (b) Wells/Saticoy sites will develop in accordance with ongoing planning efforts for those areas; (c) the Pierpont area will develop generally in accordance with a conceptual project recently considered by the City; (d) Second Units will be added at a rate of 15/year; (e) roughly half of underutilized lands identified in the Housing Element will be re-developed over the next 20 years; (f) all vacant lands outside the districts and corridors will be developed in accordance with the proposed land use designations.

4. Planned and Pending Developments based upon the City's 2004 Planning and Pending Developments list. Building areas do not include self storage facilities.

5. Expansion area totals are conceptual estimates that encompass a mix of uses and residential densities.

6. The following potential projects not included in the 2004 Planned and Pending Developments list have been included in the future development totals: (1) 150,000 square feet of industrial development in the Auto Center area; (2) 165,000 square feet of retail development along Wells Road in the Saticoy area; (3) 50,000 square feet of office development on a 3.5-acre site along Ralston Drive. The Auto Center industrial project is included in the Auto Center district; the other two projects are included in the "vacant" category. The square footage associated with these projects has been added to the projections of future growth to provide a "worst-case" analysis of possible future impacts.

Intensification/Reuse + N. Avenue + Olivas + Serra (Scenario 2)

	Residential Development (units)	Non-Residential Development (square feet)				
		Retail	Office	Industrial	Hotel	Total
Districts						
Upper North Avenue	100	10,000	50,000	200,000		260,000
North Avenue	50	10,000	50,000	400,000		460,000
Downtown	1,600	100,000	200,000		150,000	450,000
