Notes:

1. Overall residential growth is based on 1.14% annual growth through 2025. Overall non-residential growth is based on estimates provided by Stanley R. Hoffman Associates, Inc. All unit and square footage numbers are estimates of how future growth may be distributed based on available land, local land use practices, and recent Council and community direction and preferences. All figures are for analytical purposes only. The actual distribution of future growth in the City may vary based on market forces and other factors. Both the districts/corridors and expansion areas could accommodate more development and/or a different mix of development.

2. The distribution of growth in the districts and corridors is based on the following general assumptions: (a) The Downtown area and, to a lesser extent, the Ventura Avenue corridor will be the focus of future residential and commercial growth; (b) the Arundell, North Avenue, and Upper North Avenue areas will be the focus of future industrial growth; (c) other districts and corridors will not be the focus of growth, but will accommodate a certain amount of growth over time. When possible, knowledge of possible future plans or land availability has been used to estimate future growth. For example, the estimates of growth in the Downtown and Harbor Districts are based on the Downtown Specific Plan and Master Plan and staff knowledge of likely projects. Growth estimates for the Arundell community consider the likely development of the 75-acre McGrath property with a mix of uses and development of other vacant lands. Growth estimates for the Auto Center area consider the possibility of a "big box" retailer in that area.

3. Estimates of growth in the SOI/Other infill sites are based on the following general assumptions: (a) 101/126 Orchard site will develop similarly to a project recently proposed for that site; (b) Wells/Saticoy sites will develop in accordance with ongoing planning efforts for those areas; (c) the Pierpont area will develop generally in accordance with a conceptual project recently considered by the City; (d) Second Units will be added at a rate of 15/year; (e) roughly half of underutilized lands identified in the Housing Element will be re-developed over the next 20 years; (f) all vacant lands outside the districts and corridors will be developed in accordance with the proposed land use designations.

4. Planned and Pending Developments based upon the City's 2004 Planning and Pending Developments list. Building areas do not include self storage facilities.

5. Expansion area totals are conceptual estimates that encompass a mix of uses and residential densities.

6. The following potential projects not included in the 2004 Planned and Pending Developments list have been included in the future development totals: (1) 150,000 square feet of industrial development in the Auto Center area; (2) 165,000 square feet of retail development along Wells Road in the Saticoy area; (3) 50,000 square feet of office development on a 3.5-acre site along Ralston Drive. The Auto Center industrial project is included in the Auto Center district; the other two projects are included in the "vacant" category. The square footage associated with these projects has been added to the projections of future growth to provide a "worst-case" analysis of possible future impacts.

Olivas		7,160	7,066	390,053		404,279
Subtotals (Planned/Pending)	**1,718**	**81,377**	**123,214**	**435,133**	**150,000**	**789,724**
Totals (Intensification + Expansion + Pending)	**11,025**	**1,193,624**	**1,871,841**	**2,760,133**	**450,000**	**6,275,598**

Notes:

1. Overall residential growth is based on 1.14% annual growth through 2025. Overall non-residential growth is based on estimates provided by Stanley R. Hoffman Associates, Inc. All unit and square footage numbers are estimates of how future growth may be distributed based on available land, local land use practices, and recent Council and community direction and preferences. All figures are for analytical purposes only. The actual distribution of future growth in the City may vary based on market forces and other factors. Both the districts/corridors and expansion areas could accommodate more development and/or a different mix of development.

2. The distribution of growth in the districts and corridors is based on the following general assumptions: (a) The Downtown area and, to a lesser extent, the Ventura Avenue corridor will be the focus of future residential and commercial growth; (b) the Arundell, North Avenue, and Upper North Avenue areas will be the focus of future industrial growth; (c) other districts and corridors will not be the focus of growth, but will accommodate a certain amount of growth over time. When possible, knowledge of possible future plans or land availability has been used to estimate future growth. For example, the estimates of growth in the Downtown and Harbor Districts are based on the Downtown Specific Plan and Master Plan and staff knowledge of likely projects. Growth estimates for the Arundell community consider the likely development of the 75-acre McGrath property with a mix of uses and development of other vacant lands. Growth estimates for the Auto Center area consider the possibility of a "big box" retailer in that area.

3. Estimates of growth in the SOI/Other infill sites are based on the following general assumptions: (a) 101/126 Orchard site will develop similarly to a project recently proposed for that site; (b) Wells/Saticoy sites will develop in accordance with ongoing planning efforts for those areas; (c) the Pierpont area will develop generally in accordance with a conceptual project recently considered by the City; (d) Second Units will be added at a rate of 15/year; (e) roughly half of underutilized lands identified in the Housing Element will be re-developed over the next 20 years; (f) all vacant lands outside the districts and corridors will be developed in accordance with the proposed land use designations.

4. Planned and Pending Developments based upon the City's 2004 Planning and Pending Developments list. Building areas do not include self storage facilities.

5. Expansion area totals are conceptual estimates that encompass a mix of uses and residential densities.

6. The following potential projects not included in the 2004 Planned and Pending Developments list have been included in the future development totals: (1) 150,000 square feet of industrial development in the Auto Center area; (2) 165,000 square feet of retail development along Wells Road in the Saticoy area; (3) 50,000 square feet of office development on a 3.5-acre site along Ralston Drive. The Auto Center industrial project is included in the Auto Center district; the other two projects are included in the "vacant" category. The square footage associated with these projects has been added to the projections of future growth to provide a "worst-case" analysis of possible future impacts.

Appendix D

Cultural Resources List

CITY OF SAN BUENAVENTURA
HISTORIC LANDMARKS & DISTRICTS

April 1, 2002

NO.	LANDMARK NAME	ADDRESS	ADDITIONAL INFORMATION

1. Olivas Adobe **4200 Olivas Park Drive** SL/NRHP
Designated February 11, 1974 (CA-VEN-815H)

This two-story Monterey style adobe was the center of San Miguel Rancho. Built in 1847 by Don Raymundo Olivas, a prominent cattle and sheep rancher, it was owned by the family until 1899. Restored in the late 1920s by millionaire Max Fleischmann of Fleischmann Yeast and Margarine fame, the historic house was given to the City of San Buenaventura in 1961. Now a historic museum, it is dedicated to Ventura's rancho heritage.

2. Ortega Adobe **215 West Main Street** (CA-VEN-785H)
Designated February 11, 1974

Emigdio Miguel Ortega, grandson of Josef Francisco de Ortega, discoverer of San Francisco Bay in 1734, and comandante of Santa Barbara in 1782, was born at Mission San Diego. Emigdio was appointed Sergeant of the Santa Barbara Company in 18111818 and comisionado at Los Angeles in 1918. He married Concepcion Dominguez at Mission Santa Barbara. Through the land grant of 1830-1850 for Rancho Ex-Mission Santa Buenaventura from Governor Pio Pico, he bought the 200 x 200 foot lot and built the adobe in 1855-57. The west half of the adobe was washed away by the floods of 1862 and rebuilt using the original roof tiles from the Mission San Buenaventura. In 1897, Emilio C. Ortega, son of Emigdio and Conception, began and operated from the adobe, the now famous Ortega Chili Factory. Located at 215 W Main Street, it was the townhouse of the Ortega Family, built in 1857.

3. Father Serra Statue **501 Poli Street**
Designated February 11, 1974

This bronze statue was designed by John Palo-Kanges and represents an idealized image of Father Junipero Serra, the founder of Mission San Buenaventura. Located in front of Ventura's City Hall on California Street, the original cement statue was a WPA project in 1936. Due to weathering, the original was placed in storage in 1989 and replaced by the present bronze one. The wooden statue used to mold the bronze statue is located in the atrium of the City Hall. It was unveiled in November 1936.

4. **City Hall** — **601 Poli Street** — SL/NRHP
Designated February 11, 1974

Constructed in 1912, it served as the Ventura County Courthouse until 1962. Designed by famed Los Angeles architect, Albert C. Martin Sr. in the "Beau Arts" or Neo-classic style. The building features the faces of 24 monks on the facade and stained glass skylights and domes in the interior. Restored and converted into Ventura's City Hall in 1972, it stands as one of the state's premier civic buildings. The west wing, formerly the county sheriffs office and jail, was restored and added to the City Hall designation in 1988.

5. **Grant Park Cross** — **Ferro Drive** — SL(Site)
Designated February 11, 1974

The wooden cross, made of pine from Santa Paula Canyon, was placed on this site to commemorate the original cross erected by Father Junipero Serra when he founded Mission San Buenaventura in 1782. Two earlier crosses had blown down by 1875 and were not replaced again until the ladies of the ECO Club, a service club, erected the present cross on Admission Day, September 9, 1912.

6. **Mission Plaza Archeological Site** — **100 Block E. Main Street Mission Plaza Park North side of Main Street including the Albinger Museum, Filtration building** — NRHP District SL (CA-VEN-4-87)
Designated February 11, 1974

The Mission Plaza Archaeological Project studied the area west of Mission San Buenaventura Church and along Valdez Alley from 1973 to 1975. A number of important features covering 3,500 years of history were uncovered at the site. These features include five mission building foundations, ceramic pipelines, an adobe brick factory, a well, an earth oven, and a water filtration building. Nicknamed El Caballo (the Horse) because of a carved wall feature in the shape of an animal head, the filtration building, built in 1782 by Chumash labor under the direction of Father Pedro Cambon, is the oldest standing structure in Ventura County. In the late 1860s, the building was used as a jail. The Mission Plaza Archaeological site includes VEN-4, which was recorded in 1951 in the UCLA Archaeological Survey Archives. The approximately one and one half acre area was designated as a local historic landmark on February 11,1974.

7. **Conklin Residence** — **608 East Thompson Blvd.** — Mitchell Block
Designated May 6, 1974

Located at 608 E Thompson Blvd., the home was originally built in 1877 by Dr. Solomon Leander Stuart, a dentist, whose office was located on California Street between Main and Santa Clara Streets. He is thought to have been a descendent of the artist Gilbert Stuart. The home was then deeded in 1887 to E. L. Mitchell, proprietor of a brick business and builder of two of the homes within the Mitchell Block. Marguerite Conklin, granddaughter of Marada Waton and owner of the property in 1918, lived her entire life within this restored Cape Cod style home

midst her family heirlooms. It is folklore that her mantle clock, silent on the day of her passing in 1977, would never be operable again. The exterior was changed to its present Cape Cod appearance in 1927.

8. Mission Norfolk Pines **211E Main Street** Mission District
Designated July 1, 1974

Two of the tallest trees in the City, these large Norfolk Island Pines (*araucaria excilas*) are located adjacent to the San Buenaventura Mission. The trees were planted in the 1880s, and legend suggests that they were brought here from Norfolk Island by a sea captain to be used as replacement masts for his ship. The captain, perhaps lost at sea, never returned to claim his trees. Traditionally, the trees are lit with colored lights during the holiday season and can be seen from miles along Highway 101.

In November 2000, the America The Beautiful Fund designated the pines as California's Millennium Landmark Trees. The non-profit group has given the designation to at least one tree in each of the 50 states that "has seen the nation progress form a largely rural, farming community to an industrial powerhouse." The mission Norfolk Pines were the first trees to be given the designation in California.

9. Mound Pepper Tree **5430 Telegraph Road** *No longer exists*
Designated July 1, 1974

The Mound Pepper Tree was located 25 feet west of the east property line of the Mound Guest Home. It was cited as the oldest and largest tree of its specie in the City. It was 100 years old, 43 feet tall, 23.5 feet in circumference at its narrowest point two feet above ground and had a 100-foot branch spread.

10. San Buenaventura Mission **211E Main Street** NRHP District
Designated July 1, 1974

Father Junipero Serra founded Mission San Buenaventura on Easter Sunday, March 31, 1782. It was the ninth and last mission founded by Father Serra. Construction on the first adobe mission church began in 1787, but problems forced its demolition in 1790. The present stone and adobe church was built just to the east of the original structure and completed in 1809. The Mexican Government secularized the missions in 1834, and in 1846, Mission San Buenaventura was sold to Jose Arnaz and became known as Rancho Ex-Mission. In 1862, President Abraham Lincoln returned the Mission San Buenaventura Church to the Catholic Church, which owns it to this day.

11. Plaza Park Moreton Bay Fig Tree **Chestnut and Santa Clara Streets**
Designated July 1, 1974

The Moreton Bay Fig tree, which was planted in Plaza Park in 1874, is thought to be the largest tree of its species, being 68 feet high with a branch spread of 130 feet in the City. It is a *ficus*

macrophylla, which is a native of Queensland Australia. The tree is located at the northwest comer of Plaza Park at Chestnut and Santa Clara Streets.

12. **Mission Plaza Moreton100 Block East Main Street** Mission District/NHRP
Bay Fig Tree
Designated July 1, 1974

The Mission Plaza Moreton Bay Fig Tree (*ficus macrophylla*) dominates the east side of Mission Plaza Park, along Figueroa Plaza. Its branches have a spread of over 100 feet and its circumference is 18 feet. The tree is over 120 years old. This area is part of the Mission National Register of Historic Places (NRHP) District.

13. **Baker Residence** **2107 Poli Street**
Designated September 23, 1975

Located at 2107 Poli Street, the home was built in 1888 by architect Franklin Pierce and it is a well-preserved model of Victorian architecture.

14. **Judge Ewing Residence** **605 Poli Street**
Designated September 23, 1975

This house was built in 1894 for Judge Felix Ewing, then the only judge in Ventura County. It was built in the popular Queen Anne style. The large wrap-around porch was elaborate for its time. The library has special carved paneling and tiled floors. The stone used in the walls was quarried in Foster Park north of Ventura. The building is now used as law offices.

15. **Theodore Groene Building** **592 East Main Street**
Bahn's Jewelry Store
Designated October 27, 1975

This building was originally constructed in the late 1920's as a bank for the Ventura Guarantee and Loan. Although it served as a home for many different businesses, it is primarily known as being occupied by the Bahn's Jewelry Store. Purchased by Theodore Groene in 1961, it was then restored by the contractor, Clyde Campbell. The building features a beautiful interior, including three large murals by Norman Kennedy. The exterior is noteworthy because of the lovely brickwork and the unusual ceramic tiles. The original white paint was removed from the building in 1982.

16. **San Miguel Chapel Site** **NE corner Thompson Blvd.** NRHP
Designated October 27, 1975

Located at the northeast corner of the intersection of Thompson Boulevard and Palm Street. The San Miguel Chapel, originally constructed of adobe brick about 1790, served as a place of worship while the Mission San Buenaventura was being built. The Chapel was the first permanent structure in Ventura built by non-Aboriginal man. A second chapel, half the size of the first, was built on the site after the original chapel was destroyed by the earthquake of 1812. Subsequently, the chapel suffered extensive damage from natural causes, and, in 1873, the walls

were torn down. The site was excavated by students from Moorpark College, starting in 1974. Excavated features include the uncovered aqueduct, which served the Mission, a rock foundation, a bell tower, and a section of painted wall.

17. **Robert Stacy Judd Church** **101 Laurel Street**
Church of Religious Science
Designated December 1, 1975

This unusual building was designed for Ventura's First Baptist Church by Hollywood architect Robert Stacy-Judd. Finished in 1931, the church stands as a monument to the Mayan Revival style. Due to funds provided by local sculptor, Jason Herron, the building was restored in the mid 1980s.

18. **Shisholop Village Site/** **South end Figueroa Street** (CA-VEN-3)
Cabrillo's Landing
Designated December 22, 1975

Located directly on the beach at the foot of Figueroa Street is the site of the Chumash Indian village called Shisholop by the missionaries who settled Ventura. Believed to have been a Chumash provincial capital, Shisholop was first settled shortly after A.D. 1000 and reached its zenith about the time it was visited in 1542 by Portuguese navigator Juan Rodriguez Cabrillo, while on an exploratory expedition for Spain. The location of Shisholop Village and the Cabrillo landing was designated a historical site on December 22, 1975.

19. **Elizabeth Bard Memorial Hospital** **121 North Fir Street**
Designated March 8, 1976

Opened on January 1, 1902, by brothers Senator Thomas R. Bard and Dr. Cephas Little Bard as a memorial to their mother, the Elizabeth Bard memorial Hospital is Ventura's only remaining Mission Revival building. Located on a hillside just two blocks east of City Hall, the structure, with its arched loggia, scalloped parapeted gables and domed bell tower, stands out as one of the finest works of well-known local builder Selwyn Locke Shaw. Cephas Bard, who came to Ventura in 1868, is said to have been the County's first doctor. He was also the first patient to die in the Bard Hospital in 1902. The building, which has been rehabilitated for use as offices, was designated a historic landmark on March 8, 1976.

20. **Ventura Wharf (Pier)** **Harbor Blvd. east of California Street**
Designated March 29, 1976

The Ventura Wharf was partially destroyed in 1926 and was rebuilt as it appears today. Located off of Harbor Boulevard between California Street and Fir Street, the pier was built to encourage growth in Ventura and to provide an outlet for farmers and their crops. The pier was considered a public utility and "absolutely indispensable" to the city's economy. The wooden structure includes a restaurant and a bait and tackle shop. The pier is a point of interest for today's tourists, as it was a promenade for residents in early days. It is said to be one of the longest piers on the California Coast.

21. Franz Residence **31 North Oak Street**
Designated March 29, 1976

The Emanuel Franz House, built in 1879, is the only remaining unaltered example of urban Italianate architecture from the 1870s to be found in the city. The house was built for Emanuel Franz, an Austrian immigrant who operated one of the first mercantile businesses on Main Street, just a half block from his home. Franz and his new bride moved into the house in 1880. All of their six children were born in the house. The Franz family owned the house continuously until 1975. Located at 31 N. Oak Street, it has an interesting front stoop and widow's watch. Designated March 29, 1976 and placed on the National Register June 25, 1982.

22. Magnolia Tree **739 East Santa Clara Street** *No longer exists*
Designated March 29, 1976

Planted at 739 E. Santa Clara Street by Charles G. Bartlett ca. 1907. It is the oldest of its species in the City. It was cut down by the owner in August 2002.

23. Great Pacific Iron Works **235 West Santa Clara Street**
Designated October 4, 1976

Located at 235 W. Santa Clara Street. Originally housed the Hobson Brother's meat packing business which was established in the 1870's. Currently owned and operated by Lost Arrow/Patagonia.

24. Ventura Theater **26 South Chestnut Street**
Designated October 4, 1976

Built in 1928, it was the city's only luxurious movie theater during the movie palace era.

25. First Post Office Bldg. **377 East Main Street**
Designated October 4, 1976

Located at 377 E. Main Street, it is the building that housed Ventura's first post office. Built in 1902, it was used until 1919 for that purpose. Currently the building houses Attention To Detail, a home furnishings business.

26. Hitching Post **88 North Ann Street**
Designated October 4, 1976

Located at 88 North Ann Street. This is one of the last remaining hitching posts in place in the City.

27. Apostolic Church **902 East Main Street**
Designated December 20, 1976

Located at 902 E. Main St. This was originally the Alice Bartlett Club. The building has both architectural and historical significance. It was moved to its present location in 1922.

28. **Southern Methodist Episcopal Church** — **896 East Main Street**
Designated July 11, 1977

Located at 896 E. Main Street. The church was built in 1890 and is the last of the original seven churches built in the City during that time. It is in the Gothic style with a high steeple and beautiful stained glass windows. It currently houses the Victorian Rose Bed & Breakfast.

29. **Post Office Murals** — **675 East Santa Clara Street**
Designated October 24, 1977

Located in the Post Office at 675 E Santa Clara Street, the murals were painted by Gordon Grant in 1936-37. The project was sponsored by the Federal Arts project of the WPA.

30. **Livery/County Garage** **34 North Palm Street**
Designated November 21, 1977

Located on Palm Street, the site has been in use since 1875 as a livery stable, then stable and garage until it was purchased by the County in 1921. It now houses the Livery Theatre, office, and retail uses.

31. **Packard Garage** — **42 North Chestnut Street**
Designated November 21, 1977

Located on Chestnut Street, the building was originally constructed in 1925 to be used as a garage and showroom. The County purchased the building in 1956 for use as a warehouse. It is currently vacant.

32. **Peirano Store** — **204 East Main Street** — Mission District
Designated January 16, 1978

Oldest brick building in the City, built in November 1877. Located at the southeast corner of Main Street and Figueroa Plaza. Owned by the Peirano family since 1890 and in constant use as a grocery store since 1877 until Nick Peirano, nephew of the original owner, retired in 1986. It has housed a restaurant since September 1998.

33. **Peirano Residence (Parrish Law Offices)** — **107 So Figueroa Street** — Mission District
Designated January 16, 1978

House located at the southwest corner of Figueroa and Santa Clara Streets. Built in 1897 by the Peirano family and in constant use by the family until 1976. House is 1-1/2 story wood frame with gabled roof. Restored by Donald Parrish and currently used as a law office.

34. Theodosia Burr Shepherd Gardens — **SE corner of Poli and Chestnut Streets** — Point of Interest
Designated July 17,1978

The original gardens of one of California's most famous horticulturists, were located between Main and Poli, Chestnut and Fir Streets. All that remains is a Star Pine and a Bird of Paradise. Designated a Point of Interest July 17, 1978.

35. Feraud Store & Bakery 2 West Main Street (1903 Building) — NRHP
Designated July 17, 1978

Located at the southwest comer of Main Street and Ventura Avenue, the Feraud Bakery and Grocery Store was begun by Jules Feraud in 1903. The bakery stayed in the family until 1944. Currently owned by Robert Addison and used as a retail store. Designated a Point of Interest July 17, 1978.

36. First National Bank of Ventura 1904 — **401 East Main Street** — Point of Interest
Designated August 13, 1978

Located at 401E Main Street, the building was opened in June 1904 as the First National Bank. The building has been much altered over the years for various commercial uses. Designated a Point of Interest August 14, 1978.

37. First National Bank of Ventura 1926 — **494 East Main Street**
Designated October 16, 1978

Located at the cornerstone of the downtown area at Main and California Streets, this building was used as a bank for many years. First as the First National Bank of Ventura, then Bank of America, Security First National, Channel Island State Bank and Wells Fargo before becoming the American Commercial Bank. The building currently houses a retail furniture store on the ground floor and offices on upper floors.

38. Bank of Italy — **394 E. Main Street**
Designated December 4, 1978

Located at 394 E Main Street, the building was constructed in 1923-24 after being promoted by John Lagomarsino, Sr. The architectural style is Italian Renaissance Revival, which was widely used for commercial structures at that time. The building currently houses retail uses on the ground floor and office uses on the second floor.

39. **Dr. T. E. Cunnane Residence** **128 S. California Street**
Designated December 18, 1978

Located at 128 S. California Street, this structure was the home and office of Dr. Thomas E. Cunnane, the city's physician after the death of Dr. Bard in 1902. The structure is one of the few remaining examples of Queen Anne cottage style architecture. Now used as business offices.

40. **A. C. Martin Building (Bella Maggiore Inn)** **69 S. California Street**
Designated April 9, 1979

The facade is at 69 S. California Street. The building was constructed in 1926. The architect was A. C. Martin of Los Angeles, who also designed the current City Hall. The style of the facade is taken from Spanish Renaissance sources. Restored by Tom Wood and currently houses the Bella Maggiore Inn. At one time it was known as El Nido Hotel.

41. **Robert Sudden Residence** **825 Front Street**
Designated April 9, 1979

The house at 825 Front Street was built in 1886 by Captain Robert Sudden. It was originally located at Fir and Meta streets and was moved to its present location in 1916.

42. **Robert M. Sheridan Residence** **1029 Poli Street**
Designated May 21, 1979
Located at 1029 Poli Street, this craftsman bungalow house deviates from the traditional box-like shaped bungalow. Historically the house is important for it was built by Robert M. Sheridan, son of early pioneer E. M. Sheridan, who was editor of the Ventura Signal. The house was used by Robert and his wife, Ellen, who was a well-known editor, writer and designer.

43. **Chaffey & McKeeby Einstein & Bernheim General Store (building demolished)** **SE corner Main and Palm Streets** Point of Interest
Designated May 21, 1979

This building was located at the southeast corner of Main and Palm Streets and was demolished because of structural problems in December 1979. The building was originally two general merchandise stores built in 1872. The owners were associated with the early development of the City; the Einstein and Bernheim store eventually became the Great Eastern Department Store. The site now houses Mid-State Bank.

44. **Dudley House** **SW corner Loma Vista and Ashwood Ave.** NRHP
Designated January 21, 1980

The Dudley House, built in 1891, was originally located at the northwest corner of Telegraph Road and Ashwood Avenue and was moved in 1977 to the southwest corner of Ashwood and Loma Vista Road, where it is being developed and managed as an historical resource. The

farmhouse was part of a 200-acre ranch owned and occupied by the Dudley family for five generations. The house was built by Selwyn Shaw, well know local builder and craftsman. The house is currently being restored by the San Buenaventura Heritage Foundation.

45. Righetti House **125 W. Park Row Avenue**
Designated January 21, 1980

This late Queen Anne period house with elements of Classical Revival was constructed in 1918 for Daniel J. Righetti, who owned a shop on Main Street offering billiards, cigars, tobacco and confections. The Righettis were a pioneer Italian family in Ventura and lived in the house until 1922. In 1923 Dr. Julius Bianchi, a prominent local physician who served as U.S. envoy to Guatemala from 1920 to 1922, purchased the home and had his practice there for three years. He became president of the Ventura County Medical Society in 1926. On January 24, 1947, Mr. Sidney Houghton had the house moved from its original Main Street location along Valdez Alley near the Mission to its current location on Park Row Avenue. Architecturally, the house is important as one of the relatively few unaltered examples of the late Queen Anne period remaining in Ventura. Queen Anne elements include a tower, gables and bay. Classical Revival can be seen in the large, sweeping, curved porch with its classical columns. The hose serves as an important visual landmark for the Avenue Area.

46. Selwyn Shaw House **140 N. Ann Street**
Designated January 21, 1980

Selwyn Lock Shaw, a prominent carpenter/builder who was responsible for the construction of many local Victorian style residences, as well as the Bard Hospital and Methodist Episcopal Church, built this Queen Anne style house for himself in 1888. This house is one of several on a block of primarily Victorian style houses owned and occupied by members of the Shaw family. The hillside home has a distinctive half-octagon bay. Located at 140 North Ann Street it is a triple story with a half-octagon bay window with elaborate roofline.

47. Jacques Roos House **82 S. Ash Street**
Designated March 17, 1980

Jacques Roos, President of the Great Eastern Department Store, had this house built in 1892. It is a pattern house in the Queen Anne cottage style with significant Eastlake influences. The Eastlake elements are clear in the elaborately turned porch columns, spindle work and balustrade. The fine craftsmanship of this house can be seen in the meticulous detail, including elaborate sunburst patterns and flower designs in the shingles, bargeboard, and frieze. The windows make use of attractive flashed glass and are outlined by half columns. The Queen Anne influence is seen in the multiple gables and bays. This house is significant as the most elaborate example of Queen Anne cottage to be found in the City. The house was originally designated as the Wilson House. The name derived from A. E. Wilson, a clerk at the Great Eastern Department Store, who lived in the house in 1910 through 1911. When additional information identified the owner as Jacques Roos, the designated name was changed in 1991.

48. Dacy Fazio House **557 E. Thompson Blvd.**
Designated April 14, 1980

Orville Wadleigh, an early Ventura County rancher and City Trustee in 1918-1919, had this house built for his daughter Dacy Fazio in 1910. Dacy was married to Ben Fazio, owner and operator of the Fazio-Newby grocery store on Main Street. The house is a typical Craftsman Bungalow, but the property includes a carriage house/barn, which is significant as the only remaining example of a carriage house in the old downtown. The style and construction of the structure indicate that it may be older that the house itself. The house was restored in 1980 by Ira Goldenring for use as the Law Offices of Goldenring and Goldenring.

49. Terry House **4949 Foothill Road**
Designated July 14, 1980

Located at 4949 Foothill Road, now the Unitarian Church. The house was built in 1917 by J. Myers of Oxnard, for Wellington G. Wide. The Wide Family lived in the house until 1922 when it was purchased by Joe Terry, Sr. The building combines several different styles of architecture, and is a one-of-a-kind example left in Ventura of a ranch/farm house built for an affluent family of that period.

50. Bert Shaw House **1141 Poli Street**
Designated September 15, 1980

Built in 1896 by Jesse Bert Shaw, the son of Selwyn Shaw and a carpenter/builder like his father, this one-and-a-half story Victorian, with a medium high pitched cross gable roof and plain boxed cornice, is one of several houses built and lived in by members of the Shaw family along the 1100 block of Poli Street. The main feature of this house is a modified Palladian window on the front. A flat roofed addition was added on the west in 1929.

51. Blackstock House **835 E Main Street**
Designated September 15, 1980

The Blackstock House, thought to be the work of architect Charles Russell, was the home of James Blackstock, Main Street businessman and proprietor of the Central Cash and Meat Market and the Union Ice Co. from 1916 to 1926. The house was constructed in 1901 on the site of what is now the Ventura City Hall on Poli Street (originally built as the Ventura County Courthouse), and was moved ten years later to its present site at 835 Main Street, a prestigious address in early Ventura. The house remained in the Blackstock Family until 1944.

The Blackstock House marks a stylistic transition form the Queen Anne mode of Victorian design period which was ending at the turn of the century, to the Classical or Colonial revivals which swept the nation from about 1880 to 1950. The square tower of the Blackstock House, with its pointed peak (hipped roof) distinctly echoes the Victorian style. The classical or Colonial detail s can be seen in the modillions (Flat brackets under the eaves) that support the eaves, the elaborate frieze details above the second floor window, the articulation of the two stories with different classical orders and the triangular pediment above the portico.

52. Sifford House **162 S. Ash Street**
Designated September 15, 1980

The house is located in 1895 for the Frank Sifford family. Mr. Sifford was owner of the Ventura Transfer Company. His wife, Cora, was active in the Native Daughters of the Golden West. Unique characteristics include a portico columned front door, framed by a horseshoe shaped arch. The second story is accentuated by a small balcony above the front porch. Originally, the Palladian style window to the left of the font door contained stained glass in the arched center section. The house is a two-story box like shape and is a transition between the Queen Anne and Colonial Revival styles.

53. Nellie Clover House **857 E. Main Street**
Designated November 1980

This house is a fine example of a classical turn of the century cottage. The Main Street lot originally belonged to Thomas Binns who died in 1891 and left the property to Eleanor Clover, mother of Melvin Clover. Melvin married his housekeeper, Nellie (nee' de la Riva), and they first occupied the house in 1911. Their marriage lasted less than a year. The house was deeded to Nellie in 1913 and she retained ownership until her death in 1964. The de la Riva family has a long history on Ventura, and the Binns were related to the Sheridans, another prominent family.

The house incorporates several distinctive architectural features. A dentiled Italianate cornice surround the building. A hipped roof with a large shingled pediment porch is supported by classical Corinthian columns. The shingle pediment features a Palladian style vent. The buildings features also include narrow clapboard siding, bay windows and a decorative redwood front door with a sunburst design.

54. Kimball House **7891 E Telephone Road**
(Hertel Office Bldg.)
Designated July 1981

Eugene C. Kimball, a well-known rancher and inventor of farm machinery, built this house in 1929 for his growing family. Eugene C. Kimball was the son of Charles Newton Kimball who came to Ventura from Massachusetts in 1876 and farmed near Seaward Avenue between Main Street and Thompson Boulevard. The architect for the house was Alfred Frank Priest of Los Angeles. The house has elements of the Colonial Revival style. Mission style is seen in the arches, courtyard, and the red tile roof, with touches of Monterey revival style in the wood columns. The interior for the house remains much as it did when originally constructed. It is a one-story residence with a basement, of approximately 4,500 square feet, containing four bedrooms located on a little over on1.5 acres.

55. Dunning House **932 E Main Street**
Designated September 1981

This house is a single story California Bungalow built around 1920. It has a side facing the porch. Large stucco columns with a diamond design support the porch roof. The slanted bay

window on the east side of the house contains a window seat. The house is covered with clapboard siding and has a red brick chimney. Both exterior and interior retain the original California Bungalow feeling and are in excellent condition. William Arthur Dunning, a local rancher, constructed the house, which was continuously occupied by the Dunning family until 1965.

56. Granger House **1206 E Main Street**
Designated January 1982

One and a half story vernacular Victorian house featuring a high pitched truncated hipped roof topped with iron cresting and intersecting gables on the south and west side. House built in 1902 by W. H. Granger, a local grocer; his wife Effie lived in the house as late as 1917.

57. Morrison House **331 Poli Street**
Designated May 18, 1982

John C. Morrison was the first owner of this property which was built in 1880. The two and one-half story vernacular Victorian farmhouse features a prominent tower and a profusion of Eastlake details. J. C. Morrison was the first owner of this property. He was prominent locally and was involved in real estate with Thomas Bard. This two-and-a-half story vernacular Victorian farmhouse features a prominent tower and a profusion of Eastlake details. The detailed port frieze combines spindle and spool decoration with cutout stick work. The house was moved from 1785 North Ventura Avenue in 1985 to 320 W. Main Street to undergo restoration before being relocated to 331 Poli Street..

58. Mission Aqueduct **East end of Vince Street**
Designated August 2, 1982

Chumash Indians labored to construct the approximately eight-foot high wall of rubble that forms the main channel of the Mission Aqueduct. Constructed between 1702 and 1850, the aqueduct system included a dam, reservoir, filtration building, lavandaria, and fountains. Starting at the convergence of San Antonio Creek and the Ventura River, the aqueduct extended approximately seven miles, winding its way along the base of the foothills toward the mission and mission gardens, watering farms along the way.

The aqueduct was heavily damaged in the great flood of 1862, but with repairs, it continued to be used into the 1870's. Dynamite was used to blast a hole through the aqueduct during the construction of a county road. Segments of the aqueduct are still visible today, and a part of the wall exists in the basement of a house built in 1989. Located at the eastern end of Vince and Lewis Streets, it is the largest and most intact stretch of surface aqueduct known to exist. Unique features include a slight elevation of one section to slow the flow of water and prevention of overflow by building up one side of the aqueduct.

59. Blackburn House **721 E Main Street**
Designated January 9, 1984

The David S. Blackburn house was built in the late 1880s. It was constructed in the late Queen Anne style and has Colonial Revival elements. It is the most elaborate home from the turn of the 20th century still remaining on Main Street. The home is a large, two-story structure with a shingled tower, wrap around porch and an attached water tower. Notable interior features include intricate fireplaces, leaded glass window, arched ceiling, special moldings and hardwood floors. An addition built on the west side for office space makes careful use of matching materials.

60. Alessandro Lagoon **Junction of Vista Del Mar**
Designated December 1982 **Drive and Alessandro Drive**

In the later 19th and early 20th Centuries the site of the Alessandro Lagoon was known as Chautauqua flats and was a popular spot for camping and amusement enterprises. Today, it is one of the few existing fresh water refuges of the Pacific Coast flyway within Ventura County. The area is a triangular piece of land approximately 7.0 acres extending easterly from the junction of Vista Del Mar Drive and Alessandro Drive to a point of approximately 0.3 miles on Alessandro Drive which is west of the northern border fence of U. S. Highway 101. The area is presently enclosed in a seven-foot high chain link fence.

61. Elwell House **143 So Figueroa Street**
Designated March 7, 1985

The Elwell house was built in 1892 and belonged to William Elwell and his wife Elel Frieda Tico Elwell, descendents of important California and Yankee families.

This house is a single story house with a medium pitched hipped roof with an offset gable and slanted bay window. Decorative brackets in sets of three are found under the eaves and the bay window has diamond panes in the upper portion. The front porch, featuring turned columns and saw-tooth molding, has been extended and enclosed. An addition was made to the rear of the house in the 1920's. Asbestos shingles were added to the exterior of the house. Don Parrish restored the house for use as offices.

62. Suyter House **1157 Poli Street** Shaw District
Designated April 22, 1985

The William Suytar house was built in 1890-91 by Selwyn Shaw as a rental house. It is one of three landmarks located in the Selwyn Shaw Historic District. This Queen Anne-style residence features a prominent two-story slanted bay tower which extends from the side facing high-pitched gable roof. The tower roof is octagon shaped with a rooster finial at the peak. Decorative details include fish scale shingles, stained glass, dentils and elaborate flower and tendril applied design in small porch gable. The landmark takes its name from 1920s resident William Suyter, who served as a local deputy sheriff. It was moved from 334 S Oak Street at the time of the Beachfront Redevelopment.

63. El Jardin Patio Building **451-61 E. Main Street**
Designated August 12, 1985

The El Jardin (Garden) Patio building was designed as one of the earliest outdoor malls in Southern California. The shopping court was very popular in the 1920s, but El Jardin appears to be the only example built in Ventura. The two-story structure, with shops and offices opening onto an interior courtyard, remains basically unchanged from its original design. A large archway on Main Street leads to a well landscaped courtyard built on three levels. The wood trimmed stucco building has large multi-paned arched windows, wrought iron railing and lamps, carved wooden spools, beams, and brackets and mission tile. Some of the tile has been replaced with brick tile. The use of low pitched tile parapets and flush tile roof lines enhance the effect of a "Spanish Village." In the 1950s, the arched front entrances and side windows on the street level were removed and replaced with large display windows.

El Jardin Patio was designed by the prominent Los Angeles architectural firm of Weber, Staunton and Spalding in 1925 for G.W. Chrisman and W.B. and Mary Alpin. The Alpins ran La Foresial, a flower shop on the west side of the courtyard, for many years. Their son, William Alpin, a photographer for Sunset Magazine, had his studio in the rear of the courtyard.

One of the earliest tenants of El Jardin was the Jack Rose Smart Shop, which was the first retailer in town to sell off-the-rack women's fashion. This store occupied the Main Street location east of the archway. Jack Rose, a man who believed downtown businesses, opened his first Ventura store in 1925 and continued to personally operate a downtown Main Street store until his death in 1955. In 1948, he built the art deco Jack Rose Building on the northwest corner of Main and Chestnut Streets to house his store.

64. Robert Brakey Residence **413 Poli Street**
Designated October 14, 1985.

The Brakey House was built in 1890 for Ventura's well known house mover, Robert E. Brakey. Although the house has been altered, it still retains the significant features of its original Victorian character. The Brakey family continued to live on this property through the 1930s. Robert Brakey was a City Trustee in 1916-17. His son, John R. Brakey continued the house moving business and among his accomplishments was the moving of the Port Hueneme Lighthouse which, unfortunately, no longer remains. John also accumulated a large collection of historic photographs, which can be seen at the Ventura County Historical Museum.

65. Judge Ben T. Williams House **386 Franklin Lane**
Designated January 26, 1987

The Judge Ben T. Williams House was built on the Avenue around 1890 possibly by Selwyn Shaw. Around 1950 it was moved to Franklin Lane. It is an example of a Queen Anne ranch house, with Stick-Eastlake influence. Benjamin Tully Williams was Judge of the Superior Court of Ventura for many years during the 1890's and early 1900's. He was also one of the most powerful political figures in the County during that time.

66. **Charles Corcoran House** **831 Buena Vista Street**
Designated April 1, 1986

The Charles B. Corcoran Houses embody the distinctive characteristics of a type of and period of construction. The original house, built in the California Bungalow style in 1910, is a single story house with low pitched roofs, a porch with overhanging gables supported by elephantine columns, a cast concrete block foundation, and wood siding. This bungalow also includes a large Palladian bay window. The 1930 house is a much finer example of its style. Built in the Mediterranean, or Spanish Colonial Revival style, the architecture includes a red tile roof with low pitch, stucco walls, arched doorways throughout, wrought iron balconies and railings, and exposed rafters and beams.

67. **Charles Cooper House** **163 Cedar Street**
October 14, 1986

Charles L. Cooper, a carpenter, purchased this property in 1886 and built the house in the same year. One of the more noted owners was Mr. Frank White, owner from 1929-49. Mr. White was a horticulturist and developed new strains of many common flowers. The house represents a particular period of local history when Ventura was only a small community; just prior to the tremendous economic boom created by the arrival of the Southern Pacific Railroad in 1887.

68. **Josiah Keene House** **41 Bell Way**
Designated September 28, 1987

The Josiah Keene home was built near Ventura Avenue around 1872, making it one of the first grand homes built in San Buenaventura after incorporation. Josiah Keene was a veteran of the Civil War; a former U.S. Treasury employee; and a San Buenaventura area rancher. The house, which was moved to 41 Bell Way in 1928, is perhaps the City's only example of Second Empire/Victorian Residential style.

69. **Hartman House** **73 No Palm Street**
Designated September 28, 1987

In 1911, the Hartman family moved into this residence. Previously, portions of the San Buenaventura Mission complex and a brewery were on the property. The house is a well-preserved example of the Craftsman Bungalow style, which was prevalent in California in the first quarter of the 20th century, and contains many of the woodwork details, which were part of that style. Gayle Kieran restored the house in 1988 and it is now used as offices.

70. **J. A. Day House** **759 E Poli Street**
Designated April 25, 1988

In 1889, prominent local grocer J.A. Day built this Victorian home, in the Stick-Eastlake style. The structure contains unique carpentry work with a profusion of wood detail in the balusters and frieze, with crafted decorative pediments over the windows, and stained glass over the door and around the windows. The J.A. Day home reinforces the historical feeling of the nearby Selwyn Shaw Historic District.

71. **Ventura Insurance Bldg** **692 E Main Street**
(Rosarito Beach Restaurant)
Designated April 25, 1988

In 1937, this building was built for the Ventura County Mutual Fire Insurance Company. The concrete structure is unique for San Buenaventura in its classic expression of Art Deco or Moderne style with Aztec Revival flower elements in the design. The noted Los Angeles Architect William W. Ache created the design. Mr. Frank Nam restored the building in 1988 and it is now the Rosarito Beach Restaurant.

72. **Erburu House** **2465 Hall Canyon Road**
Designated January 5, 1989

The house at 2465 Hall Canyon Road was built in 1909 by Mariano Erburu as a residence for his family. This 1½ story California Craftsman Bungalow is distinctive in its size, with 4,000 sq. ft of floor space. The front of the house has a low gable roof with a large gable dormer. The house's exterior is clapboard siding, with wide framed casement and double hung windows. Mr. Erburu, an immigrant from Spain, was a prominent Ventura businessman. Mr. Erburu primarily was in the sheep business and at one time owned a flock of over 300 head. In the late 1890's he also was a partner in a mercantile business with J. Feraud. The house was the first in the area and a focal point for those traveling to Ventura through Hall Canyon. The present owners, Robert and Pauline Chianese, have authentically restored both the interior and exterior of the house.

73. **McCoskey Love House** **119 S. Figueroa Street**
(Parrish restored to office bldg)
Designated July 17, 1989

Ada McCoskey Love was the widow of prominent Ventura physician, J. H. Love. Dr. Love came to Ventura in 1891 and was a major figure in the community until his death in 1906. The Loves moved into this house in 1904. The house's style uniquely combines elements of the Italianate period with early Victorian influences. It has been moved twice with its original location being on the northwest corner of Chestnut and East Santa Clara Streets. Mr. Don Parrish has restored the house for use as offices.

74. **Kate Duval House** **953 E Main Street**
Designated July 17, 1989

The house was built in 1902 as a rental unit for the Eugene W. Duval family and was owned by Kate Duval, wife of Eugene. Mr. Duval operated a hardware store on Main Street. The Duvals lived in the house next door at 943 East Main. The most unique feature of this restored Queen Anne Cottage is the large front slanted bay window with its shingled pediment, sunburst brackets and decorative blocks.

76. **J. Hoover Love House** **970 E Santa Clara Street**
Designated July 17, 1989

This house was built in 1923 by Louis Rudolph and sold to J. Hoover Love, Deputy County Tax Collector and son of the prominent Ventura physician Dr. J. H. Love. It is unique in its blending of a Mediterranean exterior with an American Arts and Crafts Movement interior. The Mediterranean influence. is seen in the parapet roof and symmetrical stucco facade. Craftsman features include a carved wood door with four narrow panes flanked by narrow multi-paned windows. French doors with wrought iron railings are found on each side of the main entrance with raised quatrefoils.

77. **Mabel Nellie Owen House** **93 W. Simpson Street** Simpson Tract
Designated January 22, 1990

This Mediterranean style house at 93 W Simpson was the home of Mabel Nellie Owen who was an activist and voice for the Avenue Community for over fifty years. Projects with which she was involved include relocation of the Taylor Ranch feed lots, opposing a proposal to construct a sewer treatment plant next to Sheridan Way School, building of Westpark and Avenue Adult Centers, initiation of a senior mini bus, and construction of the Church of God in Christ church.

77. **Dr. Cephus Bard House** **52 W. Mission Street**
Designated April 1, 1991

Dr. Cephus L. Bard, brother of Senator Thomas Bard, was a prominent physician in Ventura during the late 1800's. This house, built in 1886 for Dr. Bard, was originally located on Oak Street. It is one of the few remaining Italianate structures in Ventura and has maintained its integrity over the years.

78. **Carlo Hahn House** **211 E. Santa Clara Street**
Designated July 15, 1991

This two-story residence was built between 1912 and 1914 for Carlo Hahn, an agent for the Bordalino Hat Co. and a partner of Giovanni Ferro. Mr. Ferro, Hahn's brother-in-law, lived next door in the elaborate Italianate villa once owned by the Schiappapietra family. The Hahn House was built to complement the adjacent mansion. It exhibits several characteristics of early Victorian styles although built well after the period ended. The house was remodeled as a restaurant in 1971. The house is listed as a contributing member of the Mission National Historic District.

79. **Hammonds/Reese House** **637-639 Poli Street**
Designated September 14, 1992

This one and one-half story Queen Anne Victorian has maintained its integrity over the years since being built in 1905. Its several outstanding features include a wraparound porch with Corinthian columns, both slanted and rounded bay windows, windows with diamond patterns, irregular gable roof lines, two tall decorative brick chimneys, decorative brackets under the extended eaves and narrow clapboard siding. The house is located on a prominent hillside and

is surrounded by other designated landmarks - the Ewing House to the west, the Bard Hospital to the east, and remnants of the Theodosia Burr Gardens across the street. The house was originally built for Harry and Dora Hammonds. Mr. Hammonds owned an insurance company in Ventura for over forty years. The second owner in 1912 was David J. Reese. Mr. Reese was the Ventura Postmaster and Editor and proprietor of the Ventura Daily Free Press and the Ventura Weekly Free Press.

80. **Pierpont Inn** **550 San Jon Road**
Designated February 1, 1993

A two-story hotel built in the Craftsman style in 1908 for Austen Pierpont. Sold in 1928 to Gus and Mattie Gleichmann who restored and enlarged the Inn over the years. President and Mrs. Bush lived in one of the cottages while Mr. Bush was working in the oil business.

81. **A. D. Briggs House** **856 East Thompson Bloulevard**
(Christopher Place)
Designated May 10, 1993

The house was built for Arthur D. Briggs in 1894. It is an unusually fine and well-maintained example of the Queen Anne style and stands with the house next door at 844 Thompson as an example of the many homes that were located in this neighborhood at the turn of the century.

82. **301 S. Dunning Street**
Designated October 12, 1993

This one and a half story English Tudor has a rectangular shape with a high pitched gable roof punctuated by 3 gabled dormer windows. On one side of this house there is a bay window, while the front features a fixed paned window. All other windows are wood casement. A front porch with matching fixed paned windows brick sides and stained glass windows complete the front. This house has a brick driveway with accents of brick and wood planters that complete the landscaping. This home on a corner lot also has many mature trees including a central English yew in the front.

83. **Arcade Building** **38-50 West Main Street**
Designated March 21, 1994

The area around Ventura Avenue east and west on Main Street was the beginning of the auto sales industry in the City of Ventura during the mid to late 1920s. Auto dealers at 38 - 50 W. Main Street included Dodge, Chrysler, Edsel and Jaguar as well as vintage car operations. The present owner is Robert Addison. Roy Weatherly of Weatherly Motors was a long time owner.

84. **Cassidy Dairy Ranch 3908 Loma Vista Road**
Designated May 16, 1994

This house was built by noted builder Selwyn Shaw in 1894 on 7½ acres as a country residence for Richard & Amelia Cassidy. He farmed oranges, grain and lima beans. In 1911 walnut trees were planted. In the mid 1920s Cassidy started a dairy, "Cassidy Dairy Ranch" which was

discontinued in 1935 upon the death of Richard Cassidy. The barn was built in 1899 by Fred Cassidy. Glen Cassidy, grandson of Richard, built his small house on the site in 1952.

85. San Buenaventura Mission Lavanderia Under Storeroom — **204-208 E. Main Street**
Designated November 14, 1994

The Mission Lavanderia was built and probably used in conjunction with the aqueduct. Because Spanish artisans were at the Mission between 1790-95 the Lavanderia and aqueduct were undoubtedly built in the earlier part of the time span of 1792-1815. The water ran from the Mission aqueduct to the fountain and into the central tank and eventually emptied into the Mission gardens to the west.

The Mission era Lavanderia was discovered under the storage behind the Peirano Market and Wilson Studio (204/208 E: Main Street) when the buildings were to be rehabilitated in 1991. Many post mission era artifacts including bottles, porcelain, stoneware, and abalone shells were found in the crawl space under the floor of the storage areas. A segment of mortared Mission floor tile was also found in the crawl space.

86. Erle Stanley Gardner Office — **21 So. California Street, Room 306**
Designated February 6, 1995

Erle Stanley Gardner was the author of 82 Perry Mason mystery novels. Gardner moved to Ventura in 1915. He practiced law in 1921 and lived here until 1934. Gardner lived in four different residences in the 15 years he spent in Ventura, only the last of which is still standing. This residence is located at 2420 Foster Avenue. His office was located in Room 306 at the northeast corner of 21 S. California Street in the First National Bank Building. The office is presently occupied by a law firm. The specific office Gardner occupied does not retain any of Gardner's personal objects.

87. Casa de Anza — **606-612 N Ventura Ave**
Designated March 23, 1998 — **11-15 E Simpson St**

The Casa de Anza apartment building was originally constructed in 1929 by Richard Langdon and the building is an example of the Spanish Colonial Revival style of the 1920's. The apartment building was erected as a direct result of the oil boom occurring on the Avenue and the resultant need for housing oil workers. After the building is restored the ground floor will be used as a library.

88. WWII Gun Emplacements — **Near Ventura River mouth**
Designated September 1998

Today it is estimated that of the 10 original Southern California coastal artillery sites, only three remain, one of which is Ventura's Battery 2. Ventura is fortunate to have such a rare and

important reminder of W.W. II. Presently the remains of the emplacements are two large concrete rings approximately 38 feet in diameter. The rings are topped with a steel rail.

89. Norton Ranch House 71 North Palm Street
Designated October 1998

This Craftsman style house was built in 1910 by Mr. Norton for his home in the 40-acre walnut grove located off of Bristol Road in east Ventura. During the twentieth century many prominent families, Cheney, Callens, Vanoni, Ramelli and De Silva, connected to the house. In 1990, the house was moved to 71 North Palm Street and restored. It is currently being used as a restaurant.

90. John C Fremont Camp 100 Block East Main Street
Designated January 11, 1999

John C. Fremont led an expedition of troops, horses and supplies from Monterey to San Buenaventura during late 1846 and early 1847, during the War with Mexico. The trip south was arduous and, in the afternoon of January 5, 1847, Fremont and his remaining expedition entered San Buenaventura and camped overnight in the orchard west of the San Buenaventura Mission Garden wall. On the rise above the Mission, a small bank of Californians was seen and Fremont and his troops fired on them. The Californians scattered and Fremont's men guarded the top of the hill all night. During that night, Fremont captured Don Jose Arnaz, a local merchant and threatened his life until Arnaz gave Fremont military information and supplies. Arnaz was released. Land that Arnaz had purchased from the Mission in 1846 was taken from him by the United States government, which did not recognize his title to the land. The land was later returned to him by the U.S. Courts. In 1850, Arnaz sold the land to Dr. Manual R. de Poli, a Spanish physician.

91. China Alley Historic Area 200 Block East Main

In the late nineteenth century, a flourishing Chinese settlement made up of merchants, laborers, and families settled on Figueroa Street, between Main and Santa Clara Street and China Alley, a former street that ran perpendicular to Figueroa Street in the middle of the newly incorporated township of San Buenaventura.

92. Louis Rudolph 958 E. Santa Clara Street
Craftsman Bungalow
Designated March, 2002

This single-story Craftsman Bungalow was built by local contractor Louis Rudolph in 1922 and lived in by his family until 1925, when he sold the lot to Amos Lovoorn, Manager of the J.C. Penney Company. Mr. Rudolph built the house next door and also built the Elk's Lodge on Main Street and Ash Street.

The house is a well-designed bungalow with a basement. The low-pitched hipped gable roof has exposed rafters under the broad eaves. Two large square stuccoed columns supported the hipped gable roof and cross-beam. A half brick design is featured on both the columns and the

fireplace. The house has narrow clapboard on the upper portion and shingles on the lower portion.

93. Five Trees **Hilltop above Ventura** **Ventura County LM**

Joseph Sexton, a Ventura horticulturist noted for his work with walnuts, avocados, and pampas grass, hired his neighbor Owen Marron to plant a row of 13 blue gum eucalyptus trees on the hilltop to mark the western boundary of his ranch. In 1903 a brush fire destroyed all but five of the trees. Old mariners charts show the five trees as a navigating landmark. Vandals cut down three of the approximately 60' tall trees on Halloween 1940 leaving only two standing. Local citizens replaced the lost trees but on Halloween 1956 vandals struck again, leaving only one original tree and one replacement tree standing. Replacement trees were again planted but two died. In 1966 the Ventura Junior Womens Club planted more replacement trees. Now, only two trees remain standing.

94. Saticoy Walnut Growers Association Warehouse **1235-1255 East Wells Road** **Ventura County LM**

This warehouse was built for drying and shipping Diamond Brand walnuts for the California Walnut Growers Association. The association was established by leaders of the Sunkist citrus industry. Many of the techniques perfected by the citrus industry, including Charles C. Teagues' cooperative marketing methods, were used to market walnuts. Eugene C. Kimball, a local resident, perfected a new way to dry walnuts which greatly reduced product losses. The building is one of two large agricultural warehouses in Saticoy located on opposite sides of a Southern Pacific Railroad spur track.

95. Saticoy Bean Warehouse **10995 Azahar Street** **Ventura County LM**

This warehouse served the area's important local lima bean industry. The bean warehouse and neighboring Saticoy Walnut Growers warehouse, stand today as important reminders of the agricultural history and the growth of the farming cooperative movement in California.

96. The Farmers & Merchants Bank of Santa Paula **1203 Los Angeles Avenue** **Ventura County LM**

This neo-classical building housed the first branch bank in Ventura County. It stands as a reminder of Saticoy's vitality as an important agricultural shipping community around the turn of the century.

Chapter 1.0
INTRODUCTION

This technical report has been prepared as a resource document for the General Plan Circulation Element update being undertaken by the City of San Buenaventura. It is intended to provide technical material and other information pertaining to the Circulation Element Update.

BACKGROUND AND SCOPE

This report provides baseline information with respect to circulation, and then focuses on specific aspects of circulation planning such as performance criteria, future traffic demands, long-range highway capacity needs, and issues pertaining to transit and bicycle circulation. Technical information and discussions are provided as appropriate, and additional detailed data is attached as Appendices.

The remainder of this chapter discusses performance criteria for the arterial street system, indicating the policy and technical aspects of this important aspect of circulation planning. Chapter 2.0 then describes existing conditions for all modes of transportation. The arterial street system performance criteria are applied to recent traffic count data to provide a description of existing conditions.

Chapter 3.0 presents future traffic forecasts and analyzes long-range capacity needs on the Citywide street network. Various land use and network alternatives are tested and evaluated to assist in formulating the arterial street component of the Circulation Element.

Chapter 4.0 addresses the Circulation Element itself, and discusses various issues that have guided the preparation of the Element. Specific components of the Element are discussed here in detail, and in particular, the classification system for the arterial street component. Comments received from public participation in the General Plan process, and notes on how they have been used in preparing the updated Circulation Element can be found in Appendix B.

STREET SYSTEM PERFORMANCE CRITERIA

To evaluate the Circulation Element arterial street system in relation to the Land Use Element, use is made of performance criteria. These criteria include "performance standards" and "thresholds of significance," the latter being used for identifying project impacts in an EIR context. The performance standards form part of City Policy as contained in the Circulation Element and represent desired operating conditions for the City's street system. For the Circulation Element to be in "balance" with the Land Use Element, the circulation system must achieve such standards.

Performance Criteria Definitions

The performance criteria used here are based on two primary measures. The first is "capacity" which establishes the vehicle carrying ability of a roadway and the second is "volume." The ratio between the volume and the capacity gives a volume/capacity (V/C) ratio and based on that V/C ratio, a corresponding level of service (LOS) is defined. A later section of this chapter contains level of service descriptions for arterial roadways and freeways as contained in the 2000 Highway Capacity Manual (HCM) 2000 (see Reference 2 at the end of this chapter).

The analysis of the arterial road system is based on intersection capacity since this is the defining capacity limitation on an arterial highway system. Levels of service for arterial roadway intersections are determined based on operating conditions during the AM and PM peak hours. The intersection capacity utilization (ICU) methodology is applied using peak hour volumes and the geometric configuration of the intersection. This methodology sums the V/C ratios for the critical movements of an intersection and is generally compatible with the intersection capacity analysis methodology outlined in the HCM 2000.

The ICU calculation methodology and associated impact criteria used for the study area arterial system are summarized in Table 1-1. The performance standards (level of service "D" or "E" depending on location) are established by City Policy in the Circulation Element. The calculation methodology, which includes saturation flow rate and clearance interval parameters that are representative values for planning purposes, could change over time in response to changes in technical procedures used for such purposes.

Table 1-1

ARTERIAL INTERSECTION PERFORMANCE CRITERIA

V/C Calculation Methodology

Level of service to be based on peak hour intersection capacity utilization (ICU) values calculated using the following values:

Saturation Flow Rate: 1,600 vehicles/hour/lane.

Clearance Interval: none

Performance Standard

Level of Service E (peak hour ICU less than or equal to 1.00) for freeway ramp intersections.
Level of Service D (peak hour ICU less than or equal to 0.90) for all other Principal Intersections*.

Threshold of Significance (for impact analyses)

For an intersection that is forecast to operate worse than it's performance standard, the impact of a given project is considered to be significant if the project increases the ICU by more than 0.01. An ICU increase of more than .01 does not cause the threshold of significance to be exceeded if the with-project ICU does not exceed the maximum ICU value.

Level of Service

Level of service ranges are as follows:

ICU	LEVEL OF SERVICE (LOS)
0.00 – 0.60	A
0.61 – 0.70	B
0.71 – 0.80	C
0.81 – 0.90	D
0.91 – 1.00	E
Above 1.00	F

* See definition of Principal Intersections in Chapter 4

Level Of Service Descriptions

Tables 1-2 and 1-3 summarize the level of service descriptions for arterial highways and intersections, respectively. These descriptions are taken from material contained in HCM 2000.

DEFINITIONS

Certain terms used throughout this report are defined below to clarify their intended meaning:

ADT	Average Daily Traffic. Generally used to measure the total two-directional traffic volumes passing a given point on a roadway.
DU	Dwelling Unit. Used in quantifying residential land use.
ICU	Intersection Capacity Utilization. A measure of the volume to capacity ratio for an intersection. Typically used to determine the peak hour level of service for a given set of intersection volumes.
LOS	Level of Service. A scale used to evaluate circulation system performance based on intersection ICU values or volume/capacity ratios of arterial segments.
Peak Hour	This refers to the hour during the AM peak period (typically 7 AM - 9 AM) or the PM peak period (typically 3 PM - 6 PM) in which the greatest number of vehicle trips are generated by a given land use or are traveling on a given roadway.
TSF	Thousand Square Feet. Used in quantifying non-residential land uses, and refers to building floor area.
V/C	Volume to Capacity Ratio. This is typically used to describe the percentage of capacity utilized by existing or projected traffic on a segment of an arterial or intersection.
VPD	Vehicles Per Day. Similar to ADT, but more typically applied to trip generation (i.e., the amount of traffic generated by a given amount of land use).
VPH	Vehicles Per Hour. Used for roadway volumes (counts or forecasts) and trip generation estimates. Measures the number of vehicles in a one hour period, typically the AM or PM peak hour.

Table 1-2

LEVEL OF SERVICE DESCRIPTIONS – URBAN STREETS

The average travel speed along an urban street is the determinant of the operating level of service (LOS). The travel speed along a segment, section, or entire length of an urban street is dependent on the running speed between signalized intersections and the amount of control delay incurred at signalized intersections. The following general statements characterize LOS along urban streets and show the relationship to free flow speeds (FFS)

LOS	DESCRIPTION	PERCENT OF FFS
A	LOS A describes primarily free-flow operations at average travel speeds, usually about 90 percent of the FFS for the given street class. Vehicles are completely unimpeded in their ability to maneuver within the traffic stream. Control delay at signalized intersections is normal.	90
B	LOS B describes reasonably unimpeded operations at average travel speeds, usually about 70 percent of the FFS for the street class. Vehicles are completely unimpeded in their ability to maneuver with the traffic stream. Control delay at signalized intersections is minimal.	70
C	LOS C describes stable operations; however, ability to maneuver and change lanes in midblock locations may be more restricted that at LOS B, and longer queues, adverse signal coordination, or both may contribute to lower average travel speeds of about 50 percent of the FFS for the street class.	50
D	LOS D borders on a range in which small increases in flow may cause substantial increases in delay and decreases in travel speed. LOS D may be due to adverse signal progression, inappropriate signal timing, high volumes, or a combination of these factors. Average travel speeds are about 40 percent of FFS	40
E	LOS E is characterized by significant delays and average travel speeds of 33 percent or less of the FFS. Such operations are caused by a combination of adverse progression, high signal density, high volumes, extensive delays at critical intersections, and inappropriate signal timing.	33
F	LOS F is characterized by urban street flow at extremely low speeds, typically one-third to one-fourth of the FFS. Intersection congestion is likely at critical signalized locations, with high delays, high volumes, and extensive queuing.	25

Table 1-3

LEVEL OF SERVICE DESCRIPTIONS – SIGNALIZED INTERSECTIONS

Levels of service (LOS) for signalized intersections are defined in terms of control delay as follows:

LOS	DESCRIPTION	DELAY PER VEHICLE (secs)
A	LOS A describes operations with low control delay, up to 10 seconds per vehicle. This LOS occurs when progression is extremely favorable and most vehicles arrive during the green phase. Many vehicles do not stop at all. Short cycle lengths may tend to contribute to low delay values.	< 10
B	LOS B describes operations with control delay greater than 10 and up to 20 seconds per vehicle. This level generally occurs with good progression, short cycle lengths, or both. More vehicles stop than the LOS A, causing higher levels of delay.	10 – 20
C	LOS C describes operations with control delay greater than 20 and up to 35 seconds per vehicle. These higher delays may result from only fair progression, longer cycle lengths, or both. Individual cycle failures may begin to appear at this level. Cycle failure occurs when a given green phase does not serve queued vehicles, and overflows occur. The number of vehicles stopping is significant at this level, though many still pass through the intersection without stopping.	20 – 35
D	LOS D describes operations with control delay greater than 35 and up to 55 seconds per vehicle. At LOS D, the influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, and high V/C ratios. Many vehicles stop, and the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.	35 – 55
E	LOS E describes operations with control delay greater than 55 and up to 80 seconds per vehicle. These high delay values generally indicate poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent.	55 – 80
F	LOS F describes operations with control delay in excess of 80 seconds per vehicle. This level, considered unacceptable to most drivers, often occurs with oversaturation, that is, when arrival flow rates exceed the capacity of lane groups. It may also occur at high V/C ratios with many individual cycle failures. Poor progression and long cycle lengths may also contribute significantly to high delay levels.	> 80

Chapter 2.0
EXISTING CONDITONS

This chapter discusses the transportation setting for the City of Ventura circulation system. Existing conditions are described for the various circulation system components addressed in the Circulation Element.

ARTERIAL STREET SYSTEM

The Citywide street system is illustrated in Figure 2-1. Shown here are those streets that are included in the Circulation Element, together with the existing midblock lanes on each street segment. Traffic conditions on the street network are described in terms of traffic volumes on the individual streets and also in terms of intersection operation. The former uses average daily traffic (ADT) as the measure of traffic usage, while the latter examines peak hour volumes to determine how well an intersection performs during rush hours. Specific "performance criteria" are used to evaluate intersections throughout the City, and these were discussed in Chapter 1.0.

The City prepares an annual monitoring report which provides traffic count data, level of service summaries and information on planned improvements at individual intersections. The latest report was released in October 2003 (see Reference 3 at the end of Chapter 1.0). Information, such as lane configurations, has been taken from that report.

Existing ADT volumes

Figure 2-2 shows the existing ADT volumes on the arterial street system. These volumes are based on counts taken in 2004 and represent two-direction 24-hour vehicles on an average weekday. As noted in the discussion on performance criteria, such volumes are not used directly in level of service criteria, but serve a number of purposes relative to evaluating the usage of the arterial street system. In particular, they provide one of the criteria for determining functional classification (see discussion on functional classifications in Chapter 4.0 of this report and also in the Circulation Element).

Figure 2-2

EXISTING ADT VOLUMES (000s)

Existing Levels Of Service

As discussed in the performance criteria section of Chapter 1.0, level of service (LOS) on the arterial street system is defined according to peak hour intersection performance using Intersection Capacity Utilization (ICU) values. Figure 2-3 shows the intersections included in this evaluation and Table 2-1 lists the current ICUs and corresponding LOS values (ICU calculations can be found in Appendix A). The ICUs and LOS values are also illustrated in Figure 2-4, which shows the highest of the AM or PM ICU values at each intersection. As can be seen here, one location does not meet the performance standard. This location is Ventura Boulevard at North Bank Drive (PM LOS "F").

Improvements at several intersections in the City (including Ventura Boulevard and North Bank Drive) are noted in the City's annual transportation report referenced earlier.

TRANSIT

The bus routes currently serving the City are illustrated in Figure 2-5. Service is provided by South Coast Area Transit (SCAT), with all six routes operating on both weekdays and weekend days. The routes serve major activity centers throughout the City, and as discussed in the bicycle section later in this chapter, buses are able to transport bicycles by means of special racks mounted on the buses.

Ventura Intercity Service Transit Authority (VISTA) provides bus service between Ventura and Santa Barbara via the transit center at Pacific View Mall, and intercity service to Oxnard, Camarillo, Thousand Oaks, Santa Paula, Fillmore and Los Angeles.

Rail transit service is provided by Metrolink and AMTRAK, and the above referenced figure shows the station locations.

Metrolink provides rail service between Ventura and Union Station in Los Angeles on the Ventura County line. A Metrolink station operates in the City of Ventura at Ventura Boulevard and Inez Street (the Montalvo Station). Presently, two trains in both the AM and PM operate the entire length of the route between Ventura and Union Station.

Rail service to the City of Ventura is also provided by AMTRAK via the Pacific Surfliner, which runs between San Luis Obispo to the north and San Diego to the south. The station is an unstaffed facility

located at Harbor Boulevard and Figueroa Street adjacent to the Ventura County Fairgrounds (Seaside Park). Four trains operate daily, with one additional train on the weekends and one additional train that operates only during the weekdays.

BICYCLES

The City has a comprehensive report labeled the "General Bikeway Plan" which was adopted by the City Council in January 2005 (see Reference 4 at the end of Chapter 1.0). It provides detailed information on the current Bikeway Plan, and an implementation program for augmenting the existing system. The plan seeks a *"citywide bikeway system that serves the needs of both commuter and recreational cyclists."* The following discussion summarizes key information from that report.

Overview

The City's General Plan contains policies within the Circulation Element and the Park and Recreation Element that relate to bikeways and support facilities within the City. The Select System of Bikeways Map, adopted by the City Council on December 13, 1999, delineates existing and proposed bikeways which connect major destinations such as schools, businesses, public facilities, transit centers, and regional trails. The Map also indicates the location of amenities such as bike racks, restrooms, and shower facilities. Also, the City has sections in its Ordinance Code which require standards for bicycle parking facilities in new development thereby encouraging greater use of bicycles as an alternate form of transportation.

The General Bikeway Plan is designed to facilitate the following actions:

- Address and expand upon existing City policies and establish related goals.
- Recommend bikeway design standards.
- Evaluate existing bicycle safety and education programs and make recommendations for enhancement.
- Identify priorities and a phasing plan for implementation of the Select System of Bikeways Map.
- Identify and recommend potential funding alternatives and other opportunities for inter-agency cooperation.

The Plan serves as a flexible, comprehensive and long-range guide for future bicycle planning and design and budgetary decisions, and helps ensure that the City's bicycle transportation and recreational needs are met.

Bicycle Advisory Team (BAT)

The BAT is an eight-member advisory committee, representing the Traffic Engineering, Planning, Parks, Recreation, and Police functions of the City. The BAT participates in preparing the City's Select System of Bikeways Plan and the General Bikeway Plan. In addition, BAT members work directly with the public in public workshops and meetings, and the committee has a major role in helping to meet the needs of commuter and recreational cyclists.

Bikeway Plan Components

The California Bicycle Transportation Act outlines the basic elements to be included in a general bikeway plan in order to be acceptable by the California Department of Transportation. This General Bikeway Plan addresses these requirements under the following headings.

- **Route Selection** – The current recommended bicycle routing within the City is based on the City's Select System of Bikeways Map, which was adopted by the City Council on December, 1999 as part of the General Bikeway Plan noted earlier in this section. The Select System of Bikeways Map was developed in concert with the Linear Park Network, the Land Use Plan Map and the Circulation Plan Map to integrate land use, circulation and recreational considerations.

- **Citizen and Community Involvement** – Development of a bikeway plan has had considerable community involvement. Entities contributing to this process include the Bicycle Advisory Team (BAT) discussed earlier, and the Parks and Recreation Commission. The Ventura County Transportation Commission was consulted to ensure long-term coordination of the General Bikeway Plan with the Regional Transportation Plan.

- **Flexibility and Coordination with Long-Range Transportation Planning** – The City's general bikeway plan has been developed to be consistent with local and regional

transportation plans. The City's Engineering, Planning, Police, and Public Works Departments work together to address bicycle transportation issues. These include safety, upgrading of bicycle facilities, maintenance, and the impacts on bicycle travel of capital improvement and major maintenance projects. The City coordinates with the Ventura County Transportation Commission on an annual basis to update the Ventura County Bikeways Map, which depicts bicyclist amenities throughout Ventura County. In addition, Local Bikeway Plans from Ventura County and adjoining Cities, including Oxnard, Santa Paula, Ojai, the Southern California Association of Governments, and Caltrans are reviewed for consistency with the City's Select System of Bikeways Map.

- **Rest Facilities and Parking Facilities** – The City's Select System of Bikeways Map indicates the location of bicyclist amenities within the system, including access to bicycle parking, storage facilities, and restrooms. City Resolution No. 81-74 establishes guidelines for bicycle parking facilities in conjunction with new construction within the City. The City's Community Development Department has also adopted bicycle rack guidelines as directed in the Resolution. In this regard, the provision of bicycle storage facilities, shower and dressing areas and other amenities is encouraged in the planning of public and private developments.

- **Bicycle Safety Education** – The General Bikeway Plan provides both physical recommendations (such as bike lanes) and program recommendations. The latter includes efforts to educate bicyclists and motorists, and efforts to increase the use of bicycles as a transportation alternative.

The City's bikeway system is illustrated in Figure 2-6. Bikeways in this system conform to standards and designations established by the California Department of Transportation (Caltrans). Figure 2-7 illustrates the three classes of bikeway facilities, and some discussion on each class of bikeway follows.

Bike Path (Class I)

Class I bike paths are separated from roads by distance or barriers, and cross traffic by motor vehicles is minimized. Bike paths offer opportunities not provided by the road system and can provide recreational opportunities or serve as desirable commuter routes.

FIGURE 1

Figure 2-6

EXISTING SYSTEM OF BIKEWAYS

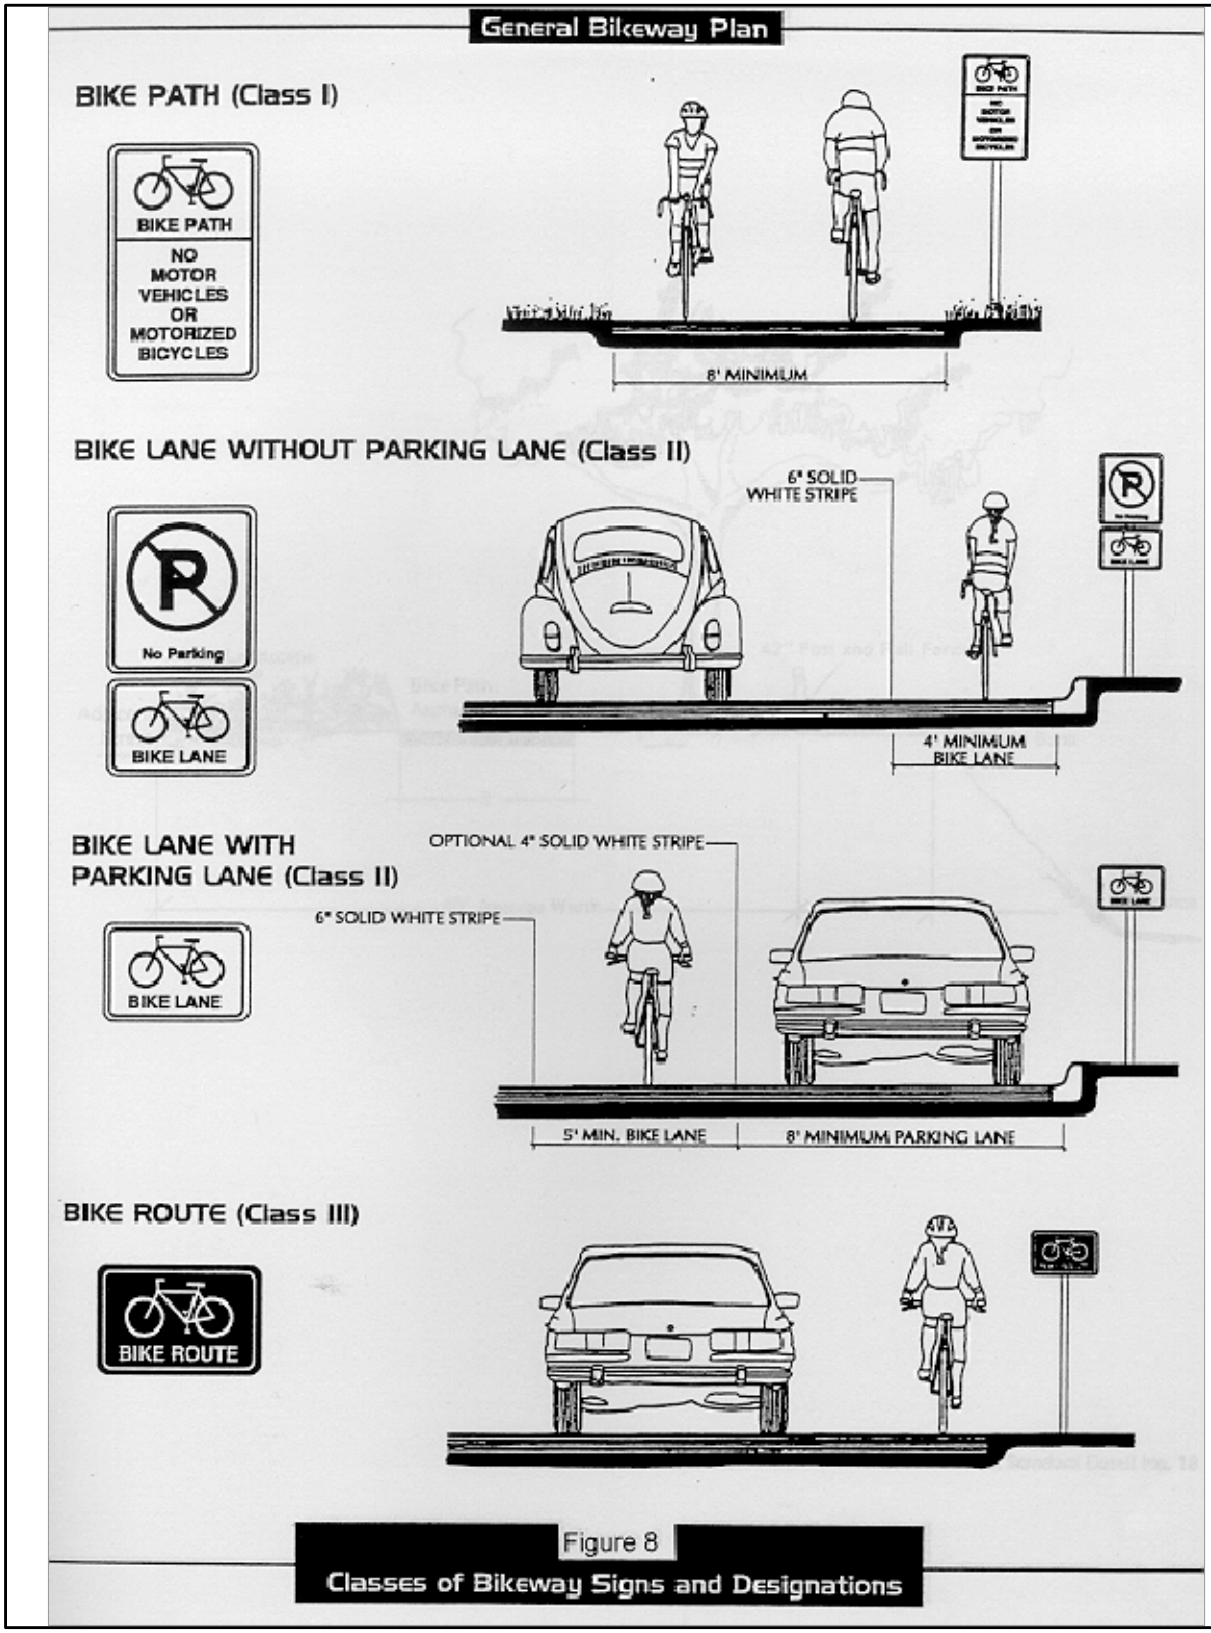

Figure 2-7

BIKEWAY CLASSIFICATIONS

Design standards require two-way bicycle paths to be a minimum of eight feet wide plus shoulders. Bike paths are usually shared with pedestrians and if pedestrian use is expected to be significant, the desirable width is greater than eight feet, preferably 12 feet wide. Where equestrians are expected, a separate facility is generally recommended. Sidewalks and meandering paths are not considered appropriate to serve as bike paths because they are primarily intended to serve pedestrians, and generally do not meet Caltrans' design standards.

Bike Lane (Class II)

A Class II bikeway is a lane on a road that is reserved for bicycles. The lane is painted with pavement lines and markings and is signed. The lane markings decrease the potential for conflicts between motorists and bicyclists.

With respect to design standards, bike lanes are one-way, with a lane provided on each side of the roadway. They are located between the travel lane and the edge of paving or, if parking is permitted, between the travel lane and the parking lane. The lanes are four feet minimum width and five feet minimum width if parking is permitted.

Bike Route (Class III)

Class III bike routes share existing roads and provide continuity to other bikeways or designated preferred routes through high traffic areas. However, there is no separate lane and bike routes are established by placing "Bike Route" signs along roadways. Signs direct the cyclist and warn drivers of the presence of bicyclists. Since bicyclists are permitted on all roads, the decision to sign a road as a bike route is based on several factors including the advisability of encouraging bicycle travel on the route, serving bicycle demand corridors, and connecting discontinuous segments of bike lanes.

A previous section of this chapter showed the South Coast Area Transit System (SCAT)'s bus routes within the City of San Buenaventura. As noted there, these routes connect most of the major destinations within the City, including the Downtown, the County Government Center, Ventura College and the Arundell Community. The SCAT buses are equipped to transport bicycles. The Pacific View Mall, the National Guard Armory, and the Park and Ride Lot provide bikeway interface with transit routes, enhancing the opportunities to employ multiple modes of transportation in reaching a particular destination.

Chapter 3.0
LONG-RANGE TRAFFIC ANALYSIS

This chapter discusses future growth in the City and presents traffic forecast data for the Citywide street system. Long-range capacity needs on the street network are then evaluated with specific emphasis on potential new roadways or upgrades to existing roadways. The analysis results provide the basic input for formulating the arterial street component of the Circulation Element (see discussion in next chapter).

OVERALL APPROACH

The arterial street system as depicted in the Circulation Element is designed to be adequate to serve future land uses as depicted in the Land Use Element. It thereby represents a circulation system that is in "balance" with future land uses. The analysis results presented here use long-range traffic forecast data based on buildout of the General Plan land uses to assess future needs and thereby identify a future street network that is adequate to serve those needs.

The approach used here is to apply year 2025 traffic forecasts to the existing system plus committed improvements (i.e., those that are funded and planned for implementation). The resulting information is then used to identify where deficiencies can be anticipated. Additional or expanded roadways are then added to the committed arterial street system until there is adequate capacity to serve the future traffic demands (these are referred to as non-committed improvements). Where appropriate, alternative strategies for achieving a balanced system were tested and evaluated.

Traffic forecast data presented here was produced using the Ventura citywide traffic forecasting model. The model uses future land use and circulation system assumptions to derive corresponding traffic forecast data. A detailed description of the modeling procedures can be found in the traffic model documentation report (Reference 5 at the end of Chapter 1.0).

The evaluation of land use and circulation system alternatives uses the performance criteria described in Chapter 1.0. As discussed there, the procedure is based on peak hour intersection performance with emphasis on the Principal Intersections identified throughout the City. Peak hour intersection capacity utilization (ICU) values are calculated using a "Baseline" set of roadway system

improvements. As discussed in Chapter 1.0, level of service (LOS) "E" (ICU not to exceed 1.00) is the performance standard for freeway ramp intersections and LOS "D" (ICU not to exceed .90) is the performance standard for all other Principal Intersections. Locations not operating at an acceptable LOS with the Baseline Network assumptions are considered deficient, and improvements needed to mitigate the deficiencies are identified.

FUTURE GROWTH ALTERNATIVES

A number of alternatives have been developed for potential growth within the City and its Sphere of Influence (SOI). They portray potential growth in four different area designations:

1. Districts – Commercial and industrial areas that have intensification potential.
2. Corridors – Linear commercial areas along designated arterials that have intensification potential.
3. Expansion Areas – Undeveloped land that is either outside the SOI or requires a "Save Our Agricultural Resources" (SOAR) vote, but has development potential.
4. Infill – General infill throughout the city.

Detailed discussions on these can be found in the reports documenting the development of the land use projections. Six scenarios have been defined which combine individual growth assumptions in the above four area designations. Total citywide growth is similar under each scenario, the differences largely affecting the geographic locations of the growth. In the sections which follow, each scenario is analyzed separately and the corresponding circulation needs evaluated.

BASELINE TRANSPORTATION IMPROVEMENTS

A number of transportation improvements throughout the city are currently committed for construction. They have identified funding sources and are programmed for implementation either through the City's Capital Improvement Program (CIP) or other mechanisms. They are referred to here as the "Baseline Improvements". Although the Baseline improvements are common to all scenarios, for convenience, they are listed as part of the overall improvements recommended with each scenario.

SCENARIO 1 – INTENSIFICATION/REUSE ONLY

This scenario adds an estimated 8,539 new dwelling units and 5.2 million square feet of non-residential development[1]. It does not have any development in the growth areas, allocating all growth to the other three area designations.

Table 3-1 summarizes the growth for this scenario by a set of sub-areas, and Figure 3-1 shows this growth in diagrammatic form. Shown here is the existing daily trip generation by sub-area and the corresponding growth under this scenario. The overall trip generation increase citywide is 18.7 percent, and the growth is generally spread throughout the City. This scenario establishes a basic set of infill and intensification assumptions that are retained in the other five scenarios.

Year 2025 ADT volumes on the baseline circulation system for this scenario can be seen in Figure 3-2, and the corresponding ICUs are illustrated in Figure 3-3. Transportation improvements to provide adequate capacity for this scenario can be seen in Table 3-2. The corresponding ICU values are listed in Table 3-3 (ICU calculations can be found in Appendix A), which shows the ICU values under Baseline improvements only, and then the values obtained by adding the recommended additional improvements (labeled "non-committed" improvements).

Scenario 1 results in one location requiring additional (non-committed) improvements. This location is the Wells Road and Darling Road intersection.

SCENARIO 2 – INTENSIFICATION/REUSE + NORTH AVENUE + OLIVAS + SERRA

This scenario adds to the intensification and infill development of Scenario 1 by adding residential and non-residential development in the North Avenue, Olivas, and Serra expansion areas. Citywide, this scenario would add an estimated 11,241 dwelling units and 6.4 million square feet of non-residential development.

Table 3-4 summarizes the growth by sub-area for this scenario, and Figure 3-4 shows this growth in diagrammatic form. Overall growth in trip generation is 22.5 percent, somewhat higher than the 18.7 percent increase in Scenario 1 due to the addition of the two expansion areas.

[1]Future estimates of development differ slightly than those in the EIR project description. However, estimates are similar enough to reflect possible impacts.

DUs – Dwelling Units
TSF – Thousand Square Feet

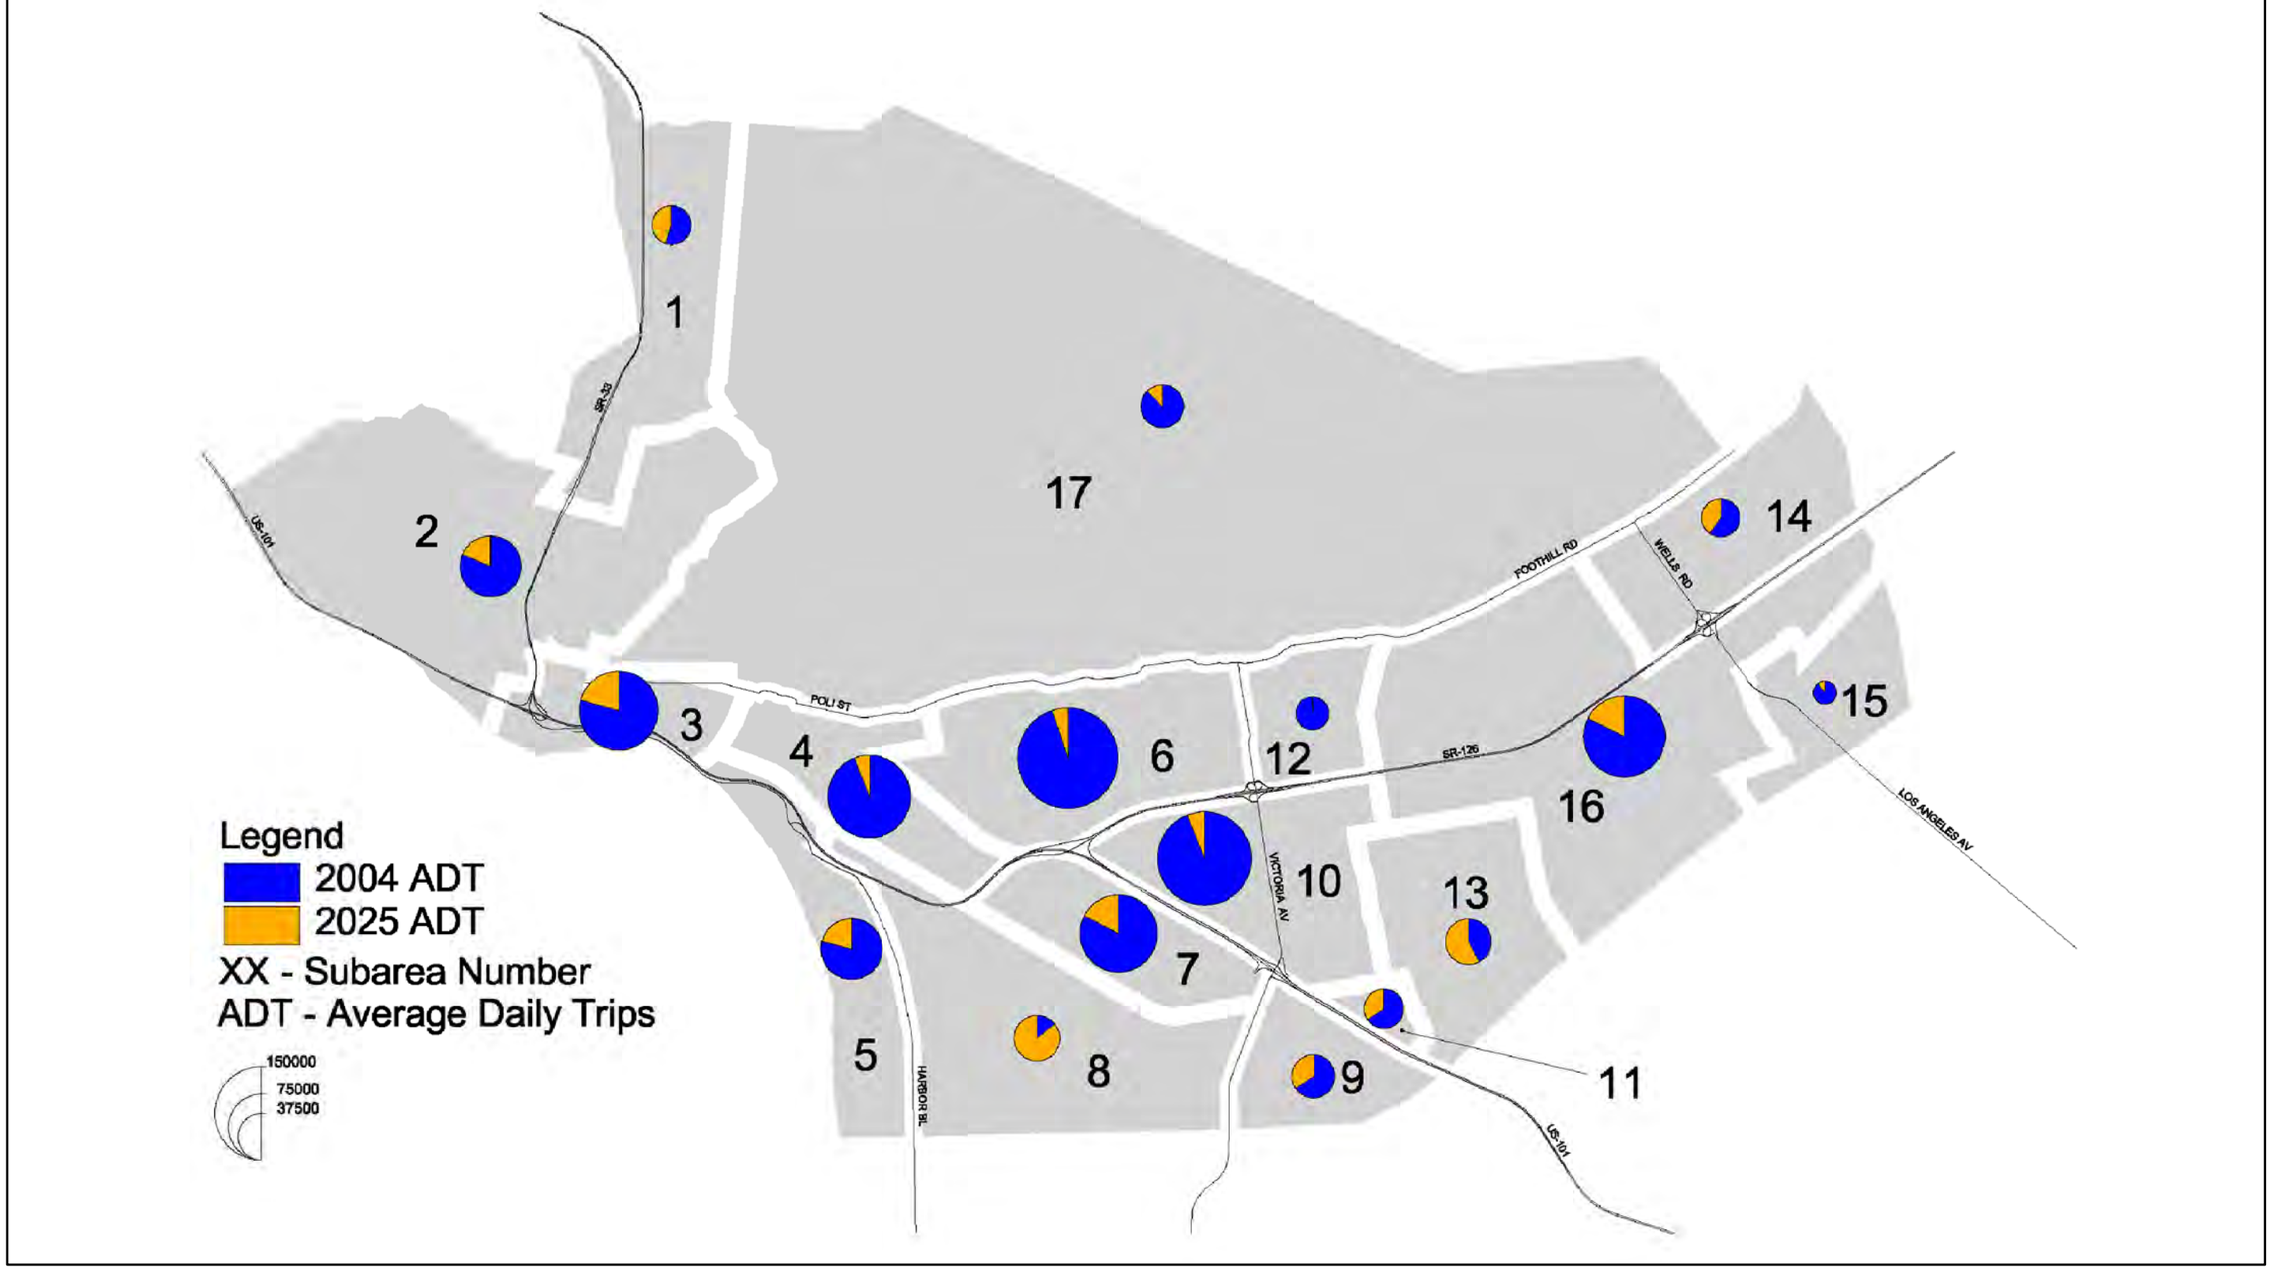

Figure 3-4

EXISTING AND FUTURE ADT BY SUBAREA
- SCENARIO 2

The 2025 ADT volumes on the baseline circulation system for this scenario can be seen in Figure 3-5, and the corresponding ICUs are depicted in Figure 3-6. To serve this scenario, it is proposed that the following new roadway links be added as an alternative to the Baseline Network along with selected intersection improvements:

1. Mills Road extension to Harbor Boulevard (connection at Schooner Drive)
2. New collector between Mills Road and Telephone Road in the Olivas expansion area
3. North Bank Drive extension from Johnson Drive to Bristol Road
4. Kimball Road extension from Telephone Road to North Bank Drive
5. Ralston Street extension from Ramelli Avenue to Montgomery Avenue

Table 3-5 summarizes the overall roadway and intersection improvements for this scenario, and Table 3-6 lists the ICU values with Baseline Improvements and with the recommended additional improvements (ICU calculations can be found in Appendix A). Comparative ADT volumes for the arterial street system with the added roadways can be found in Chapter 4.0 where the recommended roadway classifications for the scenarios are presented. It should be noted that with North Bank Drive extended from Johnson Drive to Bristol Road in the Alternative Network, the six lane widening of Johnson Drive between North Bank Drive and Bristol Road that is assumed in the Baseline Network is not needed.

Scenario 2 results in a total of four locations that require additional (non-committed) improvements, with one deficiency occurring under the Baseline Network and four deficiencies occurring under the Alternative Network. The deficient locations are as follows:

Baseline Network

- Wells Road at Darling Road

Alternative Network

- Mills Road at Main Street
- Johnson Drive at North Bank Drive
- Wells Road at Darling Road
- Ventura Boulevard at North Bank Drive

Text continues on Page 3-23

2025 INTERSECTION CAPACITY UTILIZATION (ICU) - SCENARIO 2 (BASELINE NETWORK)

Table 3-5
ROADWAY IMPROVEMENTS – SCENARIO 2

LOCATION	IMPROVEMENT
I. Baseline	
1. Streets	
A Street (Saticoy Avenue to Wells Road)	New two-lane roadway
Harbor Boulevard Bridge over the Santa Clara River	Widen to four lanes
Hill Road (Moon Drive to Ralston Street)	Extend as two-lane roadway
Johnson Drive (North Bank Drive to Bristol Road)	Widen to six lanes (a)
North Bank Drive (City limits to Wells Road)	New two-lane roadway
North Bank Drive (Current terminus to Saticoy Avenue)	New two-lane roadway
Telegraph Road (Saticoy Avenue to Wells Road)	Widen to four lanes
Thille Street (Telephone Road to current terminus)	Extend as two-lane roadway
US-101 Off-ramp to California Street	Relocate to Oak Street
Victoria Avenue (US-101 to City limits)	Widen to six lanes
Wells Road (SR-126 to City limits)	Widen to six lanes
Wells Road (Foothill Road to SR-126)	Widen to four lanes
2. Intersections	
20. Harbor Boulevard and Olivas Park Drive	Add second southbound left-turn lane
33. US-101 NB ramps at Telephone Road	Convert southbound left-turn lane to shared left-turn/right-turn lane
35. Saratoga Avenue at Telephone Road	Convert separate westbound right-turn lane to shared through/right-turn lane and add separate southbound right-turn lane
85. Victoria Avenue at Olivas Park Drive	Add second northbound and southbound left-turn lanes, third northbound and southbound through lanes, second eastbound left-turn lane and second westbound through lane
86. Telephone Road at Olivas Park Drive	Add double southbound left-turn lanes, second eastbound left-turn lane and second eastbound and westbound through lanes
91. Johnson Drive at Ralston Street	Add second northbound and southbound through lanes
92. Johnson Drive at Bristol Road	Add second northbound and southbound through lanes
94. Johnson Drive at North Bank Drive	Convert southbound right-turn lane to shared through/right-turn lane
104. Wells Road at SR-126 EB Ramps	Add third northbound and southbound through lanes
105. Wells Road at Darling Road	Add third northbound and southbound through lanes
106. Wells Road at Telephone Road	Add third northbound and southbound through lanes
160. Victoria Avenue at US 101 NB Ramps	Convert westbound shared left-turn/right-turn lane to dedicated left-turn lane and add third westbound right-turn lane
175. Ventura Boulevard at North Bank Drive	Add second eastbound through lane

(Table Continued)

Table 3-5
ROADWAY IMPROVEMENTS – SCENARIO 2

LOCATION	IMPROVEMENT
II. Non-Committed	
1a. Streets (Alternative Network)	
B Street (Mills Road to Telephone Road)	New two-lane roadway
Kimball Road (Telephone Road to North Bank Drive)	New four-lane roadway
Mills Road (Arundell Avenue to Harbor Boulevard)	New four-lane roadway
North Bank Drive (Johnson Drive to Bristol Road)	New four-lane roadway
Ralston Street (Ramelli Avenue to Montgomery Avenue)	New two-lane roadway
2. Intersections (Baseline Network)	
105. Wells Road at Darling Road	Add eastbound left-turn lane, second southbound left-turn lane and second westbound left-turn lane
2a. Intersections (Alternative Network)	
27. Mills Road at Main Street	Add northbound left-turn lane and second northbound and southbound through lanes
94. Johnson Drive at North Bank Drive	Improve eastbound approach to provide two left-turn lanes, three through lanes and a separate right-turn lane, and improve westbound approach to provide three left-turn lanes and two through lanes
105. Wells Road at Darling Road	Add eastbound left-turn lane, second southbound left-turn lane and second westbound left-turn lane
175. Ventura Boulevard at North Bank Drive	Add third eastbound through lane

(a) This widening is not needed in the Alternative Network for this scenario, which includes an extension of North Bank Drive from Johnson Drive to Bristol Road.

202. Telephone & B St	--		--		--		--		.48	A	.65	B	--		--	

(a) LOS E (ICU less than or equal to 1.00) is acceptable at this location (freeway ramps). LOS D (ICU less than or equal to .90) is the recommended performance standard for all other intersection locations.

Note: Gray shading denotes intersection locations that exceed the performance standard.

SCENARIO 3 – INTENSIFICATION/REUSE + NORTH AVENUE + OLIVAS

This scenario adds to the intensification and infill development of Scenario 1 by adding residential and non-residential development in the North Avenue and Olivas expansion areas. In this case, the amount of development in Expansion Area 2 is greater than in Scenario 1 (2,394 dwelling units versus no added dwelling units). Citywide, this scenario would add an estimated, 11,255 dwelling units and 6.4 million square feet of non-residential development.

Table 3-7 summarizes the growth by sub-area for this scenario, and Figure 3-7 shows this growth in diagrammatic form. The citywide increase in trip generation is 21.9 percent, similar to that of Scenario 2 but with different geographic distribution due to most of the expansion area growth being allocated to the Olivas Expansion Area.

The 2025 ADT volumes on the baseline circulation system for this scenario can be seen in Figure 3-8, and the corresponding ICUs are depicted in Figure 3-9. Deficiencies shown here are addressed by selected intersection improvements and by new roadway links serving the Olivas Expansion Area (the Mills Road extension and a new collector between the extension of Mills Road and Telephone Road). Table 3-8 summarizes the overall roadway and intersection improvements for this scenario, and Table 3-9 lists the ICU values with Baseline improvements and with the recommended additional improvements (ICU calculations can be found in Appendix A). Comparative ADT volumes for the arterial street system with the added roadways can be found in Chapter 4.0 where the recommended roadway classifications for the scenarios are presented.

Scenario 3 results in two locations that require additional (non-committed) improvements, with one deficiency occurring under the Baseline Network and two occurring under the Alternative Network. The deficient locations are as follows:

Baseline Network

- Wells Road at Darling Road

Alternative Network

- Mills Road at Main Street
- Wells Road at Darling Road

Table 3-8
ROADWAY IMPROVEMENTS – SCENARIO 3

LOCATION	IMPROVEMENT
I. Baseline	
1. Streets	
A Street (Saticoy Avenue to Wells Road)	New two-lane roadway
Harbor Boulevard Bridge over the Santa Clara River	Widen to four lanes
Hill Road (Moon Drive to Ralston Street)	Extend as two-lane roadway
Johnson Drive (North Bank Drive to Bristol Road)	Widen to six lanes
North Bank Drive (City limits to Wells Road)	New two-lane roadway
North Bank Drive (Current terminus to Saticoy Avenue)	New two-lane roadway
Telegraph Road (Saticoy Avenue to Wells Road)	Widen to four lanes
Thille Street (Telephone Road to current terminus)	Extend as two-lane roadway
US-101 Off-ramp to California Street	Relocate to Oak Street
Victoria Avenue (US-101 to City limits)	Widen to six lanes
Wells Road (SR-126 to City limits)	Widen to six lanes
Wells Road (Foothill Road to SR-126)	Widen to four lanes
2. Intersections	
20. Harbor Boulevard and Olivas Park Drive	Add second southbound left-turn lane
33. US-101 NB ramps at Telephone Road	Convert southbound left-turn lane to shared left-turn/right-turn lane
35. Saratoga Avenue at Telephone Road	Convert separate westbound right-turn lane to shared through/right-turn lane and add separate southbound right-turn lane
85. Victoria Avenue at Olivas Park Drive	Add second northbound and southbound left-turn lanes, third northbound and southbound through lanes, second eastbound left-turn lane and second westbound through lane
86. Telephone Road at Olivas Park Drive	Add double southbound left-turn lanes, second eastbound left-turn lane and second eastbound and westbound through lanes
91. Johnson Drive at Ralston Street	Add second northbound and southbound through lanes
92. Johnson Drive at Bristol Road	Add second northbound and southbound through lanes
94. Johnson Drive at North Bank Drive	Convert southbound right-turn lane to shared through/right-turn lane
104. Wells Road at SR-126 EB Ramps	Add third northbound and southbound through lanes
105. Wells Road at Darling Road	Add third northbound and southbound through lanes
106. Wells Road at Telephone Road	Add third northbound and southbound through lanes
160. Victoria Avenue at US 101 NB Ramps	Convert westbound shared left-turn/right-turn lane to dedicated left-turn lane and add third westbound right-turn lane
175. Ventura Boulevard at North Bank Drive	Add second eastbound through lane

(Table Continued)

Table 3-8
ROADWAY IMPROVEMENTS – SCENARIO 3

LOCATION	IMPROVEMENT
II. Non-Committed	
1a. Streets (Alternative Network)	
B Street (Mills Road to Telephone Road)	New two-lane roadway
Mills Road (Arundell Avenue to Harbor Boulevard)	New four-lane roadway
2. Intersections (Baseline Network)	
105. Wells Road at Darling Road	Add second southbound left-turn lane, second westbound left-turn lane and eastbound left-turn lane
2a. Intersections (Alternative Network)	
27. Mills Road at Main Street	Add northbound left-turn lane and second northbound and southbound through lanes
105. Wells Road at Darling Road	Add second southbound left-turn lane, second westbound left-turn lane and eastbound left-turn lane

202. Telephone & B St	--		--		--		--		.49	A	.65	B	--		--	

(a) LOS E (ICU less than or equal to 1.00) is acceptable at this location (freeway ramps). LOS D (ICU less than or equal to .90) is the recommended performance standard for all other intersection locations.

Note: Gray shading denotes intersection locations that exceed the performance standard.

SCENARIO 4 – INTENSIFICATION/REUSE + NORTH AVENUE + SERRA

This scenario adds to the intensification and infill development of Scenario 1 by adding residential and non-residential development in the North Avenue and Serra expansion areas. Citywide, this scenario would add an estimated 11,241 dwelling units and 6.4 million square feet of non-residential development.

Table 3-10 summarizes the growth by sub-area for this scenario, and Figure 3-10 shows this growth in diagrammatic form. The citywide increase in trip generation for this scenario is 21.7 percent with the expansion area growth allocated to the Serra Expansion Area (2,397 dwelling units versus 1,059 in Scenario 2).

The 2025 ADT volumes on the baseline circulation system for this scenario can be seen in Figure 3-11, and the corresponding ICUs are shown in Figure 3-12. To serve this scenario, it is proposed that the following new roadway links be added as an alternative to the Baseline Network along with selected intersection improvements:

1. North Bank Drive extension from Johnson Drive to Bristol Road
2. Kimball Road extension from Telephone Road to North Bank Drive
3. Ralston Street extension from Ramelli Avenue to Montgomery Avenue

Table 3-11 summarizes the overall roadway and intersection improvements for this scenario, and Table 3-12 lists the ICU values with Baseline Improvements and with the recommended additional improvements (ICU calculations can be found in Appendix A). Comparative ADT volumes for the arterial street system with the added roadways can be found in Chapter 4.0 where the recommended roadway classifications for the scenarios are presented. It should be noted that with North Bank Drive extended from Johnson Drive to Bristol Road in the Alternative Network, the six-lane widening of Johnson Drive between North Bank Drive and Bristol Road that is assumed in the Baseline Network is not needed.

Text continues on Page 3-45

Table 3-11
ROADWAY IMPROVEMENTS – SCENARIO 4

LOCATION	IMPROVEMENT
I. Baseline	
1. Streets	
A Street (Saticoy Avenue to Wells Road)	New two-lane roadway
Harbor Boulevard Bridge over the Santa Clara River	Widen to four lanes
Hill Road (Moon Drive to Ralston Street)	Extend as two-lane roadway
Johnson Drive (North Bank Drive to Bristol Road)	Widen to six lanes (a)
North Bank Drive (City limits to Wells Road)	New two-lane roadway
North Bank Drive (Current terminus to Saticoy Avenue)	New two-lane roadway
Telegraph Road (Saticoy Avenue to Wells Road)	Widen to four lanes
Thille Street (Telephone Road to current terminus)	Extend as two-lane roadway
US-101 Off-ramp to California Street	Relocate to Oak Street
Victoria Avenue (US-101 to City limits)	Widen to six lanes
Wells Road (SR-126 to City limits)	Widen to six lanes
Wells Road (Foothill Road to SR-126)	Widen to four lanes
2. Intersections	
20. Harbor Boulevard and Olivas Park Drive	Add second southbound left-turn lane
33. US-101 NB ramps at Telephone Road	Convert southbound left-turn lane to shared left-turn/right-turn lane
35. Saratoga Avenue at Telephone Road	Convert separate westbound right-turn lane to shared through/right-turn lane and add separate southbound right-turn lane
85. Victoria Avenue at Olivas Park Drive	Add second northbound and southbound left-turn lanes, third northbound and southbound through lanes, second eastbound left-turn lane and second westbound through lane
86. Telephone Road at Olivas Park Drive	Add double southbound left-turn lanes, second eastbound left-turn lane and second eastbound and westbound through lanes
91. Johnson Drive at Ralston Street	Add second northbound and southbound through lanes
92. Johnson Drive at Bristol Road	Add second northbound and southbound through lanes
94. Johnson Drive at North Bank Drive	Convert southbound right-turn lane to shared through/right-turn lane
104. Wells Road at SR-126 EB Ramps	Add third northbound and southbound through lanes
105. Wells Road at Darling Road	Add third northbound and southbound through lanes
106. Wells Road at Telephone Road	Add third northbound and southbound through lanes
160. Victoria Avenue at US 101 NB Ramps	Convert westbound shared left-turn/right-turn lane to dedicated left-turn lane and add third westbound right-turn lane
175. Ventura Boulevard at North Bank Drive	Add second eastbound through lane

(Table Continued)

Table 3-11
ROADWAY IMPROVEMENTS – SCENARIO 4

LOCATION	IMPROVEMENT
II. Non-Committed	
1a. Streets (Alternative Network)	
Kimball Road (Telephone Road to North Bank Drive)	New four-lane roadway
North Bank Drive (Johnson Drive to Bristol Road)	New four-lane roadway
Ralston Street (Ramelli Avenue to Montgomery Avenue)	New two-lane roadway
2. Intersections (Baseline Network)	
15. Johnson Drive & Telephone Road	Add separate eastbound right-turn lane
94. Johnson Drive at North Bank Drive	Add southbound right-turn lane
105. Wells Road at Darling Road	Add eastbound left-turn lane, second southbound left-turn lane and second westbound left-turn lane
2a. Intersections (Alternative Network)	
94. Johnson Drive at North Bank Drive	Improve eastbound approach to provide two left-turn lanes, three through lanes and a separate right-turn lane, and improve westbound approach to provide three left-turn lanes and two through lanes
105. Wells Road at Darling Road	Add eastbound left-turn lane, second southbound left-turn lane and second westbound left-turn lane
175. Ventura Boulevard at North Bank Drive	Add third eastbound through lane

(a) This widening is not needed in the Alternative Network for this scenario, which includes an extension of North Bank Drive from Johnson Drive to Bristol Road.

(a) LOS E (ICU less than or equal to 1.00) is acceptable at this location (freeway ramps). LOS D (ICU less than or equal to .90) is the recommended performance standard for all other intersection locations.

Note: Gray shading denotes intersection locations that exceed the performance standard.

Scenario 4 results in four locations that require additional (non-committed) improvements, with three deficiencies occurring under each network scenario (Baseline and Alternative). The deficient locations are as follows:

Baseline Network

- Johnson Drive at Telephone Road
- Johnson Drive at North Bank Drive
- Wells Road at Darling Road

Alternative Network

- Johnson Drive at North Bank Drive
- Wells Road at Darling Road
- Ventura Boulevard at North Bank Drive

SCENARIO 5 – INTENSIFICATION/REUSE + NORTH AVENUE + WESTERN CAÑADA LARGA

This scenario adds to the intensification and infill development of Scenario 1 by adding residential and non-residential development in the North Avenue and Western Cañada Larga expansion areas. Citywide, this scenario would add an estimated 11,246 dwelling units and 6.25 million square feet of non-residential development.

Table 3-13 summarizes the growth by sub-area for this scenario, and Figure 3-13 shows this growth in diagrammatic form. The citywide increase in trip generation is 20.6 percent, which is fairly comparable to that of Scenarios 2, 3, and 4. In this case, the Expansion Area growth is allocated to northwestern part of the city (North Avenue and Western Cañada Larga).

The 2025 ADT volumes on the baseline circulation system for this scenario can be seen in Figure 3-14, and the corresponding ICUs are depicted in Figure 3-15. To serve this scenario, it is proposed that the following new roadway links be added as an alternative to the Baseline Network along with selected intersection improvements:

1. Cedar Street extension from Kellogg Street to Stanley Avenue
2. Stanley Avenue extension from Ventura Avenue to Cedar Street

LOS C	.71-.80	LOS F	Above 1.00

Figure 3-15

2025 INTERSECTION CAPACITY UTILIZATION (ICU) - SCENARIO 5 (BASELINE NETWORK)

Table 3-14 summarizes the overall roadway and intersection improvements for this scenario, and Table 3-15 lists the ICU values with Baseline improvements and with the recommended additional improvements (ICU calculations can be found in Appendix A). Comparative ADT volumes for the arterial street system with the added roadways can be found in Chapter 4.0 where the recommended roadway classifications for the scenarios are presented. It should be noted that the Cedar Street and associated Stanley Avenue extensions suggested here are not included in the Scenario 5 circulation plan that is recommended in Chapter 4.0. The reason for this is discussed as a Special Issue in Chapter 5.0.

Scenario 5 results in two locations that require additional (non-committed) improvements, with both deficiencies occurring under each network scenario (Baseline and Alternative). The deficient locations are as follows:

Baseline Network

- SR-33 Ramps at Shell Road
- Wells Road at Darling Road

Alternative Network

- SR-33 Ramps at Shell Road
- Wells Road at Darling Road

SCENARIO 6 – INTENSIFICATION/REUSE + NORTH AVENUE + POINSETTIA

This scenario adds to the intensification and infill development of Scenario 1 by adding residential and non-residential development in the North Avenue and Poinsettia expansion areas. Citywide, this scenario would add an estimated 11,241 dwelling units and 6.4 million square feet of non-residential development.

Table 3-16 summarizes the growth by sub-area for this scenario, and Figure 3-16 shows this growth in diagrammatic form. Citywide growth in trip generation is 21.7 percent, relatively similar to Scenarios 2, 3, 4, and 5, but with the Expansion Area growth allocated to the Poinsettia area in the northeast part of the city.

The 2025 ADT volumes on the baseline circulation system for this scenario can be seen in Figure 3-17, and the corresponding ICUs are depicted in Figure 3-18. To serve this scenario, it is proposed that

Table 3-14
ROADWAY IMPROVEMENTS – SCENARIO 5

LOCATION	IMPROVEMENT
I. Baseline	
1. Streets	
A Street (Saticoy Avenue to Wells Road)	New two-lane roadway
Harbor Boulevard Bridge over the Santa Clara River	Widen to four lanes
Hill Road (Moon Drive to Ralston Street)	Extend as two-lane roadway
Johnson Drive (North Bank Drive to Bristol Road)	Widen to six lanes
North Bank Drive (City limits to Wells Road)	New two-lane roadway
North Bank Drive (Current terminus to Saticoy Avenue)	New two-lane roadway
Telegraph Road (Saticoy Avenue to Wells Road)	Widen to four lanes
Thille Street (Telephone Road to current terminus)	Extend as two-lane roadway
US-101 Off-ramp to California Street	Relocate to Oak Street
Victoria Avenue (US-101 to City limits)	Widen to six lanes
Wells Road (SR-126 to City limits)	Widen to six lanes
Wells Road (Foothill Road to SR-126)	Widen to four lanes
2. Intersections	
20. Harbor Boulevard and Olivas Park Drive	Add second southbound left-turn lane
33. US-101 NB ramps at Telephone Road	Convert southbound left-turn lane to shared left-turn/right-turn lane
35. Saratoga Avenue at Telephone Road	Convert separate westbound right-turn lane to shared through/right-turn lane and add separate southbound right-turn lane
85. Victoria Avenue at Olivas Park Drive	Add second northbound and southbound left-turn lanes, third northbound and southbound through lanes, second eastbound left-turn lane and second westbound through lane
86. Telephone Road at Olivas Park Drive	Add double southbound left-turn lanes, second eastbound left-turn lane and second eastbound and westbound through lanes
91. Johnson Drive at Ralston Street	Add second northbound and southbound through lanes
92. Johnson Drive at Bristol Road	Add second northbound and southbound through lanes
94. Johnson Drive at North Bank Drive	Convert southbound right-turn lane to shared through/right-turn lane
104. Wells Road at SR-126 EB Ramps	Add third northbound and southbound through lanes
105. Wells Road at Darling Road	Add third northbound and southbound through lanes
106. Wells Road at Telephone Road	Add third northbound and southbound through lanes
160. Victoria Avenue at US 101 NB Ramps	Convert westbound shared left-turn/right-turn lane to dedicated left-turn lane and add third westbound right-turn lane
175. Ventura Boulevard at North Bank Drive	Add second eastbound through lane

(Table Continued)

Table 3-14
ROADWAY IMPROVEMENTS – SCENARIO 5

LOCATION	IMPROVEMENT
II. Non-Committed	
1a. Streets (Alternative Network)	
Cedar Street (Kellogg Street to Stanley Avenue)	New two-lane roadway
Kimball Road (Telephone Road to North Bank Drive)	New four-lane roadway
Ralston Street (Ramelli Avenue to Montgomery Avenue)	New two-lane roadway
Stanley Avenue (Cedar Street to Ventura Avenue)	New two-lane roadway
2. Intersections (Baseline Network)	
105. Wells Road at Darling Road	Add eastbound left-turn lane, second southbound left-turn lane and second westbound left-turn lane
179. SR-33 Ramps at Shell Road	Add southbound right-turn lane, second westbound through lane and separate westbound right-turn lane
2a. Intersections (Baseline Network)	
105. Wells Road at Darling Road	Add eastbound left-turn lane, second southbound left-turn lane and second westbound left-turn lane
179. SR-33 Ramps at Shell Road	Add southbound right-turn lane, second westbound through lane and separate westbound right-turn lane

.XX Highest ICU value during the AM or PM peak hour

LOS A-C | LOS D | LOS E-F

Level of service (LOS) ranges:

LOS A .00-.60	LOS D .81-.90
LOS B .61-.70	LOS E .91-1.00
LOS C .71-.80	LOS F Above 1.00

Figure 3-18

2025 INTERSECTION CAPACITY UTILIZATION (ICU) - SCENARIO 6 (BASELINE NETWORK)

the following links be added as an alternative to the Baseline Network along with selected intersection improvements:

1. Johnson Drive extension from SR-126 to Foothill Avenue
2. Loma Vista Road extension from Victoria Avenue to Kimball Road
3. Woodland Street extension from Hill Road to Johnson Drive

Table 3-17 summarizes the overall roadway and intersection improvements for this scenario, and Table 3-18 lists the ICU values with Baseline improvements and with the recommended additional improvements (ICU calculations can be found in Appendix A). Comparative ADT volumes for the arterial street system with the added roadways can be found in Chapter 4.0 where the recommended roadway classifications for the scenarios are presented.

Scenario 6 results in one location that will require additional (non-committed) improvements, with the deficiency occurring under both network scenarios (Baseline and Alternative). The deficient location is as follows:

Baseline Network

- Wells Road at Darling Road

Alternative Network

- Wells Road at Darling Road

Table 3-17
ROADWAY IMPROVEMENTS – SCENARIO 6

LOCATION	IMPROVEMENT
I. Baseline	
1. Streets	
A Street (Saticoy Avenue to Wells Road)	New two-lane roadway
Harbor Boulevard Bridge over the Santa Clara River	Widen to four lanes
Hill Road (Moon Drive to Ralston Street)	Extend as two-lane roadway
Johnson Drive (North Bank Drive to Bristol Road)	Widen to six lanes
North Bank Drive (City limits to Wells Road)	New two-lane roadway
North Bank Drive (Current terminus to Saticoy Avenue)	New two-lane roadway
Telegraph Road (Saticoy Avenue to Wells Road)	Widen to four lanes
Thille Street (Telephone Road to current terminus)	Extend as two-lane roadway
US-101 Off-ramp to California Street	Relocate to Oak Street
Victoria Avenue (US-101 to City limits)	Widen to six lanes
Wells Road (SR-126 to City limits)	Widen to six lanes
Wells Road (Foothill Road to SR-126)	Widen to four lanes
2. Intersections	
20. Harbor Boulevard and Olivas Park Drive	Add second southbound left-turn lane
33. US-101 NB ramps at Telephone Road	Convert southbound left-turn lane to shared left-turn/right-turn lane
35. Saratoga Avenue at Telephone Road	Convert separate westbound right-turn lane to shared through/right-turn lane and add separate southbound right-turn lane
85. Victoria Avenue at Olivas Park Drive	Add second northbound and southbound left-turn lanes, third northbound and southbound through lanes, second eastbound left-turn lane and second westbound through lane
86. Telephone Road at Olivas Park Drive	Add double southbound left-turn lanes, second eastbound left-turn lane and second eastbound and westbound through lanes
91. Johnson Drive at Ralston Street	Add second northbound and southbound through lanes
92. Johnson Drive at Bristol Road	Add second northbound and southbound through lanes
94. Johnson Drive at North Bank Drive	Convert southbound right-turn lane to shared through/right-turn lane
104. Wells Road at SR-126 EB Ramps	Add third northbound and southbound through lanes
105. Wells Road at Darling Road	Add third northbound and southbound through lanes
106. Wells Road at Telephone Road	Add third northbound and southbound through lanes
160. Victoria Avenue at US 101 NB Ramps	Convert westbound shared left-turn/right-turn lane to dedicated left-turn lane and add third westbound right-turn lane
175. Ventura Boulevard at North Bank Drive	Add second eastbound through lane

(Table Continued)

Table 3-17
ROADWAY IMPROVEMENTS – SCENARIO 6

LOCATION	IMPROVEMENT
II. Non-Committed	
1a. Streets (Alternative Network)	
Johnson Drive (Current terminus to Telegraph Road)	New four-lane roadway
Johnson Drive (Telegraph Road to Foothill Road)	New two-lane roadway
Loma Vista Road (Kimball Road to Victoria Avenue)	New two-lane roadway
Woodland Street (Hill Road to Johnson Drive)	New two-lane roadway
2. Intersections (Baseline Network)	
105. Wells Road at Darling Road	Add eastbound left-turn lane, second southbound left-turn lane and second westbound left-turn lane
2a. Intersections (Alternative Network)	
105. Wells Road at Darling Road	Add eastbound left-turn lane, second southbound left-turn lane and second westbound left-turn lane

(a) LOS E (ICU less than or equal to 1.00) is acceptable at this location (freeway ramps). LOS D (ICU less than or equal to .90) is the recommended performance standard for all other intersection locations that are analyzed.

Note: Gray shading denotes intersection locations that exceed the performance standard.

Chapter 4.0
ARTERIAL STREET SYSTEM

This chapter presents material pertaining to the Arterial Street System Component of the Circulation Element. It is intended to provide background discussion and related material for that component of the Element, and to present recommendations for the Citywide Arterial Street Plan.

OVERVIEW

Preparing the Circulation Element Update has involved a comprehensive process with input from numerous sources. Some of these sources were described in Chapter 2.0 as part of the existing conditions data that was compiled relative to existing physical features of the circulation system. Other information sources include community input (see Appendix B) and technical analyses as described in this report.

The discussion in this chapter focuses on the arterial street system and uses information prepared in the previous chapter (Chapter 3.0) to present Arterial Street Plans to be considered for inclusion in the Circulation Element. A customized Street Classification System is first described and then recommendations presented for each of the six land use scenarios discussed in the previous chapter.

STREET CLASSIFICATION SYSTEM

The arterial street component of the Circulation Element has two features which define the physical attributes of individual roadways on the Citywide street system. These are:

1. Design Classification
2. Functional Classification

The first establishes standards for right-of-way dedication when new construction occurs and shows the maximum number of lanes that would be accommodated on a given street. It essentially sets the maximum size of the street. There are three design classifications used in the Circulation Element, Primary Arterial, Secondary Arterial and Collector. Design specifications for these can be found in the City's Standard Detail Number 105.

The functional classification addresses lane deployment, medians, parking, and streetscape attributes designed to achieve objectives other than simply moving traffic. It addresses the "character" of a street as well as its size. Labels used in naming the functional classifications include the following:

- Boulevard – a street with a raised planted median
- Arterial – a street with a striped median
- Street – a street with no median

The first two are used in differentiating Primary Arterials, and all three are used for differentiating Secondary Arterials. Other descriptions are used as appropriate, particularly for collectors which are differentiated by both medians and parking.

The design and functional classifications are listed in Table 4-1. This shows the relationship between the two in conjunction with specific features of each classification and representative average daily traffic (ADT) values. As noted in the table, the ADT values are representative only and do not imply that the street is capable of carrying this volume or that it should carry no more than this volume. Figure 4-1 provides an illustrative guide in the form of cross-sections, and a brief description of each functional classification follows.

Six-Lane Boulevard (6LB) – This is the highest level of functional classification both in terms of its ability to carry traffic and also in terms of aesthetic appearance. It has a landscaped median wherever possible (i.e., where no access is required or where access can be limited) and gives a high quality street appearance. It is not necessary for the raised median to be continuous as long as there are sufficient sections of landscaped median to provide visual continuity. The intervening sections would have a striped median. No curbside parking is allowed under this functional classification. Also, where necessary, the basic six lane section may be augmented with auxiliary lanes (as currently exists on Victoria Avenue which has eight midblock lanes).

Six-Lane Arterial (6LA) – This is the second functional classification with six lanes and is the second of two functional classifications within the Primary Arterial design classification. In this case it has a striped median allowing two-way left turns into adjacent properties. Like the six-lane boulevard, it typically does not allow curbside parking since all the street width is required to accommodate the six lanes plus center turn lane. The only situation where parking would be allowed is where the right-of-way

Table 4-1

STREET CLASSIFICATIONS

DESIGN CLASSIFICATION	FUNCTIONAL CLASSIFICATION	REFERENCE CODE	ATTRIBUTES			
			LANES	MEDIAN	PARKING	ADT*
Primary Arterial	Six Lane Boulevard	6LB	6	Raised	No parking	54,000
	Six Lane Arterial	6LA	6	Striped	No curb parking unless adequate right-of-way (indents preferred)	50,000
Secondary Arterial	Four Lane Boulevard	4LB	4	Raised	No parking	36,000
	Four Lane Arterial	4LA	4	Striped	If space available (indents preferred)	32,000
	Four Lane Street	4LS	4	None	Parking	24,000
	Two Lane Boulevard	2LB	2	Raised	No Parking	20,000
Collector	Urban Collector	UC	2	Striped**	Parking	16,000
	Residential Collector	RC	2	None**	Parking	12,000
	Special Collector	SC	2	None	Angle parking	10,000

* The ADT value is a guide to the general level of daily traffic that can be carried by a roadway of this classification. Since level of service is determined by intersection performance rather than roadway link performance, this ADT value will vary (up or down) depending on the performance of adjacent intersections.

** Except where traffic calming applications provide for a raised landscaped median

is sufficient to accommodate parking as well as the other space components of this classification (i.e., median and bike lanes).

Four-Lane Boulevard (4LB) – This is the secondary arterial equivalent of the six-lane boulevard (6LB). It essentially provides the same type of streetscape, but with only four lanes. As noted for the 6LB, the landscaped median need not be continuous as long as there are sufficient sections to provide visual continuity. No curbside parking is allowed under this functional classification.

Four-Lane Arterial (4LA) – In its highest traffic carrying form, this is similar to the 4LB, but without the landscaped median. Typically, there is no parking and the center striped lane allows for two-way left turns. A variation on this is to allow parking, in which case the median would typically be narrower (no more than the 10 feet needed for the two-way left turn lane) and the parkway would also be narrower (eight feet rather than the desired 12 feet). Ideally the parking would be accommodated by indents, thereby providing designated parking sections along individual sections of roadway.

Four-Lane Street (4LS) – This is a basic four-lane roadway with no median and parking allowed on both sides. At intersections, the parking is removed and a striped median is provided to allow protected left turns.

Two-Lane Boulevard (2LB) – This provides for a high capacity two lane roadway within the Secondary Arterial Street Design Classification. It allows for special treatments such as Class I bikeways or wide parkways. Intersection augmentation is an important feature to enable the high midblock volumes to be accommodated.

Urban Collector (UC) – The Collector is the third level of design classification in the Circulation Element, and the Urban Collector is the highest level of the three functional classifications within this design classification.

Residential Collector (RC) – The Residential Collector recognizes that many streets designated as Collectors are in residential areas, and in many cases have driveways fronting onto the street. This classification has extra wide lanes so that traffic is not blocked by cars turning into driveways. At the same time, the residential character is preserved by not providing a median unless it is part of a special traffic calming program.

Special Collector (SC) – This third functional classification for Collector allows for special treatment such as traffic calming features (raised medians and/or narrowed curb-to-curb width), or special parking provisions (Main Street through the downtown area with its angle parking is an example of this functional classification).

Functional classification cross-sections can be found in Figures 4-2 through 4-4, and Table 4-2 shows roadway space allocation examples for the various functional classifications.

PRINCIPAL INTERSECTIONS

As noted in the discussion on performance criteria, level of service is defined by peak hour intersection performance. While the previous section on street classifications included a listing of desirable ADT values, these are simply a guide and do not imply that a roadway needs to be widened simply because the desired ADT threshold is exceeded.

Accordingly, a set of principal intersections are defined in the Circulation Element and are illustrated here in Figure 4-5. These will be regularly monitored and improvements programmed as appropriate. Chapter 3.0 of this report showed estimates of future volumes and levels of service at these locations in relation to the long-range arterial street system. Actual intersection improvements at the principal intersections are not part of the Circulation Element, but would be included as appropriate in the Annual Transportation Report.

CITYWIDE STREET CLASSIFICATIONS

This section presents functional classification recommendations for the citywide arterial street system. The classification for each street segment represents a balance between needed capacity and other objectives (or constraints) related to the character of that street. Constraints include right-of-way and access needs. Other attributes include adjacent land uses, parking needs, street character, and visual/aesthetic values. An individual classification system is presented for each land use scenario, and year 2025 ADT volumes for that system are also shown for each scenario.

PRINCIPAL INTERSECTIONS

SCENARIO 1 – INTENSIFICATION/REUSE ONLY

The recommended arterial street system functional classifications for Scenario 1 are shown in Figure 4-6, and corresponding year 2025 ADT volumes are illustrated in Figure 4-7. The circulation plan for this scenario is considered a Baseline Network that contains a number of transportation improvements throughout the city that are currently committed for construction (i.e., they have identified funding sources and are programmed for implementation either through the City's Capital Improvement Program (CIP) or other mechanisms; refer to chapter 3.0 for detailed listings of the Baseline improvements).

SCENARIO 2 – INTENSIFICATION/REUSE + NORTH AVENUE + OLIVAS + SERRA

The recommended arterial street system functional classifications for Scenario 2 are shown in Figure 4-8, and corresponding year 2025 ADT volumes are illustrated in Figure 4-9. In this scenario, it is recommended that the following roadway links be added to the Baseline circulation plan:

1. Mills Road extension to Harbor Boulevard
2. New collector between the Mills Road extension and Telephone Road
3. North Bank Drive extension from Johnson Drive to Bristol Drive
4. Kimball Road extension from Telephone Road to North Bank Drive
5. Ralston Street extension from Ramelli Avenue to Montgomery Avenue

Note that with North Bank Drive extended from Johnson Drive to Bristol Road, the six-lane widening of Johnson Drive between North Bank Drive and Bristol Road that is assumed in the Baseline circulation plan is not needed.

SCENARIO 3 – INTENSIFICATION/REUSE + NORTH AVENUE + OLIVAS

The recommended arterial street system functional classifications for Scenario 3 are shown in Figure 4-10, and corresponding year 2025 ADT volumes are illustrated in Figure 4-11. In this scenario, it is recommended that the following roadway links be added to the Baseline circulation plan:

1. Mills Road extension to Harbor Boulevard
2. New collector between the Mills Road extension and Telephone Road

SCENARIO 4 – INTENSIFICATION/REUSE + NORTH AVENUE + SERRA

The recommended arterial street system functional classifications for Scenario 4 are shown in Figure 4-12, and corresponding year 2025 ADT volumes are illustrated in Figure 4-13. In this scenario, it is recommended that the following roadway links be added to the Baseline circulation plan:

1. North Bank Drive extension from Johnson Drive to Bristol Road
2. Kimball Road extension from Telephone Road to North Bank Drive
3. Ralston Street extension from Ramelli Avenue to Montgomery Avenue

Note that with North Bank Drive extended from Johnson Drive to Bristol Road, the six-lane widening of Johnson Drive between North Bank Drive and Bristol Road that is assumed in the Baseline circulation plan is not needed.

SCENARIO 5 – INTENSIFICATION/REUSE + NORTH AVENUE + WESTERN CAÑADA LARGA

The recommended arterial street system functional classifications for Scenario 5 are shown in Figure 4-14, and corresponding year 2025 ADT volumes are illustrated in Figure 4-15. In this scenario, the circulation plan is the same Baseline Network as considered for Scenario.

SCENARIO 6 – INTENSIFICATION/REUSE + NORTH AVENUE + POINSETTIA

The recommended arterial street system functional classifications for Scenario 6 are shown in Figure 4-16, and corresponding year 2025 ADT volumes are illustrated in Figure 4-17. In this scenario, it is recommended that the following roadway links be added to the Baseline circulation plan:

1. Johnson Drive extension from SR-126 to Foothill Avenue
2. Loma Vista Road extension from Victoria Avenue to Kimball Road
3. Woodland Street extension from Hill Road to Johnson Drive

TRAFFIC CALMING

Traffic calming involves the deployment of street design features that cause motorists to drive with more care, to drive more slowly or perhaps via another route. The majority of traffic calming devices make alterations to a street's geometry, reducing its real or perceived width, or causing the driver to negotiate curvature or pavement texture. These modifications are almost always made within the public right-of-way, and are usually accompanied by extensive landscaping, thereby serving as neighborhood landmarks as well as traffic calming devices.

Traffic calming measures are generally implemented in response to specific problems. The problem or problems may involve a neighborhood or simply a street or part of a street. Examples of typical problems are as follows:

Cut-Through Traffic – Cut-through traffic has neither origin nor destination within the neighborhood, but rather is passing through on local streets. Cut-through trips seek out local streets, sometimes because they are faster, and sometimes because they are more pleasant and therefore seem to be faster.

Speeding – Many motorists (neighborhood residents as well as "cut-through") drive too fast on local streets. While some speeding is by irresponsible drivers, the majority is by normally responsible drivers unintentionally speeding due to design features such as excessively wide pavement, straight sections of road and absence of landscaping. In addition to safety issues, speeding vehicles degrade the quality of the street for other users and particularly for residents.

Safety – While largely related to speeding, safety also involves factors such as road geometry, safe road crossing locations, etc.

Aesthetics – Wide expanses of pavement devoted solely to the moving of traffic can take over a street in response to providing adequate "traffic service." Traffic calming provides the opportunity to use streets not only for moving cars but also as an aesthetically pleasing focal point for the community.

Although there are a number of traffic calming devices, they generally derive from some combination of a few basic principles:

Narrowing the street – This tends to reduce the speed that most drivers find reasonable and comfortable. Narrowing is done through reducing the pavement width, either at the sides or by adding a median or both. At intersections, narrowing can be achieved or complemented by extending the curbs. The perception of narrowing, which can be as effective as actual narrowing, is gained with street trees along the curb, overhead tree canopy, buildings brought close to the street and "gateways" along the street (i.e., short sections along which the curb-to-curb street width is narrowed).

Deflecting the vehicle path – Deflection usually terminates long, straight street views, thereby reducing speeds. Deflection is done through curving the travel path of the vehicle, and thereby causing the driver to reduce speed. Features incorporated into the street to cause deflection can also enhance the visual character of a street.

Diverting the driver's route – This is a more extreme measure, and makes vehicular access more difficult, thereby encouraging drivers to use another route. Diagonal street closures, one-way streets, median closings and turning movement restrictions are examples of diversion.

Changing the pavement surface – This feature demands attention from drivers, and reduces the comfortable driving speed. When deployed at intersections, it can enhance pedestrian safety.

Standard traffic control devices – These slow traffic through regulation. Stop signs, turn movement prohibitions, traffic signals and posted speed limits are examples of these more conventional traffic calming strategies.

Table 4-3 provides a toolbox of typical traffic calming actions. Typically three steps are undertaken to implement a traffic calming program:

1. Identify what needs fixing (i.e., location and problem) and apply some form of warrant/justification for proceeding with a study.

2. Identify potential tools that might be applicable.

3. Evaluate the tools and establish an implementation plan.

Traffic calming measures, while simple in concept, give a new balance between traffic service and important neighborhood values, such as noise, safety, walking and bicycling. Part of step three above is to recognize the trade-offs that can occur in this regard and achieve the desired balance between what may often be competing objectives.

Chapter 5.0
SPECIAL ISSUES

This chapter discusses a number of special issues with respect to the citywide arterial street system. The intent is to provide analysis information regarding these issues and give recommendations as to how they should be addressed either in the General Plan Circulation Element Update or in the EIR being prepared for the updated Element.

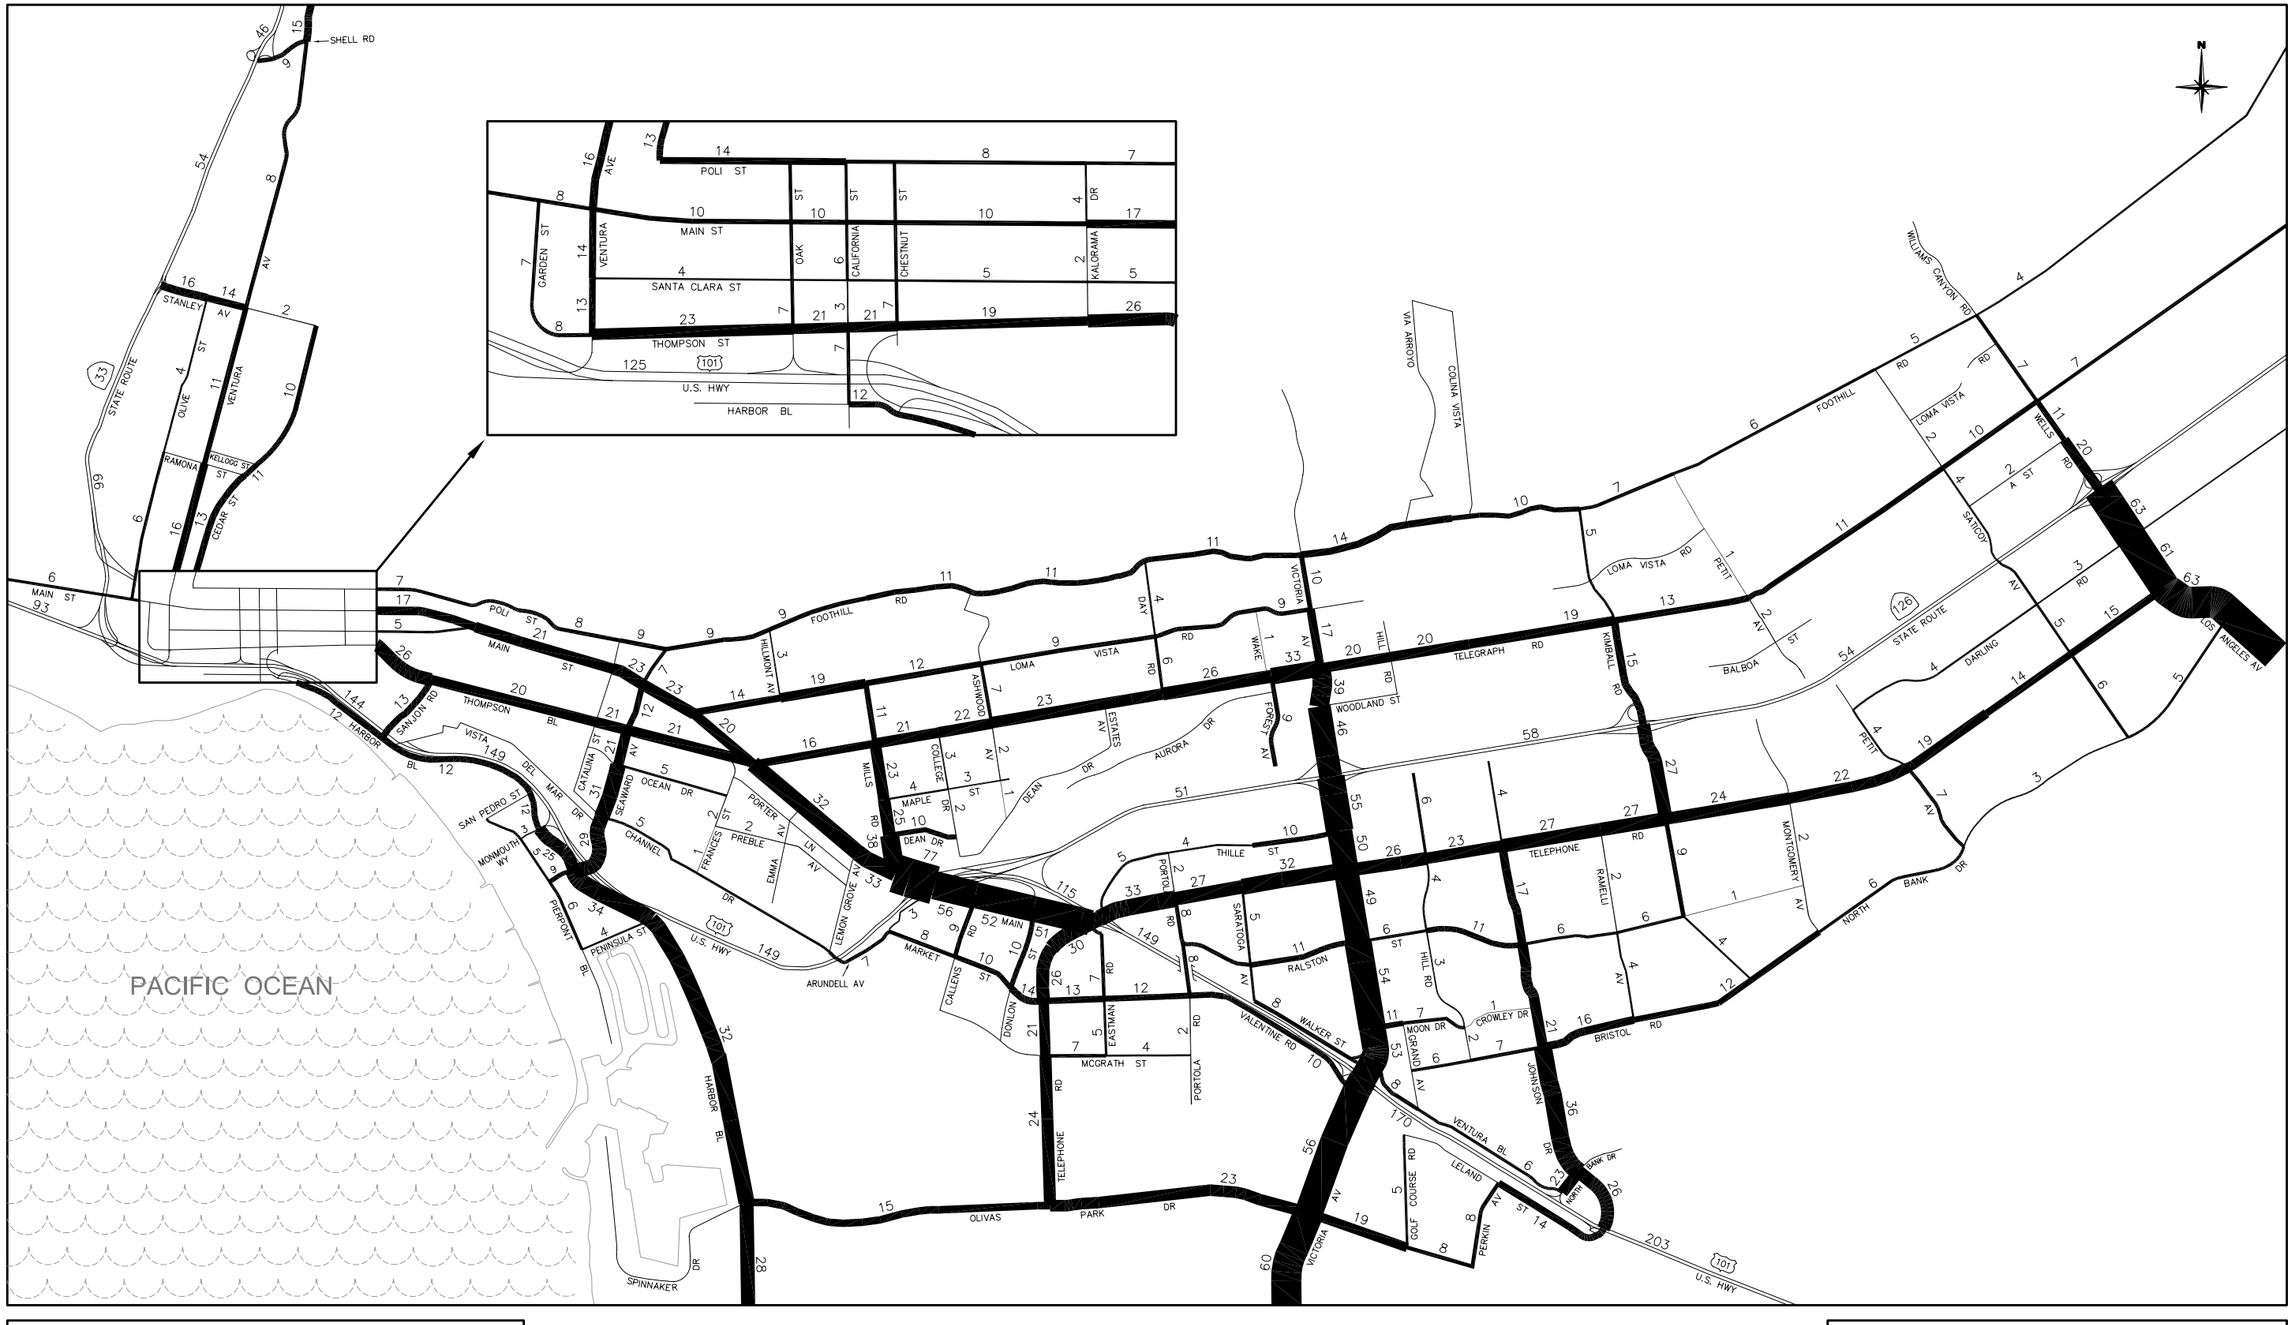
CEDAR STREET NORTHERLY EXTENSION

Consideration was given in the traffic analysis for a northerly extension of Cedar Street. A Cedar Street extension to Dakota Drive along with an eastward extension of Stanley Avenue to Cedar Street had been included in the previous Circulation Element roadway plan. As part of this Circulation Element Update Traffic Study, an analysis was made to identify the potential benefits of the Cedar Street extension. The land use alternative selected for this evaluation is Scenario 5 which includes development in Expansion Area 5 (Cañada Larga).

The 2025 average daily traffic (ADT) volumes for this scenario are shown in Figure 5-1, and comparative intersection capacity utilization (ICU) values at the intersections affected by the extension are summarized below:

	Without Cedar Extension		With Cedar Extension	
Intersection	**AM Peak**	**PM Peak**	**AM Peak**	**PM Peak**
132. Ventura & Stanley	.68	.83	.61	.62
178. SR-33 Ramps & Stanley	.64	.69	.61	.62

The traffic forecast data presented in Chapter 3.0 for Scenario 5 indicates that the majority of the traffic in the Cañada Larga Expansion Area would use the Cañada Larga and Shell Road interchanges with SR-33, and very little of that traffic would use Ventura Avenue south of Shell Road. Hence, the capacity needs at the intersection of Stanley Road and Ventura Avenue are the issue independent of the land use. As indicated above, year 2025 ICUs for this intersection show adequate capacity. Hence, the cost and potential impacts of such an extension suggest a relatively low benefit of constructing the extension. Accordingly, it is not recommended for inclusion in the Circulation Element at this time.



Legend

10 30 50 Average Daily Traffic (ADT) Volumes in 000s

Figure 5-1

2025 ADT VOLUMES (000s)
- SCENARIO 5 (ALTERNATIVE NETWORK WITH CEDAR STREET EXTENSION)

ADDITIONAL CROSSING OF THE SANTA CLARA RIVER

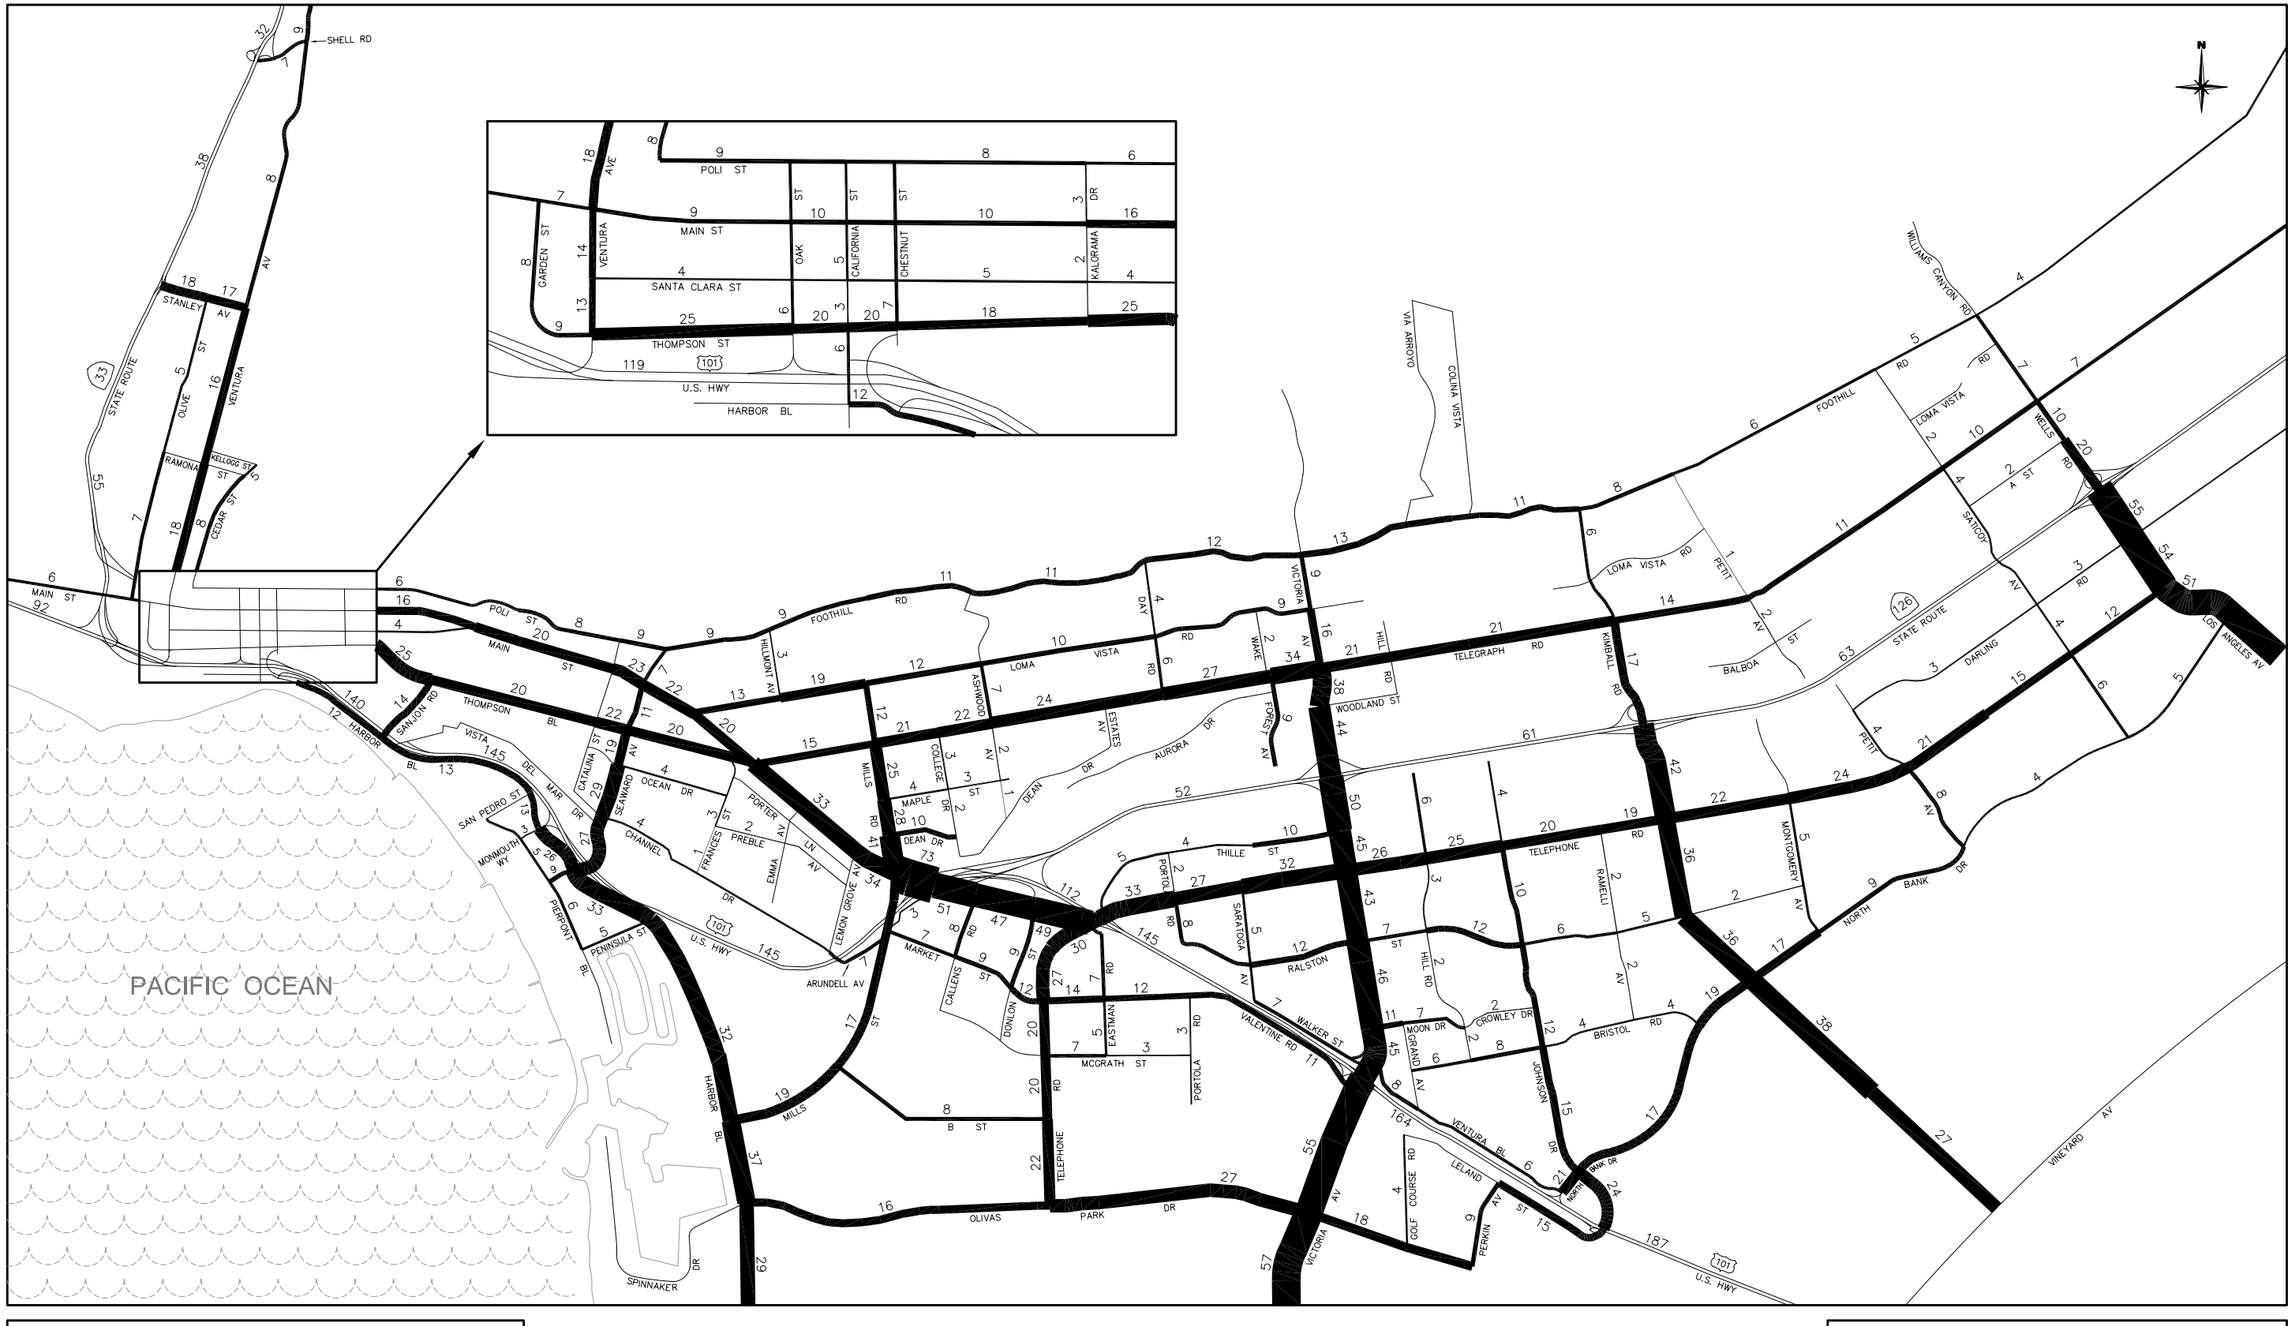
An additional crossing of the Santa Clara River has been considered several times in the past. One candidate location would be a southward extension of Kimball Road over into the recently approved RiverPark development in the City of Oxnard. A study carried out in 2004 for the County of Ventura concluded that expansion of the existing bridges (including the current Caltrans bridge widening on US-101) would accommodate future demand without the need for additional bridges.

To verify this finding and to examine the potential benefits of such an extension, the City of Ventura traffic model was utilized to prepare 2025 traffic projections with a Kimball Road extension across the river. The year 2025 ADT volumes with the new river crossing are illustrated in Figure 5-2. As can be seen, future demand on the bridge would be 38,000 ADT, more than is reasonable capacity for a two-lane bridge but within the capacity of a four-lane bridge. Potential benefits of this new bridge would largely occur on Victoria Avenue. Traffic between Ventura and Oxnard that currently uses Victoria Avenue and US-101 to travel between Ventura and the eastside of Oxnard would divert to the new bridge.

For each of the six land use scenarios analyzed in this study, a proposed circulation system has been developed which would serve the year 2025 traffic. In most cases, the circulation system involves intersection improvements and specific roadway links added to serve those scenarios that have expansion area growth. An added crossing of the Santa Clara River would not obviate the need for those additional roadways and would not change the intersection improvements in specific areas proposed as part of those scenarios. Accordingly, it is concluded that the high cost and impacts of an additional crossing would not be justified, given the ability to provide adequate capacity by other means.

OLIVAS PARK DRIVE EXTENSION

Consideration has been given in the past to extending Olivas Park Drive to the Johnson Drive underpass of the US-101. At the present time, traffic on Olivas Park Drive using the interchange must take a circuitous route via Golf Course Road or Perkin Avenue and then Leland Street to reach the Johnson Drive interchange. Hence, the extension would provide a substantial benefit with respect to access to the interchange.



Legend

10 30 50 Average Daily Traffic (ADT) Volumes in 000s

Figure 5-2

2025 ADT VOLUMES (000s)
- SCENARIO 2 (ALTERNATIVE NETWORK WITH SANTA CLARA RIVER CROSSING)

It is recommended that this extension be considered as part of the overall upgrade to the Johnson Drive interchange and vicinity. In particular, if a North Bank Drive connection to Bristol Road is constructed, then associated changes will need to be made at the intersection of Johnson Drive and on the various ramps serving the US-101. Since the Olivas Park Drive extension would aid this situation, it would be a valuable addition to the circulation system in this area. The year 2025 ADT volumes with the Olivas Park Drive extension are illustrated in Figure 5-3.

Appendix A
INTERSECTION CAPACITY UTILIZATION WORKSHEETS

This appendix contains information pertaining to the existing and future intersection analysis portion of the San Buenaventura traffic study. The sections that follow contain existing and future AM and PM peak hour intersection capacity utilization (ICU) worksheets for intersections in the traffic analysis study area. For intersections that require additional improvements, ICU worksheets with Non-Committed Improvements are included. The ICU data sets contained in the appendix are presented in the following order:

ICU DATA SETS

Scenario	Data Set
Existing	1
2025 Scenario 1 (Baseline Network)	2
2025 Scenario 2 (Baseline Network)	3
2025 Scenario 2 (Alternative Network)	4
2025 Scenario 3 (Baseline Network)	5
2025 Scenario 3 (Alternative Network)	6
2025 Scenario 4 (Baseline Network)	7
2025 Scenario 4 (Alternative Network)	8
2025 Scenario 5 (Baseline Network)	9
2025 Scenario 5 (Alternative Network)	10
2025 Scenario 6 (Baseline Network)	11
2025 Scenario 6 (Alternative Network)	12

ICU METHODOLOGY

Peak hour intersection volume/capacity ratios are calculated by means of intersection capacity utilization (ICU) values. The procedure is based on the critical movement methodology, and shows the amount of capacity utilized by each critical move. Basic assumptions used in the calculation are as follows:

Saturation flow rate: 1,600 vehicles per hour per lane

Clearance Interval: none

A "de-facto" right-turn lane is used in the ICU calculation for cases where a curb lane is wide enough to separately serve both thru and right-turn traffic (typically with a width of 19 feet from curb to outside of thru-lane with parking prohibited during peak periods). Such lanes are treated the same as striped right-turn lanes during the ICU calculations, but they are denoted on the ICU calculation worksheets using the letter "d" in place of a numerical entry for right-turn lanes.

The methodology also incorporates a check for right-turn capacity utilization. Both right-turn-on-green (RTOG) and right-turn-on-red (RTOR) capacity availability are calculated and checked against the total right-turn capacity need. If insufficient capacity is available, then an adjustment is made to the total capacity utilization value. The following example shows how this adjustment is made.

Example For Northbound Right

1. Right-Turn-On-Green (RTOG)

If NBT is critical move, then:
RTOG = V/C (NBT)
Otherwise,
RTOG = V/C (NBL) + V/C (SBT) - V/C (SBL)

2. Right-Turn-On-Red (RTOR)

If WBL is critical move, then:
RTOR = V/C (WBL)
Otherwise,
RTOR = V/C (EBL) + V/C (WBT) - V/C (EBT)

3. Right-Turn Overlap Adjustment

If the northbound right is assumed to overlap with the adjacent westbound left, adjustments to the RTOG and RTOR values are made as follows:

RTOG = RTOG + V/C (WBL)
RTOR = RTOR - V/C (WBL)

4. Total Right-Turn Capacity (RTC) Availability For NBR

RTC = RTOG + factor x RTOR
Where factor = RTOR saturation flow factor (75%)

Right-turn adjustment is then as follows: Additional ICU = V/C (NBR) - RTC

A zero or negative value indicates that adequate capacity is available and no adjustment is necessary. A positive value indicates that the available RTOR and RTOG capacity does not adequately accommodate the right-turn V/C, therefore the right-turn is essentially considered to be a critical movement. In such cases, the right-turn adjustment is noted on the ICU worksheet and it is included in the total capacity utilization value. When it is determined that a right-turn adjustment is required for more than one right-turn movement, the word "multi" is printed on the worksheet instead of an actual right-turn movement reference, and the right-turn adjustments are cumulatively added to the total capacity utilization value. In such cases, further operational evaluation is typically carried out to determine if under actual operational conditions, the critical right-turns would operate simultaneously, and therefore a right-turn adjustment credit should be applied.

Shared Lane V/C Methodology

For intersection approaches where shared usage of a lane is permitted by more than one turn movement (e.g., left/thru, thru/right, left/thru/right), the individual turn volumes are evaluated to determine whether dedication of the shared lane is warranted to any one given turn movement. The following example demonstrates how this evaluation is carried out:

Example for Shared Left/Thru Lane

1. Average Lane Volume (ALV)

$$ALV = \frac{\text{Left-Turn Volume + Thru Volume}}{\text{Total Left + Thru Approach Lanes (including shared lane)}}$$

2. ALV for Each Approach

$$ALV\ (Left) = \frac{\text{Left-Turn Volume}}{\text{Left Approach Lanes (including shared lane)}}$$

$$ALV\ (Thru) = \frac{\text{Thru Volume}}{\text{Thru Approach Lanes (including shared lane)}}$$

3. Lane Dedication is Warranted

If ALV (Left) is greater than ALV then full dedication of the shared lane to the left-turn approach is warranted. Left-turn and thru V/C ratios for this case are calculated as follows:

$$V/C\ (Left) = \frac{\text{Left-Turn Volume}}{\text{Left Approach Capacity (including shared lane)}}$$

$$V/C\ (Thru) = \frac{\text{Thru Volume}}{\text{Thru Approach Capacity (excluding shared lane)}}$$

Similarly, if ALV (Thru) is greater than ALV then full dedication to the thru approach is warranted, and left-turn and thru V/C ratios are calculated as follows:

$$V/C\ (Left) = \frac{\text{Left-Turn Volume}}{\text{Left Approach Capacity (excluding shared lane)}}$$

$$V/C\ (Thru) = \frac{\text{Thru Volume}}{\text{Thru Approach Capacity (including shared lane)}}$$

4. Lane Dedication is not Warranted

If ALV (Left) and ALV (Thru) are both less than ALV, the left/thru lane is assumed to be truly shared and each left, left/thru or thru approach lane carries an evenly distributed volume of traffic equal to ALV. A combined left/thru V/C ratio is calculated as follows:

$$V/C\ (Left/Thru) = \frac{\text{Left-Turn Volume + Thru Volume}}{\text{Total Left + Thru Approach Capacity (including shared lane)}}$$

This V/C (Left/Thru) ratio is assigned as the V/C (Thru) ratio for the critical movement analysis and ICU summary listing.

If split phasing has not been designated for this approach, the relative proportion of V/C (Thru) that is attributed to the left-turn volume is estimated as follows:

If approach has more than one left-turn (including shared lane), then:
V/C (Left) = V/C (Thru)

If approach has only one left-turn lane (shared lane), then:

$$V/C\ (Left) = \frac{\text{Left-Turn Volume}}{\text{Single Approach Lane Capacity}}$$

If this left-turn movement is determined to be a critical movement, the V/C (Left) value is posted in brackets on the ICU summary printout.

These same steps are carried out for shared thru/right lanes. If full dedication of a shared thru/right lane to the right-turn movement is warranted, the right-turn V/C value calculated in step three is checked against the RTOR and RTOG capacity availability if the option to include right-turns in the V/C ratio calculations is selected. If the V/C value that is determined using the shared lane methodology described here is reduced due to RTOR and RTOG capacity availability, the V/C value for the thru/right lanes is posted in brackets.

When an approach contains more than one shared lane (e.g., left/thru and thru/right), steps one and two listed above are carried out for the three turn movements combined. Step four is carried out if dedication is not warranted for either of the shared lanes. If dedication of one of the shared lanes is warranted to one movement or another, step three is carried out for the two movements involved, and then steps one through four are repeated for the two movements involved in the other shared lane.

Figure A-1 shows the intersections for which ICU calculations are made, and the actual calculation sheets follow.

Appendix B
CIRCULATION ELEMENT – COMMUNITY INPUT

This appendix summarizes input received from community outreach programs, most notably the Ventura Vision and the Comprehensive Plan Advisory Committee work. It is intended to acknowledge comments received from those work efforts and to document their role in formulating the Circulation Element recommendations.

VENTURA VISION

In 1999 and 2000 a comprehensive outreach program was carried out guided by a broad based Citizens Outreach Committee. That effort culminated in the "Ventura Vision, Seize the Future" document of March 2000. This vision document articulated a shared vision to guide the community in the future, including guiding principles, vision statements, and strategies for pursuing those visions. With respect to circulation, the following statement of high-priority strategies was noted:

> ***Our Accessible Community***. *Develop a balanced transportation system by encouraging land use modifications and "transportation systems management" to reduce traffic congestion; upgrading road maintenance, improving and diversifying local transit systems; promoting a regional rail strategy; enhancing parking through better use of existing structures and new structures at strategic locations; facilitating bicycle and pedestrian access through an interconnected system of bike and walking paths; and exploring ways to improve the community's access to air transportation.*

As embodied in this statement and as outlined in the section entitled "Our Accessible Community," the vision identified its central goal as seeking an integrated multi-modal transportation system in which bus, rail, bicycle and pedestrian modes can reduce dependency on the automobile for transportation. The overall goal of the Circulation Element articulates this vision as do specific objectives such as listed in the transit, bicycle and pedestrian components of the Element. In addition, implementing strategies from the Vision document have been directly or indirectly incorporated into the Element in the form of specific programs.

COMPREHENSIVE PLAN ADVISORY COMMITTEE (CPAC)

A special Comprehensive Plan Advisory Committee (CPAC) met over a number of months in early 2002 to provide input to the Comprehensive Plan update process. This committee provided a forum to address Comprehensive Plan issues and to thereby supplement the results of the major community outreach program described above.

The meeting in which Circulation was the main topic was held on March 13, 2002, and numerous comments were received from CPAC members and from public attendees at that meeting. The comments were grouped into four topics, 1) arterial street, 2) public transit, 3) bikeways and 4) pedestrians. The first three of these are addressed here, and the fourth is discussed under separate cover. For each subject area, the comments are listed and the actions taken with respect to those comments noted. In some cases the comments pertain to a specific traffic issue that would not be within the purview of the General Plan, but is nevertheless an important concern with respect to circulation. These have been compiled so that the information can be forwarded to the appropriate department within the City. Most comments provided valuable input to the Circulation Element preparation process and were an important consideration in the development of the Circulation Element. The following sections discuss the three topic areas.

ARTERIAL STREETS

The CPAC and public comments on arterial streets are summarized in Table B-1. Discussion on specific subject areas follows.

Customized Street Classification (Comments S1.1, S1.4, S1.6, S1.12, S1.13, S1.15, S2.6, S2.7, S2.8)

The potential for customizing street classifications in the Circulation Element was presented at the March 13 meeting. The comments received indicate a general interest in adopting this approach and the arterial street component of Circulation Element has been prepared accordingly. The previous chapter of this report discussed design classifications and functional classifications, the latter addressing the customizing of the classification system for arterial streets.

Table B-1

ARTERIAL STREETS
CPAC and Public Comments – March 13, 2002

	COMMENT	ACTION*
S1 – CPAC COMMENTS		
S1.1	Do not widen Ventura Avenue, custom approach needed	CE
S1.2	Connect Cameron	CE(D)
S1.3	Need traffic signals on the Avenue	N&F
S1.4	Custom approach needed to extend Olive north of Stanley to Sycamore Village	CE
S1.5	Solve the north/south traffic for future development	CE(D)
S1.6	Apply "custom approach" citywide	CE
S1.7	Hwy 101 / Harbor; Northbound Hwy 101 off-ramp / road to Channel Drive/ Borchard	CE
S1.8	Roundabout at Main and Mills	CE(D)
S1.9	Extend Mills south along Arundell Barranca to Harbor Blvd.	CE(D)
S1.10	State Route 126 westbound to Hwy 101 southbound	N&F
S1.11	Poli, from North Pacific to North Victoria, should be 1) reconstruct to 2 lanes 2) Remove side parking 3) slow to 30 mph 4) install bike / pedestrian side lanes 5) calm traffic 6) move traffic to Loma Vista	CE(D)
S1.12	Need custom approach along Main and Thompson	CE
S1.13	Needs to be pedestrian friendly along Main and Thompson and where Main and Thompson meet Telegraph	CE
S1.14	Extend Arundell to Schooner Drive	CE(D)
S1.15	Special treatment to Foothill Road	CE(D)
S1.16	Extend Johnson Drive north to Foothill Road	CE(D)
S1.17	Extend Kimball south across Santa Clara River to Oxnard	CE(D)
S1.18	Extend south Johnson Drive eastbound along Santa Clara River and then north to Bristol Road	CE(D)
S1.19	Provide roadway from Bristol across Santa Clara River into Oxnard	CE(D)
S1.20	Extend Loma Vista at Petit all the way to Amador	CE(D)
S1.21	Extend Balboa at Newport all the way to Wells	CE(D)
S1.22	Extend North Bank Drive northeast to Bristol Road	
S2 – PUBLIC COMMENTS		
S2.1	Stanley to 33 onramp needs to be improved – very dangerous	N&F
S2.2	Extend Olive north to connect with Ventura Avenue north of Stanley.	CE
S2.3	Need traffic calming on Olive esp. near the Boys & Girls Club.	CE
S2.4	Connect the 2 parts of Cameron.	CE(D)

Table B-1 (cont)
ARTERIAL STREETS
CPAC and Public Comments – March 13, 2002

	COMMENT	ACTION*
S2 – PUBLIC COMMENTS (cont)		
S2.5	Need additional traffic signals on Ventura Avenue especially south of Stanley.	N&F
S2.6	Customize Main though Midtown – similar to Downtown – with wide sidewalks and pedestrian amenities	CE(D)
S2.7	Customize 5 points as Midtown entry	CE(D)
S2.8	As stated in plan, retain "county" character of Foothill Road. Retain 2 lanes, enhance with bike path, and lower speed limit. No additional traffic can be accommodated.	CE(D)
S2.9	Recognize that Foothill carries substantial traffic, which will increase – 4 lanes needed.	CE(D)
S2.10	Foothill Road cannot take additional traffic from Hall Canyon, Barlow Canyon, and Sexton Canyon as proposed by Lloyd Corp. and Mariano Rancho.	CE(D)
S2.11	Traffic calming speed bumps or more stop signs on through streets between Foothill and Loma Vista, esp. Sexton Hall, Dorothy, and Agnus.	CE
S2.12	Callens onto East Main – takes much time to get out driveway onto Main traffic.	N&F
S2.13	Poli Street and Foothill Road cannot be widened. It is an old route to Santa Paula – It can't take much more traffic	CE
S2.14	Is there a road planned for access to the Lloyd Properties on the other side of the hills, north side, and running east to west?	N&F
S2.15	Anticipate potential future development of agricultural parcels north of Highway 126 – identify future extension of Johnson Drive across freeway north through agricultural parcels.	CE
S2.16	Anticipate potential future development of agricultural parcels in inner city greenbelt – easterly extension of Balboa Street and Loma Vista Road.	CE
S2.17	Anticipate potential future development of inner city greenbelt parcels by identifying future extension of roadways through agricultural properties such as Kimball, Ralston, and any other streets. Identify need for specific plan to establish possible road design standards, location of roads, etc. City needs to investigate economic feasibility of extending Kimball south to Oxnard – identify whether this will occur in general plan time frame.	CE
S2.18	Mills Road should be put through to Foothill	CE
S2.19	Safer intersections downtown	N&F

* Actions taken are as follows:

N&F	Comment not directly applicable to the Circulation Element but has been **noted and forwarded** to the appropriate City Department
CE	Comment is being addressed in the Circulation Element Update
CE(D)	Comment is being addressed in the Circulation Element Update and is discussed here in the text

New Roadways (Comments S1.2, S1.9, S1.14, S1.16, S1.17, S1.18, S1.19, S1.20, S1.21, S1.22, S2.15, S2.16, S2.18)

There are a number of new roadways on the current Circulation Element and these are being evaluated as part of preparing the Circulation Element update. Those being indicated in the comments as potentially desirable are as follows:

Southward extension of Mills across US-101
Extension of Arundell to Schooner Drive
Extension of Johnson Drive north to Foothill Road
Extension of Johnson Drive eastward along the Santa Clara River to connect to Bristol
Extension of Loma Vista at Petit to Armador
Extension of Balboa at Newport to Wells

An additional comment (S2.4) suggested connecting the two parts of Cameron. At the present time, Cameron is not on the Circulation Element and hence unless it was to be added to the Element such an extension would be a local subdivision issue rather than a Comp Plan issue. While an extension could help provide north/south capacity parallel to Ventura Avenue, there are issues involved such as bisecting an existing park and residential neighborhood. Without an assessment of feasibility, it is not recommended at this time that Cameron be added to the Circulation Element.

Additional Crossing(s) of the Santa Clara River (Comments S1.19, S2.17)

The question of an additional crossing of the Santa Clara River east of US-101 is currently being addressed in a joint study by the County of Ventura, the City of Ventura and the City of Oxnard. Since the location and sizing of one or more bridges affects all three entities, that cooperative study will evaluate a number of alternatives and the potential impacts/benefits to the communities involved. It is anticipated that this Comprehensive Plan process will have the benefits of the results of that study and thereby be able to incorporate recommendations into the Circulation Element update.

Foothill Road (Comments S2.8, S2.9, S2.10, S2.13)

While one of the public comments (S2.9) appears to contradict the others by suggesting a four-lane road should be built, the general consensus is that Foothill Road has a special character and should

remain at two lanes (as articulated in the Vision Plan). One of the purposes of devising customized functional classifications is to address this special roadway and its needs and limitations. Special functional classifications are aimed at preserving or attaining a desirable character while providing adequate carrying capacity for the forecast traffic volumes. Discussions on this can be found in the traffic forecasting results (Chapter 3.0) and in the development of functional classifications (Chapter 4.0).

Roundabouts (Comment S1.8)

The comment suggests a roundabout at Main and Mills, presumably to address the high traffic volume at this location. Unfortunately, a roundabout to accommodate this volume would require considerable right-of-way and not necessarily be more effective than a signalized intersection. At the same time, the comment introduces the concept of roundabouts as a traffic control devise for deployment in the City. Roundabouts have been used in various locations in the United States, including some locations with relatively high traffic volumes. The greater use, however, has been as traffic calming devises and as a means of creating a more local character to a street (compared to traffic signal control at an intersection). The suggestion here is that roundabout intersections be considered as part of the toolbox for the traffic calming measures and if found desirable, could be deployed accordingly.

PUBLIC TRANSIT

The CPAC and public comments on Transit are summarized in Table B-2. The following discussion addresses specific subject areas.

Train Depot/Transit Centers (Comments T1.3, T1.4, T1.5, T1.9, T2.6, T2.10)

These comments reflect an awareness of the role that transit stations/centers can have in promoting transit use. Policies and programs plus the associated discussion in the Circulation Element respond to these, and emphasize its importance. Since the City has a greater degree of control over providing such amenities (compared to train and bus routing and scheduling) it represents an appropriate directive to pursue such facilities through a variety of actions, both public and private.

Table B-2

PUBLIC TRANSIT
CPAC and Public Comments – March 13, 2002

	COMMENT	ACTION*
T1 – CPAC COMMENTS		
T1.1	Public transit should focus on transit dependent areas	N&F
T1.2	Smaller buses could be used during off peak hours	N&F
T1.3	The depot should be in the Front Street area between Kalorama and Laurel.	CE(D)
T1.4	The depot should be located at Front Street at Figueroa	CE(D)
T1.5	Put a transit center at Pacific View mall on Telegraph	CE(D)
T1.6	Seniors need a way to get to the center of the mall.	CE(D)
T1.7	Pedestrian access to transit is problematic at Victoria and Telephone	N&F
T1.8	Improve public transit, bus stops, facilities in the Westside	CE
T1.9	Metrolink Station at Los Angeles Avenue and Azahar.	CE(D)
T1.10	Kneeling busses need to be routed to senior apartments and complexes and large senior housing areas	CE
T1.11	Priority should not be given to ADA over seniors.	--
T1.12	Subsidize seniors' taxicab CHITS	N&F
T2 – PUBLIC COMMENTS		
T2.1	Use smaller buses which use non-polluting fuel	N&F
T2.2	North-south connections to SCAT east-west routes	N&F
T2.3	More public transit in small buses that neighborhoods	N&F
T2.4	Slow traffic, narrow roads, use transit	--
T2.5	Mass transit with bike, surfboards, skateboard storage	N&F
T2.6	Bus stops need to be upgraded. Middle class people with transit options don't want to sit on dirty benches in the sun or rain. Bike racks on buses are very good. We need a multi-modal transit center downtown.	CE(D)
T2.7	Trolley transit route from downtown through midtown to mall to Harbor back by beach to downtown runs every 30 minutes.	--
T2.8	Publicly subsidized mass transit	--
T2.9	School only through 6th	--
T2.10	Transportation (bus service) should be available to the train station	N&F

* Actions taken are as follows:

N&F	Comment not directly applicable to the Circulation Element but has been **noted and forwarded** to the appropriate City Department
CE	Comment is being addressed in the Circulation Element Update
CE(D)	Comment is being addressed in the Circulation Element Update and is discussed here in the text

BIKEWAYS

The CPAC and public comments on bikeways are summarized in Table B`-3. Discussion on specific areas of interest or concern follows:

Additions or Modifications to Bikeway System (Comments B1.1, B1.2, B1.3, B1.6, B1.7, B1.8, B2.4, B2.5, B2.6, B2.7, B2.12)

The comments include a number of suggestions for modifying and/or expanding the General Bikeway Plan. Such suggestions need to be considered in the next update process for that plan and included if appropriate.

One of the key roles of the Circulation Element is to ensure compatibility between the bikeway plan and the Functional Classifications of the roadways used by the designated bike routes or trails. All functional classifications have the ability to provide a Class II bike lane provided the right-of-way is in accordance with the design classification. In some cases, the functional classification supports the potential inclusion of a Class I bike path in the standard cross-section (e.g., the Two-Lane Boulevard). The intent is to provide as much flexibility as possible in enhancing and expanding the Citywide bikeway system.

Table B-3

GENERAL BIKEWAY PLAN
CPAC and Public Comments – March 13, 2002

	COMMENT	ACTION*
B1 – CPAC COMMENTS		
B1.1	Connection from Vista Del Mar to Thompson	CE(D)
B1.2	Close road (Brakey Road) to traffic and make it pedestrian and bike only	CE(D)
B1.3	Bike path along Olive (Westside)	CE(D)
B1.4	Improved bike and pedestrian path to get from Mills (the mall) to lower Main Street	CE
B1.5	Improved access to existing bike trail along Ventura River from residential areas along Olive and north of Stanley (i.e., Sycamore Village)	CE
B1.6	Bikeway extension from Cedar to Dakota.	CE(D)
B1.7	Harbor to Ondulondo/Clearpoint – pedestrian / bikeway barrancas	CE(D)
B1.8	Extend bike path from Barranca from Bristol to Park	CE(D)
B1.9	Extend bike path in traffic lane all the way through the curve (on Johnson)	N&F
B1.10	More segregated trails	CE
B1.11	Slow down traffic along Foothill so that cars and bikes may coexist.	CE
B1.12	More police funding. Do you want a bike path along your backyard? Just a thought. We need police on all new bike paths. Policing needed for increased crime	--
B1.13	Create and facilitate cross-city bike routes for specific transportation objectives as in Santa Barbara.	CE
B1.14	Make Foothill 2 lanes with bike path adjacent to road on south side (slow Foothill traffic to 30 mph)	CE
B1.15	Policy: All upgrades to arterials shall include a bikeway	CE
B1.16	Coordinate with county and other cities/communities to hire a bike consultant with input on all road projects (someone like Wilson Hubbell)	--
B1.17	Need through traffic bike lanes at intersections – this is a problem throughout the City of Ventura.	N&F
B1.18	Right turn and west from Harbor to Seaward needs improvement from danger of traffic turning on to freeway (similar problems in other areas in town).	N&F
B2 – PUBLIC COMMENTS		
B2.1	Class II bike trail along Ventura Avenue	CE
B2.2	Better access to bike path from the community located north of Stanley and east of Ventura Avenue (i.e. Sycamore Village)	CE
B2.3	Need safer and easier connection between Ventura River Trail and Omer Rains path	CE
B2.4	Seaward should eliminate parking and have bike lanes instead	CE(D)
B2.5	Bikeway extension off Cedar Street (north to Dakota?)	CE(D)
B2.6	Eliminate parking on Poli in favor of bike lanes	CE(D)

Table B-3 (cont)
GENERAL BIKEWAY PLAN
CPAC and Public Comments – March 13, 2002

	COMMENT	ACTION*
B2 – PUBLIC COMMENTS (cont)		
B2.7	Need a bike and/or pedestrian link from Marina Park to the Harbor	CE(D)
B2.8	Connections	CE
B2.9	Policy suggestion – All arterials should provide for a bike path whenever a road is re-striped or re-paved.	CE
B2.10	Biketrails on Foothill Road	CE
B2.11	Real bike lanes on Victoria; slow traffic get rid of sidewalk bike lane	CE
B2.12	Bike trails or pedestrian trails along Barrancas	CE(D)
B2.13	More bikeways to get across town not just recreational trails – use bike as transportation mode.	CE
B2.14	We need education to change perception of bicycling – share the road concept – bicycling is viable transportation mode	CE
B2.15	Foothill Road should not be made 4 lanes. It should remain 2 lanes with bike and pedestrian paths and left hand turn bays.	CE
B2.16	Consider bikeways to connect communities where there are no streets – i.e. bikeways out of closed off developments	CE

* Actions taken are as follows:

N&F Comment not directly applicable to the Circulation Element but has been **noted and forwarded** to the appropriate City Department
CE Comment is being addressed in the Circulation Element Update
CE(D) Comment is being addressed in the Circulation Element Update and is discussed here in the text

Appendix F

2004 Biennial Water Supply Report

2004 Biennial Water Supply Report

I. Executive Summary

This report is submitted in compliance with the City Council adopted 1994 Comprehensive Water Resources Management Plan (CWRMP). The CWRMP consists of a compilation of water supply policy statements to provide guidance related to the City's future water supply and demand. The intent of the plan is to ensure the City's ability to provide its customers with adequate water that meets regulatory water quality standards.

A water supply monitoring requirement is included in the CWRMP. This requirement calls for an annual review of critical water supply conditions and a biennial report to the Council for certification in the Fall of even numbered years. The purpose of the Biennial Water Supply Report is to certify that the City's existing water supply and planned improvements are sufficient to satisfy our needs for at least the next ten years and provide advance warning if a supplemental water supply is needed. The ten-year planning horizon represents the time needed to develop a supplemental water supply.

This 2004 Biennial Water Supply Report finds that the City's future water supply and planned improvements are sufficient to satisfy the City's water needs beyond this 10-year planning horizon.

The report includes projections of the City's future water supply and demands. The current and projected water supplies used in the report include: (1) production from the Ventura River, (2) supply from Lake Casitas, (3) production from the Mound Groundwater Basin, (4) pumping allocations in the Oxnard Plain Groundwater Basin, (5) pumping allocations in the Santa Paula Groundwater Basin and (6) future Saticoy County Yard Well. The water demand figures used were determined from historical water consumption figures, anticipated water consumption trends and the estimated population growth for the water service area.

The report also summarizes the capital improvement projects planned for the next five years. These planned improvements increase the City's ability to utilize existing water resources. The planned projects will improve the quantity and quality of the City's existing supplies and provide the system flexibility necessary for the City to support demands during a drought period when the need arises.

In addition to a biennial water supply report, staff annually reviews the health of the City's water supplies. Potential impacts to the water supply, which include the condition of our facilities, agreements with other agencies and weather conditions, are tracked. By tracking these effects potential impacts can be identified before they occur. At this time the City's water supplies are healthy. It is concluded that with planned capital improvements there is sufficient water supply to satisfy the City's water demands for at least the next ten years. In two years when the next Biennial Water Supply Report is prepared, conditions will be reassessed and water supply and demand projections updated.

II. Current and Projected Water Supply

There are presently five water sources that provide water to the City water system:

1. Ventura River surface and subsurface water intakes and four shallow wells (Foster Park)
2. Casitas Municipal Water District (Casitas)
3. Mound Groundwater Basin
4. Oxnard Plain Groundwater Basin (Fox Canyon Aquifer)
5. Santa Paula Groundwater Basin

The City has acquired a sixth source, a well located on the Santa Clara River east of Highway 118 (Wells Road). This location is not within either the Santa Paula Groundwater Basin or the Fox Canyon Aquifer. The well is complete and has been tested for production capacity and water quality. Capacity tests indicate the production from this well will be at least 2,500 gallons per minute (gpm). Pumping and control systems will be complete by mid-year 2005 and connecting pipelines to the Saticoy Conditioning Facility will be complete near the beginning of 2006.

The City also holds a State Water Project (SWP) entitlement of 10,000 acre-feet per year (AFY). To date, the City has not received delivery of its allotment, and it is not certain if or when facilities will be constructed to transport SWP water to the City. In 1998 the City became a signatory to the SWP Monterey Amendment. The amendment would allow the City, with other contractors, to sell surplus water back to the state, however litigation has prevented the terms of the amendment from being fully acted upon.

The City manages its water resources conjunctively. Conjunctive use is the practice of first utilizing surface supplies (which are lost to the ocean if not used when they are available), before groundwater supplies (which can be stored for use when the surface supplies are not plentiful). Groundwater is used to provide for seasonal demands and as a source during drought periods. Therefore, the City will generally utilize its water supplies in the following order: Ventura River, Lake Casitas, and groundwater basins.

In addition, the City provides reclaimed water from the Ventura Wastewater Reclamation Facility to two municipal golf courses, the Ventura Marina area and private customers for landscape irrigation.

1. Ventura River

Surface water from the Ventura River is diverted through the City's Foster Park Facilities. The surface diversion, subsurface intake, and four shallow wells within the Ventura River collect water. Production from this source is a function of several factors including production capacity, local hydrology, environmental impacts, and the storage capacity of the Ventura River alluvium and upstream diversions. Currently, our surface diversion is unused due to the natural migration of the active river channel. Foster Park improvements, now in design, will replace production from our surface diversion with

additional wells. Even without production from the surface diversion, the City produced 6,722 AF from Foster Park in 2003, a year of below average rainfall.

The production from the Ventura River in 1992 was 9,874 AF, the highest annual water volume ever produced. The lowest production was 1,463 AF in the 1951 drought year. The Ventura River water source is highly variable and very dependent upon local hydrology. The CWRMP states the yearly yield is between 700 and 11,000 AF per year. For this report the average long-term water production of 6,700 AFY will be used, and is based on the Evaluation of Long Term Alternative Water Sources, James M. Montgomery, June 1993.

2. Casitas Municipal Water District (Casitas)

The western portion of the City is within the Casitas service area. Approximately 32 percent of the City's water accounts are located within the Casitas service area. Use of Casitas water is restricted to the volume of water used within its boundaries. The "safe yield" of Lake Casitas is defined to be the amount of water that can be removed from the lake each year without excessive risk that the lake will become dry. The safe yield of Lake Casitas is currently estimated to be 21,920 AFY, based on the critical historical dry period from 1944 to 1965. Studies by Casitas' engineering department have shown that this period represents the most critical dry spell for the Lake's watershed of all the years for which historical data is available.

To maintain future operation of Lake Casitas at safe yield, Casitas established an allocation program for its customers in 1992. The City's allocation can be as high as the in-district demand for Stage 1 (wet or average year), or reduced to 7,090 AFY for Stage 2 (dry conditions) and further incrementally reduced (Stages 3 and 4) to 4,960 AFY for Stage 5 (extremely dry conditions). Stage 2 is initiated when Lake Casitas storage drops below 95,000 AF and Stage 5 is initiated when levels drop below 65,000 AF. The lower allocation remains in effect until the storage is recovered to 90,000 AF. Total lake storage is approximately 254,000 AF. Lake Casitas storage as of August 2004 was 168,397 AF.

In July 1995 the City signed an agreement with Casitas, which established the City's minimum purchase at 6,000 AFY. The terms of the agreement are subject to the allocation program described above during drought periods. For this report the projected water supply available from Casitas is anticipated to average 8,000 AFY, the projected in-district demand.

3. Mound Basin

Two wells supply water from the Mound Groundwater Basin (Victoria Well No. 2 and Mound Well No. 1). Construction of Mound Well No. 1 was completed in 2003.

In March 1996 the City completed a project that included: 1) constructing Mound Basin

monitoring wells at Camino Real Park and Marina Park; 2) developing a database from historical records, and 3) identifying potential surpluses within the basin. This work was performed in conjunction with the United Water Conservation District. The report compiled as part of that project indicated that historical data supports a basin yield of at least 8,000 AFY during drought conditions as long as pumpage is reduced during wet years to allow water levels to recover. It is anticipated that the basin will be able to sustain a higher yield (at least 10,000 AF during drought periods), provided that future wells are located so as not to adversely impact the existing Mound Basin Wells. Future annual reports will further assess the operational yield of the basin.

For this report the future water supply from the Mound Basin is assumed to be 4,200 AFY based on 75 percent of the current pumping capacity of 5,600 AFY.

4. Oxnard Plain Groundwater Basin

Wells near the Buenaventura Golf Course have drawn from the Oxnard Plain Groundwater Basin since 1961. Additional wells have been constructed over the years with the most recent being completed in 1991. Currently, three wells produce potable water for the City's system. These wells pump from the Fox Canyon aquifer of the Oxnard Plain Groundwater Basin. Average annual yield from the Golf Course Wells over the past 15 years has been about 3,200 AFY.

The Fox Canyon Groundwater Management Agency (GMA) was created by state legislation in 1982 to manage local groundwater resources in a manner to reduce overdraft of the Oxnard Plain and stop seawater intrusion. A major goal of the GMA is to regulate and reduce future extractions of groundwater from the Oxnard aquifers, in order to operate the basin at a safe yield. In August 1990, the GMA passed Ordinance No. 5, which requires existing municipal groundwater users to reduce their extractions by five percent every five years until a 25 percent reduction is reached by the year 2010.

The City's baseline allocation was set by the GMA at 5,459 AFY, which was the average extraction from the Golf Course Wells for the period of 1985 to 1989. Beginning in 1992, baseline extractions set by the GMA were reduced by 5% to 5,186 AFY, in 1995 it was reduced to 4,913 AFY, and further in 2000 to its current allocation of 4,640. This allocation will further be reduced as follows:

Years	Amount (AFY)
2006	4,367
2010	4,094

Following wet weather conditions, water levels in the City's groundwater basins rise significantly. Conjunctive use strategies and customer water conservation have allowed the City to store 33,193 AF in the GMA bank as of the end of calendar year 2003. This storage bank makes it possible for the City to implement operational procedures that will allow the use of its groundwater supplies up to safe yield levels, and to use its

banked groundwater as an additional supply during future drought conditions. If the City were to use its banked water, it is estimated that the City could extract as much as 5,500 AFY based on 75% of the current pumping capacity of 7,300 AFY. However for this report, future supply is conservatively based on GMA restricted extraction limits listed in the preceding paragraph.

5. Santa Paula Groundwater Basin

The Saticoy Water System acquired by the City in 1968 included Saticoy Well No. 1, which draws water from the Santa Paula Basin. Due to casing failure, the well was destroyed and replaced in 1991 with a new well designated as Saticoy Well No. 2 in the same general location. Pumping capacity within the Santa Paula Basin is currently only 2,200 AFY based on 75% of the current pumping capacity of 2,900 AFY. With the addition of Saticoy Well 3 (completion anticipated 2006) to be located east of Highway 118 (Wells Road) we anticipate increasing pumping capacity in the basin to 6,400 AFY.

In March 1996, the City ended a five-year stalemate over the future use of the Santa Paula Basin. Under an agreement with the United Water Conservation District and the Santa Paula Pumpers Association (an association of ranchers and businesses), the City can pump on average 3,000 AFY from the Santa Paula Basin. The City is not limited to this allocation in any single year, but may produce seven times its average annual allocation (21,000 AF) over any running seven-year period. In addition, the City may pump an additional 3,000 AFY in case of an emergency resulting from a long-term drought situation. Therefore, for the purposes of this report, the future annual production from the Santa Paula Basin is estimated to be 3,000 AFY.

6. Saticoy Yard Well

The County of Ventura has relocated their maintenance yard to a site within the Saticoy Community contiguous to the City's water service area. In exchange for extraterritorial water service, the County has provided the City a well to offset their water demand. The well is expected to provide not only production capacity for serving the maintenance yard, but also significant additional system capacity. The Saticoy Yard Well is anticipated to begin production in 2006, with an estimated 75 percent of design production capacity of 2,262 AFY. The water demand for the maintenance yard is estimated to be 20 AFY.

III. Water Supply Summary

The following Table 1 summarizes the historical deliveries from each of the above sources, as well as projected deliveries to the year 2014. Projected figures are based on the water supply available from each source, and do not necessarily represent amounts currently produced.

Table 1: Historic and Projected Water Source Production and Supply Availability (acre-feet)

Year	Surface Water		Ground Water				Total Water Supply (7)
	Ventura River (1)	Lake Casitas (2)	Mound Basin (3)	Oxnard Plain Basin (4)	Santa Paula Basin (5)	Saticoy Yard Well (6)	
Historic Production							
1980	7,276	7,544	0	5,198	2,129		22,147
1985	5,493	9,099	2,360	6,172	46		23,170
1990	2,859	6,175	4,365	5,749	0		19,148
1995	9,042	1,622	2,169	2,603	2,594		18,030
1996	7,926	4,456	2,789	2,768	1,599		19,538
1997	7,052	7,089	213	3,452	2,025		19,831
1998	8,069	4,328	802	4,312	1,033		18,544
1999	6,419	7,061	3,955	1,621	1,669		20,725
2000	6,779	5,836	4,579	2,674	1,698		21,566
2001	5,727	6,292	4,030	905	2006		18,960
2002	5,951	7,127	3,720	1,978	1,157		19,933
2003	6,722	4,874	5,546	2,898	316		20,356
Projected Supply							
2004	6,700	8,000	4,200	4,600	3,000	0	26,500
2009	6,700	8,000	4,200	4,400	3,000	2,262	28,562
2014	6,700	8,000	4,200	4,100	3,000	2,262	28,262

Notes:

1. Ventura River future supply is the average long-term production based on analysis of the period from 1939 to 1982 per the Evaluation of Long Term Alternative Water Sources, James M. Montgomery, June 1993.
2. Includes the City's total past Casitas purchases in addition to raw water and oil recovery users; projected supply is the City's current in-district use.
3. Mound Basin future supplies are 75 percent of well pump rated output.
4. Oxnard Plain Basin future supply is based on GMA restricted extraction limits rounded to nearest 100 AF.
5. Santa Paula Basin future supply is the pumping allocation of the Stipulated Judgement.
6. Saticoy Yard Well future supply is 75 percent of design maximum pump output capacity.
7. Includes treated and raw water; excludes reclaimed water supply.

IV. Historic and Projected Water Demand

A. Historic Water Demand

Water consumption within the City (excluding raw water/oil company use) has decreased in recent years as shown by the per capita use figures in Table 2. The annual per capita usage from 1940 to 1970 averaged about 0.31 acre-feet per person (AF/capita). In the period 1976-1989 (pre-mandatory water conservation), the annual per capita use averaged about 0.22 AF/capita. In the period 1994-2003 (post mandatory water conservation), the per capita figure dropped to an average of 0.182 AF/capita. This decrease in per capita consumption is the result of structural improvements such as low flow fixtures and low water consuming appliances in some existing and all new housing and an active water conservation program adopted by the City in 1975 and further strengthened with mandatory regulations in 1990. Mandatory regulations were lifted in 1993, however water conservation efforts remain very effective.

Table 2: Historic Water Production and Population

Year	Total Prod. (AF) (1)	Raw Water Use (AF) (2)	Treated Water Use (AF) (3)	Est. Pop. Served by Water System (4)	Per Capita Use (AFY) (5)	Annual Rainfall (in.) (6)
1940	4,240	0	4,240	13,264	0.320	12.54
1950	5,307	0	5,307	16,534	0.321	13.34
1960	8,832	0	8,832	29,114	0.303	12.08
1970	21,524	4,473	17,051	57,964	0.294	13.92
1980	22,147	4,766	17,381	73,774	0.236	24.78
1990	19,148	2,317	16,831	94,856	0.177	5.53
1991	14,660	2,077	12,583	94,913	0.133	17.01
1992	16,469	1,625	14,846	95,626	0.155	20.91
1993	17,459	2,010	15,449	96,540	0.160	28.21
1994	18,980	2,000	16,980	97,154	0.175	11.47
1995	18,030	1,602	16,428	99,668	0.165	34.52
1996	19,538	1,500	18,038	100,482	0.180	13.81
1997	19,831	1,829	18,002	101,096	0.178	16.02
1998	18,544	1,769	16,775	101,610	0.165	43.25
1999	20,725	1,067	19,657	102,224	0.192	10.56
2000	21,566	1,129	20,481	103,238	0.198	17.04
2001	18,960	889	18,071	104,153	0.173	23.22
2002	19,933	968	18,965	105,267	0.180	7.24
2003	20,356	846	19,510	106,782	0.182	20.06
Average	1940-70				0.31	
Average	1976-89	Pre-Mandatory Water Conservation)			0.22	
Average	1994-2003	Post-Mandatory Water Conservation			0.179	

Notes for Table 2:

1. Total production includes all water produced by the City and purchased from the Casitas Municipal Water District, including raw water and oil recovery use.
2. Raw water use includes oil and raw water users.
3. Treated water use is total production less raw water use.
4. Population figures provided by City of Ventura Community Development Department and California Department of Finance. Estimated population served by water system for 1990-date includes areas outside of city limits served by the City.
5. Per capita use excludes raw water and oil use (treated water use ÷ population).
6. Annual rainfall is the average of measured precipitation for the water year (October 1st through September 30th) for four rain gauge stations throughout the City (Stations #66, #122, #167, and #222) as provided by the Ventura County Flood Control District.

B. Population Projections

Recent historical populations (see Table 2) are from adjusted Department of Finance figures for the City's Planning Area, including the County water service area. Projected populations used in this study (see Table 3) were provided by the City Community Development Department, and reflect the figures shown in the 1989 Comprehensive Plan for the City's Planning Area, adjusted to the 1990 and 2000 census. We have also included the portion of our water service area, which covers unincorporated areas adjacent to the City. These are slightly different than the population figures used in the City's 2002 Biennial Water Supply Report, due to recent adjustments by the Department of Finance.

It is important to note that the projected population figures used in this report are not intended to represent either support for or any commitment to this level of growth. Rather they are intended to provide a safe margin in planning for long-term water improvements that might be needed given the rate of growth that could be allowed under the 1989 Comprehensive Plan. Currently the City is going through the process of revising the Comprehensive Plan.

Table 3: Estimated Population Growth for Water Service Area

Year	Projected Planning Area Population
2004	108,651
2009	113,162
2014	118,295

Note: City population estimates are based on the U.S. 2000 Census and

a growth rate of 0.9%. Additional population for the unincorporated area served by Ventura's water system, is based on 2004 count of customers outside city limits and a growth rate of 0.6%.

C. Projected Water Demand

For planning purposes, in 1990 the City used 0.22 AF of water per capita per year based on the average pre-mandatory conservation per capita use data (see Table 2). Anticipated demand reductions, through long-term conservation programs, have lowered the per capita water usage factor. Estimated demand reductions due to conservation in 1990 were anticipated to be five percent in 1995 (0.209 per capita use), 10 percent in 2000 (0.198 per capita use), and 12 percent thereafter (0.194 per capita use). The figures in Table 2 show that the reductions assumed in 1990 have been exceeded and are now around 17 percent. Based on data from the past 10 years since mandatory conservation ended, the average per-capita usage is 0.179 AFY. For the purpose of this report 0.179 AFY per capita will be used to estimate future water demands.

In addition, raw water demand for oilfield injection has declined steadily since 1970. Average raw water usage for the past 5 years was 1,000 AFY. For the purpose of this report a future raw water demand of 1000 AFY will be used.

Applying this per capita demand factor to the projected populations provides an estimate of treated water demands for the next 10 years, as shown in Table 4. As stated, the numbers in Table 4 reflect the belief that there will be few substantive changes in the near future, with planned long-term improvements.

Table 4: Projected Water Demand (Acre Feet) - (Normal year, weatherwise)

Year	Est. Water Service Area Pop. (1)	Per Capita Usage AFY (2)	Treated Water Demand (2)	Raw Water Demand (3)	Total Water Demand
2004	108,651	0.179	19,449	1,000	20,449
2009	113,162	0.179	20,256	1,000	21,256
2014	118,295	0.179	21,175	1,000	22,175

Notes:

1. Estimated planning area populations are from Table 3.
2. Treated water demand is estimated population multiplied by 0.179 AF/capita based on the 1994-2003 average post-mandatory water conservation per capita use from Table 2.
3. Raw water demand projections include raw water and oil users.

V. Water Supply and Demand Summary

Table 5 summarizes the City's projected water demand and supply through the year 2014. Additional water supplies will not be needed until sometime after 2014 under average non-drought weather conditions.

Table 5: Summary of Projected Water Demand and Supply (Acre Feet) - (Non-Drought Conditions)

Year	Projected Planning Area Pop.(1)	Projected Water Demand(2)	Projected Water Supply(3)	Additional Water Supply Needed(4)
2004	108,651	20,449	26,500	No
2009	113,162	21,256	28,562	No
2014	118,295	22,175	28,262	No

Notes:

1. Projected planning area population is from Table 3.
2. Projected water demand is from Table 4, and includes oil and raw water use.
3. Projected water supply is from Table 1.
4. Additional water supply needed is the projected water supply less the projected water demand. Additional supply to meet water quality goals is not included.

Based on the above projection, the existing water supply and planned improvements are sufficient to satisfy the City's water needs for at least the next ten years.

VI. Planned Improvements

The City will continue to implement capital improvements and do resource planning for our water system. These improvements will increase production capacity and storage, improve our ability to move water from the diverse sources of supply to all points of use, improve water quality, reliability and safety. We anticipate an update of the Water System Master Plan during the 2004-05 fiscal year.

The availability of the facilities below are essential to meet future water production, storage and transport needs. For purposes of this report, we have assumed these projects will proceed as currently anticipated. Detailed system condition and hydraulic evaluations for both normal and drought condition operation are still to be completed. When completed these may change the projects on this list.

- Upgrade of Foster Park Production Facilities. This will include replacing the production capacity of the surface diversion with new wells. Upgrades of the facilities have been designed and are pending environmental approval. Construction should begin in 2006 and be completed by 2008.

- Saticoy Conditioning Facility Renovation. Upgrades to the facility, including the installation of an emergency generator, will provide capacity to treat production from two wells simultaneously.

- Construction of Saticoy Well No. 3. This new well is currently included with the upgrade of the Saticoy Conditioning Facility. Design is underway and completion is anticipated by 2006.

- Construction of Connecting Pipelines. Several system connections are still needed to enable efficient movement of water from sources to distant sections of the City.

- North Wells Road Reservoir. This 4 million gallons of additional storage will serve the eastern portion of the area to improve fire and domestic supply reliability.

Other projects currently included in the 5-year Capital Improvement Plan include both projects needed to maintain our existing water system infrastructure and projects planned to improve system efficiency and reliability. They include:

- Rehabilitate and upgrade mechanical/electrical system for Golf Course Well #3;

- Correction of distribution system dead-ends and complete system service loops;

- Replacement of aging cast iron mains;

- Continue modernization of and provide emergency backup power for the booster pump stations that deliver treated water to system storage; and

- Construct new pipeline improvements to include interties for the 210/330 and 210/430 zones and backup zone connections for the Pierpont-Harbor neighborhood.

Although additional water supplies are not needed at this time, the following system efficiency improvements will make the water system capable of supporting increased demands:

- Continue to work with participating agencies on the Ventura River Watershed and Habitat Conservation Plans for Steelhead Trout.

- Continue discussions with local agencies concerning our State Water Project Entitlement.

- Continue work towards development of Santa Paula Basin Operational/Management Plan with United Water Conservation District & Santa Paula Pumpers Association.

- Implement the recommendations in the West County Water Supply Reliability Study, which would provide an emergency connection between the Ventura and Oxnard water systems.

- Work with the Casitas Municipal Water District to formally define the City's water service in the North Ventura Avenue area.

VII. Certification

By adopting the 2004 Biennial Water Supply Report, the City Council certifies that based on the findings of this report, there is sufficient water supply available with existing local resources to satisfy the City's water needs for at least the next ten years. The next biennial certification review will take place in the Fall of 2006.

Responses to Comments on the Draft EIR

RESPONSES TO COMMENTS ON THE DRAFT EIR

The letters that follow are the public comment letters on the Draft Environmental Impact Report (EIR) for the proposed 2005 Ventura General Plan. The Draft EIR was circulated for a public review period that began on June 1, 2005 and concluded on July 18, 2005. This appendix includes responses to comments on the Draft EIR.

The City received 32 comment letters on the Draft EIR. Commenters and the pages on which each letter appears are listed below.

The comment letters and the City's responses follow. Responses to individual comment letters immediately follow each letter. When a letter includes more than one comment, the individual comments are lettered (1A, for example) and specific responses are provided for each comment.

STATE OF CALIFORNIA

San Buenaventura, CA 93002

Subject: City of Ventura 2005 General Plan Draft EIR
SCH#: 2004101014

Dear Kari Gialketsis:

The State Clearinghouse submitted the above named Draft EIR to selected state agencies for review. On the enclosed Document Details Report please note that the Clearinghouse has listed the state agencies that reviewed your document. The review period closed on July 13, 2005, and the comments from the responding agency (ies) is (are) enclosed. If this comment package is not in order, please notify the State Clearinghouse immediately. Please refer to the project's ten-digit State Clearinghouse number in future correspondence so that we may respond promptly.

Please note that Section 21104(c) of the California Public Resources Code states that:

> "A responsible or other public agency shall only make substantive comments regarding those activities involved in a project which are within an area of expertise of the agency or which are required to be carried out or approved by the agency. Those comments shall be supported by specific documentation."

These comments are forwarded for use in preparing your final environmental document. Should you need more information or clarification of the enclosed comments, we recommend that you contact the commenting agency directly.

This letter acknowledges that you have complied with the State Clearinghouse review requirements for draft environmental documents, pursuant to the California Environmental Quality Act. Please contact the State Clearinghouse at (916) 445-0613 if you have any questions regarding the environmental review process.

Sincerely,

Terry Roberts

Terry Roberts
Director, State Clearinghouse

Document Details Report
State Clearinghouse Data Base

SCH# 2004101014
Project Title City of Ventura 2005 General Plan Draft EIR
Lead Agency San Buenaventura, City of

Type EIR Draft EIR

Description The 2005 Ventura General Plan is an update to the 1989 Comprehensive Plan that currently serves as the blueprint for development in the City of Ventura. The 2005 General Plan updates each of the 1989 Comprehensive Plan elements, other than the Housing Element (an update of which was approved in 2004) with policies and action items that reflect the current needs and preferences of the community. The land use map will also be updated including a simplification of the number of land use categories from over 30 to 9 land use categories.
The 2005 General Plan DEIR includes analysis of six separate land use scenarios. These scenarios range from an intensification/reuse only option with minimal changes to the City's sphere of influence (SOI) to an option that includes three expansion areas totaling 1,449 acres currently in agricultural use for possible future development. The DEIR would also be used as a Master Environmental Assessment (MEA) for future environmental analysis in the planning area.

COMMENTER: Terry Roberts, Director, State Clearinghouse, Governor's Office of Planning and Research

DATE: July 14, 2005

RESPONSE:

The commenter attaches a letter from the California Department of Parks and Recreation and acknowledges that the City has complied with State Clearinghouse review requirements for draft environmental documents. The comments from the Department of Parks and Recreation are addressed in the response to Comment Letter 2.

RE: City of Ventura General Plan Draft EIR – SCH #2004101014

Dear Reader:

Thank you for the opportunity to review and comment of the Draft EIR (DEIR) for the City of Ventura's General Plan. Two state park units and a portion of the Omer Rains Bike trail are within the jurisdiction of the City. We have had a long and successful working relationship with the City and look forward opportunities to work together.

Our comments on the DEIR focus on the biological resources. There are four specific points/considerations we believe should be brought to the City's attention. They are:

1. **Coastal strand/Beach:** Our field data records have recorded two Western snowy plover nests on the beach north of the Santa Clara River in Summer 2005. Western snowy plovers also use this coastal strand/beach as wintering foraging habitat. It is also an area known for nesting by the California Least Tern. A

2. **Special status communities/areas:** The beach area north of the Santa Clara River should be considered as a sensitive habitat area because it supports both Western Snowy Plover and California Least Tern habitat. B

3. **Summary comparison of impacts for EIR scenarios:** All development and intensification of use in the City has potential for increasing impacts on the Santa Clara River Estuary due to discharges from the City's wastewater treatment plant. Unless contemplated water recycling programs keep pace with increased growth there will be increased levels of discharge into the Santa Clara River Estuary. Other less easily quantified impacts will occur in riparian, wetlands, and open water habitats due to increased runoff tied to increased impermeable surface area within developments. These in turn could affect special status species such as tidewater goby, steelhead, and other aquatic spp. through the potential for increased erosion and associated sediment entering waterways, increased contaminants entering waterways, and other effects associated with increased impermeable surfaces C

4. **Action 1.8 should include the buffering all watercourses.** Action Items to protect riparian areas from the impacts of future development effective in protecting riparian areas should include the avoidance of building within the D

floodplain where feasible. Where infeasible, appropriate mitigations must be enforced.

Questions or follow-up on comments made in this letter can be addressed to Barbara Fosbrink, Technical Services Chief, (805) 585-1848 or bfosb@parks.ca.gov.

Sincerely,

Richard A. Rojas
Superintendent
Channel Coast District

Letter 2

COMMENTER: Richard A. Rojas, Superintendent, Channel Coast District, California Department of Parks and Recreation

DATE: July 13, 2005

RESPONSE:

Response 2A

The commenter notes that Department of Parks and Recreation records indicate that two Western snowy plover nests were identified on the beach north of the Santa Clara River in summer 2005 and notes that the same area is also known for nesting by California least tern. In response to this comment, the second paragraph under Coastal Strand/Beach on page 4.4-1 of Section 4.4, *Biological Resources,* will be revised to read as follows:

> *Cobble beach habitat is also found near the Ventura River mouth and in patches intermixed with sandy beach habitat. Littleneck and bean clams may be found buried next to cobbles used by gastropods such as the black turban snail. The cobble area also contains a few striped and yellow shore crabs. The listed Western snowy plover forages in the beach habitat in the City and has been identified on the beach north of the Santa Clara River. The listed least tern also nests in sandy beach/coastal strand habitat north of the Santa Clara River mouth.*

This minor clarification does not affect the conclusions of the Draft EIR. Implementation of proposed General Plan policies and actions would reduce potential impacts to the Western snowy plover and California least tern to a less than significant level.

Response 2B

The commenter states that the beach area north of the Santa Clara River should be considered a "sensitive habitat" because it supports the Western snowy plover and California least tern. General Plan Action 1.17 identifies "shoreline areas" as sensitive habitats and requires surveys and appropriate buffers and other mitigation for any projects that may affect such areas. Implementation of this action would address possible future impacts to the Western snowy plover and California least tern.

Response 2C

The commenter states that the intensification of land use within the City has the potential to indirectly affect the Santa Clara River estuary and other open water habitats because of increased discharges from the wastewater treatment plant and increased surface runoff associated with the increase in impermeable surface area. Issues relating to wastewater treatment and surface water quality are addressed in Sections 4.13, *Utilities and Service Systems,* and 4.8, *Hydrology and Water Quality.* As discussed in Section 4.13, the City's wastewater treatment plant has adequate capacity to handle the projected increase in wastewater flow under any of the six EIR land use scenarios. As such, although an increase in overall wastewater generation would occur, wastewater

treatment would continue to meet Regional Water Quality Control Board discharge requirements and significant impacts would not occur. As discussed in Section 4.8, all future development in the City would be subject to the requirements of the Ventura County SQUIMP, which provide specific stormwater runoff treatment requirements and performance standards. The standards for new development and redevelopment exceed the standards of most existing development in the City and generally restrict post-project runoff levels to pre-project levels. Continued implementation of SQUIMP requirements on all new development and redevelopment within the City would be expected to generally improve the quality of stormwater runoff and reduce impacts to surface water quality to a less than significant level.

Response 2D

The commenter states an opinion that Action 1.8 should include the buffering of all watercourses and that building within the floodplain should be avoided. Proposed Action 1.8 provides for a minimum 50-foot buffer for waterways that retain natural soil slopes and thus have the potential for biological value. This action is not intended to apply to existing concrete-lined channels since such channels have little or no biological resource value. However, Action 1.10 calls for the removal of concrete channel structures as funding allows and where doing so will fit the context of the area and not create unacceptable flood or erosion potential. As discussed in Section 4.8, *Hydrology and Water Quality*, the six EIR land use scenarios include only a limited amount of developable land within the floodplain. Any future development proposals within 100-year flood zones would be required to comply with all Federal Emergency Management Agency requirements as well as the City's Flood Plain Ordinance.

RE: 2005 Ventura General Plan EIR Comments

Dear Kari:

Thank you for providing the Ventura Local Agency Formation Commission (LAFCO) with the opportunity to comment on the Draft Program EIR for the Ventura General Plan. As a responsible agency for subsequent projects that may be implemented according to the General Plan, LAFCO must be able to make findings that the CEQA determinations made by the lead agency are appropriate for proposed project(s). Having the opportunity to comment on draft environmental documents helps to ensure that the CEQA issues as they pertain to the LAFCO process are addressed prior to application to LAFCO. Please understand that the specific comments about the DEIR detailed below are those of the LAFCO staff. The DEIR has not been reviewed or discussed by the Commission.

Section 2.0 – Project Description

1. Figures 2-4, 2-5, 2-6, 2-7 and 2-8 contain multiple, confusing references to areas within the North Ventura Avenue area ("North Avenue Potential Expansion Area", "Upper North Avenue District" and "North Avenue District"). These Figures and all related text references should be clarified so the reader can better distinguish between "Districts" and the "Potential Expansion Areas" in the North Ventura Avenue area. A

2. Due to the relatively large scale of the "Scenario" maps (Figures 2-3 through 2-8), it would be helpful if a list or table of Assessor parcel numbers is included as part of the Project Description Chapter to distinguish the specific boundaries of each of the potential expansion areas. B

Section 4.2 - Agriculture

1. Please find enclosed additional comments offered in 11 x 17-inch chart format in an effort to reduce the length of our narrative comments. This chart is intended to clarify and supplement the information provided in the agricultural impacts chart on Page 4.2-12 of the EIR. In particular, please note Footnote No. 3 on the chart. As currently described in the EIR, annexation of the North Avenue Potential Expansion C

County Government Center • Hall of Administration • 800 S. Victoria Avenue • Ventura, CA 93009-1850
Tel (805) 654-2576 • Fax (805) 477-7101
http://www.ventura.lafco.ca.gov

Area is not possible based on the fact that geographic contiguity cannot be established unless the EIR is revised to include parcels to the south not already analyzed in the scope of the proposed General Plan land use scenarios.

Please also note the a portion of the 11-acre property north of the wastewater treatment plant included in Scenario 1 is subject to City SOAR according to County GIS maps. D

2. Although the City of Ventura may use the State Important Farmland Maps as a threshold for significance for their initial study checklist, LAFCO must comply with the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000 definition of prime agriculture to determine agricultural impacts. The definition is as follows: E

   (Government Code (G.C.) Section 56064)
   "...an area of land whether a single parcel or contiguous parcels, that has not been developed for a use other than an agricultural use and that meets any of the following qualifications:
   - *(a) Land that qualifies, if irrigated, for rating as class I or II in the USDA Natural Resource Conservation Service land use capability classification, whether or not land is actually irrigated, provided that irrigation is feasible.*
   - *(b) Land that qualifies for rating 80 and 100 Storie Index Rating.*
   - *(c) Land that supports livestock used for the production of food and fiber and that has an annual carrying capacity equivalent to at least one animal unit per acre...*
   - *(d) Land planted with fruit or nut-bearing trees, vines, bushes, or crops that have a nonbearing period of less than five years and that will return during commercial bearing period on an annual basis...of not less than $400 per acre.*
   - (e) *Land that has returned from the production of unprocessed agricultural plant products an annual gross value of not less than $400 per acre for three of the previous five years."*

   For LAFCO purposes, the USDA rating and storie class of the site should be addressed in the EIR or at the time of application for a specific boundary change.

3. Not all parcels under Land Conservation Act (LCA) contract within the Olivas Potential Expansion Area are shown on Figure 4.2-3. Based on our review of County GIS maps, it appears that approximately 170 acres of land are under LCA contract in the Olivas area rather than 24 acres as indicated in the EIR (Assessor Parcels: 080-0-020-200 and 138-0-060-495). The map and accompanying text references to total acreage under LCA contract should be revised accordingly. F

4. For those Expansion Areas containing parcels subject to LCA contracts, the EIR should describe the consistency review process according to Government Code Section 56856.5 and acknowledge that this generally precludes the ability of LAFCO to approve the annexation of such lands to a city. G

5. The first paragraph on Page 4.2-11 indicates that any change to greenbelt agreement boundaries between cities requires approval from LAFCO. This is incorrect. Greenbelt agreements are statements of local policy adopted by one or more cities and the County of Ventura. However, although LAFCO is not a party to greenbelt agreements, it has "endorsed" all such agreements as statements of local policy. As such, LAFCO has adopted a policy providing that a proposal from a city that is in conflict with any greenbelt agreement will not be approved unless exceptional circumstances exist. A greenbelt amendment must be amended by all parties involved prior to any proposal which may be in conflict with the agreement being considered by LAFCO (see enclosed Section 2.5.3 of the LAFCO Commissioner's Handbook). H

6. The EIR references proposed General Plan Policy 3D ("Continue to preserve agricultural lands within the City's Planning Area") and cites proposed General Plan Action 3.12 as being one means to this end. General Plan Action 3.12 directs the City to renew and "modify" greenbelt agreements as necessary to direct development to already urbanized areas." I

   Page 4.2-16 of the EIR contains the following statement:

   > " Implementation of the above policies/actions would minimize the *premature* conversion of agricultural lands under any of the land use scenarios. Outside of re-designating important farmlands for continued agricultural use, additional mitigation is not available." (emphasis added)

   Given the above statement acknowledging that agricultural land would not be permanently preserved within the timeframe and context of the development contemplated under the proposed General Plan, and based on the EIR conclusion that all six land use scenarios would result in the conversion of agricultural land within the sphere, and that two of the scenarios (Scenario 2 and 3) would actually require a reduction in the area covered by the Oxnard-Ventura Greenbelt, it is unclear how any of the proposed scenarios could be found to be *consistent* with General Plan Action 3.12, let alone how these policies could be found to serve as "mitigation measures" (see next comment).

7. Two of the mitigation measures proposed by the EIR to address impacts associated with the conversion of agricultural land (Pages 4.2-15 – 4.2-16) refer to implementation of General Plan Actions 3.12 and 3.15 which, respectively, directs J

the City to renew and modify greenbelt agreements as necessary to direct development to already urbanized areas, and to adopt use permit standards for non-farm activities in agricultural areas that protect and support farm operations (including requiring non-farm uses to provide buffers). However, the EIR acknowledges that these policies merely serve to minimize the "premature" conversion of agricultural land and, and that "outside of re-designating important farmlands for continued agricultural use (which the EIR does not propose to do), additional mitigation is not available." As such, reliance on these policies which serve as only *temporary* means to preserve agricultural land as "mitigation" does not seem to reflect the true intent of mitigation under CEQA. Moreover, given that the impacts regarding agricultural land conversion would remain unavoidably significant, even with this "mitigation", we believe that the references to the proposed General Plan actions as "mitigation" should be deleted altogether.

8. Please note that LAFCO is planning to prepare a Municipal Service Review (MSR) for the City of Ventura, which is required before LAFCO can undertake an update of the City's sphere of influence. As part of this process, LAFCO policy 4.1.2.3 (enclosed) provides that city spheres of influence should coincide, with or cover lesser area than, voter approved growth boundaries. LAFCO will base the update of the City's sphere of influence on the above-noted policy, unless there is sufficient justification for change. This project EIR and subsequent decisions by the City about its SOAR boundary will be used as part of the basis for the City's sphere of influence update by LAFCO. Thus, once LAFCO completes the MSR, the probable result will be that all territory located within the current sphere of influence but subject to the City's SOAR ordinance will be removed from the sphere (including all or portions of land use Scenarios 2-6, and possibly even Scenario 1, with respect to the 11-acre area that is outside of the current sphere and a portion of which is subject to the City SOAR). If LAFCO's sphere of influence update is completed prior to the passage of a SOAR vote to redesignate any of the Expansion Areas, any of the Expansion Areas that are subject to the City SOAR ordinance could also be outside the City's sphere of influence. As such, the EIR should discuss the fact that an application for a sphere amendment may need to be approved by LAFCO prior to considering these lands for annexation. K

9. The first paragraph of page 4.2-18 incorrectly references the Olivas area as being part of Scenario 4. L

10. The discussion on page 4.2-18 under Scenario 5 indicates that a portion of the Western Cañada Larga area could only be converted to another use upon cancellation of existing LCA contracts and approval of a sphere of influence amendment by LAFCO. Scenarios 2 and 3 would also require cancellation of existing LCA contracts. The applicable sections of the EIR should be revised to acknowledge this fact. Also, based on the City's current sphere of influence M

boundary. Scenarios 1, 2, 3 and 4 would require sphere of influence amendments. Scenario 6 may potentially require a sphere amendment following the pending sphere update to be performed by LAFCO as part of the Municipal Service Review process.

11. Under Scenario 1 on page 4.2-20, the EIR states, "several agricultural properties within the proposed SOI that are currently designated for non-agricultural uses could be developed under this scenario." The EIR proceeds to reference properties in the Saticoy area that may present potential agricultural/urban compatibility conflicts, however, there is no information about any specific property in the Saticoy area and no mapped reference. For the record, we would like it noted that the subject EIR does not contain sufficient information to assess impacts associated with any annexations associated with these properties. Any future actions requiring LAFCO approval will require additional environmental review. N

Section 4.14 - Land Use and Planning

12. Section 4.14 (Land Use and Planning) of the EIR contains erroneous interpretations of the Cortese-Knox-Hertzberg Act of 2000 (California Government Code Section 56000 et seq.), LAFCO policies and the Ventura County Guidelines for Orderly Development. Please refer to the "Frequently Asked Questions" link on our website at www.ventura.lafco.ca.gov for additional information. For the sake of ease and clarity, we recommend that the EIR simply reference the applicable Code Sections or local policy documents in sufficient detail for interested readers to locate on their own accord rather than include inaccurate restatements of statutes and policies. As such, we recommend that all the applicable interpretations found on pages 4.14.6 and 4.14.7 be deleted. O

13. In addition to the factors contained in Government Code Section 56000 et seq., the Ventura LAFCO has adopted local polices that will also be considered as a part of any LAFCO review of the project. A discussion about consistency with these Ventura LAFCO policies and any resulting environmental impacts should be included in the EIR. All of these polices are contained in the Ventura LAFCO Commissioner's Handbook. A complete copy of the Commissioner's Handbook is available from the Ventura LAFCO and on-line at the Ventura LAFCO web site. Specific applicable LAFCO policies are enclosed and include: P
    a. Conformance with local plans and policies (policy 2.5.1), especially in relation to any changes that may be necessary to the City's SOAR ordinance.
    b. Agriculture and open space conversion (policy 3.1.5 in its entirety). Note that policy 3.1.5 requires a detailed alternative site analysis of non-prime agricultural or vacant lands as well as an analysis of the impacts on

adjoining prime agricultural or open space lands. Also note that this policy refers to phasing annexation for very large developments that may involve time horizons over 5 years.

c. School capacity (policy 3.1.6)
d. Annexation of unincorporated island (policy 3.2.3)

Given that the subject EIR does not include an analysis of several of the above noted policies, LAFCO does not consider this EIR adequate for the purposes of any future sphere amendments or annexations unless supplemental analysis is provided.

Paragraph b, above is emphasized in response to statements in the EIR indicating that the 2005 General Plan would not change the land use designation for any of the areas under Scenarios 2 through 6 (pages 4.2-17 through 4.2-18). At the point when the City begins to implement any land use scenario that requires an amendment to the sphere of influence, please note that LAFCO discourages such unless annexation of the territory involved is anticipated within five years. Note further, however, that once territory is within the City's sphere of influence there is no requirement that it be annexed within five years or any other specific timeframe.

14. In acting on any governmental boundary reorganization proposal LAFCO must consider the factors identified in Government Code Section 56668. Each of these factors should be fully discussed in the appropriate sections of the EIR. Note that these factors include a reference to Government Code Section 56377 concerning open space conversion and that LAFCO uses the definition of open space contained in Section 65560 of the Public Resources Code.

Again, thank you for the opportunity to comment. If there are any questions regarding our comments, please feel free to contact me at 805-654-2866.

Sincerely,

Kim Uhlich
Senior Analyst

DIVISION 2 – OPERATIONAL POLICIES

CHAPTER 5 – LOCAL PLANS AND POLICIES

SECTION 2.5.1 CONFORMANCE WITH LOCAL PLANS AND POLICIES

2.5.1.1 Consistency with General and Specific Plans: Unless exceptional circumstances are shown, LAFCO will not approve a proposal unless it is consistent with the applicable general plan and any applicable specific plan. For purposes of this policy, the applicable general plan is as follows:

i. For proposals by a city, the general plan of the city.
ii. For proposals by a district, where the affected territory lies within an adopted sphere of influence of a city, the general plan of the city.
iii. For proposals by a district, where the affected territory lies outside an adopted city sphere of influence, the Ventura County General Plan.

2.5.1.2 Consistency with ordinances requiring voter approval: For cities that have enacted ordinances that require voter approval for the extension of services or for changing general plan designations, LAFCO will not approve a proposal unless it is consistent with such ordinances and voter approval has first been granted, or unless exceptional circumstances are shown to exist.

SECTION 2.5.2 GUIDELINES FOR ORDERLY DEVELOPMENT

LAFCO encourages proposals that involve urban development or that result in urban development to include annexation to a city wherever possible. In support of this policy LAFCO has adopted Guidelines for Orderly Development, the policies of which are incorporated by reference.

SECTION 2.5.3 GREENBELTS

The County of Ventura and various cities in the County have adopted Greenbelt Agreements for the purposes of preserving agriculture and/or open space, providing separation between cities, and/or limiting the extension of urban services. The Ventura LAFCO is not a direct party to these Greenbelt Agreements, but has endorsed them as statements of local policy. As such, LAFCO will not approve a proposal from a city that is in conflict with any Greenbelt Agreement unless exceptional circumstances are shown to exist. A Greenbelt Agreement shall be amended by all parties involved prior to any proposal which may be in conflict with the Agreement is considered by LAFCO.

SECTION 3.1.5 AGRICULTURE AND OPEN SPACE PRESERVATION

3.1.5.1 Findings and criteria for prime agricultural and open space land conversion: LAFCO will approve a proposal for a change of organization or reorganization which is likely to result in the conversion of prime agricultural or open space land use to other uses only if the Commission finds that the proposal will lead to planned, orderly, and efficient development. For the purposes of this policy, a proposal for a change of organization or reorganization leads to planned, orderly, and efficient development only if all of the following criteria are met:

i. The territory involved is contiguous to either lands developed with an urban use or lands which have received all discretionary approvals for urban development.
ii. The territory is likely to be developed within 5 years and has been pre-zoned for non-agricultural or open space use. In the case of very large developments, annexation should be phased wherever possible.
iii. Insufficient non-prime agricultural or vacant land exists within the existing boundaries of the agency that is planned and developable for the same general type of use.
iv. The territory involved is not subject to voter approval for the extension of services or for changing general plan land use designations. Where such voter approval is required by local ordinance, such voter approval must be obtained prior to LAFCO action on any proposal unless exceptional circumstances are shown to exist.
v. The proposal will have no significant adverse effects on the physical and economic integrity of other prime agricultural or open space lands.

3.1.5.2 Findings that insufficient non-prime agricultural or vacant land exists: The Commission will not make affirmative findings that insufficient non-prime agricultural or vacant land exists within the boundaries of the agency unless the applicable jurisdiction has prepared a detailed alternative site analysis which at a minimum includes:

i. An evaluation of all vacant, non-prime agricultural lands within the boundaries of the jurisdiction that could be developed for the same or similar uses.
ii. An evaluation of the re-use and redevelopment potential of developed areas within the boundaries of the jurisdiction for the same or similar uses.
iii. Determinations as to why vacant, non-prime agricultural lands and potential re-use and redevelopment sites are unavailable or undesirable for the same or similar uses, and why conversion of prime agricultural or open space lands are necessary for the planned, orderly, and efficient development of the jurisdiction.

3.1.5.3 Impacts on adjoining prime agricultural or open space lands: In making the determination whether conversion will adversely impact adjoining prime agricultural or open space lands, the Commission will consider the following factors:

i. The prime agricultural and open space significance of the territory and adjacent areas relative to other agricultural and open space lands in the region.
ii. The economic viability of the prime agricultural lands to be converted.
iii. The health and well being of any urban residents adjacent to the prime agricultural lands to be converted.
iv. The use of the territory and the adjacent areas.
v. Whether public facilities related to the proposal would be sized or situated so as to facilitate the conversion of prime agricultural or open space land outside of the agency's sphere of influence, or will be extended through prime agricultural or open space lands outside the agency's sphere of influence.
vi. Whether natural or man-made barriers serve to buffer prime agricultural or open space lands outside of the agency's sphere of influence from the effects of the proposal.
vii. Applicable provisions of local general plans, applicable ordinances that require voter approval prior to the extension of urban services or changes to general plan designations, Greenbelt Agreements, applicable growth-management policies, and statutory provisions designed to protect agriculture or open space.
viii. Comments and recommendations by the Ventura County Agricultural Commissioner.

SECTION 3.1.6 SCHOOL CAPACITY

In addition to the factors and determinations required by state law, LAFCO will consider whether or not the territory involved in a proposal for a change of organization or reorganization can be served by affected school districts. LAFCO will not favor any change of organization or reorganization proposal where any affected school district certifies that there is not sufficient existing school capacity, or will not be sufficient school capacity at the time of development, to serve the territory involved.

SECTION 3.2.3 ANNEXATION OF UNINCORPORATED ISLAND AREAS BY CITIES

(Added 4/16/03)

Any approval of a proposal for a change of organization or reorganization will be conditioned to provide that proceedings will not be completed until and unless a subsequent proposal is filed with LAFCO initiating proceedings for the change of organization or reorganization of all unincorporated island areas that meet the provisions of Government Code Section 56375.3, provided all of the following criteria are applicable:

i. The approved proposal was initiated by resolution of a city that surrounds or substantially surrounds one or more unincorporated island areas that meet the requirements of Section 56375.3.
ii. The territory in the approved proposal consists of one or more areas that are each 40 acres or more in area.
iii. The territory in the approved proposal will not be used exclusively for agriculture or open space purposes after the completion of proceedings.
iv. The territory in the approved proposal is not owned by a public agency or used for public purposes.

DIVISION 4 – SPHERES OF INFLUENCE

CHAPTER 1 – GENERAL POLICIES

SECTION 4.1.1 APPLICABILITY AND WAIVER

4.1.1.1 Applicability:
(a) These policies and standards do not preempt state law. In the event of a conflict between these policies and the provisions of state law, the provisions of state law shall prevail.
(b) In the event of a conflict between these policies relating to spheres of influence and the rules and regulations, or the operational policies, adopted by the Ventura LAFCO, the provisions of the rules and regulations and the operational policies shall prevail.

4.1.1.2 Waiver: These policies and standards relating to spheres of influence shall be given great weight as a part of the Ventura LAFCO's consideration of proposals. They are general guidelines for the Commission to follow, however, they are not mandatory or binding. The Commission can and will consider each proposal upon its merits within the parameters set forth in state law. Should the Commission elect not to follow a policy, it shall, as a part of any resolution on the matter and as part of the written record, set forth the specific waiver, and the reason for it.

SECTION 4.1.2 BOUNDARIES

4.1.2.1 Compliance with state law: All boundaries shall comply with the provisions of state law.

4.1.2.2 Conformance with lines of ownership and assessment: Sphere of influence boundaries should coincide with lines of assessment or ownership. If sphere of influence boundaries do not coincide with lines of assessment or ownership they shall be described by metes and bounds legal descriptions sufficient for definitive mapping purposes using geographic information system software.

4.1.2.3 Consistent with voter approved growth boundaries: For cities that have enacted ordinances that require voter approval for the extension of services or for changing general plan designations, sphere of influence boundaries should coincide with, or cover lesser area than, voter approved growth boundaries.

Q

2005 Ventura General Plan EIR: Comparison of Scenarios 1 -6 integrating LAFCo Law/Policies and Minor Data Corrections

CRITERIA	Scenario 1 (4)	Scenario 2	Scario 3	Scenario 4	Scenario 5	Scenario 6
Prime Farmland Conversion?	Yes; refer to EIR for acreage	Yes; refer to EIR for acreage	Yes; refer to EIR for acreage	Yes; refer to EIR for acreage	Yes; refer to EIR for acreage	Yes; refer to EIR for acreage
Conflicts with SOAR? (1)	Portion of the 11 acres north of water filtration plant subject to City SOAR	Yes; refer to EIR for acreage	Yes; refer to EIR for acreage	Yes; refer to EIR for acreage	Yes; **approximately 95 total acres** subject to City SOAR (EIR indicates 84 acres) (6)	Yes; refer to EIR for acreage
Conflicts with LAFCo Law/Policy? (2)	11 acres north of water filtration plant would require SOI amandment prior to annexation. However, annexation of noncontiguous territory is prohibited by Sec. 56741 of C-K-H	North Avenue area is not contiguous to City boudary; annexation is prohibited by Sec. 56741 of C-K-H	North Avenue area is not contiguous to City boudary; annexation is prohibited by Sec. 56741 of C-K-H.	North Avenue area is not contiguous to City boundary; annexation is prohibited by Sec. 56741 of C-K-H.	North Avenue and Western Canada Larga areas are not contiguous to City boudary; annexation is prohibited by Sec.56741 of C-K-H.	North Avenue area is not contiguous to City boundary; annexation is prohibited by Sec. 56741 of C-K-H.
Conflicts with Guidelines for Orderly Development (3)?	Yes; land to be developed for urban purposes should first be annexed to City. North Avenue area cannot be annexed per LAFCo policy	Yes; land to be developed for urban purposes should first be annexed to City. North Avenue area cannot be annexed per LAFCo policy	Yes; land to be developed for urban purposes should first be annexed to City. North Avenue area cannot be annexed per LAFCo policy	Yes; land to be developed for urban purposes should first be annexed to City. North Avenue area cannot be annexed per LAFCo policy	Yes; land to be developed for urban purposes should first be annexed to City. North Avenue and Wester Canada Larga areas cannot be annexed par LAFCo policy	Yes; land to be developed for urban purposes should first be annexed to City. North Avenue area cannot be annexed per LAFCo policy
Conflicts with greenbelt agreement?	No, according to criteria for Scenario 1 eligibility as stated in EIR (5)	Yes; refer to EIR for acreage	Yes; refer to EIR for acreage	No	No	No
Conflicts with LCA contract(s)?	No, according to criteria for Scenario 1 eligibility as stated in EIR (5)	Yes; **170 acres** in Olivas area under LCA contract (EIR indicates 24 total acres)	Yes; **170 acres** in Olivas area under LCA contract (EIR indicates 24 total acres)	No	Yes; refer to EIR for acreage	No

22

NOTES:
(1) The EIR should indicate that LAFCo will not accept an application for a sphere amendment or an annexation for any territory subject to the City SOAR ordinance until and unless voter concurrance is reached.

(2) Through a pending State-mandated review and update of the City's sphere of influence to be performed by LAFCO within the next year, and based on Ventura LAFCO policies, all land currently subject to the City SOAR ordinance will potentially be removed from the SOI. As such, several areas identified as being within the SOI will potentially be removed from the SOI. This information should be included and made part of the EIR analysis.

(3) The location of the "North Avenue Potential Expansion Area" as described in the EIR does not include territory that would make annexation of this PEA possible under State law. It is possible to annex the parcels within the North Area PEA but in order to do so under this EIR it would be necessary to revise the project description and the boundaries of one or more of the land use scenarios to include properties south of the PEA that provide a means of geographical contiguity with properties already within the City boundaries located considerably south of the currently described North Avenue PEA. Some of these properties may be subject to the City SOAR ordinance and thus their inclusion in the General Plan area would need to be analyzed along with any other additional potential impacts.

(4) This analysis for Scenario 1 includes analysis of "incorporation" (sic) of approximately 11 acres north of water filtration plant in the North Avenue area as referred to in EIR. Specific properties included in under this Scenario are not all identified in the EIR. Those areas that are identified, such as the McGrath property,Thille area proparty, and several Saticoy sites, should be included in the impact analysis if they are known to be part of Scenario 1.

(5) Page 4.2-16 refers to criteria that properties eligible to be part of Scenario 1 must meet, such as properties not subject to City SOAR, can include agricultural land but must be designated for urban use, not subject to an LCA contract, not within a greenbelt and within the current SOI. However, Page S-1 of the EIR describes Scenario 1 as one that limits development "almost exclusively" to areas within the current SOI. Other EIR references to Scenario 1 indicate that no land outside the SOI will be included. Thus, the parameters of Scenario 1 are inconsistent and unclear.

(6) According the County GIS maps, approximately 29 acres within the W. Canada Larga PEA and approximately 66 acres in the North Ventura Avenue PEA , for a total of approximately 95 acres, are subject to the City SOAR.

Letter 3

COMMENTER: Kim Uhlich, Senior Analyst, Ventura Local Agency Formation Commission

DATE: July 11, 2005

RESPONSE:

Response 3A

The commenter notes that there are multiple confusing references to the North Avenue District, Upper North Avenue District, and North Avenue Expansion Area on Figures 2-4 through 2-8. The Upper North Avenue district is shaded gray and numbered "1." The North Avenue district is shaded gray and numbered "2." The North Avenue expansion area is shown with a hatch pattern and labeled as such. All three areas are within the current Sphere of Influence. However, the North Avenue expansion area is considered such because it is designated Agriculture in the current Comprehensive Plan land use map and therefore would need voter approval for re-designation and subsequent development.

Response 3B

The commenter requests a listing of parcel numbers for each of the potential expansion areas. This list was provided to the LAFCO staff upon their request and is attached.

Response 3C

The commenter notes that annexation of the North Avenue potential expansion area is not possible because it is not contiguous with the current City boundary. It is presumed that annexation and development of the North Avenue area would not occur (if at all) until such time as areas to the south and/or west are annexed to the City. The Draft EIR Project Description is unclear on this point. Therefore, the discussion of the City's corporate limits in Section 2.0, *Project Description*, will be revised as follows in the Final EIR (new text is underlined):

> ***a. Corporate Limits.*** *The corporate limits of the City currently encompass approximately 13,700 acres, or 21 square miles. The City stretches from the Pacific Ocean eastward to the community of Saticoy and northward up the Ventura River valley. The City is not currently seeking annexation of any lands outside the current City limits. However, the City may seek annexation of unincorporated islands as well as urbanized areas adjacent to the current City limits (such as in Saticoy and the North Ventura Avenue area) over the life of the 2005 General Plan. Any annexations would be sought only at such time as the area to be annexed is contiguous with the current (at that time) City limit.*

In addition, the first full paragraph on page 2-5 will be replaced with the following in the Final EIR to clarify whether and how the City may seek adjustments to the Sphere of Influence:

The City is not seeking any adjustments to the SOI at this time. However, the 2005 General Plan includes a land use designation ("Industrial") for a small area outside the current SOI. This area encompasses approximately 10-11 acres located north of the City's water filtration plant. The City may seek inclusion of that area within the SOI over the life of the 2005 General Plan; however, any application for an adjustment to the SOI and annexation would occur (if ever) only at such time as the City's corporate boundary has been extended to be contiguous with the boundary of the area. Similarly, should any potential expansion areas be selected for inclusion in the General Plan land use map in the future, the SOI may be proposed for adjustment at that time to encompass the expansion areas. Applications for any necessary SOI adjustments would be sought at such time as development of these areas is proposed. The SOI adjustments that would be needed for each expansion area are discussed in detail in subsection 2.5. Finally, the City is interested in having the SOI moved to be coterminous with the City's corporate boundary for the hillside areas above the City pursuant to Action 1.13 of the Draft General Plan. It is the City's understanding that the Ventura LAFCO is planning to prepare a Municipal Service Review (MSR) for the City that will likely result in the removal this area (and possibly other areas, including all of the potential expansion areas) from the SOI; therefore, the City will not seek an SOI adjustment at this time. However, if the LAFCO does not take action to remove the hillside areas from the SOI, the City may apply for such an adjustment in the future.

Subsection 2.5.3.c of the EIR Project Description will be revised to read as follows in the Final EIR (new text is underlined):

*c. **Possible Future Changes to Sphere of Influence Boundaries.** As noted in subsection 2.2, although the City is not seeking adjustment to the Sphere of Influence (SOI) at this time, implementation of the 2005 General Plan may require several adjustments to the Sphere of Influence (SOI) that would subsequently be processed and subject to approval by LAFCO. About 2,300 acres in the hillsides above the City are proposed to be removed from the SOI. This would remove these areas from consideration for future City extension of services and focus future development on non-hillside areas. In addition, approximately 10-11 acres north of the City's water filtration plant along the west of SR 33 may need to be included in the SOI at some point in the future. This area is partly in agricultural use, but it is designated for industrial development in the Ventura County General Plan and in the 1989 Comprehensive Plan.*

The SOI would not need to be adjusted at this time to include any of the expansion areas considered in this EIR. However, certain expansion areas would require expansion of the SOI if they are to be considered for future development. Such SOI expansions would be sought, if ever, at such time as development of the areas is proposed. Possible future expansions of the SOI include the following:

- ***Western Cañada Larga** – This 110-acre area, located at the northern end of the Planning Area along the State Route (SR) 33 corridor, would need to be included in the SOI if selected for possible future development. Inclusion within the SOI could occur only at such time as the City's corporate boundary has been extended to be contiguous with the boundary of the expansion area.*
- ***Olivas** – About 55 acres of the 930-acre Olivas area (the portion of this area north of U.S. 101) are within the current SOI. However, the remaining 875 acres, which*

consist of agricultural land located primarily between U.S. 101 and Harbor Boulevard, would need to be included in the SOI if this area is selected for possible future development.

- ***Serra** – About 160 acres of the 438-acre Serra area are currently outside the SOI. This area, which is located south of Bristol Road and along the north bank of the Santa Clara River, would need to be included in the SOI if the Serra area is selected for possible future development.*

Because the Ventura LAFCO may remove all areas subject to voter approval from the SOI as a result of its Municipal Service Review, any of the expansion areas may have been removed from the SOI by the time they are considered for development. Therefore, an SOI adjustment may need to be sought for any of the expansion areas.

The second, third, and fourth paragraph under subsection 2.6 (those related to LAFCO approvals) will be replaced with the following:

The City is not seeking annexation of lands or adjustments to the SOI at this time. However, implementation of the 2005 General Plan may require future approval of adjustments to the City's SOI, as described above. Annexations and SOI adjustments would be sought as appropriate at such time as developments are proposed for the areas in question. Any adjustments to the SOI will require approval from the Ventura LAFCO.

Other references to future SOI adjustments throughout the Draft EIR will be adjusted to reflect the above. In addition, Figures 2-3 through 2-8 will be revised to eliminate the future SOI boundaries that are depicted.

Response 3D

The commenter states that the 11-acre property north of the water treatment plant is subject to SOAR according to County records. In actuality, two small pieces of the property in question are designated Agriculture in the current Comprehensive Plan and therefore subject to SOAR. However, the bulk of the property (and the entire area included within the Upper North Avenue District depicted on Figures 2-3 through 2-8) is designated Industrial and not subject to SOAR.

Response 3E

The commenter notes that the Ventura County LAFCO uses the USDA rating and storie class of the site to determine the significance of agricultural resource impacts. Any project EIR for future annexation or SOI adjustment proposals will address these factors, in accordance with LAFCO requirements.

Response 3F

The commenter notes that the Olivas area includes an additional Land Conservation Act (LCA) contract not noted in the Draft EIR. In response to this comment, Figure 4.2-3 will be amended to reflect this additional LCA contract. In addition, Table 4.2-3 and accompanying text will be

amended to reflect the fact that EIR Scenarios 2 and 3 would potentially affect 170 acres if land under LCA contract. This change in acreage does not affect the findings or conclusions of the Draft EIR as conflicts with agricultural designations were already identified as unavoidably significant for Scenarios 2 and 3.

Response 3G

The commenter suggests that the EIR should describe the LAFCO review process required by the California Government Code and that the presence of LCA contracts within an area generally precludes LAFCO from approving annexation. In response to this comment, the following will be added to the first paragraph under "Scenario 2 – Intensification/Reuse + North Avenue + Olivas + Serra" on page 4.2-17 (under Impact AG-2):

> *The California Government Code (Section 56856.5) generally precludes the LAFCO from approving annexation of lands under LCA contract unless a notice of non-renewal has been filed and the annexing agency (the City) agrees that no services will actually be provided during the remaining life of the contract for land uses or activities not allowed under the contract.*

This same sentence will also be added under the discussion of Scenarios 3, 4, and 5.

Response 3H

The commenter notes that the Draft EIR incorrectly states that the LAFCO needs to approve amendments to greenbelt agreements. In response to this comment, the last sentence of the first paragraph under "Greenbelt Agreements" on page 4.2-11 will be replaced with the following:

> *A greenbelt agreement must be amended by all parties involved before the LAFCO will consider any proposal that may be in conflict with the agreement.*

Response 3I

The commenter questions how the conversion of land within the Oxnard-Ventura Greenbelt Agreement could be found to be consistent with proposed General Plan Action 3.12 relating to the preservation of farmland and greenbelt agreements and how the proposed General Plan action could serve as a "mitigation measure." The action to which the commenter refers is not a "mitigation measure." Rather, it is an action proposed in the draft General Plan and thus is part of the "proposed project." In CEQA terms, mitigation measures are additional actions above and beyond those included in the proposed project. With respect to consistency with Action 3.12, it is the City's stated intent, throughout the 2005 General Plan, to focus first on intensification and reuse of lands within the SOI prior considering expansion of the SOI boundaries. It is expected that the focus on intensification and reuse will relieve pressure for the development of farmland at the City's periphery. Nevertheless, the City acknowledges that some planning objectives may not be met through intensification/reuse alone and, under Scenarios 2-6, would retain the flexibility to consider annexation of various expansion areas at some point in the future. Though the City's general approach to planning is expected to minimize pressure for the future conversion of farmland, the Draft EIR acknowledges that such conversion would be an unavoidably significant impact. Finally, it should be noted that City

staff are recommending adoption of a variation on Scenario 1 (the "Intensification/Reuse Only" scenario), which includes none of the expansion areas and thus would not affect any areas within existing greenbelt agreements.

Response 3J

The commenter states an opinion that General Plan Actions 3.12 and 3.15 should not be referred to as "mitigation measure." As noted in Response 3I, the actions to which the commenter refers are not "mitigation measures," but rather are proposed General Plan policies that are part of the "proposed project." The discussion in the Draft EIR is merely intended to direct the reader to proposed General Plan actions that address the issue of farmland conversion. The Draft EIR acknowledges that, despite the inclusion of these actions in the draft General Plan, buildout of any of the EIR land use scenarios would result in unavoidably significant impacts relating to the conversion of important farmlands.

Response 3K

The commenter notes that the LAFCO is currently planning to prepare a Municipal Service Review that may result in the removal of all areas subject to voter approval from the SOI and states that the EIR should acknowledge this fact. Such a discussion will be added to the Final EIR. Please see Response 3C.

Response 3L

The commenter notes that the discussion of Alternative 4 incorrectly references the Olivas area. In response to this comment, the last sentence of the first paragraph on page 4.2-18 will be removed in the Final EIR.

Response 3M

The commenter notes that the statement regarding LCA contract cancellation under Scenario 5 also applies to Scenarios 2 and 3. The commenter also notes that any of the scenarios could ultimately require an expansion of the SOI. In response to this comment, the following sentence will be added to the discussion of Scenarios 2 and 3 on page 4.2-18 (under Impact AG-2):

Lands under LCA contract could only be converted upon cancellation of the contracts.

The SOI issue is discussed in previous responses. A statement regarding the need to expand the SOI for Scenarios 2, 3, and 4 will be added to the applicable discussions under Impact AG-2 and a statement of the possible need for an SOI adjustment will be added to the discussion of Scenario 6. Such a statement is not necessary for Scenario 1 since, although development under that scenario may require a future SOI adjustment, such an adjustment would not involve agriculturally-designated land (please see Response 3D).

Response 3N

The commenter notes that the LAFCO will require additional environmental review for the future conversion of agricultural parcels within the SOI prior to any actions requiring LAFCO approval. Agricultural lands within the Planning Area are shown on Figure 4.2-1. The EIR is a program level document that analyzes the overall impact of growth under the 2005 General Plan. Project-specific environmental review will be conducted for individual development projects at such time as projects are proposed.

Response 3O

The commenter suggests that the text describing LAFCO policies and the Cortese-Knox – Hertzberg Act of 2000 be replaced with simple references to these policies in order to avoid inaccurate representations of policy intent. The commenter suggests that the EIR should include discussion of several additional policies relevant to LAFCO's review of the 2005 General Plan that are not included in the Draft EIR. In response to this comment, the discussion under Impact LU-1 will be replaced with the following in the Final EIR:

> ***Impact LU-1 No boundary adjustments are being sought at this time and all of the General Plan scenarios emphasize intensification and reuse over expansion of the City. Annexations and Sphere of Influence adjustments could be sought at some point in the future under any of the scenarios and certain possible annexations/Sphere of Influence adjustments could potentially conflict with relevant State and LAFCO policies. However, because any conflicts would need to be resolved prior to LAFCO approval of any boundary adjustment, impacts can be reduced to a Class III, less than significant level, for all six scenarios.***

The State of California possesses the exclusive power to regulate boundary changes, which means that no local government has the right to change its own boundary without State approval. The Legislature has prescribed a "uniform process" for boundary changes for both cities and special districts that is now embodied in the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000 (California Government Code Section 56000 et seq.). This Act delegates the Legislature's boundary powers to local agency formation commissions (LAFCOs).

The Ventura LAFCO is responsible for reviewing and approving proposed jurisdictional boundary changes in Ventura County, including the annexation and detachment of territory to and/or from cities and most special districts, incorporations of new cities, formations of new special districts, and consolidations, mergers, and dissolutions of existing districts. In addition, LAFCOs must review and approve contractual service agreements, conduct service reviews, and determine spheres of influence for each city and district.

In addition to the Cortese-Knox-Hertzberg Act, the Ventura LAFCO has adopted local policies that it considers in its review of projects. The LAFCO also enforces the County's Guidelines for Orderly Development. A complete listing of policies that

LAFCO considers in its review of proposed boundary changes can be found in the LAFCO website (www.ventura.lafco.ca.gov).

No adjustments to the City's corporate boundaries or Sphere of Influence (SOI) are proposed at this time. However, all of the 2005 General Plan scenarios could accommodate the development of lands that are outside the current City boundaries and SOI. Specific analysis of individual proposals would be needed at the time such possible future boundary adjustments are proposed, but boundary adjustment policies are discussed below as they relate to the 2005 General Plan.

Conformance with Local Plans and Policies

Unless exceptional circumstances are shown, LAFCO will not approve a proposal unless it is consistent with the applicable general plan and any applicable specific plan. No boundary adjustments are being sought at this time. Although boundary adjustments may be sought in the future under any of the EIR scenarios, it is anticipated that such adjustments would be consistent with the 2005 General Plan, regardless of which of the EIR scenarios is adopted.

LAFCO will not approve a proposal unless it is consistent with ordinances requiring voter approval. Scenarios 2-6 all includes potential expansion areas that are subject to voter approval. No land use designated or boundary adjustment is being sought at this time for any of the expansion areas. If such adjustments are sought at some point in the future, they will be sought only after voter approval of a land use designation change for the property in question.

Guidelines for Orderly Development

LAFCO encourages proposals that involve urban development or that result in urban development to include annexation to a city wherever possible. All of the EIR scenarios emphasize intensification/reuse over expansion of the City's boundaries and no boundary adjustments are being sought at this time. Nevertheless, all of the scenarios would accommodate development in lands that are outside the current corporate boundaries and the SOI. Development of such areas could be found to be in conflict with the Guidelines for Orderly Development, particularly with respect to the North Avenue and Western Cañada Larga expansion areas, which are not contiguous with the existing City corporate boundary. However, no development would occur until such time as the property in question is annexed and, if necessary, included in the SOI. Such adjustments could be made only with LAFCO approval and, in the case of the expansion areas, voter approval under SOAR. Given that future boundary adjustments would only be made at such time as they are deemed consistent with the Guidelines for Orderly Development, any of the scenarios could be found to be consistent with the Guidelines.

Greenbelts

LAFCO will not approve a proposal for a city that is in conflict with any Greenbelt Agreement unless exceptional circumstances are shown to exist. Scenarios 1, 4, 5, and 6 do not include any lands that are subject to existing Greenbelt Agreements. However, the Olivas expansion area that is included in Scenarios 2 and 3 is within the Oxnard-

Ventura Greenbelt. As such, the Olivas area could be brought into the SOI and annexed to the City only if it is removed from the Greenbelt. Such an amendment to the Greenbelt Agreement could be made only with the consent of the City of Oxnard. Moreover, approval of a land use designation change could only be made with voter approval under the SOAR Ordinance.

Agricultural and Open Space Preservation

LAFCO will approve a proposal for a change of organization that is likely to result in the conversion of Prime agricultural land or open space land only if it finds that the proposal will lead to planned, orderly, and efficient development. For a development to be deemed planned, orderly, and efficient, all of the following criteria must be met: (1) the territory involved is contiguous with lands developed with an urban use or that have received approvals for urban development; (2) the territory is likely to be developed within 5 years and has been pre-zoned for non-agricultural use; (3) insufficient non-Prime agricultural land or vacant land exists within the existing boundaries of the agency that is planned and developable for the same general type of use; (4) the territory is not subject to voter approval for the extension of services or changing of land use designations; and (5) the proposal will have no significant adverse effects on the integrity of other Prime agricultural or open space lands.

All of the EIR scenarios emphasize intensification and reuse of existing urban lands prior to the development of agricultural lands. Nevertheless, as discussed in Section 4.2, Agricultural Resources, any of the six scenarios would potentially accommodate the conversion of some Prime agricultural lands if the City's planning objectives cannot be met through intensification and reuse. All of the areas that could potentially be converted are contiguous with existing urban uses and, in many instances, are surrounded by urban uses. Although the North Avenue, Olivas, Serra, and Poinsettia expansion areas are subject to voter approval under the SOAR Ordinance, voter approval would have to be received prior to any LAFCO action. In addition, it is anticipated that inclusion within the SOI and/or annexation would not be sought unless development were planned within five years. In the case of large developments that could potentially be accommodated under Scenarios 2, 3, 4, and 6, development and annexation may need to be phased. Any of the agricultural lands that could be converted under Scenarios 1-6 could be found to be consistent with LAFCO's agricultural and open space preservation policies, though LAFCO's determination would need to be at the time of individual proposals based upon current (at that time) circumstances and the nature of the proposals.

School Capacity

LAFCO will not favor a change of organization where any affected school district certifies that there is no sufficient existing school capacity to serve the territory involved. As discussed in Section 4.11, Public Services, many VUSD schools are at or near capacity and would be over capacity in 2025 with the growth projected under any of the EIR scenarios. Scenario 1 would only accommodate a minor SOI adjustment that would not bring any residential development, though the annexation of individual properties that may be sought in the future under Scenario 1 could generate new VUSD students. The expansion areas included in Scenarios 2, 3, 4, and 6 include sufficient acreage to

accommodate new schools that would be needed to serve the areas. However, the expansion areas included in Scenario 5 may lack sufficient land to accommodate the development of new schools. The impacts of individual developments on schools will need to be addressed on a case-by-case basis as such impacts depend upon the nature of the project and the circumstances for the VUSD at the time of the individual application.

Annexation of Unincorporated Island Areas

Any approval of a proposal for a change of organization for an area of 40 acres or more will be conditioned to provide that the proceedings will not be completed until and unless a subsequent proposal is filed with LAFCO initiating proceedings for the change of organization of all unincorporated island areas that meet the provisions of Government Code Section 56375.3. This policy means that LAFCO will not approve annexations of 40 acres or more unless the City has filed an application to annex all of the island areas in the City, which include eight separate islands in the Montalvo area totaling about 55 acres. Therefore, no additional annexations will be completed until an application for annexation of these island areas has been filed.

Mitigation Measures. *No mitigation is required. Individual boundary adjustment proposals will need to be addressed by the City and the Ventura LAFCO on a case-by-case basis.*

Significance After Mitigation. *As the City is not seeking any boundary adjustments at this time, no inconsistencies would occur with respect to any of the six scenarios. Certain areas that may be considered for future annexation and/or inclusion within the SOI would not be eligible under current conditions; however, it is assumed that boundary adjustments would not be sought until such time as such adjustments could be found to be consistent with state and local requirements.*

The summary matrix and EIR summary table will also be revised to reflect this revised discussion.

Response 3P

The commenter notes that LAFCO must consider factors identified in Government Code Section 56668 in acting on any governmental boundary reorganization and suggested that these factors should be discussed in the EIR. Please see Response 3O. As noted in previous responses, although development that could be accommodated under any of the EIR scenarios may involve the consideration of future adjustments to the City's corporate boundary and/or sphere of influence, the City is not seeking any boundary adjustments at this time. As specific boundary adjustments are proposed in the future, the City will conduct analysis of applicable Government Code provisions as required by LAFCO.

Response 3Q

The commenter has attached a matrix with LAFCO's analysis of each of the EIR scenarios. Most of the items contained in the matrix are addressed in Responses 3A through 3Q. However, several additional items are addressed below.

The commenter states that County records indicate that 95 acres included in EIR Scenario 5 are subject to the SOAR Ordinance rather than the 84 acres indicated in the Draft EIR. The commenter may have included in the 11 acres north of the City's water treatment plant in the estimate of SOAR acreage. As discussed in Response 3D, only a very small piece of the 11-acre property north of the City's water treatment plant is subject to SOAR.

With respect to the North Avenue expansion area, it is correct that this area could not currently be annexed. However, no annexation would be sought at this time even if that expansion area were included in the selected General Plan land use map. Rather, annexation may be sought in the future, but not until and unless contiguous properties to the south and/or west were incorporated either before or as a part of the same request. If annexation is sought at some point in the future to accommodate a specific development proposal, a separate environmental review of the specific proposal will be conducted.

Footnote 4 of the LAFCO's suggested corrections table suggests that the EIR should include specific analysis of several sites within the current SOI that could be considered for future annexation under EIR Scenario 1. The Draft EIR acknowledges that a number of properties outside the corporate limits may be considered for annexation and development in the future and addresses the overall citywide impacts associated with the possible future development of these areas. However, project-specific analysis is not the purpose of the General Plan EIR, nor is such analysis possible given that no specific developments have been proposed at any of the sites in question. If and when specific development applications are submitted to the City, project-specific analysis, including analysis of applicable LAFCO policies, will be conducted at that time.

Re: Casden Properties LLC site at Johnson and North Bank Drives, Ventura, CA

Dear Ms. Porras:

You will soon be considering the Public Review Draft of the Ventura General Plan ("Draft General Plan") for adoption and the supporting Draft Environmental Report ("DEIR"). In the attached letter to Ms. Daluddung, Community Development Director, we have outlined our comments for your consideration in this matter.

We own an 8-acre site located at the northeast corner of Johnson and North Bank Drives. After initial meetings with City staff in early 2003, we were told that staff anticipated that the new planning designation of our site would support a dense, mixed-use development. We revised our proposal accordingly and shared this new plan with staff and with the CPAC at a hearing. Upon the City's recommendation, we withheld submission of a formal application and participated in the General Plan amendment process, waiting to submit our project once the General Plan is amended. We were quite surprised that our proposed project was not reflected in the Draft General Plan or the DEIR and that, in fact, the development potential for the entire Johnson Drive Corridor was lower than that proposed for just our project.

Please review the attached letter on the Draft General Plan and our proposed project and consider our recommendations. We are committed to supporting the goals of the City and would be happy to discuss our proposed project with you at your convenience. Thank you for your consideration.

Sincerely,

Carol Schwartz, Assistant Vice President

Ref.: Casden Properties LLC site at Johnson and North Bank Drives
Ventura, CA

Dear Ms. Daluddung:

We have reviewed the Public Review Draft of the Ventura General Plan ("Draft General Plan") and respectfully submit these comments for your review and consideration. We believe that the Development Potential identified for the Johnson Drive Corridor should be increased, especially with respect to the residential component.

Our Property

As you are aware, in January 2003, Casden Properties LLC, through an affiliate, acquired an 8.03 acre site in Ventura located at the northeast corner of Johnson and North Bank Drives. In Spring 2003, we met with City staff for a pre-application meeting for development of this site. At the meeting, we were informed that the City had embarked on the update of the General Plan based on Smart Growth principles and were anticipating that the new designation of our site would support a dense, mixed-use development. We therefore revised our development scheme to a mixed-use project including 300 rental housing units and 22,500 square feet of commercial space, which we shared with staff. Because of the review process, we postponed the submission of a formal application for this project until the General Plan was amended.

In the intervening period, we have participated in the General Plan Update process, attending the various scoping and community meetings and shared the proposed project at a CPAC hearing. The Draft General Plan designated our site in the Johnson Drive Corridor for Commercial use. The Commercial designation "encourages a wide range of building types of anywhere from two to six stories that house a mix of functions, including commercial, entertainment, office, and housing" which supports the mixed-use concept we have proposed.

However, we are concerned that the Development Potential that was identified in the Draft General Plan for the Johnson Drive Corridor appears to understate the potential for this area. While we recognize that the City has stated that the guidelines are not limits of development, we believe that a greater level of development should be encouraged in this Corridor to better support the City's growth goals.

The Draft Environmental Impact Report that was prepared to support the Draft General Plan states that the growth was distributed among the various corridors and districts in the City "[B]ased on the development potential of each growth district and corridor and direction from the community, CPAC, Planning Commission and City Council on where growth in the community should be encouraged". We believe that the Johnson Drive Corridor, and in particular, our site, is an excellent location for rental housing as a component of a mixed-use project. In this letter, we will present our rationale for increasing the residential potential of the corridor. We hope that the planners and members of the CPAC can review the allocation for housing and revise it, taking into account our 300 units before the General Plan is finalized and adopted this summer.

Johnson Drive Corridor

The Johnson Drive Corridor appears to have two large sites remaining for development—our site and the site bounded by Johnson Drive, North Bank and the Ventura Freeway. The remainder of the corridor is developed with entertainment/retail use, commercial buildings and self storage.

While some of the existing projects might ultimately be redeveloped, we would anticipate that the Development Potential for the Corridor is much greater than the proposed 150 residential units, 50,000 square feet of retail space and 20,000 square feet of office space, and would be easily realized on these two undeveloped sites. Given its location, fronting the freeway, the other site would not be a prime location for residential development. However, our site is an excellent location for rental housing. We contend that a build-out of 300 units at this location would provide the appropriate scale of development to support the City's goals for Smart Growth.

The City of Ventura is committed to the principles of Smart Growth and has identified a number of Smart Growth concepts as part of the Draft General Plan. Increasing the intensity of residential development in the Johnson Drive Corridor serves to further support Smart Growth precepts. We will demonstrate how intensification of residential development in the Johnson Drive Corridor will support Smart Growth objectives and how a larger critical mass of residential development is needed at our site to support these Smart Growth goals and desirable development forms.

Johnson Drive Corridor as Location for Housing

Mix land uses. Smart Growth encourages a mix of land uses both vertically and horizontally. By introducing a significant component of residential units to this commercial corridor, residents can benefit from proximity to services and existing

businesses can benefit from this additional customer base. For example, the commercial center adjacent to the project site includes a TutorTime childcare facility which tends to attract new families with young children. This facility would benefit from an adjacent residential property that could provide additional client families.

Create a range of housing opportunities and choices. Because of the commercial nature of the corridor, a significant amount of rental housing would be an appropriate infill use. Rental product in this area will provide a much needed alternative to the for-sale product available further north on Johnson Drive.

Create walkable communities. By developing a substantial number of residential units at this site, we increase the opportunity for neighboring businesses and for the on-site retail and live/work units to be supported by walk-in customers. Residents will be able to walk to the movies or the video store located across the street or to the shops and services on the property. Our scheme also incorporates pedestrian access to the Linear Park which runs along the perimeter of the site.

Preserve open space, farmland, natural beauty and critical environmental areas. Our site is an infill location within the Johnson Drive Corridor. It is adjacent to the farmland of the Serra Expansion Area, being considered in the Draft EIR for future development and expansion of the City. By intensifying the development in this existing corridor, it forestalls the development of this agricultural area.

Provide a variety of transportation choices. Intensifying the residential development in the Corridor allows an increased number of residents to benefit from proximity to the South Coast Area Transit (SCAT) bus route along Johnson Drive, Ventura Intercity Service Transit Authority (VISTA) bus stops and easy access to the Freeway. By locating more potential commuters adjacent to the Freeway, we reduce the impact of these new households on local traffic patterns.

Foster distinctive, attractive communities with a strong sense of place. The Johnson Drive Corridor lacks a cohesive focus or image. The addition of a substantial, high-quality housing component will support a more diversified base of commercial establishments to better serve the corridor and the neighboring communities.

Casden Properties LLC Development Concept

Mix land uses. We have proposed the development of 22,500 square feet of retail space and 300 residential units, a number of which will be live/work product. We have designed the site with retail at the western portion of the site, along North Bank Drive, with live/work space transitioning to the residential eastern portion of the site. Our site is a preferable location for residential units in the City as the mix of uses at our site and the proximity to surrounding commercial development allows for pedestrian access, reducing the traffic impact that might accompany a similar level of residential development elsewhere.

Take advantage of compact building design. The residential component of the Casden proposal is comprised of 3-story buildings set on slightly elevated podiums. The required parking is primarily accommodated under the podium in a semi-subterranean structure. This creates a compact building form above ground, surrounding landscaped courtyards. The sprawl that comes from vehicular circulation and parking in projects with grade level automobile accommodation is avoided in this design scheme. It is important to note that podium products are very expensive to construct. We need to be able to develop a critical mass of units (approximately 300) before the substantial investment needed for this product is supported.

Create a range of housing opportunities and choices. Our project concept includes a range of housing product and target markets. Our current proposal includes both traditional rental units as well as live-work units fronting the commercial edge of our site. We also plan to provide both market rate and a significant component of affordable housing units in our project.

Foster distinctive, attractive communities with a strong sense of place. Casden Properties LLC is committed to developing beautiful projects with a high level of amenity. This proposed project will be distinctive by virtue of the podium product separating the vehicular from the pedestrian circulation and allowing for significant landscaping. By developing this site with 300 units, we are able to provide a high level of community amenities, including a large recreation center and pool area, which are anticipated to become a focal point for the residents. With lower development potential, the level of community amenities must be scaled back significantly.

Strengthen and direct development toward existing communities. As an infill site within an existing community, development should be intensified at this location. By increasing the amount of housing at the site, a critical mass of units can be developed to strengthen the sense of community here. The currently contemplated 150 units are simply too few to achieve a true sense of community in this location, which does not abut other residential areas.

Achieving critical mass on our site is necessary to develop and maintain a project that is consistent with City goals.

- Quality Product: The podium product we plan to develop creates very desirable, walkable communities, with large amounts of landscaped areas free from vehicular traffic.

- Project Amenities: Our proposed project includes a large recreation center, pool, spa, and large landscaped areas as project amenities. This level of amenity requires a critical mass of units to support their inclusion and maintenance.

- On-going, Committed Management: In order to operate and maintain this project at the appropriate level of service and security, dedicated property management is required, which can only be supported at a project of significant size.

* * * *

Casden Properties LLC respectfully submits this request to increase the residential allocation in Johnson Drive Corridor to at least 300 units. We are very committed to supporting the goals of the City while developing this project and are eager to discuss our proposal further at your convenience. Attached for your perusal are a copy of the proposed site plan and a description of the project.

Sincerely,

Carol Schwartz

Project Description
Site Plan

Project Site: Johnson and North Bank Drives
Northeast Corner of intersection
The site is accessible off Highway 101 North at the Johnson Drive exit.

Site Description:

Lot Area: 8.03 acres
Density: 300 dwelling units / 52 du/acre Residential
22,500 SF Commercial
Parking: 510 stalls –Residential [includes direct and tandem]
90 stalls -Commercial

Project Description:

This project is designed to include 300 dwelling units including an affordable component in a community where people can live and work.

The development is arranged to respond to the constraints and opportunities presented by its surroundings. The main entrance is off Johnson Drive. This provides great visibility from the Highway 101. The site will be lushly landscaped, feature decorative paving and planting to entice the motorist.

The proposed project is bounded by commercial sites to the north, and west. To the east is agricultural developed land; however this site borders the east end of San Buenaventura. The adjacent site to the east is outside of San Buenaventura. The south edge of the site borders Highway 101.

The buildings are designed with three stories over semi-subterranean parking. A main drive runs through the site past a 3,500 square foot clubhouse with attendant. The residential buildings front on this main drive or perimeter view opportunities as appropriate.

The typical building has eighteen dwelling units. These apartments include one bedroom, and two bedroom configurations.

Notes:

1. Overall residential growth is based on 0.66% annual growth through 2025. Overall non-residential growth is based on estimates provided by Stanley R. Hoffman Associates, Inc. All unit and square footage numbers are estimates of how future growth may be distributed based on available land, local land use practices, and recent Council and community direction and preferences. All figures are for analytical purposes only. The actual distribution of future growth in the City may vary based on market forces and other factors. Both the districts/corridors and expansion areas could accommodate more development and/or a different mix of development.

2. The distribution of growth in the districts and corridors is based on the following general assumptions: (a) The Downtown area and, to a lesser extent, the Ventura Avenue corridor will be the focus of future residential and commercial growth; (b) the Arundell, North Avenue, and Upper North Avenue areas will be the focus of future industrial growth; (c) other districts and corridors will not be the focus of growth, but will accommodate a certain amount of growth over time. When possible, knowledge of possible future plans or land availability has been used to estimate future growth. For example, the estimates of growth in the Downtown and Harbor Districts are based on the Downtown Specific Plan and Master Plan and staff knowledge of likely projects. Growth estimates for the Arundell community consider the likely development of the 75-acre McGrath property with a mix of uses and development of other vacant lands. Growth estimates for the Auto Center area consider the possibility of a "big box" retailer in that area.

3. Estimates of growth in the SOI/Other Infill sites are based on the following general assumptions: (a) 101/126 Orchard site will develop similarly to a project recently proposed for that site; (b) Wells/Saticoy sites will develop in accordance with ongoing planning efforts for those areas; (c) the Pierpont area will develop generally in accordance with a conceptual project recently considered by the City; (d) Second Units will be added at a rate of 15/year; (e) roughly half of underutilized lands identified in the Housing Element will be re-developed over the next 20 years; (f) all vacant lands outside the districts and corridors will be developed in accordance with the proposed land use designations.

4. Planned and Pending Developments based upon the City's 2004 Planning and Pending Developments list. Building areas do not include self storage facilities.

5. Expansion area totals are conceptual estimates that encompass a mix of uses and residential densities.

6. The following potential projects not included in the 2004 Planned and Pending Developments list have been included in the future development totals: (1) 150,000 square feet of industrial development in the Auto Center area; (2) 165,000 square feet of retail development along Wells Road in the Saticoy area; (3) 50,000 square feet of office development on a 3.5-acre site along Ralston Drive. The Auto Center industrial project is included in the Auto Center district; the other two projects are included in the "vacant" category. The square footage associated with these projects has been added to the projections of future growth to provide a "worst-case" analysis of possible future impacts.

Letter 4

COMMENTERS: Carol Schwartz and Demitrius Zeigler, Casden Properties, LLC

DATE: June 14, 2005

RESPONSE:

The commenters state concerns that their project near the northeast corner of the Johnson Drive/North Bank Drive intersection was not reflected in the Draft EIR and note that the development potential for the Johnson Drive corridor identified in the Draft EIR is lower than for their project. The commenters also attach a letter describing their proposal and how it relates to various City development goals and requesting an amendment to the development "allocation" for the Johnson Drive corridor.

It is not the intent of the Draft EIR to identify or analyze the impacts of specific development proposals. As discussed in Section 1.0, *Introduction*, the Draft EIR is intended to meet the requirements of a Program EIR, which is prepared on a series of actions (such as a General Plan) that may be characterized as one large project. By design, a Program EIR is more conceptual in nature than a Project EIR and contains a more comprehensive discussion of impacts, alternatives, and mitigation measures. Once a Program EIR has been prepared, subsequent activities within the program (such as individual development proposals) must be evaluated to determine whether an additional CEQA document needs to be prepared.

The development totals used in the Draft EIR, as reflected in Appendix C of the Draft EIR, should not be interpreted as "allocations" of growth for individual districts, corridors, or neighborhood centers. Rather, they are estimates of the distribution of future growth within the Ventura Planning Area based on direction from the City Council, ongoing development trends in the City, and other factors. The estimates for individual districts, corridors, and neighborhood centers are not intended to serve as growth caps for those areas, but rather, were developed for analytical purposes only in order to estimate the overall effects of projected citywide growth through 2025. In no case do the estimates of projected growth for an individual district, corridor, or neighborhood center reflect the maximum growth potential for that district, corridor, or neighborhood center. Actual growth within each district, corridor, and neighborhood center may be higher or lower than projected in the Draft EIR. Individual developments will need to undergo separate environmental review on a case-by-case basis to determine their specific impacts.

In response to several comments on the Draft 2005 General Plan and Draft EIR, a table will be added to the General Plan that will show the carrying capacity of the total land area for the Plan. This table is intended to show what the total development potential is versus the realistic estimates provided in the original table (May Draft Overview, Table 2, pages 14 &15).

Re: Correction to Assessor's Parcel Number referenced in 2005 General Plan EIR – Page 6-17, paragraph 6.6.1., lines 5 & 6.

I have noticed a typographical error in the 2005 EIR of the Assessor's Parcel Number for my property located at 1456 Alelia Street in Saticoy.

My parcel is incorrectly identified as 90-043-13. The correct APN is 90-143-13.

Two additional APN's should also be referenced. The Southerly extension of Alelia Street has been abandoned by the County of Ventura and the acreage deeded back to myself and the property owner to the West - APNs 90-142-14 & 90-143-17. Please see the enclosed platt map.

Therefor, all four APN's should be referenced in paragraph 6.6.1 as follows: APNs 90-142-11, 90-142-14, 90-143-13 and 90-143-17.

Thank you for your assistance in this matter.

Respectfully,

Charles W. Rogers

Charles W. Rogers
Owner APNs 90-143-13 & 90-143-17

Enclosures:
Platt map
2005 EIR page 6-17

Like 2005 General Plan Scenarios 2-6, this alternative would generally be consistent with most regional land use plans and policies. This alternative would pose the same potential conflict with the Guidelines for Orderly Development associated with Scenario 5, but would not pose the potential conflict with Coastal Act policies pertaining to the preservation of Prime farmland that would occur under Scenarios 2 and 3.

Population and Housing

Population and housing growth would be similar to that of General Plan Scenarios 2-6. The 2025 population is projected to exceed SCAG and Ventura County AQMP forecasts. As with the 2005 General Plan scenarios, implementation of this alternative would be expected to maintain a balance of jobs and housing in the City.

6.6 INTENSIFICATION/REUSE + MINOR MAP CLEAN-UP

6.6.1 Description

This alternative is a variation of 2005 General Plan Scenario 15, the Intensification/Reuse Only scenario. The purpose of this alternative is to address three minor map clean-up issues identified following receipt of City Council direction on the recommended 2005 General Plan land use map. The first of these involves the re-designation of approximately five acres along the south side of Rosal Lane in the unincorporated area of Saticoy (APNs 90-142-11 and 90-043-13) that are designated "Industrial" on the draft General Plan land use map, but are designated "Residential Two Family" in the County of Ventura's Saticoy Area Plan. To achieve consistency with the Saticoy Area Plan, these lots would be redesignated "Residential Medium Density" under this alternative. The second change involves properties located on the Westside between Ramona (north), Simpson Street (south) and straddling Sheridan Way. This map change would include changing the proposed land use designation from low to high density residential to be consistent with the neighborhood and existing uses on the properties. A third change involves properties located in the Simpson Historic District located to the south of Simpson Street in generally the same area. The land use map would be changed from high to medium density, which is consistent with existing development in the Simpson Historic District and would generally allow 2 units per parcel. 90-143-13

Other than the three changes described above, this alternative is identical to 2005 General Plan Scenario 1. An estimated 8,300 residential units are projected to be added through 2025.

6.6.2 Impact Analysis

Other than issues pertaining to land use compatibility (aesthetics, noise, hazards), this alternative's impacts would be identical to those of Scenario 1. Re-designation of the five-acre area in Saticoy may incrementally increase the potential for compatibility conflicts with existing and future industrial uses in the area as properties to the south are designated "Industrial." However, potential conflicts relating to lighting, noise, and hazards can be addressed through appropriate design, including, if necessary, the construction of solid block walls between residential and industrial uses. In addition, it should be noted that the properties along the north side of Rosal Lane, immediately across the street, are designated "Residential Medium Density." As such, developing the site along the south side of Rosal Lane with residential uses

COMMENTER: Charles W. Rogers, Owner APNs 90-143-13 and 90-143-17

DATE: June 20, 2005

RESPONSE:

The commenter notes that the assessor's parcel numbers for the site along the south side of Rosal Lane in Saticoy that would be re-designated "Residential Medium Density" under the "Intensification/Reuse + Minor Map Cleanup" alternative discussed in Section 6.0, Alternatives, are incorrectly identified. In response to this comment, the first paragraph under the "Description" of that alternative on page 6-17 will be amended to read as follows (changes are underlined):

> *This alternative is a variation of 2005 General Plan Scenario 5, the Intensification/Reuse Only scenario. The purpose of this alternative is to address three minor map clean-up issues identified following receipt of City Council direction on the recommended 2005 General Plan land use map. The first of these involves the re-designation of approximately five acres along the south side of Rosal Lane in the unincorporated area of Saticoy (APNs 90-142-11, 90-142-14, 90-143-13, and 90-143-17) that are designated "Industrial" on the draft General Plan land use map, but are designated "Residential Two Family" in the County of Ventura's Saticoy Area Plan. To achieve consistency with the Saticoy Area Plan, these lots would be redesignated "Residential Medium Density" under this alternative. The second change involves properties located on the Westside between Ramona (north), Simpson Street (south) and straddling Sheridan Way. This map change would include changing the proposed land use designation from low to high density residential to be consistent with the neighborhood and existing uses on the properties. A third change involves properties located in the Simpson Historic District located to the south of Simpson Street in generally the same area. The land use map would be changed from high to medium density, which is consistent with existing development in the Simpson Historic District and would generally allow 2 units per parcel.*

This minor text correction does not change the EIR conclusions or result in any significant impacts not identified in the Draft EIR. The change in land use would not create any significant land use conflicts that could not be addressed through site design.

Subj: 2005 General Plan Draft Environmental Impact Report Review Comments

1. A review of the General Plan Draft Environmental Impact Report June 2005, Section 4.13, UTILITIES & SERVICE SYSTEMS, was conducted and resulted in development of the following comments.

A. Page 4.13-1, of the General Plan Draft Environmental Impact Report[1] states "An operational evaluation prepared as part of the 1993 City Water Master Plan provides a detailed analysis of the water system and future needs.", however, the Water System Operational Evaluation & Improvement Program Report[2] findings are not discussed and has not been updated to reflect current conditions of the water system, sources of water supply or the population being served by the water system. A

B. The General Plan Draft Environmental Impact Report does not address: historic or future water consumption by category; the impact of drought conditions on the yield of existing water sources; or the potential future water source requirements. Page 4.13-9 of the General Plan Draft Environmental Impact Report[3] identifies the City of Ventura Historic and Projected Water Production[4] and is based on the 2004Biennial Water Supply Report[5]. The water system analysis contained in the 2004Biennial Water Supply Report[6] does not address: 1) historic or future water consumption by category[7]: 2) the impact of drought conditions on the yield of existing water sources[8]; or 3) the potential future water source requirements[9]. A graph of the annual rainfall data for Ventura Station 66 obtained from the Ventura County Watershed Protection District for the period 1892-2001 is attached for information as Figure 1. The graph shows a trend for above average rainfall began in 1991. B

C

C. Page 4.13-9 of the General Plan Draft Environmental Impact Report [10] identifies the City of Ventura Historic and Projected Water Production[11],. The projected future treated water production requirements are computed from a constant per capita water usage of 0.179 and the expected population being served. There appears to be a discontinuity in the Years 1989-1991 between the per capita water usage data contained in the Water System Operational Evaluation & Improvement Program Historic Water Demand Trends, Table ES-1[12] and General Plan Draft Environmental Impact Report, Historic and Projected Water Production, Table 4.13-8[13]. Chart of the annual per capita water usage contained in 1993 Water Report and 2005 DEIR are contained in Figures 2 and 3. It is recommended this discontinuity in the per capita water usage between the 1993 and 2004 Water Reports be explained in the DEIR.

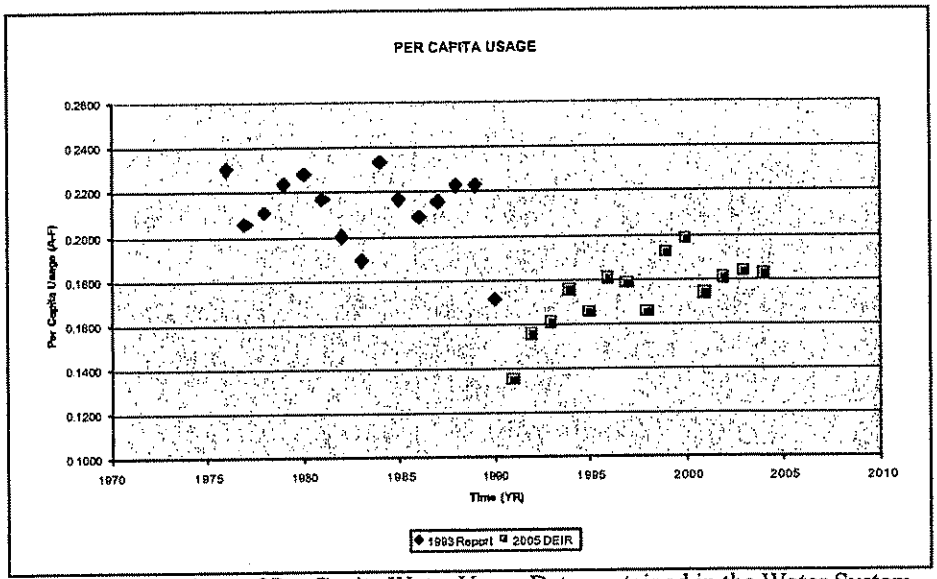

Figure 2 – Comparison of Per Capita Water Usage Data contained in the Water System Operational Evaluation & Improvement Program Historic Water Demand, Table ES-1[14] and General Plan Draft Environmental Impact Report, Historic and Projected Water Production, Table 4.13-8[15].

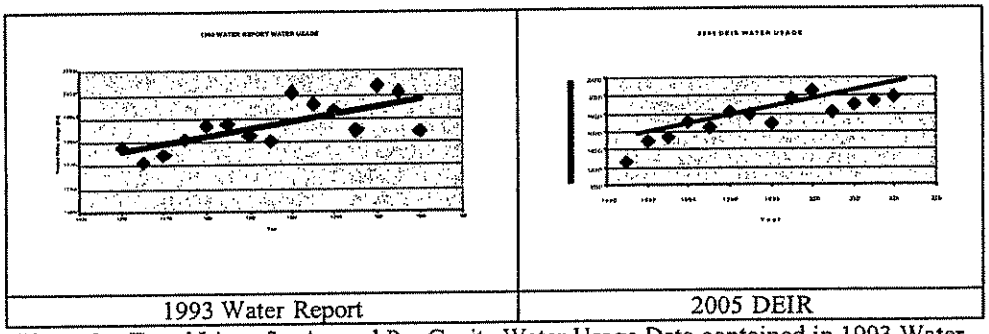

Figure 3 – Trend Lines for Annual Per Capita Water Usage Data contained in 1993 Water Report and 2005 DEIR.

D. Furthermore, a detailed trend analysis of the per capita water usage between the years 1991 and 2004 reveals a increase in 0.0028 A-F per capita per year which is not factored into future treated water requirements and is shown in Figure 4. The General Plan Draft Environmental Impact Report, Projected Water Demand, Intensification/Reuse Only, Table 4.13-15[16] appears to use 0.504 A-F per year water use per unit which equates to a 0.196 A-F per capita per year based on an occupancy of 2.57 persons per dwelling unit. A need for an additional source of water can be expected to meet treated water needs between the years 2020 and 2025 and is shown in Table 1 if the projected annual increase in per capita water usage is used to compute future requirements. The potential requirement for future water sources depends on several factors including the anticipated long-term yield of existing water sources under

Potential Future Water Sources Requirements

The quantity of water needed by the City from new sources depends on several factors, including the anticipated long-term yield of existing water sources under varying weather conditions, potential future water demands in the system, which potential future water sources are implemented, and water quality goals. Even without improving the quality of water provided to the customers, additional water is needed now and in the future just to meet quantity deficits in dry years. Table ES-10 summarizes the water quantity needs for future demand conditions based on potential yields from existing sources only. As shown in the table, water quantity deficits are anticipated in all future dry years, and in average years by 2040. Dry year deficits would be approximately 4,500 acre-feet in 1995 and approximately 7,000 acre-feet per year by 2010. Additional water quantities beyond those indicated would be needed to improve water quality.

Figure 4 - Water System Operational Evaluation & Improvement Program
Potential Future Water Sources Requirements, Page ES-16

E. Page 4.13-9 of the General Plan Draft Environmental Impact Report [18] identifies the City of Ventura Historic and Projected Water Production[19],. The projected future treated water production requirements are computed from a constant per capita water usage of 0.179 and the expected population being served. There appears to be a discontinuity in the Years 1989-1991 between the treated water used data contained in the Water System Operational Evaluation & Improvement Program Historic Water Demand Trends, Table ES-1[20] and General Plan Draft Environmental Impact Report, Historic and Projected Water Production, Table 4.13-8[21]. Chart of the treated water used contained in 1993 Water Report and 2005 DEIR are contained in Figure 5. It is recommended this discontinuity in the treated water requirements between the 1993 and 2004 Water Reports be explained in the DEIR.

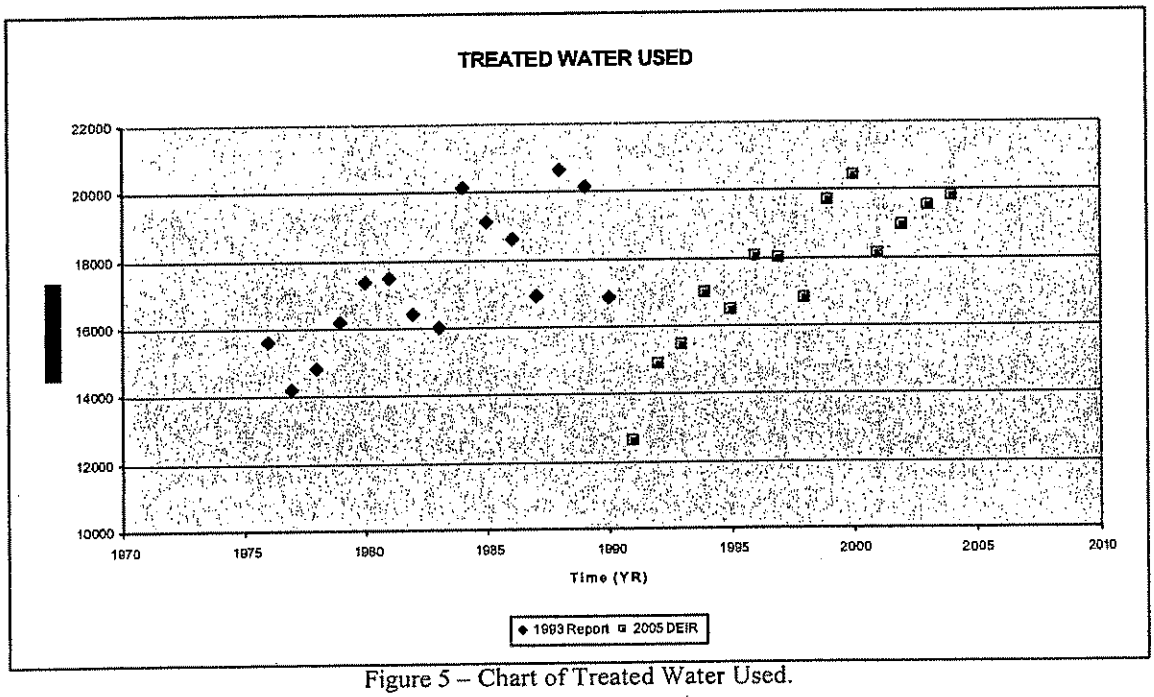

Figure 5 – Chart of Treated Water Used.

1/ Total production is all water produced or delivered from City sources; AF = acre feet.
2/ Untreated water use is oil company and agricultural water use in the North Ventura Avenue area (CMWD direct + Kingston effluent).
3/ Treated water use is total production less untreated water use.
4/ Maximum day demand is based on treated water production (Golf Course Wells + Saticoy Well + Victoria Well + CMWD #2 + Avis MWC + Power effluent + Valley Vista BPS); MGD = million gallons per day.
5/ Peaking factor for maximum day demand is related to average day demand.
6/ Estimated water population is the approximate population served by the water system; this is slightly higher than the population within the City limits (see Table 3.
9): N/A = data not available.
7/ Per capita use factor is treated water use divided by population.
8/ City wide annual rainfall averaged from four rainfall stations: Downtown, Avenue 17, Hall Canyon, and the County Government Center.

Water Loss3/		1267	6.6	3144	13.1	2622	10.9	-186	-.8	1491	6.7
Total Production		19148	100.0	23921	100.0	24089	100.0	22656	100.0	22263	100.0

1/ Data is from City water consumption billing records (AF = acre feet).
2/ Consumption categories are from City billing data base.
3/ Water loss is the difference between total production and total consumption; the 1987 figure of 186 AF is an anomaly due to meter read cycles.

Water System Operational Evaluation & Improvement Program Historic Water Consumption Summary, Table ES-2

TABLE ES-8

POTENTIAL YIELD OF EXISTING WATER SOURCES

Existing Source	Potential Long-Term Yield (acre-feet)[1/] Wet Year	Avg Year	Dry Year	Projected Water Quality (mg/l TDS)[2/]
Ventura River	11,000	6,700	700	660
Lake Casitas[3/]	7,090	7,090	4,960	450
Oxnard Plain Basin[4/]	4,090	4,090	4,090	1,100
Santa Paula Basin	3,000	3,000	3,000	1,000
Mound Basin	6,000	6,000	6,000	2,100
Total	31,180	26,880	18,750	

1/ Potential long-term (year 2010) yield of existing sources per the Long-Term Sources Evaluation study. Some of the existing sources require additional production facilities to provide the potential yields shown. Assumes groundwater safe yields extracted in wet, average, and dry years.

2/ Projected water quality is the average TDS for the past five years, except for the Mound Basin where quality is expected to continue to deteriorate from current levels.

3/ Lake Casitas yield is the City's Stage 2 annual allocation for wet and average years, and Stage 5 allocation (70% of Stage 2 allocation) for dry years.

4/ Oxnard Plain Basin long-term yield (year 2010 and beyond) is 75% of GMA baseline allocation (yield decreases in 5% steps from baseline beginning in 1992).

Water System Operational Evaluation & Improvement Program Potential Yield of Existing Water Sources, Table ES-8

TABLE ES-10

POTENTIAL FUTURE WATER SOURCE REQUIREMENTS
(For Annual Water Quantity Needs Only - Quality Needs Are Not Included)

Study Year	Total Demand[1]	Potential Yield from Existing Sources[2]			Net Supply (Deficit)[3]		
		Wet Yr	Avg Yr	Dry Yr	Wet Yr	Avg Yr	Dry Yr
1995	24,027	31,990	27,690	19,560	7,963	3,663	(4,467)
2000	24,280	31,720	27,420	19,290	7,440	3,140	(4,990)
2010	25,732	31,180	26,880	18,750	5,448	1,148	(6,982)
2040	30,959	31,180	26,880	18,750	221	(4,079)	(12,209)

1/ From Table ES-4 (all values in table are in acre-feet).

2/ From Table ES-8 and including GMA stepped reductions of Oxnard Plain Basin source (5% reduction increments in 1995, 2000, 2005, and 2010). Some of the existing sources require additional production facilities to provide the potential yields shown.

3/ Total existing source capacity less total demand.

Conjunctive Use of Sources

One of the recommendations of the Long-Term Sources Evaluation study is to increase the overall yield of existing water sources by implementing a conjunctive use operating procedure. This procedure would involve utilizing surface waters (Ventura River, Lake Casitas, and SWP) during wet years to the fullest extent possible while letting groundwater sources rest. During dry years when the surface water source yields are reduced, the groundwater sources can be pumped to meet remaining demands. Production facilities for the additional dry year extractions would be required. This approach can also be implemented if desalinated seawater is chosen by conjunctively using groundwater and Ventura River and Lake Casitas water.

Conjunctive use of the City's existing groundwater sources is limited by the requirement to maintain long-term production from the groundwater basins within their safe yields. The total safe yield of existing groundwater sources is estimated to be approximately 13,000 acre-feet per year in the year 2010. The Oxnard Plain and Mound Basins are recommended to be conjunctively used, because both basins have large storage and transmissivity capacities. The Oxnard Plain Basin also has an accounting system in place per the GMA ordinances.

In order for conjunctive use of existing groundwater sources to be feasible, a long-term balance between wet, average, and dry year conditions must occur. Beginning a conjunctive use program after an extended dry period is not recommended, because groundwater levels have been reduced and require several wet years to bring levels back to normal conditions.

Water System Operational Evaluation & Improvement Program Potential Future Water Source Requirements, Table ES-10

Potential Future Water Sources Requirements

The quantity of water needed by the City from new sources depends on several factors, including the anticipated long-term yield of existing water sources under varying weather conditions, potential future water demands in the system, which potential future water sources are implemented, and water quality goals. Even without improving the quality of water provided to the customers, additional water is needed now and in the future just to meet quantity deficits in dry years. Table ES-10 summarizes the water quantity needs for future demand conditions based on potential yields from existing sources only. As shown in the table, water quantity deficits are anticipated in all future dry years, and in average years by 2040. Dry year deficits would be approximately 4,500 acre-feet in 1995 and approximately 7,000 acre-feet per year by 2010. Additional water quantities beyond those indicated would be needed to improve water quality.

Water System Operational Evaluation & Improvement Program Potential Future Water Sources Requirements, Page ES-16

Table 2-3
Population and Housing Projections

	2004 Levels[a]	2025 Estimates		Change from 2004-2025	
		0.88% Annual Growth	1.14% Annual Growth	0.88% Annual Growth	1.14% Annual Growth
Population	104,952	126,153	133,160	21,201	28,208
Housing Units[b]	40,880	49,138	51,867	8,258	10,987

[a] *Source: California Department of Finance, City/County Population and Housing Estimates, 1/1/2004. Note that 2004 data are used as the baseline because 2005 data were not available when the EIR was initiated in Fall 2004; 2005 population and housing estimates are provided in Table 3-1 in Section 3.0, Environmental Setting.*

[b] *Housing unit estimates assume that the current ratio of 2.57 persons per household remains constant through 2025. In reality, the number of persons per unit could go up or down, depending upon housing costs, the types of housing built in the City, population growth, and other factors.*

General Plan Draft Environmental Impact Report, Table 4.13-15

Table 1: Historic and Projected Water Source Production and Supply Availability (acre-feet)

Year	Surface Water		Ground Water				Total Water Supply (7)
	Ventura River (1)	Lake Casitas (2)	Mound Basin (3)	Oxnard Plain Basin (4)	Santa Paula Basin (5)	Saticoy Yard Well (6)

Projected Supply							
2004	6,700	8,000	4,200	4,600	3,000	0	26,500
2009	6,700	8,000	4,200	4,400	3,000	2,262	28,562
2014	6,700	8,000	4,200	4,100	3,000	2,262	28,262

Notes:

1. Ventura River future supply is the average long-term production based on analysis of the period from 1939 to 1982 per the Evaluation of Long Term Alternative Water Sources, James M. Montgomery, June 1993.
2. Includes the City's total past Casitas purchases in addition to raw water and oil recovery users; projected supply is the City's current in-district use.
3. Mound Basin future supplies are 75 percent of well pump rated output.
4. Oxnard Plain Basin future supply is based on GMA restricted extraction limits rounded to nearest 100 AF.
5. Santa Paula Basin future supply is the pumping allocation of the Stipulated Judgement.
6. Saticoy Yard Well future supply is 75 percent of design maximum pump output capacity.
7. Includes treated and raw water; excludes reclaimed water supply.

COMMENTER: Daniel Cormode

DATE: June 19, 2005

RESPONSE:

Response 6A

The commenter states that the Draft EIR does not provide updated information on the water system from the 1993 Water Master Plan. The current water system is described on pages 14.13-1 through 4.13-7 based on updated information provided by City Public Works Department staff. The 1993 Water Master Plan is incorporated by reference in the Final EIR.

Response 6B

The commenter states that the Draft EIR does not address historic or future water source by category, the impact of drought conditions on the yield of existing water sources, or potential future water source requirements. Detailed historic water consumption by land use category is not available. Detailed future consumption by area and by land use category is provided in Tables 4.13-15 through 4.13-20 for Scenarios 1 through 6, respectively. Potential sources of supply are shown in Table 4.13-7 and the entire discussion under Impact U-1 compares projected future water demand to available supply. The Biennial Water Supply Report included in Appendix F includes discussion of various City programs that augment City supplies under drought conditions. A detailed analysis of available water supply during various drought conditions will be undertaken as part of the City's Urban Water Management Plan, which must be updated in years ending in zero and five. Demand projections from the various scenarios were, however, compared to those of the 2000 UWMP and all were below those projections.

Response 6C

The commenter suggests that the Draft EIR estimates future water demand based on a constant per capita rate and notes that per capita water consumption has risen since 1991. The projections of future water demand contained in Section 4.13 of the Draft EIR are not based upon a per capita rate, but rather are based upon water demand factors for the various uses anticipated under the 2005 General Plan. Therefore, the fact that per capita consumption may have increased slightly does not affect the water demand projections or conclusions regarding the availability of water supply.

Future water demand was not projected based on a per capita rate, but rather was projected based on typical rates for the uses anticipated to be developed through 2025. Therefore, the current per capita rate from the Biennial Report (which includes all water demand associated all uses) cannot be compared only to the demand associated with future residential development. Instead, it should be compared to the entire projected demand associated with all uses. For comparison purposes, the increase in annual water demand for Scenario 6 is estimated at 7,611 acre-feet, while the projected population increase for that scenario is 28,208

(as shown in Table 2-3 in Section 2.0, *Project Description*). This equates to a per capita rate of 0.269 acre-feet per person (7,611/28,208). Other scenarios would yield similar per capita consumption.

The projected per capita rate of 0.269 acre-feet per year is about 50% higher than the current citywide per capita rate of 0.179 acre-feet per year. Therefore, water demand associated with future development has been projected based upon a conservative estimate of per capita water consumption. The estimates of overall citywide water demand in 2025 are conservative not only because of the high per capita rate assumed, but also because the baseline citywide water demand assumed for all scenarios is the highest water use from the past five years (21,500 acre-feet per year).

Subj: 2005 General Plan Draft Environmental Impact Report Review Comments

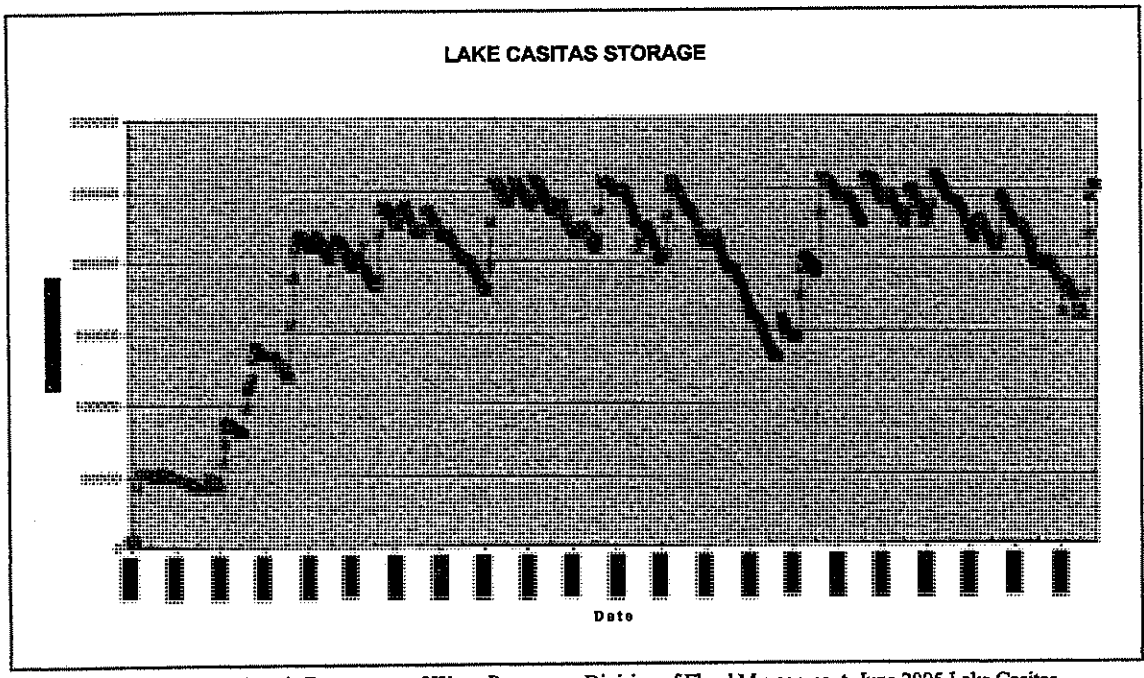
Ref: (a) Daniel Cormode ltr re: 2005 General Plan Draft Environmental Impact Report Review Comments dated 19 June 2005

1. A review of the General Plan Draft Environmental Impact Report June 2005, Section 4.13, UTILITIES & SERVICE SYSTEMS, was conducted and comments were contained in reference (a)/

2. Additional comments are forwarded relative to review of the subject document.

3. The subject document does not adequately address the impact of a prolonged drought and the adequacy of water resources to supply the required water under those conditions.

4, During the April 1986 through January 1991, the volume of water stored in Lake Casitas decreased by 48% from 254,800 A-F to 129,173 A-F and is shown in Figure 1.

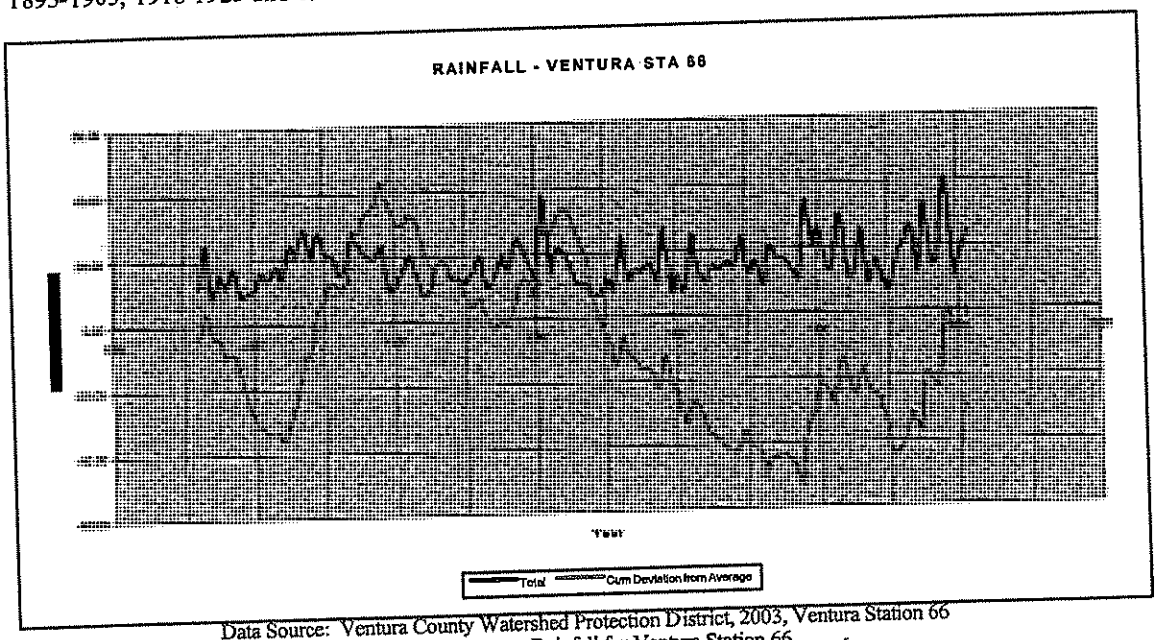


Data Source: California Department of Water Resources, Division of Flood Management, June 2005 Lake Casitas

Figure 1 – Lake Casitas Water Storage (A-F)

1

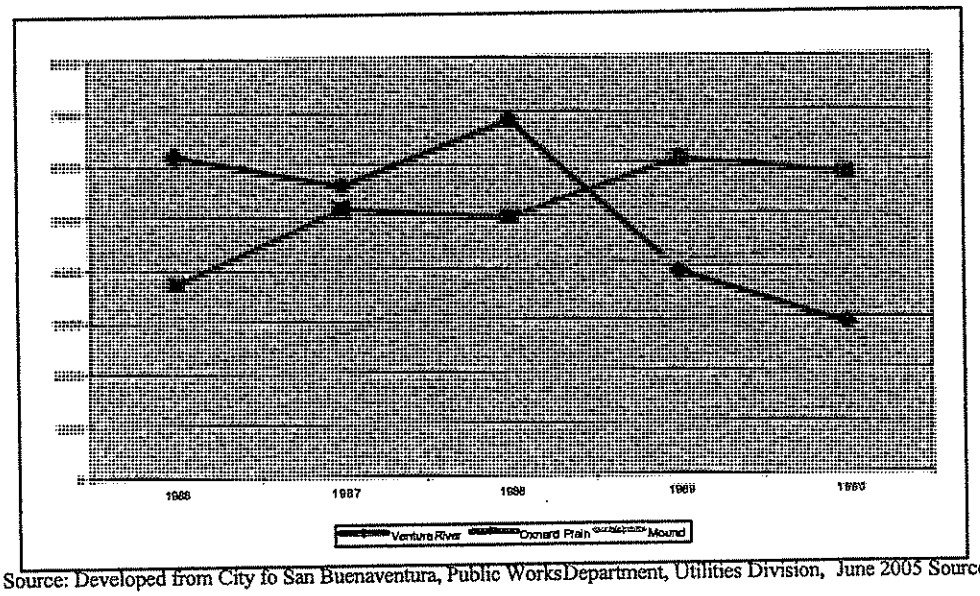
5. It is highly probable that additional droughts can be identified from the examination of rainfall data for the years 1891-2001 for Ventura Station 66 shown in Figure 2. Droughts of 8 years probably occurred during the years 1893-1905, 1918-1925 and 1944-1951 and a 5 year drought occurred during 1986-1990.



Data Source: Ventura County Watershed Protection District, 2003, Ventura Station 66

Figure 2 – Annual and Cumulative Deviation from Average Rainfall for Ventura Station 66

6. Drought conditions also impact the ability of the City to pump water from the Ventura River basin. And increase the load on the Oxnard and Mound aquifers and i9s shown in Figure 3. The DEIR does not discuss the ability of the aquifers to supply water during prolonged drought conditions.



Data Source: Developed from City fo San Buenaventura, Public WorksDepartment, Utilities Division, June 2005 Source Data

SOURCE PRODUCTION - DATA IN ACRE FEET					
APRIL 1986 - FEBRUARY 1991

COMMENTER: Daniel Cormode

DATE: June 23, 2005

RESPONSE:

The commenter states an opinion that the Draft EIR does not adequately address the impact of a prolonged drought and the adequacy of water resources to supply the required water under those conditions. As stated in responses to Letter 6 (the commenter's June 19, 2005 letter), the Biennial Water Supply Report included in Appendix F discusses various City programs that augment City supplies under drought conditions. The impact of drought on the ability of the water supply system, including the management of surface and groundwater storage, is addressed in the City's Urban Water Management Plan, which is updated in years ending in zero and five. It should also be noted that any future development of more than 500 dwelling units would also be subject to the requirements of Senate Bills 221 and 610, which require a Water Supply Assessment and Verification Report that must address drought conditions.

Subj: 2005 General Plan Draft Environmental Impact Report (DEIR) Review Comments

Ref: (a) Daniel Cormode e-mail of 20 May 2001

1. The subject DEIR identifies impacts to fire services, police services, traffic; circulation, storm drain systems and schools which will required additional funding. Some of those mitigation measures will require public finding as they will benefit the general population and other mitigation measures having direct impact as a result of the development require funding by developer. These magnitude of these economic impacts do not appear to be discussed in either the proposed 2005 General Plan nor the subject DEIR.

2. It is recommended discussion of the following relevant economic/fiscal elements identified in the State of California General Plan Guideline be adequately addressed in the subject DEIR and discussion should be contained therein. Those elements include discussing:

a. Fiscal Stability, including existing and potential revenue resources, costs of services and facilities and economic forecasts.

b. Budgetary Structure, including: existing outlays to departments, services and comparable revenue recoupment mechanisms and levels; and comparison of facility and services versus efficiency of providing the programs.

3. For additional information, please contact me by telephone at 805-647-4063 or by e-mail at dcormode@sbcglobal.net.

Subj: Economic Development Issue Paper
Date: 5/20/01
To: merrymanwcc@aol.com
CC: sandmand@pacbell.net
BCC: ttanda@pacbell.net

Margaret,

At the 16 May 01 CPAC Meeting, an Economic Development Issue Paper for the City of San Buenaventura Comprehensive Plan was presented to members of the Comprehensive Plan Advisory Committee (CPAC).

The presentation stated that Economic Development Goals and policies can assist the City in achieving its overall Vision by:

- Guiding economic revitalization in key areas of the community;
- Presenting new economic options for development at key entry points to the City;
- Promoting the City's economic potential to achieve regional prominence, strengthen the economic base of the City, and stimulate other economic investments in the community;
- Seeking to minimize sales tax "leakage" to surrounding areas and increase fiscal benefits;
- Providing a healthy climate to encourage economic investments in the community;
- Emphasizing training and job opportunities for local workers;
- Providing a choice of housing opportunities commensurate with job growth;
- Maintaining a high level of public services and infrastructure for residents and businesses; and
- Actively pursue opportunities for a more balanced economic base in all focus areas.

What is missing from both the above presentation and the Vision, are identification, and potential cost if applicable, of:

- Key areas of the City requiring revitalization;
- The type of revitalization required for each key area;
- Specific economic options;
- Key entry points to the City;
- The economic potential of the City through an economic model or other measurable statistical analysis tool;
- The ability for the City to sustain itself economically, both currently and in the future, based on City infrastructure maintenance and support requirements;
- The climate needed to encourage economic investment in the City:
- Training and job opportunities for local workers;
- Types of housing opportunities available;
- Areas of current/expected job growth;
- Current/Future public services and infrastructure requirements by both residents and business; and
- opportunities for a more balanced base.

Furthermore, I feel the data contained in the presentation did not clearly relate to the following relevant economic/fiscal elements identified in the State of California General Plan Guidelines:

- Business retention and development by sector;
  - Identification of the needs, limitations and alternatives to existing businesses;
  - Identification of potential improvements and strategies which would encourage business retention;
- Employee Development

- Areas of employment growth, shortages and needs;

- Business Recruitment:
  - Relevant issues concerning the types, number, and success of existing and potential recruitment strategies.
  - Identification of thoise businesses which would be compatible with the objectives of the general plan and consistent with the carrying capacity of the land and infrastructure.

- Fiscal Stability
  - Includes existing and potential revenue resources, costs of services and facilities and economic forecasts.

- Budgetary Structure
  - Existing outlays to departments, services and comparable revenue recoupment mechanisms and levels.
  - Comparison of facility and services versus efficiency of providing the programs.

Recommend the above concerns be either placed on the CPAC meeting agendas for discussion or forwarded on to City Staff for action as appropriate.\

R/

Daniel Cormode
805-647-4063

- **Storm Drain System** – potential impacts due to system deficiencies in older parts of the City, including Ventura Avenue corridor and Downtown district (all scenarios); this impact can be mitigated through development of funding mechanisms to address system deficiencies

- **Fire Protection Service** – potentially significant impacts to fire protection service in the North Ventura Avenue area (Scenarios 2-6); this impact can be mitigated through development of a new fire station in the North Ventura Avenue area

- **Police Protection Service** – potentially significant impacts relating to the need for new facilities (all scenarios); this impact can be mitigated through expansion of facilities as necessary

- **Traffic Performance Standards** – potentially significant impacts to roadway intersections (Scenarios 1, 3, 4, 5, and 6); impacts can be mitigated through policies and actions directing implementation of feasible system improvements as needed

Impact HWQ-2 Development accommodated through the year 2025 under any of the land use scenarios under consideration for the 2005 General Plan would increase the amount of impervious surfaces within the Planning Area, potentially increasing surface runoff in areas where existing storm drain systems are deficient. This is considered a Class II, significant but mitigable, impact for all scenarios.	**HWQ-2 Additional Drainage Actions.** The following actions shall be added to the 2005 General Plan to address existing storm drain system deficiencies: • Develop a financing program for the replacement of failing corrugated metal storm drain pipes in the City. • Adopt assessment districts or other financing mechanisms to address storm drain system deficiencies in areas where new development is anticipated and deficiencies exist (e.g., Downtown district, Ventura Avenue corridor, and Harbor district).	Less than significant for all scenarios.

Impact PS-1 Development under any of the 2005 General Plan land use scenarios would increase the City's population and density of development, and introduce new development into high fire hazard areas. This would increase demand for fire protection services and potentially create the need for new fire protection facilities. With proposed General Plan policies, impacts for Scenario 1 are Class III, less than significant. Impacts for Scenarios 2-6 are considered Class II, significant but mitigable.	**PS-1(a) North Avenue and Western Cañada Larga Expansion Areas.** The following action shall be added to the 2005 General Plan if any land use scenario that includes possible future development of the North Avenue expansion area or the Western Cañada Larga expansion area is adopted: • Add a fire station in the North Avenue area as determined necessary by the Ventura Fire Department. Consider an assessment district for the North Avenue area to fund a new station. **PS-1(b) Poinsettia Expansion Area.** The following action shall be added to the 2005 General Plan if any land use scenario that includes possible future development of the Poinsettia expansion area is adopted: • Include a fire station site in any future specific plan for the Poinsettia expansion area if determined necessary by the Ventura Fire Department.	Less than significant for all scenarios.
Impact PS-2 Possible future development under Scenarios 1-6 would increase the City's population and density of development, thereby resulting in the need to construct new facilities in order to provide effective police protection service. Impacts would be Class II, significant but mitigable, for any of the six land use scenarios.	**PS-2 Police Protection Service.** The following actions shall be added to the 2005 General Plan: • Establish a new Downtown storefront to meet the needs of the growing Downtown population • Expand the Police Department headquarters as necessary to accommodate staff growth.	Less than significant for all scenarios.
Impact PS-3 Projected enrollment growth under the 2025 General Plan would exceed the capacity of existing schools within the Ventura Unified School District, thereby creating the need to construct additional facilities. However, payment of State-mandated school impact fees is presumed to provide funding for needed new school facilities. Therefore, although available land for new schools may be limited (particularly for Scenarios 1 and 5), impacts to schools would be reduced to a Class III, less than significant, level for any of the six land use scenarios.	None required, but the following are recommended: **PS-3(a) School Coordination.** The following action should be added to the 2005 General Plan: • Coordinate with the Ventura Unified School District to ensure that school facilities can be provided to serve new development. **PS-3(b) Expansion Area Schools.** The following action should be added to the 2005 General Plan if any land use scenario that includes an expansion area is adopted: • Require expansion area specific plans to be prepared in coordination with the Ventura Unified School District and set aside land needed for new school facilities.	Less than significant for all scenarios.

Impact TC-1 Growth accommodated under any of the General Plan land use scenarios could result in deficiencies to the local circulation system based on recommended level of service standards. The number of locations that could have deficiencies based on the projected growth scenarios ranges from one (for Scenario 1) to four (for Scenarios 2 and 4). Feasible improvements are available to address all projected deficiencies for Scenarios 1, 3, 4, 5, and 6; therefore, impacts associated with those scenarios are considered Class II, significant but mitigable. For Scenario 2, implementation of feasible improvements would not achieve performance standards at the Johnson Drive/North Bank Drive intersection. The impact at that location is considered Class I, unavoidably significant, for Scenario 2.	To ensure that impacts are addressed and that the improvements identified in this EIR (or other feasible improvements that achieve the same objectives) are identified, the following measure is required: **TC-1 Additional Circulation Action.** The following action shall be added to the 2005 General Plan to ensure that traffic impacts of future developments are addressed and mitigated: • Require project proponents to analyze traffic impacts and implement mitigation as appropriate prior to development. Depending upon the nature of the impacts and improvements needed, mitigation may either consist of implementing needed physical improvements, contributing "fair share" fee toward implementation of needed improvements, or some combination thereof.	Less than significant for Scenarios 1, 3, 4, 5, and 6. Unavoidably significant at Johnson Drive/North Bank Drive intersection for Scenario 2.

Letter 8

COMMENTER: Daniel Cormode

DATE: June 20, 2005

RESPONSE:

The commenter states an opinion that the Draft EIR should include economic and fiscal analysis relating to increased demand for police and fire service, and transportation and storm drain infrastructure. It is not the EIR's purpose to discuss environmental or fiscal effects. The purpose of the EIR is to identify and, when possible, mitigate potentially significant environmental effects, which generally relate to physical changes to the environment. Section 15131 of the *CEQA Guidelines* states that "economic or social effects of a project shall not be treated as significant effects on the environment."

Subject: RE: EIR

Hello Charles:
I understand that granny flats is the vernacular way of describing a guest house and even is used to describe second units. My understanding is that you are asking about second units.... under the law it has this new name.. People often the two. Two Second units are exempt from CEQA under State statute. the second point is that both second units and "granny flats "
do not have an impact separate and apart from any other population-- so the answer is yes, the City has taken them into account with our population projections. I will forward you to our consultant if you are asking for more detailed information.
Have a great day.

Subject: EIR

Has the EIR made any provision for the impact of the Granny Flats that have been included in the general plan? Since the implementation of the program will be impacted by the city's understanding of the resources required to build the flats, has a sensitivity analysis been done concerning alternate ways to implement the plan. Granny flats can create a lot of problems in neighborhoods with limited parking. Since residents are often using their garage for storage rather than their cars, just because a house has a garage does not mean that there is adequate parking. Since this issue can create a lot of legal issues between neighbors, how ill disputes be resolved without burdening the courts?

Letter 9

COMMENTER: Charles Spraggins

DATE: June 26, 2005

RESPONSE:

The commenter asks whether the EIR has made any provision for "granny flats" and how disputes about parking associated with these units will be resolved. The EIR analysis assumes that up to about 300 second units will be built in the City through 2025, or about 15 units per year for 20 years. Therefore, the overall citywide impact of adding second units has been accounted for in the EIR. Any analysis of the impacts of individual second units would be speculative as the nature and magnitude of impacts would depend upon where such units are built. In any event, it should be noted that State law allows for the construction of second units in certain instances regardless of whether or not the proposed 2005 General Plan is adopted.

SUBJECT: COMMENTS TO THE DRAFT EIR

Dear Ms. Gialketsis:

We have reviewed the Public Review Draft Environmental Impact Report ("DEIR") and respectfully submit the following comments regarding the development potential identified for the Johnson Drive Corridor for City decision makers' consideration. We are concerned that the Development Potential identified in the DEIR of 150 residential units, 50,000 square feet of retail space and 20,000 square feet of office space appears to considerably understate the potential for this area.

We feel that a greater level of development should be encouraged in the Johnson Drive Corridor to better support the City's smart growth goals, and other sustainable development policies, especially with respect to the residential component. We believe that future intensification and redevelopment in the Johnson Drive Corridor, combined with future new development on available infill sites, makes the stated Development Potential in the Corridor insufficient. It is quite likely that the projected thresholds for residential and non-residential development described in the DEIR would be quickly realized on the two remaining undeveloped sites in the Corridor (both located at the intersection of Johnson and North Bank Drives). We contend that significantly increasing the intensity of residential development in the Johnson Drive Corridor would support the City's Smart Growth goals and encourage desirable development forms in this very important "gateway" corridor. Intensifying the residential development potential in the Johnson Drive Corridor would:

- *Preserve open space, farmland, natural beauty and critical environmental areas.* The Johnson Drive Corridor is adjacent to the farmland of the Serra Expansion Area being considered in the Draft EIR for future development and expansion of the City. By intensifying the development in this existing Corridor, it forestalls the development of nearby agricultural areas.

- *Foster distinctive, attractive communities with a strong sense of place.* The Johnson Drive Corridor lacks a cohesive focus or image. The addition of a substantial, high-quality housing component would support a more diversified base of commercial establishments to better serve the corridor and the neighboring communities.

- *Mix land uses.* Smart Growth encourages a mix of land uses both vertically and horizontally. By introducing a significant component of residential units to this commercial corridor, existing businesses can benefit from the stabilizing effect of this sizeable, adjacent customer base, while residents benefit from proximity to services and stores.

- *Create walkable communities.* By encouraging the development of a substantial number of residential units in this corridor, we increase the opportunity for local businesses to be supported by walk-in customers. Residents will be able to walk to the movies or the nearby shops and make use of the Linear Park which runs along the perimeter of the Corridor.

- *Create a range of housing opportunities and choices.* Because of the generally commercial nature of the corridor, a significant amount of housing would be an appropriate infill use. For example, rental product in this area would provide a much needed alternative to the for-sale product available further north on Johnson Drive.

- *Provide a variety of transportation choices.* Intensifying the residential development in the Corridor allows an increased number of residents to benefit from proximity to the South Coast Area Transit (SCAT) bus route along Johnson Drive, Ventura Intercity Service Transit Authority (VISTA) bus stops, and easy access to the Freeway. By locating more potential commuters adjacent to the 101 Freeway, the impact of these new households on local traffic patterns would be reduced.

We understand that the City intends for the projections included with the DEIR to be assumptions for analytical purposes only, and that the Districts, Corridors and Expansion Areas could accommodate more development based on market forces and other factors. We acknowledge City staff's assertion that the Development Potential described in the DEIR is not intended as a future "cap" on development; however, we are concerned that the described Development Potential would later be perceived by members of the public (or even the City Council) as a limit to growth and, thus, constrain new residential development in this corridor otherwise ripe for infill/intensification. We fear this is a real possibility since the DEIR indicates that projected City growth was distributed among the various corridors and districts in the City "based on the development potential of each growth district and corridor and direction from the community, CPAC, Planning Commission and City Council on where growth in the community should be encouraged." Even clear language qualifying the empirical assumptions, as provided in

the footnotes to "Appendix C" of the DEIR, may do little to change the perception that the Development Potential projections are not targets or limits.

Equally concerning to us is the anticipated relationship among the DEIR, Draft General Plan and forthcoming Development Code, such that the same assumptions and projections used solely for analytical purposes in the DEIR (such as residential development potential) could become policy through the creation of the formal Development Code. In other words, those projections used solely for analysis in the Draft General Plan and DEIR could seriously limit future development opportunities if adopted into ordinance with the Development Code if the zoning density designations are derived from these figures. This could have the unintended consequence of turning the otherwise "analytical projections" into local law.

As a result of the above considerations, we respectfully recommend that the residential development potential in the Johnson Drive Corridor be revised substantially upward to accommodate the appropriate scale and quality of future housing in this key infill Corridor.

Letter 10

COMMENTERS: Carol Schwartz and Demitrius Zeigler, Casden Properties, LLC

DATE: July 7, 2005

RESPONSE:

The commenters re-state concerns about the amount of development assumed in the Draft EIR for the Johnson Drive corridor and request that the amount of development assumed for the Johnson Drive corridor be revised upward. These concerns are addressed in the response to Comment Letter 4. As the commenters acknowledge, the growth estimates included in the Draft EIR for all districts, corridors, and neighborhood centers are assumptions to be used for analytical purposes. These do not represent growth caps or restrictions and do not limit the ability of the City to approve individual projects that include more units or square footage than have been assumed in the EIR analysis. As such, there is no reason to adjust the growth estimates shown in the Draft EIR. The specific impacts of individual development projects will need to be addressed on a case-by-case basis.

In response to several comments on the Draft 2005 General Plan and Draft EIR, a table will be added to the General Plan that will show the carrying capacity of the total land area for the Plan. This table is intended to show what the total development potential is versus the realistic estimates provided in the original table (May Draft Overview, Table 2, pages 14 &15).

Subject: **Response to the Draft Environmental Impact Report for the 2005 Ventura General Plan**

On behalf of the partners of the Howard and Howard Ranch, and also, of all the farmers in the Serra area, I would like A to take this opportunity to commend both Staff and the Consultants for a remarkable achievement in producing this EIR on the 2005 Draft Ventura General Plan. Having been an active citizen participant over the course of the past 5 years of this process, I am particularly gratified that so much attention was given to the issues of agriculture in the Ventura urban environment, and to the Serra area in particular.

We understand that Scenario 1 – Intensification/Reuse is the first priority of the General Plan and that further discussion of the potential expansion areas, identified as Scenarios 2-6, will be postponed until after the adoption and ratification of both the General Plan and the EIR has occurred on August 8th. As owners of commercial agricultural land within the Serra area, we support this approach. However, we also agree with the statement in the General Plan (page 3-10) that "even the most successful effort to achieve community planning goals through infill may need to be supplemented at some point by expanding into areas outside the city limits."

The Draft EIR has included the Serra area in two of the potential growth expansion scenarios, Scenario 2 (Intensification/Reuse + North Avenue + Olivas + Serra) and Scenario 4 (Intensification/Reuse + North Avenue + Serra). We are also aware that Staff has recommended "the North Avenue and Serra expansion areas as the top priority for development if future growth to the year 2025 cannot be met through infill development alone." (Attachment D – Long-Term Potential Expansion Strategy to the General Plan). We strongly support their recommendation.

This response to the Draft EIR addresses several major concerns, contradictions, and what we believe to be errors in the content of the document, particularly as they affect the discussion of the Serra area. These points are as follows:

LACK OF CONSISTENCY IN THE MAPS (FIGURES) INCLUDED IN THE DRAFT EIR SHOWING THE SERRA AREA

The First Assembly of God Church site at the corner of Montgomery Avenue and Bristol Road B

In November, 1999, this 25.59-acre parcel was removed from SOAR restrictions and pre-zoned to an R-1 Single Family zone with a subzone of R-1-1AC with the passage of Measure C the "First Assembly of God Land Initiative." (See Appendix F, Draft General Plan). In early 2004, the church submitted plans for the development of the site to the Community Development Department. Those plans, proposed to be built in several phases, include at least seven sports fields, a large church sanctuary, multiple other church buildings, two maintenance buildings, two concession buildings, an amphitheater, picnic areas, parking areas, and a jogging track. Although no further action has been taken by the church to proceed with this development, the plans are included in the City's Pending Project list.

Section 2.5.5 b. (pg. 2-31) of the Draft EIR states, "Currently planned and pending projects were taken from the City's Pending Projects list. These were assumed to occur".

Despite this stated assumption, only seven maps out of a total of 36 maps showing the Serra Expansion Area correctly show the First Assembly of God Church site removed from the Serra Expansion Area. One map includes the parcel as outside the City Limit boundaries (Figure 2-9) and is correct. Two other maps show this site as continuing in agriculture, so are possibly correct, despite the plans to urbanize this land in the near future. The remaining 26 maps erroneously include this parcel in the Serra Expansion Area and contradict the Draft's stated working assumptions and methodology of assuming pending projects to occur. Figure 4.2-3 (Greenbelts, Land Conservation Act Contracts, SOAR Designated Lands, and Hillside Voter Participation Areas) is particularly inaccurate, given that the church property has not been under SOAR since 1999. (Specific details of these maps are given below.)

On several occasions since 2000, I have requested the Community Development Department to change their maps to accurately reflect this change in the Serra area. I was assured that the General Plan would reflect this change: most maps presented in both the Draft General Plan and the Draft EIR do not. We believe that no accurate future growth planning of this area can be accomplished without an accurate report of the extent to which urban uses have and are encroaching upon commercial farmland under SOAR restrictions in Serra. We respectfully request that all maps in both the Draft General Plan and the Draft EIR be corrected to accurately depict the First Assembly of God Church site.

Maps *CORRECTLY* showing Serra *WITHOUT* the First Assembly of God Church site
(These maps are correct)

Figure 2.8 (page 2-27) Scenario 6 – Intensification/Reuse + No. Avenue + Poinsettia

Maps Showing 1st Assembly of God site in agriculture despite "Assumed" Development (These maps may be correct)

Figure 4.2-1 Lands in Agricultural Use
Figure 4.2-2 Important Farmlands

All Other Maps in the Draft EIR Showing the Serra Area *INCORRECTLY INCLUDE* the First Assembly of God Church site

VUSD Property (South of Ralston where it meets the Serra Area Agricultural Land) C

This ten-acre parcel is owned by the VUSD and is therefore under no SOAR restrictions. It can be developed at any time. Curiously, it appears on only one map in either the Draft General Plan or the Draft EIR as separate from the rest of the agricultural lands in the Serra Potential Expansion Area.

Figure 4.12-5 – Pedestrian System includes this parcel as a school-owned property, nestled in a corner of the Serra Potential Expansion Area (see the lilac colored square under the letters EX.)

More curious still, this area does not even appear as a school site on the following map Figure 4.11-3 –Public Schools and Libraries.

Figure 4.2-3 – Greenbelts, Land Conservation Act Contracts, SOAR Designated Lands, and Hillside Voter Participation Areas, inaccurately shows this area to be part of SOAR Designated Lands. It is not and has never been under SOAR restrictions.

Our concerns regarding this property are similar to those we have with the presentation of the 1st Assembly of God site as being part of the Serra Potential Expansion Area. Again, we believe that accurate reporting of the land designations and uses in this area are vital to responsible future growth planning. We respectfully request that all maps in both the Draft General Plan and the Draft EIR be corrected to accurately depict the VUSD property in the Serra Area.

TRANSPORTATION AND CIRCULATION – SECTION 4.12 D

This section of the Draft EIR includes a number of errors and omissions, as well as some proposed "roadway improvements" that directly contradict a primary goal of the 2005 General Plan "to protect our hillsides, farmlands and open spaces". Below is a discussion of those areas of particular concern, including the widening of Montgomery and Ramelli Avenues, the extension of Kimball Road and Ralston Street, and proposed Class II bikeways, any and all of which will remove farmland from the Serra Potential Expansion Area.

Widening of Ramelli and Montgomery Avenues

Ramelli Avenue borders existing SOAR farmland on the northwest section of the Serra Potential Expansion area and Montgomery Avenue borders existing SOAR farmland on the northeast section of Serra.

Common sense might dictate that both of these roads be widened as a consequence of increased urban development in the area, specifically that of the Community Park and the First Assembly of God Church site. However, if these roads are widened it will necessitate removing farmland currently under SOAR restrictions for the purpose of building the road improvements. These two roads will take land from three of the five remaining farmers in the Serra area. Hence, any discussion of changes to Ramelli and/or Montgomery is of great concern to those of us who own farmland in Serra.

Both the Draft General Plan (Figure 4-3 Roadway Classification Plan) and a number of maps in Appendix E graphically show the City's intention to widen both of these roads, under each and every scenario presented in the EIR. Yet, the EIR does not mention these roadway improvements anywhere else in the document, either in the text or in any table in the EIR or Appendix E to the EIR.

It should be noted that unless the Serra Potential Expansion Area is selected for growth expansion, the widening of Ramelli and/or Montgomery Avenues would be in direct conflict of the stated goal to "protect and preserve farmland". In the case of these two roadway improvements, farmland would be removed from production not only for the road itself, but also for any buffer that might be required by the County Agricultural Commissioner and the City. In addition to actual farmland lost from production, the additional encroachment of urban traffic in this area will only serve to exacerbate already serious ag/urban conflict issues.

It is impossible to know whether these the maps, showing the widening of these roads, have been printed in error, or whether there have been multiple omissions in not including these roadway improvements in the various tables in the Draft EIR and Appendix E to the Draft EIR. Regardless, this needs to be clarified and corrected before the final approval and ratification of this document. We respectfully request that this be done.

Table 4.12-8	Scenario 3	Appendix E – Table 3-8 (pages 3-28,29)
Table 4.12-10	Scenario 4	Appendix E – Table 3-11 (pages 3-39,40)
Table 4.12-12	Scenario 5	Appendix E – Table 3-14 (pages 3-51,52)

Extensions of Kimball Rd. and Ralston St. in Scenario 5 (Intensification/Reuse + No. Avenue + Western Canada Larga)

E

The discussions of Scenario 2 (Intensification/Reuse + North Avenue + Olivas + Serra) and of Scenario 4 (Intensification/Reuse + North Avenue + Serra) include a Kimball Road extension from Telephone Road to North Bank Drive and a Ralston Street extension from Ramelli Avenue to Montgomery Avenue. Certainly, if either of these two scenarios is selected for future growth expansion, these two road extensions will be crucial to a well-planned development of the Serra area.

Discussion for Scenario 5 (Intensification/Reuse + North Avenue + Western Canada Larga), however also anticipates that new roadway links would include a "Kimball Road extension from Johnson Drive to Bristol Road" and a "Ralston Street extension from Ramelli Avenue to Montgomery Avenue" (Section 4.12 Scenario 5, page 4.12-63). We believe this to be an error for the following reasons:

1. A Kimball Road extension from Johnson Drive to Bristol Road would transect farmland in Serra that is supposed to remain in farmland under Scenario 5 until at least 2025.

2. The Transportation and Circulation Element of every General Plan since the early 1970's has included an extension of Kimball Road to Bristol Road, but never one from Johnson Drive to Bristol Road, so it begs the question whether this is really the intended extension.

3. A Ralston Street extension from Ramelli Avenue to Montgomery Avenue makes absolutely no sense in that it would horizontally bisect the northern portion of the Serra farmland when this area is supposed to remain in farmland under Scenario 5. It makes even less sense to extend Ralston Street, without also including the extension of Kimball Road from Telephone Road to Bristol Road.

4. **These road extensions are *INCLUDED* in the following discussion of Scenario 5:**
   Draft EIR Transportation and Circulation Scenario 5 text (page 4.12-63)
   Draft EIR Table 4.12-12 Roadway Improvements – Scenario 5 (page 4.12-67)
   Appendix E Table 3-14 Roadway Improvements – Scenario 5 (page3-52)
   Appendix E Table 3-15 2025 ICU Summary-Scenario 5. (page 3-56)

5. **These road extensions are *NOT INCLUDED* in the following discussion of Scenario 5:**
   Appendix E Scenario 5 Text related to roadway improvements (pgs. 3-45, 3-50)
   Appendix E Figure 3-14 2025 ADT Volumes – Scenario 5 (page 3-48)
   Appendix E Figure 3-15 2025 ICU – Scenario 5 (page 3-49)
   Appendix E Figure 4-14 Roadway Classifications – Scenario 5 (page 4-22)
   Appendix E Figure 4-15 ADT Volumes – Scenario 5 (page 4-23)

Given the conflicting information presented in the Draft EIR and the Appendix to the Draft EIR it is difficult to know if these two road extensions are planned under Scenario 5 or not. I recently spoke with a member of

Staff, who assured me that yes, indeed, these road extensions had been planned through Serra under Scenario 5, despite the fact that Serra is not included as a Potential Expansion Area under this scenario.

Therefore, in response to this EIR, **we must strenuously object to the extension of these two roads in particular, in any configuration, and also to the development of any roads that will transect and/or remove farmland that potentially will remain under SOAR restrictions and/or are designated Agriculture Only until at least 2025 in this General Plan.**

For five years I have argued in both oral presentations and written submissions to the CPAC, the Planning Commission, and the City Council that any road extensions or expansions through farmland that is expected to remain under SOAR restrictions should be removed or abolished from any growth development plan for Ventura. This is particularly true in the case of "roadway improvements", such as the Kimball and Ralston Road extensions discussed here and the widening of Ramelli and Montgomery discussed above.

To intentionally design urban incursion by road extensions that will subdivide what is left of already small islands of farms segregated in the Ventura urban area, while requiring those farms to remain as farms is to violate every goal, policy and action plan that calls for the protection and preservation of agricultural land. As stated above, in addition to actual farmland lost from production for these road extensions, the additional encroachment of urban traffic in this area will only serve to exacerbate already serious ag/urban conflict issues.

Either the citizens of Ventura want to preserve farmland, already completely encircled by urban development, or they don't. If they do, they must accommodate the farms they say they want to protect. If they want to realistically protect these "inner city" farms, they will have to deal with traffic congestion that might otherwise be accommodated by driving roads through what is now farmland. They will also have to learn to accept other inconveniences associated with having farms in the midst of the urban environment. If the citizens of Ventura do not wish to do these things, they must allow this farmland to be developed.

Therefore, we respectfully demand that the extensions of both Kimball Road and Ralston Street as described in Scenario 5 be deleted from the Traffic and Circulation section of the Draft EIR and also from Appendix E of the Draft EIR.

Class II Bike Lane as shown in the Serra Area F

A Class II Bike Lane is defined in Section 4.2 Transportation and Circulation 4.12.1 Setting d. Bicycle/Pedestrian Travel (page 4.12-15) as a "lane on a road that is reserved for bicycles. The lane is painted with pavement lines and markings and is signed. The lane markings decrease the potential for conflicts between

motorists and bicyclists. Bike lanes are one-way, with a lane on each side of the roadway between the travel lane and the edge or paving or, if parking is permitted, between the travel lane and the parking lane. The lanes are at least four feet wide, five feet if parking is permitted."

Both Figure 4-1 (Bicycle Facilities) of the General Plan and also Figure 4-12-4 of Section 4.12 Transportation and Circulation Figure show Class II Bike Lanes where there would be potential extensions of Kimball Road and Ralston Street.

Given that Class II Bicycle Lanes can only exist where there are developed roads, it would seems reasonable to suggest that these potential bikeways should only appear in those areas, and under those circumstances, in which those roads would be extended.

Therefore, while we encourage the use of alternative transportation, especially that of bicycles, we must object to the presentation in both the Draft General Plan and the Draft EIR of these Class II Bicycle lanes along presupposed extensions of Kimball Road (from Telephone Road to Bristol Road) and/or the extension of Ralston Street from Ramelli to Montgomery. Until and unless the Serra Area is selected as a Growth Expansion Area, it is inappropriate to identify bike lanes going through the area, without the confirmation of the development of the associated roads.

Consequences of the First Assembly of God Church Site Development G

As owners of one of the two SOAR-restricted agricultural properties that are adjacent to the First Assembly of God Church site in the Serra Area, we are incredibly concerned about the impact that the development of this site will have on our land, and also the other remaining farmlands in the Serra area. A Staff member assured me that the Church property had been evaluated and had been included in the EIR analysis as a "pending project".

Considering the contradictions and confusions in the Draft EIR Transportation and Circulation section, as presented above, we believe that there is some reason to be skeptical.

We are not traffic engineers, but it is difficult for us to believe that there will be no adverse or even increased traffic impact in the area considering the stated intentions of Church officials that this very intensely developed parcel will be in operation from 7 AM to10 PM seven days a week. Despite assurances, we cannot but believe that at least Montgomery Road will need to be widened (as has been shown in many maps, although not detailed in any text or tables – See Above). We also believe that Ralston Street will need to be analyzed for expansion, even though the EIR traffic studies would indicate otherwise.

AGRICULTURE

The Draft EIR does an exemplary job of describing the impacts of development accommodated under the 2025 General Plan on existing agriculture in the Ventura Area.

Description of Serra in Section 4.2.1 Agriculture Setting (page4.2-7) H

The description of Serra in the Draft EIR is incorrect in several respects, including crops currently in production, the proximity of residential development to existing farmland, and the absence of discussion of the First Assembly of God Church site and the UVSD parcel (discussed above) that abut farmland.

We suggest the following rewrite (*Italics used for new language*):

This 464-acre area is currently used *for lemon and avocado orchards and for row crops. Adjacent to the farmland on the north is residential development and Telephone Road. Across Telephone Road on the north are more* single-family homes and the new 100-acre community park that is *expected to open during the summer of 2005. To the east is low-density residential development, and to the west both low and medium density residential development. At the corner of Montgomery Avenue and Bristol Road is a 26-acre parcel that is no longer under SOAR restrictions and which is planned for development.* Commercial uses *are* to the southwest along Johnson Drive. The Santa Clara River is located along the southern boundary of this area. The Department of Conservation has classified the entire Serra Area as a mix of "Prime", "Statewide Importance", and "Unique".

Buffers

For a number of years, the commercial farmers operating within the SOI of Ventura have asked the City to adopt a buffer policy that would help, in some measure, protect our land from the effects of urban encroachment. We are delighted that the 2005 General Plan includes two Actions that provide buffer policy.

Action 7.24 in the General Plan states: "Require non-agricultural development to provide buffers of 50 feet or more from agricultural operations to minimize the potential for pesticide drift." This action is also included in the Draft EIR in Section 4.7 Hazards and Hazardous Materials (page 4.7-13).

Action 3.15 in the General Plan states "Adopt use permit standards for non-farm activities in agricultural areas that protect and support farm operations, including requiring non-farm uses to provide all necessary buffers as determined by the Agricultural Commissioner's Office." This action is not specifically included in the Draft EIR. We believe that it would be appropriate to include this Action in Section 4.2 Agriculture in the Draft EIR. We respectfully request that Action 3.15 be included. I

Portions of Land Not Developed in Scenarios 2-6 Allowed to Remain in Agriculture J

Throughout the Draft EIR, discussions of Scenarios 2-6 submit the possibility that in such cases where there is more land than necessary to accommodate growth, that "any development could include wide areas of open space that could either allow portions of the areas to remain in agriculture or allow for large areas of civic spaces (parks) ..." (Section 4.1 Aesthetic and Community Design, page 4.1-15).

It is important to stress that any urban development that is built adjacent to commercial agricultural lands is potentially threatening to the protection and preservation of those agricultural lands. Even with buffers

required as part of the design of the new urban development, natural conflicts will arise between the urban interests and the agricultural interests. A list of such conflicts is presented in Section 4.2 Agriculture (pages 4.2-7 and 4.2-8). While it is gratifying that this EIR recognizes such conflicts, it is also somewhat troubling that it is potentially proposing that if too much land exists in a selected scenario, that the City will build what it needs, while leaving the remaining agriculture to deal with the consequences of adjacent development.

We suggest that any Long-term Potential Expansion Strategy that is selected give careful consideration to attempting to avoid creating new and potentially destructive ag/urban conflicts.

K

Right-to-Farm Ordinances

Section 4.2.1 c of the Draft EIR discusses the Right-to-Farm Ordinance approved by the City in 1997. However the description of this Ordinance presented here does not include the disclaimer built into the Ordinance that it does not apply "if the agricultural activity, operation, or facility obstructs the free passage or use, in the customary manner of ...any public park, square, street, or highway." (Right-to-Farm Ordinance, Section 4162) (underlining for emphasis.)

Given today's litigious-happy society, we believe it is important for the City to consider these exceptions to the Right-to-Farm Ordinance before adopting any growth plan or policy that will require roads or parks to encroach on existing agricultural land.

CONCLUSION

We congratulate everyone involved in the preparation of this Draft Environmental Impact Report to the 2005 Ventura General Plan. It is an outstanding effort and accomplishment. The scope and detail required in the production of this document is truly impressive.

We hope that you will accept the comments and suggestions included in this response to the Draft EIR knowing that we offer them with the sole purpose of making an already remarkable document even better.

Subject: **Response to the Draft Environmental Impact Report for the 2005 Ventura General Plan**

The following are additional corrections that should be made to the Draft EIR. I suspect that by now, most of these have probably been cleaned up for the Final version, but just in case, I offer them here.

Page iii	Under List of Figures, after Figure 2-8, add "Scenario 6" before Intensification/Reuse + North Avenue + Olivas
Page 4.2-18	At the end of the first paragraph under "Scenario 4 – Intensification/Reuse + North Avenue + Serra, the final sentence "In addition, about 24 acres within the Olivas area are under LCA contract" should be deleted. Olivas is not an expansion area studied under this scenario.
Figure 4.11-2	This map is labeled "Parks and Recreational Facilities". It should be renumbered to read Figure 4.11-4. Figure 4.11-2 appears earlier in the section as a map labeled "Wildfire Risk Areas"
Page 4.12-76	The heading at the top of the page reads "Scenario 6 – Intensification/Reuse + North Avenue + Olivas + Serra". This should be changed to read "Scenario 6 – Intensification/Reuse + North Avenue + Poinsettia".
Page 4.12-89	A graphic box should be added around the section TC-1.

Again, many kudos for a job well done.

Respectfully submitted,

Jean Howard Mann

Letter 11

COMMENTERS: Jean Howard Mann, Owner and Managing Partner, Howard and Howard Ranch

DATE: July 14, 2005

RESPONSE:

Response 11A

The commenter states support for the City's emphasis of intensification and reuse as the top priority for future growth as well as staff's recommendation that the North Avenue and Serra areas be the top priority for development if future growth through 2025 cannot be met through infill development alone. This support is noted.

Response 11B

The commenter states that there are inconsistencies on several maps, suggesting that some maps show the First Assembly of God Church site as within the Serra expansion area and that others of show the church as outside the Serra expansion area. All of the Draft EIR maps that depict the Serra expansion area include the First Assembly of God Church site within the expansion area. However, the commenter correctly notes that re-designation of the site has received voter approval and the site is no longer subject to the SOAR Ordinance. Therefore, although the First Assembly of God Church site is outside the current City boundary, it will be removed from the Serra expansion area. The maps throughout the Draft EIR will be revised to reflect this change, which will reduce the size of the Serra expansion area to an estimated 438 acres. This change will not substantively affect any of the Draft EIR conclusions, though the total acreage of agricultural land conversion for the Intensification/Reuse Only scenario will increase by about 26 acres and the amount of land subject to SOAR under Scenarios 2 and 4 will decrease by a similar amount. These changes will be made in the Final EIR.

Response 11C

The commenter notes that a 10-acre parcel south of Ralston Street is owned by the Ventura Unified School District (VUSD) and states an opinion that EIR figures should depict the site as a school and not subject to the SOAR Ordinance.

Figure 4.11-3 to which the commenter refers is intended to show existing school facilities, not merely VUSD-owned properties. Though owned by the VUSD, the site in question is currently used for agricultural production, not a school; therefore, no correction to Figure 4.11-3 is needed.

With respect to Figure 4.2-3, whether or not school district-owned properties are subject to local policies such as the SOAR Ordinance has been the subject of some debate. While it may be true that a public school could be developed without a SOAR vote, any other development on the property would be subject to a SOAR vote. For example, if the VUSD were to sell the property to a private developer (as has occurred with several other VUSD properties), development of

the site could occur only with voter approval. Because the 10-acre site in question could be subject to SOAR under certain circumstances, no correction to Figure 4.2-3 is needed.

Response 11D

The commenter states that there are inconsistencies between figures and tables in the EIR traffic study. Specifically, the comment states that several figures suggest that Ramelli Avenue and Montgomery Avenue are to be widened, but that accompanying tables omit the widening of those same roadways. Neither Ramelli Avenue nor Montgomery Avenue would be widened to add lanes or increase the road capacity. The widening that could potentially occur would be to add on-street park and/or sidewalks. However, such widening would only be expected to occur in conjunction with the possible future development of the Serra area.

Response 11E

The commenter states that there are inconsistencies in the Draft EIR with respect to whether or not the extensions of Kimball Road and Ralston Street would be implemented in conjunction with buildout of Scenario 5, which does not include the Serra expansion area. It is not anticipated that either Kimball Road or Ralston Street would be extended through the Serra expansion area under Scenario 5. The traffic modeling for that scenario did not assume the extension of either roadway. Any references to the extension of those two roadways for Scenario 5 contained in the Draft EIR will be corrected in the Final EIR.

Response 11F

The commenter states an opinion that figures showing the future extension of the bikeways through the Serra expansion area should be amended to exclude those extensions until and unless the Serra area is planned for development. In response to this comment, Figure 4-1 in the traffic study in Appendix E and Figure 4.12-4 in Section 4.12, *Transportation and Circulation*, will be amended to include a note indicating that bikeways through agricultural or open lands would be constructed only in conjunction with development of the area.

Response 11G

The commenter states concerns about the impact of the First Assembly of God Church site development on remaining agricultural lands and re-states concerns about the possible future expansion of Montgomery Road and Ralston Street. Agricultural/urban conflicts are discussed generally in Section 4.2, *Agricultural Resources*, and it is acknowledged that conflicts between the agricultural growers in the Serra area and adjacent urban uses may persist if the Serra area remains in agricultural use. The specific impacts of the First Assembly of God Church site on adjacent agricultural lands would need to be addressed as part of a site-specific environmental review of the church's development plans. See Response 11D for a response to concerns about the possible future widening of Montgomery Avenue. No widening of Ralston Street is planned.

Response 11H

The commenter suggests several clarifications with respect to the discussion of the Serra expansion area in Section 4.2, *Agricultural Resources*. In response to this comment, the paragraph describing the Serra area on page 4.2-7 is revised as follows (text revisions are underlined):

> *Serra. This 438-acre area is currently used for lemon and avocado orchards and for row crops. Adjacent to the farmland on the north are residential development and Telephone Road. Across Telephone Road to the north are more single family homes and the new 100-acre community park that is currently under construction. To the east is low density residential development, and to the west are both low and medium density residential development. At the corner of Montgomery Avenue and Bristol Road is a 26-acre parcel that is no longer subject to the SOAR Ordinance and that is planned for development. Commercial uses are to the southwest along Johnson Drive. The Santa Clara River is located along the southern boundary of this area. The Department of Conservation has classified this area as a mix of "Prime," "Statewide Importance," and "Unique" farmland.*

Response 11I

The commenter requests that General Plan Action 3.15 pertaining to requiring non-farm uses to provide necessary buffers between agricultural and urban uses be included in the Final EIR. Action 3.15 is discussed in two separate places in the Draft EIR, on pages 4.2-16 and 4.2-22.

Response 11J

The commenter states concerns about what she perceives as a proposal in the Draft EIR to develop only as much of the expansion areas as needed, while leaving remaining agriculture to deal with the consequences of adjacent development. The Draft EIR is not proposing that portions of the expansion areas should be left in agricultural use, but rather merely acknowledges that, depending upon the level of development that is proposed in the expansion areas in the future (if any), all of the expansion area land may not be needed to accommodate planned development. In such an instance, remaining land not used for development could potentially remain in agriculture, but could also be used for other purposes (such as schools, parks, or other civic spaces). It is true that if only a portion of the Serra area, for example, were used for urban development, the remaining growers within the Serra area would be further isolated and would likely experience greater levels of conflict with urban uses.

Response 11K

The commenter notes that the City's Right-to-Farm Ordinance provides exceptions when agricultural activity obstructs the use of a public park, square, street, or highway. This exception is noted. As discussed under Responses 11E and 11F, no extensions of roadways or bikeways through the Serra expansion area would be expected to occur until and unless that area is planned for development.

Response 11L

The commenter notes five minor typographical errors in the Draft EIR. These will be corrected in the Final EIR.

DELIVERED VIA E-MAIL & FAXCIMILE

RE: San Buenaventura City General Plan EIR

Dear Ms. Gialketsis:

On behalf of the approximately 500 companies and their representative employees who make up the Greater LA/Ventura Chapter of the Building Industry Association of Southern California, thank you for the opportunity to comment on the City of Ventura's proposed 2005General Plan and its accompanying Environmental Impact Report.

While the General Plan document is quite benign, we believe the "devil is in the details" of the almost 1000 page EIR. It is this document that will serve as the true guideline when questions or concerns arise. While we respect Ventura's efforts to seek the highest environmental standards that arise due to construction; we have concerns with some aspects of the proposed EIR. These concerns include the air quality standards, population growth, standards on public services, transportation and road construction, and utilities and services.

I. AIR QUALITY

A

The EIR uses numbers based on SCAG projections. The SCAG projections are lower than the city's; thus, every project becomes an unavoidable significant impact. The Air Quality thresholds (and population thresholds) should be consistent with the city's chosen alternative. The EIR should be revised once the city chooses its population limit so that development within that limit is not determined to create an unavoidable significant impact.

II. POPULATION AND HOUSING

B

The preferred environmental alternative, infill and intensification of reuse only without expansion areas, sets a limit of 8258 units of residential housing up until the year 2025. It is our thought that this number might be too low, not taking into account the maximum use of underdeveloped properties throughout the city.

III. PUBLIC SERVICES

C

It is in this section that we have the most concerns. The city has been using very high standards for parkland per 1000 residents, as well as for police and fire. The question should be asked "are these standards realistic?" Has the city ever met these standards during the previous general plan? If these arbitrary standards are carried over, then they should be evaluated against reality, and lowered where appropriate. This will avoid having every project in conformance with the plan have an unavoidable significant impact. These unattainable ratios will be the basis for new fees on development. The EIR must be made clear that new development does not pay for existing deficiencies, just the impacts of the new residents only. Parks take a significant role in this chapter.

The standard for a neighborhood park of 5 acres is arbitrary and outdated, again the same as in earlier General Plans. The BIA requests that the 5-acre standard be removed.

Fire services are another area in which the BIA has concern. All new residential construction requires fire sprinklers. This standard should be sufficient to help mitigate the need for additional fire personnel at least that of which is to be paid for by new development.

We are also concerned with the standards put forward on public schools. Is there a demographic analysis that takes into account the aging population?

IV. TRANSPORTATION AND CIRCULATION D

We would like to request an addition to the EIR that states, "All future roadway, bikeway, and pedestrian path alignments are shown for illustrative purposes only. Exact alignments will be determined during project review." Some of these alignments are carried over from the 1975 plan, and may not reflect the most current topography or development which has since taken place. The city must maintain design flexibility, and avoid the duplicative process of a general plan amendment for road location on projects which conform to land use and other elements.

V. UTILITIES AND SERVICES E

In this section there is a breakdown of new residential units and other construction by neighborhood. This breakdown is used for water and wastewater analysis only. The BIA feels the breakdown should be for illustrative purposes only; otherwise, a permanent breakdown will be adopted as part of the EIR, and will pre-ordain the RGMP process, and leave little discretion for decision makers.

While the General Plan update process has been quite lengthy, the BIA thanks the City of San Buenaventura for allowing us to be part of the discussion to date. As the City of Ventura focuses on streamlining their development processes, we welcome the opportunity to continue to be a part of the collective and collaborative processes which will someday result in an easier development process for our members to navigate.

Thank you once again for the opportunity to provide comments. Please feel free to contact me at 661-257-5042 or tdonlon@bialaventura.org if you have any questions or comments. Please note that in the last few weeks we have moved offices, we are now located at 28460 Avenue Stanford, Suite 110, Santa Clarita, CA 91355.

Sincerely,

Terra Donlon
Director of Government Affairs

Cc: Mr. Brian Brennan, Mayor
San Buenaventura City Council Members
Mr. Rick Cole, City Manager
Susan Daluddung, Community Development Director

Letter 12

COMMENTER: Terra Donlon, Director of Government Affairs, Building Industry Association

DATE: July 15, 2005

RESPONSE:

Response 12A

The commenter notes that the EIR uses numbers based on SCAG projections and suggests that the EIR should be revised once the City chooses a population limit so that future developments would not create unavoidably significant impacts. The population growth estimates included in the Draft EIR were directed by the City Council and are not purported to be a "limit". Because the projected citywide growth through 2025 based on the Council-directed growth rates exceeds the SCAG/Ventura County AQMP growth forecast for the City, any of the EIR scenarios could be found to be inconsistent with the AQMP. However, as noted in the Draft EIR and in the comment letter from the Ventura County Air Pollution Control District (Letter 27), the 2007 AQMP will include revised growth forecasts that will take into account the City's growth projections under the 2005 General Plan. As such, future developments that are consistent with the 2005 General Plan will likely be found to be consistent with the new AQMP.

Response 12B

The commenter states an opinion that the 8,258 residential units assumed to be added to the City through 2025 under Scenario 1 may be too low. This opinion is noted. The 0.88% average annual growth rate assumed for Scenario 1 represents the average annual rate of growth that has occurred in the City over the past 10 years (1994-2004) and as stated in 12A above, were directed by City Council to use as estimates.

Response 12C

The commenter disagrees with the standards for parks, fire service, and schools that are discussed in Section 4.11, *Public Services*. The park acreage standards presented in the Draft EIR are the currently adopted City standards, while the fire service standards are those provided by the Ventura Fire Department. Similarly, the projected number of new students associated with growth through 2025 is based on students per housing unit generation rates provided by the Ventura Unified School District. The Draft EIR differentiates between existing deficiencies based upon currently adopted standards and the demands for increased service associated with new development. New developments will be subject to existing park and school impact fees, which are intended to offset the demands associated with new developments rather than to alleviate existing deficiencies. Any new fire impact fees that the City may develop in the future would similarly be designed to have new developments offset the cost of providing facilities to serve the new development rather than to address existing deficiencies. It should be noted that existing impact fees for schools and parks, as well as any possible future impacts fees for other services (such as fire protection), can be used only for facilities and equipment, not for personnel.

Response 12D

The commenter requests that maps showing future roadway, bikeway, and pedestrian path alignments be amended to include a note indicating that the alignments shown are for illustrative purposes only and that final alignments will be determined during project review. These maps will be amended to include such a note in the Final EIR and General Plan.

Response 12E

The commenter requests that the breakdown of uses by location within the City in several tables in Section 4.13, *Utilities and Service Systems*, should include a note stating that the breakdown is for illustrative purposes only and that the actual amount of development within individual areas of the City may vary. The tables in Section 4.13 will be amended to include such a note in the Final EIR.

City of Ventura 2005 General Plan Update Draft E.I.R.
City Council & Planning Commission Joint Workshop#2
Review of the Draft E.I.R.

Re: **General Plan Scenario 5: Intensification/Reuse + North Avenue + Western Canada Larga**

Dear Council Members & Commissioners:

Thank you for today's opportunity to address you with my comments Concerning the City's 2005 General Plan Update Draft Environmental Impact Report. Unfortunately, speaker time does not permit me to fully comment on all of the issues raised in the analyses of General Plan Scenario 5. I will submit all of my written comments by the conclusion of the 45-day review period July 18, 2005.

Today, I submit for your consideration a letter and maps concerning watershed flood plain issues not addressed in the document's "Upper North Avenue District Housing" Alternative. This Alternative is a variation of General Plan Scenario 5 relating to the Brooks Campus expansion and the Petrochem Refinery residential reuse. The attached County G.I.S. maps illustrate those sites to be substantially within the 100 year flood plain of Canada Larga Creek.

I will limit my oral comments to 3 issues raised in the Environmental Impact Report analyses of General Plan Scenario 5, which includes the Westernmost 120 acres portion of the original 800 acre P.E.A. #1 Canada Larga. Those issues are Density, Guidelines for Orderly Development and Farmland Conversion.

Thank you,

Shull Bonsall, Jr.
Rancho Canada Larga

Ventura, CA 93001

Subject: SUMMARY OF CANADA LARGA CREEK FIELD TRIP ON JUNE 2, 2005

Dear Mr. Bonsall:

The Canada Larga watershed is located about 5 miles north of the City of Ventura and has a catchment area of about 12,311 acres (19.24 square miles). Current land usage of the watershed are mostly natural woodlands and grass lands with cattle grazing. Canada Larga Creek is one of the two largest tributaries of Ventura River. A preliminary hydrologic study indicates that the 100-year peak flood flow discharge at the confluence with Ventura River is about 13,386 cubic feet per second (cfs).

In January and February of 2005, two major storms struck Southern California and resulted in over-bank flooding of Canada Larga Creek (approximately 40-year return period), causing damages to properties, agriculture and infrastructures; especially at the lower reach of Canada Larga Watershed.

To better understand the issue in Canada Larga Watershed, the District engineers, Sergio Vargas, Denny Tuan and Yunsheng Su, visited the site with you on June 2, 2005. This letter summarizes the findings of that field trip:

1. Lower reach of the Canada Larga Watershed is subject to frequent flooding. It is caused not only by undersized channels and road crossings, but also by the excessive amount of debris and sediment.

2. The District has identified the needs to address the issues, and a project is proposed in our Integrated Watershed Protection Plan (20-year plan). However, the present benefit-cost ratio does not rank a higher priority than other urgently needed District facilities improvements.

3. You mentioned that the Brooks Institute Camp Expansion project is under planning downstream of HWY 33, and that a land development project might be planned upstream of HWY 33 in the future. Should there be funding opportunities due to future land developments, the District can provide information, mapping, and engineering expertise in a watershed-wise evaluation for solutions of flood control, water quality and habitat restoration.

4. You explained your concept for a potential detention/debris basin. However, before any conclusion is reached, watershed-wise hydrology, hydraulics, and sediment transport studies have to be conducted to evaluate the baseline (existing) and the proposed conditions.

We appreciate the opportunities to work with you. Please feel free to give me a call at 805-650-4077 if you have any questions.

Sincerely,

Sergio Vargas, P.E.
Deputy Director

Letter 13

COMMENTER: Shull Bonsall, Jr., Rancho Cañada Larga

DATE: June 25, 2005

RESPONSE:

The commenter attaches a letter from the Ventura County Watershed Protection District, which addresses flooding issues in the Upper North Avenue district and notes that portions of the Brooks Institute campus and Petrochem refinery are within the 100-year flood zone. The commenter is correct that portions of the Upper North Avenue area is within the 100-year flood zone. This is discussed in Section 4.8, *Hydrology and Water Quality*. Any development within the 100-year flood zone would be subject to FEMA requirements as well as the requirements of the City's Floodplain Ordinance. In order to clarify the flooding potential as it relates to the Upper North Avenue District Housing alternative, the discussion under "Hydrology and Water Quality" for that alternative on page 6-15 will be amended to read as follows (new text is underlined):

> *Residential development within the Upper North Avenue District would be within the 100-year flood zone and would therefore be subject to the requirements of FEMA and the City's Floodplain Ordinance. Placing residential development within the Upper North Avenue district adjacent to the Ventura River would incrementally increase the potential for water quality impacts within the river. However, possible impacts could be addressed on a case-by-case basis through compliance with standard engineering practices and runoff control requirements. Overall, hydrology and water quality impacts would be somewhat greater than those associated with 2005 General Plan Scenario 5, but could be reduced to a less than significant level.*

P.O. Box 24198 Ventura, CA 93002 www.VenturaAudubon.org

14

July 17, 2005

CITY OF SAN BUENAVENTURA
JUL 18 2005
COMMUNITY DEVELOPMENT

Ms. Kari Gialketsis
City of San Buenaventura
Community Development Department
501 Poli St.
Ventura, CA 93001

Dear Ms. Gialketsis,

Thank you for the opportunity to comment on the Public Review Draft of the Ventura General Plan, May 24, 2005 and the associated Draft EIR. The Ventura Audubon Society has the following concerns.

The General Plan asserts that there is an intention to preserve the essential nature of our community. Specifically in Policy 1B it states that the City wishes to increase the area of open space protected from development impacts. The proposed expansion areas for development will significantly decrease the area of open space and we are opposed to this action. A

Agricultural open space does have some wildlife value. In the case of row crops; e.g. most of the proposed Olivas expansion, the wildlife value is very low, but in the other proposed expansion areas that contain orchards there is a medium level of wildlife value. Orchards provide cover and food, from associated insects, for many bird species. Virtually all of the proposed expansions are either in SOAR designated areas or are in designated Land Conservation Act Contracts and we feel that they should remain as open space.

Action 1.8 states: "Buffer barrancas and creeks that retain natural soil slopes from development with a minimum of 50 feet of natural existing or restored vegetation." We feel that this may encourage removal of existing riparian forests (consisting of Cottonwood, Willow, White Alder and Sycamore trees) that are wider than 50 feet adjacent to watercourses. The loss of Riparian Forest is the cause of the significant decline of many bird species, e.g. Yellow-billed Cuckoo and Southwestern Willow Flycatcher that are dependent of this habitat. This action should be amended to require preservation of wider existing areas of Riparian Vegetation. B

Action 1.11 states: "Require that sensitive wetland and coastal areas be preserved as undeveloped open space wherever feasible." We feel this should be amended to require a level of "no net loss" of either sensitive wetlands or 'natural' coastal areas. C

Policy 1C states: "Improve protection for plants and animals." Within this policy, Action 1.18 states: "Prohibit dredging during fish spawning and bird migration cycles." This action is sufficiently vague to render it not useful. Does it apply to inland or coastal dredging? Western Snowy Plovers and California Least Terns nest on local beaches outside of normal bird migration times of the year and would be adversely impacted by dredging operations during that time. Which fish species are to be protected? The Ventura Port District often discharges dredge material into the ocean at the mouth of the Santa Clara River during the winter. This would not affect Tidewater Gobys but may impact Steelhead Trout wishing to migrate up the river. D

We are thankful that the City of Ventura has an attitude of environmental concern that is translated into day to day concerns by City staff. We look forward to working with the City in the future to preserve and protect the existing wildlife habitats that make Ventura a desirable place to live and work. We look forward to receiving your written responses to our comments. Please feel free to contact me at (805) 644-9344 if you have questions about our comments.

Sincerely yours,

Reed V. Smith
Board Member, Science Chair
Ventura Audubon Society

Letter 14

COMMENTER: Reed V. Smith, Board Member, Science Chair, Ventura Audobon Society

DATE: July 17, 2005

RESPONSE:

Response 14A

The commenter states opposition to the inclusion of any of the expansion areas in the 2005 General Plan, noting that agricultural open space has some wildlife value. This opposition is noted. City staff are currently recommending adoption of the "Intensification/Reuse Only" scenario, which includes none of the expansion areas.

Response 14B

The commenter suggests that buffers around riparian areas should be larger than the 50 feet identified in General Plan Action 1.8. This opinion is noted. The 50-foot buffer is a minimum requirement for new development adjacent to riparian areas. City staff believe that this is an appropriate minimum buffer area given the urban/suburban nature of the Planning Area. The 50-foot buffer is consistent with that adopted by many cities throughout California. If a larger buffer is needed in specific locations in order to address potentially significant impacts to a riparian corridor, then such a buffer can be required on a case-by-case basis.

Response 14C

The commenter suggests amending General Plan Action 1.11 to require no net loss of wetland and coastal areas. In response to this comment, Action 1.11 will be amended to read as follows (new text is underlined):

> *Require that sensitive wetland and coastal areas be preserved as undeveloped open space wherever feasible and that future developments result in no net loss of wetlands or "natural" coastal areas.*

Response 14D

The commenter suggests that Action 1.18 regarding the timing of dredging should be modified to be more specific as to what type of dredging is being addressed and when dredging may occur. In response to this comment, Action 1.18 will be replaced with the following:

> *Action 1.18: Conduct coastal dredging in accordance with the U.S. Army Corps of Engineers and California Department of Fish and Game requirements in order to avoid impacts to sensitive fish and bird species.*

RE: SCAG Comments on the Draft Environmental Impact Report (DEIR) for the 2005 Ventura General Plan
SCAG No. I 20050363

Dear Ms. Gialketsis:

Thank you for submitting the Draft Environmental Impact Report for the 2005 Ventura General Plan to the Southern California Association of Governments (SCAG) for review and comment. SCAG's responsibility as the region's clearinghouse per Executive Order 12372 includes the implementation of California Environmental Quality Act (CEQA) §15125 [d]. This legislation requires the review of local plans, projects and programs for consistency with regional plans.

SCAG staff has evaluated your submission for consistency with the Regional Comprehensive Plan and Guide (RCPG), Regional Transportation Plan (RTP), and the Compass Growth Vision. The Draft EIR addresses SCAG's policies and forecasts appropriately and has provided sufficient explanation of how the project helps meet and support regional goals. Based on the information provided in the DEIR, we have no further comments. We would appreciate notification of the Final EIR, especially should a change in project scope occur.

A description of the proposed Project was published in the June 1-15, 2005 Intergovernmental Review Clearinghouse Report for public review and comment.

If you have any questions, please contact me at (213) 236-1851. Thank you.

Sincerely,

Brian Wallace
Associate Regional Planner
Intergovernmental Review

DOCS # 112177v1

Letter 15

COMMENTER: Brian Wallace, Associate Regional Planner, Southern California Association of Governments

DATE: July 14, 2005

RESPONSE:

The commenter states that the Draft EIR appropriately addresses SCAG's policies and forecasts. No response is necessary.

RE: Draft Environmental Impact Report #SCH2004101014
City of Ventura General Plan Amendment Update 2005

Dear Ms Gialketsis:

As an interested property owner, we have reviewed the Draft Environmental Impact Report (DEIR) and General Plan Update. Overall, we are quite impressed with the new direction the City is taking.

In reviewing the Land Use Section of both the DEIR and General Plan Update, we agree with the City's proposed land use designation for high density residential on our property.

We would like to make the following comment regarding the DEIR:

- Transportation and Circulation Element – Many of the Exhibits show specific alignments for proposed bikeways and streets. We believe that it would be appropriate to note within the DEIR that these alignments are for illustrative purposes only. We feel that the City should retain the flexibility to adjust these alignments and locations as projects are developed.

We hope that the City incorporates our comment in the Final Environmental Impact Report.

Sincerely,

William M. Borgers
Vice President

Cc Rick Cole – City Manager
Susan Daluddung – Community Development Director
Lisa Porras – City Planner
Rincon Environmental

Letter 16

COMMENTER: William M. Borgers, Vice President, Ventura Citrus Properties, Inc.

DATE: Not dated

RESPONSE:

The commenter suggests that maps depicting road and bikeway alignments be amended to clarify that the locations shown are for illustrative purposes and that final alignments will be determined during project review. These maps will be amended to include such a note in the Final EIR.

June 27, 2005 SUSAN DALLDORF 17

Memo of Buz Bonsall's 3-minute public comments at the June 25, 2005 City Council/Planning Commission Workshop #2

Re: City of Ventura 2005 General Plan Update Draft E.I.R.

- **Achieving the Vision** A

Cañada Larga was the only one of what ultimately became 12 P.E.A.s to be specifically called out for in the March 2000 Vision document. Had the original 800 acre P.E.A. #1, Cañada Larga, been studied in this Draft E.I.R., there would be plenty of excess acreage for Open Space, Parkland and School land use which were found lacking in Scenario 5: Intensification/Reuse – North Avenue + Western Cañada Larga. All or part of that acreage is still available for those purposes.

- **Density** B

Assigning 1700 housing units to the roughly 80 usable acres of the 120 Acre Western Cañada Larga Expansion Area is a totally unrealistic density for this semi-rural area, making for unrealistic impacts. I would not want 1700 units on the entire original 800 Acre P.E.A. much less on the reduced acreage. A 3-digit number would be more appropriate for the land in either case.

- **Guidelines for Orderly Development** C

In the potential Class 1, Unavoidably Significant Impacts of "Guidelines for Orderly Development Inconsistency," my conversations with Everett Mallais and Kim Uhlich of L.A.F.C.O. lead me to believe this is an error. They say Scenario 2 and 3 would have the same impacts if looked at the same way as Scenario 5 or there would be no inconsistency with all three Scenarios 2, 3 & 5. They will make their comments.

- **Farmland Conversion** D

I refer you to Table 4.2-1 on Page 4.2-2. The 120 Acre Western Cañada Expansion Area has no Prime Farmland, Statewide Importance Farmland or Unique Farmland 0 acres total. This is also true for the original 800 acre P.E.A. All but 15 unusable riverbed and flood plain acres of the Cañada Larga Expansion Area, 120 acres or 800 acres, does not require a City S.O.A.R. vote to be utilized. I would direct you to the Ventura County Office of Agricultural Commissioner's letter in the Appendix A commenting on the Revised Notice of Preparation quote: "In reviewing the alternative P.E.A.s under consideration we have the following observations:....Alternative #3 appears to be most in keeping with all the stated policies and goals of both the City and the County of Ventura. This Scenario requires minimum expansion of Sphere of Influence. Limited removal of Prime Agricultural soils and Lands protected under S.O.A.R. and provides direction for growth to 2025."

In the revised NOP, the referenced Alternative #3 is now Scenario 5: Intensification/Reuse + North Avenue + Western Cañada Larga in this E.I.R. document. Cañada Larga has no Farmland Conversion by itself.

Thank you.

BUZ

Letter 17

COMMENTER: Buz Bonsall, Rancho Cañada Larga

DATE: June 27, 2005

RESPONSE:

Response 17A

The commenter notes that the 800-acre Cañada Larga area includes sufficient acreage to accommodate open space, parks, and schools. It is correct that the 800 acres included in the original Cañada Larga area considered by the CPAC, Planning Commission, and City Council would likely include sufficient acreage to meet school and park demands associated with development of the area.

Response 17B

The commenter states an opinion that the 1,700 residential units assumed for the Western Cañada Larga expansion area included in EIR Scenario 5 is unrealistic. The density assumed in the Draft EIR was directed by the City Council. City staff agree that the density assumed is not realistic; therefore, an alternative that reduces the density for the Western Cañada Larga and North Avenue expansion areas as compared to Scenario 5 was included in Section 6.0, *Alternatives*. That alternative, known as the "Upper North Avenue District Housing" alternative would replace some of the development assumed for the Western Cañada Larga expansion area with additional development in the Upper North Avenue district.

Response 17C

The commenter suggests that the conclusion regarding an inconsistency of the Western Cañada Larga area with respect to the Guidelines for Orderly development is an error. In its comment letter on the Draft EIR (Letter 3), the Ventura LAFCO suggested that inclusion of the Western Cañada Larga within the City's sphere of influence at this time would be inconsistent with the Guidelines for Orderly Development since that area is not contiguous with the current City limit. The LAFCO also suggests that development of the North Avenue expansion area may be inconsistent with the Guidelines for Orderly Development since it is not contiguous with the City boundary and, therefore, may not be annexed at this time. The LAFCO notes that annexation of the Olivas area (which is included in Scenarios 2 and 3) would not conflict with the Guidelines for Orderly Development. It should also be noted that, in response to the LAFCO letter, portions of the EIR Project Description and Section 4.14 were re-written to clarify how and when boundary adjustments may occur in the future and how the General Plan relates to future boundary adjustments. Because no boundary adjustments are being sought by the City at this time and it is presumed that future boundary adjustments would be sought only at such time as they could be found to be consistent with applicable State and LAFCO policies, the impact with respect to consistency with LAFCO policy has been changed to Class III, less than significant, for all scenarios.

Response 17D

The commenter notes that the Western Cañada Larga expansion area does not include any important farmlands and that the Agricultural Commissioner's Office has stated an opinion that Scenario 5 appears to be most in keeping with the policies of the City and County (note that the current Scenario 5 was called Scenario 3 in the Notice of Preparation). As discussed in Section 4.2, *Agricultural Resources*, it is correct that the Western Cañada Larga expansion area does not include any farmland designated as Prime, Statewide Importance, or Unique.

Subject: City of Ventura
2005 General Plan Draft Environmental Report

Dear Ms. Gilaketsis:

A

We appreciate the opportunity to provide you with our comments on the City's Draft Environmental Impact Report (DEIR) for the City's proposed 2005 General Plan. The DEIR is well written and comprehensive.

We have focused our comments on the DEIR's analysis of the future development potential of the Upper North Avenue District (UNAD). The comments are offered in the spirit of ensuring that there is adequate flexibility in the General Plan's land use designation of "Industry" to allow a mixed-use project to be considered for the expansion of the Brooks Campus and adjacent area and to be found consistent with the City's 2005 General Plan. We are seeking to protect the potential that we believe exists for the City to realize numerous land use and economic objectives in the UNAD should it be annexed in the near future.

A conceptual plan, known as the *Village at Crooked Palm*, has been under development and would result in expansion of the Brooks Institute, the creation of an urban village, and the remediation and reuse of the former USA Petrochem site. With respect to this potential project in the UNAD, the City's Economic Development Strategy document (adopted on April 25, 2005) describes its potential to "*...transform the upper North Avenue area from an industrial ghost town to a dynamic economic engine....*" and proceeds to state that:

> *Setting the groundwork for project entitlement will be the City's primary focus for the next few years. Critical to the effort is site remediation, resolving outstanding land use issues that allow consistency with the General Plan update, and future annexation to the City (page 5).*

To this end, the following comments reflect a desire to ensure that the groundwork is clearly established within the 2005 General Plan. We want to ensure that the opportunity is not lost to facilitate the City's future ability to consider an urban village concept within the UNAD and find it consistent with its newly adopted General Plan and the City's Economic Development Strategy.

"Industry" Land-Use Designation

A

The proposed General Plan designates the land use for the UNAD as "*Industry.*" With respect to the land use designations within the proposed General Plan, page 2-13 of the DEIR states that: "*For industrial parcels, industrial only projects would be allowed, but it is assumed that residential uses would be limited to work/live or live/work residences*". This stated assumption is limiting and too restrictive to facilitate a future finding of General Plan consistency with the Economic Development Strategy for the Brooks campus and urban village land use concept currently under development. Residential use would not be limited to work/live units as there is also the extraordinary opportunity to create neighborhoods that would provide a variety of housing types to support Brooks' campus and the associated office, retail, cultural, and recreational uses.

Given these opportunities and land area available within the UNAD, a housing density consistent with the General Plan's "*Neighborhood- Medium*" providing for 9-20 dwelling units per acre, would be appropriate and should be considered for the UNAD.

The DEIR's assumptions regarding the limits of an *Industry* land use designation also runs counter to important planning objectives stated in the proposed 2005 General Plan and to the adopted goals of the Economic Development Strategy. For example, the proposed 2005 General Plan states:

> *Industrial sites that are fast converting to light industry, high tech manufacturing and assembly could become factory villages with green space, multiple types of housing, small scale retail to serve workers and spin-off businesses.* (page 3-5)

The proposed General Plan also states in its description of corridors and districts:

> *One of the primary objectives for infill in Ventura is to produce mixed-use development that places everyday requirements in close proximity to dwellings.* (page 3-7)

We therefore specifically request that the DEIR either broaden its assumptions of what land uses would be allowed in lands designated as *Industry* or that the land use designation for the UNAD be revised to Commerce or Residential (or a combination of all three) such that a mixed-use, urban village project could be processed and found to be consistent with the 2005 General Plan.

The document should also clarify how the existing Brooks Campus is a use consistent with the proposed land use designation of *Industry* or if the proposed plan will result in an existing use being inconsistent with the newly adopted General Plan.

Alternatives Analysis

B

We note that a project concept similar to what is described above is included within the Alternatives Analysis (section 6.5 Upper North Avenue District Housing) as an alternative to Scenario 5 which is noted as having insufficient acreage to accommodate a mix of housing types or to accommodate parks, schools, or other public facilities. The DEIR analysis considers a mix of office, retail, student/rental housing and 750 other residences being developed on within the UNAD. The analysis also assumes that this level of development would reduce, commensurately, that which would otherwise be developed within the Western Cañada Larga and North Avenue sites. Beyond merely off-setting the intensity of development that might occur in these expansion areas, the DEIR description and analysis (beginning on page 6-13) should also clearly identify the other advantages resulting from developing the UNAD:

- Expanding Brooks' campus and creating jobs and new related growth opportunities in a mix-use urban environment consistent with the city's Economic Development Strategy.
- A brownfield site would be eliminated and reused.
- Development of the UNAD would meet the City's goal of utilizing existing urban infill sites before developing expansion areas.
- The development of the UNAD would be consistent with the County's Guidelines for Orderly Development by developing a site that is currently within the City's Sphere of Influence and contiguous with the City's boundary.

Thank you for your consideration of the foregoing comments. The UNAD is currently within the City's Sphere of Influence and will likely be considered for annexation in the near future. Given that the 2005 General Plan is intended to guide the City's land use decisions until 2025, it should provide the City's future decision-makers with the flexibility to consider exemplary projects and land uses on underutilized parcels that could potentially satisfy many of the City's economic, job creation, housing and community planning objectives.

Very truly yours,

Kriston D. Qualls

Kriston D. Qualls
General Counsel

cc: Susan Daluddung, Community Development Director
Rob Rossi, Hollywood West LLC

Letter 18

COMMENTER: Kriston D. Qualls, General Counsel, USA Petroleum Corporation

DATE: July 18, 2005

RESPONSE:

Response 18A

The commenter notes that the 2005 General Plan includes various statements suggesting that mixed use development is encouraged within light industrial areas, but that the Draft EIR suggests that residential uses within Industrial-designated areas would be limited to work/live or live/work residences. It is true that various types of residences could be found to be compatible with light industrial development and that one of the 2005 General Plan objectives is to produce mixed use development where everyday requirements are in close proximity to residences. In response to this comment, the last sentence of the first paragraph of EIR page 2-13 will be amended to read as follows (new text is underlined):

> *For Industrial-designated parcels, industrial only projects would be allowed. Residential uses could include work/live or live/work residences, or traditional housing as part of mixed use development so long as residences are not subject to significant compatibility conflicts relating to such issues as aesthetics, noise, or health and safety that cannot be addressed through site planning.*

Response 18B

The commenter suggests that the analysis of the "Upper North Avenue District Housing" alternative should be amended to acknowledge various environmental benefits of that alternative, including implementation of the City's economic development strategy, elimination of a brownfield site, emphasizing intensification/reuse, and consistency with the Guidelines for Orderly Development. The Draft EIR already implicitly acknowledges that development of the Upper North Avenue district would be consistent with City goals and objectives as well as the Guidelines for Orderly Development. In response to this comment, the discussion under "Hazards and Hazardous Materials" for the Upper North Avenue District Housing alternative will be amended to read as follows (new text is underlined):

> *Hazard impacts would be similar to those of 2005 General Plan Scenario 5. This alternative could potentially increase safety conflicts relating to the placement of residential development in proximity to oil production in the Upper North Avenue area. On the other hand, redevelopment of the Petrochem refinery site would eliminate an existing brownfield. Compliance with 2005 General Plan policies and standard safety requirements on new development would reduce impacts relating to hazardous materials to a less than significant level.*

RE: 2005 Ventura General Plan EIR Comments

Dear Kari:

CITY OF VENTURA DRAFT ENVIROMENTAL IMPACT REPORT JUNE 2005

Comments and Corrections by Buz Bonsall, owner of the 120 acre Western Cañada Larga Potential Expansion Area.

A Pg. S-1 2nd ¶ "... ~~Three~~ Five "Expansion Areas" "

B Fig. 2-1a & Fig. 2-1b "Planning Area" Boundaries inconsistent on maps at City Water Facility in Cañada Larga area.

C Pg. 4.1-18 Photo 13 caption "... Portions of the hillside area fronting the freeway ~~could potentially be graded~~ has already been removed and graded for SR33 Freeway and could be regraded and developed if this expansion area is selected."

D Pg. 4.1-18 Photo 14: This photo depicts M2- Industrial zoned industrial land on the Westside of SR33 and does not represent the grazing land on the Eastside of SR33.

E Pg. 4.2-1 Legend "Row Crops" incorrectly depicted on Western most portion (West of bike path) of Western Cañada Larga Expansion Area

F Pg. 4.4-24 Photo 3: Depicts a Caltrans SR33 Freeway 15+ acres hillside removal and grading project (Late 1969) with natural plant recovery.

G Pg. 4.4-25 Scenario 5 paragraph, final sentence "the Western Cañada Larga area is the ~~least~~ most disturbed of the expansion areas (15+ acres of hillside removal and massive grading for the SR33 freeway in 1969)...."

H Pg. 4.4-26 First paragraph reference to Photo 3: There is no native bunch grass or oak woodland present in photo 3. Line 5 "~~Santa Clara River~~" should be Ventura River.

RANCHO CAÑADA LARGA

I

Pg. 4.5-17 "Scenario 5" paragraph...." A portion of the mission aqueduct is located ~~within~~ outside to the south of Western Cañada Larga expansion area."

J

Pg. 4.11-51 Top of page final sentence ".....with that scenario." It should be noted that the owners of the Western Cañada Larga Expansion Area have over 6000 acres adjacent to the Area for potential parkland. There is no shortfall of acres.

K

Pg. 6-20 Public Services: It should be noted there is a Ventura County Fire Department Station building on North Ventura Avenue next to the City's Water Treatment facility.

L

General Comment: As noted by the D.E.I.R. authors at Pg. 4.1-19 Scenario 5, 1700 housing units assigned to the reduced acreage (120 acres) of the original 800 acre Potential Expansion Area of Cañada Larga is "unrealistic", hence the unrealistic impacts in D.E.I.R. data (such as sewer plant capacity etc.) throughout the report.

Thank you for the opportunity to comment. If there are any questions regarding my comments, please feel free to contact me at 805-565-0629.

Sincerely,

Buz Bonsall
Rancho Cañada Larga

Letter 19

COMMENTER: Buz Bonsall, Rancho Cañada Larga

DATE: July 18, 2005

RESPONSE:

Response 19A

The commenter notes a typographical error in the Summary. This will be corrected in the Final EIR.

Response 19B

The commenter notes an inconsistency in the depiction of the Planning Area shown in Figures 2-1a and 2-1b. The Planning Area boundary shown in Figure 2-1a will be corrected in the Final EIR.

Response 19C

The commenter suggests a clarification of the caption accompanying Photo 13 in Section 4.1 of the EIR to note that the area shown was previously graded as part of the SR 33 construction. The caption will be amended as suggested by the commenter in the Final EIR.

Response 19D

The commenter correctly notes that the area shown on Photo 14 in Section 4.1 is designated Industrial. The caption accompanying that photo will be revised in the Final EIR to read as follows:

> *Agricultural land adjacent to the Western Cañada Larga expansion area looking south from SR 33. This area is within the Upper North Avenue District and is currently designated Industrial.*

Response 19E

The commenter notes that the area west of the bike path within the Western Cañada Larga expansion area is not in row crop production, as shown on Figure 4.2-1. Figure 4.2-1 will be corrected in the Final EIR to show that area as "Grazing/Livestock" land.

Response 19F

The commenter notes that the area shown in Photo 3 in Section 4.4, *Biological Resources*, was previously graded as part of the SR 33 construction. This comment is noted, though no change to the photo caption is necessary.

Response 19G

The commenter states an opinion that the Western Cañada Larga area is the most disturbed among the expansion areas. Even though much of the area in question has been disturbed historically by past grading activity, the open lands of the Western Cañada Larga area maintains higher biological resource value than the irrigated agricultural lands associated with the other expansion areas. Therefore, from a biological resource perspective, it would be considered the least disturbed.

Response 19H

The commenter notes that Photo 3 on Figure 4.4-4 does not depict native bunch grass or oak woodland. The commenter also notes that the reference to the Santa Clara River on the fifth line of page 4.4-26 should be to the Ventura River. The reference to the Santa Clara River will be corrected in the Final EIR. Although Photo 3 does not depict the habitats mentioned by the commenter, the statement to which the commenter refers merely notes that the Western Cañada Larga has the potential for such habitats. Site specific surveys of the area would be needed to determine whether such habitats actually are present. Such surveys would appropriately be conducted in conjunction with the environmental review of any specific development project for the area.

Response 19I

The commenter requests a clarification of the location of the Mission Aqueduct, as discussed on page 4.5-17. The Mission Aqueduct is known to be in the North Avenue area, but actual location of the Mission Aqueduct is not known with certainty. In response to this comment, the sentence noted by the commenter will be revised to read as follows (new text is underlined):

> *A portion of the Mission Aqueduct is located in the vicinity of the Western Cañada Larga expansion area.*

Response 19J

The commenter notes that acreage is available for parks within Rancho Cañada Larga. This comment is noted, though the areas mentioned by the commenter are not within the Western Cañada Larga expansion area discussed in the Draft EIR.

Response 19K

The commenter notes that there is a County Fire Department station next to the City's water treatment facility. This comment is noted, though the City would need to provide fire protection service in the event that properties within the North Avenue area are annexed and developed.

Response 19L

The commenter states an opinion that the development total assumed for the Western Cañada Larga expansion area are unrealistic. Please see Response 17B.

VENTURA UNIFIED SCHOOL DISTRICT

THE POINSETTIA CITY BY THE SEA

20

July 18, 2005

Lisa Y. Porras, Senior Planner
Community Development Department
City of San Buenaventura
P.O. Box 99
Ventura, CA 93002

RECEIVED
JUL 19 2005
PLANNING DIV.

Dear Ms. Porras:

Thank you for the opportunity to review and provide input to the Draft Environmental Impact Report for Ventura's General Plan. The following are our comments pertaining to the K-12 Educational School Facilities.

1) Attached is a sample copy of the District's letter to the City dated September 18, 2003 concerning the Draft Comprehensive Plan Update and Draft Issue and Alternative Report. It seems these comments were not addressed on the Draft EIR Report. Also attached is a letter to the Planning Commission concerning public school classroom capacity and proposed residential development dated October 10, 2003. A

2) Figure 4.11-3 shows the locations of school facilities and administration facilities within the planning areas operated by Ventura Unified School District (VUSD). There have been some changes. The District no longer owns the Arcade District office site. It was sold last year. The Santa Clara District office site is currently in escrow and the Transportation Department only occupies this site. The administration staff that once occupied the Arcade and Santa Clara office sites has been relocated to the newly remodeled Education Service Center, (formerly Kinko's Corporate Office). Education Service Center is located at 255 West Stanley Avenue. Please make these changes to Figure 4.11-3. B

3) The Draft Environmental Impact Report did not take into consideration the relationship between commercial and industrial development projects and school facility needs. Economic opportunities as a result of the development of commercial and industrial space attract new households to the community. C

Commercial and industrial development along with residential development has an impact on school enrollment. New jobs require a larger labor force while in turn, causes new housing to be built to increase the housing supply. The families in these new houses will have their children enrolled in the local school district. This enrollment growth, a joint result of the commercial, industrial and residential development impacts the facility capacities of our District. In conclusion, this type of new development will cause a need for school facilities in Ventura Unified School District. Please note besides residential development, new commercial and industrial development projects are also subject to school impact fees.

FACILITIES, MAINTENANCE & OPERATIONS DEPARTMENT
359 S. Victoria Avenue • Ventura, CA 93003 • (805) 289-7981 • Fax: (805) 289-7988

4) On page 4.11-37, it states, "One alternative to developing new schools would be to expand existing schools". Existing District facilities will be pressed beyond capacity solely with the projected student enrollment from new residential development. Our facilities have minimal space remaining to accommodate projected enrollments from new development. D

Both classrooms and support space are needed to house additional students. As classrooms are added to schools, overcrowding becomes greater in the multi-purpose facility, library, administration office and other support areas. Without additional core space, the current standards of support space will suffer. As result of the implementation of class size reduction in grades Kindergarten through third grades several years ago, it maximized the space at several elementary school sites. Also, parking facilities at our sites will be impacted. Schools such as Balboa Middle, Loma Vista Elementary, Mound Elementary and E.P. Foster Elementary already have inadequate parking facilities that, in turn, impact adjacent neighborhoods.

Ventura Unified School District considers a school overcrowded when it operates at 90 percent of capacity. Using this standard, 18 of the District's schools are overcrowded. Students are being transferred to less crowded schools and are unable to attend a school in their neighborhood. The enrollment projection indicated in the Draft EIR will continue to grow and exceed available school space. One of the goals in the Districts master plan is to construct a new middle school in the east end of the City in the Wells Road area. This will help accommodate students generated from the housing development that has occurred in the east end in the last 6 years.

The remaining student capacity at this district's elementary, middle and high school is of the greatest short-term concern, while the new schools will be required to meet long-term student population progression. In addition many of the existing schools are in older neighborhoods. In these areas, minimal vacant land is available for expansion.

5) In relation to Impact PS-3, page 5.17, we disagree with the statement "less than significant for all scenarios." We consider the impact to school facilities as unavoidably significant for all scenarios. The implementation of the project will result in a potentially significant impact. We request that a School Facility Availability Ordinance a Memorandum of Understanding be adopted by the City Council as a proposed residential development should be approved only in confirmation with this ordinance. This involves the City encouraging the school district and developer to engage in early discussions about the nature and scope of the proposed projects, possible fiscal impact and mitigation measures. It is my understanding a similar measure was adopted by the City Council and spearheaded by the past Councilman, Mr. Steve Bennett that was Resolution NO. 97-98 E

6) In addition to SB 50 as mitigation measure and the above noted resolution. We recommend that the following objectives and policies be included to address education issues and impacts to public schools within the project scenarios. F

Objective: Accommodate the growth of all educational facilities.

- Policy: Provide an adequate level of infrastructure and services to accommodate campus growth at all educational levels.
- Policy: Work with the school district to locate school sites where infrastructure already exists to minimize costs to the school district in new school construction.
- Policy: Include school district staff in the review and input of annexation proposals to guide campus site selection and desirable design elements.
- Policy: Streamline the permitting process for educational facilities as practicable

Objective: Emphasize smart growth principles through all steps of the land development process.

- Policy: Ensure well-planned infill development Citywide, allow for increased density in selected areas along established transportation corridors.

The policies listed above will significantly lessen impacts directly related to the Project. We request that individual development proposals will comply with proposed City standards and practices regarding review of the adequacy of educational facilities. These proposed standards and practices include:

- Use the CEQA review process to evaluate impacts of future development on local schools.
- Ensure the payment of SB 50 school impact fees by project proponents as necessary.

We do concur to some degree with the mitigation measures listed on page S-17 and S-18 but need additional enforcement by the City to implement the above noted recommended objectives and polices.

7) The Draft EIR indicates the overall acreage needed to accommodate new school facilities has ranges for each potential expansion scenario. This range does not match the Assumed Expansion Area Acres by Use on Table 2-8, page 2-35. For example, Scenario 2, page 4.11-38 indicates a range from about 38 to 103 acres, but when you compare this to Table 2-8, it shows 110 acres for a school scenario. Pease make the necessary corrections G

8) No land use designation is indicated on the expansion area maps to accommodate future school sites. H

9) On page 4.11.40 Significance after Mitigation states: "Continue collection of State-mandated school impact fees would fund the construction of new school facilities that would be required to accommodate projected increases in school enrollment and would reduce school impacts to a less than significant level for any of the six scenarios." However, the cost of school facility needed by the district to accommodate students related to new development projects is greater than the fees which may be levied against respective type of new development projects. This statement is supported by Development Impact Fee Justification Study dated July 3.2003. As you are aware, construction cost to built public outlay projects continue to increase dramacily in the state of California. I

10) We request that the consultant provide a detail methodology how they determined the projected 2025 student enrollment and school acres needed listed on Tables 4.11-14 and 4.11-15. Please confirm that the California Department of Education's usage standard was used to determine the square footage needed per student generated from development. J

In conclusion, the City should consider suitable school capacity when they approve development. It is the overall benefits to the City that adequate and school facilities are established with helps contribute to the quality of education in the community.

We would like to meet with the consultants and City Staff to discuss our comments. Please call me to schedule this meeting at 289-7981, extension 1010. Thank you.

Sincerely,

Jorge B. Gutierrez

Ventura, CA 93002

Dear Commissioners:

This letter is concerning the K-12 Educational School Facility issues related to the Draft Comprehensive Plan Update and Draft Issues & Alternatives Report. For your information, I have been a member of the Comprehensive Plan Advisory Committee for the past two years. During my tenure, I have tried to provide vital input into the development of the plan as well as its impact on public school facilities.

I would like you to consider the comments I addressed to the City of Ventura Planning Department concerning the Draft Plan (see attached).

Further, I have attached a copy of Resolution No. 97-98: "A Resolution of the City Council Amending the Land Use Land Plan Element of the Comprehensive Plan Regarding Public School Classroom Capacity and Proposed Residential Development". I recommend that this resolution be incorporated into the Comprehensive Plan.

If you have any questions, please do not hesitate to call me at 289-7981, extension 1010. I appreciate your time and consideration in this matter.

Sincerely,

Jorge Gutierrez
Director of Facilities, Maintenance and Operations

VENTURA UNIFIED SCHOOL DISTRICT

September 18, 2003

City of San Buenaventura
City Planning Department
Attn: Lisa Porras, Associate Planner
P.O. Box 99
Ventura, CA 93002

Dear Ms. Porras:

Thank you for the opportunity to review and provide input on the draft Comprehensive Plan Update and Draft Issues and Alternatives Report. Below are our comments pertaining to the K-12 Educational School Facilities.

PUBLIC SERVICES

On page 11, under Public Services, a statement was made that; " ... public schools overcrowding has been alleviated with the recent opening of Foothill Technology High School ..." This statement is incorrect. The Foothill Technology High School helped relieve the student overcrowding at the high school level, but did not alleviate the total problem.

It was indicated that District middle schools have sufficient space. Again, this is not an accurate statement. Based on the Districts' 2002-03 Classroom Usage Report, Anacapa Middle School is at 99% student capacity; and Balboa Middle School, located in the east end of the city, is at 91% student capacity.

Last year, Balboa middle school's enrollment was 1454. The District prefers student enrollment at the middle school level to be around 1200. This school contains the largest student population among the four middle schools in the District. Also, of the 55 classrooms on site, 12 are portable, which means 22% of the class space is relocateable. The student population continues to grow every year as a result of housing developments that have occurred in the past 10 years in the east end of the city. Although portables have been placed at Anacapa and Balboa middle schools, the core facilities, such as cafeterias, have not been expanded.

The elementary schools in the west side of the city, which include E.P. Foster and Sheridan Way, are at 100% capacity. There are 22 classrooms at E.P. Foster Elementary School of which 13 are portable classrooms. This means 59% of the classroom space at E.P. Foster is relocateable; Sheridan Way Elementary School's relocateables make up 38% of classroom space.

The Public Services section relating to public schools do not portray a true picture of overcrowding conditions facing Ventura Unified School District. We recommend the data previously provided to the consultant working on the Comprehensive Plan should be expanded to include the above-noted information at the elementary, middle and high schools level.

PUBLIC SERVICES ISSUES

We request that the Public Services Issues on Page 12 concerning schools be expanded to add the following pertinent issues:

1. Crowding problem will still arise as more relocateables are added to existing school sites;
2. Need to replace and upgrade aging portable classrooms;
3. Need to expand support spaces such as libraries, restrooms, cafeterias and multi-purpose rooms in same proportion to classrooms to alleviate school overcrowding;
4. Constraints - Opportunity to expand existing campuses is limited by the physical size of the school sites and by the capacities of existing permanent facilities; and
5. Explore the feasibility of the City adopting a School Facility Availability Ordinance.

In respect to the School Facility Availability Ordinance, this type of ordinance may have been adopted by the City Council, several years ago, which was spearheaded by past Councilmen, Steve Bennett. As a proposal, residential development should be approved only in confirmation with the School Facility Availability Ordinance. This involves the City encouraging the school district and developers to engage in early discussions about the nature and scope of proposed projects and possible fiscal impact and mitigation measures.

HOUSING DEMAND – Section 3.1.1

The Population and Housing section does not reflect the school age population (5-17 years) in the City of Ventura. We request a figure be prepared which show the school age population from 1970 to 2025. This figure requested will show the magnitude of growth at different periods of time during the duration of the General Plan. Also, will rising birth rates result in increased enrollment from older homes?

SCHOOLS – Section 3.1.2

We would like to meet with the consultants to determine their methodology in determining land needed for new schools. Our projections used by the State Department of Education are different than what is proposed for land needed at each school grade level. The projected school needs should comply with the State Services Land Standards for the number of students per classroom and laboratory, recommended size of parcel for a given number of students, and the number of pupils per acre. Services level standards measure the physical attributes of educational facilities and their ability to provide a given level of educational benefit.

COMMERCIAL AND INDUSTRIAL SITES – Section 3.2.4

We would like to know if the consultant took into consideration the relationship between commercial and industrial development and schools impact. For example, in a case of a business moving to a new facility from an existing building in the city, it is assumed that on average, the older facility will be occupied by a new business enterprise with the same number of employees as the business that moved out. It is the growing capacity of the community to accommodate employment that result in residential growth and increased school demand.

SCHOOLS – Section 5.7

We disagree with the statement "the acreage estimate could be reduced in various ways, including more intensive use of existing schools, reducing the acreage requirement of new schools". The schools in our district are at or near capacity. With the District's implementation of class size reduction at K-3 grade level, additional relocateable classrooms were placed at elementary school sites, and at the same time, support space such as libraries and cafeterias were not expanded. With the additional classroom space added in the past ten years, there exists a lack of available open space to address future growth without impacting playground and support space.

The recommendation to reduce the acreage requirements of new schools will impact the District's ability to meet the Department of Education State Services Standards. By not meeting these standards, the District will not provide a quality level of educational environmental benefits to support curriculum and the learning process. Also, it will perpetuate overcrowding conditions for students and staff at impacted school sites.

At the top of page 93, it states "... no land within the existing City/SOI is specifically designed for new schools" ... except for the 10-acre elementary school PEA #2 (North Avenue). We feel there is sufficient property within PEA #2, #7, #8 and #9 to designate as new school sites. We recommend that the 100-acres required for new schools be address in the General Plan. Also, this plan fails to address the financial measures to pay for the new schools as a result of population growth.

We would like to meet with the consultants and City staff to discuss the possible 20-acre site Pacific View Mall (North Site) and the 35-acre area south of DeAnza Middle School.

Should you have any questions, please do not hesitate to call me at 289-7981, extension 1010.

Sincerely,

Jorge B. Gutierrez
Director of Facilities, Maintenance and Operations

Letter 20

COMMENTER: Jorge B. Gutierrez, Director of Facilities, Maintenance and Operations, Ventura Unified School District

DATE: July 18, 2005

RESPONSE:

Response 20A

The commenter references letters submitted to the City in 2003 and suggests that the Draft EIR does not address comments included in those letters. The Draft EIR incorporates relevant information contained in the referenced letters. In addition, consultant staff contacted the VUSD several times during the preparation of the Draft EIR in the first half of 2005 and received current enrollment and other data from the VUSD during that time period as well.

Response 20B

The commenter notes two changes to the locations of VUSD facilities that should be reflected on EIR Figure 4.11-3. Figure 4.11-3 will be amended in the Final EIR to reflect the new location of the VUSD Education Service Center on Stanley Avenue.

Response 20C

The commenter states an opinion that the Draft EIR does not take into account the relationship between commercial/industrial development and school enrollment. As suggested by the commenter, the generation of new jobs in the community is expected to contribute to population growth. However, the population and housing growth estimates discussed in the Draft EIR include all new housing and population growth anticipated for the Ventura Planning Area, including people who relocate to the area to fill new jobs. As discussed under Impact PH-4 in Section 4.15, *Population and Housing*, the City is projected to maintain a balance of jobs and housing through 2025 under any of the six land use scenarios studied in the Draft EIR. Therefore, the effect of job growth on school enrollment has been accounted for in the Draft EIR. As the commenter notes, non-residential developments would continue to be required to pay State-mandated school impact fees.

Response 20D

The commenter notes that a number of VUSD schools are already at or near capacity, that existing facilities have minimal space to accommodate projected enrollment increases, and that minimal vacant land is available in many existing neighborhoods. The commenter also notes that the VUSD is planning to construct a new middle school in the Wells Road area.

The comments with respect to school enrollment and capacity, and available land for new schools are consistent with the discussion under Impact PS-4 in Section 4.11, Public Services. Table 4.11-4 shows that projected 2025 enrollment exceeds the capacity of VUSD schools at the elementary, middle, and high school levels, while the discussion under "Scenario 1 –

Intensification/Reuse Only" acknowledges that there is "limited land that could be used for the development of new school facilities." In response to this comment, the following sentence will be added at to the last paragraph on page 4.11-11:

> *One of the goals in the VUSD master plan is the construction of a new middle school in the Wells Road area.*

Response 20E

The commenter states disagreement with the conclusion that impacts to schools would not be significant under CEQA and requests that the City adopt a "school availability ordinance" or memorandum of understanding in which residential development would only be approved following developer discussions with the VUSD and development of appropriate mitigation measures. The opinion with respect to the significance of school impacts is noted. As acknowledged in the Draft EIR, projected school enrollment exceeds the capacity of VUSD schools and, under some EIR scenarios, limited land is available for the development of new schools. However, as noted in the Draft EIR, pursuant to Section 65995(h) of the California Government Code (Senate Bill 50, chaptered August 27, 1998), the payment of statutory fees "...is deemed to be full and complete mitigation of the impacts of any legislative or adjudicative act, or both, involving, but not limited to, the planning, use, or development of real property, or any change in governmental organization or reorganization." As the State legislature has made this determination, the City has no authority to make a determination that payment of State-mandated fees would not mitigate impacts.

The Draft EIR includes two recommended actions that would at least in part address the request for coordination between developers, the City, and the VUSD. These are listed below.

PS-3(a) **School Coordination.** The following action should be added to the 2005 General Plan:

- Work with the Ventura Unified School District to ensure that school facilities can be provided to serve new development.

PS-3(b) **Expansion Area Schools.** The following action should be added to the 2005 General Plan if any land use scenario that includes an expansion area is adopted:

- Require expansion area specific plans or community plans to be prepared in coordination with the Ventura Unified School District and set aside land needed for new school facilities.

Response 20F

The commenter suggests several additional policies/actions for inclusion in the 2005 General Plan. The actions listed in Section 4.11 of the DEIR and under Response 20E partially address these suggestions. The City will continue to cooperate with the VUSD to identify new school sites in areas where residential growth is anticipated to occur. Chapter 3 of the 2005 General Plan addresses "smart growth," which is one of the

primary emphases of the General Plan. The City will be required by law to continue to use the CEQA process to evaluate the impacts of local development on schools and collect State-mandated school impact fees on behalf of the VUSD.

Response 20G

The commenter notes that the acreage assumed for schools within expansion areas does not match the acreage needed to meet the demands of individual EIR land use scenarios. These acreages are not intended to match. The commenter notes that the school acreage assumed for the expansion areas under Scenario 2, for example, is 110 acres, while the projected overall demand for acreage ranges from about 38-103 acres. This suggests that the expansion areas included in Scenario 2 provide more than enough acreage to meet overall demand associated with buildout of that scenario. Thus, inclusion of the expansion areas could help accommodate students generated by intensification and reuse development.

Response 20H

The commenter notes that the expansion areas do not include land use designations to accommodate schools. As noted in Section 2.0, *Project Description*, the City is not proposing to re-designate any of the expansion areas at this time. The Draft EIR considers these areas as possible future expansion areas. It is anticipated that any future development proposal for any of the expansion areas would involve a Specific Plan that would include provisions for schools.

Response 20I

The commenter notes that the costs of school construction are greater than that provided by State-mandated fees. As discussed in Section 4.11 and in Response 20E, State law dictates that payment of the State-mandated fees constitutes full and complete mitigation under CEQA.

Response 20J

The commenter requests an explanation of the methodology used to project school enrollment and school acreage requirements. This methodology is described in Section 4.11, *Public Services*. To estimate growth in student enrollment, the projected number of new housing units was multiplied by the students-per-household rates provided by the VUSD. To estimate the acreage of new schools needed, the following methodology was used:

- The current school capacity totals were subtracted from the projected number of new students (these totals are shown in the second column of Table 4.11-15)
- These totals were divided by the projected number of students per school (shown in the third column of Table 4.11-15) to determine the number of new schools needed (shown in the fourth column of Table 4.11-15)
- The number of schools needed were multiplied by the number of acres per school, from the California Department of Education recommended school size, to determine the amount of school acreage needed (shown in column 5 of Table 4.11-5)

Re: ***Comments on City of Ventura 2005 General Plan Draft Environmental Impact Report***

Dear Ms. Gialketsis:

I am submitting these comments regarding the Draft Environmental Impact Report ("DEIR") for the City of Ventura 2005 General Plan ("General Plan") on behalf of my client, Mariano Rancho, LLC. Mariano Rancho owns approximately 215 acres of vacant property within the City of Ventura ("City"), located north of Poli Street/Foothill Road and zoned R-1-7. As a longstanding member of the Ventura community, Mariano Rancho shares the City's interest in supporting responsible and sustainable planning for the future of the community.

To that end, we have reviewed the General Plan, the DEIR for the General Plan and the City of San Buenaventura 2000-2006 Housing Element ("Housing Element") to ensure that the documents are accurate and consistent. Our comments touch on apparent inconsistencies between the Housing Element and the General Plan, difficulties in tracking housing unit allocations and corresponding traffic impacts for particular areas across the three documents, characterization of the habitat conditions on the Mariano Rancho property and the Ventura hillside areas generally, and the need to clarify the status of linear parks delineated in the General Plan.

A

I. **Apparent Inconsistency Between the General Plan Projected Housing Growth Distribution and the Housing Element**

A general plan must be integrated and internally consistent among and within each element. Government Code § 65300.5. The housing element is one of seven mandated elements in the general plan. Gov. Code § 65302. Although it must be updated every five years, rather than the longer time frame permitted for updating general plans, the housing element must still be consistent with the overall general plan. Gov. Code § 65888

In Ventura's case, the City adopted the most recent Housing Element in April 2004, while the multi-year General Plan updating process was underway. The Housing Element contains certain assumptions about development potential which should be carried through to the General Plan. In particular, in its analysis of availability of sites for housing, the Housing Element states that 2,050 housing units can be developed on vacant lots in Ventura, of which 486 units may be developed on vacant sites zoned R-1-7.[1] Appendix D of the Housing Element provides a complete inventory of vacant sites, including parcel number, zoning and acreage. Mariano Rancho's property (740010015 R-1-7) is listed as 215.40 acres with "constraint" acreage of 71.97. Assuming this very conservative constraint estimate is accurate (which cannot be confirmed without the benefit of a project-specific analysis for the site), by applying the maximum density of 6 units per acre and the 70% of lot maximum density assumption used in the Housing Element, the unit potential derived for the Mariano Rancho property in the Housing Element is:

71.97 acres x 6 DU/acre x 70% = 302 dwelling units.

Turning to the General Plan DEIR, Table 2-5 summarizes Projected Housing Growth Distribution for the 20-year planning period of the General Plan under all scenarios by growth area. The General Plan proposes to focus most of the new growth into the specified Growth Districts/Corridors; these areas account for 3,950 units in all scenarios. The Mariano Rancho property is not located within one of these nine Growth Districts/Corridors. The DEIR projects another 2,650 units to be built within the proposed smaller Sphere of Influence and existing areas designated for urban uses, of which 700 units are projected to be built on vacant and underutilized parcels outside the Growth Districts/Corridors. (DEIR p. 2-32.) Appendix C to the DEIR breaks these 700 infill units down further into 250 units projected to be developed on underutilized sites and 450 units projected to be built on vacant property. Note 3 to the tables in Appendix C explains that these tables assume that "all vacant land outside the districts and corridors will be developed in accordance with the proposed land use designations."

Taken together, it is difficult to reconcile the assumptions in the Housing Element with those in the General Plan. Specifically, how do the 486 units assumed for just the R-1-7 zoned areas in the Housing Element compare to the 450 units projected for all non-Growth District/Corridor vacant property in the General Plan EIR? Using the Housing Element methodology and assuming the property is developed in accordance with its zoning, the Mariano Rancho's 302 units alone would account for 67% of all the units projected to be built

[1] Adopted City of San Buenaventura 2000-2006 Housing Element, April 2004, pp. 4-1, Chart 4-1 on p. 4-2.

on vacant properties designated for urban uses outside the Growth Districts/Corridors and within the city limits. Additional clarification of how the Housing Element assumptions relate to the General Plan's Projected Housing Growth is necessary to confirm that the General Plan is internally consistent as required by state law.

B

II. The Circulation Element Update Traffic Study Does Not Track the Housing Element Assumptions

The need for clarification extends to the issue of how Appendix E to the DEIR, the Comprehensive Plan Circulation Element Update Traffic Study ("Traffic Study"), accounts for the trips that would be generated by the growth assumed in both the Housing Element and the land use element of the General Plan. Attached to this comment letter is a communication from Paul W. Wilkinson, of the traffic engineering firm Linscott Law & Greenspan, noting the difficulties he had confirming that the permitted development assumed in the Housing Element was carried over to the development potential tabulation input to the General Plan and the Traffic Study. Mr. Wilkinson's analysis is hereby incorporated into this comment letter by reference.

In particular, we request that the General Plan and Traffic Study be amended to include a Traffic Analysis Zone ("TAZ") Exhibit and a trip table (development summary and trip forecast) that presents a development and trip making forecast for every TAZ that is consistent with all elements of the General Plan. Such TAZ and trip table exhibits would enable planners, property owners and community members to more clearly assess the traffic impacts of the growth assumptions and provide a basis for comparing site specific analyses to the General Plan's overall growth and circulation goals, policies and actions.

C

III. Characterization of the Habitat on the Mariano Rancho Property and Hillside Areas Overstate Potential Impacts

Figure 4.4-1 on page 4.4-3 of the DEIR maps the habitat types found within the planning area of the General Plan. The map depicts a substantial portion of the Mariano Rancho property and nearly all of the hillside property as containing coastal sage scrub habitat. A note on Figure 4.4-1 states that the vegetation cover types were derived from Landsat Thematic Mapper satellite imagery. We understand that at the analytical level of a General Plan detailed site characterizations are impractical and inappropriate. However, more detailed studies of the area indicate that Figure 4.4-1 vastly overstates the extent of coastal sage scrub in the Mariano Rancho and hillside areas. As a result, we would expect that as part of a site-specific analysis, some of the potential impacts identified, such as BIO-2 potential adverse affects on sensitive habitats, BIO-3 potential affects on special-status plants and animals and BIO-4 potential affects on ecological connectivity through wildlife corridors, would not be found or would be avoided.

GIBSON, DUNN & CRUTCHER LLP

D

IV. Status of Designated Linear Parks Should be Clarified

Figure 4.11-4[2] Parks and Recreational Facilities on page 4.11-15 of the DEIR, depicts a linear park network that includes a linear park running through the Mariano Rancho property and portions of the hillside areas. The Final EIR should clarify that these linear parks do not currently exist, have not been offered for dedication to the City and that the City has not presently offered to purchase the land for these parks.

In addition, the text at page 4.11-20 acknowledges that the "[r]esources available for constructing the linear park and trail system are acquired through conditions placed on developers who plan to build in areas within the linear park network." This approach to building the linear park therefore appears to presume the development of the hillside property in order to obtain the exactions necessary to dedicate and construct the linear park through the hillside portion of the City. This appears to be at odds with the General Plan's overall goal of focusing future development on non-hillside areas.[3] Therefore, the DEIR and the General Plan should be revised to either remove the linear park network designations from the hillside areas or include a statement that the linear parkland in this area may be acquired through purchase of the property or the permitting of limited development in the area to obtain the parkland through dedications.

Finally, the linear park system proposed for the hillside area in Figure 4.11-4 does not appear to have been delineated with consideration of the natural topography of the area. We suggest that text be added to the General Plan and DEIR stating that the final alignment of the Mariano Rancho and hillside linear parks may be revised to account for topography, habitat and other considerations.

We appreciate the opportunity to comment on the General Plan DEIR and look forward to reviewing the final document in the coming weeks.

Very truly yours,

Cecilia V. Estolano

Subject: **Review of General Plan and Related City Documents**
Mariano Rancho Property
Ventura, California

Dear Ms. Estolano:

At your request, we've reviewed several documents prepared by the City of Ventura as part of its General Plan update process. Those documents include the following:

- City of San Buenaventura, *Ventura General Plan, Public Review Draft*, May 24, 2005;
- City of Ventura, *2005 General Plan: Draft Environmental Impact Report*, SCH #2004101014, June 2005;
- City of San Buenaventura, *Comprehensive Plan Circulation Element Update Traffic Study*, May 2005, Appendix E;
- *Adopted, City of San Buenaventura, 2000-2006 Housing Element*, April 2004.

These documents were reviewed with the intent of tracking the "placeholder" within each for the Mariano Rancho property, which lies generally northeast of Downtown, north of Poli Street and Foothill Road, and south of the "Hillsides" open space area illustrated in the Draft General Plan Diagram (follows page 16 of the *Public Review Draft* of the *General Plan*). The intent of that tracking was to confirm that the permitted development on the property as outlined in the City's *Adopted 2000-2006 Housing Element* was carried over to the development potential tabulation input to the *General Plan Public Review Draft*, which in turn was specifically input to the *Circulation Element Update Traffic Study*.

Such a process would normally ensure that a future housing development proposal on a specific site, when consistent with the *Housing Element* assumptions for that site, would also be consistent with the City's circulation planning for the site area. This consistency would be most conveniently indicated when the trip table for the Traffic Analysis Zone (TAZ) of the *Circulation Element Update* traffic studies indicates a unit count, attributable to that specific site, which exactly (or very nearly equals) the

unit count permitted by the *Housing Element* (and by extension the *General Plan* Land Use component, since the *Housing Element* and *General Plan* are supposed to be consistent).

Unfortunately, as the following discussion will reveal, we are not able to make that finding of internal consistency between the *Housing Element* "placeholder" for the site, and the traffic analyses that support the *Circulation Element Update*. It may be possible that they are, but we doubt it. Having been unable to reconstruct that consistency from document to document, we recommend that the question be posed to the City as part of the public review process, ensuring that that which is called for on the Mariano Rancho property within the *Housing Element* is indeed represented in the circulation planning and impact studies conducted by the City.

Adopted City of San Buenaventura 2000-2006 Housing Element (April 2004)
Chart 4-1 of this report (page 4-2, which is also Page 124 in the electronic version) identifies the residential development potential on vacant sites in the City. The Mariano Rancho falls within the R-1-7 zoning designation, where the maximum density is 6 units per acre. The chart indicates that there are 56 parcels within this category, with vacant acreage totaling 111.7 acres, and with a development potential (at 70% of maximum density) of 486 dwelling units. (As an aside, the math here may be in error: 111.7 x 6 x 70% = 469 dwelling units).

Looking to Appendix D of this report, all of the assessor's parcel numbers that resulted in the Chart 4-1 summary are indicated, sorted to either underutilized or vacant sites (the later includes the Mariano Rancho). Looking to the "vacant sites" summary, the zoning designation, parcel acreage, and "constraint" acreage (presumably useable acreage) are indicated. As we understand it, the Mariano Rancho is APN 740010015 R-1-7, for which the total site acreage is 215.40, and the "constraint" acreage is 71.97. Taking the later, and the methodology underlying Chart 4-1, the unit potential of the Mariano Rancho would be as follows:

71.97 AC x 6 DU/AC x 70% = 302 dwelling units.

Using our terminology, this constitutes the future development "placeholder" we would expect to be carried to the other documents discussed below.

City of San Buenaventura, Ventura General Plan, Public Review Draft, May 24, 2005
Continuing our focus on the Mariano Rancho as a future residential development site, with as many as 302 dwelling units per the adopted *Housing Element*, Table 2 (pages 14 and 15) of the *General Plan Public Review Draft* presents the development potential for both residential and non-residential categories throughout the City. The *Draft* indicates, "Table 2 provides estimates of the amount of development that could reasonably be expected to occur in the city, sphere of influence, and potential expansion areas based on the densities and intensities allowed under each planning designation". These estimates

are sorted to "districts" and "corridors" (both of which are identified in the Draft General Plan Diagram following page 16 of the *Draft*), as well as "sphere of influence (SOI) / other infill" and "planned and pending developments" which, in our reading are not located on any figure of the *Draft*. In reviewing Table 2, it appears that Mariano Rancho is not represented among any of the described sub areas or projects. Thus while a development total of 302 units is the inferred unit potential of the site in the *Adopted Housing Element*, those units appear not to be included in any of the land use scenarios considered in the *Draft*, or its companion EIR *Draft*.

It is worth noting that among all four categories and their sub areas, Table 2 indicates an added development potential of 8,318 DU in the City, and this total appears to presume no development on the Mariano Rancho.

City of San Buenaventura, Comprehensive Plan Circulation Element Update Traffic Study, May 2005, Appendix E

From this document, it is evident that the Mariano Rancho is located within Sub Area 17 of the traffic analysis (Figure 3-1, Page 3-5). It will be noted that the report presents six figures using this base, one for each of six land use scenarios studied by the consultant. While the ADT pie chart varies among those six figures, Sub Area 17 includes the Mariano Rancho and the much larger surrounding area that includes the "Hillsides" area plus those intervening undeveloped sites between the "Hillsides" on the north and Poli Street and Foothill Road on the south.

Table 3-1 (page 3-4) of this report identifies the growth by land use type for the 17 sub areas of the study. A total of 435 dwelling units are identified for Sub Area 17 in Table 3-1. While this table refers specifically to Scenario 1 (of six) analyzed in the study, the 435 added unit ("total growth") total in Sub Area 17 is the same for all six scenarios. While 435 is clearly greater than the 302 unit development potential for Mariano Rancho inferred from the *Adopted Housing Element*, there is no way to tell from the studies we have if Mariano Rancho is included at any specific DU count.

Further, it is worth noting from Table 3-1 that the total growth potential for housing units among all 17 sub-areas of the traffic study is 8,539 dwelling units. For other scenarios, this total amount varies between 11,241 and 11,255 units, but the added unit count in Sub Area 17 remains constant at 435 units. Referring back to the discussion on Table 2 of the *General Plan Public Review Draft*, the development potential throughout the study area was estimated at 8,318 units. All six scenarios of the traffic study presume a greater unit total (meaning the traffic forecasts and findings are conservative...a good thing), but again we cannot isolate the specific development "placeholder" for Mariano Rancho.

Ms. Cecilia V. Estolano
July 15, 2005
Page 4

Conclusion
Given all of the above, we conclude that:

1. The *Adopted Housing Element* intended a total development of 302 residential units on Rancho Mariano.

2. The *General Plan Public Review Draft* identified a development potential of 8,318 residential units throughout the General Plan study area. Mariano Rancho does not appear to be part of that summary at any total, including the 302 units inferred by the *Adopted Housing Element*.

3. Mariano Rancho is included within Sub Area 17 of *The Comprehensive Plan Circulation Element Update Traffic Study*. That sub area is much larger than the footprint of Mariano Rancho. The projected housing growth in Sub Area 17 is 435 units regardless of the scenario evaluated. While 435 exceeds the 302 unit development total per the *Housing Element*, it still is not clear if the traffic study recognized / established a 302 unit "placeholder" for Mariano Rancho in circulation planning for the City.

4. In our experience, the ability to track, or "map", the development totals of a specific development proposal against prior land planning and circulation studies prepared at the city-wide level is an indispensable tool in reviewing and processing those eventual development applications. The documents we have do no allow us to conclude a consistency between the *Adopted Housing Element*, the *General Plan Public Review Draft*, and *The Comprehensive Plan Circulation Element Update Traffic Study* for the Mariano Rancho property.

5. While we've come to this conclusion as we tried to create this "map" for Mariano Rancho, we are concerned that virtually any future development proposal in the City could have the same difficulty, creating unnecessary trauma for the decision maker, staff, community and applicant. We recommend that such a mapping correlation process be framed now, as part of this General Plan review process, to avoid those unnecessary difficulties in the future. Such a framework may require refinement to these studies, or from a circulation perspective, might be relatively easily solved through a straight forward reconciliation process that presents a specific Traffic Analysis Zone (TAZ) exhibit and identifies a trip table (development summary and trip forecast), that for every TAZ, presents a development and trip making forecast that is deemed consistent with the selected Scenario of the General Plan adoption.

We have welcomed the opportunity to provide this investigation. Please call us if you have any questions.

Sincerely,

Linscott, Law & Greenspan, Engineers

Letter 21

COMMENTER: Cecilia V. Estolano, Gibson, Dunn & Crutcher, LLP, on behalf of Mariano Ranch, LLC

DATE: July 15, 2005

RESPONSE:

Response 21A

The commenter states concerns about what are perceived as inconsistencies between the housing growth projections contained in the Housing Element and the 2005 General Plan EIR. The Housing Element and the 2005 General Plan EIR use different methodologies to project possible growth because they have different purposes. The purpose of the analysis in the Housing Element was to demonstrate the ability to meet the City's housing needs; therefore, the numbers provided in the Housing Element illustrate the maximum development potential based upon the current zoning. The Draft EIR, on the other hand, is attempting to provide a "realistic" estimate of how much growth will actually occur through 2025 rather than illustrate the maximum amount of development that could occur theoretically. The growth factors upon which the Draft EIR analysis is based represent historic growth rates over the past 10 years (0.88% annually) and the past 20 years (1.14% annually). Theoretically, any of the land use scenarios considered in the Draft EIR could accommodate substantially more growth if all of the designations shown on the land use map(s) were built out to their maximum. However, it is unlikely that such growth would actually occur within the 20-year timeframe of the 2005 General Plan.

It is important to note that the EIR is an informational document, not a policy document, and that the growth numbers presented in the Draft EIR are assumptions developed for analytical purposes only. City and consultant staff attempted to distribute the future growth through the City in a manner consistent with the General Plan land use designations, Council direction, and current growth patterns in the City. However, the actual amount of growth that may occur in any given area may be higher or lower than that presented in the Draft EIR and a deviation from the number of projected units for any specific area would not represent an inconsistency with the General Plan.

Finally, it is also important to note that the proposed land use designation for the Mariano Ranch property about which the commenter is concerned (Low Density Residential) affords the same development potential as the current 1989 Comprehensive Plan designation (a maximum of 8 units per acre). Therefore, the development potential of the property has not changed.

Response 21B

The commenter attaches an analysis from a traffic engineering firm and requests that the traffic study include a traffic forecast for every traffic analysis zone that is consistent with all elements of the General Plan. A table such as that described by the commenter would not be useful and would more likely be the source of substantial confusion. As discussed under Response 21A, the maximum development potential estimates shown in the Housing Element and the

projections of growth over the next 20 years contained in the Draft EIR are not the same, nor are they intended to be as the two documents are intended to serve different purposes. It should again be noted that the development potential of the Mariano Ranch property about which the commenter is concerned would not change under the 2005 General Plan.

Response 21C

The commenter states an opinion that the biological resource analysis in the Draft EIR overstates the extent of coastal sage scrub in the Mariano Ranch area and individuates that biological resource impacts can likely be avoided if that area were to develop. The Draft EIR is intended to provide a conservative estimate of possible future impacts. It is correct that site-specific analysis of individual properties may reveal that biological resource impacts may be lower than suggested in this program level document. In any event, the City concurs with the opinion that biological resource impacts can be avoided or mitigated, as evidenced by the fact that the Draft EIR concludes that proposed General Plan policies would reduce biological resource impacts to a less than significant level.

Response 21D

The commenter notes that the Final EIR should clarify that linear parks shown in the hillside areas do not currently exist and, if they are to be developed, would need to be acquired through property acquisition or permitting of limited development to obtain parkland through dedications. The commenter also suggests that text be added to the figure depicting linear parks be amended to include text indicating that the alignments shown are conceptual and subject to change based upon site-specific conditions. The commenter is correct that linear parks in these areas would need to acquired or obtained through dedications. A note will be added to the EIR and General Plan maps indicating that the linear park locations are conceptual.

PLANNING DIV.

Ms. Lisa Y. Porras
City of San Buenaventura
Community Development Department
501 Poli Street
P.O. Box 99
Ventura, CA. 93002-099

Subject: General Plan Update

"Dear Ms. Porras,

My firm's review of the City draft EIR evaluating the effects on the environment of the new City General Plan is summarized as follows:

1. It does not appear to evaluate current and future potential redevelopment within the City and its ultimate effect on traffic, air quality, noise, etc A

2. It selects an already underutilized use of City lands, both within the City limits and Sphere of Influence boundaries, leading to Scenario No.1, but doesn't take into account natural population increases less deaths in addition to minor proposed housing increases. Use of antiquated SCAG guidelines fails to account for natural increases nor for redevelopment of such areas as the Harbor, Mid-Town and Ventura Avenue North to Canada Larga. B

3. The most appropriate population scenario should assume a rate of housing at 1.14% rather than 0.88%. C

4. It would be a burden on staff and costly to choose a population level that will be regularly exceeded, thus causing need for General Plan amendments, most of which would require complex and convoluted election campaigns. Using the SCAG population numbers is not being current and automatically causes almost every project to exceed City population and require a General Plan Amendment. D

5. General Plan Amendments in Ventura are expensive and problematic. E

6. As to one of our projects, Westwood Communities' Parklands, we assume that its location is considered infill in the new General Plan despite the need to annex it to the City. F

7. At S-11, Biological Resources, Impact BIO-1: A specific standard of 50 feet of setback from barrancas appears inconsistent with a Form Based Code approach in the New General Plan. Buffers from barrancas should be adaptable depending on (1) whether the barranca edge is where scenic retail or housing may be located, (2) the layout of contiguous parallel pedestrian and bike paths, etc. As an example, the buffer for Parklands is planned at 40 feet on each side of Brown Barranca. Where a barranca runs through a project area and not along one side, the amount of the buffer becomes doubled, impacting not only the adaptation of the barranca into the plan but keeping quite a bit of land out of use. G

8. At S-18, Public Services, Impact PS-3: We bring to your attention that a new school is not planned for the Parklands. H

9. At 4.11-18, City Park Facilities: Please recognize that the amount of acreage and size of public parks needs greater flexibility upon adoption of a Form Based Code approach to residential development. Our understanding of New Urbanism Parks calls for multiple parks of smaller acreage, dispersed through a proposed residential project. An example of this is our Parklands project, which has a proliferation of smaller than 5 acre parks, including tot lots, informal pitch and hit parks, etc. I

10. In the sections on Circulation and connecting streets, we strongly urge that not all connecting streets be required to be straight alignments between existing termini and entry into secondary and primary public streets. As an example, because of the strong desires of the residents west of Parklands, the east-west connector to Wells Road is designed to connect, but not in a straight run. This alignment was urged by the neighbors to the project as a means of keeping future trips from running through their home streets. Thus, we are urging that you provide street standards which allow for a convoluted, but nevertheless actual connection without having to leave an existing or proposed residential neighborhood. J

Respectfully submitted,

David J. Rose

David J. Rose

Chuck Cohen
Weston Benshoof Rochefort Rubalcava & MacCuish

Letter 22

COMMENTER: David J. Rose, DTR Engineering

DATE: July 18, 2005

RESPONSE:

Response 22A

The commenter states an opinion that the Draft EIR does not appear to evaluate the effects of current and future redevelopment. The Draft EIR evaluates the impacts of potential citywide growth through 2025, including intensification/reuse (including redevelopment of properties) and, in some instances, expansion of the City. As noted in Section 2.0, *Project Description*, approximately 8,300 housing units are assumed to be added to the City through intensification and reuse over the next 20 years and each of the analysis subsections in Section 4.0, *Environmental Impact Analysis*, evaluates the impacts associated with such intensification/reuse development. Traffic, air quality, and noise issues are discussed in detail in Sections 4.12, 4.3, and 4.10, respectively. Traffic impacts are further discussed in the full traffic study included in Appendix E.

Response 22B

The commenter states an opinion that the use of SCAG guidelines fails to account for natural population increases or the redevelopment of various areas. It is not clear to which SCAG guidelines the commenter is referring. The Draft EIR analysis discusses SCAG policies in Sections 4.14 and 4.15. However, as discussed in the Draft EIR, the population projections used in the Draft EIR exceed SCAG forecasts for the City; therefore, the City is not relying on SCAG's guidelines with respect to projected population growth through 2025. With respect to redevelopment, each of the Draft EIR land use scenarios anticipates the development of approximately 8,300 housing units in the City through intensification and reuse, including a substantial number of units in the Harbor, Midtown, and Ventura Avenue areas. Finally, both of the growth rates used in the Draft EIR (0.88% annually and 1.14% annually) are higher than the natural growth rate for the area, which is generally estimated at about 0.6% annually.

Response 22C

The commenter states an opinion that the 1.14% annual average growth rate is more appropriate than the 0.88% growth rate. These numbers were directed by City Council to be used as reasonable growth estimates over the next 20 years.

Response 22D

The commenter states an opinion that using SCAG population projections that are not current causes almost every project to exceed the City's population projections and therefore require a General Plan amendment.

The Draft EIR does not rely on SCAG forecasts. It merely acknowledges that the population projections used in the Draft EIR exceed SCAG growth forecasts for the City. Individual projects would not require a General Plan amendment merely because the City's population projections exceeds SCAG's forecast. The more likely scenario is that SCAG will update its forecasts to reflect the City's current growth projections following adoption of the 2005 General Plan. Similarly, it is anticipated that the Ventura County APCD will update its growth forecasts for Ventura in the 2007 AQMP that is currently in preparation.

Response 22E

The commenter notes that General Plan amendments are expensive and problematic. This comment is noted; however, as discussed above, exceedance of SCAG population forecasts would not necessitate a General Plan amendment for individual projects.

Response 22F

The commenter assumes that the Westwood Communities Parklands' project is considered infill even though the site requires annexation. The site is within the current Sphere of Influence and designated for urban use; therefore, its development would be included in the Intensification/Reuse Only scenario.

Response 22G

The commenter notes that the 50-foot buffer from riparian areas can affect large amounts of land and suggests that requiring such a buffer is inconsistent with a Form Based Code approach. This concern is noted. It is not clear why such a requirement would be inconsistent with a Form Based Code approach. Buffers can be adaptable depending upon circumstances, but the 50-foot buffer has been determined to provide the minimum distance needed to effectively protect riparian habitat and associated wildlife movement corridors. This minimum distance is consistent with that adopted by a number of communities in the southern California region.

Response 22H

The commenter notes that the Parklands project does not include a new school. This comment is noted. The developer will be required to pay State-mandated school impact fees.

Response 22I

The commenter notes that the size and acreage of parks needs greater flexibility under a Form Based Code approach. City staff agree with this statement generally and will continue to seek various means of meeting park and recreational demands associated with new development on a case-by-case basis. In addition, language has been added to the General Plan under Policy 6A as follows:

> *Update standards for citywide public parks and open space to include an expanded menu of shared park types, and identify locations and potential funding sources for acquiring new facilities in existing neighborhoods.*

Response 22I

The commenter suggests that not all connecting streets should be required to provide straight alignments between existing termini and entries into public streets. Specific alignments of new road extensions will continue to be reviewed on a case-by-case basis. The alignments shown in the Draft EIR and traffic study are conceptual only and will need to be adjusted to reflect on the ground conditions as part of individual project review.

Re: City of Ventura Draft Environmental Impact Report, SCH # 2004101014

To Whom It May Concern:

I am responding to the extraordinary above captioned Draft EIR. I am certain that you have already been told that it works better than weights in the gym. While totally impressed, it doesn't mean that I don't have some concerns and comments.

A

Initially, I offer a concern about Scenario 1 and the population limited therein and related to an outdated SCAG maximum number for the City. During the course of the CPAC update, at least three population alternatives were announced, including a recommendation of the Planning Commission to peg the new number based on a ratio of 1.14% per year rather than 0.88%. Scenario 1 is very restrictive, and one could assume that the annual birth rate produces a greater number of new Ventura residents, at least by a factor of 1+%, than the number which die or leave the community for other reasons. It essentially omits or doesn't provide for at least some new residents attracted to this beautiful, now vibrant city.

I was unable to find a population allowance for redevelopment, particularly along major streets in mid-town, The Avenue and the Harbor.

While the General Plan is silent on population, the EIR is likely to be relied on by persons generally opposed to new projects, and it will be used as a supportable statistical basis to declare a new project as not being consistent with the General Plan as it relates to population, and its concomitant effects on traffic, air quality, etc., regardless of the absence of a formal cap in its text.

The foregoing analysis of the population base leads me to the more important, costly and time consuming concern that, while there is an implicit flexibility of dealing with added population, the current text could require worthwhile and well located applications to go through an amendment to the General Plan due to its reliance on the known unrealistic SCAG projection, which is already less than actual.

It is my understanding that the new General Plan is a precursor to the City adopting a Form Base Code approach to all new development. The initial application is taking shape in Downtown and was recently informally applied to the School District's Hails property under contract to The Olsen Company. Should my premise be correct, the EIR should be similarly oriented, and not include hard edge archaic current zoning standards. In that regard, it should be a prospectively designed General Plan.

To illustrate the foregoing, please consider:

Public Services:

B

Park Area: Ventura is a mature City with existing park and recreation areas, which have been added to over the years as needed. One outstanding feature of the City is its beaches, which provide a recreation amenity non-coastal cities would die for. Yet, it appears that the EIR is calling for the same green park acreage as is required in non-coastal cities. A review of Tables 4.11-8, 4.11-9 and 4.11-10 find sufficient park acreage aggregating from the three categories examined in those Tables. On the larger scale, Ventura is addressing active sports parks. In a Form Base Code setting, minimum 5 acre parks are arbitrary and likely questionable or unnecessary. More apropos would be an EIR statement to the effect that new projects require new ideas, dimensions and types of common recreation, specially in light of more attached housing, smaller lots and less private on-site recreation area. Thus, in my opinion, rigid park requirements are out of touch with the new planning paradigm.

C

Fire Facilities: The standards discussed in the EIR relate to a different, earlier time when fire fighters were primarily engaged in fire protection and fire fighting rather than as now, with a change of emphasis to serving as paramedics. There will always be a necessary role for fire personnel to keep our

cities safe and to do prevention. But old standards do not take into full consideration the requirements of the State Uniform Building Code, improved construction materials, e.g. roofing, and methods, e.g. interior sprinklers, wall construction treatment, etc. Thus, the issue is whether the EIR should comment generally rather than specifically on such facilities and crew numbers.

Biological Resources at page S-11: The specificity of the buffer area in Action 1.8 related to rivers, creeks and barrancas is too binding. Each of such natural settings need be protected, and protection provided from potential overflows to nearby development. But to specify an arbitrary set back of 50 feet is to, in my opinion, miss the point of the Form Base Code, which enables a recognition of greater integration, not based on arbitrary dimensions or distances, of such natural features with new projects to enhance the aesthetic, recreation and socialization character of such new projects. Thus, non intrusive bike and walking paths—not subject to effects of spillover—as well as detention/retention areas used for passive recreation could be forced away from the top of banks where the full experience of being close to water courses is best enjoyed. Similarly, the matter of proximity of restaurants or even residences to such water courses should be left to topographic and site design and safe and thoughtful construction methods, all of which would go through rigorous review to reach a more spontaneous, natural and random product. Such creativity should be rewarded and not preempted by language in the FEIR or the General Plan. D

Public Schools: PS-3 is a positive example of dealing with a generic matter of placement of new schools as need arises. E

Noise: F

Impact N-1: By specifying a sound wall in the EIR pursuant to Action 7.28, other values such as views of the Santa Clara River could be unintendedly obscured and subordinated. Such a sound issue could be addressed on a specific project look and not clutter the EIR and General Plan.

Utilities and Service Systems: G

Impact U-2(b): It is observed that the reference to sanitation capacity in this subsection specifies Ojai Valley Sanitary District capacity. It is found that the language in this subsection hands jurisdiction or development veto

power to that special district to the detriment of the City maintaining final authority and options. If it is necessary to specify the subject District, you might consider adding language, to wit: "only when the Ojai Valley Sanitary District has adequate capacity for projected wastewater flows or there is other mitigation approved by the City Engineer."

H

Population and Housing:

Impact PH-2: The finding of Significance after Mitigation in the third column of Table S-1 would not be required but for the tie-in of all Scenarios 1-6 to the SCAG population projection.

Transportation and Circulation:

I

Policy 3E and Action 3.17 are other positive examples of, in this case, dealing with road alignments and dimensions in a Form Based Code mode, wherein there is flexibility to provide for connectivity of existing to new roadways in a manner which enhances walkability and direct access without overburdening existing neighbors, e.g. design for Parklands' street system, particularly connecting the existing neighborhood street on the west boundary to Wells Road, but **not** necessarily in a straight alignment.

Congratulations on a heroic effort and documented study.

Very truly yours,

Charles W. Cohen

Letter 23

COMMENTER: Charles W. Cohen, Weston, Benshoof, Rochefort, Rubalcava & MacCuish, LLP

DATE: July 18, 2005

RESPONSE:

Response 23A

The commenter states an opinion that the 0.88% population growth rate considered in the Draft EIR is overly restrictive. The commenter also states concerns about reliance on SCAG population projections and what he believes is the lack of a "population allowance" for the Midtown, Ventura Avenue, and Harbor areas. Finally, the commenter states an opinion that the EIR should not include "hard edge archaic zoning standards."

The opinion with respect to the appropriate population growth rate for the City is noted. As noted in the Draft EIR, the 0.88% average annual growth rate assumed for Scenario 1 represents the average over the past 10 years, while 1.14% growth rate assumed for Scenarios 2-6 represents the average over the past 20 years. It is important to note that the growth rates assumed in the Draft EIR are not intended to be growth caps. Rather, they are estimates used for analytical purposes that are intended to provide a realistic picture of likely conditions in 2025.

As part of the overall anticipated growth, the Draft EIR relies on certain assumptions about where future growth might occur and assigns growth to areas throughout the City, including the Midtown, Ventura Avenue, and Harbor areas. However, as with the overall population growth assumptions in the Draft EIR, the assumed amount of growth for individual areas within the City are not meant to be growth caps for those areas. Any of the districts, corridors, or neighborhood centers could theoretically accommodate substantially more growth than assumed in the Draft EIR based on the land use designations. However, it is not realistic to assume that all areas of the City would build out to the maximum theoretical degree over the next 20 years.

In response to several comments on the Draft 2005 General Plan and Draft EIR, the table in the 2005 General Plan will be revised to eliminate the detailed estimates of future growth by geographic location. The Final 2005 General Plan will include a table that summarizes growth projections by general category (districts/ corridors, neighborhood centers, other) in order to eliminate confusion about whether the growth projections for individual areas used for the EIR analysis constitute growth caps for those areas.

The Draft EIR does not rely on SCAG forecasts. It merely acknowledges that the population projections used in the Draft EIR exceed SCAG growth forecasts for the City. Individual projects would not require a General Plan amendment merely because the City's population projections exceeds SCAG's forecast. The more likely scenario is that SCAG will update its forecasts to reflect the City's current growth projections following adoption of the 2005 General

Plan. Similarly, it is anticipated that the Ventura County APCD will update its growth forecasts for Ventura in the 2007 AQMP that is currently in preparation.

It is correct that the City intends to adopt a Form Based Code subsequent to approval of the 2005 General Plan. However, it is not clear which zoning standards to which the commenter is referring. The Draft EIR analysis does not rely on current zoning standards.

Response 23B

The commenter states concerns about the use of current City park standards in the Draft EIR and suggests that the EIR is "calling for the same green park acreage as is required in non-coastal cities." The commenter also states an opinion that the use of rigid park requirements is not appropriate. The opinion regarding park standards is noted. The Draft EIR uses current City park acreage standards to estimate future demand for parks. However, it is true that acreage is only one component of park demand. In addition, as noted in the Draft EIR, the estimate of existing park acreage does not include beaches, schools, or regional park and open space facilities located outside the Planning Area. All of these facilities offset the "shortfall" of parks identified in the Draft EIR and will continue to do so in the future. The City will continue to seek creative ways of meeting the park and recreational needs of the community, which likely will involve some variation from the adopted standards in some instances. In addition, language has been added to the General Plan under Policy 6A as follows:

> *Update standards for citywide public parks and open space to include an expanded menu of shared park types, and identify locations and potential funding sources for acquiring new facilities in existing neighborhoods.*

As noted in the Draft EIR, the continued collection of park fees and use of these funds to develop new parks and recreational facilities would reduce park-related impacts to a less than significant level.

Response 23C

The commenter states an opinion that the standards for fire protection service discussed in the Draft EIR are inappropriate given the current emphasis on paramedics. The commenter also suggests that the EIR should comment on fire service more generally, rather than providing information about specific personnel and facility needs. These opinions are noted. The information regarding current fire service needs was obtained directly from the Ventura Fire Department as part of the Draft EIR preparation. Therefore, it is presumed that the needs identified in the Draft EIR reflect the current Department needs.

Response 23D

The commenter states an opinion that the 50-foot riparian area setback specified in the Draft EIR is unnecessarily binding, noting that in certain circumstances a less restrictive setback may be adequate. This opinion is noted. The City will retain flexibility in how the setback requirement is to be applied. However, the recommended 50-foot buffer provides the minimum determined to be needed to maintain the biological integrity of "natural" riparian areas.

Response 23E

The commenter states agreement with the manner in which school impacts is addressed in the Draft EIR. No response is necessary.

Response 23F

The commenter states an opinion that the need for sound walls would be more appropriately addressed as part of a specific project than as part of the General Plan. This opinion is noted. The action mentioned by the commenter is intended to address existing noise issues for current residences located adjacent to area freeways. Project-specific analysis of future development proposals would not address this existing condition.

Response 23G

The commenter suggests a revision to Mitigation Measure U-2(b) to provide additional flexibility for the City. In response to this comment, Measure U-2(b) is revised to read as follows (new text is underlined):

> *U-2(b)* ***Ojai Valley Sanitary District Capacity.*** *The following action shall be added to the 2005 General Plan if Scenario 5 or any other scenario that includes both the North Avenue and Western Cañada Larga expansion areas is selected:*
>
> - *Allow development within the North Avenue expansion area or Western Cañada Larga expansion only when the Ojai Valley Sanitary District has adequate treatment capacity for projected wastewater flows or other mitigation is approved by the City Engineer.*

Response 23H

The commenter notes that the unavoidably significant impact relating to population projections is due to the comparison to SCAG growth forecasts. This is correct. However, it should be noted that the unavoidably significant impact does not prevent the City from approving the 2005 General Plan, nor does it mean that future individual projects would be inconsistent with the General Plan. The City merely needs to acknowledge the discrepancy between the forecasts and adopt a Statement of Overriding Considerations setting forth the reasons the project's benefits outweigh the impact. It is anticipate that SCAG will update its population forecasts for the City in response to new projections provided by the City following approval of the General Plan Update.

Response 23I

The commenter states agreement with the approach taken in General Plan Policy 3E and Action 3.17. No response is necessary.

SUBJECT: Draft EIR for Comp. Plan Update

Thank you for the opportunity to review and comment on the above subject document. Attached are the comments that we have received resulting from an intra-county review of the projects.

Any responses to these comments should be sent directly to the commenter, with a copy to Carl Morehouse, Ventura County Planning Division, L#1740, 800 S. Victoria Avenue, Ventura, CA 93009.

If you have any questions regarding any of the comments, please contact the appropriate respondent. Overall questions may be directed to Carl Morehouse at (805) 654-2476.

Sincerely,

Christopher Stephens
County Planning Director

COMMENTER: Christopher Stephens, County Planning Director, County of Ventura Resource Management Agency

DATE: July 18, 2005

RESPONSE:

The commenter notes that comments from individual departments at the County of Ventura are attached to his letter. Responses to individual department comments are included in the responses to Letters 25-28.

County of Ventura
Planning Division
MEMORANDUM

25

TO: Carl Morehouse

DATE: July 18, 2005

FROM: Bruce Smith, Manager
General Plan Section

SUBJECT: Draft Environmental Impact Report for Update of Comprehensive Plan (City of San Buenaventura)

The Ventura County Planning Division has reviewed the Draft Environmental Impact Report (DEIR) for the Update of the City of San Buenaventura Comprehensive Plan. While the EIR itself appears to adequately address the impacts of the Comprehensive Plan Update, we offer the following comments relative to conflicts with the County General Plan with respect to Saticoy and the North Ventura Avenue Area:

Conflict with Saticoy Area Plan

A

The City's proposed Comprehensive Plan indicates that the residential neighborhood between Nardo Street and Rosal Lane is designated as "Medium Density Residential (9-12 dwelling units per acre"). The area south of Rosal Lane is designated as "Industrial" by the Comprehensive Plan.

The Ventura County Saticoy Area Plan designates the Rosal Lane area as "2-Family Residential" which is consistent with the City's Plan, but the County's residential designation extends further south 225 feet into the area designated by the City as "Industrial". This conflict between the City and County plans creates an 8.5-acre "no-man's land" which is not developable because the City is unable to extend water service for a residential land use which is inconsistent with the Comprehensive Plan and the County cannot approve industrial development on land zoned and planned for residential development. The area cannot be annexed to the City as it is not currently contiguous to the existing City limits. The County plan designation has been in place since at least 1967. Land use in this "no man's land" area is largely vacant, but includes two or three residential units south of Rosal Lane at Alelia Avenue, and one small commercial property fronting on Los Angeles Avenue. We presume that the City does not intend a conflict and that the Comprehensive Plan map may reflect a mapping error. We ask that the City evaluate this conflict with the County's plan and determine whether or not a boundary adjustment is appropriate at this time.

B

Conflict with North Ventura Avenue Area Plan

In 1982 and 1984 the City and County jointly adopted an area plan for the North Ventura Avenue area. Policies of the joint plan required that future City and County amendments should be processed and approved by both jurisdictions to avoid conflicts between City and County plans for the area. Although there were minor differences between the City and County plans for the North Ventura Avenue area in formatting and terminology even when first adopted, the City plan has evolved over time and now evidences significant land use conflicts with the County Area Plan. The principal differences appear to be that the former "Floodplain" area is now largely designated as "Agriculture"; a portion of the former "Floodplain" area (the unincorporated portion of the City's wastewater treatment plant site) has been designated as "Industrial" and large areas formerly designated as "Oil Extraction Industrial" have been re-designated as "Industrial", "Agricultural" or "Open Space". While we have no particular concerns with most of the land use amendments the City has approved over time, we are concerned that the two plans are no longer in sync, resulting in confusion and unnecessary complications for applicants for discretionary applications. We suggest that the City direct its staff to work with the County to identify and eliminate where feasible conflicts between the City and County plan either by amendment of the County Plan, the City Plan or both, as appropriate.

We also suggest that the proposed "Industrial" designation of the unincorporated portion of the City treatment plant may be inappropriate because of the potential flood hazard. We suggest a designation of "Public and Institutional" would better serve as a land use designation for this site.

Thank you for the opportunity to review the Draft EIR and Comprehensive Plan Update.

Letter 25

COMMENTER: Bruce Smith, Manager, General Plan Section, County of Ventura Planning Division

DATE: July 18, 2005

RESPONSE:

Response 25A

The commenter notes a discrepancy between the General Plan land use map and the County's Saticoy Area Plan for properties along the south side of Rosal Lane. This discrepancy is addressed as part of the "Intensification/Reuse + Minor Map Clean-Up" alternative studied in Section 6.0, *Alternatives*. City staff are recommending revision of the General Plan land use map to provide a "Residential Medium Density" designation for the properties in question. It should also be noted that one of the property owners submitted a comment letter (Letter 5) correcting the APNs listed in the Draft EIR. Those numbers will be corrected in the Final EIR.

Response 25B

The commenter suggests that City and County staff work together to resolve discrepancies between the City and County plans for the North Ventura Avenue area. The commenter also suggests that the "Industrial" designation for the unincorporated portion of the City's treatment plant may be inappropriate because of the potential flood hazard in the area. City staff will continue to work with County staff regarding the planning of the North Ventura Avenue area. With respect to the water treatment plant site, it is presumed that the commenter is referring to the area immediately north of the treatment plant. That area is already designated "Industrial" in the current Comprehensive Plan. Therefore, the "Industrial" designation represents no change. Any development within the 100-year flood zone would need to comply with FEMA requirements as well as the requirements of the City's Floodplain Ordinance.

26

VENTURA COUNTY
WATERSHED PROTECTION DISTRICT
PLANNING AND REGULATORY DIVISION
800 South Victoria Avenue, Ventura, California 93009
PAUL CALLAWAY, Permit Manager - 805 654-2011

DATE: July 14, 2005

TO: CARL MOREHOUSE

FROM: PAUL CALLAWAY

SUBJECT: Comments to the DEIR for the Ventura's General Plan Update
RMA 04-086-2

We have reviewed the DEIR and have the following comments on our areas of concern

PERMIT SECTION:

A

In section 4.8 the DEIR discusses ways to mitigate the increase in peak runoff due to the increase in impervious area from the proposed future development scenarios. In reviewing the proposed mitigation measures to make the effect less than significant we found that these measures are acceptable but we think that developments and re-developments in the areas adjacent to our jurisdictional channels should be conditioned, as an additional possible mitigation measure, to dedicated right of way to meet the future needs of the Watershed Protection District (District), and to build and dedicate to the District improvements that will address the deficient facilities along and in those channels. These right of way needs will depend on the type of channel the city would like to see in these areas such as a soft environmentally friendly channel which would require a larger right of way compared to the District's preferred channel which is a vertical walled concrete channel with access road.

ENVIRONMENTAL SERVICES SECTION:

B

The Environmental Services Section of the District has reviewed the DEIR dated June 2005, and has the following comments.

The lands and land use changes that are evaluated in the DEIR, including project alternatives, may include impacts on engineered drainages, debris or detention basins, rivers or streams, and adjacent 100-year floodplains that are owned by the District or subject to the District's jurisdiction.

The proposed plan and the policies therein, present an opportunity for the District to work cooperatively with the City of Ventura to set aside undeveloped floodplains for the purpose of providing "soft" solutions to flood control and to maintain rivers and streams

In their natural state. These public trust resources are amenities that improve the quality of life in the City of Ventura and its Sphere of Influence.

Section 4.8 of the DEIR identifies flooding and flood mitigation measures for developable areas within the 100-year floodplain under each land use scenario. In addition, several Actions (Actions 1.10, 1.14, 5.2) described in this section indicate that the City will pursue removal concrete and renovation of flood control facilities for the purpose of creating "soft" flood control facilities (e.g., natural stream, wetlands, etc.) and greenbelts.

In most cases, natural channels generally require a much wider floodplain than engineered structures. However we note that the proposed plan does not present any land use goals, policies or actions that would limit development in the floodplains or encourage dedication of floodplain for such purposes. Further, policies that limit the use of variances that would allow development in the 100-year floodplain should also be considered and included in the adopted plan.

The DEIR also describes mitigation measures for development in 100-year floodplains in the various land use scenarios. These include structural or building solutions that elevate finish floors, and/or Letters of Floodplain Map Revision from FEMA. In light of the plan goals for soft solutions to flood control, these mitigation measures are incongruous. If the City intends to restore and maintain natural streams for flood control purposes over the life of the plan, land use policies which promote this approach to flood control and dedication of floodplain right-of-way must be adopted, applied, and enforced.

Establishing and strengthening protective policies for floodplains in this plan update is valuable. As history illustrates, over time, continued encroachment into the floodplain by urban development in cities and in unincorporated areas results in substantial flooding problems, which then require traditional flood control improvements. Moreover, the pressure for additional tax-payer funded flood control projects in natural rivers and streams will increase.

Planning and Regulatory Division

K:\WQ\Environmental Services\EIR Reviews\City of Ventura Comp Plan_DEIR.DOC

Letter 26

COMMENTER: Paul Callaway, Ventura County Watershed Protection District

DATE: July 14, 2005

RESPONSE:

Response 26A

The commenter suggests that the EIR should include an additional mitigation measure requiring the dedication of right-of-way for future Watershed Protection District needs for developments adjacent to jurisdictional channels. In response to this comment, Mitigation Measures HWQ-2 will be amended to read as follows (new text is added):

HWQ-2 ***Additional Drainage Actions.*** *The following actions shall be added to the 2005 General Plan to address existing storm drain system deficiencies:*

- *Develop a financing program for the replacement of failing corrugated metal storm drain pipes in the City.*
- *Adopt assessment districts or other financing mechanisms to address storm drain system deficiencies in areas where new development is anticipated and deficiencies exist (e.g., Downtown district, Ventura Avenue corridor, and Harbor district).*

The following actions are recommended to minimize the impact of future development on the local storm drain system and implement City goals regarding sustainable infrastructure:

- *As feasible, require new developments to incorporate stormwater treatment practices that allow percolation to the underlying aquifer and minimize offsite surface runoff. Such methods may include, but are not limited to, (1) the use of pervious paving material within parking lots and other paved areas to facilitate rainwater percolation; and (2) construction of retention/detention basins to limit runoff to pre-development levels and to encourage infiltration into the groundwater basin.*
- *Where deemed appropriate, require new developments adjacent to Ventura County Watershed Protection District channels to dedicate necessary right-of-way to meet future District needs.*

Response 26B

The commenter reiterates the need for dedicated right-of-way adjacent to District drainage channels and suggests that the General Plan should strengthen land use policies to direct development away from floodplains rather than providing for structural solutions to flooding issues. Please see Response 26A. Also, the proposed 2005 General Plan is primarily intended to direct development away from drainages and focus on intensification and reuse within the

already urbanized areas of the City and contains many policies and statements that enforce this intent. In the event that any structural solutions are considered, the City will discuss them with the Watershed Protection District.

27

VENTURA COUNTY
AIR POLLUTION CONTROL DISTRICT
Memorandum

TO: Carl Morehouse, Planning DATE: July 13, 2005

FROM: Alicia Stratton AS

SUBJECT: Request for Review of Draft Environmental Impact Report for the Update of 1989 Comprehensive Plan, City of Ventura (Reference No. 04-086-2)

The proposed project involves the update of the 1989 Comprehensive Plan, which serves as the blueprint for the development of the City. Each of the Comprehensive Plan elements other than the Housing Element (an update of which was approved earlier this year) will be updated with goals, policies, and objectives that reflect the current needs and preferences of the community. The land use map will also be updated.

The City intends to emphasize infill development and reuse of developed lands within he current Sphere of Influence over the life of the Comprehensive Plan Update (through 2025), and has identified a number of growth districts and corridors where infill/reuse is to be focused. However, as part of the Comprehensive Plan update, the City is also considering inclusion of certain areas outside the current Sphere of Influence for future development.

We wish to submit the following comments on the draft environmental impact report;

1. Table 4.3-1 on Page 4.3-2 should be revised to reflect that the federal one-hour ozone standard has been revoked, effective June 15, 2005 (see attached). The corresponding paragraph discussing the table should be revised accordingly (Pages 4.3-2 and 4.3-3). A

2. The discussion on Current Ambient Air Quality on Page 4.3-5 should be revised to include data from the APCD air quality monitoring station at Emma Wood near Ventura. Data from this monitoring station is representative of air quality in the coastal areas of Ventura; data from the El Rio monitoring station is more representative of the inland portions of Ventura. The Emma Wood station only monitors ozone levels. B

3. The discussion of the 1994 Air Quality Management Plan (AQMP) in Section 4.3.1 Setting (d) on Page 4.3-5 should include this statement following the last sentence of the fifth paragraph: "To that end, the APCD is currently developing a new AQMP, which will be completed in 2007. The 2007 AQMP will contain C

strategies for attainment of the new eight-hour federal ozone standard by 2010. It will also incorporate updated projections of population, dwelling units and motor vehicle emissions."

4. The second paragraph on Page 4.3-14 should be revised to state that: "The Ventura County AQMP provides recommendations for reducing emissions from transportation-related sources by reducing vehicle use or improving traffic flow. These techniques are referred to as Transportation Control Measures (TCMs)." D

5. The Mitigation Measures discussion on Page 4.3-20 should be expanded to include this additional measure: "Require other air pollutant mitigation measures found feasible at the time of project approval." E

If you have any questions, please call me at 645-1426 or email me at alicia@vcapcd.org.

National Ambient Air Quality Standards (NAAQS)

The Clean Air Act, which was last amended in 1990, requires EPA to set **National Ambient Air Quality Standards** for pollutants considered harmful to public health and the environment. The Clean Air Act established two types of national air quality standards. ***Primary standards*** set limits to protect public health, including the health of "sensitive" populations such as asthmatics, children, and the elderly. ***Secondary standards*** set limits to protect public welfare, including protection against decreased visibility, damage to animals, crops, vegetation, and buildings.

The EPA Office of Air Quality Planning and Standards (OAQPS) has set National Ambient Air Quality Standards for six principal pollutants, which are called "criteria" pollutants. They are listed below. Units of measure for the standards are parts per million (ppm) by volume, milligrams per cubic meter of air (mg/m^3), and micrograms per cubic meter of air ($\mu g/m^3$).

National Ambient Air Quality Standards

Pollutant	Primary Stds.	Averaging Times	Secondary Stds.
Carbon Monoxide	9 ppm (10 mg/m^3)	8-hour[1]	None
	35 ppm (40 mg/m^3)	1-hour[1]	None
Lead	1.5 $\mu g/m^3$	Quarterly Average	Same as Primary
Nitrogen Dioxide	0.053 ppm (100 $\mu g/m^3$)	Annual (Arithmetic Mean)	Same as Primary
Particulate Matter (PM_{10})	50 $\mu g/m^3$	Annual[2] (Arith. Mean)	Same as Primary
	150 ug/m^3	24-hour[1]	
Particulate Matter ($PM_{2.5}$)	15.0 $\mu g/m^3$	Annual[3] (Arith. Mean)	Same as Primary
	65 ug/m^3	24-hour[4]	
Ozone	0.08 ppm	8-hour[5]	Same as Primary
Sulfur Oxides	0.03 ppm	Annual (Arith. Mean)	------
	0.14 ppm	24-hour[1]	------
	------	3-hour[1]	0.5 ppm (1300 ug/m^3)

[1] Not to be exceeded more than once per year.

[2] To attain this standard, the 3-year average of the weighted annual mean PM_{10} concentration at each monitor within an area must not exceed 50 ug/m^3.

[3] To attain this standard, the 3-year average of the weighted annual mean $PM_{2.5}$ concentrations

EPA National Ambient Air Quality Standards (NAAQS)

from single or multiple community-oriented monitors must not exceed 15.0 ug/m^3.

[4] To attain this standard, the 3-year average of the 98th percentile of 24-hour concentrations at each population-oriented monitor within an area must not exceed 65 ug/m^3.

[5] To attain this standard, the 3-year average of the fourth-highest daily maximum 8-hour average ozone concentrations measured at each monitor within an area over each year must not exceed 0.08 ppm.

Letter 27

COMMENTER: Alicia Stratton, Ventura County Air Pollution Control District

DATE: July 13, 2005

RESPONSE:

Response 27A

The commenter suggests revising Table 4.3-1 to reflect the fact that the federal one-hour ozone standard was revoked on June 15, 2005. That table and the corresponding text will be revised accordingly in the Final EIR. This minor text change will not affect any EIR findings or conclusions.

Response 27B

The commenter suggests that the discussion of ambient air quality on page 4.3-5 should be revised to include data for the Emma Wood monitoring station. In response to this comment, the following table will be added to EIR Section 4.3-3 and the accompanying text will be revised accordingly. Subsequent tables will be renumbered.

Table 4.3-3
Ambient Air Quality Data for the Emma Wood Monitoring Station

Pollutant	Air Pollution Data		
	2002	2003	2004
Ozone, ppm - maximum hourly concentration (ppm)	0.078	0.094	0.093
Number of days of state exceedances (>0.09 ppm)	0	3	1
Number of days of federal exceedances (>0.12 ppm)	0	0	0
Ozone, ppm - maximum 8-hour concentration (ppm)	0.069	0.078	0.082
Number of days of federal exceedances (>0.08 ppm)	0	0	1

Source: ARB, Air Quality Data Statistics; available at http://www.arb.ca.gov/aqd/aqdpage.htm.

Response 27C

The commenter suggests the addition of a sentence about the 2007 AQMP. In response to this comment, the following will be added to the end of the first paragraph under subsection d (Air Quality Management Plan):

> *To that end, the APCD is currently developing a new AQMP, which will be completed in 2007. The 2007 AQMP will contain strategies for attainment of the new eight-hour*

federal ozone standard by 2010. It will also incorporate updated projections of population, dwelling units, and motor vehicle emissions.

This minor text changes does not affect the EIR findings or conclusions.

Response 27D

The commenter suggests a clarification with respect to AQMP programs to reduce vehicle use and improve traffic flow. In response to this comment, the first two sentences of the first full paragraph of page 4.3-14 will be replaced with the following:

The Ventura County AQMP provides recommendations for reducing emissions from transportation-related sources by reducing vehicle use or improving traffic flow. These techniques are referred to as Transportation Control Measures (TCMs).

This minor text change does not affect the EIR findings or conclusions.

Response 27E

The commenter suggests an additional mitigation measure. In response to this comment, the first bullet point of Measure AQ-2 will be revised to read as follows (new text is underlined):

- *Require air quality analysis of individual development projects in accordance with the most current version of the Ventura County Air Pollution Control District Air Quality Assessment Guidelines and, when significant impacts are identified, require implementation of air pollutant mitigation measures determined to be feasible at the time of project approval.*

28

PUBLIC WORKS AGENCY
TRANSPORTATION DEPARTMENT
Traffic, Advance Planning & Permits Division
MEMORANDUM

DATE: June 23, 2005

TO: Resource Management Agency, Planning Division
Attention: Carl Morehouse

FROM: Nazir Lalani, Deputy Director NL

SUBJECT: Review of Document 04-086-2, Draft EIR
Update of the 1988 Comprehensive Plan for the City of Ventura
Project involves updating the 1988 plan through the year 2025 with the current goals, policies and objectives that reflect the current needs and preferences of the community. The plan will also consider inclusion of certain areas outside the current Sphere of Influence for development.
Project Applicant/ Lead Agency: City of San Buenaventura

The Public Work Agency - Transportation Department has reviewed the revised the Draft Environmental Impact Report (DEIR) to update the City of Ventura Comprehensive Plan, which serves as a blue print for development in the City. Our comments are the same as in our memo dated November 1, 2004 and are as follows:

The EIR should address the following comments:

1. Road improvements associated with all six scenarios along the major transportation corridors should match those shown in Appendix 8.3 of the County's General Plan Update DEIR. A copy of Appendix 8.3 is attached. The major corridors include Victoria Avenue, Olivas Park Drive, Harbor Blvd, Ventura Avenue, Foothill Road, Telegraph Road, Hwy 118 and Hwy 232. This would include bicycle and pedestrian facilities. A

2. On Page S-1, the DEIR makes reference to North Avenue, Olivas Park, Serra, Western Canada Larga and Poinsettia areas. A map should be provided to indicate the limits of these areas. B

3. Page 4.12-10 "Presently, two trains in both AM and PM operate the entire length of the route between Ventura and Union Station." There are three Metrolink trains that operate currently along this stretch. The EIR should make this correction. C

4. As noted in our memo on the Notice of Preparation of the DEIR, dated January 20, 2005, in accordance with the Ventura LAFCO Commissioner's Handbook, section 3.2.1, cities shall annex entire roadway sections adjacent to territory proposed to be annexed and shall include complete intersections. The EIR should require conditions for annexing county roadway section adjacent to the development, when the proposed expansion areas are developed. D

5. As noted in our memo on the Notice of Preparation of the DEIR, dated January 20, 2005 the updated 2025 comprehensive plan should address annexing of unincorporated islands in the County such as Montalvo, and developed areas immediately adjacent to the City limits such as Saticoy and existing development on North Ventura Avenue. E

6. One of the alternatives being considered by the Comprehensive Plan Update includes annexation and development of the Canada Larga area. As demonstrated by the 2005 winter storms, this area is prone to major damage by flooding. The EIR should address this issue. F

7. Ventura Avenue south of Shell Road is subject to severe flooding during winter storms. Annexation of this area by the City should address the need to provide an adequate storm drain system. G

8. All of the scenarios are associated with major intersection and road segment improvements that will be needed to mitigate the traffic growth generated by the land use changes. The EIR should address how these improvements are to be funded. H

9. The cumulative impacts of the development of this project when considered with the cumulative impact of all other approved (or anticipated) development projects in the County will be potentially significant. To address the cumulative adverse impacts of traffic on the County Regional Road Network, the appropriate Traffic Impact Mitigation fees should be paid to the County when development occurs. With payment of the Traffic Impact Mitigation Fees, the Level of Service and safety of the existing roads would remain consistent with the County's General Plan. I

Our review of this project is limited to the impacts this project may have on the County's Regional Road Network.

Please call me at 654-2080 if you have questions.

LOS is based on thresholds from Figure 4.2.2 in the Ventura County General Plan

Letter 28

COMMENTER: Nazir Lalani, Deputy Director, County of Ventura Public Works Agency, Transportation Department

DATE: June 23, 2005

RESPONSE:

Response 28A

Road improvements associated with all six scenarios along the major transportation corridors such as Victoria Avenue, Olivas Park Drive, Harbor Boulevard, Ventura Avenue, Foothill Road, Telegraph Road and Highways 118 and 23 match those shown in Appendix 8.3 of the County's General Plan update DEIR as stated by the commenter. Following adoption of the 2005 General Plan (and the Circulation Element), the City will discuss the changes in land use and circulation resulting from the General Plan Update with the County. The discussion will compare inconsistencies in roadway classifications in the City's Circulation Element with those in the County's General Plan to some of the minor roadways. Since the traffic analysis carried out for the General Plan Update uses the most recent long-range traffic data for circulation planning purposes, it can thereby provide a technical basis for evaluating those differences. An agreement can then be reached as to where future changes to the County's General Plan may be appropriate to establish consistency.

Response 28B

The commenter requests clarification with respect to the locations of the potential expansion areas considered in the Draft EIR. These areas are depicted on Figure 2-4 through 2-8 of Section 2.0, *Project Description*.

Response 28C

The commenter notes that three Metrolink trains operate between Ventura and Union Station in Los Angeles rather than the two trains noted in the Draft EIR. This will be corrected in the Final EIR. This minor text change will not affect the EIR findings or conclusions.

Response 28D

The commenter states an opinion that the EIR should include conditions for annexing County roadway sections adjacent to expansion areas at such time as those areas are developed. The scenario being recommended by City staff is the "Intensification/Reuse Only" scenario with some minor map clean-up. Because no expansion areas are being recommended at this time, the condition suggested by the commenter is not applicable. If and when any of the expansion areas are considered for annexation, appropriate conditions regarding annexation of adjacent roadways will be made part of the annexation.

Response 28E

The commenter suggests that the City should consider annexation of unincorporated islands such as Montalvo and developed areas adjacent to the City limits, such as in Saticoy and the North Avenue area. Annexation of these areas is one of City's goals for the 2005 General Plan. Portions of several of the districts and corridors that are to be the focus of future development are within the Saticoy and North Avenue areas.

Response 28F

The commenter notes that portions of the Western Cañada Larga area are subject to flooding. Flooding issues are addressed in Section 4.8, *Hydrology and Water Quality*. Portions of that expansion area are within the 100-year flood zone. As noted in Response 27D, City staff are not recommending inclusion of the Western Cañada Larga area as a potential expansion area on the 2005 General Plan land use map.

Response 28G

The commenter notes that Ventura Avenue south of Shell Road is subject to severe flooding. The area to which the commenter refers is within the North Avenue District, which the City anticipates annexing and making one of the focal points for future industrial development. Flooding issues along that stretch of Ventura Avenue will be addressed as that area redevelops.

Response 28H

The commenter states an opinion that the EIR should address how future roadway improvements are to be funded. Subsequent to adoption of the 2005 General Plan, the City will undertake a revision to its traffic impact fee program. As part of that revision, the cost of planned improvements and development impact fees will be determined.

Response 28I

The commenter states that potentially significant cumulative impacts to the County road network can be mitigated by requiring developers to pay the County's Traffic Impact Mitigation Fees. The City will continue to require developers to pay the County's Traffic Impact Mitigation Fees, in accordance with the City's agreement with the County.

RE: CITY OF VENTURA GENERAL PLAN DEIR

Dear Ms. Gialketsis:

Thank you for the opportunity to review and provide input to the Draft Environmental Impact Report (DEIR) for the proposed update to the General Plan of the City of Ventura. We appreciate the opportunity to review the plan and the associated environmental report because it provides us the opportunity to better coordinate our planning and development of the electrical facilities needed to provide services to the existing and future residents and businesses in the city.

Although the proposed General Plan document and its DEIR did not have any specific discussions about electrical facilities, whether existing or planned, we believe that future development projects deemed consistent with the proposed document may have impacts on SCE facilities and thus may require detailed environmental evaluation. For example, the General Plan proposes the widening of many roads and arterials. Such activities may require the construction or relocation of SCE facilities, and those SCE actions may themselves have environmental consequences cognizable under the California Environmental Quality Act (CEQA). If those environmental consequences are properly identified and adequately addressed in the development documents and CEQA approval process, SCE may not be required to pursue the mandatory CEQA review through

10060 Telegraph Rd.
Ventura, CA 93004

the California Public Utilities Commission (CPUC) and its General Order 131-D process (the CPUC being the CEQA "lead agency" for SCE projects unless one of the exemptions in G.O. 131-D applies).

We are hopeful that the City will continue to require the evaluation of site-specific environmental impacts of subsequent non-exempt development proposals in compliance with CEQA, including mandatory noticing and public review requirements. This will allow SCE and other affected stakeholders the opportunity to work with the City to address relevant environmental issues and recommend viable mitigation measures.

If any of the subsequent development proposals implementing the General Plan affect SCE facilities, it is essential that their environmental impacts are adequately addressed. This is particularly true for projects that do not fit into any GO 131-D exemptions and would otherwise require CEQA review by the CPUC, a process that could delay project implementation.

We look forward to working with you as you update your General Plan, and on its implementation upon adoption. SCE does have the capacity to continue to serve the existing and future developments in the city, and we are committed to working with the City, project proponents and developers to facilitate the design and subsequent construction of relevant facilities to serve all proposed projects. If you have any questions or seek clarifications, please contact me at 805 654-7226. Thank you.

Sincerely Yours

Nancy M. Williams

Nancy M. Williams
Region Manager

Letter 29

COMMENTER: Nancy M. Williams, Region Manager, Southern California Edison

DATE: July 18, 2005

RESPONSE:

The commenter notes that SCE has the capacity to continue to serve existing and future developments in Ventura, but notes that certain projects that may be accommodated under the 2005 General Plan (road widenings, for example) may require the construction or relocation of SCE facilities. As the commenter notes, the City will undertake project-specific environmental reviews for individual projects accommodated under the 2005 General Plan. Any impacts to SCE facilities, including potential secondary effects associated with the relocation of facilities, will be addressed as part of future project-specific environmental documents.

DELIVERED VIA E-MAIL AND FAX

RE: City of San Buenaventura 2005 General Plan Draft EIR

Dear Ms. Gialketsis:

On behalf of HOME (Housing Opportunities Made Easier) thank you for the opportunity to comment on the City of Ventura's proposed 2005 General Plan and its accompanying Draft Environmental Impact Report, dated June 2005. HOME is a volunteer-based alliance of non-profit organizations, area business leaders, elected officials and concerned citizens who have as a common goal, working together to create a more receptive environment for the development of high-quality workforce housing in Ventura County. HOME's mission is to facilitate community engagement and support for proactive solutions to create a greater diversity in housing choices.

HOME supports smart growth strategies, which include mixed-use, higher density, and pedestrian/transit oriented development by concentrating growth, when possible, on infill sites and by the revitalization of older, underutilized, or deteriorating properties and areas of the community located near transit, or within walking/biking distance of jobs and services. We applaud Ventura's leadership in this area, and encourage you to continue your efforts to streamline the development process for these types of properties. We do, however, have several concerns regarding the assumptions, and the implementation feasibility of the 2005 General Plan. HOME offers the following comments for your consideration:

A) The Project Objectives section of the DEIR lists the Ventura Vision Goals, which have been translated into the required General Plan Elements. While we appreciate this creative approach to integrating the community's priorities (as expressed in the "Ventura Vision" document) into the City's General Plan Update, we are concerned that the General Plan does not contain enough specificity, in some areas, to successfully implement the Vision. We understand that, following the Ventura Vision, the 2005 General Plan is "the second in a series of three connected documents that will guide future conservation and change in the City" (DEIR 1-2). However, until the City completes the third step in this process, the form-based Development Code, which will provide the regulatory structure for implementation of the 2005 General Plan, it may prove difficult to successfully, and efficiently implement some of the General Plan Policies. A

We encourage the City to create greater clarity in how development proposals will be reviewed and regulated, until stage three (new form-based Development Code) is adopted. Numerous General Plan Action items, including 3.11, 3.17, and 3.18, indicate the City's intent to re-write its zoning ordinances and development codes to better facilitate its intensification/reuse strategy. HOME encourages the City to expedite this process, and to make clear and decisive policy decisions as to how it will respond to proposed development projects, which are submitted during the period prior to the adoption of the new codes. Without the adoption of the form-based Development code, it would appear that it will be all but impossible to process a new proposed development.

Infill Development is already inherently risky, and can often be more costly and difficult to complete, due to existing site issues, constraints, and perceived conflicts with existing uses. In order to: "Utilize infill development to accommodate the targeted number and type of housing units described in the Housing Element" (Action 3.11), it is incumbent upon the City to work diligently to remove regulatory obstacles and barriers to realization of this goal.

B) **Alternatives**: While we recognize that, for the reasons mentioned in the DEIR, the "No Project" Alternative is not realistic, we disagree with the assertion that since "this alternative assumes that no further development occurs in the City..." then "environmental conditions do not change" (DEIR S-4). HOME recognizes that while this statement may be "technically accurate" based on the definitions and guidelines for environmental review under CEQA, it is "functionally inaccurate", in that development does not, in and of itself, dictate population growth; nor will the lack of it allow the City to avoid the environmental impacts created by a failure to plan for realistic projections of future population growth. HOME strongly advocates the reform of this type of "one-sided" view of the environmental review process, as implemented under CEQA. In order to facilitate the production of workforce housing, while also protecting our natural and existing built environment, we must begin to clearly and objectively assess both the positives and negatives of our land use decisions, including the negative impacts which may be caused from a failure to adequately plan for the future housing needs of our workforce, and all of Ventura's residents. B

C) **Population Growth Projections:** The Intensification/Reuse Only Scenario assumes an annual population growth rate of 0.88%, while all of the other Scenarios are based on a projected rate of 1.14%. While the 0.88% annual rate reflects Ventura's actual growth rate for the past 10 years (1994-2004), we believe that this growth rate was uncharacteristically low for that timeframe, due in part to the 1990s recession, which hit the construction industry hard. We believe that the 1.14% growth rate, which is much closer to the Countywide rate of 1.2%, and reflects the City of Ventura's most recent (2000-2005) actual growth rate of 1.0%, is a more realistic projection of growth that will actually occur, and for which the City should plan. It appears as though the 0.88% growth rate was selected largely due to concerns regarding the potential to exceed SCAG and/or AQMP growth projections, even though these limitations are discounted elsewhere in the DEIR as being outdated. This "two-sided" argument, both for and against adherence to these growth projections, could likely be used by "no growth" advocates to challenge future development approvals. C

D) **Our Well Planned Community:** In order to satisfy State requirements, every General Plan must include policies for the seven required "elements", including the Land Use Element, which "establishes the general distribution and intensity of land uses, including housing, commerce, industry, open space, education and public facilities." (2005 GP page 11) D

The proposed 2005 General Plan includes a number of "over-arching goals for the City of Ventura", including: "Our Well Planned and Designed Community", which has been incorporated into the Land Use, Housing, and Community Design Elements. Table 2-1 of the DEIR (page 2-11), gives the following "Examples of Topics Covered" under these General Plan Elements: "Development patterns, neighborhoods, visual character, urban design, demographics, housing needs, affordability, constraints on production." And yet, the 2005 General Plan offers this description of the General Plan Chapter, called "Our Well Planned Community ... Our goal is to protect our hillsides, farmlands, and open spaces; enhance Ventura's historic and cultural resources; respect our diverse neighborhoods; reinvest in older areas of our community; and make great places by insisting on the highest standards of quality in architecture, landscaping and urban design."

While the items expressed in this section may certainly be valid goals for the City to pursue, HOME questions the appropriateness of including them in the "Land Use Element" of the General Plan. It seems to us, that many of these priorities are more appropriately expressed elsewhere in the Plan,

(i.e. the Conservation, Open Space, and/or Culture Elements). The Land Use Element should focus on such things as development patterns and urban design, not conservation issues. While the 2005 General Plan clearly defines infill as a priority, and refers to planning tools such as form-based codes that the City intends to adopt in the future, we are concerned that the City currently lacks the regulatory structure that will allow it to implement its planning goals, and land use policies. Chapter 3 of the 2005 General Plan effectively describes the City's vision, but provides limited details as to how, or when, it will adopt and/or revise the existing codes and programs (like the RGMP-Action 3.18) in order for this vision to be realized. It is not enough for the City to simply "insist on the highest standards of quality in architecture, landscaping and urban design", it is incumbent upon the City to provide the development community with the proper tools and regulatory structure, to facilitate quality development.

One further concern regarding the Land Use Element is in the area of open space, education, and public facilities. The DEIR points to several limitations to the City's ability to adequately plan for and meet its needs in these areas, via the Intensification/Reuse Only Scenario. The DEIR identifies several "potentially significant impacts" relating to the need for new facilities that cannot be adequately mitigated with an infill only strategy. While HOME fully supports infill development, whenever and wherever possible, we also recognize the inherent limitations of this approach in meeting some of the more land-intensive needs of the community's growth. We encourage the City to refrain from limiting its ability to include additional land in its planning inventory, which could allow it to meet the need for additional public facilities, parks, and open space.

E

E) **Housing Affordability:** As previously stated, HOME's mission revolves around "workforce housing", which may include, but is not limited to "affordable housing" per the legal definitions. However, we are very concerned about issues that impact housing affordability, including the costs associated with the development and construction of new housing units. As such, there are numerous references in the DEIR, which identify City infrastructure deficiencies that will need to be upgraded, repaired, and/or replaced in order to accommodate the intensity of development that is called for in Scenario 1. We encourage the City to aggressively pursue an action plan, and funding sources, to correct existing infrastructure deficiencies, which would not place the entire burden of financing these community-wide needs on the backs of builders and new home buyers.

F

F) **Process:** Section 1.5 of the DEIR clearly defines the CEQA Environmental Review Process, which requires that the City's decision making bodies have an opportunity to review and consider the FINAL EIR, including all public comments and responses, prior to making a decision on Final EIR Certification of the proposed project (the 2005 General Plan). HOME questions the City's ability to meet this CEQA requirement, given the proposed timeframes for closing the public comment period on July 18th, while scheduling Public Hearings with the Planning Commission and City Council on July 19th and August 8th, respectively. How can the City possibly consider and respond to all public input within such a compressed timeframe?

G

G) **Conflicting Priorities**: We are concerned that some of the stated Policies, Actions and Priorities expressed in the 2005 General Plan may be internally inconsistent or lacking sufficient specificity for the GP to be a useful tool in guiding future growth and development. Some of these inconsistencies are addressed above, as in the focus on Intensification/Reuse to meet the projected growth, in spite of clearly identified physical and regulatory constraints in many of the areas targeted for infill development. Another, more subtle example of this issue is Action 1.20, which calls for the City to "Adopt development code provisions to protect mature trees..." without defining "mature trees" or how they will be "protected". Furthermore, Section 4.5 of the DEIR discussed the prevalence of Cultural and Historic Resources in several of the areas that have been identified for intensification/reuse, without fully acknowledging the extent to which the City's *Historic*

Preservation Regulations, which are much broader and less clearly defined than State or Federal Historic Preservation Policies, may limit development in these locations.

H) **Parks**: The City of Ventura is a mature city with existing park and recreation areas that have come on line as needed. We are fortunate enough to have an incredible park that inland cities would die for in our beaches. Yet, the EIR is recommending that we apply the same park acreage as required in non-coastal cities. When the Form Base Code guidelines come on line, it would seem that minimum 5 acre parks would be too rigid and unnecessary. Park space should be designed and formatted with the same flexibility that Form Based Code itself offers. Changing housing stock and the impending change of lifestyle that will accompany it, will lead to creative design and uses of parkland that should not be restricted by outdated and less fluid guidelines. H

I) **Biological Resources**: The specificity of the buffer area in Action 1.8 related to rivers, creeks and barrancas is too binding. While we acknowledge the need to protect these precious environs, an arbitrary set back of 50 feet could severely limit the creativeness and integration that the Form Based Code encourages. Strictly applied, this buffer area could squash entire infill developments. We encourage arbitrary requirements like this to be removed from the EIR and left to the already strenuous and rigorous review that all projects must be subjected. I

Thank you for the opportunity to submit our comments. HOME is truly excited about the principles of Form Based Code that the City of Ventura has embraced, and we are pleased to see the City's leadership in promoting a new way to grow our incredible city.

HOME sincerely looks forward to the adoption of the new General Plan and EIR.

Brad Golden
Vice Chair of HOME and Ventura resident

Letter 30

COMMENTER: Brad Golden, Vice Chair of HOME and Ventura resident

DATE: July 26, 2005

RESPONSE:

Response 30A

The commenter urges the City to expedite the preparation of a new development code, noting that processing of new developments may be difficult until the new code is adopted. The City will be initiating preparation of the new development code upon adoption of the 2005 General Plan. However, in the interim period between adoption of the General Plan and the new development code, the City will continue to process applications based on the current code requirements and the guidance provided in the 2005 General Plan.

Response 30B

The commenter states disagreement with the approach to the analysis of the "no project" alternative, which is based on the assumption that no physical changes to the environment would occur. The commenter is correct that a moratorium on development would not necessarily stop population growth in the City and that failure to provide new housing may lead to a variety of undesirable conditions (overcrowded housing, higher housing prices, etc.). The Draft EIR acknowledges these facts as well as the fact that the "no project" alternative is not feasible.

Response 30C

The commenter states opinions that the 1.14% annual growth rate is more realistic than the 0.88% growth rate and that it appears as though the 0.88% annual growth was selected due to concerns about SCAG and AQMP growth projections. The opinion regarding the appropriate growth rate is noted. Both growth rates discussed in the Draft EIR were selected by the City Council and represent historic growth rates in the City (the 1.14% rate is the 20-year growth rate while the 0.88% growth rate is the 10-year growth rate). SCAG and AQMP population forecasts were not used to develop either rate and, in fact, both growth rates exceed the SCAG and AQMP forecasts. The Draft EIR acknowledges this exceedance. However, it is anticipated that, following adoption of the 2005 General Plan, both SCAG and the Ventura County APCD will update their population forecasts for the City to reflect the new General Plan.

Response 30D

The commenter states opinions about the format and content of the 2005 General Plan and notes that the Draft EIR points out several limitations associated with the "Intensification/ Reuse Only" scenario. The commenter also encourages the City not to limit its ability to include additional land in its planning inventory. The comments about the 2005 General Plan are not relevant to the adequacy of the Draft EIR, but will be considered by the City Council as they review the final General Plan. It is true that the Draft EIR points out certain limitations for

the "Intensification/Reuse" scenario, particularly relating to land available for new schools and parks. However, the Draft EIR does not identify such limitations as "significant" impacts. Although City staff are not recommending inclusion of any of the expansion areas at this time, several of the expansion areas could provide acreage for parks and schools and the City may consider future General Plan amendments to allow development of one or more of these areas in the future if such an amendment would meet planning objectives that cannot be met through intensification or reuse. It should be noted, however, that conversion of any of the expansion areas except for portions of the Western Cañada Larga area would be allowed only following voter approval under the SOAR Ordinance.

Response 30E

The commenter encourages the City to pursue action plans for addressing infrastructure deficiencies that will not place the entire burden of financing community-wide needs on builders and new home buyers. The City will develop such action plans to address needed improvements to roads, storm drains, and water and sewer lines. Builders will be responsible for financing improvements needed to serve their developments, but not to correct existing deficiencies.

Response 30F

The commenter questions how the Final EIR can be completed within a compressed timeframe. Responses to comments on the Draft EIR were completed and provided to agency commenters 10 days prior to the City Council's August 8 hearing (at which the Council may certify the Final EIR), thus complying with CEQA's requirement that public agency commenters receive responses at least 10 days prior to certification.

Response 30G

The commenter states an opinion that the General Plan may include conflicting priorities, specifically by calling for the preservation of mature trees and historic resources in areas where intensification and reuse are expected to occur. Every General Plan (and every community) has certain priorities that can be in conflict. The two examples cited by the commenter reflect the City's desire to preserve its resources. The exact manner in which these actions are to be implemented will be detailed in the new development code. New developments that are consistent with general policy goals while potentially conflicting with others will need to be addressed on a case-by-case basis to determine whether and how such conflicts can be reconciled and which priorities take precedence.

Response 30H

The commenter states an opinion that park standards need to be flexible. This opinion is noted. The Draft EIR discusses the City's general standards in order to provide an overall analysis of citywide impacts associated with projected growth; however, the City will continue to seek creative and flexible ways of meeting the community's needs with respect to parks and recreation. In addition, language has been added to the General Plan under Policy 6A as follows:

Update standards for citywide public parks and open space to include an expanded menu of shared park types, and identify locations and potential funding sources for acquiring new facilities in existing neighborhoods.

Response 30I

The commenter states an opinion that the 50-foot buffer from riparian areas in Action 1.8 is overly restrictive. This opinion is noted. The 50-foot buffer has been determined to provide the minimum distance needed to effectively protect riparian habitat and associated wildlife movement corridors. This minimum distance is consistent with that adopted by a number of communities in the southern California region. It should be noted that this requirement only applies to waterways that retain natural soil slopes.

31

Carolyn Briggs, Chair and
Members of the Planning Commission
501 Poli Street
Ventura, California 93002

Dear Chair Briggs and Members of the Planning Commission:

These preliminary comments on the draft 2005 Ventura General Plan (May 2005) ("DGP") and draft Environmental Impact Report ("DEIR") are made on behalf of the Ventura Port District ("District"). In 1999, the City Council and the Board of Port Commissioners entered into a Memorandum of Understanding ("MOU") for the preparation of a Master Plan for the Harbor Area. The MOU is attached as Exhibit A. It was contemplated that the Master Plan would be adopted as a Specific Plan and constitute the land use plan and zoning for the Harbor Area. The draft Master Plan and Master Environmental Impact Report ("MEIR") have been complete for over two years. The District has, however, refrained from circulating the documents for public review in an effort to reach agreement with the City on how to address an existing deficiency in fire service response times in and around the Harbor Area. The DGP and DEIR raise a number of issues of concern with respect to the draft Master Plan/Specific Plan, some of which are outlined below.

1. Harbor Master Plan.

A

The DGP (p. 3-8) establishes the "Harbor District" and describes it as an area with visitor serving uses and marine facilities to be regulated by a Harbor master plan. The DGP land use map designates The Harbor as "Draft Harbor Master Plan." This should be "Specific Plan." Because the draft Harbor Master Plan has been incorporated by reference into the DGP, it should become the overriding policy document for land use, water use, and future development of the Harbor upon adoption of the DGP, whether the Master Plan has itself been adopted or not or as a Specific Plan. The policy language in the DGP should be expanded and clarified to make it clear, without question, that the Harbor Master Plan/Specific Plan is the overriding policy document for the Harbor. A copy of a booklet describing the master plan is enclosed. This booklet was distributed at the joint City Council/Board of Port Commissioners meeting in April 2005.

Ventura Port District

www.venturaharbor.com

B

2. Local Coastal Program.

The draft Master Plan/Specific Plan are based on the City's certified Local Coastal Program ("LCP"). Apparently, the DGP is intended to supercede the Land Use Plan ("LUP") of the LCP. If this were to occur, there would be serious procedural and substantive issues, some of which are outlined below.

a. The DGP may not be specific enough to satisfy the Coastal Act or the California Coastal Commission ("CCC") and the CCC would want to review the LUP together with the Local Implementation Plan [zoning]. For example, the Land Use Plan does not show "visitor serving uses" or public access ways. The District could be caught between the City and the CCC. Until a development code is adopted and approved by the CCC, there would be a lack of certainty regarding what may or may not be built in the Harbor.

b. Processing a LUP amendment is very time consuming. A whole new LUP could take years to get in place.

c. If the certified LUP is repealed or superceded while the CCC reviews a new one, this would leave the City without the ability to process any projects in the coastal zone during the interim. Applicants would need to seek approvals from the CCC, which is time consuming and difficult without a certified LUP. Further, it is unlikely a new LCP or LUP with residential units would be certified by the CCC.

d. The Harbor would need to separately seek CCC approval of the Master Plan/Specific Plan. This would otherwise be unnecessary because the draft Master Plan is consistent with the existing LUP.

e. The Sondermann/Ring project, which is critical to the economic vitality of the Harbor, may be greatly delayed.

f. Because the DGP does not appear to be inconsistent with the certified LUP, it would be wise to leave the LUP in place and overlay applicable DGP policies and "actions." This would avoid seeking CCC approval at all.

g. If there is an inconsistency between the DGP and the LUP, a specific amendment to the LUP could be sought concurrently with the LCP amendment required to support the Sondermann/Ring project.

h. The certified LUP could be attached as an appendix to the DGP for easy reference. The maps could be revised to specify LUP in the coastal zone.

i. Specific plan areas could be shown as "Specific Plan." The Harbor area should be titled "Harbor Specific Plan," not draft Master Plan.

j. These changes to the DGP are not complex and would avoid what could become a procedural nightmare and engender costly litigation from developers unable to process their projects in the coastal zone.

C

3. Fire Services.

The DEIR suggests that a new fire station and nine firefighters are needed to accommodate anticipated growth in the Harbor. The DGP and DEIR also state that a new fire station is needed to address current deficiencies. Thus, the 9 firefighters needed for the new station are also necessitated by an existing condition. Based on a desired ratio of 0.98 per 1,000 residents (the City now operates at 0.69 firefighters per 1,000 population), development of Parcels 15 and 18, hotel expansion, and the marine learning center, do not, themselves come close to justifying a new station or 9 firefighters. These developments should, like any other new development, provide a fair share toward the capital costs of a new station. Neither the DGP nor the DEIR justify requiring the Harbor to fully fund development and the operation and maintenance of a fire station. While the DGP calls for resolving extended response times by adding a fire station at the "Pierpont/Harbor area," it only calls for studying the feasibility of funding services from fees, taxes or assessments "as new subdivisions designed on the New Urbanism concept are established." Action 7.13, which is intended to address fire response mistakenly refers to police services. In addition, neither the DGP nor the DEIR actually address the need for firefighting capabilities for non-residential use. The only concept of fair share related to the ratio of firefighters to population is set forth in the DEIR. The discussion of plans for a fire station in the Harbor are more detailed than called for by the DGP. (See DEIR, p. 4.11-28.) It is not certain that impact fees would be sufficient to pay for fire facilities and equipment. Impact fees cannot be used to cure existing deficiencies or for operational costs. (See, DEIR, p. 4.11-31.) Assessments require voter approval.

D

4. Process.

Cooperation and input from the District in the preparation of the DGP policies was not requested. DEIR p. 1-2 describes 11 City Council meetings from Feb. - Aug. 2004 taking input from the CPAC and Planning Commission. Nowhere in the DGP and DEIR is there a discussion of the District's input into the process. As discussed below, the DGP policies and actions could conflict with contractual rights of District lessees.

E

5. Responsible Agency.

The District should be designated as a "responsible agency" under the CEQA definition. The District is a public agency that would carry out policies of the DGP and LCP as it pertains to the Harbor.

F

6. Assumed Net Increase in Development at Buildout.

The level of future development assumed within the Harbor is not clearly called out in the DEIR, but can be determined from tables estimating water and sewer impacts. Based on these tables, the proposed DGP assumes a net increase within the Harbor of 300 dwelling units at 216,000 square feet of non-residential building area. Of this non-residential area, 150,000 square feet are identified as hotel use, leaving 66,000 square feet for expansion of other non-residential uses within the Harbor. This is insufficient to provide for development of the Marine Learning Center (approximately 77,000 square feet) and commercial uses within Parcels 15 and 18.

G

7. Protecting and Restoring Coastal Resources.

DGP Action 1.3 would require the District to determine and carry out appropriate methods for protecting and restoring coastal resources, including supplying sand at beaches (from dredging operations). This could be costly and unreasonable for the District to carry out this action on its own. It is uncertain whether dredging spoils would be suitable for such beach restoration.

8. Preservation of Sensitive Wetland and Coastal Areas.

DGP Action 1.11 would require sensitive wetland and coastal areas to be preserved as undeveloped open space wherever feasible. This could affect the District's ability to develop vacant Parcels 8, 15 and 18 depending on how "sensitive wetland and coastal areas" are defined. The CCC has very specific and rigorous restrictions on development in and adjacent to environmentally sensitive habitat areas (see California Coastal Act Section 30240). Although it does not appear that "sensitive wetland and coastal areas" affect any of the areas planned for development within the Harbor, it is necessary to make sure that such definitions will not apply.

9. Updating and Enforcing Stormwater Quality and Watershed Protection Measures.

DGP Action 1.14 requires compliance with directives from regulatory authorities to update and enforce stormwater quality and watershed protection measures. This could be costly, extensive, and unreasonable for the District to carry out such regulatory directives since watersheds extend miles inland from the Harbor. The Harbor is the "end user" and should be responsible for actions within the Harbor, and not for stormwater protection in the entire watershed.

H

10. Prohibition on Dredging.

DGP Action 1.18 would prohibit dredging during fish spawning and bird migration cycles. Without clear and specific definitions of species and types of fish spawning and bird migration, this could severely limit or shut down dredging operations in The Harbor.

11. Promote Channel Islands Tours and Develop an Aquarium.

DGP Action 2.17 would establish a partnership between the City, District, and National Park Service to promote Channel Islands tours and develop an Aquarium. This is helpful, but not a definitive commitment, nor are details are provided.

12. Prioritization of Uses in the Harbor Master Plan Area.

DGP Action 2.18 would prioritize uses in the Harbor Master Plan area as follows: (1) commercial visitor-serving, (2) recreation, boating, fishing, (3) commercial fishing, and (4) public service facilities. This prioritization of uses conflicts with the range of uses in the Harbor Master Plan. For example, residential use is excluded from the prioritized list of uses, even though the CCC has taken specific action to permit such uses within the mobile home park and on Parcels 15 and 18. Commercial fishing is the number two priority in the Master Plan and is a critical use required to sustain the District's eligibility for federal dredging funds.

13. Public View and Solar Access Preservation.

DGP Action 3.3 would require preservation of public view sheds and solar access. This policy could affect the District's ability to develop vacant Parcels 15 and 18 depending on how "public view sheds and solar access" areas are defined.

14. Public Access.

DGP Actions 3.4, 4.20 6.5, and 6.6 would require (and encourage) public pedestrian and bicycle access to and along the coast on all shoreline development. The policies would affect the design of new development on vacant Parcels 8, 15 and 18, and may impact the Yacht Club due to lack of shoreline access on the Yacht Club parcel. Clarification is needed to determine if the public access system set forth in the Master Plan fulfills these actions.

15. Form-Based Development Code.

DGP Action 3.17 would affect building and site design on Harbor parcels to emphasize pedestrian orientation, integration of land uses, treatment of streetscapes as community living space, and environmentally sensitive building design and operation. While form-based codes have a number of benefits, it is questionable whether the CCC would accept such a code as the sole basis for a Local Implementation Plan.

16. Minimize Truck Traffic on Residential Neighborhoods.

DGP Action 4.9 would identify, designate, and enforce truck routes to minimize the impact of truck traffic on residential neighborhoods. This policy could adversely impact the movement of goods and cargo in and out of the District depending on how it is implemented. Action 4.9 should be clarified to specify the location of truck routes.

17. Alternative Transportation Modes and Transit.

DGP Actions 4.15, 4.16, 4.17, 4.18, 4.27, 4.31, 4.32, and 4.34 encourage alternative modes of transportation and transit systems to reduce vehicle trips and congestion. This could affect circulation and access to the Harbor depending on how these policies are implemented.

18. Expanded Recreational Opportunities.

DGP Actions 6.15 and 6.16 call for new recreational programs that would occur in the Harbor, such as surfing, sailing, kayaking, bird watching, and additional boating and swimming access. Care must be taken in how these expanded recreational uses are conducted, for example, allowing swimming in boat navigation channels could be hazardous.

19. Cultural, Historical, and Archaeological Resources.

DGP Actions 9.2, 9.3, 9.12, 9.13, 9.14, 9.15, 9.16, 9.17, 9.18, and 9.19 would affect activities, operations, redevelopment, design and restrictions on District parcels. District input on these policies would be appreciated.

Thank you for considering these comments. The District respectfully requests that the hearings on the DGP and DEIR be continued for three months to provide an opportunity for the District and the City to resolve these and other issues.

Sincerely,

Oscar F. Peña
General Manager

James E. Neuerburg

Agreement No. 99-88

City Council Approved: 8/4/99

MEMORANDUM OF UNDERSTANDING AND LEAD AGENCY AGREEMENT

This Agreement is made by and between the City of San Buenaventura ("City") and the Ventura Port District ("District") in consideration of the following facts.

A. The District desires to update its master plan for the Ventura Harbor in accordance with requirements set forth in the 1998 Local Coastal Program ("LCP") amendment.

B. The City and the District desire to work together to initiate a joint process for developing a specific plan for the Harbor area.

C. It is contemplated that the master plan would be the land use plan for the specific plan and the specific plan would constitute the zoning for the Harbor area. These regulations are hereinafter referred to collectively as the "Specific Plan".

D. Amendments to the LCP may be desirable to realize the objectives of the Specific Plan.

E. It is contemplated that a master environmental impact report ("MEIR") will be prepared for the project.

F. The parties desire to (1) designate a Lead Agency for the MEIR; (2) specify general procedures for actions relating to A through E, above; (3) allocate costs for preparing and processing the MEIR and the Specific Plan; and (4) specify the currently contemplated time frame for processing the MEIR and Specific Plan.

Exhibit A

G. All parties desire to process the foregoing planning documents in an efficient and timely manner that maximizes public input and stakeholder involvement. To that end, it is hereby agreed as follows:

1. This Agreement shall become effective between the City and the District upon approval by the City Council and the District Board.

2. The District will act as Lead Agency for the MEIR and the City shall be a Responsible Agency as defined by the California Environmental Quality Act.

3. The District and the City will jointly select consultants necessary for processing the MEIR and the Specific Plan.

4. Public workshops will be held to solicit input from all stakeholders and the public, including, but not limited to, lessees, franchisees, businesses in the Harbor area, potential developers, surrounding residents and environmental and special interest groups such as fishing, boating and surfing organizations.

5. During the public review period, the City Planning Commission may convene hearings on the draft master plan and MEIR, as it deems appropriate, to provide comments to the District.

6. Prior to adoption of the master plan and certification of the final MEIR, the District will fully consider and evaluate all City recommendations, and explain in writing the reason(s) any such recommendation is rejected.

7. The parties contemplate that the Specific Plan will be adopted by the City Council after adoption of the master plan and certification of the MEIR by the District.

8. The cost of preparing and processing the Specific Plan, the MEIR and LCP amendments, if any, (excluding administrative overhead expense) will be shared equally by the District and the City, up to a budgeted $100,000 for each agency.

9. District and City will separately, and jointly, as the case may be, apply for grants to defray the costs of the Specific Plan and MEIR (herein the "Project Costs"). In addition, it is contemplated that Harbor tenants and developers whose development proposals are to be considered or included as part of the Specific Plan and MEIR may contribute to funding of the Project Costs. Upon receipt of such grant funds, and/or tenant and developer contributions, such grant funds and contributions, together with any District and City funds required to be contributed as grant matching funds, shall be applied first to Project Costs. Thereafter, District and City funds shall be applied to Project Costs only when the grant funds, and/or tenant and developer contributions are exhausted. Excess funds, if any, remaining after completion of the Specific Plan and MEIR shall be returned to District and City in amounts proportional to their contributions to Project Costs which are contemplated to be equal. District and City will also establish a procedure, pursuant to Government Code section 65456 and Public Resources Code section 21157(c), whereby tenants and developers who haven't contributed their fair

share of the Project Costs prior to commencement of work on the Specific Plan and MEIR will be charged a fee in an amount equal to their proportionate share of the Project Costs, at the time of application for a permit, or other entitlement for a development project considered or included in the Specific Plan and MEIR. All revenues received from such fees shall be used to reimburse District and City for their Project Costs in amounts proportional to their contributions to the Project Costs.

10. The District will contract with the consultant(s) and forward a copy of approved bills to the City's Director of Management Services. The City will pay the District one-half of the approved bills within 30 days of City's receipt of the approved bill.

11. In the event litigation is filed challenging the MEIR and/or the Specific Plan, the District and the City will cooperate in the defense of the action and equally share their expenses of the defense.

12. In the event LCP amendments are proposed, such amendments will be processed with the California Coastal Commission following adoption of the Specific Plan by the City.

13. The currently contemplated time line for processing the Specific Plan and possible LCP amendments, if desirable, is attached as Exhibit A.

14. Notices shall be provided as follows:

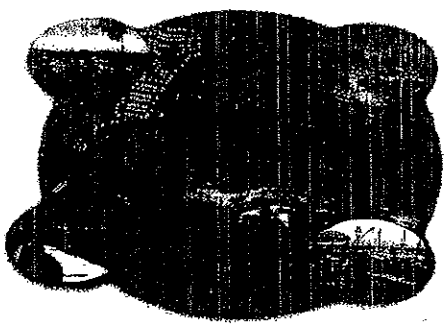
VENTURA HARBOR MASTER PLAN

Ventura Port District
City of San Buenaventura



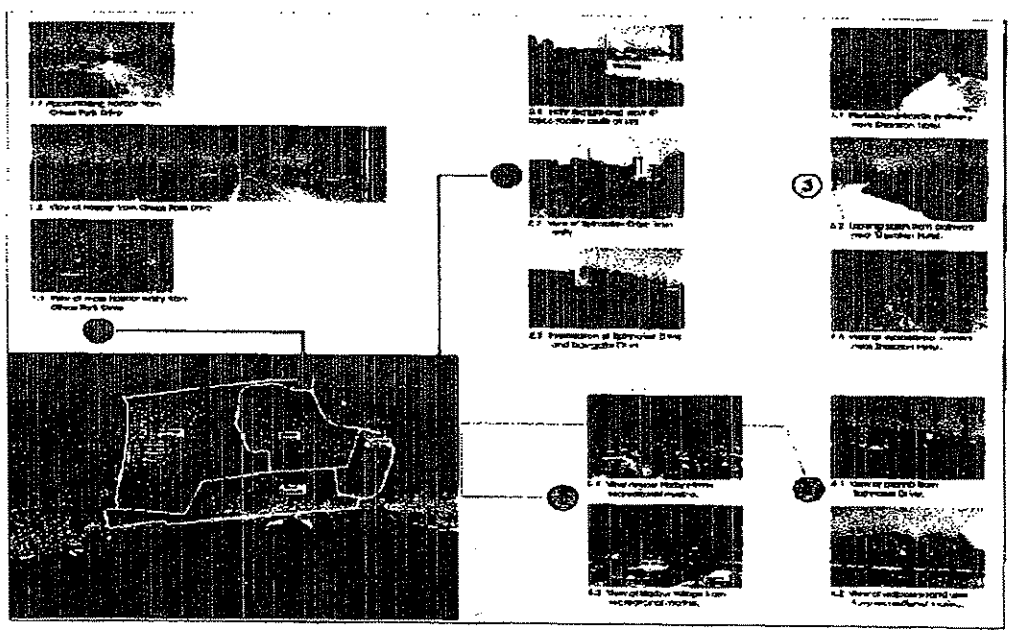
April 4, 2005

Purpos

- Define a consistei
- Create a planning Harbor.
- Facilitate a Master

Existing Setting

- Central Harbor



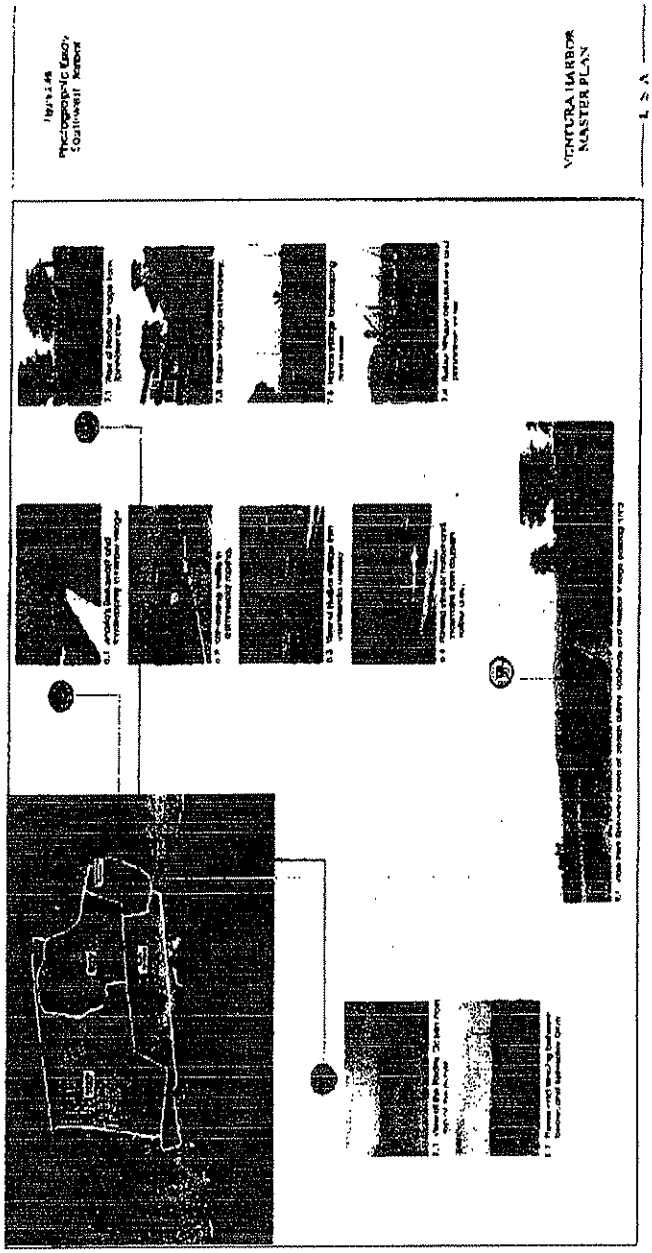
Photographic Survey
Central Harbor

VENTURA HARBOR
MASTER PLAN

LSA

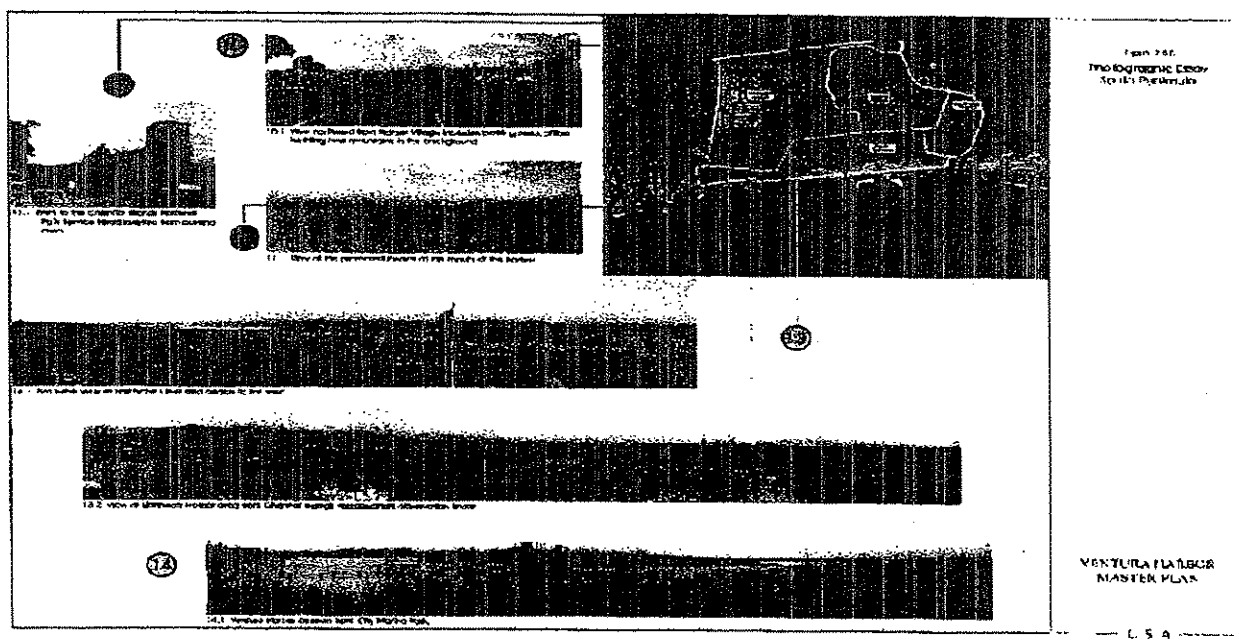
Existing Setting

- Southwest Harbor



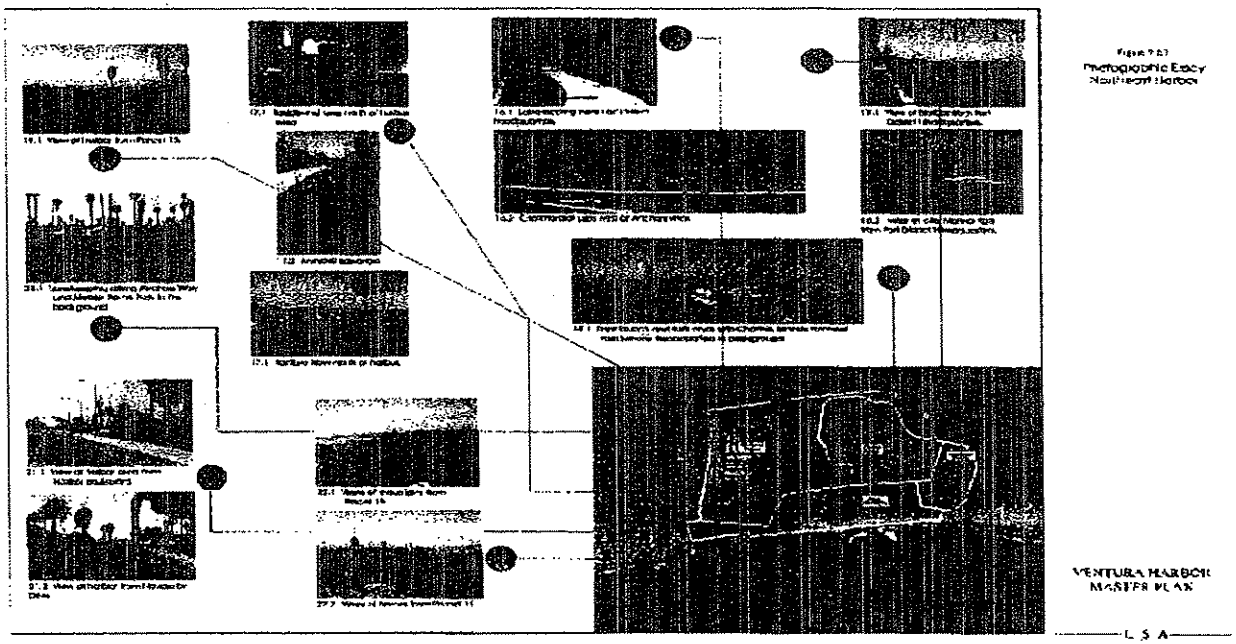
Existing Setting

- South Peninsula



Existing Setting

- Northeast Harbor

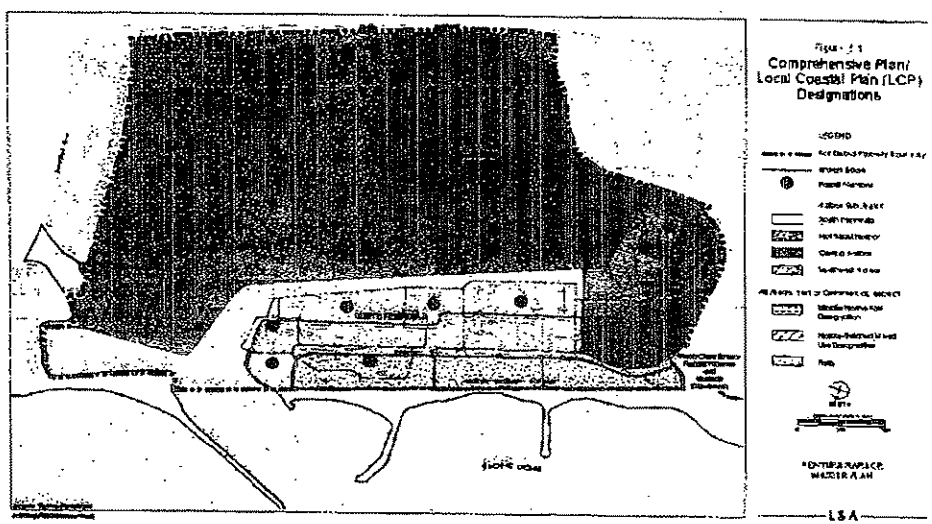


Coastal Act Priorities

- Coastal Dependent and Ocean-Related Uses
- Commercial Fishing
- Coastal Access
- Visitor-Serving Commercial and Recreational Uses

Local Coastal Plan and Comprehensive Plan Requirements

- Northeast Harbor
  - Harbor Commercial
  - Harbor-Related Mixed Use
  - Mobile Home Park
- Central Harbor
  - Harbor Commercial
- Southwest Harbor
  - Harbor Commercial
- South Peninsula
  - Harbor Commercial



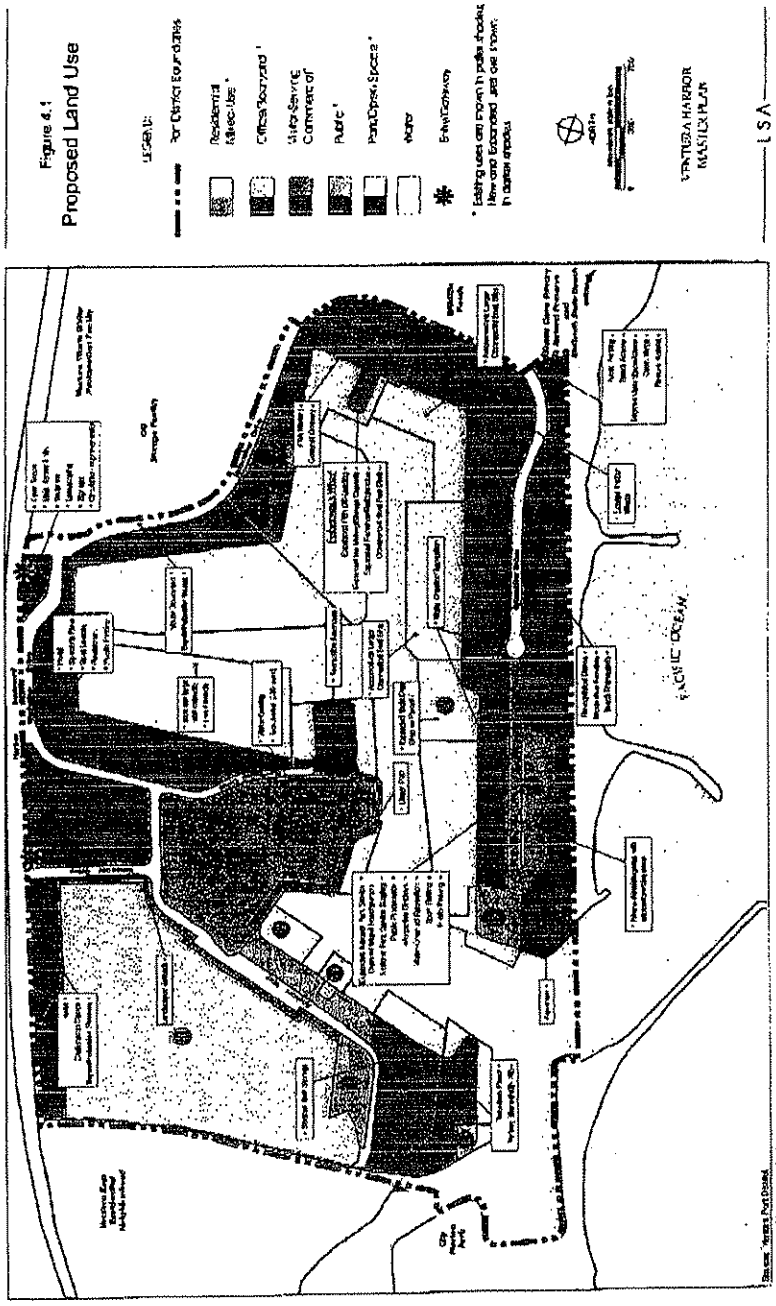
Land Use Objectives

- Create a recognizable visitor-serving destination, well integrated with the functions of a working harbor.
- Provide a human-scaled environment, and provide gathering places and amenities for people to enjoy.
- Facilitate walking and biking for recreation and transportation.
- Emphasize views of the harbor, ocean, and coastal mountains.
- De-emphasize the visual prominence of automobiles within the Harbor.

Land Use Plan

- All existing uses are considered to be permitted uses, may remain, and expand.
- Future land uses are options for future development.
- Master EIR to facilitate future development review for new permitted uses and expansion of existing uses.

Land Use Plan



Circulation: Roadway Improvements

- Harbor Boulevard
  - Signal at Oyster Street and modifications to slow traffic speeds. (Not part of Master Plan)
- Beachmont Street
  - One-way crossing of the Arundell Barranca.
  - Traffic calming.
- Anchors Way
  - Limit northbound left turns; improve ease of permitted turning movements.

Circulation: Roadway Improvements

- Spinnaker Drive
  - Reconfigure intersection at Navigator Drive to eliminate left turns from Navigator.
  - Access to commercial center on Harbor Boulevard would be right in/out only along Spinnaker Drive.
  - End public street right-of-way at Parcel 6, and reconfigure parking areas.
- Schooner Drive
  - Modify median to permit left turns into Parcel 19A.

Parking

- Projected deficit of 195 spaces (weekend) at build out.
- Solution: establish common parking areas and shuttle service.
- Potential locations for common parking:
  - Parcels 19A, 5, and 7.
  - Vacant land adjacent to mini-warehouses.

Coastal-Related Services and Facilities

- Pedestrian and Bicycle Access
  - Improve crossings of boat storage (Parcel 20), boat launch (Parcel 12).
  - Connection through Parcels 15, 16, 18.
  - Improve crossing of fish off-loading area (striping and signage).
  - Improve connections to beach.
- Waterfront Promenade
- Beachfront Boardwalk
- Spinnaker Drive Crossings
  - Signage.
  - New crossing at Parcel 3A to the existing parking.

Recreational Opportunities

- Marina Facilities
  - Provide additional space for large boats.
- Channel Islands National Park
  - Assist NPS in meeting headquarters needs.
  - Facilitate Channel Islands visitation.
- Marine Learning Center and Aquarium
- Boat Launch
- Park on Parcel 16

Visitor-Serving Opportunities

- Hotel Expansion
- Expand Harbor Village
- Park and waterfront trail on Parcels 15, 16, 18
- Sport fishing and charters (Parcel 5)
- Expanded facilities for Island Packers

Public Services and Facilities

- Water Facilities
- Sewer Facilities
- Drainage
- Electricity and Natural Gas
- Public Safety Services
  - Law Enforcement
  - Fire Protection

Fire Protection Issues

- Majority of existing Harbor area does not meet Fire Department response time objectives.
- Majority of service calls are for emergency medical assistance.

Recommended Fire Service Provisions

- Port District to assume responsibility as first responder for emergency medical calls within Harbor.
- New commercial, retail, office, and public facilities development over 500 s.f. of building area will install automatic fire sprinkler systems, or meet requirements of City's Automatic Sprinkler Ordinance, whichever is more restrictive.
- Use of fire-resistant construction materials.

Recommended Fire Service Provisions (cont'd)

- Provide adequate address signage to facilitate emergency response.
- Pursue joint training of Harbor Patrol and Fire Department personnel to better respond to water-related emergencies within the general Harbor area.
- Port District to make available a fire boat for fire and emergency service within the Harbor and Keys area and catastrophic emergency services to the City pier.
- Provide fire hydrants and water lines in compliance with UFC and City requirements.

Recommended Fire Service Provisions (cont'd)

- Design internal circulation on development sites to accommodate fire suppression equipment with adequate turn-around areas.
- Ensure that City fire flow standards are met.
- Provide a usable ½-acre site within the northern end of Parcel 19A for establishment of an "all risk" fire station by the City upon notice that the City is prepared to construct and establish service at the station.
- Payment of fees pursuant to City ordinance, if adopted.

Master EIR

- Notice of Preparation (NOP) distributed on January 30, 2002.
- Issues addressed in the MEIR:
  - Aesthetics
  - Air Quality
  - Hydrology
  - Noise
  - Public Services
  - Traffic and Circulation
- No significant unavoidable impacts identified.

Master EIR (cont'd)

- Effects found not to be significant:
  - Agricultural Resources
  - Biological Resources
  - Cultural Resources
  - Geology and Soils
  - Hazards and Hazardous Materials
  - Land Use and Planning
  - Mineral Resources
  - Population and Housing
  - Park Services; Recreation

Purpose

- Define a common vision for the Harbor, consistent with the City's "Seize the Future."
- Create a consolidated reference document for planning and development within Ventura Harbor.
- Facilitate future development review through a Master EIR.

Process

- Analyze existing conditions, issues, and opportunities. Workshops.
- Prepare alternatives and select preferred alternative (March 2000). Workshop.
- Prepare, review and revise Master Plan (September 2002). Workshop.
- Revise Master Plan and prepare EIR (August 2003).
- Resolve fire service issues (ongoing).

Land Use Issues and Opportunities

Issues

- Land use incompatibilities (wastewater treatment, oil storage).
- Seasonal economy; lack of a focal point.
- Limitations on office use.
- Fire protection.

Land Use Issues and Opportunities

Issues

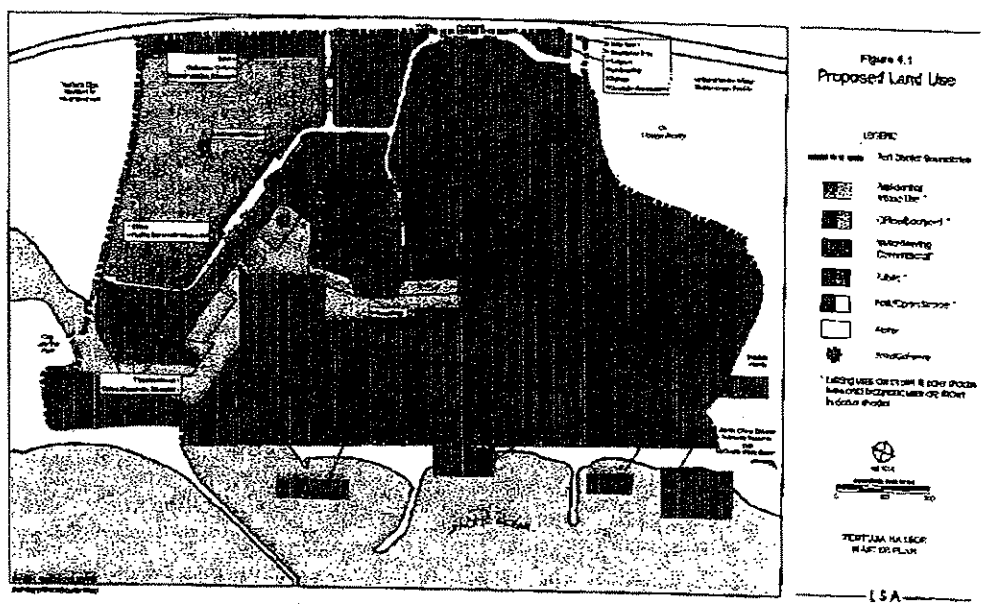
- Land use incompatibilities (wastewater treatment, oil storage).
- Seasonal economy; lack of a focal point.
- Limitations on office use.

Opportunities

- Commercial fishing fleet.
- Regionally central location.
- Marine Learning Center and Channel Islands National Park Headquarters.

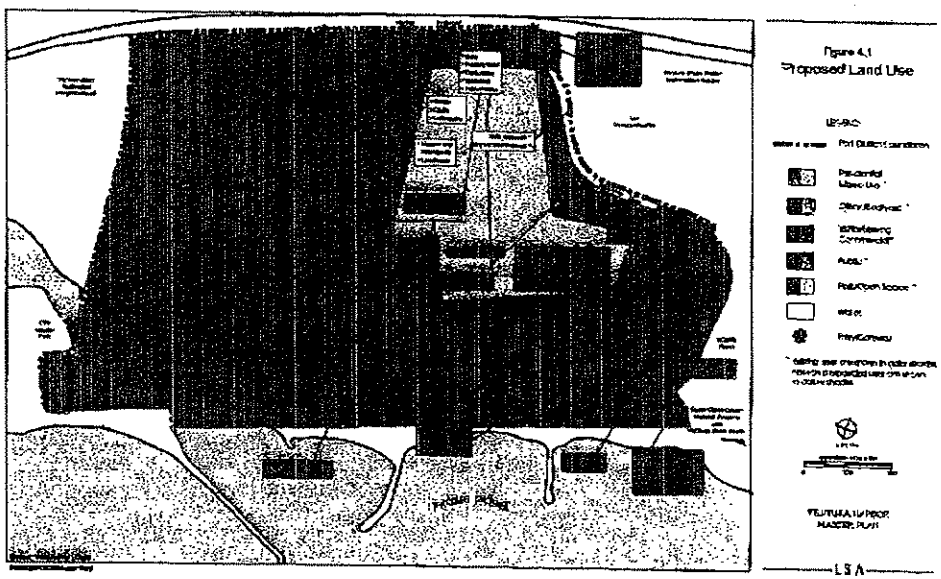
Land Use Plan: Northeast Harbor

- Parcels 15, 16, 18
  - Mixed-use with 300 du's, 150 boat slips, and 20,000 s.f. commercial
- Expand hotel
- Improve entry to Parcels 10A and 10B
- Retain Mobile Home Park, restaurant, and boat yard



Land Use Plan: Central Harbor

- Improve Harbor entry and provide directional signage.
- Hotel expansion on Parcel 19.
- Continue marina uses and provide for future expansion.



Land Use Plan

- Overall planned land use is substantially less than is now permitted.
  - Existing LCP permits 2.4 million s.f. of building area and 610 dwellings.
  - 2002 Master Plan anticipates 894,556 s.f. of building area and 610 dwellings.
  - Current Master Plan anticipates 896,056 s.f. of building area and 610 dwellings.

Table 4.A - Anticipated Land Uses

Parcel	Existing Land Use	Total Land Area (sf)	Existing Development (sf)	Commercial Building Area (sf)/Du's Permitted under LCP	Anticipated Development		
					Land Use	Building Area Commercial (sf)/ Dwelling Units	Net Increase
1	Hotel	168,000	45,000	120,000	Hotel and Specialty Retail	120,000	75,000
1PR	Hotel	340,000	180,000	255,000	Hotel	255,000	255,000
2,3	Ventura Isle Marina	330,000	528 boat slips	240,000	Marina	3,000	3,000

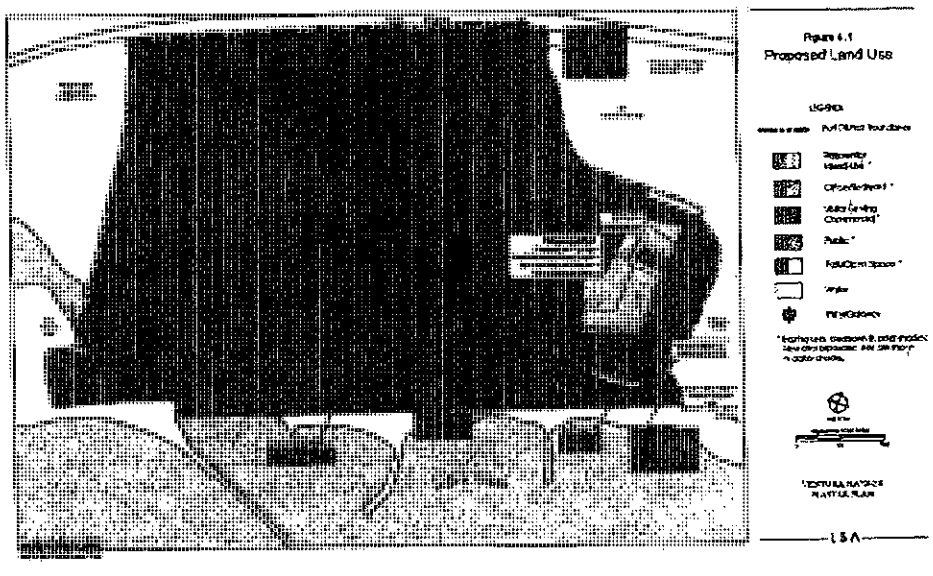
10B	Port District	14,818	7,000	11,568	Port District Offices	7,000	0
11	Dry Boat Storage	78,584		59,538	Dry Boat Storage	0	0
12	Public Boat Launch	169,584			Public Boat Launch	0	0
13	Parking	65,340		32,670	Parking	0	0
14	Fuel Supply	95,832	1,500	42,471	Fuel Supply	1,500	0
15, 16 & 18	Vacant	929,587		300 du's 177,389	Residential Visitor-Serving Commercial Public boat slips	300 du's 20,000 150 slips	300 du's 20,000 150 slips
17	Ventura West Marina	260,000	387 boat slips	195,000	Marina, Restaurant, Bait& Tackle, Boat Storage, Convenience Market/Deli, Storage	194,000	194,000
19A	Parking	158,558		118,919	Parking/Shuttle Services		0
20	Boatyard/ Restaurant	280,000	5,000	157,500	Boatyard with dry stacking facility, restaurant	5,000	0
TOTAL SQUARE		5,564,142	1,501,740	2,418,919		894,056	545,896

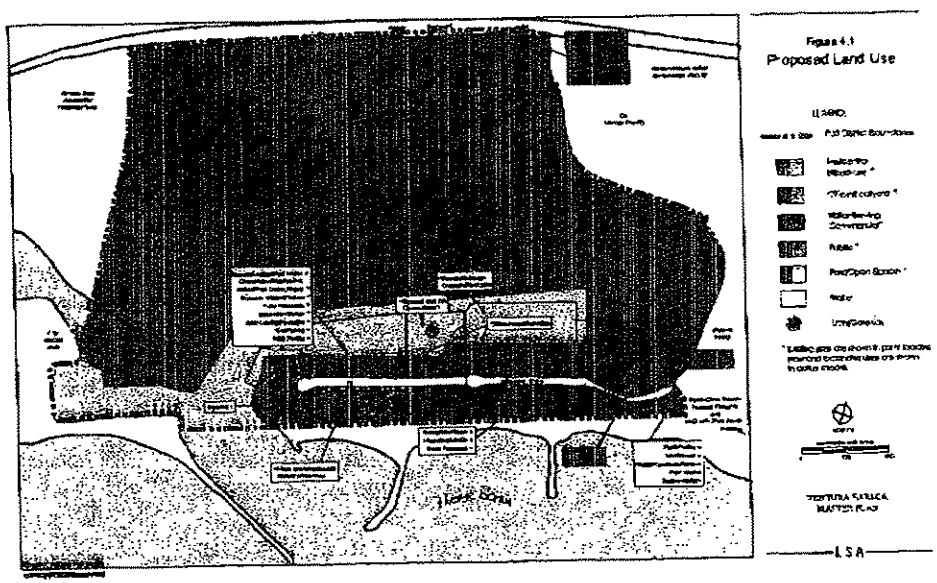
Land Use Plan: Southwest Harbor

- Wharf (Parcels 3A and 3B).
- Connections to wildlife ponds, Santa Clara River mouth, McGrath State Beach.
- Expand Harbor Village and improve connections to the beach.



Land Use Plan: South Peninsula

- Marine Learning Center and Aquarium (Parcel 8).
- Expand recreational opportunities.
- Reconfigure Spinnaker Drive and parking area.



Recreational Opportunities

- Marina Facilities
  - Provide additional space for large boats.
- Channel Islands National Park
  - Assist NPS in meeting headquarters needs.
  - Facilitate Channel Islands visitation.
- Marine Learning Center and Aquarium
- Boat Launch
- Park on Parcel 16

Visitor-Serving Opportunities

- Hotel Expansion
- Expand Harbor Village
- Park and waterfront trail on Parcels 15, 16, 18
- Sport fishing and charters (Parcel 5)
- Expanded facilities for Island Packers

Letter 31

COMMENTER: Oscar F. Peña, General Manager, Ventura Port District

DATE: July 15, 2005

RESPONSE:

Response 31A

The commenter states that the draft General Plan should be revised to clarify that the Harbor Master Plan/Specific Plan is the overriding policy document for Ventura Harbor. The text of the 2005 General Plan will be revised to clarify that the City and Port District are working together to cooperatively complete the Master Plan/Specific Plan for the Harbor area. Once the Harbor Specific Plan is adopted, it will become the overriding policy document for Ventura Harbor.

Response 31B

The commenter is concerned that the Draft General Plan is intended to supercede the current Land Use Plan and Local Coastal Program (LCP). The Port District's Draft Master Plan/Specific Plan is based on the City's current certified LCP. While the Port District's concerns are valid, it is not the intent of the 2005 General Plan to supercede the existing LCP. City staff has engaged in several discussions with the Port District to address this issue. In fact the Planning Commission Resolution recommending approval of the Draft 2005 General Plan (July 26, 2005) was specifically written to ensure that this is not the case. The intent is that the existing LCP would remain in full force and effect until the Coastal Commission adopts the new LCP. Thus, all areas of the City within the Coastal zone boundary and subject to the LCP would remain under the same regulations until either an LCP amendment (including the Draft Harbor Master Plan/Specific Plan) is adopted or the new LCP is adopted. In addition, there is specific language in the Draft 2005 General Plan that indicates that the City intends to work with the Port District to complete the Draft Harbor Master Plan and Specific Plan. Therefore, the concerns stated in the Port District's comment letter regarding requiring processing of Land Use Plan amendments would not require any different processing than currently is the case under the existing LCP/LUP.

The draft 2005 General Plan also contemplates the development that is considered in the Draft Harbor Master Plan and is not intended to preclude any current development proposals such as the Sonderman/Ring project.

City staff is not proposing to attach the existing LUP as it is not recommended that it will be superceded with adoption of the 2005 General Plan. The "Commerce" and "Mobile Home Park" designations shown on the proposed General Plan diagram are consistent with the current land use designations in the Harbor area and thus will not create any inconsistencies.

Response 31C

The commenter notes that a new fire station is needed in the Harbor area, but states that developments within the Harbor do not in themselves justify a new fire station or nine firefighters. The commenter also notes a typographical error in Action 7.13 of the General Paln. The typographical error will be corrected. As discussed in Section 4.11, *Public Services*, the Fire Department already has plans to construct a new fire station in the Harbor area in response to an existing service deficiency. If the City adopts a fire impact fee program, new development in the City, including development within the Harbor, would be subject to such fees. Though not an environmental impact of the 2005 General Plan, the VFD has identified the need for approximately 30 new firefighters to offset current staff deficiencies in addition to the new firefighters needed for the new Harbor station. As with all firefighting staff, funding for new personnel to staff a new station would come from the City's general fund unless other negotiated means can be determined.

Response 31D

The commenter states that the input from the Harbor was not requested for the draft 2005 General Plan. The draft plan has been circulated for public review since May 2005 in order to solicit comments prior to preparation and approval of a final plan. The City will incorporate relevant concerns from the Harbor into the final 2005 General Plan.

Response 31E

The commenter notes that the Port District should be designated as a "responsible agency." The Port District will be listed as a responsible agency in Section 1.0, *Introduction*.

Response 31F

The commenter states the level of development assumed for the Harbor does not account for all planned Harbor development. The Marine Learning Center and other developments in the Harbor have been accounted for in the EIR traffic and related noise analysis. The estimates of water demand and wastewater generation do not specifically include all of the facilities included in the Harbor Master Plan; however, on a per capita basis, the estimate of future water demand amounts to about 0.269 acre-feet per person per year, which is about 50% higher than the current per capita demand of about 0.179 acre-feet per year. Thus, the estimates of water demand and wastewater generation are conservative and more than account for additional non-residential development that may occur in the Harbor. The Draft EIR analysis is not intended to provide a "full buildout" estimate for the City, but rather to provide a reasonable estimate of growth that may occur over the next 20 years. Nevertheless, the table depicting possible Harbor development in the 2005 General Plan will be revised to reflect buildout estimates included in the Draft Harbor Master Plan.

Response 31G

The commenter expresses concerns about 2005 General Plan policies pertaining to protection of coastal resources and sensitive wetland and coastal areas, and enforcement of stormwater quality measures (items 7-9 of the Port District letter). None of these policies/actions are

expected to affect operations at the Harbor or restrict the Harbor's plans for development under its Master Plan.

Response 31H

The commenter expresses concerns about Action 1.18, which relates to dredging. In response to this and another comment, that action will be revised to read as follows:

> *Action 1.18: Conduct coastal dredging in accordance with the U.S. Army Corps of Engineers and California Department of Fish and Game requirements in order to avoid impacts to sensitive fish and bird species.*

Response 31I

The commenter expresses concerns about a number of 2005 General Plan actions and how they might affect the Harbor (items 11-19 in the Port District letter). While these comments do not pertain to the adequacy of the DEIR, the Port District's concerns are being addressed through discussions with City staff and as determined appropriate, will be incorporated into the final 2005 General Plan.

Letter 32

COMMENTER: McLoughlin Family Ranch

DATE: July 15, 2005

RESPONSE:

Response 32A

The commenter states an opinion that the 1.14% annual population growth rate assumed for Scenarios 2-6 is more realistic than the 0.88% growth rate assumed for Scenario 1. This opinion is noted. The growth rates used in the Draft EIR were directed by the City Council. These assumptions were used for analytical purposes. The actual growth rate in the City varies from year to year and is dependent upon a variety of factors.

Response 32B

The commenter states an opinion that, given the complications associated with intensification and reuse, the City should allow the opportunity to consider development of the expansion areas. The commenter also notes that the Draft EIR identifies limitations on available land under the Intensification/Reuse Only scenario.

Although City staff are recommending adoption of the land use map included in Scenario 1 (Intensification/Reuse Only), the City will continue to have the option of allowing development of one or more of the expansion areas. Any land use designation change for the expansion areas that are subject to the SOAR Ordinance, whether sought as part of the 2005 General Plan or as a future General Plan amendment application, would be subject to voter approval.

It is correct that the Draft EIR identifies limitations on available land for the development of schools and parks under the Intensification/Reuse Only scenario. Impacts relating to schools and parks are not significant under CEQA. However, as noted in the Draft EIR, the relative lack of available land may limit the ability to develop new large park facilities or schools.

Response 32C

The commenter points out several potential benefits associated with development of the Olivas expansion area. Some of the benefits noted by the commenter, including potential circulation improvements and restoration of the Arundell Barranca, are discussed in the Draft EIR. In addition, in Section 4.15, the Draft EIR notes that the Intensification/Reuse Only scenario may restrict the types of housing available as compared to Scenarios 2, 3, 4, and 6, emphasizing multi-family housing over single family housing.

Response 32D

The commenter notes that although development of the Olivas area may conflict with the California Coastal Act policy relating to Prime farmland conversion, it could implement other Coastal Act policies relating to coastal access and recreation and enhancement of water quality.

This is correct. As discussed in Section 4.14 of the Draft EIR, possible future development within the Olivas expansion area could be found to be consistent with several Coastal Act policies.

Response 32E

The commenter notes that earlier documents included the Olivas expansion area in a "staff recommended" or "City Council preferred" scenario and requests that the City Council include the Olivas area within its proposed Sphere of Influence (SOI) boundary. It is true that the City Council identified three expansion areas, including the Olivas area, in its "preferred scenario" in July/August 2004. However, because the City's desire to focus on intensification/reuse, staff are now recommended adoption of the Intensification/Reuse Only scenario. It should be noted that the City will not be seeking SOI boundary adjustments at this time. The Ventura LAFCO will, however, be performing an analysis of the SOI boundary within the next year that will likely result in adjustments that exclude areas not planned for development within the next five years (including areas subject to SOAR) from the SOI.

McLoughlin Family Ranch
1200 Cypress Point Lane
Ventura, CA 93003
(858) 204-7680

July 15, 2005

Kari Gialketsis, Principal Planner
City of San Buenaventura
Community Development Department
501 Poli Street P.O. Box 99
Ventura, CA 93001-0099

Sent by Email kgialketsis@ci.ventura.ca.us and Fax #(805) 653-0763

Re: City of San Buenaventura 2005 General Plan Draft EIR

Dear Ms. Gialketsis:

On behalf of the members of the McLoughlin Family, who own approximately 300 acres of land located along Olivas Park Drive, in the City of Ventura ("*McLoughlin Ranch*"), thank you for the opportunity to comment on the City of Ventura's proposed 2005 General Plan and its accompanying Draft Environmental Impact Report, dated June 2005.

The *McLoughlin Ranch* property is located within the 930 acre Olivas Potential Expansion Area ("Olivas PEA"), as described in the City's General Plan Update and accompanying documents. There are six additional families/entities that own parcels of various sizes within the *Olivas PEA*. While the McLoughlin Family has been in communication with the other *Olivas PEA* property owners, who have expressed a desire and willingness to work cooperatively on any potential future planning efforts for the Olivas PEA, it should be noted that the comments expressed in this letter are those of the McLoughlin Family, and we are not intending to speak for, or represent the views of the other *Olivas PEA* property owners.

It is our understanding that the new Draft General Plan sets forth an unambiguous emphasis regarding the City's desire to focus on accommodating future growth with infill, intensification, and re-use of sites within the currently urbanized areas of the City, prior to considering any potential expansion of the City. And yet, there is strong indication of a number of potentially significant benefits to the City, and its General Plan Goals, that could only be accommodated through future development in one or more of the Potential Expansion Areas ("PEAs"):

"...the community has indicated that before the city expands any further, the first priority to achieving planning goals should be in the vacant and underutilized areas of the City. Yet even the most successful efforts to achieve community planning goals through infill may need to be supplemented at some point by expanding into areas outside the city limits. Such expansion may not only be necessary to fulfill development objectives; it may also be needed to provide open space, parklands and natural areas to be preserved and restored...These areas (PEAs) were identified because they embody opportunities for achieving a variety of community vision objectives that may not be feasible within existing city limits." (VGP-Attachment D-Long Term Potential Expansion Strategy)

We also understand that the City will, at a yet undefined future date, be considering and making a decision regarding a Long-Term Potential Expansion Strategy, which will include: a) Guidelines for Timing and Consideration of PEAs; b) Framework for Development of Expansion Areas; and c) Criteria and Process for Site Selection. We know that any future development of the PEAs will require the preparation and approval of a Specific Plan, including the necessary environmental review, and will ultimately require a SOAR vote, and approval of the development concept by Ventura's electorate. We are not seeking to address the details of those future deliberations and policy decisions at this time.

While we are aware that the City has chosen to position its Draft 2005 General Plan as an Intensification/Reuse Only strategy (Scenario 1), and that the decision regarding which, if any, of the potential expansion strategies (Scenarios 2-6) will be selected for future planning has been segregated from the approval and adoption process for the 2005 General Plan Update, there are a number of issues/comments that we would like to address in response to the DEIR analysis, which is being used as a basis for this decision. Please consider the following:

1) **Growth Rate:** The Intensification/Reuse Only Scenario assumes a citywide annual population growth rate for the planning time frame of the 2005 VGP (2005-2025) to be 0.88%, while all of the Scenarios that include PEAs are based on a projected annual growth rate of 1.14%. While the 0.88% annual rate reflects Ventura's actual growth rate for the past 10 years (1994-2004), we believe that this growth rate was restricted by a number of factors including: the national, regional and local economic recession of the 1990s; the loss of several major employers from the area (including Kinko's relocation of corporate offices from Ventura to Texas); and the limited supply of new housing units that were produced in Ventura during that time frame due to restrictions imposed by the City's Residential Growth Management Program (RGMP).

A

We believe that the 1.14% growth rate is a more realistic and prudent projection for the City to use in its planning efforts, because this represents the longer range historic view of Ventura's actual growth (1984-2004), and is also much closer to the Countywide growth rates, and the City's actual growth during the recent past from 2000 to 2005.

2) **City's Ability to Accommodate Projected Growth with Infill Only:** Scenario 1 proposes to meet all of the City's anticipated growth, as projected using the 0.88% growth rate through 2025 (which assumes 8,300 new residential dwelling units and nearly 4.9 million new square feet of commercial, office, and industrial space), through the intensification and reuse of land within currently urbanized areas. While we appreciate and support the community's desire to accommodate as much of its anticipated growth as possible, through infill development, we question the feasibility of actually being able to accommodate this much growth within areas defined in Scenario 1. The DEIR identifies the primary areas where this growth is expected to occur, including defined Planning Districts and Corridors, many of which are located in the Downtown, Westside, and Midtown communities.

B

However, infill development can be much more complicated and costly, and faces many challenges that do not affect "Greenfield" development. Meeting the City's growth needs through Scenario 1 will require significant private investment, cooperation with existing neighbors, and less restrictive zoning and land use regulations than those that currently exist in Ventura. Until the City has completed an update of its zoning ordinance, and adopts the proposed form-based codes, it may be virtually impossible to legally approve enough projects at the levels of density that would be required in order to meet the proposed level of development. It is our understanding that the City plans to begin re-writing its zoning and development codes after the General Plan Update is approved, and that the process of developing the form based codes could take as long as two additional years to complete.

Given the inherent limitations of infill development, combined with probable conflicts between 2005 General Plan Policies and the existing regulatory framework, we believe that it would be prudent for the City to keep its options open by allowing for the opportunity to consider future development of the PEAs. It should also be noted that due to the requirements for Specific Plans and SOAR votes, any future development in the PEAs would require a multi-year planning effort. If the City waits until it discovers that its infill strategy has not been successful in yielding the needed level of development, it may be too late to meet growth projections within the planning period (2005-2025) through development in one or more of the PEAs.

Furthermore, the DEIR clearly indicates that there is a shortage of available land in Scenario 1 to meet the increased demand for Public Services that would be generated under even this lower growth rate scenario. Of particular concern is the lack of available infill sites large enough to provide additional fire, police, schools, and recreational facilities. The DEIR further states that "...limited available land for new schools may necessitate condemnation of property for new school sites and/or more intensive use of existing facilities." (Impact PS-3), and "Large sites to accommodate citywide park facilities are also lacking under this scenario" (Impact PS-6). Future development in one or more of the PEAs will alleviate these issues, especially the Olivas PEA, which offers adequate land to mitigate any impacts of Olivas development and additionally to offset the unmet needs from Scenario 1.

3) **Constraints on Intensification/Reuse Only Strategy:** In addition to the acreage, social, and regulatory limitations of Scenario 1, as described above, there are numerous specific and significant potential constraints associated with this strategy which are identified throughout the DEIR, and particularly in Section 4. The Intensification/Reuse Scenario assumes that a large percentage of the City's future growth will be met within the Planning Districts and Corridors, as identified in the Draft General Plan Update, and that a significant amount of this growth would occur in the older urbanized areas of the City, including Downtown, Midtown and the Westside. However, these older areas of town present a myriad of development challenges, which could very likely limit the potential growth in those areas, and/or negatively impact the financial viability of infill development. Some of these areas of concern, as identified in Section 4, include: Cultural and Historic Resources; Geologic Hazards; Hazardous Materials; Hydrology and Water Quality; Public Services; and Utilities.

   Section 4 details numerous deficiencies in existing water, sewer and storm water facilities, especially in the older parts of town, that will require extensive re-investment and upgrades to infrastructure. This could affect the cost, timing, and/or ultimate viability of infill development in some areas. Also, the downtown and Westside areas are ripe with identified and potential unidentified cultural and historic/prehistoric resources. Development in these areas may well conflict with other General Plan and Ventura Vision priorities regarding historic and cultural preservation. The Westside and portions of the Downtown communities also contain identified hazardous material issues. Any of these factors could severely limit the true development potential under Scenario 1.

C

4) **Benefits of Olivas Expansion Area:** While there are certainly some potential challenges associated with future development in the Olivas PEA, the DEIR also identifies numerous potential benefits to the City, which could be obtained through the future planning of a high quality, mixed-use, new urbanist village at this location. In addition to the benefits listed above, Olivas offers opportunities to improve, enhance, and/or mitigate numerous issues of community wide importance, and to fulfill several General Plan and Vision Goals/Priorities, including:

   a. Completion of critical multi-modal circulation linkages that will enhance and improve circulation between existing neighborhoods, and promote alternative modes of transportation, by: I) connecting the Olivas/Ventura Harbor area to midtown through the extension of Mills Road, II) enhancing the Arrundell Barranca Bike and Pedestrian Pathway to create a safer and more appealing alternate circulation corridor, III) possible creation of a multi-modal transit center along the railroad line on Olivas PEA. (GP Policies 4A, 4B, and 4C)

   b. Enhancing the economic viability of both the Ventura Harbor and the Pacific View Mall, by improving access and visibility, and creating better connectivity between these two vital commercial/tourist attractions, thus generating higher sales tax revenue to the City. (Impact TC-2)

   c. Development in the Olivas PEA could allow for the restoration of the Arrundell Barranca into a more natural state (Vision Goal), and the creation of a beautiful parkland and bio-filtration area surrounding the Barranca, which would help to alleviate the siltation problems that are negatively affecting the waterways of the Ventura Keys and the Harbor. This would help meet several environmental, Coastal Commission, Vision, and General Plan priorities by using BMPs to improve storm water quality, enhancing the viability of commercial fishing and recreational boating in the Harbor, and creating attractive recreational opportunities for all residents. (Impact HWQ-2 and HWQ-3, GP Action 5.2, and Action 1.10, among others)

   d. Scenario 1 will produce mostly multi-family housing, do to the limited amount of land available, and the desire to intensify development in currently urbanized areas. Future development in Olivas will allow for a greater diversity of housing choices. (DEIR page 4.15-10)

D

5) **Coastal Commission Priorities:** While it is noted that the preservation of Prime Agricultural land in the Coastal Zone is a priority of the

California Coastal Commission, the DEIR also discusses several other priorities/policies of the California Coastal Act (CCA) that could be served by a development in the Olivas PEA which adheres to policies of the Act, with the potential benefits outweighing any loss associated with the conversion of agricultural land. These are located in Section 4.14 of the DEIR and include: Article 2-Public Access (connecting Harbor to other areas of town and enhanced bike/ped trails); Article 3-Recreation (opportunities for coastal-related recreational activities/facilities, and visitor-serving commercial uses); Article 4- Marine Environment (enhance water quality and protection of commercial fishing & recreational boating); Article 6-Land Resources (allows for conversion of prime farmland when would allow for concentration of development in close proximity to existing developed areas with adequate services); and Article 6- Development.

Finally, we would like to note that in the initial Notice of Preparation for this DEIR, which was issued in September 2004, the Olivas PEA was included in the Staff Recommended Scenario; and in the Revised NOP that the City issued in December 2004, Olivas was included in the City Council Preferred Scenario; but it has now been removed from a priority position in the DEIR. Given the numerous potential benefits from future development in the Olivas PEA, and the ability to realize numerous City Vision and General Plan Goals, we respectfully request that the City Council include the Olivas PEA in its proposed Sphere of Influence boundaries, in its application to LAFCO. E

Thank you for your time and consideration of our comments.

Sincerely,

McLoughlin Family

COMMENTER: McLoughlin Family Ranch

DATE: July 15, 2005

RESPONSE:

Response 32A

The commenter states an opinion that the 1.14% annual population growth rate assumed for Scenarios 2-6 is more realistic than the 0.88% growth rate assumed for Scenario 1. This opinion is noted. The growth rates used in the Draft EIR were directed by the City Council. These assumptions were used for analytical purposes. The actual growth rate in the City varies from year to year and is dependent upon a variety of factors.

Response 32B

The commenter states an opinion that, given the complications associated with intensification and reuse, the City should allow the opportunity to consider development of the expansion areas. The commenter also notes that the Draft EIR identifies limitations on available land under the Intensification/Reuse Only scenario.

Although City staff are recommending adoption of the land use map included in Scenario 1 (Intensification/Reuse Only), the City will continue to have the option of allowing development of one or more of the expansion areas. Any land use designation change for the expansion areas that are subject to the SOAR Ordinance, whether sought as part of the 2005 General Plan or as a future General Plan amendment application, would be subject to voter approval.

It is correct that the Draft EIR identifies limitations on available land for the development of schools and parks under the Intensification/Reuse Only scenario. Impacts relating to schools and parks are not significant under CEQA. However, as noted in the Draft EIR, the relative lack of available land may limit the ability to develop new large park facilities or schools.

Response 32C

The commenter points out several potential benefits associated with development of the Olivas expansion area. Some of the benefits noted by the commenter, including potential circulation improvements and restoration of the Arundell Barranca, are discussed in the Draft EIR. In addition, in Section 4.15, the Draft EIR notes that the Intensification/Reuse Only scenario may restrict the types of housing available as compared to Scenarios 2, 3, 4, and 6, emphasizing multi-family housing over single family housing.

Response 32D

The commenter notes that although development of the Olivas area may conflict with the California Coastal Act policy relating to Prime farmland conversion, it could implement other

Coastal Act policies relating to coastal access and recreation and enhancement of water quality. This is correct. As discussed in Section 4.14 of the Draft EIR, possible future development within the Olivas expansion area could be found to be consistent with several Coastal Act policies.

Response 32E

The commenter notes that earlier documents included the Olivas expansion area in a "staff recommended" or "City Council preferred" scenario and requests that the City Council include the Olivas area within its proposed Sphere of Influence (SOI) boundary. It is true that the City Council identified three expansion areas, including the Olivas area, in its "preferred scenario" in July/August 2004. However, because the City's desire to focus on intensification/reuse, staff are now recommended adoption of the Intensification/Reuse Only scenario. It should be noted that the City will not be seeking SOI boundary adjustments at this time. The Ventura LAFCO will, however, be performing an analysis of the SOI boundary within the next year that will likely result in adjustments that exclude areas not planned for development within the next five years (including areas subject to SOAR) from the SOI.

Appendix H

Mitigation Monitoring and Reporting Program

MITIGATION MONITORING AND REPORTING PROGRAM

CEQA requires that a reporting or monitoring program be adopted for the conditions of project approval that are necessary to mitigate or avoid significant effects on the environment (Public Resources Code 21081.6). The mitigation monitoring and reporting program is designed to ensure compliance with adopted mitigation measures during project implementation. For each mitigation measure recommended in the Environmental Impact Report, specifications are made herein that identify the action required and the monitoring that must occur. In addition, a responsible agency is identified for verifying compliance with individual conditions of approval contained in the Mitigation Monitoring and Reporting Program (MMRP).

The following table is a checklist to be used to verify compliance with the mitigation measures included in the Final EIR for the "Intensification/Reuse Only" scenario.

Mitigation Measure/Condition of Approval	Action Required	When Monitoring to Occur	Monitoring Frequency	Responsible Agency or Party
AIR QUALITY				
AQ-2 Additional Air Quality Actions. The following actions should be added to the 2005 General Plan to address air quality impacts of future development on a case-by-case basis: • Require air quality analysis of individual development projects in accordance with the most current version of the Ventura County Air Pollution Control District Air Quality Assessment Guidelines and, when significant impacts are identified, require implementation of air pollutant mitigation measures determined to be feasible at the time of project approval. • In accordance with Ordinance 93-37, continue to require payment of fees to fund regional transportation demand management (TDM) programs for all projects generating emissions in excess of Ventura County APCD thresholds.	Verification that actions are included in the final 2005 General Plan; review of individual projects over the life of the 2005 General Plan	Verification of inclusion of recommended actions prior to publication of the final 2005 General Plan; review and assessment of fees prior to issuance of building permits for individual development projects	Once prior to final 2005 General Plan publication; review of individual projects as needed over the life of the 2005 General Plan	Planning Department
AQ-3 Construction Mitigation. The following action should be added to the 2005 General Plan to address air quality impacts of future construction projects on a case-by-case basis: • Require individual construction contractors to implement the construction mitigation measures included in the most recent version of the Ventura County APCD's Ventura County Air Quality Assessment Guidelines and, when	Verification that the action is included in the final 2005 General Plan; verification that construction plans for individual projects include provisions that are consistent with APCD guidelines	Verification of inclusion of the recommended action prior to publication of the final 2005 General Plan; review and approval of construction plans prior to issuance of grading permits for individual development projects	Once prior to final 2005 General Plan publication; review of individual projects as needed over the life of the 2005 General Plan	Planning Department

Mitigation Measure/Condition of Approval	Action Required	When Monitoring to Occur	Monitoring Frequency	Responsible Agency or Party
significant impacts are identified, require implementation of air pollutant mitigation measures determined to be feasible at the time of project approval.				
HYDROLOGY AND WATER QUALITY				
HWQ-2 Additional Drainage Actions. The following actions shall be added to the 2005 General Plan to address existing storm drain system deficiencies: • Develop a financing program for the replacement of failing corrugated metal storm drain pipes in the City. • Adopt assessment districts or other financing mechanisms to address storm drain system deficiencies in areas where new development is anticipated and deficiencies exist (e.g., Downtown district, Ventura Avenue corridor, and Harbor district). The following actions are recommended to minimize the impact of future development on the local storm drain system and implement City goals regarding sustainable infrastructure: • As feasible, require new developments to incorporate stormwater treatment practices that allow percolation to the underlying aquifer and minimize offsite surface runoff. Such methods may include, but are not limited to, (1) the use of pervious paving material within	Verification that actions are included in the final 2005 General Plan; inclusion of infrastructure plans in future development plans (e.g., specific plans, redevelopment plans) for areas where deficiencies exist	Verification of inclusion of recommended actions prior to publication of the final 2005 General Plan; verification that appropriate infrastructure plans are in place prior to approval of development plans for affected areas	Once prior to final 2005 General Plan publication; verification of infrastructure plans as needed over the life of the 2005 General Plan	Planning Department, Public Works Department, Planning Commission, City Council

Mitigation Measure/Condition of Approval	Action Required	When Monitoring to Occur	Monitoring Frequency	Responsible Agency or Party
parking lots and other paved areas to facilitate rainwater percolation; and (2) construction of retention/detention basins to limit runoff to pre-development levels and to encourage infiltration into the groundwater basin. • Where deemed appropriate, condition new developments adjacent to Ventura County Watershed Protection District channels to dedicate necessary right-of-way to meet future District needs.				
NOISE				
N-1 Rubberized Asphalt. The following action shall be added to the 2005 General Plan to reduce general traffic noise: • As feasible, use rubberized asphalt or other sound reducing material for paving and re-paving of City streets.	Verification that the action is included in the final 2005 General Plan; verification that rubberized asphalt is used when feasible, particularly on roads where noise levels approach or exceed City standards	Verification of inclusion of the recommended action prior to publication of the final 2005 General Plan; prior to re-paving of individual roads over the life of the 2005 General Plan	Once prior to final 2005 General Plan publication; re-paving as needed over the life of the 2005 General Plan	Planning Department; Public Works Department
N-3 Noise Ordinance Update. The following action shall be added to the 2005 General Plan: • Update the Noise Ordinance in conjunction with the new development code to provide noise standards for residential projects and residential components of mixed use projects within commercial and industrial zones.	Verification that the action is included in the final 2005 General Plan; verification that the new development code includes noise standards for residential projects within commercial and industrial zones	Verification of inclusion of the recommended action prior to publication of the final 2005 General Plan; verification of inclusion of noise standards prior to approval of new development code	Once prior to final 2005 General Plan publication; once prior to approval of development code	Planning Department, Planning Commission, City Council
PUBLIC SERVICES				
PS-2 Police Protection Service. The following actions shall be added to the 2005 General Plan:	Verification that the action is included in the final 2005 General Plan; annual	Verification of inclusion of the recommended action prior to publication of the	Once prior to final 2005 General Plan publication; monitoring annually over	Planning Department; Police Department

Mitigation Measure/Condition of Approval	Action Required	When Monitoring to Occur	Monitoring Frequency	Responsible Agency or Party
• Establish a new Downtown storefront to meet the needs of the growing Downtown population • Expand the Police Department headquarters as necessary to accommodate staff growth.	monitoring of Police Department facility needs and development of new facilities as needed	final 2005 General Plan; monitoring of Police Department facilities annually over the life of the 2005 General Plan	the life of the 2005 General Plan	
PS-3(a) School Coordination. The following action should be added to the 2005 General Plan: • Work with the Ventura Unified School District to ensure that school facilities can be provided to serve new development.	Verification that the action is included in the final 2005 General Plan; verification of coordination with School District in conjunction with review of individual developments	Verification of inclusion of the recommended action prior to publication of the final 2005 General Plan; coordination prior to approval of individual development projects	Once prior to final 2005 General Plan publication; coordination as needed over the life of the 2005 General Plan	Planning Department, Planning Commission, City Council
PS-5 Solid Waste Disposal Facilities. The following actions shall be added to the 2005 General Plan: • Coordinate with the Ventura Regional Sanitation District and the County to expand the capacity of existing landfills, site new landfills, or develop alternative means of disposing of solid waste that will provide sufficient capacity for waste generated in the City. • Develop incentives for new residences and businesses to incorporate recycling and waste diversion practices using guidelines provided by the Environmental Services Office.	Verification that the action is included in the final 2005 General Plan; verification of inclusion of appropriate incentives in new development code	Verification of inclusion of the recommended action prior to publication of the final 2005 General Plan; verification of inclusion of incentives prior to adoption of new development code	Once prior to final 2005 General Plan publication; once prior to adoption of new development code	Planning Department, Planning Commission, City Council
TRANSPORTATION AND CIRCULATION				
TC-1 Additional Circulation Actions. The following actions shall be added to the 2005 General Plan to ensure that traffic impacts of future developments	Verification that the actions are included in the final 2005 General Plan; verification of traffic	Verification of inclusion of the recommended actions prior to publication of the final 2005 General Plan;	Once prior to final 2005 General Plan publication; analysis and development of mitigation as needed	Planning Department; Public Works Department, Planning Commission, City Council

Mitigation Measure/Condition of Approval	Action Required	When Monitoring to Occur	Monitoring Frequency	Responsible Agency or Party
are addressed and mitigated: • Require project proponents to analyze traffic impacts and implement mitigation as appropriate prior to development. Depending upon the nature of the impacts and improvements needed, mitigation may either consist of implementing needed physical improvements, contributing "fair share" fee toward implementation of needed improvements, or some combination thereof. • Update the traffic mitigation fee program to fund necessary citywide circulation and mobility system improvements needed in conjunction with new development.	mitigation fee program update; analysis of impacts of individual development projects and inclusion of appropriate mitigation	verification of traffic mitigation fee program update in conjunction with annual General Plan review; analysis and development of mitigation prior to approval of individual development projects	over the life of the 2005 General Plan	
UTILITIES AND SERVICE SYSTEMS				
U-1 Water System Analysis. The following action shall be added to the 2005 General Plan: • Require project proponents to conduct evaluations of the existing water distribution system, pump station, and storage requirements for the proposed development in order to determine if there are any system deficiencies or needed improvements for the proposed development.	Verification that the action is included in the final 2005 General Plan; analysis of impacts of individual development projects and inclusion of appropriate mitigation	Verification of inclusion of the recommended action prior to publication of the final 2005 General Plan; analysis and development of mitigation prior to approval of individual development projects	Once prior to final 2005 General Plan publication; analysis and development of mitigation as needed over the life of the 2005 General Plan	Planning Department, Public Works Department, Planning Commission, City Council
U-2(a) Sewer System Analyses. The following action should be added to the 2005 General Plan: • Require project proponents to	Verification that the action is included in the final 2005 General Plan; analysis of impacts of individual development projects and	Verification of inclusion of the recommended action prior to publication of the final 2005 General Plan; analysis and development	Once prior to final 2005 General Plan publication; analysis and development of mitigation as needed over the life of the 2005	Planning Department, Public Works Department, Planning Commission, City Council

Introduction

Community Vision

TO CREATE AN INTERCONNECTED, REVITALIZED WESTSIDE COMMUNITY THAT IMPROVES OVER TIME BY PRESERVING NEIGHBORHOOD HERITAGE, SUPPORTING AND EXPANDING THE VIBRANT ARTS COMMUNITY, REQUIRING WELL DESIGNED DEVELOPMENT, INCREASING URBAN PLAZAS AND GREEN SPACES, ENHANCING MULTI-MODAL TRAVEL OPTIONS, AND EXPANDING JOBS, WITH AN EMPHASIS ON GREEN TECHNOLOGY AND HIGH TECH SECTOR OPPORTUNITIES.

Setting

The proposed Westside Community Plan area consists of approximately 900 acres excluding ROW, located on the western edge of the City. The Plan area is generally bounded by the steep hillsides to the east, Highway 33 to the west, Park Row Avenue on the south, and Ottawa Street on the North and the adjacent North Avenue District as identified in the 2005 General Plan. The Plan area is divided into eastern and western halves by Ventura Avenue.

The southerly border of the Westside Plan begins immediately north of the Downtown Ventura area, and is approximately 26 miles south of the City of Santa Barbara. State Route 33 connects the Westside area to unincorporated Ventura County and Ojai to the north, and to Highway 101 which connects the greater Ventura City area to Los Angeles to the south, and Santa Barbara County to the north.

History

The City of Ventura was originally settled by native Chumash tribes who lived undisturbed until the arrival of Spanish missionaries. In 1782, missionaries led by Junipero Serra established the San Buenaventura Mission south of the Plan area, the original aqueduct of which runs to the north end of the Plan area.

Because Ventura was not easily accessible, the City experienced little economic or population growth until a railway connection and port were established in the 1880s that catalyzed development. Oil was discovered in Ventura in 1885. In the early 1900s, the first oil field was created on the Westside, known as the Ventura Avenue Oil Field. The subsequent oil boom resulted in a period of intense growth for the Westside Community and the adjacent North Avenue area, and established the pattern of development. This period of industrial development was influential in shaping the community's character. By the 1920s, both the Westside Community and adjacent North Avenue areas had approximately 113 oil wells. The oil boom also resulted in the establishment of other support industries, such as wire yards and machine shops. The Westside Community area was developed with workforce housing. By the 1970s, oil production rates began to decline, taking much of the employment base out of the area. A large refinery located near Stanley Avenue was demolished, and one of the larger companies in the area, VETCO, sold their headquarters to KINKO'S, signaling a shift to lighter industrial uses in the area.

Built Environment, Context and Character

The Westside area is characterized by an interconnected, pedestrian-scale grid of workforce housing neighborhoods dating back to the early part of the 20th century. Several disconnected alleyways and frequently spaced narrow residential streets provide residents with pedestrian-oriented paths to access Ventura Avenue, the planning area's primary roadway. Along Ventura Avenue, commercial development ranges from small single-story shops to larger two-story mixed-use buildings with a regular pattern of small nodes that have historically served as gathering places. However, there are often abrupt transitions between industrial and residential land uses, coupled with a discontinuous pattern of industrial land uses along Ventura Avenue and Olive Street with a resulting inconsistent pattern of building massing and scale North of Stanley Avenue along Ventura Avenue of the Westside area. The primary connection between Ventura Avenue and State Route 33 for the Westside is Stanley Avenue. Stanley Avenue is home to the Ventura Unified School District headquarters and bus operations center, Ventura Community College District headquarters, as well as industrial uses and several mixed-use development proposals.

Implementation

This Community Plan is intended to implement the City's General Plan at the neighborhood level. While this Community Plan provides further direction on requirements and development standards for new development, policies and actions of the General Plan remain applicable and in effect. The Westside Community Planning Project includes a proposal to study adoption of a redevelopment project area per California Redevelopment Law (CRL). Implementation of policies and public improvements included within the Community Plan will occur through redevelopment tax increment financing, Capital Improvement Program financing and leveraged private investment, among other financing opportunities.

Plan Preparation Process

Civic engagement is critical to successful planning efforts. The Westside Community Plan is the result of an extensive public participation process that began in 1996 with the series of 'Take Part Westside' public workshops, which led to a community vision for revitalization of the Westside area. In 1999, the *Westside Urban Design Plan* incorporated key elements and established design guidelines supportive of the 'Take Part Westside' vision.

In the year 2000, the *Ventura Vision* plan, which ultimately guided formulation of the 2005 Ventura General Plan, incorporated the goals and objectives developed during the Westside vision process. That same year, the *Westside Economic Strategy* assessed the Westside's economic strengths, weaknesses, and opportunities and summarized the existing conditions of the areas land uses. These efforts culminated in the 2001 Westside Workshop and *Conceptual Land Use Plan*.

Beginning in 2006, the City also sponsored well-attended public workshops over several months to gather and incorporate meaningful public input. Students from the City and Regional Planning Department at California Polytechnic State

University, San Luis Obispo, assisted City staff with many of these workshops and assembling background data for the Community Plan including a comprehensive survey of parcels in the project area, and survey of community members preferences regarding building type and scale.

In the Fall of 2010, a preliminary draft Westside Community Plan was circulated for public review and feedback including extensive workshops and feedback sessions with community groups, city commissions and members of the public. The result of that feedback was contained in the Draft Westside Community Plan of April 2011. Continued review by the Planning Commission City Council and specialized workshops in the summber of 2011 resulted in the current Draft Westside Community Plan.

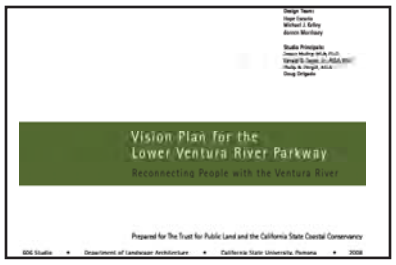
12.1 Our Natural Community

The natural setting framing the Westside Community Planning area is one of the areas greatest assets. The Pacific Ocean is located less than one mile south of the Westside Community area. To the east and west, the Westside sits between the Ventura County hillsides and the Ventura River. Drainage channels from this area feed the Ventura River, which eventually empties into the Pacific Ocean. Revitalization of the Westside Community area must consider the potential human impact on the river and hillside environments and also focus on the benefits these natural areas provide for the community, such as contributing to larger ecosystems, adding aesthetic value, and providing recreational opportunities. On a regional level, the Westside Community has a primary interest in participating in the implementation of the Vision Plan for Lower Ventura River Parkway completed in April 2012, to preserve and enhance the Ventura River.

Goal: Support the native ecology, endangered species, and opportunities for recreational uses in and along the Ventura River.



Lower Ventura River Parkway Plan provides planning tool for local governments and land owners to create a parkway:
- compatible with recreational use,
- promotes sustainable land stewardship,
- respects river function, and
- enhances regional ecosystems

Policy 12 A: Participate with stakeholders and agencies to protect natural resources and enhance the Ventura River.

Action 12.1.1: Assist and work regionally with the County and Ventura River stakeholders in the implementation of the Ventura River Parkway for watershed and recreation planning.

Action 12.1.2: Upon adoption of the Ventura River Multi-Species Habitat Conservation Plan, new development shall coordinate with Federal, State and Local resource agencies to facilitate recovery of endangered species in the Ventura River Watershed.

Policy 12 B: Follow a development approach that contributes to resource conservation in the Westside Community.

Action 12.1.3: In partnership with other stakeholders, conduct an inventory of existing conditions and hydrological resources at the regional and watershed scale and formulate a plan to mitigate hydrological impacts of development to water quality of local surface drainage in developed areas adjacent to the Ventura river.

Action 12.1.4: Provide bio-filtering and groundwater recharging through low impact development (LID) and other careful design of new development in the Westside Community.

Action 12.1.5: Require new development to install city approved trash excluders in stormwater inlets to reduce trash outflow to the Ventura River.

This page intentionally left blank

12.2 Our Prosperous Community

Positioned along two major north-south arterials at Ventura Avenue and State Route 33, the Westside Community is located at the western edge of the city with opportunities for neighborhood serving retail and business to serve this segment of the population. The Westside has historically provided an excellent location for oil production support businesses as well as a wide variety of construction materials manufacturing and distribution firms. In recent years the local labor force has expanded to include many who are employed in technology sectors and the growing artist community. The industrial land located within the Westside is well suited for potential transition to green and high technology industries for economic prosperity in the first half of the 21st Century.

Proposed neighborhood linkages and revitalization of a jobs-producing industrial base is a Plan objective. Improved connectivity of the urban form can promote retail and transitioning industrial areas and create shopping and business service opportunities for the west side of Ventura. A variety of retail, shopping, educational, creative arts, and industrial opportunities are called for throughout the Plan. An opportunity exists to enhance retail along Ventura Avenue while promoting green and high-tech industrial opportunities in obsolete or converting industrial portions of the Plan area around Stanley Avenue. This Plan intends the historical Westside neighborhood to remain the town center of the area, complete with residential, retail and office space and several pedestrian nodes to facilitate community interaction and placemaking. Existing smaller industrial businesses are to be preserved to protect the jobs that they provide. The City of Ventura recognizes that prosperity is to be shared with all segments of the community and that services and jobs for struggling families, the disadvantaged, or disabled are part of what makes a community integrated, healthy and safe. This Plan aspires to protect economic interests of all residents by preserving and encouraging diversity in employment opportunities.

GOAL: Increase local shopping opportunities, diversify the local economy, and create job opportunities in the Westside areas.

GOAL: Provide for a variety of Westside Community workforce and transitional housing opportunities.

GOAL: Encourage diverse and equitable neighborhoods that provide housing options for a full range of incomes, physical abilities and ages.

Policy 12 C: Stimulate private investment for revitalization of underutilized parcels in the Westside Community Plan area.

Action 12.2.1: Identify federal, state and local funding sources for the Westside Community Planning project area to stimulate economic development and generate leverage funds for development opportunity sites in the area.

Action 12.2.2: Stimulate investment in two catalyst sites for their revitalization through available public and private financing along Olive at Stanley Avenue (Stanley/Olive); and portions of AERA and Ventura Unified School District parcels west of Ventura Avenue at Shell Road (School District/AERA) as follows:

- Catalyst Site #1: Industrial area south of Stanley Avenue, along Olive Street to be focus of economic development efforts to encourage traditional, green and high technology job recruitment to the City.

- Catalyst Site #2: School District/AERA: Portions of 90 acre site that includes approximately 4.5 acre Avenue School site to be considered for mixed-use development to provide transition between industrial uses to the north and newer residential and commercial uses to the south.

Policy 12 D: Support economic growth and the creation of traditional, green and high technology jobs through business retention, expansion, and formation.

Action: 12.2.3: Design and conduct a business-marketing program to publicize the key attributes of a Westside location to the business community.

Action 12.2.4: Collaborate with countywide, regional, and statewide economic development organizations to heighten awareness among targeted industries about the characteristics of business sites in the Westside.

Action 12.2.5: Establish a strategic vision that outlines Ventura Avenue as one of the City's Business Corridors and includes an emphasis on green industries.

Action 12.2.6: Consider the creation of an incentive program that targets businesses within desirable high-tech, green and creative industries to establish or relocate in the Westside Community.

Policy 12 E: Identify and designate Westside sites that are compatible with development opportunities for technology businesses and professional services firms to provide jobs.

Action 12.2.7: Establish a cohesive strategy for redevelopment of former oil industrial areas along Stanley Avenue and Olive Street.

Action 12.2.8: Expressly preserve underutilized sites on the Westside for job producing uses with respect to the whole community planning area.

***Action 12.2.9: Designate suitable locations and development standards for industrial and service commercial businesses in the Westside Community. Action implemented through Regulating Code designation.

***Action 12.2.10 Zone or maintain at least 96 acres for industrial and service commercial development, based on economic market analysis to inform the Plan. Action implemented through Regulating Code designation of Special District Industrial and Urban Center/Urban General.

Action 12.2.11: Pursue funding for brownfield site assessment and remediation to facilitate reuse of obsolete industrial parcels in the Westside Community.

Action 12.2.12: Locate sites or developments that could potentially house a green technology incubator and partner with other organizations for implementation.

Action 12.2.13: Respect and preserve oil production, high value job base and maintain existing land use, but anticipate long range industrial mixed use development of the Avenue School site. (Catalyst #2)

Policy 12 F: Collaborate with workforce training agencies and services programs to ensure Westside local worker access to new jobs.

Action 12.2.14: Coordinate with the California Employment Development Department, the County Human Services Agency, the Ventura Workforce Investment Board, Regional Occupation Program, and other workforce training agencies to provide well tailored employment training programs to meet the needs of businesses locating in the Westside and resident workers seeking new employment opportunities.

Policy 12 G: Prioritize and promote expansion of local-serving retail and service businesses to improve shopping opportunities in the Westside Community.

***Action 12.2.15: Zone locations for local-serving retail commercial businesses. Action implemented through Regulating Code designation.

***Action 12.2.16: Zone suitable sites for future retail commercial development to serve growth in Westside market demand. Action implemented through Regulating Code designation.

Policy 12 H: Promote development of Westside housing opportunities commensurate with the incomes generated by local businesses, at both upper and lower income levels.

Action 12.2.17: Encourage mixed use development to achieve a mix of housing types for a range of household income levels and options for seniors, families with children, and persons with disabilities in the community.

Policy 12 I: Encourage high quality, sustainable and green development project designs that reflect environmental quality and consideration of long- term benefit over short-term gain.

***Action 12.2.18: Expand the range of building and site design options that are permitted in order to further reduce the environmental footprint of new development in the community. Action implemented through Regulating Code.

***Action 12.2.19 Establish cost-effective private property design standards to provide visual buffers to screen industrial business operations from public

right-of-ways. Action implemented through Regulating Code.

Action 12.2.20 Identify funding or incentive programs to assist property owners in property improvements to screen industrial operations and reduce off-site visual impacts.

Policy: 12 J: Establish flexible form-based standards conducive to successful mixed-use development that provide residential and business opportunities at all economic levels.

***Action 12.2.21: Allow commercial businesses to be located where they benefit from traffic flow and visibility in order to capture market support from outside the Westside Community. Action implemented through Regulating Code.

***Action 12.2.22: Allow for shared parking in mixed-use projects to reduce the overall costs of development and defray the cost to commercial development. Action implemented through Regulating Code.

***Action 12.2.23: Collocate residential housing types that are compatible with the noise, lighting and traffic flows of business development in mixed-use projects. Action implemented through Regulating Code.

This page intentionally left blank

12.3 Our Well Planned Community

Residents of the Westside want to enhance the quality of life within their neighborhoods. Revitalization of the public realm and redevelopment of commercial and industrial areas should be of the highest design to promote sense of place and local cultural identity, animation of the public realm, and foster connectivity. New development should also provide public amenities such as parks and protection of adjacent natural resources to meet larger citywide goals. These citywide goals include creating walkable, bikeable, compact neighborhoods with a wide diversity of housing types and neighborhood serving uses in order to increase housing choices, with strong urban design to address infill development in the residential areas and a strategy to increase parks. Greater intensity and mixed-uses are called for along Ventura Avenue. This Plan attempts to balance the public purpose of citywide initiatives to implement an infill strategy for Districts, neighborhood centers and along corridors within existing neighborhoods.

The future development of the Westside will be largely based on the success of revitalization efforts along Ventura Avenue and key areas that can serve as catalysts for other infill development. These areas include: the existing mixed use areas of Olive Street and the commercial corridor along Ventura Avenue with a focus on access and connectivity to spur economic activity; neighborhood centers within walking distance of surrounding communities, linked by multi-modal transit options and pedestrian-oriented design. Successful investment in these areas will strengthen the economic forces that encourage other infill development to occur.

The Westside includes the Ventura Avenue Corridor and is home to several neighborhood centers that are surrounded by well-connected neighborhood blocks. Opportunities exist to realize the revitalized potential of the neighborhood through improved linkages to expand mobility, enhanced pedestrian amenities along streetscapes, and contextually appropriate height and massing of new development along mixed-use corridors.

GOAL: Encourage Traditional Neighborhood Design in existing and new Westside neighborhoods.

GOAL: Enhance Ventura Avenue with plazas and green spaces that can accommodate gathering areas, trees and public art.

GOAL: Emphasize Neighborhood Preservation by valuing existing residential, industrial and artistic characteristics of the Westside community.

Policy 12 K: Develop public squares through dedication of pedestrian oriented space in new development along the Ventura Avenue Corridor.

Action 12.3.1: Install gateway monumentation within the right-of-way at the intersections of Ventura Avenue at Park Avenue, Ventura Avenue at Stanley Avenue, and Stanley Avenue at Olive Street.

Action 12.3.2: Create more intensive core ¼ mile pedestrian development areas along Ventura Avenue between Park Row to Kellogg; Warner to Lewis and around Stanley Avenue to Shoshone.

Cameron Street Park Exhibit

Policy 12L: Preserve existing Westside neighborhood character and integrate local history and cultural heritage into urban form and daily life.

Action 12.3.3: Coordinate with neighborhoods and the Historic Preservation Committee to designate a historic district between Lewis and Vince Streets and adopt design guidelines as identified in 2011 Westside Historic Preservation Survey.

Action 12.3.4: Maintain the scale of new buildings compatible with existing neighborhoods.

Action 12.3.5: Provide a transition in the buildings and urban form of the edges between the Downtown Specific Plan and Westside Plan.

Action 12.3.6: Work with Ventura Unified School District to facilitate reuse of Avenue School into a community amenity.

Action 12.3.7: Maintain the existing historically built character with regard to the increments of building, blocks, and neighborhoods that form the Westside.

Policy 12 M: Integrate the design principles of Traditional Neighborhood Development into Westside community-scale and building-scale plan.

Action 12.3.8: Develop more mixed-use type buildings and live/work units along Ventura Avenue and other adjacent streets.

***Action 12.3.9: Preserve existing neighborhood housing types and provide more opportunities for owner occupied housing via a mix of housing types including live/work. Action implemented through Regulating Code building types; however occupancy not regulated.

***Action 12.3.10: Create development standards that allow existing neighborhoods to change over time to reflect the community design features of this Community Plan. Action implemented through Regulating Code.

***Action 12.3.11: Revise allowable park standards to accommodate urban greens and green spaces within urbanized area. *** Action implemented through Regulating Code.

Action 12.3.12: Encourage and create more alley commercial loading areas.

Policy 12 N: Revitalize former and present industrial sites in the Westside Industrial area south of Stanley Avenue.

***Action 12.3.13: Establish a cohesive strategy for redevelopment of former oil industrial areas along Stanley Avenue and Olive Street to accommodate traditional, green and high technology sector industries. Action implemented through Regulating Code.

***Action 12.3.14: Renovate uses on Ventura Avenue south of Stanley, including a combination of residential and mixed-use development. Some of the mixed-use development could include and/or retain light industrial use. Action implemented through Regulating Code.

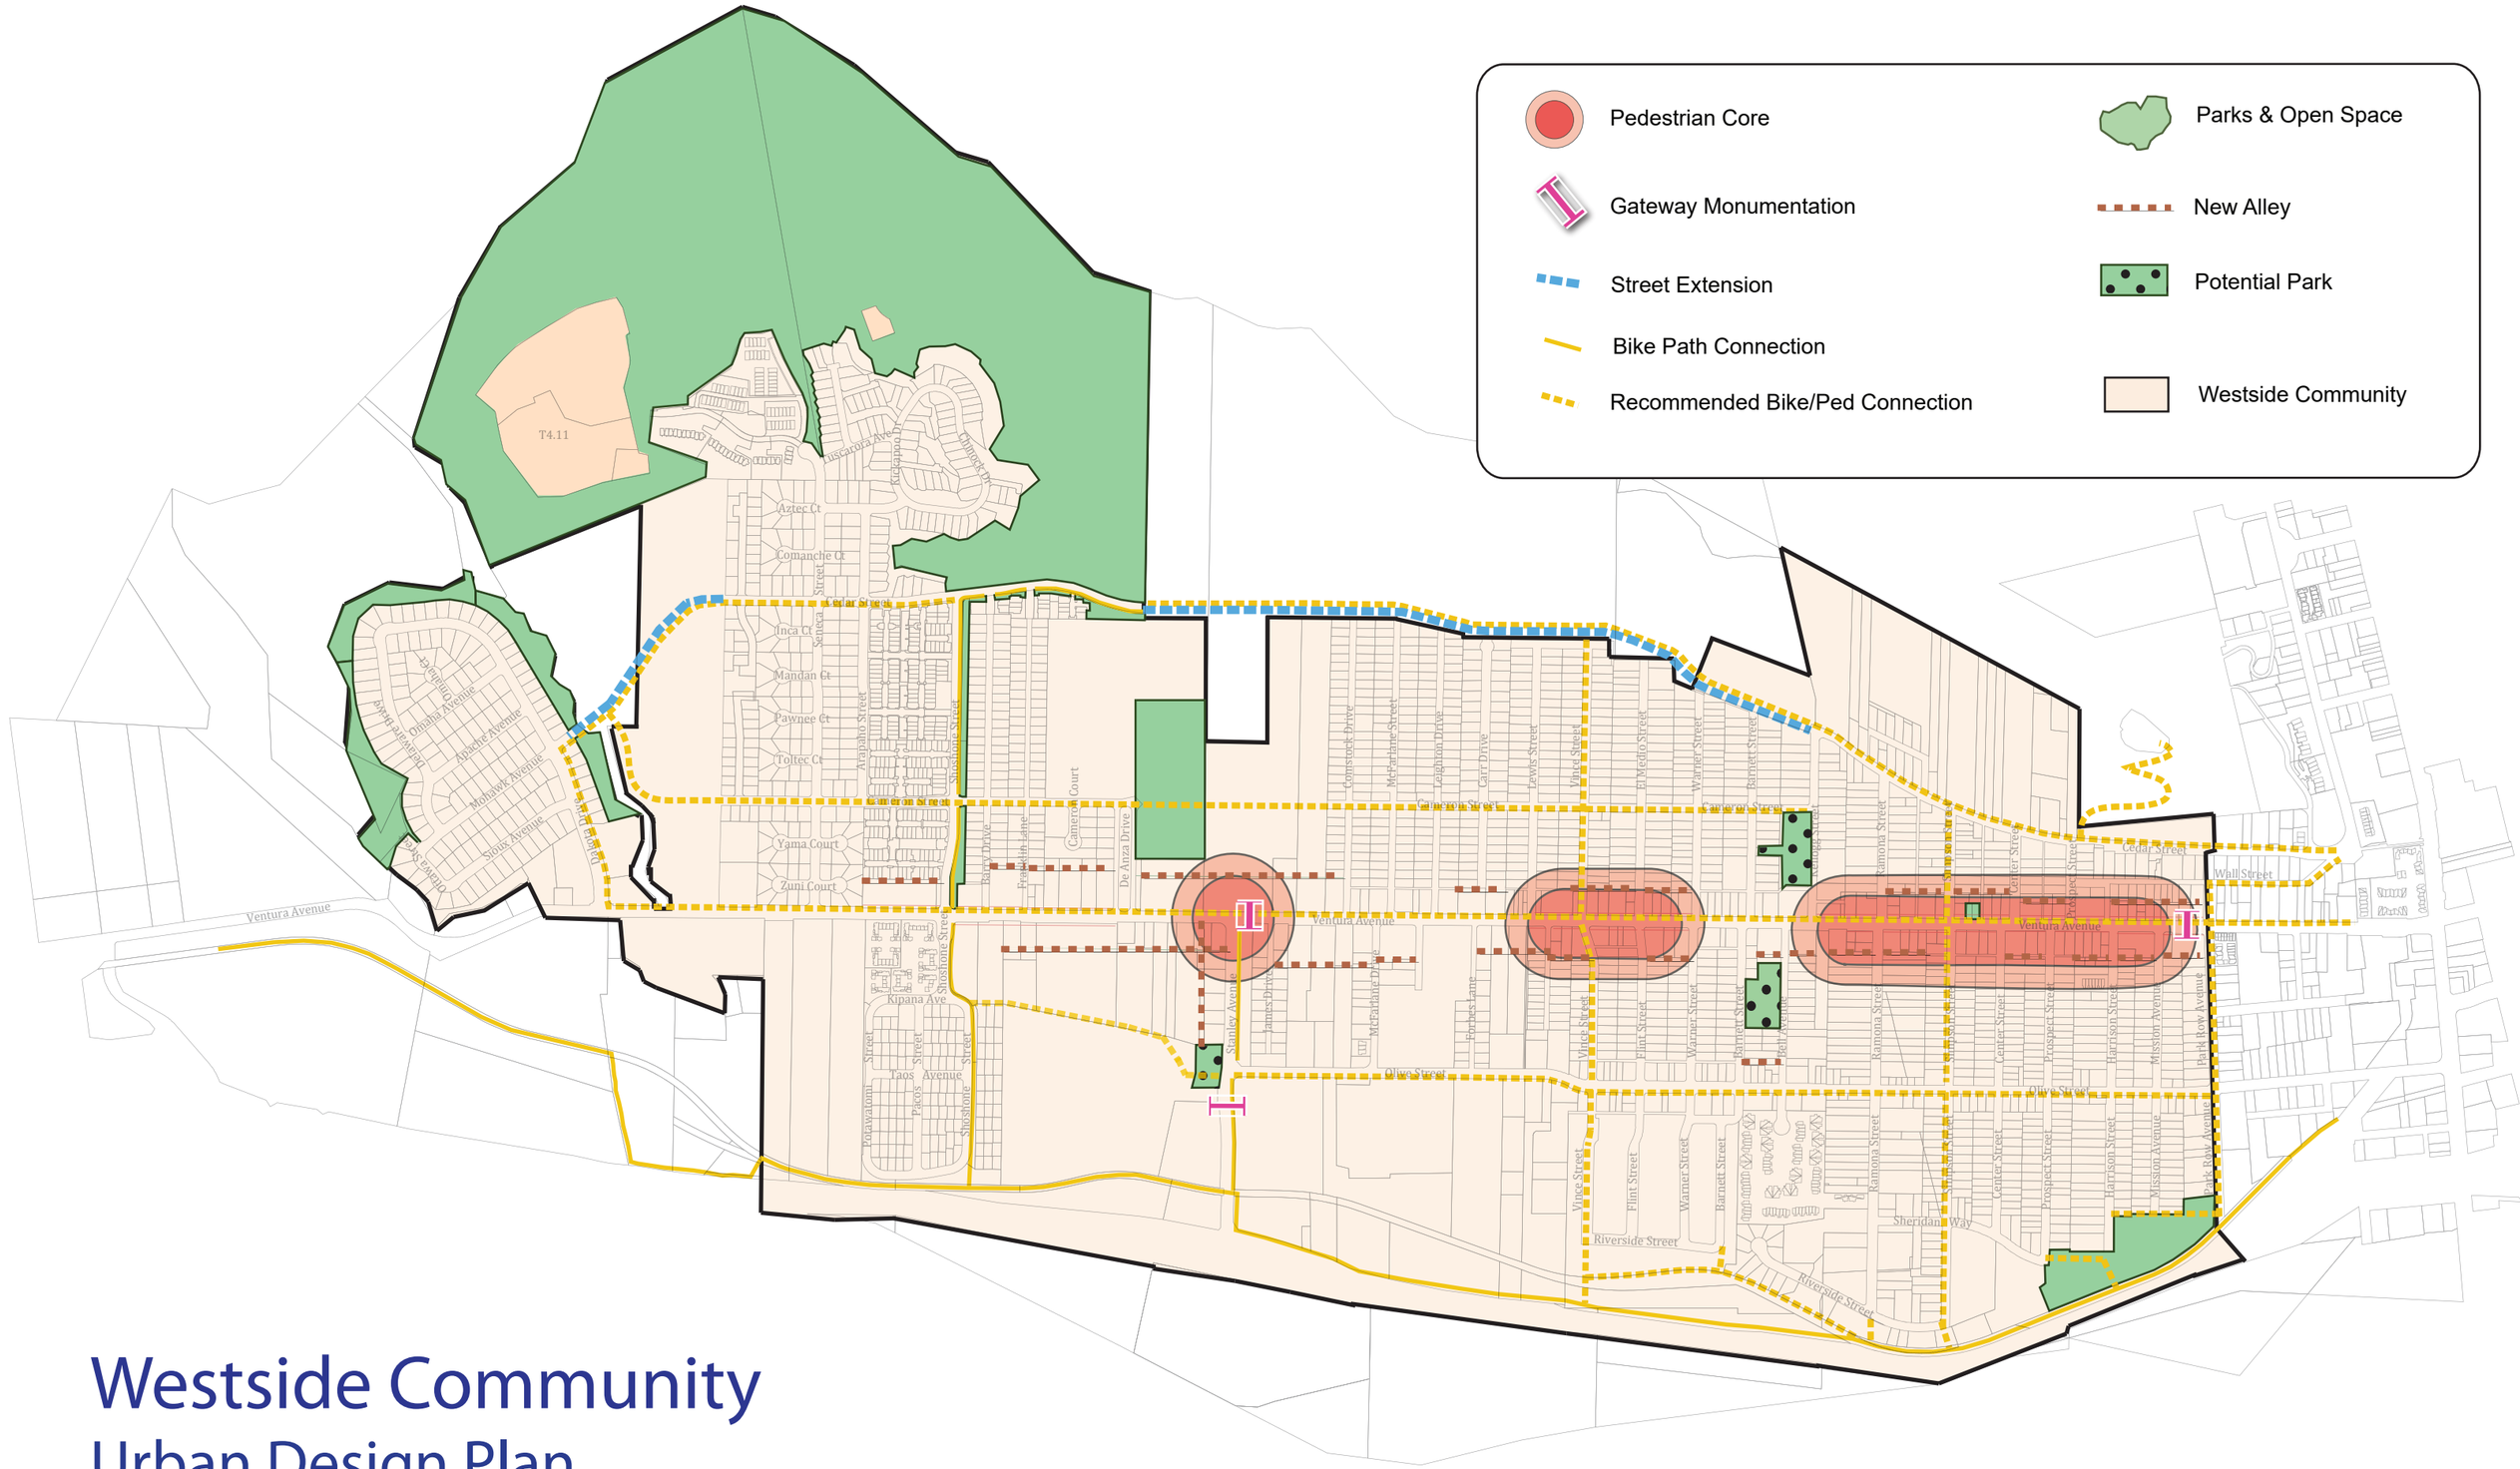
***Action 12.3.15: Adopt 'flex-shed' industrial building type to accommodate future industrial and mixed-use development. Action implemented through Regulating Code.

Policy 12 O: Enhance the streetscape of the Westside.

Action 12.3.16: Protect existing trees and plant new trees, especially along Ventura Avenue.

Action 12.3.17: Add trees, streetscape improvements, public art, and architectural elements along Ventura and Olive Avenues.

Action 12.3.18: Explore with Westside property owners the placement of neighborhood street trees on private parcels.



Westside Community
Urban Design Plan

October 2012

12.4 Our Accessible Community

Mobility is the ability for people, goods and services to circulate from one place to another. Efficient mobility is essential for a vibrant economy, social interaction and safety. Transportation enhancements necessary to improve mobility in the Westside Community area include public streetscape design, community gateways, bike paths, improved connectors and transit through neighborhood streets.

Pedestrian and bicycle mobility are key components for the future of the Westside Community area. Along Ventura Avenue, the corridor will be a place where pedestrian mobility is the preferred and necessary mode to activate the public realm and invigorate the corridor. Streetscape improvements are necessary to provide an enhanced and safe pedestrian experience. Public transit options that provide safe linkages from the neighborhoods to the Ventura Avenue transit trunk lines will also be necessary to maintain accessibility for residents from their home to the commercial corridor or places of work. Within neighborhoods, the Plan calls for providing improvements and linkages to bicycle facilities. It also calls for connections in the street grid where it may be experiencing blockages that inhibit mobility through the neighborhood.

Additionally, the community has a strong desire to access the unincorporated hillsides along Cedar Street for recreational benefits, but existing landslide instability and multi-jurisdictional authorities will require collaborative, long-term vision and work plan to achieve.

GOAL: Encourage various modes of travel by providing infrastructure for buses, bikes and pedestrians as well as cars and improved connections from the Ventura River Trail to neighborhoods to the hillsides.

GOAL: Improve parking along Ventura Avenue for commercial business customers.

Policy 12 P: Improve roadway design along Ventura Avenue to enhance pedestrian safety, facilitate safe crossing of pedestrians and bicyclists, and improve parking. Ensure that the Westside circulation system is interconnected and usable by all modes of transportation.

Action 12.4.1: Develop street standards that emphasize the safe and efficient movement of vehicles, pedestrian safety, streetscapes, and compatibility with adjoining urban features and incorporate naturalistic 'green street' design elements into the streetscapes.

Action 12.4.2: Where appropriate reinstate the Neighborhood Traffic Management program and consider implementation on a block by block or neighborhood by neighborhood basis to slow traffic through residential neighborhoods.

Action 12.4.3: Extend Cedar Street to Mohawk Avenue.

Action 12.4.4: City Public Works will utilize tools such as improved signage, signalization and curb extensions to provide improved bicycle and pedestrian

safety crossings across Ventura Avenue at locations such as Vince, Warner, McFarland and DeAnza when funding is available.

Action 12.4.5: Consider restricting commercial truck loading along Ventura Avenue to ensure parking for customers and facilitate pedestrian and bicycle mobility.

Action 12.4.6: Work with local schools and the community on a Safe Routes to Schools program.

Policy 12 Q: Improve bike and pedestrian connections to the Ventura River Trail and through the neighborhoods.

Action 12.4.7: Develop a bicycle and pedestrian accessible extension of Olive Street from Stanley Avenue to Shoshone Street.

Action 12.4.8: Develop connections from the regional Ventura River Trail bike trail to adjoining neighborhoods consistent with the Bicycle Master Plan and explore connections at Simpson Street and Riverside Drive among other potential locations.

Action 12.4.9: Develop bicycle/pedestrian boulevards along Cameron Street, Vince Street, Simpson Street, and Park Row to facilitate east-west mobility and improve access to the Ventura River Trail.

Action 12.4.10: Connect portions of Cedar Street for multi-modal access, including bicycles, pedestrians, and automobiles.

Action 12.4.11: Integrate bicycle trails into the Westside Community to serve both as transportation corridors and as recreational amenities.

Policy 12 R: Restore and enhance connection to the local beach.

Action 12.4.12 Create a safe and attractive pedestrian and bicycle crossing at Olive Street and the Stanley Avenue/Highway 33 off ramp as specified in the Bicycle Master Plan.

Action 12.4.13: Create a safe and attractive extension of the southern end of the Ventura River Bicycle Path at Rex Street, so it crosses Highway 33 on/off -ramp as specified in the Bicycle Master Plan.

Policy 12S: Develop an access strategy connecting the Westside Community to the hillsides along Cedar Street

Action 12.4.14: Working with local residents, property owners, the Ventura Hillside Conservancy, and City and County officials, develop a workplan to stabilize the hillsides and prevent landslides above Cedar Street, Vince Street, Carr Drive, El Medio Street, Lewis Street and Warner Street to ensure public safety.

Action 12.4.15: Where the hillside has been stabilized, develop a workplan to connect Westside residents to Grant Park by creating pedestrian trails where possible and where elevation grades will permit along Cedar Street corridor.

Policy 12T: Enhance the mobility grid network through new and existing alleys.

Action 12.4.16: Develop a long-range master Westside Community circulation plan for alleys and streets to establish the urban form to guide future redevelopment.

***Action 12.4.17: Identify blocks in the lower Westside planning area likely to experience future redevelopment and most suitable for creation of alley structure to provide connectivity within neighborhoods; include this as development standard in the Development Code. Action implemented through Regulating Code.

Action 12.4.18: Reconnect existing alleys to link portions of neighborhoods to Ventura Avenue.

Policy 12 U: Reduce dependence on the automobile in the Westside Community.

Action 12.4.19: Prepare a Westside Parking Study to assess supply and demand and recommend revised parking standards for the Westside.

Action 12.4.20: Provide for shared parking and transportation improvements.

Action 12.4.21: Require all new development to contribute toward a Transportation Demand Management (TDM) fund to be used to develop community, City, and regional transportation programs that reduce transportation related air pollutants.

Action 12.4.22: Facilitate the establishment of a Westside car-sharing service by preparing a feasibility study when funding is available, such as from the TDM fund.

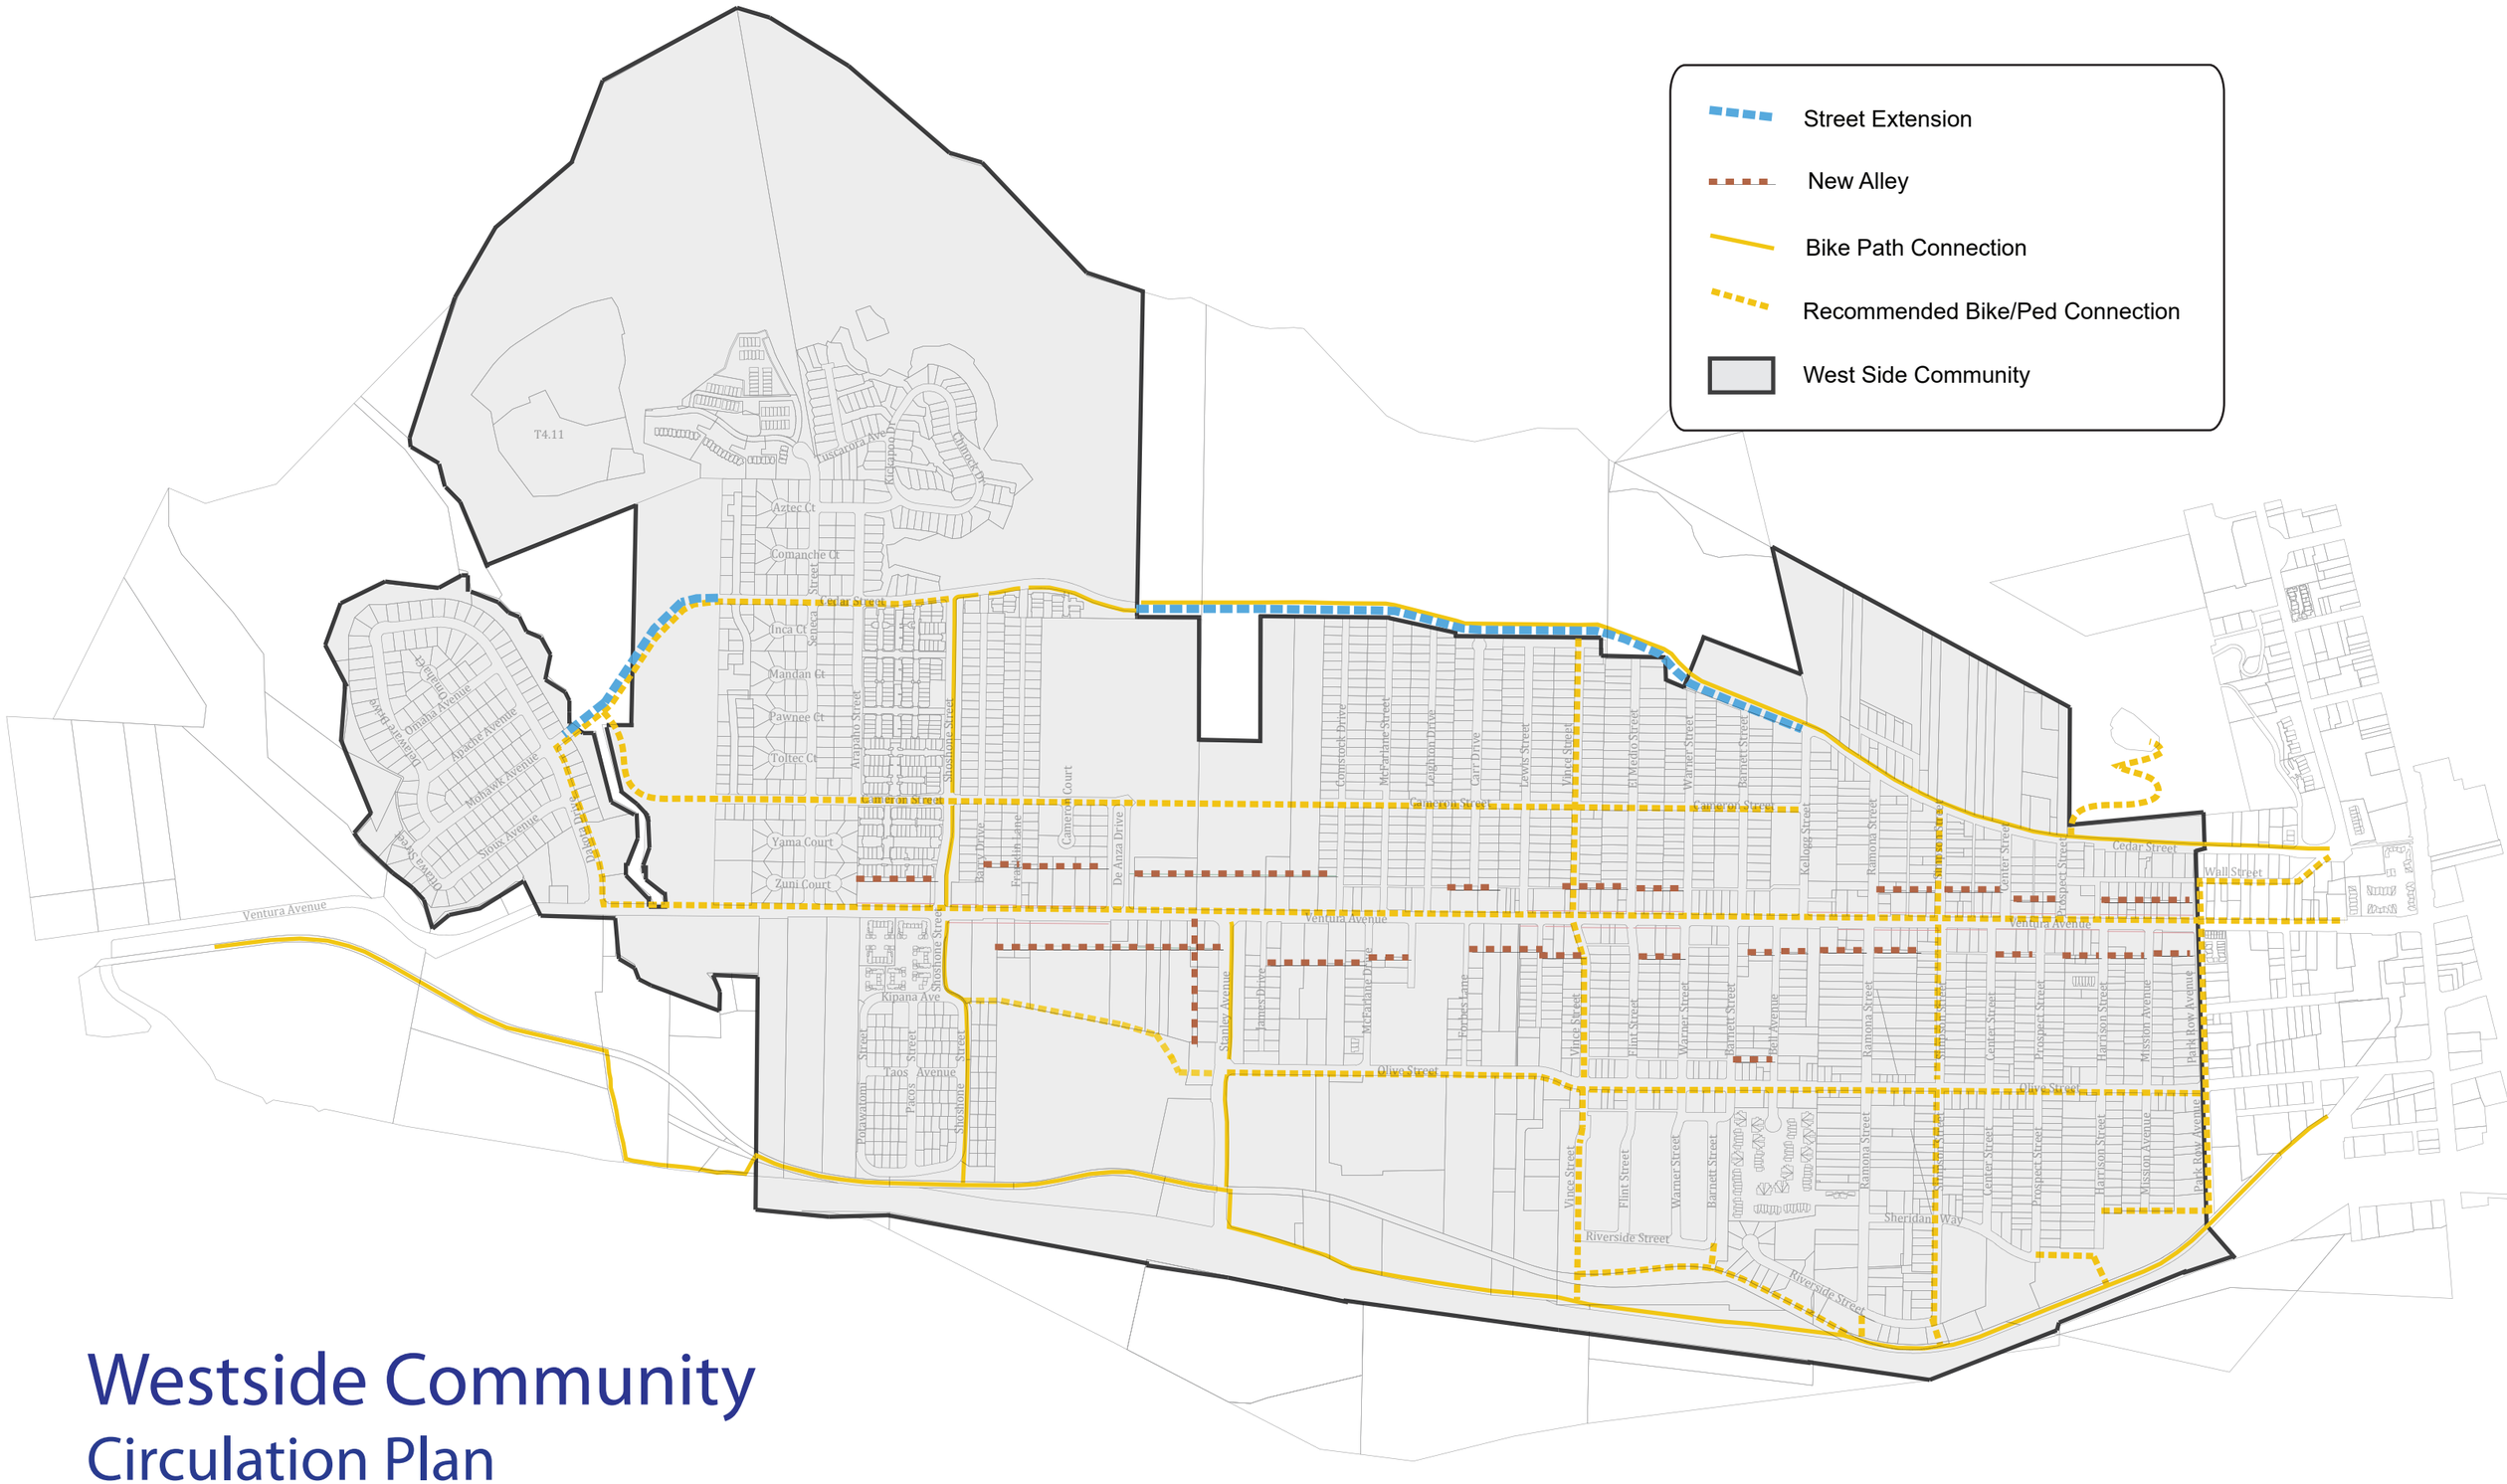
***Action 12.4.23: Require all new development and existing development, where feasible, to provide bike racks that meet League of American Bicyclists standards for public use and bike lockers and shower facilities for employee use. Action implemented through Regulating Code.

Policy 12 V: Improve Westside Community public transit and transportation options.

Action 12.4.24: In consultation with VCTC/Gold Coast Transit, complete a long-range transit study to establish Westside Community transit needs and identify viable long-term funding mechanisms.

Action 12.4.25: Subject to available long-term funding, establish secondary transit circulation on Olive Avenue and other streets as needed to facilitate access to primary transit trunk lines along Ventura Avenue.

Action 12.4.26: Coordinate with VCTC/Gold Coast Transit to relocate transit stops to areas subject to the most intense urban centers as designated in the Regulating Code.



Westside Community
Circulation Plan

October 2012

This page intentionally left blank

12.5 Our Sustainable Infrastructure

Sustainable development is an integrated approach to development that attempts to maximize efficient and effective long-range management of land and community resources. Revitalization in the Westside Community will be focused toward Ventura Avenue, some industrial land reuse, and opportunities in existing residential neighborhoods, both proactive measures to encourage development to incorporate green design.

A sufficient water supply, effective wastewater treatment system, and an efficient drainage system are vital components of a community's well-being. It is the responsibility of the City to ensure that infill growth has adequate public facilities and services as well as preserves and enhances valuable resources such as hydrological resources through effective groundwater management and participation in regional efforts such as the Lower Ventura River Parkway plan.

GOAL: Minimize the impacts of new development on Westside infrastructure and the Ventura River Watershed through advancing sustainable planning and design practices.

Policy 12 W. Incorporate green design and infrastructure solutions into the urban landscape using low impact development techniques to protect and preserve water resources.

Action 12.5.1: Require new development and redevelopment to implement Low Impact Development stormwater techniques as outlined in the Ventura County Technical Guidance Manual for Stormwater Quality Control Measures to retain, treat and infiltrate stormwater runoff.

Policy 12 X: Require new development in the Westside Community to provide necessary public infrastructure to sustain anticipated development and maintain current services.

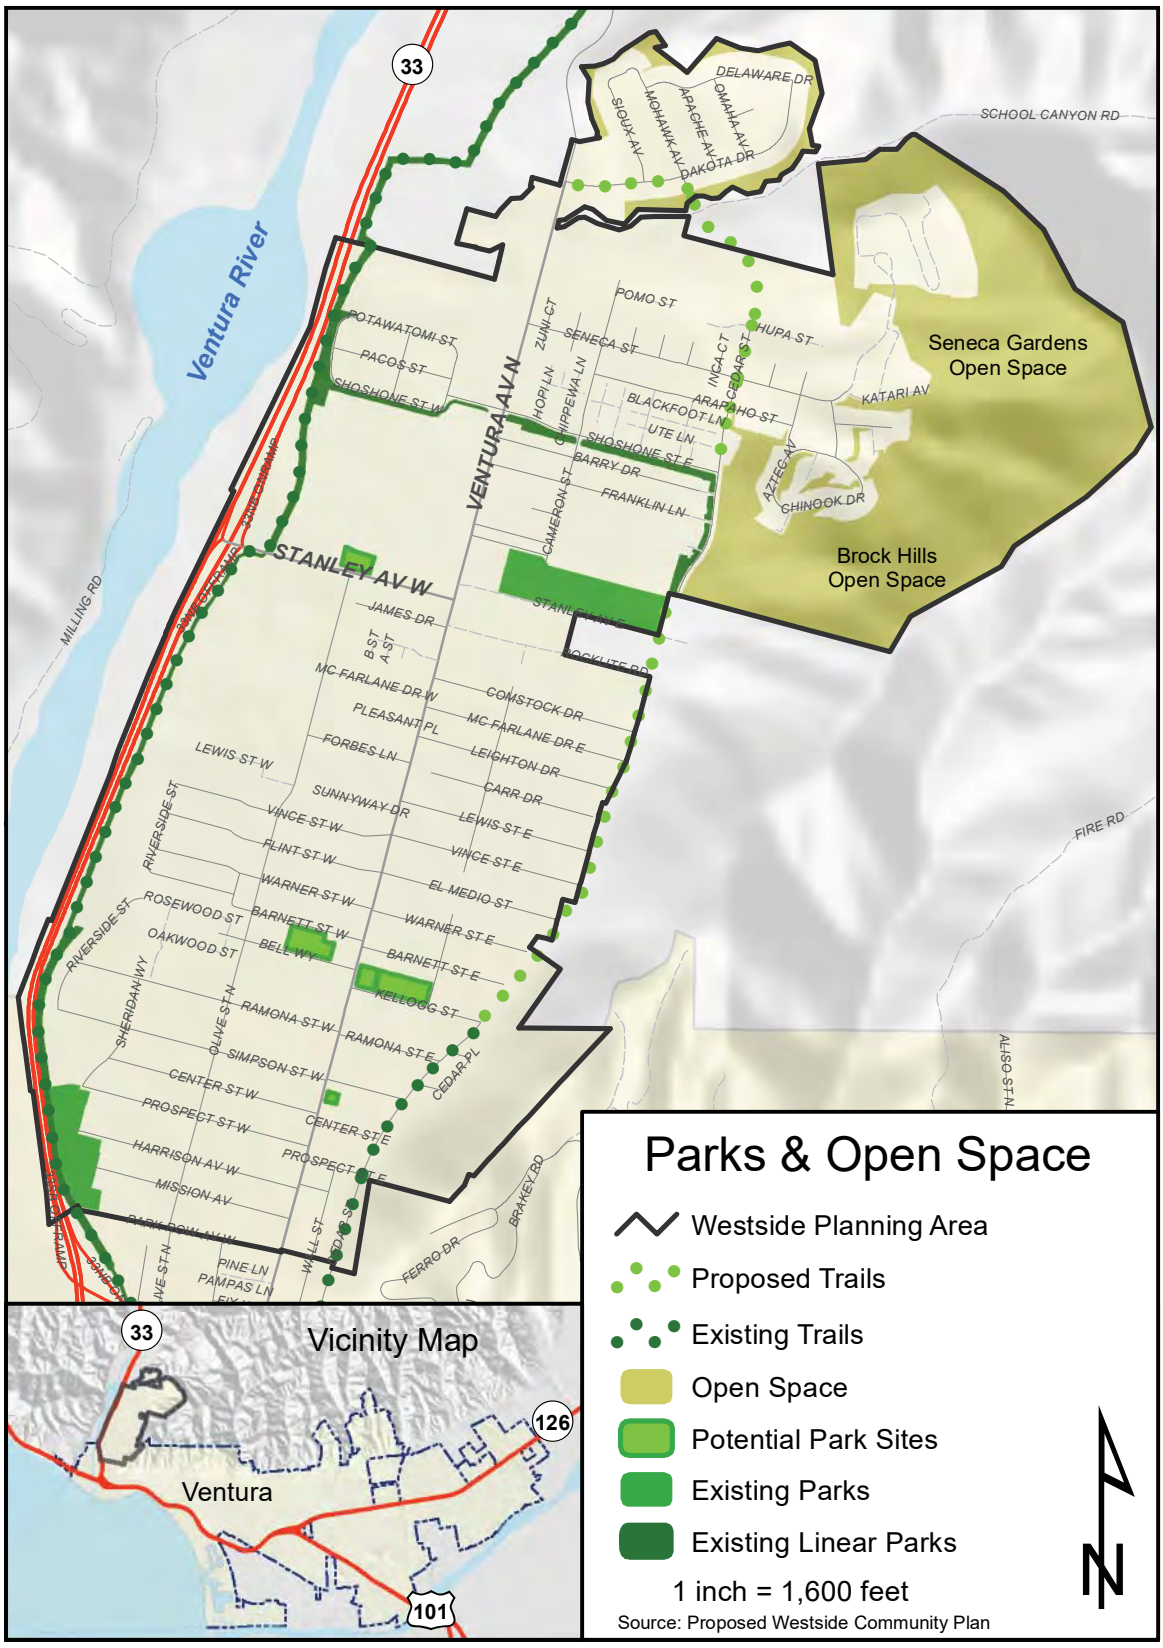
Action 12.5.2: Promote a natural means of drainage from the Westside to the Ventura River in new development where feasible in existing developed areas.

Action 12.5.3: Install infrastructure for wireless technology and computer networking that is accessible from various public locations along the Ventura Avenue corridor.

Action 12.5.4: Update the 2005 Westside/Downtown Sewer Main Capacity Deficiency Fee Nexus Study, downstream wastewater capacity studies and Capital Improvement Deficiency Study (CIDS) fees for the Westside Community to determine adequate capacity, supply, fireflow and/or infrastructure improvements.

Action 12.5.5: New development shall fund a hydraulic analysis to evaluate and determine water capacity, supply and infrastructure improvements which shall be constructed prior to occupancy.

Westside Community Plan



12.6 Our Active Community

The City of Ventura is committed to ensuring that citizens have plentiful access to high quality spaces for active and passive recreation. In the Westside area, that requires improvements to aging facilities and enhanced connectivity to larger amenities adjacent to the project area. Parks provide gathering places where residents and visitors share the area's natural amenities and enjoy recreational activities and cultural events. The City values the social benefit of youth-oriented programs such as tutoring, recreation, education, and classes focused on the arts that are provided through joint partnerships with the Ventura Unified School District and community organizations. As existing infill development occurs within the community, additional or expanded facilities and programs are desired to meet community needs and maintain existing service to residents. This Plan calls for modernization of existing facilities, shared use agreements with partner agencies, and providing services to youth and seniors. Additionally, leisure time will be enhanced through attention to creating more enjoyable public spaces such as plazas in the urban setting.

The natural setting framing the Westside area is one of its greatest assets in providing open space amenities to area residents. This Plan calls for participating in joint community efforts; providing recreational and educational opportunities including hiking and bicycle trails to complement the existing Ventura River Trail; and connecting the Westside to Grant Park.

GOAL: Create new park space and increase passive and active recreational opportunities at Westpark, Harry A. Lyon Park, along the Ventura River Trail and Brock Linear Park.

Policy 12 Y: Design Westside Community facilities to provide multiple community benefits, including daytime activities for seniors, weekend athletic programs and public gathering spaces.

Action 12.6.1: Encourage public-private partnership and seek funding mechanisms for planning, design and construction of the Westside Community pool at Harry Lyon park.

Action 12.6.2: Build out the Westpark Master Plan for recreation facilities.

Action 12.6.3: Plan, design and seek funding to install passive green space fronting the Adult Center on Ventura Avenue.

Action 12.6.4: Seek opportunity site to develop public park and/or open space.

Action 12.6.5: Consider redesignating the General Plan Land Use of the approximately 2 acre site located at the northeast corner of Kellogg Street and Ventura Avenue, the approximately 1 acre city-owned site on the north side of Stanley Avenue, and the approximately 1.6 acre site located at Bell Way near Olive Street to Parks and Open Space.

Action 12.6.6: Permit a Transfer of Development Rights (TDR) opportunity between City property and private property to develop a park.

Action 12.6.7: Pursue funding mechanisms to finance acquisition, construction, operation and maintenance of a new park facility.

Action 12.6.8: Develop joint use agreements with the Ventura Unified School District for joint use of school parks and recreational space and fund. The City shall coordinate and fund a pilot program for joint use at one or more of the Ventura Unified School District facilites in the Westside Community.

Action 12.6.9: Form partnerships to allow cooperative community gardens in neighborhoods and public facilities.

Action 12.6.10: Pursue opportunities for development of vacant or underutilized lots as neighborhood greenspace.

Policy 12 Z: Expand the park and trail network opportunities in the Westside to link the community to the hillside, Ventura river, and connection to the Ventura shoreline.

Action12.6.11: Pursue partnerships, engineering solutions, safety and funding measures to establish a trail connection to Grant Park from the Westside neighborhoods.

Refer to Policy 12S Actions 12.4.14 & 12.4.15 on page 26 of Our Accessible Community regarding hillside accessibility strategy.

12.7 Our Healthy and Safe Community

Cumulatively, there are significant natural and manmade risks in the Plan area that must be planned for appropriately in order to create a safe and healthy urban environment. While the natural setting surrounding the community is one of its most notable assets, it also presents threats, as the Westside Community planning area is located between steep erosive hillsides with high risk of wildfire. Landslides and liquefaction are pressing issues on the hillsides to the east of Cedar Avenue. In addition to placement within the 100-year flood zone, the Ventura River and its northern dams and connecting creeks pose high risk of flooding. Because of the historical prominence of the oil industry on the Westside, there are contaminated Brownfield sites and gas conveyance lines running beneath the Plan area. Additionally, seismic fault lines run to the north and south of the area, which necessitates careful attention to applicable building code requirements. Potential risks to life and property must be minimized through innovative programs, model mitigation measures, and mindful urban design. State Route 33 adjacent to the project area generates noise to neighboring residential neighborhoods, requiring mitigation in project design. Crime and public safety is a growing concern among the residents of the Westside.

GOAL: Reduce threats to public health and safety throughout the Westside Community through regulation of hazardous conditions and enhanced public safety services and facilities.

Policy 12 AA: Minimize the Westside Community exposure to floods, landslides and hazardous substances.

Action 12.7.1: Require proponents of any new development within the Ventura River 100-year floodplain to implement measures, as identified in the Flood Plain Ordinance, to protect structures from 100-year flood hazards (e.g. by raising the finished floor elevation outside the floodplain).

Action 12.7.2: Develop urban standards to accommodate future findings of updated Flood Insurance Study of Ventura River and Army Corp of Engineers levy study.

Action 12.7.3: Seek grant funding through FEMA's Hazard Mitigation Grant Program (HMGP), Pre-Disaster Mitigation (PDM), Flood Mitigation Assistance (FMA), Repetitive Flood Claims (RFC), and Severe Repetitive Loss (SRL) programs to provide funding for eligible mitigation activities that reduce disaster losses and protect life and property from future disaster damages. (Note Flood hazard is required analysis in the Environmental Impact Report.)

Action 12.7.4: Monitor the use and storage of hazardous substances in the industrial areas to alleviate the risk of watercourse contamination along the Ventura River through development review and National Pollution Discharge Elimination System (NPDES) monitoring requirements.

Refer to Policy 12S Actions 12.4.12 & 12.4.13 on page 26 of Our Accessible Community regarding hillside landslide strategy.

Policy 12.BB: Develop a public safety strategy and provide necessary public safety personnel to serve the Westside Area.

Action 12.7.5: Require new development to pay their fair share to fund additional public safety facilities and services for police and fire.

Action 12.7.6: Integrate features such as public visibility, night-time public use, low-level lighting, or other crime prevention measures, into the design of commercial and public buildings in order to create a safe environment, particularly in mixed-use areas.

Action 12.7.8: Pursue public, private and grant funding to add code enforcement personnel in order to provide enhanced services to Westside public places, recognizing the relationship of crime to poorly maintained areas.

12.8 Our Educated Community

The majority of students in the Westside project area attend Sheridan Way, E.P. Foster Elementary Schools, and De Anza Middle School. It is important to support a well-educated, active, and culturally sensitive community. Providing a variety of learning opportunities enriches the lives of children and helps to assure their economic independence. Strategies for increasing adult education and job training should be pursued. To meet the growing needs of the community, a potential expansion and relocation of the Avenue Library can also offer increased educational opportunities.

GOAL: Provide learning opportunities for adults and children through community partnerships.

Policy 12 CC: Partner with the Ventura Unified School District, Ventura Community College, Ventura County Library and other education organizations to provide an adult education and training program in the Westside Community.

Action 12.8.1: As a short-term strategy, coordinate with Ventura Unified School District for shared use of campus facilities for adult education and training programs.

Action 12.8.2: Seek grant funding and local sponsorships to develop and promote a Westside adult education and training program.

Action 12.8.3: In the long-term, find a permanent location for a Westside adult education and training center within a Pedestrian Core Node, such as Stanley and Ventura Avenue, or the old Avenue School at 2717 Ventura Avenue.

Action 12.8.4: Explore relocation and expansion of the neighborhood library facility from the current location at 606 North Ventura Avenue, near higher density neighborhood development, school or park.

Policy 12 DD: As the population increases in the Westside Community, the City shall coordinate with Ventura Unified School District for necessary school facilities, including a possible new elementary school to serve new development.

12.9 Our Creative Community

The arts build civic pride and cultural diversity and are a large part of the identity of the Westside community, which is home to many local Ventura artists. Community arts programs in the area are built on local historical foundations and cultural contributions of Westside residents. In particular, the local community seeks to enhance and foster the Latino Culture as a foundation of the Westside. As a community identifier, generous provisions for public arts should be made to weave arts into everyday life and enhance the newly revitalized areas.

GOAL: Protect the cultural heritage, with particular attention to the Latino influence on the Westside and promote creativity and civic art in the Westside community to improve the quality of the built environment and animate the public realm.

Policy 12 EE: Increase Westside public art and cultural expression throughout the community.

Action 12.9.1: As a public-private partnership, fund, develop and implement a Westside Mural Program to include the following:

1. Identify, map and encourage protection of existing community murals.

2. Outreach with stakeholders groups such as Bell Arts Factory, CAUSE, and Westside Community Council to promote and collaborate new mural installations.

3. Coordinate with the City's Community Partnerships and Community Development Departments to process murals through the Pubic Arts Commission and Design Review Committee, as appropriate, pursuant to the Interim Mural Guidelines.

Action 12.9.2: Promote and expand the City's Artwalk as a major event in the Westside Community.

Policy 12 FF: Meet the Westside Community needs for performance, exhibition, and workspace.

Action 12.9.3: Partner with community-based organizations to facilitate the promotion of artists and arts-based activities in the Westside Community.

Action 12.9.4: Continue City programming of cultural activities translation of City publications into Spanish, and Latino arts marketing workshops.

Action 12.9.5: Encourage community gathering and cultural activities such as farmer's markets in public spaces.

Community Ideas for Cultural Events

- De Colores festival,
- movie screenings through Starlight Cinema at Westpark,
- City grant support for the Dia de los Muertos celebration,
- the Ventura Big Read, and
- inclusion of Mexican folk music at City event series

Policy 12 GG: Encourage the expansion of Westside Community facilities and business opportunities for local artists.

Action 12.9.6: Identify locations for, and support the development of, workspaces for local artists, including live/work development, venues for display of the art, including cultural performances, and business spaces for vendors that supply the local arts community, including the photography and motion picture arts and sciences taught at Brooks Institute.

Action 12.9.7: Encourage Brooks Institute to take a strong role in arts development in the community, including possibly offering scholarships to local residents and hosting or sponsoring arts and cultural events in the community.

San Buenaventura, CA
Code of Ordinances

‹ CHARTER COMPARATIVE TABLE - ORDINANCES DIVISION 2 - ADMINISTRATION ›

DIVISION 1 - GENERAL PROVISIONS

Chapter 1.005 - Construction and Effect of Code

Sec. 1.005.010. - Title of Code.

This Code shall be known as the "San Buenaventura Municipal Code."

1. *Citing in prosecutions.* In any prosecution for the violations of any provision of this code, it shall be sufficient to refer to the Code as the "San Buenaventura Municipal Code."
2. *Amendatory ordinances.* Any ordinance added to, amending or repealing this Code may be designated as an addition or amendment to, or repeal of, the "San Buenaventura Municipal Code."

(Code 1971, § 1)

Sec. 1.005.020. - Former ordinances.

The provisions of this Code, insofar as they are substantially the same as existing provisions relating to the same subject matter, shall be construed as restatements and continuations thereof and not as new enactments.

(Code 1971, § 2)

Sec. 1.005.030. - Violations; effect of amendments.

Prosecutions for violations of provisions of this Code which occurred prior to the effective date of any amendment or repeal of such provision shall not be affected by the adoption of such amendment or by repeal of any such provision.

1. *Licenses and penalties.* Neither the adoption of this Code nor its repeal of any ordinance shall be construed as a waiver of any license or penalty due and unpaid under such ordinance at the effective date of the Code; nor shall such adoption or repeal be construed as affecting any provision of such ordinance relating to the collection of any such license or penalty or the penal provisions applicable to the violation thereof.
2. *Bonds and deposits.* Neither the adoption of this Code nor its repeal of any ordinance shall affect the validity of any bond or cash deposit required to be posted, filed or deposited pursuant to such ordinance; and all rights and obligations thereunder shall continue in full force and effect.

(Code 1971, § 3)

Sec. 1.005.040. - Matters of record.

This Code shall not affect deposits or other matters of record which refer to, or are otherwise connected with, ordinances which are therein specially designated by number or otherwise and which are included in the Code; but such references shall be construed to apply to the corresponding provisions of the Code.

(Code 1971, § 4)

Sec. 1.005.050. - Repeal.

All ordinances or portions thereof in conflict with this Code are hereby repealed.

(Code 1971, § 5)

Sec. 1.005.060. - General.

The provisions of this Code and all proceedings under it are to be construed to effect its object and to promote justice.

(Code 1971, § 6)

Sec. 1.005.070. - Headings.

Division, chapter, article and section headings contained herein shall not govern, limit, modify or affect the scope, meaning or intent of the provisions of this Code.

(Code 1971, § 7)

Sec. 1.005.080. - Territorial limitation.

This Code shall refer only to the omission or commission of acts within the territorial limits of the City of San Buenaventura and that territory outside of the city over which the city has jurisdiction or control by virtue of the Constitution, or any law, or by reason of ownership or control of property.

1. *Local signification.* All references in this Code to places, acts, persons or things shall be construed to mean that the same are applicable to this city, whether the city is mentioned in each particular section or not.

(Code 1971, § 8)

Sec. 1.005.090. - Titles.

The use of the title of any officer, employee, office, board, commission or ordinance shall mean such officer, employee, office, board, commission or ordinance of the City of San Buenaventura, unless otherwise designated.

(Code 1971, § 9)

Sec. 1.005.100. - Number, gender and tense.

The singular number includes the plural, and the plural includes the singular. Any gender includes the other genders. Words used in the present tense include the past and future tenses; and vice versa.

(Code 1971, § 11)

Sec. 1.005.110. - Severability.

If any section, sentence, clause, phrase or portion of this Code is for any reason held to be invalid or unconstitutional by the decision of any court, such decision shall not affect the validity of the remaining portions of the Code. The council would have adopted this Code and each section, sentence, clause,

phrase and portion thereof, irrespective of the fact that any one or more sections, sentences, clauses, phrases or portions be invalid or unconstitutional.

(Code 1971, § 12)

Sec. 1.005.120. - Legislative intent.

The council recognizes and approves the preferred place given in our scheme of government to the great, indispensable democratic freedoms and liberties secured by the United States Constitution and the California Constitution, and that these liberties and freedoms have a sanctity and sanction not permitting dubious intrusions. The council has a zealous solicitude for rights falling within these constitutional guarantees. It is neither the express nor the implied intent of the council to permit or allow any city officials to exercise any discretionary power granted to them by this Code so as to directly or indirectly impose a censorship or previous restraint upon these, our most revered liberties and freedoms.

(Code 1971, § 12.1)

Sec. 1.005.130. - Interpretation, general.

The provisions of this Code shall be construed so as to give them effect and to avoid unconstitutionality, wherever possible. No provision of this Code shall be construed by any court or person as being broad enough to permit or condone any direct or indirect censorship or previous restraint upon any constitutional right or freedom nor shall they be construed as broad enough to permit any other improper application.

(Code 1971, § 12.2)

Chapter 1.010 - Definitions

Sec. 1.010.010. - Definitions.

A. *Generally.* As used in this Code, unless a different meaning is apparent from the context or is specified elsewhere in the Code:

City means the City of San Buenaventura, and geographically means the area within the territorial city limits of the City of San Buenaventura and such territory outside of this city over which the city has jurisdiction or control by virtue of any constitutional provision or any law.

Council means the city council of this city.

Oath includes affirmation.

Person means natural person, firm, corporation, organization, company, association, business trust, joint-stock organization, partnership, joint venture, club, or the agent, servant, manager, officer, employee or lessee of any of them.

Written includes printed, typewritten, mimeographed or multigraphed.

Section, article, chapter and *division* means, respectively, section, article, chapter and division of this Code.

B. *Civil Code provisions.* The provisions of the Civil Code of California, sections 13 and 1645, are hereby adopted in the interpretation of words and phrases, unless otherwise provided herein.

C. *Non-technical meaning.* Words and phrases used in this Code and not specifically defined shall be construed according to the context and approved usage of the language.

(Code 1971, § 10)

Chapter 1.030 - Notices

Sec. 1.030.010. - Notices.

A. *Service.* Whenever a notice is required to be given under this Code, unless different provisions are otherwise specifically made herein, such notice may be given either by personal delivery thereof, to the person to be notified, or by deposit in the United States mail in a sealed envelope, postage prepaid, addressed to such person to be notified, at the person's last known business or residence address as the same appears in the public records or other records pertaining to the matter to which such notice is directed. Service by mail shall be deemed to have been completed at the time of deposit in the post office.

B. *Proof.* Proof of giving any notice may be made by the certificate of any officer or employee of the city, or by affidavit of any person over the age of 18 years, which shows service in conformity with this Code or other provisions of law applicable to the subject matter concerned.

(Code 1971, § 14)

Chapter 1.040 - Subpoenas

Sec. 1.040.010. - Purpose and intent.

This chapter is adopted pursuant to the municipal affairs provision of the City Charter for the purpose of establishing a procedure for issuing subpoenas to compel the attendance of witnesses and the production of other evidence at city administrative actions or proceedings.

(Ord. No. 99-2, § 1, 1-25-99)

Sec. 1.040.020. - Authority.

On its own motion, at the request of any city officer, board or commission, or at the request of any person who is a party to any city administrative action or proceeding, the city council may authorize the issuance of a subpoena requiring the attendance of a witness and/or to compel the production of documents or other evidence at any city administrative action or proceeding. The city clerk will issue subpoenas in the name of the city when authorized to do so by the city council.

(Ord. No. 99-2, § 1, 1-25-99)

Sec. 1.040.030. - Subpoena duces tecum.

Any city officer, board or commission or any party to a city administrative action or proceeding requesting a subpoena duces tecum must comply with the provisions of Code of Civil Procedure § 1985, and any successor statute or regulation, before the city council authorizes the issuance of a subpoena duces tecum.

(Ord. No. 99-2, § 1, 1-25-99)

Sec. 1.040.040. - Form of subpoena.

City issued subpoenas will appear substantially as follows.

EXPAND

STATE OF CALIFORNIA)	IN THE MATTER OF _____
COUNTY OF VENTURA)	SUBPOENA
CITY OF SAN BUENAVENTURA)	[ ] Duces Tecum

THE CITY OF SAN BUENAVENTURA DIRECTS:

You are ordered to appear before _____, in _____ at City Hall, located at 501 Poli Street, Ventura, California, on the _____ day of _____, _____, at _____ o'clock _____.m., to testify in a matter now pending before _____ concerning _____.

You are

a. [ ] ordered to appear in person.

b. [ ] not required to appear in person if you produce the records described in the accompanying affidavit and provide a copy of such records, accompanied with an affidavit or declaration that complies with Evidence Code §§ 1271, 1560, 1561, and 1562, to the city clerk before the date and time specified above.

c. [ ] ordered to appear in person and produce the records described in the accompanying affidavit. The personal attendance of the custodian or other qualified witness and the production of the original records are required by this subpoena.

Disobedience of this subpoena or the refusal to testify (except upon constitutional grounds) will constitute a misdemeanor and will be punishable by the penalties provided for in Section 1936 of the San Buenaventura Ordinance Code.

IF YOU HAVE ANY QUESTIONS ABOUT THE TIME OR DATE FOR YOU TO APPEAR, OR IF YOU WANT TO ASCERTAIN THAT YOUR PRESENCE IS REQUIRED, CONTACT THE CITY CLERK BEFORE THE DATE ON WHICH YOU ARE TO APPEAR.

In Witness whereof, I have hereunto set my hand and affixed the City seal this _____ day of _____, _____.

_____

City Clerk.

(Ord. No. 99-2, § 1, 1-25-99)

Sec. 1.040.050. - Service.

Subpoenas will be served in accordance with the provisions of Code of Civil Procedure §§ 1987 and 1988, and any successor statute or regulation.

(Ord. No. 99-2, § 1, 1-25-99)

Sec. 1.040.060. - Witness fees and mileage.

A. All witnesses appearing pursuant to subpoena, other than the parties, will receive fees, and all witnesses appearing pursuant to subpoena, except the parties, will receive mileage, in the same amount and under the same circumstances as prescribed by California law for witnesses in civil actions in a superior court.

B. Fees and mileage will be paid by the party at whose request the witness is subpoenaed and will be tendered to the city clerk prior to a subpoena being issued.

C.

The city clerk will forward witness fees to witnesses upon their appearance pursuant to a subpoena.

(Ord. No. 99-2, § 1, 1-25-99)

Sec. 1.040.070. - Violations.

Disobedience of a subpoena or the refusal to testify (under other than constitutional grounds) is a misdemeanor.

(Ord. No. 99-2, § 1, 1-25-99)

Chapter 1.050 - Civil Penalties[1]

Footnotes:

*--- (**1**) ---*

***Editor's note—** Ord. No. 2007-001, adopted Jan. 22, 2007, amended ch. 1.050 in its entirety to read as herein set out. Former ch. 1.050, which consisted of §§ 1.050.110—1.050.550, pertained to administrative citations and derived from the 1971 Code.*

ARTICLE 1. - GENERAL PROVISIONS

Sec. 1.050.110. - Purpose.

This chapter is adopted pursuant to the municipal affairs provision of the City Charter for the purpose of making any violation of the San Buenaventura Municipal Code subject to a civil penalty, and to set forth the procedures for the assessment, payment and collection of such penalties.

(Ord. No. 2007-001, § 1, 1-22-07)

Sec. 1.050.120. - Applicability.

This chapter authorizes an enforcement officer, as defined herein, to issue an administrative citation assessing a civil penalty in order to enforce the provision of this Code. Issuance of an administrative citation in the manner provided for by this chapter shall be at the sole discretion of an enforcement officer. If an enforcement officer determines to issue an administrative citation assessing a civil penalty for a violation of this Code, such enforcement action shall be in lieu of any criminal citation or complaint that could have been issued for such violation. However, the issuance of the administrative citation does not prevent the issuance of a criminal citation or complaint for any subsequent violation or violations of the same or similar nature.

(Ord. No. 2007-001, § 1, 1-22-07)

Sec. 1.050.130. - Definitions.

modified

Unless the contrary is stated or clearly appears from the context, the following definitions shall govern the construction of the words and phrases used in this Chapter.

1. *Citee* means the person to whom an enforcement officer has issued an administrative citation that assesses a civil penalty against such person in the manner provided for by this Chapter.
2. *Enforcement officer* means any City officer or employee who is authorized by the City Manager, Police Chief, Fire Chief, Director of Public Works, General Manager of Ventura Water, or the Director of Community Development to issue a citation pursuant to this Chapter assessing a civil penalty for a violation of one or more provisions of this Code.
3. *Day* means calendar, not business, day.
4. *Chief Financial Officer* means the chief financial officer of the City or his or her designee.
5. *Hearing officer* means a person, other than a City officer or employee, who has been designated or retained by the City Clerk to conduct an administrative hearing on a contested civil penalty in the manner provided for by Article 4 of this Chapter.
6. *Review officer* means the City officer or employee designated by the City Manager or department head to conduct the administrative review of a contested civil penalty in the manner provided for by Article 3 of this Chapter.

(Ord. No. 2007-001, § 1, 1-22-07; Ord. No. 2022-002 , § 1, 3-21-22)

Sec. 1.050.140. - Amount of civil penalties.

The amount of the civil penalties assessed pursuant to this chapter shall be established by resolution of the city council. In addition to establishing civil penalties for an initial violation of the provisions of this Code, such resolution shall set forth any increased penalties for repeat violations of the same code provision by the same person within 12 months from the date of a previous violation, as well as the amount of the civil penalty delinquency fees and collection fees hereinafter provided for by this chapter.

(Ord. No. 2007-001, § 1, 1-22-07)

Sec. 1.050.150. - Service of citations and notices.

A. *Notice to a citee.* Unless otherwise provided in this chapter, all citations and other notices required to be served on a citee pursuant to the provisions of this chapter shall be served either by personal service or by first-class mail, postage prepaid, addressed to the citee at his or her last known address. Such service shall be deemed effective on the date it is personally delivered to the citee or on the date it is deposited in the mail addressed as set forth above. The city officer or employee serving a citee with a citation or other notice by mail shall complete a declaration of service and attach it to the copy of the citation or other notice.

B. *Notice to the city.* Unless otherwise provided by this chapter, all notices required to be served on the city pursuant to the provisions of this chapter shall be served either by personal service at the office set forth on a citation or by first class mail, postage prepaid, addressed to the city at the address set forth on the citation. Such service shall be deemed effective on the date it is personally delivered to the city or on the postmark date when served on the city by mail.

(Ord. No. 2007-001, § 1, 1-22-07)

ARTICLE 2. - ASSESSMENT AND PAYMENT OF CIVIL PENALTIES

Sec. 1.050.210. - Issuance of administrative citation assessing a civil penalty.

A person who is assessed a civil penalty for a violation of the provisions of this Code shall be served by the enforcement officer with an administrative citation that assesses the civil penalty in an amount established by resolution of the city council and that contains all of the information required by this article.

(Ord. No. 2007-001, § 1, 1-22-07)

Sec. 1.050.220. - Contents of administrative citation.

Each administrative citation shall contain the following information:

1. The date of the violation;
2. The address or a definite description of the geographic location where the violation occurred or is occurring;
3. The section of this Code that was violated;
4. A description of the circumstances giving rise to the code violation;
5. The amount of the civil penalty for the code violation;
6. A description of the penalty payment process, including a description of the time within which and the place to which the penalty shall be paid;
7. An order prohibiting the continuation or repeated occurrence of the code violation described in the administrative citation;
8. Notice that payment of a penalty under this chapter shall not excuse or discharge any continuation or repeated occurrence of the code violation that is the subject of the administrative citation;
9.

A description of the time and manner in which the citee may request administrative review of the civil penalty assessed by the citation in the event the citee seeks to contest the penalty; and

10. The name of the citing enforcement officer.

(Ord. No. 2007-001, § 1, 1-22-07)

Sec. 1.050.230. - Payment of civil penalties.

A civil penalty assessed against a citee pursuant to the provisions of this chapter must be paid in full to the city at the place set forth in the administrative citation within 30 days from the date of the administrative citation; provided that:

1. If a request for administrative review of the civil penalty is submitted within the time and in the manner provided for by article 3 of this chapter, payment of the penalty shall be stayed until the review officer has made a determination on such request and served notice of the determination on the citee. In the event the review officer determines to approve the penalty, the review officer shall include in the notice of his or her determination a requirement that the civil penalty be paid within 30 days of the date such notice is served on the citee; and
2. If, following administrative review, a request for an administrative hearing on a civil penalty is submitted within the time and in the manner provided by article 4 of this chapter, and if, following such hearing, the hearing officer renders a decision sustaining the penalty, the city clerk shall cause a notice to be served on the citee along with the hearing officer's decision that requires payment of the civil penalty, or any remaining balance thereof, within 30 days of the date the decision and such notice is served on the citee.

(Ord. No. 2007-001, § 1, 1-22-07)

Sec. 1.050.240. - Delinquent payment of civil penalties; delinquency fee.

modified

In the event a civil penalty is not paid within the time provided for in this Article, the Chief Financial Officer shall serve the citee with an initial delinquency notice that assesses a delinquency fee and that requires payment of the penalty and delinquency fee within 30 days of the date the initial delinquency notice is served on the citee. Such delinquency fee shall be in an amount established by Resolution of the City Council based on the estimated additional costs to the City of accounting for and otherwise processing penalty delinquencies.

(Ord. No. 2007-001, § 1, 1-22-07; Ord. No. 2022-002 , § 2, 3-21-22)

Sec. 1.050.250. - Delinquent civil penalties; collection fee.

modified

In the event a civil penalty is not paid within the time provided for by this Article and remains unpaid more than 30 days following the date an initial delinquency notice is served on the citee, the Chief Financial Officer shall serve the citee with a second delinquency notice (i) that assesses an additional collection fee; (ii) that requires payment of the penalty, delinquency fee and collection fee within 30 days of the date the second delinquency notice is served on the citee, and (iii) that advises the citee of the process to be followed by the City if the penalty and all such fees are not paid within the time required by the notice. Such collection fee shall be in an amount established by Resolution of the City Council based on the average collection agency fees, attorney's fees or other costs incurred by the City in order to account for and collect a penalty delinquency.

(Ord. No. 2007-001, § 1, 1-22-07; Ord. No. 2022-002 , § 2, 3-21-22)

Sec. 1.050.260. - Financial inability to pay.

modified

Penalties need not be delinquent in order to utilize the provisions of this Section. In the event a citee establishes to the satisfaction of the Chief Financial Officer that he or she does not have the financial ability to pay the full amount of a civil penalty assessed in the manner and within the time provided for by this Chapter, the Chief Financial Officer may permit the citee to satisfy the payment obligations required by this Chapter by executing a promissory note in the amount of the unpaid balance of the penalty, together with any unpaid delinquency fees and/or collection fees. Such promissory note shall provide for payment of the civil penalty in full on the terms specified by the Chief Financial Officer, shall include interest on the unpaid balance in an amount equal to the interest rate then earned by the City on its invested funds, shall be secured by any real property owned by the citee if the civil penalty arose out of the use or condition of such property, and shall be in a form approved by the City Attorney.

Where a citee's obligation to pay a civil penalty, delinquency fees and/or collection fees assessed in the manner provided by this Chapter is satisfied by the execution of a promissory note as provided herein, the citee shall be deemed to have paid the penalty for purposes of this Chapter as long as the citee is current on his or her obligations to pay any installment required by the promissory note within the time and in the manner required therein.

(Ord. No. 2007-001, § 1, 1-22-07; Ord. No. 2022-002 , § 2, 3-21-22)

Sec. 1.050.270. - Curfew violations; probation in lieu of penalty.

First time violators of the nighttime juvenile curfews established by chapter 10.300 of this code may elect to perform up to six hours of community work in any community work program established by the chief of police that is in effect on the date an administrative citation is issued for the violation in lieu of paying the civil penalty assessed in the citation. The civil penalty shall be waived upon the citee

submitting proof of the completion of such community work in a form prescribed by the chief of police within 30 days from the date of the administrative citation. Subsequent violations of the nighttime juvenile curfew will disqualify the citee from any further penalty waiver.

(Ord. No. 2007-001, § 1, 1-22-07)

Sec. 1.050.280. - Permit violations; deferred issuance of permits.

Should an enforcement officer issue an administrative citation assessing a civil penalty because the citee lacks a required permit and the penalty has not been vacated or dismissed in the manner provided for herein, the citee shall not be issued the permit until the civil penalty and any applicable delinquency fees and collection fees have been paid in full, unless the enforcement officer has determined that withholding the issuance of the required permit will perpetuate an existing hazardous condition.

(Ord. No. 2007-001, § 1, 1-22-07)

ARTICLE 3. - ADMINISTRATIVE REVIEW PROCEEDINGS

Sec. 1.050.310. - Request for administrative review.

A citee who is issued a citation assessing a civil penalty arising out of a violation of this Code may request administrative review of the civil penalty in the manner provided for by this article. Such request must be made in writing and must be served on the city at the address set forth in the citation within 20 days following the date of the citation. Such request must include the citation number, must set forth, with particularity, the reasons the citee believes a violation did not occur or that the citee was not responsible for the violation, and must contain the address at which the city should serve the citee with notice of review officer's response to the request for administrative review.

A request for administrative review is a mandatory prerequisite to a request for an administrative hearing provided for by article 4 of this chapter.

(Ord. No. 2007-001, § 1, 1-22-07)

Sec. 1.050.320. - Response to request for administrative review.

Within ten days of receiving a citee's request for administrative review, the review officer shall review the request, the citation, and other pertinent information, and shall determine that:

1. The civil penalty assessed by the citation should be upheld because the violation occurred, the citee was responsible for the violation, and no other justification could be found for vacating the penalty.
2.

The penalty assessed by the citation has been vacated because there was no violation, or the citee was not responsible for the violation; or the citee has provided some other justification that, in the discretion of the reviewing officer, warrants vacating the penalty.

(Ord. No. 2007-001, § 1, 1-22-07)

Sec. 1.050.330. - Notice of determination on administrative review.

modified

Upon making his or her determination on a citee's request for administrative review, the review officer shall cause a notice of the determination to be served on the citee at the address set forth in the citee's request for administrative review and shall cause a copy of the notice to be provided to the finance officer and City Clerk. Where the review officer has upheld the penalty assessed by an administrative citation, the notice shall also set forth a new date by which the penalty must be paid that is 30 days following the date of the notice, as well as the citee's right to request an administrative hearing to further contest the penalty in the manner provided for by Article 4 of this Chapter.

(Ord. No. 2007-001, § 1, 1-22-07; Ord. No. 2022-002 , § 3, 3-21-22)

ARTICLE 4. - ADMINISTRATIVE HEARING PROCEDURES

Sec. 1.050.410. - Request for administrative hearing.

A citee dissatisfied with the determination of a review officer following a request for administrative review of a citation assessing a civil penalty may further contest the civil penalty by requesting an administrative hearing in the manner provided for by this article. Such request must be made in writing and must be served on the city at the address set forth in the review officer's notice of determination within 20 days after the date the citee is served with notice of such determination. Requests for an administrative hearing must be filed in the office of the city clerk and shall be in a form required by the city clerk.

(Ord. No. 2007-001, § 1, 1-22-07)

Sec. 1.050.420. - Advance deposit of penalty amount.

Except as otherwise provided in this article, each request for an administrative hearing must be accompanied by an advance deposit in an amount equal to the contested civil penalty or the sum of $1,000.00, whichever is less.

(Ord. No. 2007-001, § 1, 1-22-07)

Sec. 1.050.430. - Advance deposit of penalty amount; hardship waiver.

modified

A. A citee who is financially unable to make an advance deposit in the amount required by this Article, may file an application in the Office of the City Clerk requesting a waiver of the advance deposit requirement based on such financial inability to pay. Such application shall be in a form required by the City Clerk, shall be filed with the request for an administrative hearing, and shall be accompanied by a declaration, signed under penalty of perjury, and any supporting documents required by the City Clerk demonstrating the citee's financial inability to pay.

B. After reviewing a citee's application for a hardship waiver, together with the declaration and any supporting documents filed in connection therewith, the City Clerk shall determine whether to grant or deny the request. Thereafter the City Clerk will serve the citee with a notice of his or her determination by mail at the address provided in the waiver application. The City Clerk's determination on the application shall be final.

C. Should the City Clerk determine that a waiver is unjustified, the citee must deposit the required advance deposit with the City Clerk not later than ten days following the date the notice of the City Clerk's determination on the application for a hardship waiver has been served on the citee. Failure to make a deposit within ten days after waiver denial shall be deemed a waiver of the citee's right to an administrative hearing, and the civil penalty shall be deemed delinquent. The City Clerk shall then serve notice of the penalty delinquency on the citee, and shall cause a copy of such notice to be provided to the review officer and Chief Financial Officer.

(Ord. No. 2007-001, § 1, 1-22-07; Ord. No. 2022-002 , § 4, 3-21-22)

Sec. 1.050.440. - Hearing date.

Upon receiving a timely request for an administrative hearing to contest a citation assessing a civil penalty, together with an advance deposit of all or that part of the penalty amount required by this article, the city clerk will set an administrative hearing on a date not less than 15, nor more than 60 days, from the date the hearing is requested. Written notice of the date, time, and location of the administrative hearing will be provided to the citee at least 15 days prior to the hearing date.

(Ord. No. 2007-001, § 1, 1-22-07)

Sec. 1.050.450. - Conduct of hearings.

A. *Scope of the hearing.* The issues to be determined at the hearing are limited to the following:

1. Whether the violation alleged in the administrative citation actually occurred; and
2. Whether the citee was responsible for the violation.

B.

Burden of proof and evidentiary rules. At the hearing, the hearing officer shall render his or her decision based on the preponderance of the evidence. However, the administrative citation shall constitute prima facie evidence of the facts contained in the citation. Both the citee and enforcement officer shall have the opportunity to testify and present additional evidence concerning the administrative citation. Evidence may include, without limitation, witness testimony, documents, or other similar evidence. Evidence sought to be introduced shall not be limited to any legal rules of evidence, save and except for the rule that it be relevant and material to the issues of whether the violation alleged in the citation occurred and whether the citee was responsible for the violation.

C. *Waiver of personal appearance at hearing.* In lieu of personally appearing at an administrative hearing, the citee may request that the hearing officer decide the matter based on the citation's face and any other documentary evidence submitted to the city clerk by the citee or enforcement officer prior to the hearing date.

D. *Attendance of citee.* Failure of a citee to appear at the hearing shall be deemed a waiver of the right to be personally present at the hearing. The hearing officer shall then decide the matter based upon the facts set forth in the citation, any documentary evidence previously submitted, and any additional evidence that may be presented at the hearing by the enforcement officer.

E. *Attendance of enforcement officer.* The enforcement officer who issued the administrative citation may, but is not required to, attend the administrative hearing. If the enforcement officer does not attend the hearing, the enforcement officer may, prior to the hearing date, submit reports, photographs, or other documentation regarding the violation to the city clerk who will forward such information on to the hearing officer for consideration at the hearing.

F. *Continuation of hearings.* The hearing officer may continue any hearing and request additional information from the enforcement officer or citee prior to issuing a written decision.

(Ord. No. 2007-001, § 1, 1-22-07)

Sec. 1.050.460. - Hearing officer's decision.

A. Within ten days after closing the hearing, the hearing officer shall issue a written decision to uphold or set aside the civil penalty assessed against the citee by the administrative citation, shall set forth the reasons for such decision, and shall forward a copy of the decision to the city clerk.

(Ord. No. 2007-001, § 1, 1-22-07)

[Sec. 1.050.470. - Reserved.]

Sec. 1.050.480. - Action of the city clerk following receipt of the hearing officer's decision.

modified

A. After receiving the hearing officer's decision, the City Clerk shall promptly cause the hearing officer's decision to be served on the citee at the address set forth in the citee's request for an administrative hearing together with the notice hereinafter required by this Section, and shall cause a copy of the decision and such notice to be provided to the Chief Financial Officer and review officer.

B. If the decision of the hearing officer is to sustain the civil penalty assessed by the citation that was the subject of the hearing, then the City Clerk shall accompany the hearing officer's decision with a notice advising the citee that:

1. The City will retain the advance deposit if the deposit was in the full amount of the civil penalty, or require payment of the penalty balance within the time required by Article 2 of this Chapter if the advance deposit was less then the civil penalty or if the advance deposit was waived on the basis of financial hardship; and,
2. The citee has the right to file a petition with the Ventura County Superior Court seeking judicial review of the hearing officer's decision in the manner hereafter set forth in this Article if the citee chooses to further challenge the decision.

C. If the decision of the hearing officer is to set aside and vacate the civil penalty assessed by the citation that was the subject of the hearing and the citee has made an advance deposit in the amount of the civil penalty or any portion thereof, the City Clerk shall accompany the hearing officer's decision with a notice advising the citee, review officer and Chief Financial Officer that the City will be refunding the amount of the advance deposit.

(Ord. No. 2007-001, § 1, 1-22-07; Ord. No. 2022-002 , § 5, 3-21-22)

Sec. 1.050.490. - Right to judicial review.

A citee may appeal a hearing officer's decision rendered in the manner provided for by this article by filing a petition for writ of mandate in the Ventura County Superior Court seeking to set aside the decision within 90 days of the date the decision is deemed to have been served on the citee, all as provided for in sections 1094.5 and 1094.6 of the California Code of Civil Procedure.

(Ord. No. 2007-001, § 1, 1-22-07)

ARTICLE 5. - COLLECTION AND LIEN PROCEDURES

Sec. 1.050.510. - Collection of delinquent and unpaid civil penalties, delinquency fees and collection fees.

All delinquent and unpaid civil penalties, together with any accrued delinquency fees and collection fees that were assessed thereon in the manner provided by this chapter, shall constitute a debt that is owed by the citee to the city and that shall be collected in the manner provided for in this article or in any other manner authorized by law.

(Ord. No. 2007-001, § 1, 1-22-07)

Sec. 1.050.520. - Collection of unpaid civil penalties exceeding the jurisdiction of the small claims court.

modified

All civil penalties together with any accrued delinquency fees and collection fees assessed thereon (i) that are in excess of the current jurisdiction of the small claims court, and (ii) that remain unpaid for 60 days or more following the delinquency date, shall be referred to the city attorney who is hereby authorized and directed to commence an action in Ventura County Superior Court against the citee who is indebted to the city for such penalty and fees, and to cause any judgment entered in such action to be executed against the assets or income of the citee in the manner provided for by law.

(Ord. No. 2007-001, § 1, 1-22-07)

Sec. 1.050.530. - Collection of unpaid civil penalties less than the jurisdiction of the small claims court.

modified

Except as hereinafter provided in this Article, all unpaid civil penalties together with any accrued delinquency fees and collection fees assessed thereon (i) that are within the current jurisdiction of the Ventura County Small Claims Court, and (ii) that remain unpaid for 60 days or more following the delinquency date shall be collected as directed by the Chief Financial Officer either by causing a complaint to be filed in the small claims court against the citee who is indebted to the City in the amount of such penalties, fees, and costs, or by referral of such debt to a reputable collection agency for collection.

Payment of the civil penalty will be considered complete once all city fines and fees have been paid by the citee.

(Ord. No. 2007-001, § 1, 1-22-07; Ord. No. 2022-002 , § 6, 3-21-22)

Sec. 1.050.540. - Collection of property related civil penalties.

Notwithstanding the provision of section 1.050.530 to the contrary, all civil penalties together with any delinquency fees and collects costs that have been assessed against the owners of real property (i) that are less than the current jurisdiction of the Ventura County Small Claims Court, (ii) that remain unpaid for 60 days or more following the delinquency date, and (iii) that arose out of the condition or use of such property, shall be subject to a lien that is levied on such property by resolution of the city

council, forwarded to the Ventura County Assessor for inclusion on the annual property tax bill sent to the property owner or owners, and collected at the time and in the same manner as property taxes are collected.

(Ord. No. 2007-001, § 1, 1-22-07)

Sec. 1.050.550. - Collection of property related civil penalties; lien procedures.

modified

The finance officer shall initiate and conduct proceedings to collect delinquent civil penalties (i) that are within the jurisdiction of the small claims court, and (ii) that arose out the condition or use of real property as follows:

1. At or before a date in each fiscal year of the City that is at least 30 days prior to the date established by the Ventura County Assessor for filing annual City assessments, the Chief Financial Officer shall prepare a proposed City Council Resolution levying assessments against all real property in the City of San Buenaventura that is subject of such delinquent civil penalties. Such Resolution shall set forth all of the following information and otherwise be in a form approved by the City Attorney:
   (a) The address of each parcel of real property that is subject of a delinquent civil penalty;
   (b) The assessor's parcel number assigned to the property;
   (c) The amount of the delinquent civil penalty to be assessed against the property, together with any delinquency fees or collection fees added thereto by reason of such delinquency;
   (d) The name and address of the owner or owners of the property as set forth on the assessor's tax rolls;
   (e) The determination of the City Council to levy an assessment against each such property in the amount of the delinquent penalty, together with any delinquency fees and collection fees added thereto by reason of such delinquency; and
   (f) A request and authorization for the assessor to add such assessments to the county tax rolls and to collect such assessment at the time and in the same manner as property taxes are collected.
2. The Chief Financial Officer shall submit the proposed Resolution to the City Clerk together with a written staff report that recommends City Council approval of the Resolution and that sets forth the basis for such recommended action.
3. Upon receiving the proposed Resolution and staff report, the City Clerk shall cause the matter to be noticed for a public hearing before the City Council, and shall cause a copy of the Resolution and written notice of the date, time, and place of the hearing, and the matter to be considered at the hearing to be served on the owner or owners of each

parcel of real property that is a subject of the Resolution. Such notice shall be addressed to each such person at his or her address as set forth on the county assessor's last equalized tax roll. The failure of any such person to receive actual notice of such proceeding shall not affect the legal validity of the proceeding.

4. At the time and place of the hearing, the City Council shall hear and consider the protests, if any, of all persons appearing at the hearing to object to the proposed assessments.
5. At conclusion of the hearing, the City Council shall determine whether to adopt the proposed Resolution, including any changes or amendments thereto; provided that if the Chief Financial Officer advises the City Council at such hearing that an assessment against a parcel of real property included in the Resolution has been paid in full subsequent to the date the Resolution was noticed for public hearing, the Resolution shall be changed or amended to delete such assessment.
6. Following adoption of a City Council Resolution levying assessments against real property in the City of San Buenaventura that is the subject of such delinquent civil penalties, the Chief Financial Officer shall cause a certified copy of the Resolution to be forwarded to county tax assessor for inclusion on the county tax rolls.

(Ord. No. 2007-001, § 1, 1-22-07; Ord. No. 2022-002 , § 7, 3-21-22)

Chapter 1.100 - Reserved

Chapter 1.150 - Criminal Penalties

Sec. 1.150.010. - Violations; misdemeanors; nuisances.

No person shall violate any provision or fail to comply with any of the requirements of the San Buenaventura Municipal Code. Each and every violation of any provision of this Code is a misdemeanor unless otherwise provided. Every person shall be guilty of a separate offense for each and every day during any portion of which any violation of any provision of this Code is committed, continued, or permitted by such person and shall be punishable accordingly. In addition to the penalties herein provided, any condition caused or permitted to exist in violation of any of the provisions of this Code shall be deemed a public nuisance and may be abated by this city, either summarily or otherwise as appropriate under law, at the expense of the person or persons creating, causing, committing or maintaining it and such expense shall be a lien against the property on which the nuisance is maintained and shall be a personal obligation against the owner of such property.

(Code 1971, § 13)

Sec. 1.150.020. - Penalty.

Any person convicted of a misdemeanor, the penalty for which is not otherwise prescribed, shall be punished by a fine of not more than one thousand dollars ($1,000.00) or by imprisonment for not more than six (6) months, or by both such fine and imprisonment.

(Code 1971, § 13.1)

Sec. 1.150.030. - Certain violations as infractions.

A. Notwithstanding the provisions of section 1.150.420 or any other provision of this Code, the violation of any of the provisions of the San Buenaventura Municipal Code contained in any of the following enumerated divisions, chapters, articles or sections shall be an infraction; provided, however, that a fourth or additional violation of the same Code section, regardless of the time of occurrence, shall constitute a misdemeanor: Municipal Code sections 8.050.510 and 22.170.010.

B. Notwithstanding any other provision of this Code, a violation of any provision, requirement or prohibition of the following San Buenaventura Municipal Code sections is hereby made an infraction: 16.210.020; 16.210.030 (second paragraph); 16.210.040.A., B., C., and D.; 16.210.050; 16.210.050.B.; 16.210.060.A.; 16.210.060.B.; 16.210.060.C.; 16.210.060.D.2.; 16.210.060.E.2.; 16.210.060.F.; 16.210.060.G.; 16.210.060.H.; 16.210.060.I.; 16.210.060.J.; 16.210.070.B.; 16.210.070.C.; 16.215.030; 16.215.030.B.; 16.215.030.C.; 16.215.030.D.; 16.215.030.E.; 16.215.050.A. and B.; 16.215.060 (second paragraph); 16.215.070 (second paragraph); 16.220.010.B.1.(d); 16.220.020; 16.220.030; 16.220.040; 16.220.050.B.1., 2., 3., and 4.; 16.220.050.C.; 16.225.030.B.; 16.225.030.C.; 16.225.030.D.; 16.225.030.F.; 16.225.030.G.; all sections within chapter 8.350 of division 8.

C. Notwithstanding any other provision of this Code, any violation constituting a misdemeanor under this Code may, in the discretion of the city attorney, where deemed to be in the interest of justice, be charged and prosecuted as an infraction.

(Code 1971, § 13.2; Ord. No. 2004-005, § 2, 4-5-04; Ord. No. 2005-007, § 1, 10-10-05)

Sec. 1.150.040. - Penalties for infractions.

Each and every violation of a provision of this Code which is an infraction is punishable by:

1. A fine not exceeding $100.00 for the first violation;
2. A fine not exceeding $200.00 for a second violation of the same provision within one year;
3. A fine not exceeding $500.00 for each additional violation of the same provision within one year of the first violation.

(Code 1971, § 13.3)

Sec. 1.150.050. - Unlawful acts.

Whenever this Code makes any act or omission unlawful it shall include causing, permitting, aiding, abetting, suffering, or concealing the fact of such act or omission.

(Code 1971, § 13.4)

Sec. 1.150.060. - Code enforcement.

A. *Code enforcement responsibilities.* The police department, fire department, utilities division, business license office, building official, and other designated persons shall be responsible for enforcement of the various provisions of this Code under their respective authority or as is specifically assigned to them by the city manager or council. Officials and employees designated to enforce provision of this Code shall have authority to arrest persons pursuant to Penal Code section 836.5 for purposes of issuing citations for violations of provisions of this Code. Notwithstanding the foregoing, police officers have full authority to arrest persons for violations of the provision of this Code pursuant to any applicable provision of the Penal Code.

B. *Citation procedure for violations.*

1. Any city officer or employee arresting any person for a violation of any provision of this Code, who does not immediately take such arrested person before a magistrate, as prescribed in the Penal Code of the state, shall prepare in duplicate a written notice to appear in court. The notice shall contain:

   (a) The name and address of the person arrested;

   (b) The offense charged, the time and place of the alleged violation;

   (c) Where and when such person shall appear in court.

   The time specified in the notice for appearance must be at least ten days after such arrest. The place specified in the notice to appear and the notice shall be in conformity with the applicable provisions of the Penal Code of the state.

2. The arresting city officer or employee shall deliver one copy of the notice to appear to the alleged violator; the alleged violator in order to secure his immediate release must give his written promise to so appear in court at the time and place indicated on the notice by signing the duplicate notice, which signed copy shall be retained by the city officer or employee. Thereafter, the arresting city officer and employee shall release forthwith from custody the person so arrested. The duplicate copy of the notice to appear shall be filed in the manner prescribed in the Penal Code of the state.

C. *Failure to appear.* Any person who willfully violates his written promise to appear in court by failing to appear at the time and place stated shall be deemed guilty of a misdemeanor regardless of the disposition of the charge upon which the person was originally arrested.

D. *Warrant for arrest upon failure to appear.* When a person signs a written promise to appear at the time and place specified therein, and has not posted bail as provided in the Penal Code of the state, the magistrate shall issue and have delivered for execution a warrant for the person's arrest within 20 days after such person has failed to appear as promised, or if such person promises to appear before an officer authorized to accept bail, other than a magistrate, and fails to do so on or before the date which the person promised to appear, then within 20 days after delivery of such written promise to appear by the officer to the magistrate having jurisdiction over the offense, such magistrate shall issue and have delivered for execution a warrant for the person's arrest. When such person violates his promise to appear before an officer authorized to receive bail other than a magistrate, the officer shall immediately deliver to the magistrate having jurisdiction over the offense charged the written promise to appear and the complaint, if any, filed by the arresting officer or employee.

(Code 1971, § 13.5)

Sec. 1.150.070. - Cost recovery for code enforcement.

The city council, from time to time, may by resolution establish procedures and fees for the recovery of costs incurred by the city in enforcing the City of San Buenaventura Municipal Code.

(Code 1971, § 13.6)

Chapter 1.200 - Judicial Review

Sec. 1.200.010. - State law applicable.

The provisions of section 1094.6 of the California Code of Civil Procedure shall be applicable as respects the City of San Buenaventura, its officers, agents and/or employees and any actions filed under Code of Civil Procedure sections 1094.5 or 1085, except that where a shorter time limit is specified by this Code or other law, said shorter time limit shall be applicable.

(Code 1971, § 1421)

Sec. 1.200.020. - Expedited judicial review.

Pursuant to California Code of Civil Procedure § 1094.8(c), and any successor statute or regulation, the following permits and entitlements of this Code are designated for expedited judicial review pursuant to the procedure set forth in California Code of Civil Procedure § 1094.8, or any successor statute or regulation:

A. Permits issued pursuant to chapter 8.120 entitled "Regulation of Commercial Motion Picture and Television Production";

B. Permits issued pursuant to chapter 18.200 entitled "News Racks";

C. Permits for free speech events issued pursuant to chapter 18.250 entitled "Use of Public Streets and Other Rights-of-Way for Parades, Athletic Events, Block Parties and Other Public Assemblies";

D. Permits for free speech events issued pursuant to chapter 13 of the San Buenaventura Ordinance Code, as recodified in the SBMC (this Code), entitled "Permits Authorizing Events Conducted in City Parks and Park Facilities";

E. Decisions regarding signage subject to design review pursuant to section 24.420.060;

F. Decisions regarding signage variances pursuant to section 24.420.300;

G. Decisions regarding adult-oriented business pursuant to chapter 24.492 entitled "Adult-Oriented Business Regulations";

H. Permits for signs issued pursuant to section 24.505.020 in chapter 24.505 entitled "Director's Permit Procedure"; and

I. Any other provision of this Code designated by city council ordinance or resolution as being subject to expedited judicial review.

(Ord. No. 2000-06, § 2, 2-7-00)

Chapter 1.250 - Disposition of Unclaimed Property

Sec. 1.250.010. - Disposition of unclaimed property.

All unclaimed property in the possession of the police department shall be handled and disposed of in the following manner:

1. Such unclaimed property except unclaimed bicycles shall be held by the police department for a period of at least four months and unclaimed bicycles shall be held for a period of at least three months.
2. Thereafter, if the property has not been claimed as herein provided, it shall be transferred to that division or department of the city having responsibility for warehousing for sale to the public at public auction. In the event that the property cannot be sold at public auction, it may then be given away to any fraternal, benevolent, patriotic, charitable or religious organizations not organized for profit; and if any such property is of no value and cannot otherwise be disposed of by gift or sale, it may be destroyed as junk.
3. Notice of such sale at public auction shall be given at least five days before the time fixed therefor, by publication in a newspaper of general circulation published in the city and county specifying the time and place where such public sale will be held and generally

describing the property to be sold at said public auction.

4. In the event the owner of any such property shall appear before the date when said property is transferred to the warehouse and reclaim said property and reimburse the city for all expenses incurred in the care and preservation of the property, then said property shall be restored to the owner. Once property has been transferred to that division or department of the city having the responsibility for warehousing, however, such property shall not be redeemable by the owner or other person entitled to possession.

(Code 1971, § 6311)

Chapter 1.300 - Damage Claims Against the City

Sec. 1.300.010. - Authority.

This chapter is enacted under the authority of Section 935 of the California Government Code.

(Ord. No. 2006-017, § 1, 11-20-06)

Sec. 1.300.020. - Claims presentation requirements.

All claims against the city for money or damages not otherwise governed by the California Tort Claims Act (California Government Code Sections 900 et seq.), or another state law shall be presented within the time, and in the manner, prescribed by Part 3 of Division 3.6 of Title 1 of the California Government Code (commencing with Section 900) for the claims to which Part 3 applies by its own terms, as those provisions now exist or shall hereafter be amended, and as further provided by this chapter.

(Ord. No. 2006-017, § 1, 11-20-06)

Sec. 1.300.030. - Form of claims.

All claims presented under this chapter shall be made in writing and verified by the claimant or by his or her guardian, conservator, executor or administrator. No claim may be filed on behalf of a class of persons unless verified by every member of that class as required by this section. In addition, all claims shall contain the information required by California Government Code Section 910.

(Ord. No. 2006-017, § 1, 11-20-06)

Sec. 1.300.040. - Compliance with claim presentation requirements a prerequisite to lawsuit.

All claims shall be presented as provided in this chapter and acted upon by the city as a prerequisite to the filing of any action or suit on such claims. No such action or suit may be brought by a person who has not complied with the requirements of this section.

(Ord. No. 2006-017, § 1, 11-20-06)

Sec. 1.300.050. - Lawsuit must conform to requirements of California Tort Claims Act.

Any action or suit brought against the city based upon any claim subject to this chapter shall conform to the requirements of Sections 940—949 of the California Government Code. Any action brought against any employee of the city shall conform with the requirements of Sections 950—951 of the California Government Code.

(Ord. No. 2006-017, § 1, 11-20-06)

Conservation Issue: Scenic Overlay Zone Problem

Created: 13 October 2012; Last updated: 13 October 2012

Importance of the Ventura County Scenic Resource Protection Overlay Zone

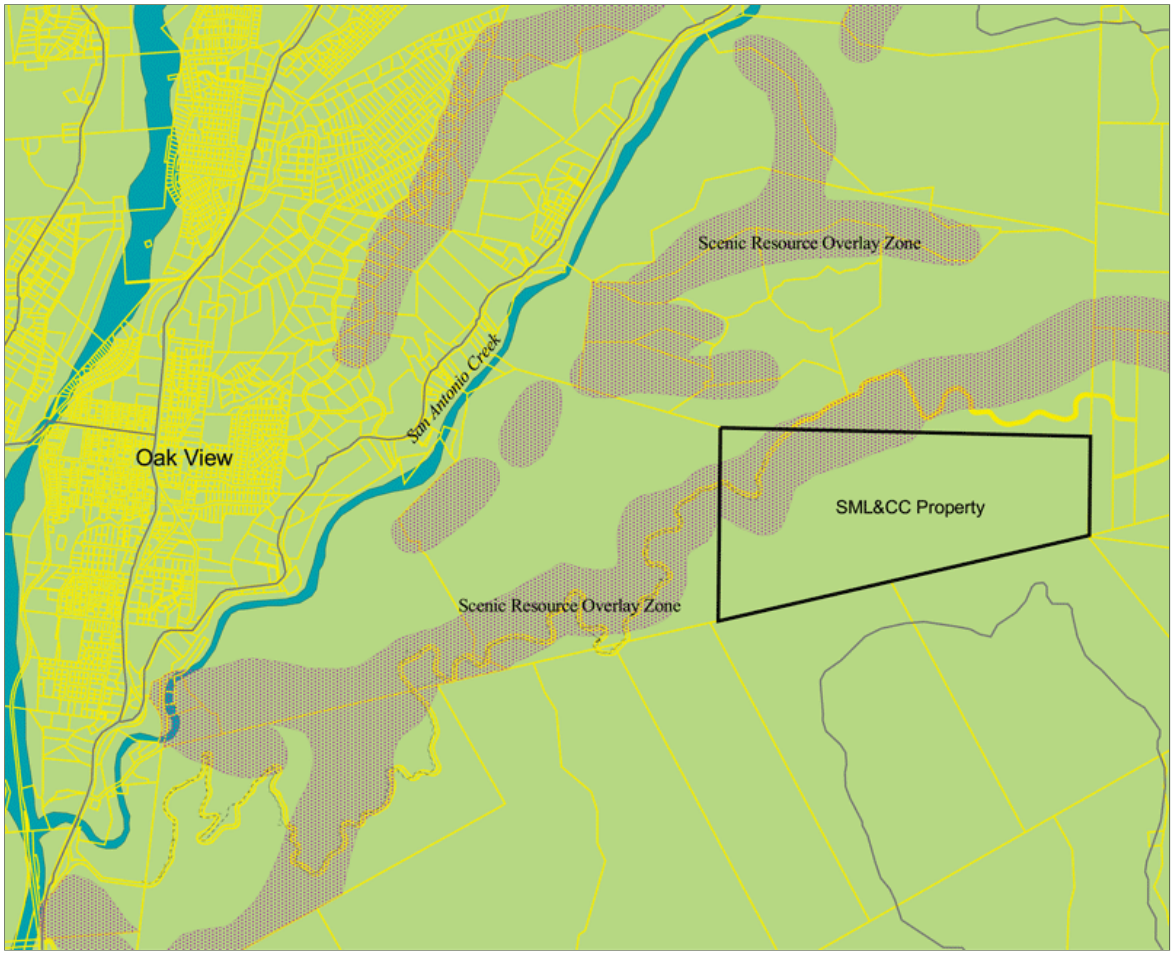
Ventura County created overlay zones several years ago for sensitive portions of the County. In areas with overlay zones, additional procedures of environmental review are required to ensure that particular resources are protected for the benefit of all Ventura County citizens. One such overlay zone is the Scenic Resource Protection Overlay Zone, designed to protect the viewshed from certain areas of the County, in this case, from lakes and highways. This overlay requires environmental review and permits for most land use changes on properties located on ridgetops visible from lakes/reservoirs frequented by the public. The overlay zone does not prohibit development in the areas of the County covered by them, it just requires that a landowner's proposed actions be reviewed first. Such regulations are needed to ensure that our government guides development of undeveloped lands in an orderly and appropriate manner. Below is a simple map showing the areas covered by the Ventura County Scenic Resource Protection Overlay Zones.

The Scenic Resource Protection Overlay Zone covers approximately 55,143 acres of unicorporated land in Ventura County, most of which is undeveloped, and much of that land used for grazing livestock, or single-family residences on large parcels. The map above includes city boundaries and major roads. It is clear that the overlay zone covers only a small portion of the County, yet the development activities that could occur in these areas could seriously affect the natural and visual resources from offsite. The Scenic Resource Protection Overly Zones are only in a few areas of the County, such as around the Ojai Valley, around Hidden Valley/Lake Sherwood, Lake Piru, Conejo Valley, and along State Route 33 north of Ojai (the portion designated by the State as a Scenic Highway). Another type of protection overly covers the coastal side of the Santa Monica Mountains, that portion that is within the Coastal Zone (pursuant to the California Coastal Act), and overlay zones to protect mineral resources.

There are a total of 1,870 parcels wholey or partially by the overlay zone, of which 389 parcels (almost all quite large) owned by a government agency, such as the U.S. Forest Service, or a land conservancy, such as the Ojai Valley Land Conservancy, and nonprofit entities such as the Boy Scouts of America. These 389 parcels total 39,620 acres, or 72% of the land. This means that only 28% of private property is affected in any way by the Scenic Resource Overlay Zone. When the parcel ownership is examined (based on 2006 data), 270 parcels, totaling approximately 1,966 acres (4%), is owned by land developers, oil companies, or other types of industry, not farmers, ranchers, or homeowners. This means that only 25% of the parcels within the overlay zone are owned by farmers, ranchers, or homeowners, and those families holding lands in trusts. Many of the remaining 114 parcels are owned by the same individuals, corporations, partnerships, etc., meaning that a very small percentage of the County's voting citizens may be required to apply for a permit, to the benefit of all the rest of the citizens of Ventura County. So, why are these few people given so much deference? Sounds like dirty politics, or ignorance by appointed or elected officials, or they have failed to do their jobs to satisfy the desired of the vast majority of Ventura County citizens. The citizens and the environment both loose when this happens, as occurred with the Sulphur Mountain Land & Cattle Company case described below.

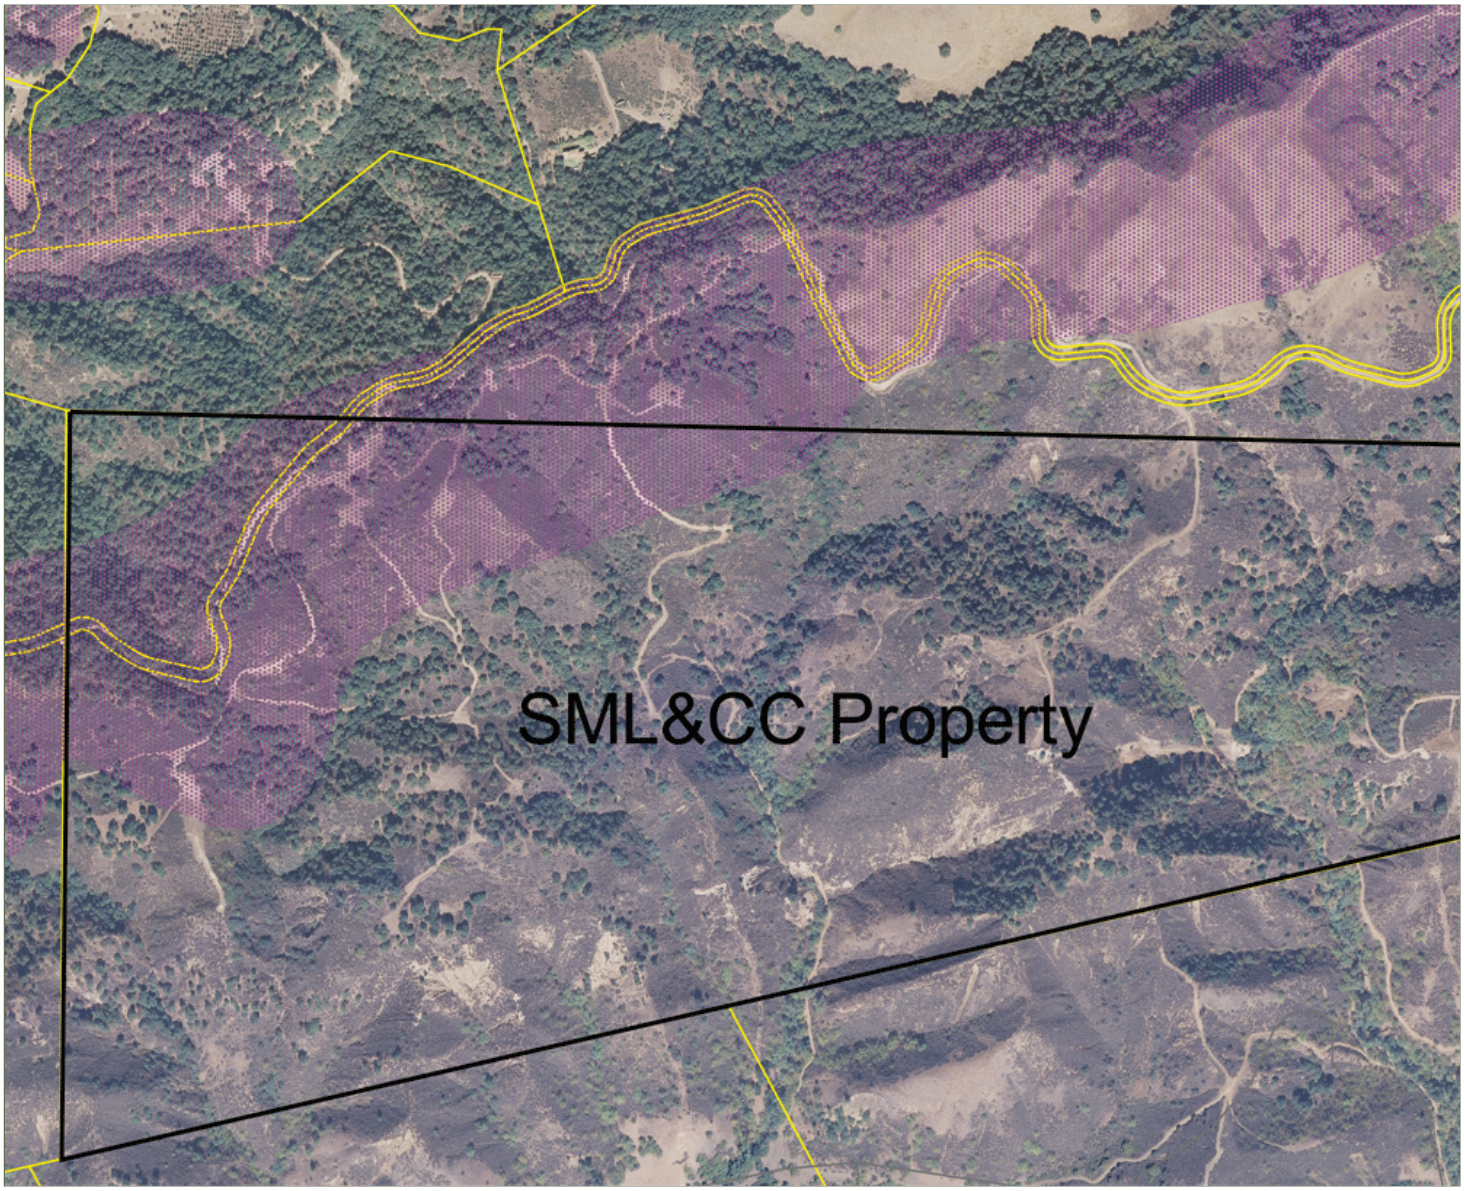
Sulphur Mountain Violation

In the summer of 2011, the Sulphur Mountain Land & Cattle Company (SML&CC), which owns many acres on Sulphur Mountain, cleared natural vegetation from about 15 acres of the parcel without first obtaining a permit from the Ventura County Planning Division, resulting in a violation notice. Sulphur Mountain is the primary ridge on the south side of the Ojai Valley, much of which is visible from Lake Casitas, located in the western portion of the Ojai Valley. The western half of Sulphur Mountain is also visible from State Route 33 on the south heading north from Ventura. Below is a simple map of the western portion of Sulphur Mountain showing parcels (yellow outlines), the Scenic Resource Overlay Zones (magenta stippled areas), Ventura River and San Antonio Creek (blue areas), roads (dark gray lines), and the SML&CC parcel (thick black lined box).



SML&CC used bulldozers to clear Coastal Sage Scrub and chaparral vegetation from the top of Sulphur Mountain, adjacent to and south of Sulphur Mountain Road, which is a popular hiking and cycling road open to the public. SML&CC is in the business of raising cattle for the beef industry. SML&CC's land, and most of Sulphur Mountain, has been used for livestock grazing for over 200 years now, beginning when it was part of the San Buenaventura Mission lands in the late 1700s. Tremendous damage was done to the natural vegetation and soils as the result of overgrazing, damage from which is still evident today in some areas.

Much has been learned about impacts of overgrazing in the last 40 years or so, and SML&CC is said to be working to follow sustainable range management practices. Those practices do not consider the direct and indirect impacts of converting natural vegetation into forage "crops" to feed cattle. The principles of the "holistic" rangeland management are to maximize profit from the land in a sustainable manner, and ignore the needs of native plants and wildlife that occur there naturally, even with passive grazing by livestock. Below is a 2007 aerial photograph of the SML&CC parcel (black outlined) four years prior to their vegetation type conversion. The yellow lines represent parcel boundaries and the magenta stippled areas represent the areas covered by the Ventura County Scenic Resource Overlay Zone. As can be easily seen, the two dominant vegetation types on Sulphur Mountain are Coastal Sage Scrub and Coast Live Oak Woodland, with the later occurring primarily on the north-facing slopes.



SML&CC didn't want to be bothered with applying for a permit to convert the natural vegetation to non-native forage grasses, so, like Wild West cowboys, they just did what they wanted to do. Then, after receiving the violation notice, hired attorneys and consultants, and the right-wing radical group, Coalition of Labor, Agriculture, and Business (VCCOLAB) to fight the County during a tense election cycle. VCCOLAB is all about private property rights and anti-government, regardless what the majority of the population believes or supports. VCCOLAB certainly does nothing for labor or most forms of business in Ventura County, as their name implies. SML&CC appealed the Planning Director's decisions on the violation to the Ventura County Planning Commission (VCPC) in June 2012, which was heard by the VCPC on 16 August 2012. CNPS was the only conservation organization to provide comments/testimony, through the Environmental Defense Center. The public and environmental community was ignorant of the seriousness of the hearing. VCCOLAB members where out in full, including Supervisorial candidate Bob Roper, in favor of ignoring the County's planning rules and letting ranchers behave like Wild West cowboys and damm their neighbors. SML&CC is claiming that the natural vegetation on land that is grazed is a crop, and; therefore, can be removed at any time as "normal agricultural practice". Examining the definitions of crop (see link to online dictionary in last sentence) never mentions natural vegetation as a crop; rather, a crop is something that is planted and harvested. SML&CC **converted** the natural vegetation to a crop. We used to think it was okay to dump trash and industrial wastes into or rivers, which was certainly a normal business practice for decades. We used to do lots of things, which we don't anymore because we figured out that society suffered while only a few prospered. The rules of what is "normal" practice have changed, but not for cowboy operations like SML&CC. A video of the Planning Commission hearing can be viewed here.

Astonishingly, the VCPC, in a vote 4:1, upheld SML&CC's appeal, totally ignoring the facts and the law, and the sound reasoning provided to them by VCPD staff and the Director. Read the VCPD staff report here. This decision by the Commission was extremely short-sighted, and just plain dumb. They clearly didn't bother to actually read the law, or really even understand it, that except for the Commissioner from District 1.

This is incredibly bad for native plants and wildlife. This is incredibly bad for all citizens of Ventura County, except for those cowboy companies that own lots of land in the county that is covered by the overlay zone. CNPS only had 10 days to file an appeal to the Board of Supervisors; however, that would have cost CNPS $2,000 just for the filing fee, not to mention the additional funds needed to have CNPS represented by environmental attorneys. Since politics are so slanted in Ventura County that most of the Supervisors are afraid to cast any votes that appear to be against farming, we would likely have only gotten two votes in our favor, and then would have had to sue the County, at much greater cost. The entire environmental and social justice community needs to come together and correct this aggrecious error in judgement by the Commission and strenghten the SOAR Initiative regulations when they come up for renewal in the not-to-distant future. We can't let this terrible ruling stand.

Botanical Resources of Sulphur Mountain

Had the VCPC supported VCPD staff and the citizen's desire to protect important natural resources on Sulphur Mountain, the property owner would have found out that his property supported a diverse flora and fauna, and that several rare plants are known to occur on or at least immediately adjacent to where he bulldozed all the natural vegetation. David Magney previously compiled a list of all the plants known to occur on Sulphur Mountain, which is published on his Ventura County Flora website, as well on this website.

CNPS has regularly led field trips along Sulphur Mountain Road, including past SML&CC's property. Mr. Magney recently found several rare plants along the road, including some on the road through SML&CC's property. It is almost certain that one or more of these species were bulldozed during his vegetation type-conversion activities. Rare plants found include: *Baccharis plummerae* ssp. *plummerae*, *Calochortus catalinae*, *Eriogonum parvifolium* var. *paynei*, *Juglans californica* var. *californica*, and *Polygala cornuta* var. *fishiae*. Botanists, including the author, have found other rare plants on Sulphur Mountain (e.g. *Aphanes occidentalis*, *Bromus laevipes*, *Elymus glaucus* var. *jepsonii*, *Galium californicum* ssp. *flaccidum*, *Navarretia ojaiensis*, *Ribes californicum* var. *californicum*), one or more of which could be on the SML&CC property. Certainly, you would think that a landowner who was concerned about the natural resources on his property would find out what occurs on it before blindly changing the landscape.

INTRODUCTION AND SUMMARY

INTRODUCTION AND SUMMARY

The Oxnard Airport Master Plan is being prepared to provide the community and public officials with proper guidance for future development that addresses aviation demands and is wholly compatible with the environment. This study has the specific objective of re-examining the recommended direction from the 1996 Draft Airport Master Plan. This will include incorporating subsequent changes where conditions and circumstances may have invalidated previous recommendations within the context of the airport mission statement. Still valid concepts may be retained, while new concepts will be developed for those alternatives that are either no longer valid or considered to be unacceptable or unworkable. Coordination between Ventura County (Sponsor), local, regional, state, and federal agencies, and the consultant team will be essential to bringing together all facts and data relevant to the project and to developing a mutual agreement regarding future development of the airport.

The Master Plan will provide recommendations from which the County may take action to maintain and improve the airport and all associated services important to public needs, convenience, and economic growth. The Master Plan is intended to benefit all residents of the area by providing a comprehensive plan which supports and balances continued opportunity for aviation activities and the environmental preservation of the surroundings.

AIRPORT MISSION STATEMENTS

The mission statements for both the Ventura County Department of Airports and the Oxnard Airport are provided here for reference and guidance during the preparation, review, and implementation of the Oxnard Airport Master Plan.

DEPARTMENT OF AIRPORTS MISSION STATEMENT

- To provide safe, efficient, maintained, and accessible facilities for the provision of general aviation and limited commuter airline service needs of the citizens of Ventura County.
- To limit the development of Camarillo and Oxnard Airports to meet the forecasted needs of general aviation and commuter airline services in a manner that will complement each other.
- To optimize the use of present airport land, maximize safety, assure financial feasibility, and minimize the negative environmental effects on the surrounding communities.

OXNARD AIRPORT MISSION STATEMENT

Oxnard Airport shall:

- be a publicly owned, operated, and managed general aviation airport with a strong emphasis on safety, cooperation with its neighbors, and responsible flight operations.
- maintain a viable center for air commerce, which enhances trade and business for the economic development and transportation needs of the City of Oxnard and Ventura County.
- make every reasonable effort to limit the hours of air operations through a curfew, and to reduce noise and air pollution nuisances caused by airport users and operations.
- provide the region with safe and efficient access to the national air transportation system and general aviation.
- continue to search for a regional airport to serve the air carrier and commercial needs of the City of Oxnard and Ventura County.

SUMMARY AND RECOMMENDATIONS

The proper planning of a facility of any type must consider the demand that may occur in the future. For Oxnard Airport (OXR), this involved updating forecasts to identify potential future aviation demand. Because of the cyclical nature of the economy, it is virtually impossible to predict with certainty year-to-year fluctuations in activity when looking five, ten, and twenty years into the future.

Recognizing this reality, the Master Plan is keyed more to potential demand "horizon" levels than future dates in time. These "planning horizons" were established as levels of activity that will call for consideration of the implementation of the next step in the Master Plan program. By developing the airport to meet the aviation demand levels instead of specific points in time, the airport will serve as a safe and efficient aviation facility which will meet the operational demands of its users while being developed in a cost efficient manner. This program allows the County to change specific development in response to unanticipated needs or demand.

The forecasts of aviation activity at Oxnard Airport were developed taking into account the two mission statements. This results in forecasts that are somewhat constrained compared to those developed by previous planning efforts. The forecast planning horizons are summarized in **Table A** and **Exhibit A**.

TABLE A
Aviation Demand Planning Horizons
Oxnard Airport

	Current	Short Term	Intermediate Term	Long Term
ANNUAL OPERATIONS				
Commuter	3,650	4,500	5,600	6,500
Air Taxi	9,756	11,500	12,600	14,500
Military	1,541	1,500	1,500	1,500
General Aviation	73,803	78,200	83,900	92,700
Total Operations	88,750	95,700	103,600	115,200
ANNUAL PASSENGERS				
Enplanements	22,829	35,000	45,000	60,000
Based Aircraft	142	150	158	170

Exhibit A also presents historic activity for the four primary activity indicators. It is evident from this exhibit that the long term planning horizon activity levels for based aircraft and operations will remain well below levels attained in the 1990's. The long term horizon for enplanements is just slightly above the 1990 high level.

The Airport Layout Plan set acts as a blueprint for everyday use by management, planners, programmers, and designers. These plans were prepared on computer to help ensure their continued use as an everyday working tool for the Department of Airports.

As indicated in the introduction, this Master Plan is intended to re-examine the recommended direction of the 1996 Draft Master Plan that was never adopted by the County Board of Supervisors.

The principal airfield recommendations focus upon safety, security, and compatibility. It is of key importance to ensure that airport design standards are upheld to the maximum extent feasible, particularly in relation to the runway safety area (RSA). Other recommendations are provided to improve the efficiency and circulation on the airfield. **Exhibit B** depicts the airfield recommendations.

Runway 7-25 will remain the only runway at Oxnard Airport. The runway is currently 5,950 feet long and 100 feet wide with a pavement strength of 70,000 pounds dual wheel loading. It is planned to remain at this pavement strength to continue to accommodate the design aircraft indicated earlier.

An analysis of the runway's safety area requirements indicated that the runway does not meet the FAA design standards for the approach category C and D aircraft that regularly use the airport. The RSA beyond the east end of the runway extends for approximately 750 feet before reaching the airport's perimeter service road. The recommended plan for the east end involves relocating the departure end threshold for Runway 7 250 feet to the west.

It is also recommended that, in the interest of safety and to minimize disruption of airline service, the airport continue to improve its instrument approaches. This will likely mean improving approach minimums as improved capabilities become available through GPS (global positioning system).

Exhibit B also depicts the property acquisition recommendations. All property acquisitions are related to direct control of land use for the enhancement of safety. The intent is to either clear properties, maintain undeveloped properties, or to at least maintain current uses with no new development.

Recommended landside improvements are primarily associated with maintenance, redevelopment, and modernization of existing facilities. The facility requirements indicated that, with the addition of previously approved executive hangars, and the replacement of Hangar One, facilities area should be adequate from a space standpoint. Older hangar facilities may require replacement during the planning period. In addition, future mandates in security could require alterations in the terminal area.

The primary improvement items over the planning horizons include the following:

Short Term

- Meet changing security needs.
- Continue pavement rehabilitation and maintenance

Exhibit B
RECOMMENDED PLAN

- Correct extended RSA off east end of runway
- Construct blast pad off east end of runway
- Continue fee simple and easement acquisitions for safety enhancement
- Repair and maintain existing structures as necessary
- Make security improvements as may become necessary

Intermediate Term

- Improve Runway 7 GPS approach minimums by installing approach light system
- Continue airport facility rehabilitations and modernizations
- Remodel terminal building

Long Term

- Continue rehabilitation and modernization of facilities as necessary.

The full implementation of the Master Plan would involve a financial commitment of $16.4 million over the planning period (**Table B**). Approximately 90 percent of the total costs will be eligible for grants-in-aid administered by the Federal Aviation Administration (FAA). The source of these grants is the Aviation Trust Fund which is a depository for aviation taxes such as those from airline tickets, aviation fuel, aircraft registrations, and other aviation-related fees. Most eligible projects can receive up to 95 percent funding from the FAA.

Primary commercial service airports such as Oxnard Airport qualify for entitlement funding through the program. Oxnard Airport is currently earmarked for $1.0 million in annual entitlement funds annually. These funding levels, however, are not guaranteed. The amount of federal funding that will be made available will depend upon the future of the Airport Improvement Program.

TABLE B
CIP Financial Assumptions (2004 $)

	Short Term	Intermediate Term	Long Range
Total Project Costs	$6,757,000	$3,171,000	$6,500,000
Grant Eligible	$5,997,900	$3,012,450	$5,795,000
AIP Entitlements	$5,000,000	$7,000,000	$10,000,000
State Funding	$0	$0	$0
Remaining Grant Eligible Costs	$997,900	$0	$0
Matching Share Costs	$439,100	$158,550	$305,000
Remaining PFC-Eligible Costs	$1,437,000	$158,550	$305,000
Passenger Facility Charges (PFC)	$722,400	$1,227,650	$2,289,750
Remaining Matching Share	714,600	$0	$0
Non-Eligible Costs	$320,000	$0	$400,000
Remaining Airport CIP Costs	$1,034,600	$0	$400,000

The Ventura County Department of Airports will need to use other sources of airport-generated funding as well. Commercial service airports such as Oxnard Airport have been authorized by Congress to impose passenger facility charges (PFCs) as a means to collect revenues for airport improvements. A PFC of up to $4.50 is allowed. The airport has been authorized at this maximum level and currently uses the revenue to fund eligible projects in excess of the entitlement funding received. Most of the projects not eligible for federal funding can be funded from the revenue they generate.

CONCLUSIONS

In conclusion, the Master Plan is reviewed with regard to the Department of Airports and Oxnard Airport Mission Statements.

DEPARTMENT OF AIRPORTS MISSION STATEMENT

- ***To provide safe, efficient, maintained, and accessible facilities for the provision of general aviation and limited commuter airline service needs of the citizens of Ventura County.***

The Master Plan concept preserves the current general aviation and commuter activities for which Oxnard Airport is used. It includes recommendations to enhance safety and efficiency, as well as to maintain existing facilities.

- ***To limit the development of Camarillo and Oxnard Airports to meet the forecasted needs of general aviation and commuter airline services in a manner that will complement each other.***

The Master Plan utilizes a forecast that takes into account the following development qualifiers:

- No increase in runway length.
- No significant increase in terminal space.
- Planning to maintain and serve based aircraft levels equal to its current market share of registered aircraft in the county.

- ***To optimize the use of present airport land, maximize safety, assure financial feasibility, and minimize the negative environmental effects on the surrounding communities.***

With the exception of an approach light system, segmented circle relocation, and perimeter fencing, all development in the Master Plan will occur on current airport property. The only property acquisitions recommended are those designed to enhance operational safety.

OXNARD AIRPORT MISSION STATEMENT

Oxnard Airport shall:

- ***be a publicly owned, operated, and managed general aviation airport with a strong emphasis on safety, cooperation with its neighbors, and responsible flight operations.***

The Master Plan is based upon maintaining the Oxnard Airport as a County-owned and operated airport. It remains open to general aviation activity that can operate within the constraints of its facilities. The major improvement recommendations for the airfield are based upon meeting airport design standards to the extent feasible.

- ***maintain a viable center for air commerce, which enhances trade and business for the economic development and transportation needs of the City of Oxnard and Ventura County.***

The Master Plan continues to provide for maintenance and modernization of existing terminal area facilities to serve the needs of its users. The plan does consider growth in general aviation and airline traffic beyond the current levels of activity in support of economic development and transport-ation needs of the City and County.

- ***make every reasonable effort to limit the hours of air operations through a curfew, and to reduce noise and air pollution nuisances caused by airport users and operations.***

Since the Master Plan is primarily a facility-related plan, the consideration of limited hours and/or curfews is beyond the purview of the Master Plan. The Master Plan is also limited in means to reduce noise and air pollution. The Master Plan, however, does not recommend any improvements that would increase the potential for noise and air pollution.

- ***provide the region with safe and efficient access to the national air transportation system and general aviation.***

Safety, maintenance, and modernization of the Oxnard Airport is the primary emphasis of the Master Plan. The plan will allow the airport to continue to be a regional access to the national air transportation system.

- ***continue to search for a regional airport to serve the air carrier and commercial needs of the City of Oxnard and Ventura County.***

The limited development recommendations of the Master Plan are based in large part on the continued search for a new airport. The Master Plan recognizes that the forecasts for Oxnard Airport fall well short of meeting the commercial service demand in Ventura County. As other commercial airports in the Los Angeles Basin reach their capacities, it will become more incumbent upon the County to have access to adequate airport facilities to serve the needs of its citizens, businesses, and economic well-being.

OXNARD AIRPORT

Chapter One
INVENTORY

CHAPTER ONE

INVENTORY

The initial step in the preparation of an airport master plan is the collection of information that will provide a basis for further analysis in subsequent chapters. Information is gathered regarding not only the airport but also the region it serves. This chapter will begin with an overview of the existing conditions at Oxnard Airport consisting of airport facilities, airspace, and the airport's role in regional, state, and national aviation systems. This will be followed by background information regarding Ventura County, the City of Oxnard, and the regional area, including information regarding surface transportation and the socioeconomic profile.

Information provided in this chapter was obtained through on-site inspections of the airport, interviews with airport management, airport tenants, and various governmental agencies. Information was also obtained from available documents and studies, both in print and online, concerning the Oxnard Airport and the Ventura County area.

HISTORICAL PERSPECTIVE

The current airport setting and configuration is depicted on **Exhibit 1A**. Oxnard Airport was opened by Ventura County in 1934 with a 3,500-foot dirt runway. In 1938, the runway was paved and a large hangar, now referred to as Hangar Two, was constructed by the Works Progress Administration (WPA). After the completion of these improvements, the Oxnard Flying School began operations in 1939 with two aircraft. In 1940, the U.S. Army Air Corps established a primary training base for its pilots at the airport. The training facility was named the Mira Loma Flight Academy. During the Air Corps tenure at the

airport, two more hangars, Hangar One and Hangar Three, and a housing facility were constructed. The housing facility, that was used to house the pilots and their trainers, still exists across the street from the airport and is now the Mira Loma Apartments.

The declaration of war in December 1941 resulted in the relocation of the Oxnard Flying School to Boulder City, Nevada as civilian flying was not allowed within 200 miles of the coastline. The Army Air Corps continued training at the airport prior to 1944 when the airport was reassigned to the U.S. Navy until the Naval Air Station at Point Mugu could be completed. In 1945, the Navy relocated to the completed station at Point Mugu and the Oxnard Flying School returned to the airport. Control of the airport was returned to Ventura County by the federal government in 1948 and in the following year, the State of California issued the airport an operating permit.

Scheduled airline flights began in 1946 by Southwest Airlines and later Pacific Airlines. Since that time, a number of commercial service providers have served the airport including Cable, Golden West, Wings West, American Eagle, Mesa, and America West Express.

Major improvements at the airport have included the construction of an airport traffic control tower in 1960, the extension of Runway 7-25 to 5,947 feet in 1963, construction of a terminal building in 1971, the installation of taxiway lighting in 1973, and the installation of precision instrument landing and approach lighting systems in 1976. It should also be noted that in 1974 radar approach control was established at Point Mugu, thereby allowing positive radar coverage to aircraft flying into and out of Oxnard Airport.

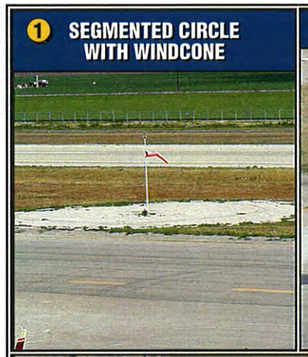
In October 1994, Hangar One, the original hangar constructed at the airport, was lost to fire. Plans are underway to replace this hangar with a corporate hangar and office complex which will serve the general aviation community at the airport.

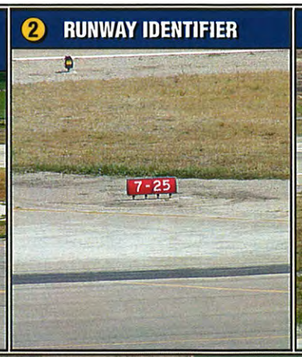
Currently, Oxnard Airport is positioned to serve all segments of the civil air transportation industry as it has facilities to accommodate commercial airline activity and general aviation users.

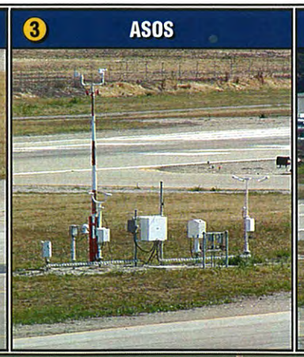
The commercial airline segment of the air transportation industry includes all air carriers providing scheduled air service. Currently, regularly scheduled commercial service is provided by Sky West Airlines, operating under a code share agreement with United Airlines as United Express.

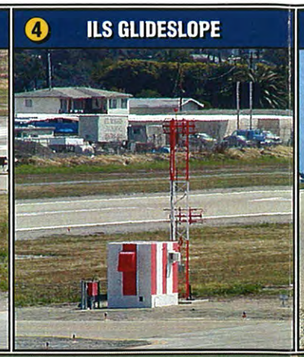
General aviation is the largest and most diverse segment of the air transportation industry. General aviation aircraft constitute 97 percent of all civil aircraft in the United States today. Use of these aircraft covers a broad spectrum of activities from personal and recreational flying to air ambulance to business and commercial uses such as aerial applicators, aerial surveyors and photographers, and the non-scheduled transport of company staff from one location to another. General aviation aircraft range from one and two seat piston-powered

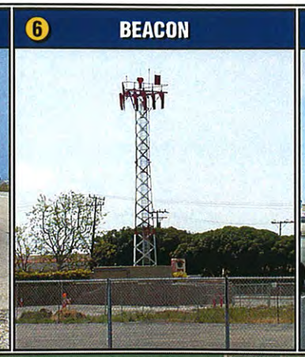
02MP01-1A-8/29/03

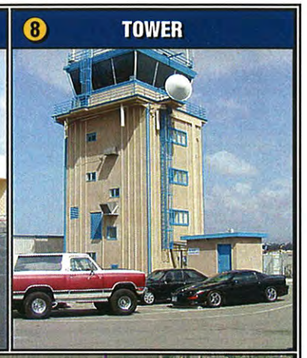


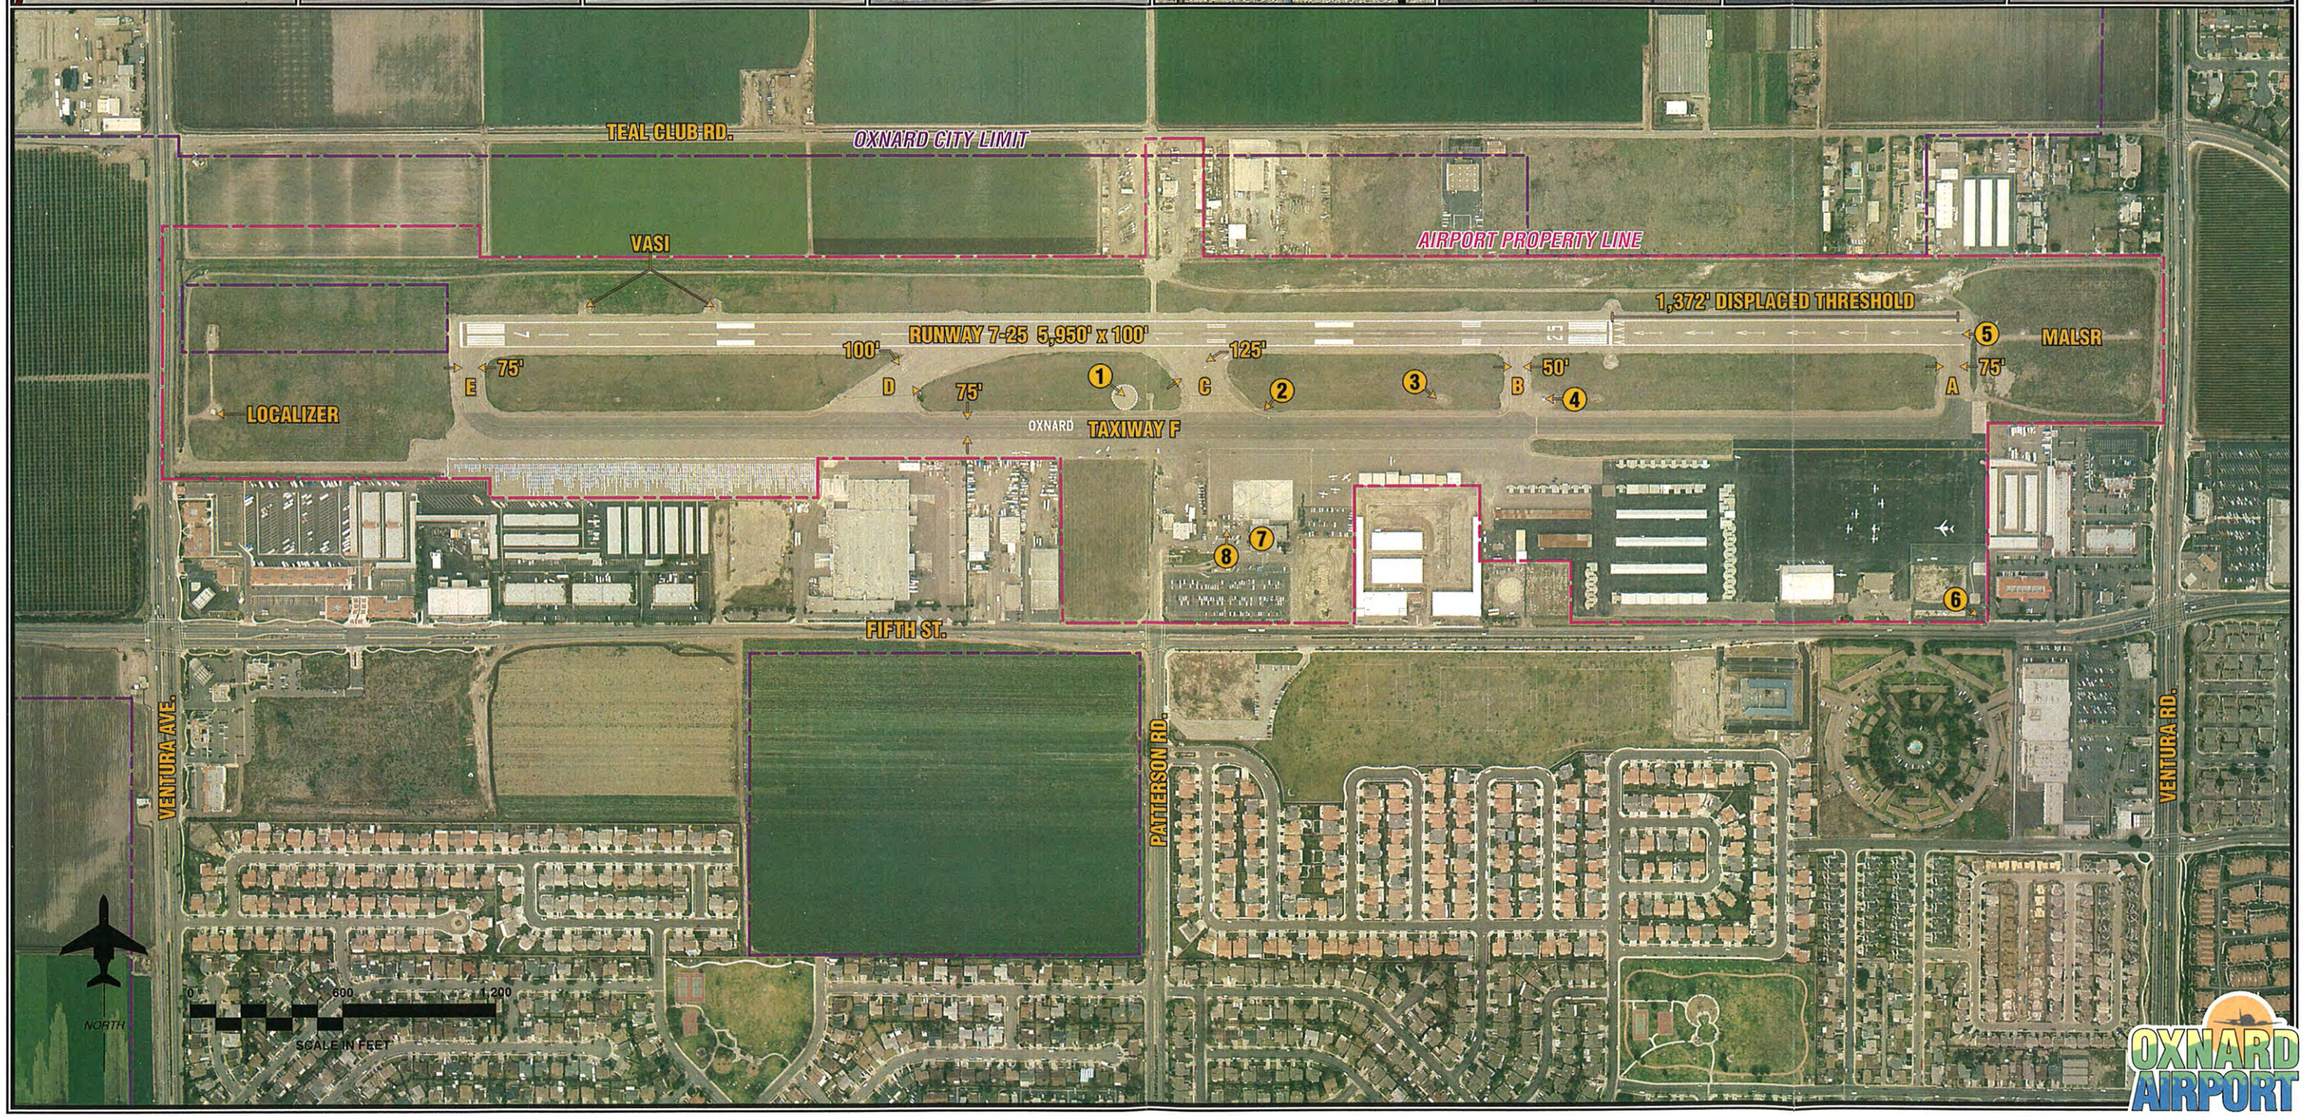












OXNARD AIRPORT

Exhibit 1A
EXISTING AIRFIELD FACILITIES

aircraft to long-range business jet aircraft capable of flying non-stop to international destinations. In the spring of 2002, there were 144 aircraft based at Oxnard Airport.

THE AIRPORT'S SYSTEM ROLE

Airport planning exists on many levels: local, state, and national. Each level has a different emphasis and purpose. Locally, this master plan is the primary airport planning document.

At the national level, the airport is included in the National Plan of Integrated Airport Systems (NPIAS). The NPIAS includes a total of 3,660 airports (both existing and proposed) which are important to national air transportation. Oxnard Airport is classified as a primary commercial service airport within the NPIAS.

At the state level, the airport is included in the **California Aviation System Plan** (CASP) as one of 29 primary commercial service airports in the State of California.

At the regional level, the airport is included in the **Southern California Association of Government's Regional Aviation Plan**. This plan encompasses 65 airports including six air carrier airports, three commuter airports, 45 general aviation airports, and 11 existing or recently closed military installations. Within this plan, Oxnard Airport is classified as a commuter airport.

AIRPORT ADMINISTRATION

Oxnard Airport is a commercial service airport owned by Ventura County and operated by the Ventura County Department of Airports which is charged with the day-to-day operation, repair, maintenance, and administration of the airport. The Department of Airports oversees Oxnard and Camarillo airports and is staffed with 32 employees. Of these 32 staff members, ten are allocated directly to Oxnard Airport.

The airport is overseen by the Ventura County Board of Supervisors. The Board receives recommendations from the Ventura County Airport Advisory Commission, which is concerned with the technical aspects of the airport, and the Oxnard Airport Authority, which is concerned with the business aspects of the airport.

The Aviation Advisory Commission, which makes recommendations on both Oxnard and Camarillo airports, consists of ten appointed members. The members are appointed by the County Board of Supervisors. Each supervisor appoints two individuals to serve on this commission.

The Airport Authority is responsible for only Oxnard Airport and consists of five members - two members from the Board of Supervisors, two members from the Oxnard City Council, and one member from the public.

AIRPORT SETTING

The City of Oxnard lies equidistant between Santa Barbara and Los Angeles, approximately 62 miles from each. **Exhibit 1B** depicts the city in its regional setting. Oxnard Airport lies one and one-half miles east of the Pacific coastline, and is situated along the coastal edge of the 200-square mile Oxnard Plain. The airport is located on approximately 216 acres of land in the northwest portion of the City of Oxnard.

AIRPORT FACILITIES

This section presents a description of the existing facilities at Oxnard Airport. These facilities can be divided into two distinct categories, airside facilities and landside facilities. Airside facilities include those directly associated with aircraft operation. Landside facilities include those necessary to provide a safe transition from surface-to-air transportation and support aircraft servicing, storage, maintenance, and operational safety.

AIRSIDE FACILITIES

Airside facilities, previously depicted on **Exhibit 1A**, are those facilities directly associated with the safe and efficient movement of aircraft on the airport. In most cases, airside facilities dictate the types and levels of aviation activity capable of operating at an airport. Airside facilities include runways, taxiways, airport lighting, and navigational aids. Airside facility data is discussed in detail below and is summarized in **Table 1A**.

Runways

Oxnard Airport is equipped with a single 5,950-foot long by 100-foot wide runway. This runway, Runway 7-25, is oriented in an east-west alignment. Due to obstructions in the east approach, the Runway 25 landing threshold has been displaced 1,372 feet to the west, which reduces the landing length available for Runway 25 to 4,578 feet.

Runway 7-25 has an asphalt surface and is strength-rated for 50,000 pounds single-wheel loading (SWL) and 70,000 pounds dual-wheel loading (DWL). SWL refers to the design of the aircraft landing gear that has a single wheel on each main landing gear strut and DWL refers to a landing gear that has dual wheels on each main landing strut.

Taxiways

The taxiway system at Oxnard Airport, as depicted on **Exhibit 1A**, consists of a full length parallel taxiway and five connecting taxiways, all located on the south side of Runway 7-25.

Taxiway F is the full length parallel taxiway. This taxiway is 75 feet wide and provides access to all apron and hangar facilities on the airport.

Taxiways A, B, C, D, and E are connecting taxiways providing access between the runway to Taxiway F. Taxiways A (east end) and E (west end) are 75-foot wide right angle taxiways which provide access for aircraft taking off and exiting from both ends of the runway.

MIRL/MITL: Medium intensity runway/taxiway lighting
MALSR: Medium intensity approach lighting system with runway alignment indicator lights
VASI: Visual approach slope indicator
PAPI: Precision approach path indicator
ASOS: Automated surface observation system

Taxiway B is a 50-foot wide exit taxiway located approximately 1,500 feet west of the displaced threshold for Runway 25. Taxiways C and D are angled exit taxiways. Taxiway C is 125 feet wide and is angled to serve Runway 25 landings. Taxiway D is 100 feet wide and is angled to serve as an exit for Runway 7 landings.

Airfield Lighting

Airfield lighting systems extend an airport's usefulness into periods of darkness and/or poor visibility. A variety of lighting systems are installed at Oxnard Airport for this purpose. These lighting systems, categorized by function, are summarized as follows.

- IDENTIFICATION LIGHTING

The location of an airport at night is universally indicated by a rotating beacon which projects two beams of light, one white and one green, 180 degrees apart. The rotating beacon at Oxnard Airport is located in the southeast corner of the airfield near Fifth Street.

- RUNWAY AND TAXIWAY LIGHTING

Runway and taxiway lighting are light fixtures placed near the pavement edge to define the lateral limits of the pavement. This lighting is essential for maintaining safe operations at night and/or during times of poor visibility in order to maintain safe and efficient access from the runway and aircraft parking areas.

Runway 7-25 is equipped with medium intensity runway lighting (MIRL). Medium intensity taxiway lighting (MITL) has been installed on its associated taxiways.

- APPROACH LIGHTING

Approach lighting systems (ALS) consist of a configuration of signal lights that extend into the approach area from the runway threshold. The purpose of an ALS is to aid pilots in transitioning from instrument flight to visual flight for landing. A medium intensity approach lighting system with runway alignment indicator lights (MALSR) is installed at the end of Runway 25 to assist pilots in landing to the west during inclement weather conditions. The MALSR extends for 2,800 feet from the displaced runway threshold.

Two types of visual approach slope guidance aids are utilized at the airport: visual approach slope indicator (VASI) and precision approach path indicator PAPI). While configured differently, the VASI and PAPI have a similar purpose of providing visual approach slope guidance to pilots. Generally, each lighting aid consists of a system of lights, located at various distances from the runway threshold which, when interpreted by the pilot, give him or her an indication of being above, below, or on the designed descent path to the runway.

The two-box PAPI (PAPI-2) system installed for Runway 25 is located on the left, approximately 400 feet past the displaced threshold. Runway 7 is equipped with a four-box VASI (VASI-4) system which is located on the left side of the runway approximately 400 feet from the runway threshold.

- AIRFIELD SIGNS

Airfield identification signs assist pilots in identifying their location on the airfield and direct them to their desired location. Lighted airfield signs at Oxnard Airport are located along Runway 7-25 and its associated taxiways. They are also used to identify aircraft hold positions, taxiway intersections, as well as the intersection of the connecting taxiways and runway.

- PILOT-CONTROLLED LIGHTING

The MIRL and MALSR systems on Runway 7-25 can be controlled through a pilot-controlled lighting system (PCL) when the airport federal control tower (FCT) is closed. This system allows pilots to turn on and/or increase the intensity of the lighting system from the aircraft with the use of the aircraft's radio transmitter.

Pavement Markings

Pavement markings aid in the movement of aircraft along airport surfaces and identify closed or hazardous areas on the airport. Non-precision instrument markings on Runway 7 identify the runway designations, centerline, touchdown point, and aircraft holding positions. Runway 25 has precision instrument markings that identify the runway centerline, designation, touchdown point, and pavement edge as well as the displaced threshold. Taxiway and apron centerline markings are provided to assist pilots in maintaining proper clearance from pavement edges and objects near the taxiway/taxilane edges. Pavement markings also identify aircraft tie-down positions and aircraft holding positions.

Other Facilities

The airport also has a lighted wind cone inside a segmented circle. A lighted wind cone provides information to pilots regarding wind conditions both day and night. The segmented circle consists of a system of visual indicators designed to provide traffic pattern information at airports. The segmented circle and wind cone are located midfield near the intersection of Taxiways C and F. Additional windcones are located near each end of Runway 7-25 between the runway and Taxiway F.

Air Traffic Control

Oxnard Airport has an FCT which provides traffic control services from 7:00 a.m. to 9:00 p.m. The purpose of the FCT is to control aircraft movement within the local Class D airspace and on the runway and taxiway system. Approach and departure control is provided by Point Mugu Approach Control between the hours of 7:00 a.m. and 11:00 p.m. Between the hours of 11:00 p.m. and 7:00 a.m., approach and departure control services are provided by the Los Angeles Air Route Traffic Control Center (ARTCC).

Aircraft operating in the vicinity of the airport are not required to file any type of flight plan or to contact any air traffic control facility unless they are entering

airspace where contact is mandatory. Air traffic advisories and certain weather information can be obtained using the airport CTAF. Enroute air traffic control services are provided through the Los Angeles ARTCC, which controls aircraft in a large multi-state area.

LANDSIDE FACILITIES

Landside facilities are the ground-based facilities that support the aircraft and pilot/passenger handling functions. These facilities typically include the passenger terminal complex, aircraft storage/maintenance hangars, aircraft parking apron and support facilities such as fuel storage, automobile parking, and roadway access. Landside facilities at Oxnard Airport are identified on **Exhibit 1C**.

Airline Terminal Facilities And Services

The airport terminal building is located at midfield, east of the FCT. Areas for airline ticketing and operations, baggage claim, rental car reservation offices, security screening, a lounge, and a restaurant are provided within the terminal building. **Exhibit 1D** depicts terminal area floor plan.

Fifth Street provides access to the airport. The terminal access road connects to this street and extends north to the terminal building. The two-lane, one-way road then turns west and runs between the terminal building and the vehicle parking lot. The terminal road ends at Patterson Road on the west side of the parking lot. Patterson Road returns traffic to a signaled intersection at Fifth Street.

The passenger pick-up or drop-off area consists of 160 feet of curb in front of the terminal building. Three vehicle parking lots are located within the terminal complex area. The public parking lot, located across the street from the terminal building, consists of 220 public and 36 rental car parking spaces. A total of 26 public spaces are designated for short term parking with the remaining spaces available for long term parking.

A rental car lot is located east of the terminal building. This lot provides 73 parking spaces for rental car storage and service.

A 43-space employee parking lot is located north and west of the terminal access road, near the base of the FCT. Access to this parking lot is provided via Patterson Road.

The terminal apron is located directly north of the terminal building. The apron provides for aircraft parking, access, and circulation for the commuter aircraft.

Scheduled air service at Oxnard Airport is provided by United Express using Embraer Brasilia 120 (EMB-120) aircraft. **Table 1B** summarizes the scheduled flights for the airport as of April 2002. All flights either arrive from or depart to Los Angeles International Airport.

General Aviation Facilities And Services

Oxnard Airport is also a full service general aviation airport. The general aviation facilities at Oxnard Airport are located both east and west of the terminal and are described in the following sections.

- FIXED BASE OPERATORS

One fixed base operator (FBO), Oxnard Jet Center, currently provides service at the airport. This FBO occupies Hangars Two and Three on the southeast side of the airport, as well as a hangar immediately west of the FCT. The FBO leases approximately 3,786 square feet of office space, 15,671 square feet of hangar space, and 10,000 square feet of ramp space in Hangars Two and Three. Aircraft parking, charters, fuel, catering services, aircraft maintenance, oxygen, pilot training, and aircraft rental are some of the services provided by this FBO within these hangars.

The midfield hangar contains 2,575 square feet of office space, 4,485 square feet of hangar space, and fronts 55,000 square feet of ramp space. Helicopter services are provided from this location.

- HANGAR AND AIRCRAFT STORAGE FACILITIES

Hangar facilities at Oxnard Airport include conventional hangars, executive hangars, T-hangars, and Port-a-Ports (portable hangars). All hangars, except the one occupied at midfield by Aspen Helicopters, are located east of the terminal facilities and are depicted on **Exhibit 1C.**

A total of three conventional hangars, 20 executive hangars, 53 T-hangars, and 51 Port-a-Ports are located at the airport. Of these hangars, 55 are privately-owned and 69 are owned by the airport. All of the conventional hangar space is presently occupied by the FBO or by other business enterprises.

There are 39 aircraft tie-downs located in front of Hangar Two. A total of 11 of these spaces are leased to the FBO: four are leased privately, and the rest are utilized by transient aircraft.

- FUEL FACILITIES

Fuel storage facilities consist of two 12,000-gallon Jet A fuel tanks and two 12,000-gallon AvGas fuel tanks. The FBO provides fueling services to both commercial and general aviation aircraft with the use of two Jet A fuel trucks and one AvGas fuel truck.

- AIRPORT RESCUE AND FIREFIGHTING

Airport rescue and firefighting (ARFF) services at Oxnard Airport are provided 24 hours a day. The ARFF facility, located at the base of the ATCT, is continuously staffed by one of five trained ARFF officers. ARFF quick response equipment includes one truck with the capacity for 600 gallons of water, 110 gallons of aqueous film forming foam (AFFF), and 500 gallons of dry chemicals.

- AIRPORT MAINTENANCE

Airport maintenance equipment is stored in a secured storage area in the maintenance and storage facility located north of the midpoint of Runway 7-25.

- GENERAL AVIATION AUTOMOBILE PARKING

A number of parking spaces are available near the various general aviation facilities at Oxnard Airport. The parking spaces include approximately 21 spaces at the midfield location of Aspen Helicopters, 23 spaces in front of Hangar Two, and 42 spaces in front of Hangar Three.

Weather Observations

An Automatic Surface Observation System (ASOS) is installed at Oxnard Airport. The ASOS provides automated aviation weather observations 24 hours a day. The system updates weather observations every minute, continuously reporting significant weather changes as they occur. The ASOS system reports cloud ceiling, visibility, temperature, dew point, wind direction and speed, and barometric pressure. The ASOS is located on the west side of the airfield.

Utilities

The City of Oxnard provides water and sewer services to the airport. Electrical service is provided by Edison and natural gas service is provided by the Southern California Gas Company.

Tenants

Table 1C contains a summary of the airport tenants at Oxnard Airport. The location of many of these business was previously depicted on **Exhibit 1C**.

AIRSPACE AND AIR TRAFFIC CONTROL

The Federal Aviation Administration (FAA) Act of 1958 established the FAA as the responsible agency for the control and use of navigable airspace within the United States. The FAA Western-Pacific Region, with offices in Lawndale, CA, controls the airspace in southern California.

TABLE 1C

The FAA has established the National Airspace System (NAS) to protect persons and property on the ground and to establish a safe and efficient airspace environment for civil, commercial, and military aviation. The NAS covers the common network of U.S. airspace, including: air navigation facilities; airports and landing areas; aeronautical charts; associated rules, regulations, and procedures; technical information; personnel and material. The system also includes components shared jointly with the military.

AIR TRAFFIC CONTROL

Air Route Traffic Control Center (ARTCC)

The FAA has established 21 ARTCCs in the continental United States to control aircraft operating under instrument flight rules (IFR) within controlled airspace and while in the enroute phase of flight. An ARTCC assigns specific routes and altitudes along federal airways to maintain separation and orderly air traffic flow. ARTCCs use

radio communication and long range radar with automatic tracking capability to provide enroute air traffic services. Typically, the ARTCC splits its airspace into sectors and assigns a controller or team of controllers to each sector. As an aircraft travels through the ARTCC, one sector hands off control to another. Each sector guides the aircraft using discrete radio frequencies.

The Los Angeles ARTCC controls IFR aircraft entering and leaving the southern California area. The area of jurisdiction for the Los Angeles center includes most of the State of California, and portions of Nevada, Arizona, and Utah.

Radar Air Traffic Control Facility (RATCF)

The ARTCC delegates certain airspace to local terminal facilities which are responsible for the orderly flow of air traffic arriving and departing the major terminals. The Los Angeles ARTCC has delegated airspace to Point Mugu radar air traffic control facility (RATCF). The RATCF is staffed and operated by the U.S. Navy and is under contract with the FAA for terminal control of civilian aircraft.

RATCF uses direct radio communications and an automated radar terminal tracking system to control air traffic within its jurisdiction. Air traffic control services provided by Point Mugu RATCF include radar vectoring, sequencing and separation of IFR aircraft, and traffic advisories for all aircraft. The RATCF provides air traffic control services between 7:00 a.m. and 11:00 p.m. Between 10:00 p.m. and 6:00 a.m., air traffic control services are provided by the Los Angeles ARTCC.

Oxnard Airport Federal Control Tower (FCT)

The Oxnard Airport federal control tower operates daily from 7:00 a.m. to 9:00 p.m. local time, controlling aircraft movement within the Class D airspace and on the runway and taxiway systems. The IFR arrivals and departures from Oxnard Airport are coordinated with Point Mugu RATCF.

AIRSPACE STRUCTURE

To ensure a safe and efficient airspace environment for all aspects of aviation, the FAA has established an airspace structure that regulates and establishes procedures for aircraft using the National Airspace System. The U.S. airspace structure provides for two basic categories of airspace, controlled and uncontrolled, and identifies them as Classes A, B, C, D, E, and G as described below.

Class A Airspace

Class A airspace is designated in F.A.R. Part 71.33 for positive control of aircraft. The area includes specified airspace within the coterminous United States from 18,000 feet above mean sea level (MSL) to and including Flight Level 600 (60,000 feet MSL). Within Class A airspace, only IFR operations are allowed. The aircraft must have

special radio and navigation equipment and the pilot must obtain an air traffic control (ATC) clearance to enter Class A airspace. The pilot must have at least an instrument rating.

Class B Airspace

Class B airspace has been established at 29 high density airports in the United States as a means of regulating air traffic activity in these areas. They are established on the basis of a combination of enplaned passengers and volume of operations. Los Angeles International Airport (LAX), located 41 nautical miles (nm) south of Oxnard, is the only airport with Class B airspace in the area.

Class B airspace is designed to regulate the flow of uncontrolled traffic above, around, and below the arrival and departure airspace required for high performance, passenger-carrying aircraft at major airports. Aircraft operating in Class B airspace must have special radio and navigation equipment and must obtain an air traffic control (ATC) clearance. In order to operate within Class B airspace, a pilot must have at least a private pilot's certificate or be a student pilot who has met the requirements of F.A.R. 61.95, requiring special ground and flight training for Class B airspace. The LAX Class B airspace has an irregular shape due to the terrain and the number of airports in the vicinity of the airport.

The Mode C veil, an area associated with Class B airspace, extends for 30 nautical miles from LAX. When operating within this area, all aircraft must be equipped with a transponder with altitude encoder (Mode C).

Class C Airspace

The FAA has established Class C airspace at 120 airports around the country as a means of regulating air traffic activity in these areas. In order to fly inside Class C airspace, the aircraft must have a two-way radio and an encoding transponder, and the pilot must obtain an ATC clearance. Pilots must have at least a student pilot's certificate to fly in Class C airspace.

Burbank-Glendale-Pasadena Airport, located approximately 41 nautical miles east-southeast, and Santa Barbara Airport, located 40 nautical miles northwest of Oxnard Airport, are surrounded with Class C airspace. Oxnard Airport, however, does not have Class C airspace.

Class D Airspace

Class D airspace is normally a circular area with a radius of four to five miles around the primary airport and any extensions necessary to include instrument approach and departure paths. This controlled airspace typically extends upward from the surface to about 2,500 feet above the elevation of airports with operating control towers. Oxnard Airport, Camarillo Airport, and Naval Air Weapons Station (NAWS) Point Mugu are encompassed by Class D airspace.

As depicted on **Exhibit 1E**, Oxnard's Class D airspace is interrupted to the

southeast by NAWS Point Mugu's Class D airspace, and to the east by Camarillo Airport's Class D airspace. The ceiling of Oxnard and Camarillo Class D airspace is 2,000 feet mean sea level (MSL). NAWS Point Mugu's Class D airspace has a ceiling of 3,000 feet MSL.

Class E Airspace

The Class E category contains airspace formerly designated as control zones for non-towered airports and transition surfaces. The Class E airspace for a non-towered airport extends from the surface upward to overlying or adjacent controlled airspace. Otherwise, Class E airspace terminates at the base of Class A airspace. When Class E airspace is designated as a surface area, it is configured to contain all instrument approaches. When designated as an extension of Class B, Class C, or Class D airspace, the extension allows standard instrument approach procedures without communications requirements for VFR operations.

Class G Airspace

Airspace not designated as Class A, B, C, D, or E is considered uncontrolled, or Class G, airspace. Air traffic control does not have the authority or responsibility to exercise control over air traffic within this airspace. Class G airspace lies between the surface and 700 feet above the surface underneath much of the Class E transition surfaces in the study area. Also, the Oxnard and Camarillo Class D airspace reverts to Class G airspace when the ATCT is not operational.

Special Use Airspace

Immediately adjacent to and south of NAWS Point Mugu lies an area of restricted airspace (R-2519). This area is operated continuously and has an unlimited floor and ceiling. The airspace is restricted due to ground-to-air missile firings from NAWS Point Mugu out over the Pacific Ocean.

Approximately 10 nautical miles due south of Oxnard Airport is Warning Area 289. In general, restricted and warning areas indicate the existence of unusual, often invisible, hazards to aircraft such as artillery firing, aerial gunnery, or guided missiles. Warning areas are established beyond the three-mile limit along U.S. coastlines. Though the activities conducted within warning areas may be as hazardous as those in restricted areas, warning areas cannot be legally designated as restricted areas because they are over international waters. Penetrations of warning areas during periods of activity may be hazardous to aircraft not participating in national defense operations. Los Angeles ARTCC is the controlling facility for the warning area. The warning area extends from NAWS Point Mugu out into the Pacific Ocean in a triangular shape. The warning area is used for weapons training by Navy and Marine high performance aircraft.

Approximately 20 nautical miles north of Oxnard, an eight-mile wide corridor, which runs in an east-west direction, is designated as special military use airspace. Flights in this area are not restricted, however, pilots must be aware of the potential airspace conflict

AREA AIRSPACE

in the area. The sectional chart lists the floors and ceilings of the operations, and instructs navigators to contact Hawthorne Flight Service Station (FSS) to receive activity status of military operations in the area.

Airspace Conflicts

There are a number of airspace conflicts in the Oxnard Airport area including obstructions, terrain, and congested airspace.

The location of Oxnard Airport in proximity to NAWS Point Mugu and Camarillo Airport limits the available area near the airport for unrestricted VFR flying. For safety purposes, air traffic controllers at Oxnard must call RATCF and wait for approval, prior to releasing aircraft on instrument departures from Oxnard Airport. After permitting an instrument departure from Oxnard Airport, RATCF will not permit another departure until positive radar contact is established with the first aircraft.

NAVIGATIONAL AIDS

Navigational aids are electronic devices that transmit radio frequencies which pilots of properly equipped aircraft translate into point-to-point guidance and position information. The types of electronic navigational aids available for aircraft flying to or from Oxnard Airport include the very high frequency omnidirectional range facility (VOR), non-directional beacon (NDB), and the global positioning system (GPS).

The VOR, in general, provides azimuth readings to pilots of properly equipped aircraft by transmitting a radio signal at every degree to provide 360 individual navigational courses. Frequently, distance measuring equipment (DME) is combined with a VOR facility (VOR/DME) to provide distance as well as direction information to the pilot. The Camarillo VOR and the Ventura VOR are used by pilots flying to or from Oxnard Airport.

The NDB transmits nondirectional radio signals whereby pilots of properly equipped aircraft can determine the bearing to or from the NDB facility and "home on" or track to or from the station. Pilots flying to or from Oxnard Airport can use the Pacoima NDB.

GPS is an additional navigational aid for pilots enroute to the airport. This system was initially developed by the United States Department of Defense for military navigation around the world and is currently being utilized more and more in civilian aircraft. GPS uses satellites placed in orbit around the earth to transmit electronic signals, which properly equipped aircraft use to determine altitude, speed, and navigational information. With GPS, pilots can directly navigate to any airport in the country and are not required to navigate using a specific navigational facility. The FAA is proceeding with a program to gradually replace all traditional enroute navigational aids with GPS over the next 20 years.

LOCAL OPERATING PROCEDURES

Oxnard Airport is situated at 43 feet MSL. The traffic pattern altitude for all aircraft at the airport is 1,000 feet above the airfield elevation (1,043 feet MSL). Both runways utilize a left-hand traffic pattern. In this manner, aircraft approach the desired runway end following a series of left-hand turns.

Instrument Approach Procedures

Instrument approach procedures are a series of predetermined maneuvers, established by the FAA, which utilize electronic navigational aids such as those discussed in the previous section. The use of approach procedures assist pilots in locating and landing at an airport during low visibility and cloud ceiling conditions.

The capability of an instrument approach is defined by the visibility and cloud ceiling minimums associated with the approach. Visibility minimums define the horizontal distance that the pilot must be able to see to complete the approach. Cloud ceilings define the lowest level a cloud layer (defined in feet above the ground) can be situated for a pilot to complete the approach. If the observed visibility or cloud ceilings is below the minimums prescribed for the approach, the pilot cannot complete the instrument approach.

- PRECISION INSTRUMENT APPROACHES

Most precision approaches in use in the United States today are instrument landing systems (ILS). An ILS provides an approach path for the exact alignment and descent of an aircraft on final approach to a runway. The system provides three functions: guidance, provided vertically by a glide slope antenna and horizontally by a localizer; range, furnished by marker beacons or distance measuring equipment; and visual alignment, supplied by the approach light systems and runway edge lights.

Oxnard Airport has one published precision approach to Runway 25. Runway 25 is equipped with an ILS consisting of a localizer, glide slope, and a MALSR in addition to middle and outer marker beacons. The precision ILS approach to Runway 25 at Oxnard Airport uses a standard 3.0 degree glide slope.

Typically, a precision ILS approach aided by a localizer, glideslope, and MALSR will provide Category I minimums (one-half mile visibility and 200-foot cloud ceilings). However, for Oxnard Airport, obstructions located in the approach require weather minimums for the ILS Runway 25 approach to be at or above one mile visibility and 300-foot cloud ceilings.

- NON-PRECISION APPROACHES

Utilizing the Camarillo VOR/DME or the global positioning system (GPS), two non-precision approaches are available at Oxnard. The VOR or GPS Runway 25 approach can be flown when cloud ceilings are 500 feet above ground level (AGL) or greater and visibility is one mile for aircraft with approach speeds of up to 121 knots, 1-1/4 miles for aircraft with approach speeds less than 141 knots, and 1-1/2 miles for aircraft with approach speeds less than 166 knots. The VOR or GPS Runway 25 approach also provides for a circling approach. The circling approach also requires a cloud ceiling of 500 feet AGL for aircraft with approach speeds less than 141 knots. Visibility requirements are the same for aircraft with approach speeds less than 121 knots, but increase to 1-1/2 miles for aircraft with approach speeds less than 141 knots. For aircraft with approach speeds greater than 141 knots but less than 166 knots, the circling approach minimums increase to 700 feet AGL cloud ceilings and 2-1/4 miles visibility.

The GPS approach to Runway 7 is the second published non-precision approach at Oxnard Airport. GPS signals ensure adequate terrain and obstruction clearances during final approach to the runway. The GPS approach to Runway 7 can be flown when cloud ceilings are 500 feet AGL or greater and visibility is one mile for aircraft with approach speeds of less than 121 knots, 1-1/4 miles for aircraft with approach speeds greater than 121 but less than 141 knots, and 1-1/2 miles for aircraft with approach speeds greater than 141 knots but less than 166 knots. The GPS Runway 7 approach also allows a circling approach. The minimums for the circling approach are the same as the circling VOR or GPS approach to Runway 25.

Standard Instrument Departures

Currently, two Standard Instrument Departure (SID) procedures are published for Oxnard Airport -- the Skiff Four and the Camarillo Three SID. Each of these SIDs have two procedures: take-off and transition routing. The take-off procedures are designed to get the aircraft off the ground to a specified point. Once aircraft reach the designated point, they continue to their destination via transition routes or routes assigned by air traffic control. Transition routes are paths delineated by VOR/DME radials.

Aircraft departing Runway 7 utilizing the Skiff Four SID are directed to turn left after take-off and intercept the Camarillo VOR/DME radial 249. Aircraft are to continue climbing westbound to the Skiff intersection then via a transition or assigned route. Aircraft departing Runway 25 climb via the Camarillo VOR/DME radial 249 to the Skiff intersection. Once at the Skiff intersection, aircraft continue via a transition route or other route assigned by air traffic control.

Aircraft departing Runway 7 utilizing the Camarillo Four departure climb to the Camarillo VOR/DME via an assigned or transition route. Aircraft utilizing the Camarillo Three SID

departing Runway 25 turn right after take-off and intercept the Camarillo VOR/DME radial 249 via an assigned or transition route.

Although the airport is supported by the aforementioned SIDs, discussions with Oxnard ATCT staff indicate that they are not often used. For noise abatement purposes, radar vectors are given to aircraft in order to avoid noise-sensitive areas. ATCT staff indicate that aircraft departing Runway 25 are assigned a heading of 270 degrees between 7:00 a.m. and 8:00 a.m. and 255 degrees between 8:00 a.m. and 9:00 p.m.

Customary ATC And Flight Procedures

Flights to and from Oxnard Airport are conducted using both Instrument Flight Rules (IFR) and Visual Flight Rules (VFR). Instrument Flight Rules are those that govern the procedures for conducting instrument flight. Visual Flight Rules govern the procedures for conducting flight under visual conditions (good weather). Most air carrier, military, and general aviation jet operations are conducted under IFR regardless of the weather conditions.

Visual Flight Rule Procedures: Under VFR conditions, the pilot is responsible for collision avoidance and will typically contact the tower when approximately 10 miles from the airport for sequencing into the traffic pattern.

Generally, VFR general aviation traffic stays clear of the more congested airspace and follows recommended VFR flyways in the area. There are no VFR fly routes located in the vicinity of Oxnard Airport; however, many VFR fly routes are located to the southeast in the greater Los Angeles area.

Instrument Flight Rule Procedures: The Point Mugu RATCF handles all IFR traffic to and from Oxnard Airport. IFR arrival traffic is transferred to the RATCF by the ARTCC as traffic enters RATCF airspace. Traffic approaching from the southeast is typically vectored to the Camarillo or Ventura VOR/DME and then to the airport via the precision approach procedure. Aircraft approaching from the north/northwest are typically provided vectors to intercept the ILS signal. IFR departures require clearance from the Point Mugu RATCF before takeoff unless RATCF is closed. When the RATCF is closed, aircraft receive IFR clearance once airborne from the Los Angeles ARTCC.

Local ATC Procedures: At present there is no formal runway use program at Oxnard Airport that dictates the use of one runway over another. Arrivals and departures, however, are almost exclusively on Runway 25 due to the prevailing westerly winds. Arrivals and departures occur occasionally on Runway 7. Operations on this runway usually occur in Santa Ana wind conditions (strong winds from the north and east) or if requested by the pilot.

Noise Abatement Procedures

At Oxnard Airport, the airport traffic control tower, the Ventura County Department of Airports, and the airport users have developed noise abatement

procedures for VFR operations. Instructions are outlined regarding departures, arrivals, and pattern procedures at the airport which are aimed at minimizing noise exposure over noise-sensitive areas without compromising safety. Pilots are requested to follow the published procedures unless it is considered unsafe, weather conditions do not allow, or they are otherwise instructed to deviate by the airport traffic control tower. A voluntary curfew is in effect for all operations between the hours of 11:00 p.m. and 6:00 a.m.

COMMUNITY PROFILE

The purpose of this section is to summarize various studies and data to provide an understanding of the characteristics of the local area. Within this section is a description of ground access systems near the airport, a description of land use around the airport now and planned for the future, local climate data, and a historical summary of the local economy and demographics.

REGIONAL SETTING, ACCESS AND TRANSPORTATION

The City of Oxnard is situated along the coastal edge of the 200-square mile Oxnard Plain. Immediately adjacent to the City of Oxnard is the City of Port Hueneme. The Oxnard Harbor District operates the largest deep sea port between San Francisco and Los Angeles.

Oxnard Airport lies one and one-half miles east of the Pacific Ocean. **Exhibit 1E** depicts the location of Oxnard Airport in its regional setting. The airport is bordered on three sides by major arterial roadways: Ventura Road and Victoria Avenue run north-south along the eastern and western edges of airport property, and Fifth Avenue runs east-west along the southern edge of airport property between Ventura Road and Victoria Avenue. The airport is afforded regional access by the Ventura Freeway (U.S. Highway 101) located four miles north of the airport and the Pacific Coast Highway (State Highway 1) located approximately one mile east of the airport.

Regional Airports

Oxnard Airport is the only airport served by commercial (commuter) airlines in the immediate vicinity. The Los Angeles Basin, however, is served by a number of commercial service airports. They include Los Angeles International, Burbank-Glendale-Pasadena, Long Beach, Ontario International, and John Wayne-Orange County, all of which are served by major airlines. Approximately 40 nautical miles to the northwest, Santa Barbara Airport is the only other commercial service airport within relatively close proximity of Oxnard Airport.

Two other public use general aviation airports and one military airport are located in or near the Oxnard Airport study area. Camarillo Airport is a

public use general aviation airport approximately five miles east of Oxnard Airport. Owned and operated by Ventura County, this airport is served by a single runway and has more than 500 based aircraft and over 180,000 operations annually. Santa Paula Airport is a privately-owned, public use airport. Located approximately nine nautical miles northeast of Oxnard, Santa Paula Airport has one runway and more than 250 based aircraft.

NAWS Point Mugu is a Navy/Marine Airbase located approximately eight miles southeast of Oxnard Airport. The airbase serves military aircraft ranging from the large C-130 transport to the high performance F-18A fighter/attack jet aircraft. Due to the orientation of the airbase's two runways, Point Mugu's flight pattern does not conflict with Oxnard Airport's airspace.

Although only three other airports are within the vicinity of Oxnard Airport, it is important to note the large number of airports in the greater Los Angeles area. In addition to the commercial service airports, 20 public use general aviation airports, seven private airports, and four military airports are in the greater Los Angeles area.

AREA LAND USE AND CONTROL

Land uses immediately surrounding Oxnard Airport are varied and include a mix of agriculture, open space, residential, commercial and industrial development. The airport itself and development to the east and south are under the jurisdiction of the City of Oxnard. Undeveloped agricultural land to the north and west are unincorporated and are therefore under the jurisdiction of Ventura County.

The nearest school to the airport is located approximately two blocks east of the airport. The nearest church is also located two blocks east of the airport.

Land Use Plans

Land use surrounding the airport is under the jurisdiction of both the City of Oxnard and Ventura County. To guide development in the area, both of these entities have prepared and adopted general plans as required by California State Law.

The Public Utilities Code of the State of California, Sections 21670 et. seq., requires the County Board of Supervisors to establish an Airport Land Use Commission (ALUC) in each county with an airport operated for the benefit of the general public. The Code also sets forth the range of responsibilities, duties, and powers of the Commission.

Instead of creating a new body to serve as the ALUC, state law allows the county board of supervisors to authorize an appropriately designated body to fulfill ALUC responsibilities. (See Section 21670.1.) In Ventura County, the Board of Supervisors has designated the Ventura County Transportation Commission to act as the ALUC for the County.

Section 21675 requires the Airport Land Use Commission to formulate a comprehensive land use plan for the

area surrounding each public use airport.

As part of these general plans, various future land use maps were prepared. Review of these future land use maps indicate that future land uses within the vicinity are planned to be compatible with airport operations. Commercial and industrial land uses are planned for the area immediately surrounding the airport.

CLIMATE

Weather conditions are important to the planning and development of an airport. Temperature is an important factor in determining runway length requirements, while wind direction and speed are used to determine optimum runway orientation. The need for navigational aids and lighting is determined by the percentage of time that visibility is impaired due to cloud coverage or other conditions.

The Oxnard region experiences steady temperatures throughout the year. The average high temperature only varies nine degrees, as December, January, February, and March are the coolest months with an average high of 66 degrees Farenheit (F), and August and September are the warmest months with an average high of 75 degrees F. The average precipitation in Oxnard is 14.3 inches per year. Average temperature and precipitation totals by month are summarized in **Table 1D**.

TABLE 1D
Weather Summary
Oxnard, California

Month	Daily Minimum (degrees F)	Daily Maximum (degrees F)	Average Total Precipitation (inches)
January	44	66	3.0
February	45	66	3.1
March	46	66	2.4
April	48	68	0.9
May	51	69	0.1
June	55	71	0.0
July	57	74	0.0
August	59	75	0.1
September	57	75	0.4
October	53	74	0.3
November	48	70	2.0
December	44	66	2.0
Yearly Average	**34.9**	**65.3**	**14.3**

SOCIOECONOMIC CHARACTERISTICS

A variety of historical and forecast socioeconomic data, related to the regional area, has been collected for use in various elements of this master plan. This information provides essential background for use in determining aviation service level requirements. Aviation forecasts are often related to the population base, economic strength of a region, and the ability of a region to sustain a strong economic base over an extended period of time.

POPULATION

Historical population data for the City of Oxnard, Ventura County, and the State of California are presented in **Table 1E**. As shown in the table, the population of Oxnard, with an average annual growth rate of 2.30 percent, has grown at a faster pace than both Ventura County and the State of California, which have similar growth rates of 1.81 and 1.78 percent, respectively. According to the **City of Oxnard 2020 General Plan**, these population trends are not expected to continue as the city is expected to grow at a slower pace through the year 2020 than it has historically.

TABLE 1E
Historical Population

	1980	1990	2000	Average Annual Growth Rate
City of Oxnard	108,195	142,216	170,358	2.30%
Ventura County	525,818	669,016	753,197	1.81%
State of California	23,796,800	29,760,021	33,871,648	1.78%

Source: U.S. Census

EMPLOYMENT

Analysis of a community's employment base can be valuable in determining the overall well-being of that community. In most cases, the community's make-up and health is significantly determined by the availability of jobs, the variety of employment opportunities, and the types of wages provided by local employers. A breakdown of historical and current employment data for Ventura County is presented in **Table 1F**.

TABLE 1F
Employment by Sector
Ventura County

Industry	1997	1998	1999	2000	2001	% Change
Farming	17,300	17,700	17.500	19,300	22,300	6.55
Mining	1,500	1,300	1,000	900	900	-11.99
Construction	11,100	12,700	14,500	15,100	15,500	8.71
Manufacturing	32,800	36,000	38,600	41,000	41,100	5.80
Transportation and Utilities	9,700	10,600	11,500	11,100	11,000	3.19
Trade	59,200	59,700	62,100	65,000	66,400	2.91
Finance, Insurance & Real Estate	12,600	13,600	14,900	16,300	18,100	9.48
Services	72,400	75,500	77,100	81,300	81,800	3.10
Government	43,300	43,100	43,900	44,300	45,300	1.14

Source: California Economic Development Department

As indicated in the table, the services industry is the largest employer in the county followed by the trade industry. The greatest increases in activity during the five-year period were experienced in the construction and financial sectors. The only decrease experienced during the time period was in the mining industry. Overall, the county has experienced strong growth in the majority of the industries.

Table 1G summarizes labor force data for Ventura County. As shown in the table, the labor force available in Ventura County increased by 45,000 persons from 1990 to 2000. During that same time period, the unemployment rate increased by 1.80 percent from 1990 to 1995 but then decreased 3.0 percent in 2000 to a level below that reported in 1990.

TABLE 1G
Labor Force Data and Economic Indicators
Ventura County

	1990	1995	2000
Labor Force Data			
Civilian Labor Force	368,000	382,100	413,000
Unemployment	21,100	28,500	18,700
Unemployment Rate	5.7%	7.5%	4.5%

SUMMARY

The information discussed in this chapter provides a foundation upon which the remaining elements of the planning process will be constructed. This information will provide guidance, along with additional analysis and data collection, for the development of forecasts of aviation demand and facility requirements.

OXNARD AIRPORT

Chapter Two
FORECASTS

CHAPTER TWO

FORECASTS

OXNARD AIRPORT

An important initial factor in facility planning is a definition of demand that may reasonably be expected to occur during the useful life of its key components. In airport master planning, this involves projecting potential aviation activity over at least a twenty-year time frame. For general aviation/commuter service airports such as Oxnard Airport (OXR), forecasts of passengers, based aircraft, and operations (takeoffs and landings) serve as the basis for facility planning.

FAA Advisory Circular 150/5070-6A outlines six standard steps involved in the forecast process, including:

1) Obtain existing FAA and other related forecasts for the area served by the airport.

2) Determine if there have been significant local conditions or changes in the forecast factors.

3) Make and document any adjustments to the aviation activity forecasts.

4) Where applicable, consider the effects of changes in uncertain factors affecting demand for airport services.

5) Evaluate the potential for peak loads within the overall forecasts of aviation activity.

6) Monitor actual activity levels over time to determine if adjustments are necessary in the forecasts.

Aviation activity can be affected by many influences on the local, regional, and national levels, making it virtually impossible to predict year-to-year fluctuations of activity over twenty years with any certainty into the future. Therefore, it is important to remember

that forecasts are to serve only as guidelines and planning must remain flexible enough to respond to a range of unforseen developments.

The following forecast analysis examines recent developments, historical information, and current aviation trends to provide an updated set of aviation demand projections for Oxnard Airport. The intent is to permit the County of Ventura and its Department of Airports to make planning adjustments necessary to ensure that the facility meets projected demands in an efficient and cost-effective manner.

One of the longest and strongest growth periods in aviation history came to an abrupt halt on September 11, 2001 (9-11). Immediately following the terrorist attacks, the national airspace system was closed and all commercial flights were grounded. Following the resumption of flights, commercial airline traffic declined, which led to schedule reductions and layoffs by many of the commercial airlines. The federal government provided billions of dollars in financial assistance to the commercial airlines, along with loan guarantees. The cumulative impacts of September 11 may only be determined over time.

Prior to updating the airport's forecasts, the following section further discusses the trends in aviation at the national level.

NATIONAL AVIATION TRENDS

Each year, the Federal Aviation Administration (FAA) publishes its national aviation forecast. Included in this publication are forecasts for air carriers, regional/commuters, general aviation, and FAA workload measures. The forecasts are prepared to meet budget and planning needs of the constituent units of the FAA and to provide information that can be used by state and local authorities, the aviation industry, and by the general public. The current edition when this chapter was prepared was FAA **Aerospace Forecasts-Fiscal Years 2003-2014**, published in March 2003. The forecasts use the economic performance of the United States as an indicator of future aviation industry growth. Similar economic analyses are applied to the outlook for aviation growth in international markets.

In 2002, the overall demand for aviation services declined for the first time in more than seven years. A modest recovery is expected in 2003 as aviation user groups redefine themselves, in the post 9-11 environment. More stable levels of growth are not anticipated until 2005.

U.S. air carriers reduced capacity approximately 20 percent immediately after 9-11. Extensive route restructuring by the major carriers was expected to reduce domestic capacity another 0.8 percent in 2003. Passenger enplanements, however, are forecast to increase by 2.0 percent in 2003, 4.7

percent in 2004, then average 3.5 percent annually through 2014.

Air cargo traffic declined 5.9 percent in domestic markets in 2002, but the all-cargo carriers were down just 2.8 percent. Domestic cargo is forecast to grow at 3.9 percent annually through 2014. General aviation is expected to achieve low-to-moderate increases in the active fleet and hours flown, with most of the growth occurring in business/corporate flying. Combined aviation activity at FAA and contract airport traffic control facilities is expected to increase at significantly higher rates than those predicted for general aviation.

The forecasts prepared by the FAA assume that aviation demand will follow a similar path to recovery, as with previous terrorist or war-related incidents. In each instance, traffic and revenue growth resumed within a year. However, the events of September 11 had a much more significant effect on the aviation industry and, therefore, must be taken into consideration in the following forecasts.

REGIONAL/COMMUTER AIRLINES

The regional/commuter airline industry, defined as air carriers providing regularly scheduled passenger service and fleets composed primarily of aircraft having 60 seats or less, continues to be the strongest growth sector of the commercial air carrier industry. Dramatic growth in agreements with the major carriers, followed by a wave of air carrier acquisitions and purchases of equity interests, has resulted in the transfer of large numbers of short-haul jet routes to their regional partners, fueling the industry's growth.

Despite the events of September 11, many regionals/commuters were able to maintain their previous flight schedules. In fact, many have even increased their flight schedules in response to the transfer of additional routes from their larger code-sharing partners. Regional/ commuter capacity and traffic continued to grow in 2002, enplaning 90.7 million passengers in the fiscal year. This is an increase of 8.5 percent more than 2001. The regionals/commuters achieved an all-time high load factor of 61.3 percent in 2002, an increase of 2.6 percent over the previous year.

Industry growth is expected to continue to outpace that of the larger commercial air carriers. The introduction of new state-of-the-art aircraft, especially high-speed turboprops and regional jets with ranges of well over 1,000 miles, is expected to open up new opportunities for growth in non-traditional markets. The regional airline industry will also continue to benefit from integration with the larger air carriers. The further need for larger commercial air carriers to reduce costs and fleet size will insure that these carriers continue to transfer smaller, marginally profitable routes to the regional air carriers.

Likewise, the increased use of regional jets is expected to lead to another round of route rationalization by the larger commercial carriers, particularly on

low-density routes in the 500-mile range. Regional jet aircraft can serve these markets with the speed and comfort of a large jet, while at the same time providing greater service frequency that is not economically feasible with larger jets. This is expected to contribute to strong growth during the early portion of the planning period, although this phenomenon is expected to diminish during the mid-to-latter portion of the planning period.

Passenger enplanements are expected to increase at an average annual rate of 5.6 percent during the FAA's 12-year forecast period, from 90.7 million in 2002 to 174.1 million in 2014. In 2014, regionals/commuters are expected to transport 17.5 percent of all passengers in scheduled domestic air service. This is an increase of 3.0 percent from 2002. This greater use of regional jets results in the average seating capacity of the regional fleet increasing from 42.8 seats in 2002 to 50.4 seats in 2014. **Exhibit 2A** depicts passenger enplanements and fleet mix forecasts for the U.S. regional/commuter market.

GENERAL AVIATION

Following more than a decade of decline, the general aviation industry was revitalized with the passage of the *General Aviation Revitalization Act* in 1994, which limits the liability on general aviation aircraft to 18 years from the date of manufacture. This legislation sparked an interest to renew the manufacturing of general aviation aircraft, due to the reduction in product liability, as well as renewed optimism for the industry. The high cost of product liability insurance was a major factor in the decision by many American aircraft manufacturers to slow or discontinue the production of general aviation aircraft.

However, this continued growth in the general aviation industry slowed considerably in 2001, negatively impacted by the events of September 11. Thousands of general aviation aircraft were grounded for weeks, due to "no-fly zone" restrictions imposed on operations of aircraft in security-sensitive areas. Some U.S. airports in and around Washington, D.C. and New York City remain closed to visual flight rules (VFR) traffic. This, in addition to the economic recession which began in March 2001, has had a profoundly negative impact on the general aviation industry.

According to a report released by the General Aviation Manufacturers Association (GAMA), aircraft shipments in 2002 were down 16.9 percent for the three quarters of fiscal year 2002. The Aerospace Industries Association of America (AIAA) expected general aviation shipments in 2002 to decline 17.7 percent, to 2,153 aircraft. The number of general aviation hours flown declined by 5.9 percent in 2002 and is projected to increase by only 1.1 percent in 2003 and 1.4 percent in 2004.

The events of September 11 have not had as negative an impact on the business/corporate side of general aviation. The increased security measures placed on commercial flights has increased interest in fractional and

PERCENT BY AIRCRAFT SEAT SIZE

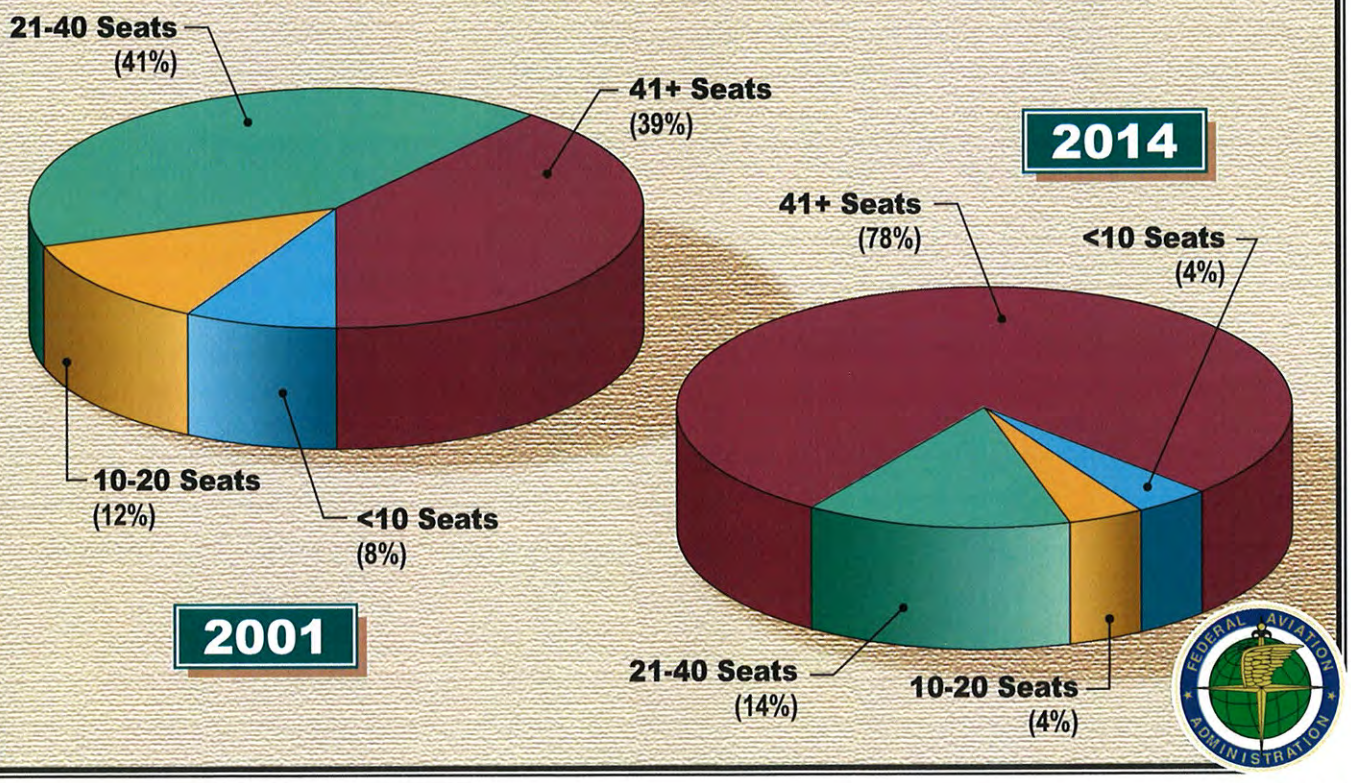

Exhibit 2A
U.S. REGIONAL/COMMUTER FORECASTS

corporate aircraft ownership, as well as on-demand charter flights. This is reflected in the forecast of active general aviation pilots (excluding air transport pilots), which are projected to increase by 81,000 (1.2 percent annually) over the forecast period.

According to the FAA, general aviation operations and general aviation aircraft handled at enroute traffic control centers increased for the ninth consecutive year. The forecast for general aviation aircraft assumes that business use of general aviation will expand much more rapidly than personal/sport use, due largely to the expected growth in fractional ownership.

In 2002, there were an estimated 211,040 active general aviation aircraft, representing a decrease of 0.2 percent from the previous year and the third straight decline in five years of increases. **Exhibit 2B** depicts the FAA forecast for active general aviation aircraft in the United States. The FAA forecasts general aviation aircraft to increase at an average annual rate of 0.7 percent over the 12-year forecast period. Piston-powered aircraft are expected to grow at an average annual rate of 0.2 percent. This is due, in part, to declining numbers of multi-engine piston aircraft, while single engine and rotorcraft increase at rates of 0.3 and 1.1 percent, respectively.

Turbine-powered aircraft (turboprop and jet) are expected to grow at an average annual rate of 2.3 percent over the forecast period. The jet portion of this fleet is expected to grow at an annual average growth rate of 3.6 percent. This growth rate for jet aircraft can be attributed to growth in the fractional ownership industry, new product offerings (which include new entry level aircraft and long-range global jets), and a shift away from commercial travel by many travelers and corporations.

Manufacturer and industry programs and initiatives continue to revitalize the general aviation industry with a variety of programs. For example, Piper Aircraft Company has created Piper Financial Services (PFS) to offer competitive interest rates and/or leasing of Piper aircraft. Manufacturer and industry programs include the "No Plane, No Gain" program promoted jointly by the General Aviation Manufacturers Association (GAMA) and the National Business Aircraft Association (NBAA). This program was designed to promote the use of general aviation aircraft as an essential, cost-effective tool for businesses. Other programs are intended to promote growth in new pilot starts and to introduce people to general aviation. These include "Project Pilot" sponsored by the Aircraft Owners and Pilots Association (AOPA), "Flying Start" and "Young Eagles" sponsored by the Experimental Aircraft Association (EAA), "Be a Pilot" jointly sponsored and supported by more than 100 industry organizations, and "Av Kids" sponsored by the NBAA. Over the years, programs such as these have played an important role in the success of general aviation and will continue to be vital to its growth in the future.

SOCIOECONOMIC TRENDS

Local and regional forecasts developed for key socioeconomic variables provide an indicator for identifying changes in demand for aviation activities at an airport. Three variables typically useful in evaluating potential for increased demand are population, employment, and per capita personal income (PCPI).

Table 2A presents historic and forecast demographics for Ventura County. These forecasts were obtained from **The Complete Economic and Demographic Data Source (CEDDS 2001)**, by Woods and Poole Economics, Inc., January 2002. This source forecasts population in Ventura County to grow at an average annual rate of 1.2 percent through 2025. Total employment is projected to grow by an average annual rate of 1.4 percent. Inflation-adjusted PCPI is projected to grow at 1.1 percent annually.

The Southern California Association of Governments (SCAG) prepared a Socioeconomic Forecast in 2001 for the six-county metropolitan region including Ventura County. The regional forecasts were adopted by the SCAG Regional Council in April 2001, and the Ventura County forecasts were adopted by the Ventura Council of Governments in May 2001. These are depicted on **Table 2B**.

The six-county region includes Ventura, Imperial, Los Angeles, Orange, Riverside, and San Bernardino counties. Overall, population is projected to grow 1.4 percent annually in the region. While Ventura County's population grew an average of 1.25 percent annually over the decade of the 1990s, the SCAG forecast calls for a 1.1 percent average increase through 2025. This is slightly lower than the 1.2 percent average population growth projected by Woods and Poole. While Woods and Poole anticipates that Ventura County will top one million residents by 2025, SCAG forecasts 951,000.

Table 2B also includes the SCAG forecast for the City of Oxnard. The projections for the city actually anticipate that the population will grow from the 2000 census count of 173,316 to 227,460 residents by 2025.

While using a different benchmark for employment, SCAG projected Ventura County employment to increase at an average annual rate of 1.3 percent through 2025. Like population, this growth is slightly lower than that projected by Woods and Poole.

According to SCAG, a key change anticipated to occur in future employment is a decline in agricultural employment from ten percent to just three percent by 2025. Similarly, manufacturing employment is projected to decline while the services sector increases.

COMMUTER SERVICE FORECASTS

Airline activity at Oxnard Airport is exclusively comprised of commuter airline service. As of the late fall of 2002, when these forecasts were completed, service was provided by SkyWest Airlines operating as United Express. There were five daily flights to Los Angeles International Airport (LAX) utilizing 30-seat Embraer 120 turboprop aircraft.

Since airline deregulation in the late 1970s, airline passenger activity at Oxnard Airport has fluctuated widely. As can be seen in **Table 2C**, annual enplaned passengers began the 1980s decade at 36,553 before dropping to a low of just 11,604 in 1986. By the end of the decade, however, traffic had risen to a high of 46,275 enplanements in 1990. That remains the highest enplanement level in the last twenty years. During that peak year, OXR had 18 daily flights to LAX, San Francisco, and Las Vegas. Two years later, traffic had dropped by more than 50 percent to 22,767 enplanements as service had been reduced to just one airline and seven daily flights.

By the base year of the **1996 Draft Master Plan** (1994), traffic was back up to 39,989 enplanements. At that time, the airport was being served by two commuters (United Express and American Eagle), both providing service to LAX on 30-seat turboprop aircraft. In the ensuing years, traffic fluctuated but remained in the 30,000 to 40,000 enplanement range. During this period, American Eagle dropped service, but Mesa Airlines added service in November 2000 with 37-seat DeHavilland Dash 8 aircraft, and 19-seat Beech 1900s.

Exhibit 2C depicts 12-month moving totals for enplanements at Oxnard Airport since December 1998. The moving totals represent a year's worth of enplanements ending with the month shown. Moving totals provide a means by which to analyze annualized trends on a monthly basis. As indicated, the moving totals reached a peak with the 12 months ending in August 1999 totaling 39,863 enplanements. At that time, United Express was the only airline serving OXR, but it was providing eight flights per day. Shortly thereafter, United Airlines began to reduce its schedule at LAX. The 12-month total began to decline each month after that until November 2000, when Mesa Airlines began service under the code-share name America West Express.

The 12-month total began to increase until reaching a peak of 38,345 in August 2001. Mesa Airlines announced it was discontinuing service to OXR on September 6, 2001. Five days after the airline left, came the events of September 11, 2001.

During the full nine months of operation, Mesa Airlines averaged 1,073 enplanements. During that same period, SkyWest's enplanements declined to an average of 586 per month. This resulted in a net gain of

02MP10-2C-4/14/03

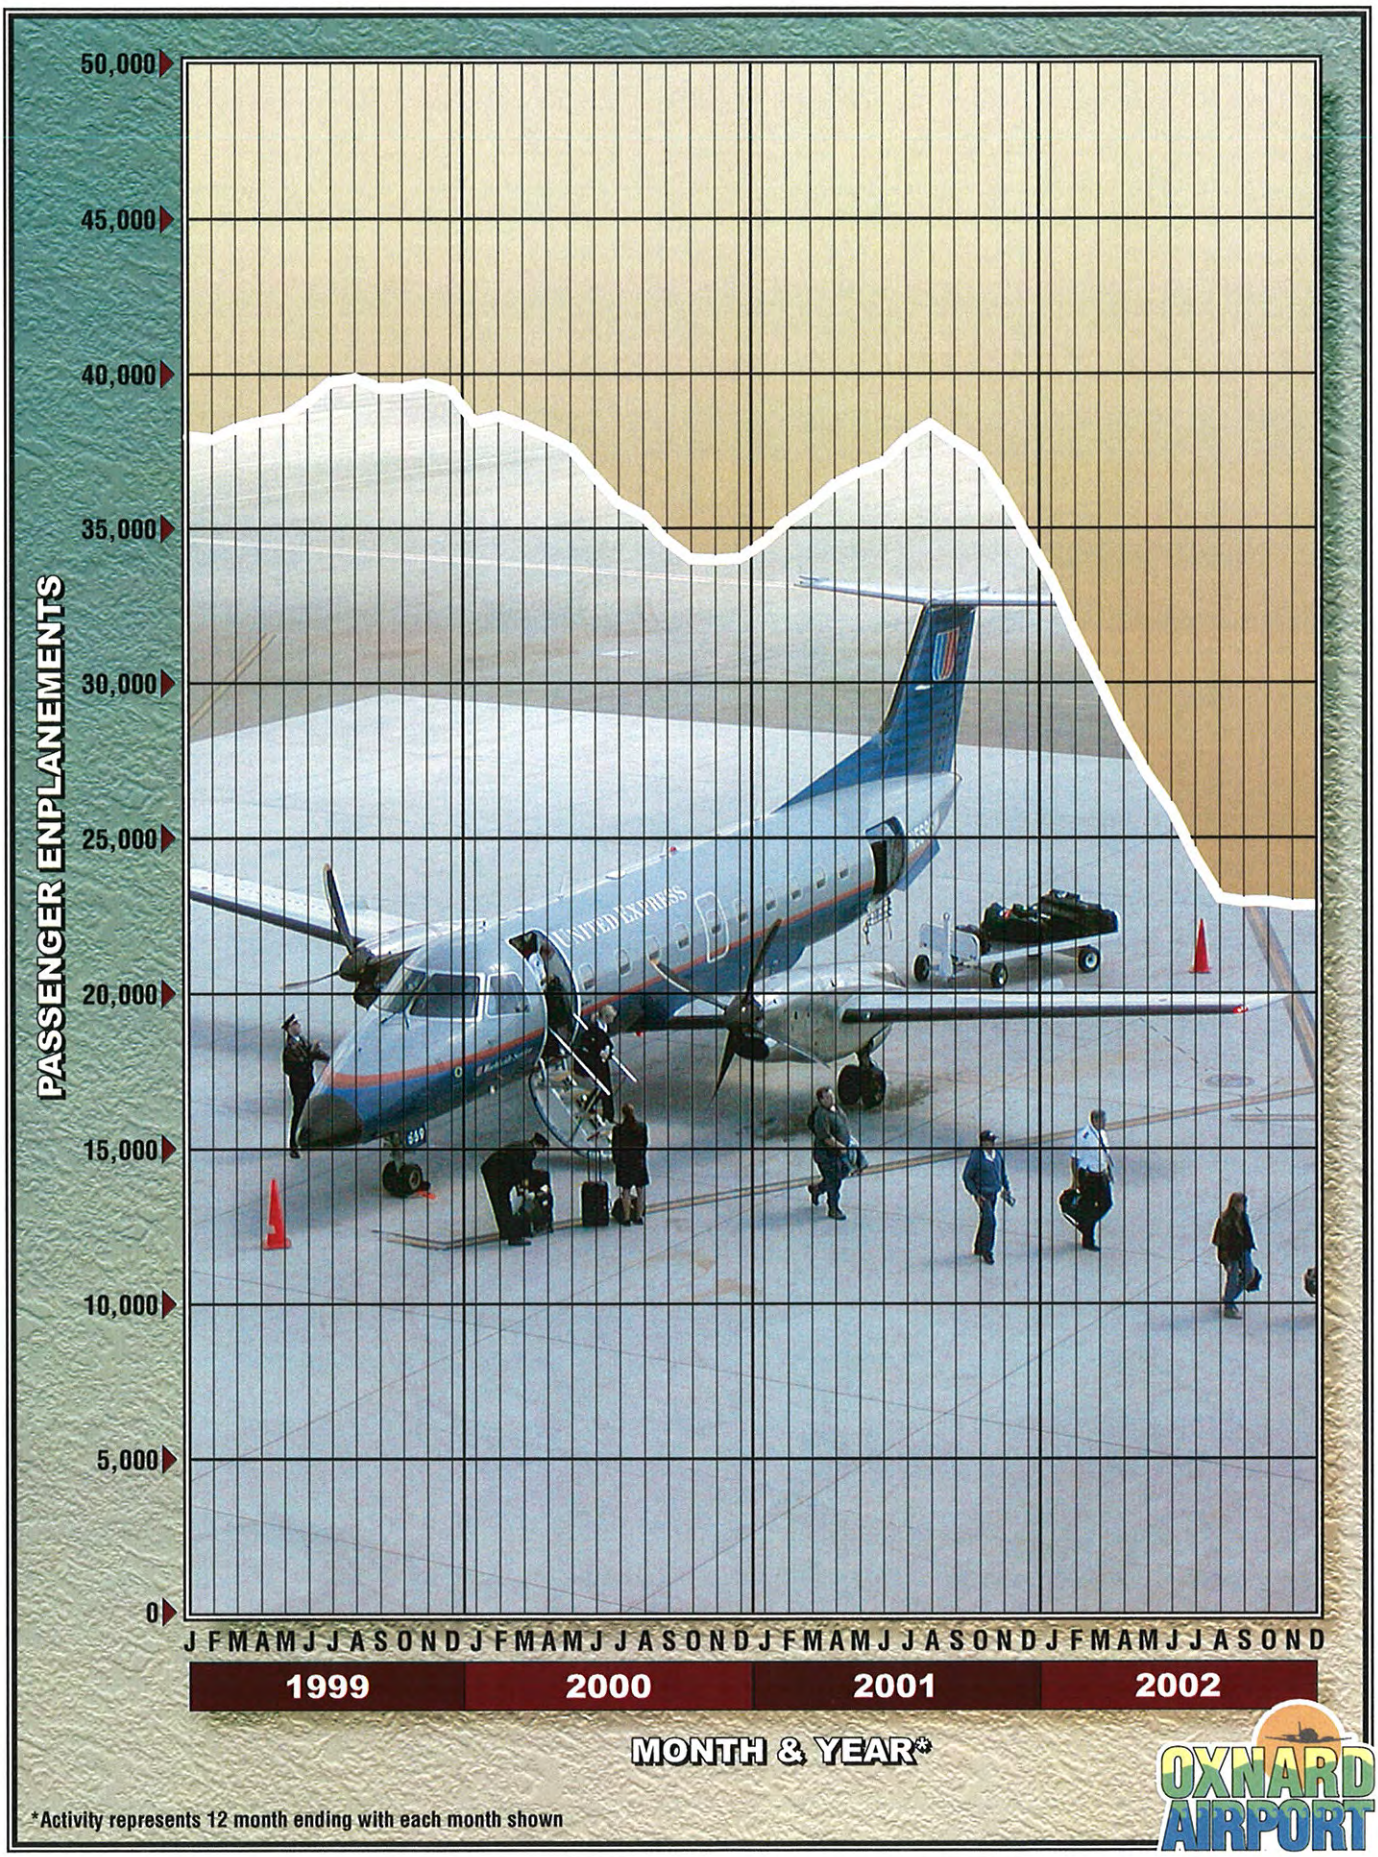

Exhibit 2C
12-MONTH MOVING TOTAL
PASSENGER ENPLANEMENTS

487 passengers per month at OXR. Statistics after 9-11, however, indicate that SkyWest traffic did not increase, but continued to decline.

3 FAA *Terminal Area Forecasts, 2002-2020*, December 2002.

In fact, the 12-month totals continued to decline until a slight increase was observed in October. This reflects the October 2002 enplanements of 2,060, being slightly higher than the 2,045 in October 2001. The 12-month total ending October 2002 was 22,904; a 40 percent decline from the 12-month total ending in August 2001. Enplanements for calendar year 2002 totaled approximately 22,829. Since August 2001, not only had service been reduced to one airline, but frequency was down to five flights per day.

ENPLANEMENT FORECASTS

It is evident from the discussion in the previous section that passenger traffic at Oxnard Airport is directly affected by the level of service provided. As with many smaller commuter airports located near a major metropolitan area, most of the local air travelers bypass the local airport and go directly to the larger hub airports in the metropolitan area.

In 1993, SCAG performed origin-destination studies that estimated there were more than 2.3 million commercial air passengers with an origin or final destination in Ventura County. That year, Oxnard Airport's total passengers (enplaned and deplaned) were approximately 70,000, or approximately 3.0 percent of the County's total passengers.

In the **Regional Aviation Plan for 2001**, published in August 2001, SCAG estimated that Ventura County's passenger demand was 4.23 million passengers. Total passengers at OXR that year totaled approximately 62,000, or just 1.5 percent of the county's demand. The **Regional Aviation Plan** indicated that Ventura County, Orange County, and Riverside County were each generating far more demand than the commercial service airports in each county were supporting. In Ventura County's case, the County was generating 5.2 percent of the demand but serving only 0.1 percent.

An emphasis of the **Regional Aviation Plan** was to move toward a decentralized airport system including former military bases and joint-use facilities rather than expanding existing urbanized airports. According to the **Regional Aviation Plan**, Ventura County's passenger demand will increase to 8.3 million by the year 2025.

While it is recognized that Ventura County's airport does not support a significant portion of the demand generated by the county's commercial air travelers, it must also be recognized that Oxnard Airport is one of the airports located in an urbanized setting with little or no room for expansion.

This is reflected in Oxnard Airport's Mission Statement which includes the following point: "Continue to search for a regional airport to serve the air carrier and commercial needs of the City of Oxnard and Ventura County."

As a result, the forecast for passenger enplanements at Oxnard Airport must reflect that the airport is limited in expansion potential and the county will continue to search for a regional airport to accommodate the long range commercial service demands generated

in Ventura County. With this in mind, the passenger potential at Oxnard Airport was examined with the following qualifiers:

- No increase in runway length.
- No significant increase in terminal building space.
- As more commuter airlines convert to all-jet fleets, a decision regarding air service in the County will become necessary.

This generally means that commercial service at Oxnard Airport will continue to be provided by commuter aircraft that can operate within the design characteristics of the runway. It is likely that various commuter airlines will continue to come and go in the market. Depending upon success, airlines will likely adjust the frequency of flights to serve the demand they generate. Competitive air fares and reliable, frequent flights will be the recipe for success. Still, the size of equipment and the availability of discount airlines at the larger hub airports in the Los Angeles basin will keep the market share at Oxnard Airport low.

Because of this, the typical regression correlation and trend analyses do not apply at Oxnard Airport. As a result, passengers were forecast based upon the potential to capture market share. **Table 2C** depicts Oxnard Airport's share of the United States domestic passenger market every year since 1980. Over this time frame, the market share has ranged from 0.0127 percent in 1980 to a low of 0.0028 percent in 1987. The market share in 1990 increased to 0.0101 percent, while by 2000, it had dropped to 0.0053 percent. In 2002, the market share dropped to 0.0040 percent.

It is evident that the general trend in market share at OXR has been downward with highs and lows depending upon the level of air service. The constant share projection presented in **Table 2C** indicates where Oxnard Airport's enplanements would go if the airport followed the growth rate of the national domestic passenger market.

Exhibit 2D compares the constant market share with the forecasts of the **1996 Draft Master Plan**. It should be noted that the **1996 Draft Master Plan** forecasts were developed based upon the potential that a variety of regional jets could serve the airport in the future. In addition, the FAA forecasts of U.S. domestic enplanements at that time were approximately 14 percent higher than the current projections. Subsequently, these forecasts are now considered too high for continued use.

Exhibit 2D and **Table 2C** also provide a comparison of the market share projections to forecasts for OXR prepared by the FAA and presented in their **Terminal Area Forecasts (TAF) 2002-2020.** It should be noted that these TAF projections were the first to take into account 9-11. The TAF projections show only marginal growth from the 2002 passenger levels. The 2020 forecast of 26,980 remains well below the 34,696 enplanements experienced in 2001.

The table shows that the enplanement projections in the TAF would result in a significant erosion in the Oxnard Airport market share of domestic enplanements. As shown in the table, the market share would decline incrementally to 0.0023 percent by 2020.

The history of passenger traffic at Oxnard Airport shows a definite reaction to the air service provided. Airline choices, frequency of service, air fares, etc. have played a role in the up-and-down nature of traffic levels. The drop in traffic of the past two years is indicative of this.

Given the Mission Statement for Oxnard Airport, it is highly unlikely that the airport will see a significant recapture of the local market of air travelers. Still, history has shown that OXR traffic can recover from similar setbacks in air service.

As a result, a market share recapture scenario was also considered. This scenario is also depicted on **Table 2C** and assumes the market share would recover to 0.0050 percent by 2010 and grow at the national forecast rate. The market share can be expected to decline over the long term as the airport becomes more limited in the types of commuter aircraft that can be served. For the planning purposes of this Master Plan, the following enplanement forecasts are recommended:

Near Term (2005): 30,000
Short Term (2010): 38,000
Intermediate Term (2015): ... 45,000
Long Term (2025): 60,000

COMMUTER OPERATIONS AND FLEET MIX

The fleet mix defines a number of key parameters in airport planning, including critical aircraft, stage length capabilities, and terminal gate configurations. Changes in equipment, airframes, and engines have always had a significant impact on airlines and airport planning. There are many on-going programs by the manufacturers to improve performance characteristics. These programs are focusing on improvements in fuel efficiency, noise suppression, and the reduction of air emissions. A fleet mix projection for Oxnard Airport has been developed by reviewing the aircraft currently used and anticipated transitions.

As previously mentioned, scheduled passenger service at Oxnard Airport is provided by SkyWest under a code-sharing agreement with United Airlines. As United Express, the airline offers five daily flights to LAX. SkyWest's aircraft fleet consists of 76 Embraer, 120 turboprops, and 73 Canadair Regional Jets (CRJs). Only the turboprops operate into Oxnard Airport.

The FAA views the regional jet as the most significant change in the composition of the future regional/ commuter fleet. These aircraft have a range in seating capacity, stand-up headroom, and lower operating costs. The long-term outlook in fleet transition is dependent on traffic growth, technological improvements, aircraft leasing and financing arrangements, and airfield facilities which can meet aircraft demand.

02MP10-2D-4/14/03

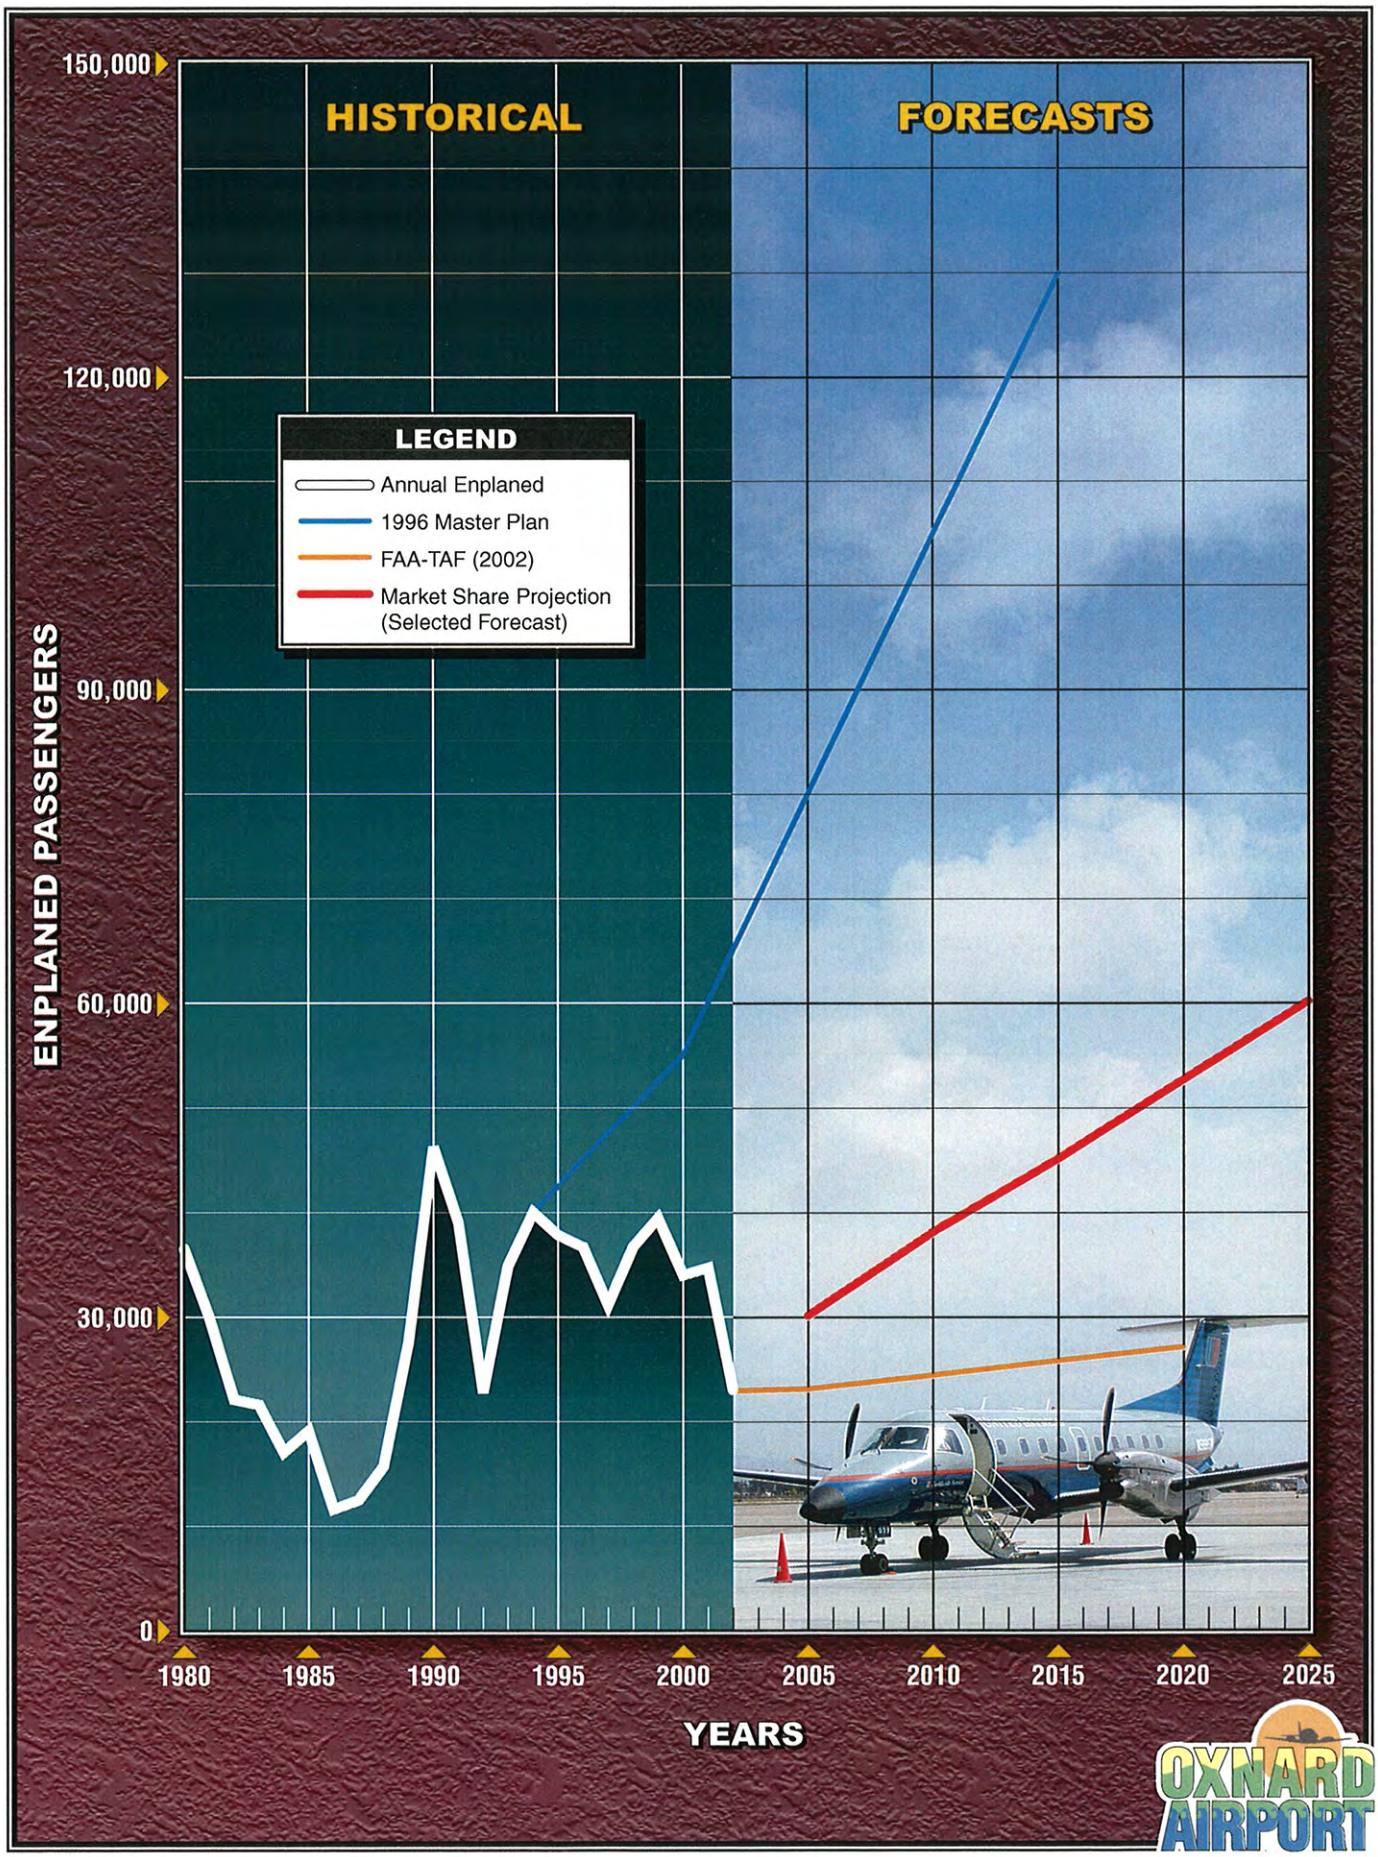

Exhibit 2D
ENPLANEMENT FORECASTS

SkyWest is adding more CRJs while reducing its turboprop fleet. The airline has orders or options for 109 more CRJs over the next four years. Over that same time frame, it expects to remove 21 Embraer 120s from service. While SkyWest has not indicated that it plans to transition to an all-regional jet fleet, other airlines, such as Mesa, have. Given the constraints on runway improvements, and the airport's Mission Statement, as more commuter airlines transition to all-jet, the County will eventually need to make decisions regarding improvements that may become necessary to accommodate available commuter aircraft.

The fleet mix projections have been used to calculate the average seats per departure, which (after applying a load factor) were used to project annual departures. The boarding load factor for Oxnard Airport may fluctuate with periodical changes in air service, but it is expected to remain around 50 percent over the planning period. Annual operations were then calculated based on boarding load factors. **Table 2D** summarizes the fleet mix and operations forecast for Oxnard Airport.

GENERAL AVIATION FORECASTS

General aviation is defined as that portion of civil aviation which encompasses all portions of aviation except commercial operations. To determine the types and sizes of facilities that should be planned to accommodate general aviation activity, certain elements of this activity must be

forecast. These indicators of general aviation demand include based aircraft, aircraft fleet mix, and annual operations.

BASED AIRCRAFT

The number of based aircraft is the most basic indicator of general aviation demand. By first developing a forecast of based aircraft, the growth of other general aviation activities and demands can be projected.

Aircraft basing at an airport is somewhat dependent upon the nature and magnitude of aircraft ownership in the local service area. As a result, aircraft registrations in the area were reviewed and forecast first.

Aircraft Registrations

The **1996 Draft Master Plan** included a historical listing of aircraft registrations in Ventura County from 1983 through 1994. Additional information was obtained from the FAA's Aircraft Registry to update this information through 2002. This is presented in **Table 2E**, as well as on **Exhibit 2E.**

In contrast to many locations around the country, registered aircraft in Ventura County grew throughout the 1980s. In the 1990s, however, the growth leveled out and registered aircraft fluctuated between 1,000 and 1,060. The turn of the century saw some renewed growth with registered aircraft growing to 1,080 in 2000 and an all-time high of 1,120 in 2001.

Exhibit 2E displays the forecast of registered aircraft from the **1996 Draft Master Plan**. That forecast expected 1,100 aircraft registered in the county by 2000 and 1,200 in 2005. While the 1,120 aircraft in 2001 is right on the forecast, the prior years tended to be below the anticipated growth. In addition, 2002 registered aircraft dropped slightly to 1,012. As a result, the methodology used to produce the previous forecast was revisited, and updated data was incorporated into the analysis.

First, an updated trend line or "time-series" analysis was conducted for the period of 1983-2002. The historical data provided a correlation coefficient or r-value of 0.77. An r-value of at least 0.90 is necessary to be considered a significant statistical fit. Still, the time-series analysis does reflect the average growth trend over the 20-year period.

Next, several multiple variable regression analyses were revisited. In the 1996 plan, county employment and inflation-adjusted per capita personal income provided r-values over 0.90. These two variables, as well as county population, were tested for the period of 1983-2001. PCPI still provided the highest correlation ® = 0.88), but was below the level to be considered significant. Employment had a correlation coefficient of 0.82, while population had an r-value of 0.80. For comparative purposes, a projection was developed from the registered aircraft correlation with county PCPI. This projection is also depicted on **Exhibit 2E.**

2025	1,360	1.43	951,000

Table 2F examines Ventura County's registered aircraft growth as a percentage of the U.S. active general aviation fleet. Because of a change in how the FAA counts active aircraft, this comparison could only be extended back to 1993. From 1993 through 1999, Ventura County's market share was declining. The past two years, however, the county has reclaimed some market share. Over the period from 1993-2001, the county's share has averaged 0.53 percent of the market. This average was extended through the planning period to provide a constant, or static, market share projection. This is presented on **Exhibit 2E**,as well as on **Table 2G**, for comparison to the other projections.

TABLE 2F

2000	1,080	217,533	0.496%
2001	1,120	211,447	0.530%
2002	1,112	211,040	0.527%
FORECASTS			
2005	1,142	215,490	0.50%
2010	1,186	223,720	0.50%
2015	1,228	231,620	0.50%
2025	1,314	248,000	0.50%

Table 2E also examines the ratio of registered aircraft per 1,000 population. Through this period, the ratio has fluctuated between 1.49 and 1.36. A projection at a constant ratio of 1.43 aircraft per 1,000 population was used to show the potential if registrations continue to grow in a similar proportion to county population.

TABLE 2G
Registered Aircraft Projections
Ventura County

	(r-value)	2005	2010	2015	2025
1996 Draft Master Plan	NA	1,200	1,300	1,400	NA
Time Series Analysis (1983-2002)	0.77	1,128	1,173	1,218	1,307
Regression Analysis vs. County PCPI	0.88	1,171	1,230	1,284	1,385
Market Share Analysis Constant Share	NA	1,142	1,186	1,228	1,314
Aircraft/Population Ratio 1.43 per 1,000 Pop.	NA	1,137	1,195	1,251	1,360
Selected Forecast	NA	1,144	1,196	1,295	1,342

All four of the updated projections are lower than the **1996 Draft Master Plan** forecast and represent a relatively narrow band. In the long term (2025), the PCPI regression projection is highest at 1,385 registered aircraft, while the time series analysis is lowest at 1,307, for a range of less than six percent over 23 years. In the immediate term (2005), the time series analysis projects 1,128 aircraft, or just slightly higher than the actual 1,120 aircraft in 2001. The PCPI regression projects 1,171 for a four percent range.

Because of the narrow grouping, an average of the four projections was selected for use in this update. This takes into account the local demographic and economic factors as well as the national general aviation industry.

Based Aircraft Forecast

Having updated the aircraft ownership demand in Ventura County, the historic basing at Oxnard Airport was reviewed to examine the change in market share over the years to project potential based aircraft demand. The market share at OXR is somewhat dependent upon what is happening at other area airports.

As depicted on **Table 2H**, the based aircraft totals at Oxnard Airport have generally been declining for at least the last 16 years. The rate of decline, however, has slowed in the last eight years. At the same time, the number of aircraft registered in the County has generally been growing.

A check of based aircraft at the other two public-use general aviation airports in the County shows they have not seen any growth in basing either. Camarillo Airport's based aircraft has dropped from 580 in 1994 to 510 in 1997, but has since grown back to 558. Santa Paula Airport has maintained its basing around 255. Overall, there was a total of 995 based aircraft in 1994, dropping to 910 in 1997, then rebounding to 957 in 2002.

In its **General Aviation Forecast for the SCAG Region**, in 1999, the Southern California Association of Governments forecast minimal growth at the three Ventura County airports through 2020. Camarillo was projected to grow from 510 to 523. This, of course, has already been exceeded. Oxnard Airport was projected to grow to only 156 based aircraft, while Santa Paula Airport would grow to 259. This was a total of 940 aircraft, or 30 more than were based at the three airports in 1997. This projection has proven to be too conservative as there are presently a combined 957 based aircraft.

The **1996 Draft Master Plan** projected the based aircraft to maintain a 16 percent share of the registered aircraft through 2015. As is evident from **Table 2H**, the airport's share has continued to drop and was 12.6 percent in 2001. In 2002, the share rebounded slightly to 12.8 percent. The historic graph on **Exhibit 2F** shows that the decline in based aircraft may be flattening out in the range of 140 to 150. If the airport were to maintain a current market share consistent with the last two

years, based aircraft could be expected to grow to 170 by the end of the planning period. If the airport simply maintained the current level of basing, its market share would decline to approximately 11 percent.

TABLE 2H
Based Aircraft Forecast
Oxnard Airport

Year	OXR Based	Registered Aircraft	OXR Market Share
1985	253	940	26.9%
1986	246	994	24.7%
1987	214	1,001	21.4%
1988	211	1,037	20.3%
1989	210	1,037	20.3%
1990	167	1,050	15.9%
1991	190	1,059	17.9%
1992	175	1,019	17.2%
1993	165	1,011	16.3%
1994	159	1,002	15.9%
1995	155	1,048	14.8%
1996	151	1,030	14.7%
1997	147	1,028	14.3%
1998	151	1,032	14.6%
1999	143	1,017	14.1%
2000	150	1,080	13.9%
2001	141	1,120	12.6%
2002	142	1,112	12.8%
FORECAST			
2005	146	1,144	12.8%
2010	152	1,196	12.7%
2015	158	1,245	12.7%
2025	170	1,342	12.7%
FAA-TAF 2002			
2005	146	1,144	12.8%
2010	150	1,196	12.5%
2015	155	1,245	12.4%
2020	161	1,294	12.4%

The FAA-TAF forecast for based aircraft at OXR is also included for comparison in **Table 2H**. This forecast is only slightly below that of the market share projection. In fact, the two projections differ by just two percent (three based aircraft) in 2020.

For the planning purposes of this Master Plan update, the market share

02MP10-2F-11/20/02

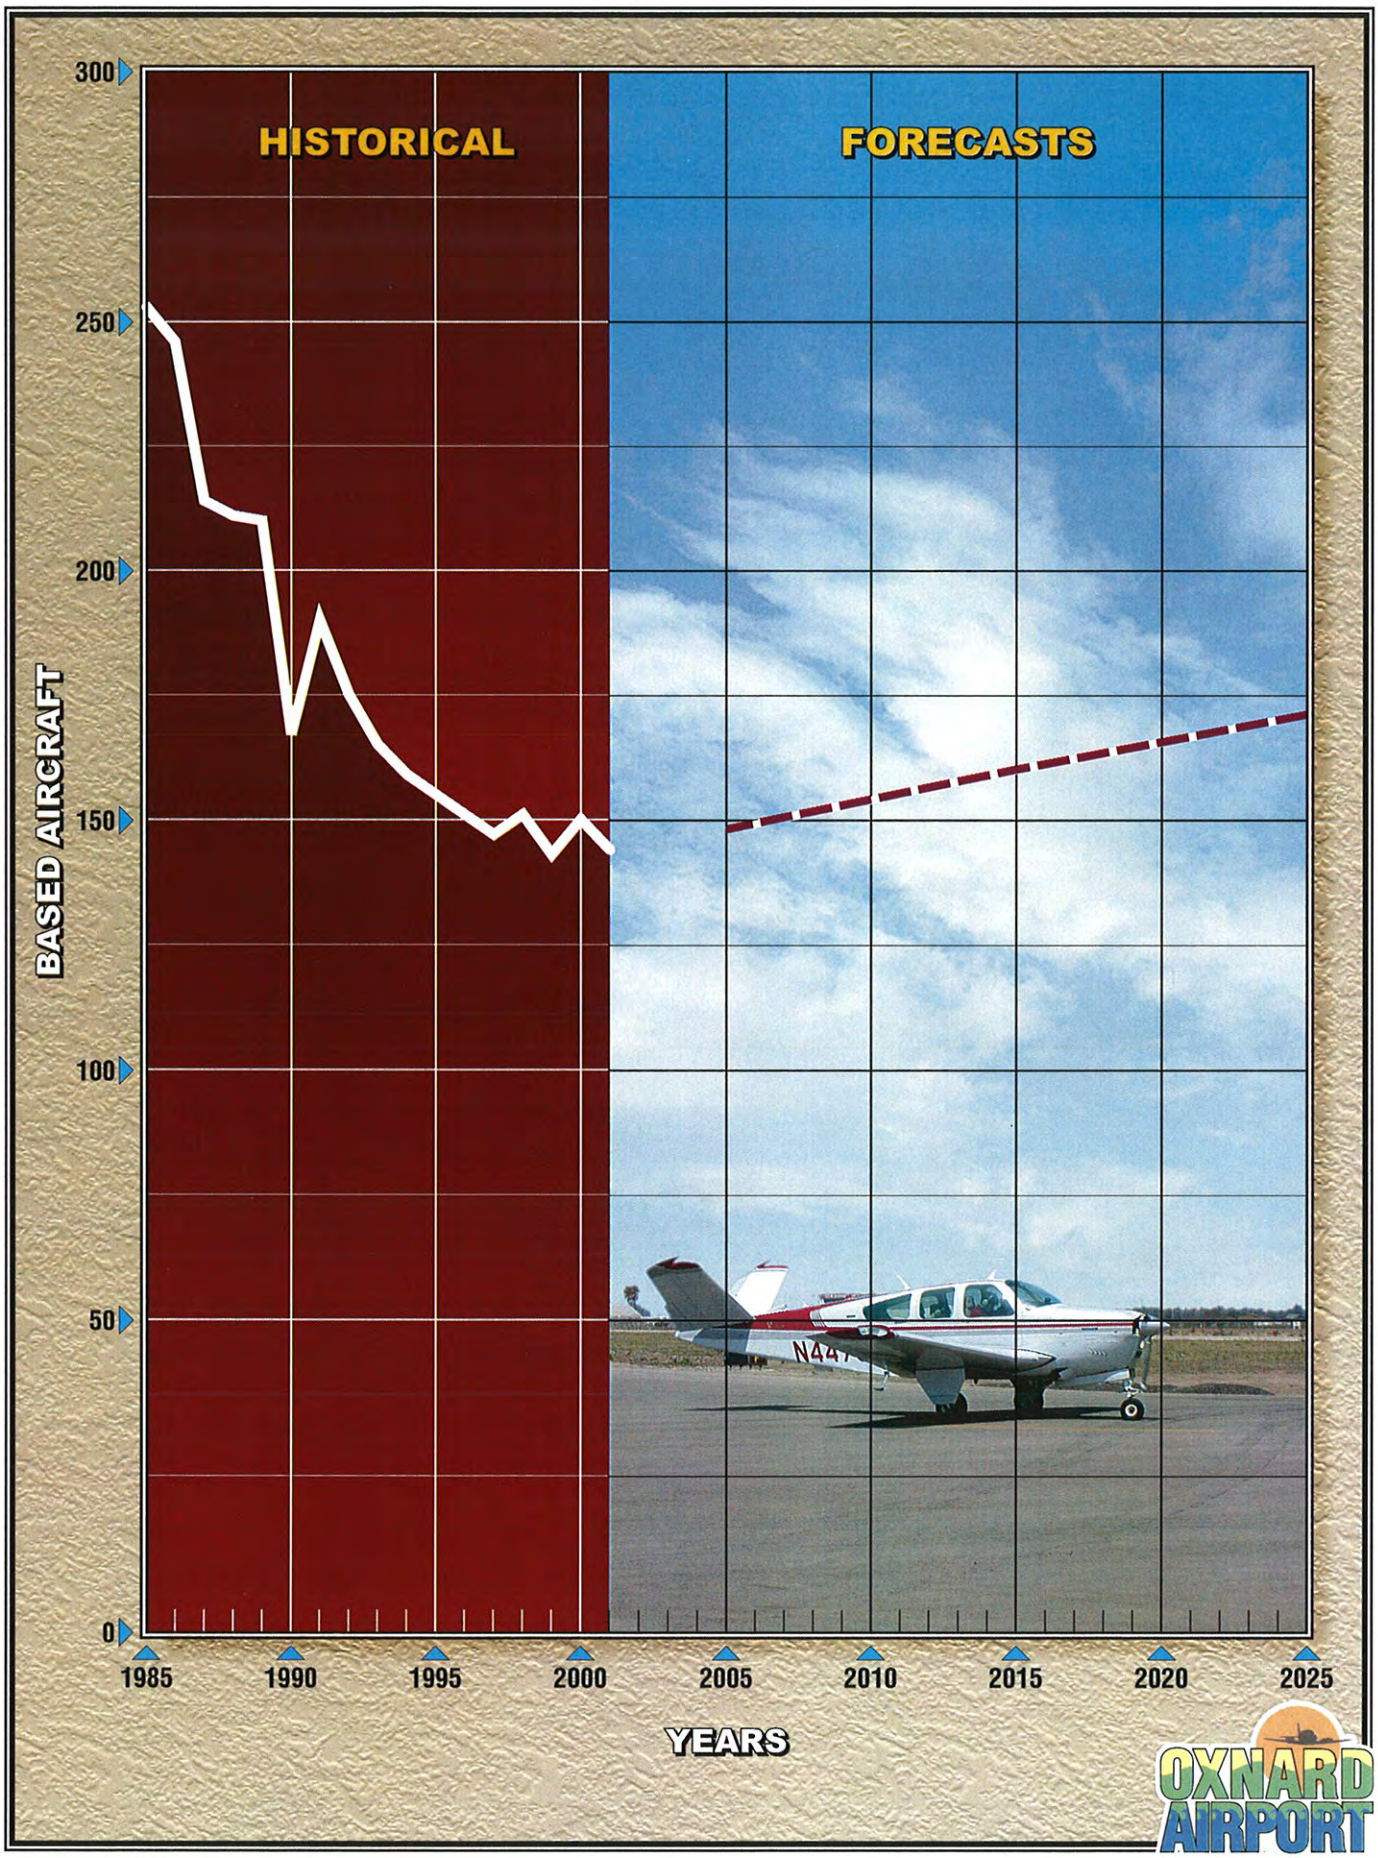

Exhibit 2F
BASED AIRCRAFT FORECAST

for Oxnard Airport was projected to follow the growth of demand for general aviation aircraft in Ventura County. This is consistent with the Mission Statements of the Oxnard Airport and the Ventura County Department of Airports. The latter Mission Statement reads, "To limit the development of Camarillo and Oxnard Airports to meet forecasted needs of general aviation and commuter airline services in a manner that will complement each other."

Planning OXR to serve and maintain its current share of the County's future demand would meet this objective. Thus, the constant market share projection depicted in **Table 2H** and on **Exhibit 2F** is the recommended forecast for based aircraft.

Based Aircraft Fleet Mix

The based aircraft fleet mix at Oxnard Airport (**Table 2J**) was compared to the existing and forecast U.S. general aviation fleet mix trends as presented in FAA **Aerospace Forecasts Fiscal Years 2003-2014**. The current based aircraft fleet mix at Oxnard Airport has a higher than average percentage of rotorcraft and multi-engine piston aircraft, lower-than-average turboprops, and no business jets.

TABLE 2J
Based Aircraft Fleet Mix
Oxnard Airport

Year	Single Engine	Multi-Engine	Turbo-prop	Jet	Rotor	Total
2002	100	28	2	0	12	142
FORECAST						
2005	102	28	2	1	12	146
2010	106	28	3	2	13	152
2015	109	28	4	3	14	158
2025	116	27	6	6	15	170

According to the FAA forecasts, active single engine aircraft will have a slow growth trend of 0.3 percent per year. So the overall percentage of single engine and experimental aircraft will remain fairly constant in the future.

The number of multi-engine piston aircraft will actually decline slightly as older aircraft are retired according to the FAA forecasts. Turboprop aircraft are expected to experience gains, approximately 120 per year nationwide (1.6 percent annually).

The largest percentage growth nationwide is anticipated in the business jet market, where an average

annual increase of 3.6 percent is expected. This relates to a net gain of nearly 360 business jets a year. Rotorcraft are anticipated to show a growth rate slightly better than the single engine and experimental aircraft.

The fleet mix for Oxnard Airport is forecast to evolve into a similar make-up as that on the national level, although the rotorcraft percentage will remain high due to the helicopter business on the airport. The single engine percentage will remain relatively constant. The number of multi-engine piston aircraft is forecast to decline by one, resulting in a percentage decline. The low percentages of turbine-powered aircraft at the airport can be expected to increase with a net increase of four turboprops and six business jets over the planning period.

GENERAL AVIATION OPERATIONS

General aviation operations are classified by the federal contract tower (FCT) as either local or itinerant. A local operation is a take-off or landing performed by an aircraft that operates within sight of the airport, or which executes simulated approaches or touch-and-go operations at the airport. Itinerant operations are those performed by aircraft with a specific origin or destination away from the airport. Generally, local operations are characterized by training operations. Typically, itinerant operations increase with business and commercial use, since business aircraft are operated on a higher frequency of use compared to personal and pleasure flights.

Itinerant Operations Forecast

Table 2K depicts the history of general aviation itinerant operations since 1990. The FCT counted 65,890 itinerant operations in 1990; this dropped to a low of 34,591 operations in 1995. The count rose to 51,749 in 1997, but has hovered around the mid-40,000s ever since.

The table also presents a history of the total general aviation itinerant operations at all airports with FAA airport traffic control towers. As with Oxnard Airport, the national itinerant operations were higher in 1990 than anytime since, and hit a low point in 1995.

The table further includes the OXR market share of the towered itinerant operations. While the market share declined in the early and middle part of the 1990s, it has since remained relatively constant.

In FAA **Aerospace Forecasts Fiscal Years 2003-2014**, the FAA projects itinerant general aviation operations will be recovering the operation level lost in 2001 in the immediate term, then grow at approximately 1.4 percent annually. **Table 2K** presents this forecast and includes a projection for Oxnard Airport based upon maintaining its share of the itinerant market.

The itinerant operation growth rate is higher than the 0.7 percent rate

forecast for active aircraft in the U.S., indicating that aircraft will be flown more in the coming years. As a result, the operations per based aircraft at the airport can be expected to increase in the future. The operations per based aircraft ratio was utilized to check the reasonableness of the itinerant operations forecast. As shown on **Table 2K**, the ratio of operations per based aircraft at Oxnard Airport would increase in the future from 316 to 354.

Table 2K also compares the Master Plan forecast with that of the FAA-TAF. As with based aircraft, the two projections are relatively close. The Master Plan forecast is just 3.4 percent higher than the FAA-TAF in 2020.

2005	45,913	22.1	0.208%	146	314
2010	48,806	23.7	0.206%	150	325
2015	51,699	25.3	0.204%	155	334
2020	54,592	27.0	0.202%	161	339

Local Operations

A similar methodology was utilized to forecast local operations. **Table 2L** depicts the history of local operations at Oxnard Airport and examines its historic market share of local operations at towered airports in the United States. By 2000, local operations at OXR had declined by more than 50 percent from 59,660 in 1993. Local operations nationally had remained relatively constant over the past decade. While the local operations declined in 2001, primarily due to September 11, they recovered in 2002 to 28,981.

The FAA **Aerospace Forecasts** projects a 1.2 percent per year increase in local operations nationwide. As with itinerant operations, this would indicate an increase in operations per active aircraft since general aviation is projected to grow at a slower rate.

Training activity is not expected to increase significantly at Oxnard Airport, thus the local operations forecast assumes growth associated with maintaining a slightly declining operations per based aircraft ratio. The table shows the forecast as well as the slight decline of operations per based aircraft over the planning period.

The table also presents the **FAA-TAF 2002** projections for general aviation and local operations. While the TAF forecasts show virtually no growth, the Master Plan forecast is within seven percent for 2020.

Table 2M and **Exhibit 2G** provide a summary of the general aviation forecasts for Oxnard Airport. The **FAA-TAF 2002** general aviation operations are also shown on the exhibit for comparison.

AIR TAXI

The air taxi category includes aircraft involved in on-demand passenger or small parcel transport. The control tower counts air taxi in the same category as commuter airline operations. Since the airport keeps track of airline operations from the airline landing reports, the commuter operations can be subtracted from the tower count to determine the air taxi operations.

In 2000, the tower counted 15,422 air taxi and commuter operations. The commuter airlines reported a total of 2,325 landings for a total of 4,650 annual operations. Thus, there were 10,922 air taxi operations. In 2001, there were 14,046 operations in the tower count, and 4,500 were by commuter airlines, leaving 9,396 air taxi operations.

In 2002, there were 13,406 operations in the tower count, and 3,650 were commuters. This left 9,756 air taxi operations. In 1994, the base year for the **1996 Draft Master Plan**, there were 8,057 air taxi operations. The Master Plan forecast 12,700 operations for 2000.

2015	12,600	1,400	100	1,500
2025	14,500	1,400	100	1,500

MILITARY

Military activity accounts for the smallest portion of the operational traffic at OXR. Since 1990, annual military operations have fluctuated between a high of 2,626 in 1993 and a low of 995 in 2001. Since 1998, local military operations have totaled less than 100 each year. For the purposes of this Master Plan update, military operations were projected to average 1,500 per year over the planning period. This includes 1,400 itinerant and 100 local operations. This is down from the **1996 Draft Master Plan** which projected an average of 2,200 annually. **Table 2N** includes the military forecast.

SUMMARY

This chapter has outlined the various aviation demand levels to be anticipated over the planning period. The next step in the master plan is to reassess the capacity of the existing facilities and determine what facilities will be necessary to meet both existing and future demands. This will be examined in the following chapter. **Table 2P** provides a summary of the aviation forecasts for Oxnard Airport.

TABLE 2P

OXNARD AIRPORT

Chapter Three
FACILITY REQUIREMENTS

CHAPTER THREE

FACILITY REQUIREMENTS

The objective of the facility requirements effort is to identify, in general terms, the capability of the existing airport facilities and outline what deficiencies there are or may be created by the forecast demands.

It is important to note that most of the activity levels forecast in the previous chapter have been exceeded in the past. For example, the 170 based aircraft forecast for 2002 are less than the 175 that were based at the airport in 1992. The 115,000 operations forecast for 2025 are less than the 137,880 operations counted in 1993. Since most of the forecast activity has been accommodated at this airport before, the emphasis will be more on re-development to ensure a safe, secure, and efficient operation. Once the deficiencies are identified, a more specific determination can be made as to how to address them in relation to the Mission Statements of Oxnard Airport and the Ventura County Department of Airports.

PLANNING HORIZONS

Cost-effective, safe, efficient, and orderly development of an airport should rely more upon actual demand at that airport than a time-based forecast figure. Thus, in order to develop a master plan that is demand-based rather than time-based, a series of planning horizon milestones have been established that take into consideration the reasonable range of aviation demand projections.

It is important to consider that, over time, the actual activity at the airport may be higher or lower than what the annualized forecast portrays. By planning according to activity milestones, the resultant plan can

accommodate unexpected shifts, or changes, in the area's aviation demand. It is important to plan for these milestones so that airport officials can respond to unexpected changes in a timely fashion. As a result, these milestones provide flexibility, while potentially extending this plan's useful life if aviation trends slow over the period.

The most important reason for utilizing milestones is to allow the airport to adapt facilities according to need generated by actual demand levels. The demand-based schedule provides flexibility in development, as the schedule can be slowed or expedited according to actual demand at any given time over the planning period. The resultant plan provides airport officials with a financially responsible and need-based program. **Table 3A** presents the planning horizon milestones for each activity demand category.

TABLE 3A
Aviation Demand Planning Horizons
Oxnard Airport

	Current	Short Term	Intermediate Term	Long Term
ANNUAL OPERATIONS				
Commuter	3,650	4,500	5,600	6,500
Air Taxi	9,756	11,500	12,600	14,500
Military	1,541	1,500	1,500	1,500
General Aviation	73,803	78,200	83,900	92,700
Total Operations	88,750	95,700	103,600	115,200
ANNUAL PASSENGERS				
Enplanements	22,829	35,000	45,000	60,000
Based Aircraft	142	150	158	170

The planning horizons represent current, short, intermediate, and long term activity levels. The short term generally relates to the expected activity five years in the future (2008). The intermediate and long term are quite similar to the forecast levels for 2015 and 2025 in the previous chapter, with modifications to round the numbers.

FCT COUNT ADJUSTMENT

The planning horizon operational activity levels in **Table 3A** represent

the actual operations counted by the federal control tower (FCT). They will remain the milestones for monitoring growth and activity because tower count is readily available.

The Oxnard federal control tower (FCT) is not a 24-hour tower, so the count is not all-inclusive of operations at the airport. Certain elements of the planning analyses, however, require that all airport activity be considered. For these evaluations, it is necessary to estimate and adjust for operations that occur when the tower is closed.

The Oxnard FCT hours are from 7:00 a.m. to 9:00 p.m. daily. **Table 3B** outlines the adjusted tower count. The commercial service operations were derived from the landing reports of the airline and do not need to be adjusted. The other operations are adjusted based upon information obtained from flight plans and airport management estimates.

TABLE 3B
Adjusted Aircraft Operations
Oxnard Airport

	Current	Short Term	Intermediate Term	Long Term

KEY PEAKING CHARACTERISTICS

While the planning horizons are statistical benchmarks that can be easily monitored, much of facility planning must be directly related to levels of peak activity. The following planning definitions apply to the peak periods:

- **Peak Month** - The calendar month when peak activity occurs.
- **Design Day** - The average day in the peak month.

- **Busy Day** - The busy day of a typical week in the peak month.

- **Design Hour** - The peak hour within the design day.

The design day is normally derived by dividing the peak month operations or enplanements by the number of days in the month. However, if commercial activity is heavier on weekdays, it may require an adjustment to reflect design weekday activity.

It is important to realize that only the peak month is an absolute peak within the year. Each of the other periods will be exceeded at various times during the year. However, each provides reasonable planning standards that can be applied without overbuilding or being too restrictive.

AIRLINE DESIGN PEAKS

Historical airport records over the last six years were examined to determine the peak month for passenger enplanements at Oxnard Airport. The peak month has occurred in a different month each year since 1997. The peak month has averaged 9.7 percent of annual enplanements during this time. Design day enplanements were then calculated by dividing total enplanements in the peak month by the number of days in the month.

With five flights currently dispersed throughout the day, the design hour enplanements presently match the seating capacity of the aircraft. This will vary in the future as airline service or aircraft seating capacity changes.

According to airport records, there were 3,650 total airline operations in 2002. The flight schedule at Oxnard Airport does not fluctuate significantly with the season. Changes in operations are more related to weather cancellations than seasonal flight schedule changes. The lower peaking percentages for passengers also suggest that the operations peaks do not vary significantly. Therefore, the peak month percentage will be forecast at 9.0 percent.

Hourly operational peaks will vary depending upon the service as well. With one airline, the activity will be dispersed throughout the day. With two airlines, there is more probability for more operations per hour. This is accounted for in the peak activity forecast in **Table 3C.**

GENERAL AVIATION DESIGN PEAKS

The key peaking characteristic for general aviation (GA) activity is related to itinerant operations. Busy day and design hour itinerant operations are utilized to determine space requirements for transient ramp, terminal services, and auto parking in GA areas.

The peak month for GA itinerant operations over the past six years has averaged 10.2 percent of annual operations. Forecasts of peak month itinerant activity have been developed

by applying this percentage to the forecasts of annual itinerant operations.

Design day operations were calculated by dividing the total number of itinerant operations in the peak month by the number of days in the month. Busy day itinerant operations were examined over the past six years. It was found that the busy day typically averaged 19.6 percent of the weekly itinerant operations. As a result, the busy day itinerant operations factor was determined to be 1.37. The design hour itinerant operations were projected at 16 percent of the design day operations over the planning period. **Table 3C** summarizes the general aviation peak activity forecasts.

TOTAL OPERATIONS DESIGN PEAKS

The total number of takeoffs and landings becomes a factor when evaluating the capacity of the airfield. The design day and design hour are factors in calculating the airport's annual service volume as well as evaluating the hourly capacity. The peak month was evaluated over the last decade as a percentage of annual operations. Although the peak month occurred during several different months over the years, May was most common, followed by April. The percentage of operations in the peak month varied between 9.3 percent and 12.1 percent, but has averaged 10.2 percent since 1990. The peak month was projected at this percentage over the planning horizons.

As with the GA itinerant operations, design day was calculated by dividing the peak month activity by 31. The design hour averages 15.0 percent of the daily operations. This percentage was projected throughout the planning horizons. **Table 3C** summarizes the peak activity forecasts for total operations.

AIRFIELD CAPACITY

Airfield capacity is measured in a variety of different ways. The **hourly capacity** of a runway measures the maximum number of aircraft that can take place in an hour. The **annual service volume (ASV)** is an annual level of service that may be used to define airfield capacity needs. **Aircraft delay** is the total delay incurred by aircraft using the airfield during a given time frame. FAA Advisory Circular 150/5060-5, **Airport Capacity and Delay**, provides a methodology for examining the operational capacity of an airfield for planning purposes. This analysis takes into account specific factors about the airfield. These various factors are depicted in **Exhibit 3A**. The following describes the input factors as they relate to Oxnard Airport:

- **Runway Configuration** - A single runway configuration with a full length parallel taxiway and instrument approaches.

- **Runway Use** - There is no formal runway use program in place, but prevailing winds dictate the use of

AIRFIELD CAPACITY
FACTORS

Runway 25 approximately 80 percent of the time.

- **Exit Taxiways** - Based upon mix, only taxiways between 2,000 feet and 4,000 feet from the runway threshold count in the exit rating. The exits must also be at least 750 feet apart to be credited. Therefore, Runway 25 is credited for only one taxiway exit, while Runway 7 gets credited for two.

- **Weather Conditions** - The airport operates under visual flight rules (VFR) 84 percent of the time. Instrument flight rules (IFR) occur when cloud ceilings are between 500 and 1,000 feet, and visibility is between one and three statute miles. This occurs 13 percent of the time. Poor visibility conditions (PVC) apply for minimums below 500 feet and one mile. This occurs three percent of the time.

- **Aircraft Mix** - Description of the classifications and the percentage mix for each planning horizon is presented on **Table 3D**.

- **Percent Arrivals** - Generally follows the typical 50-50 percent split.

- **Touch-and-Go Activity** - Percentages of touch-and-go activity are presented in **Table 3D**.

- **Operational Levels** - Operational planning horizons were outlined in the previous section of this chapter. The peak month averages 10.2 percent of the year. The peak hour currently averages 16 percent of the operations in a day, and will decline to 15 percent as operations increase over the long term.

HOURLY RUNWAY CAPACITY

Based upon the input factors, current and future hourly capacities for the various operational scenarios at Oxnard Airport were determined. The hourly operational capacity during VFR ranges between 98 and 108 operations per hour. During IFR, the hourly capacity of the runway drops to between 58 and 62 operations per hour, and during PVC the capacity drops to 49 operations per hour. This is due to increased spacings required between aircraft during IFR conditions.

As the mix of aircraft operating at an airport changes to include a higher percentage of large aircraft (weighing over 12,500 pounds), the hourly capacity of the system declines. As indicated on **Table 3D**, the percentages of Class C aircraft will increase with the planning horizon activity milestones. This results in a decline in the hourly capacity.

TABLE 3D
Aircraft Operational Mix - Capacity Analysis
Oxnard Airport

Aircraft Classification	Current	Short Term	Intermediate Term	Long Term
VFR				
Classes A & B	87%	85%	83%	81%
Class C	13%	15%	17%	19%
Class D	0%	0%	0%	0%
IFR				
Classes A & B	70%	68%	65%	63%
Class C	30%	32%	35%	37%
Class D	0%	0%	0%	0%
Touch-and-Go's	33%	32%	30%	28%

Definitions:
- Class A: Small single engine aircraft with gross weight of 12,500 pounds or less.
- Class B: Small twin-engine aircraft with gross weight of 12,500 pounds or less.
- Class C: Large aircraft with gross weights over 12,500 pounds up to 300,000 pounds.*
- Class D: Large aircraft with gross weights over 300,000 pounds.*

* OXR's published pavement strength is 70,000 pounds.

The weighted hourly capacity reflects the average capacity of the airfield taking into account VFR, IFR, and PVC conditions. The current and future weighted hourly capacities are depicted in **Table 3E**. At Oxnard Airport, the current weighted hourly capacity is 84 operations. This is expected to decline to 78 operations in the long term. This is still well above the design hour of 57 operations expected in the long term.

ANNUAL SERVICE VOLUME

The weighted hourly capacity is utilized to determine the annual service volume in the following equation:

$$ASV = C \times D \times H$$

- C = weighted hourly capacity;
- D = ratio of annual demand to the average daily demand during the peak month; and
- H = ratio of average daily demand to the design hour demand during the peak month.

The ratio of annual demand to average daily demand (D) was determined to be 304 for OXR. This is expected to remain relatively constant over the long range planning period. The ratio of average daily demand to average peak hour demand (H) was determined to be 6.57. This ratio was also projected to increase slightly to 6.63 by the long term planning horizon.

The current ASV was determined to be 167,000 operations. As mentioned earlier, the percentage of Class C aircraft utilizing the airport is expected to increase as activity increases. This will result in a decline in the annual service volume to 157,000 as operations increase over the planning horizons. With adjusted operations in 2002 totaling over 92,000, the airport is currently at 55 percent of its annual service volume. Long range adjusted annual operations are forecast to reach over 119,000 operations which would be 76 percent of the airport's ASV. **Table 3E** summarizes the airport's ASV over the long range planning horizon.

TABLE 3E
Airfield Demand/Capacity Summary
Oxnard Airport

	PLANNING HORIZON			
	Base Year (2002)	**Short Term**	**Intermediate Term**	**Long Term**
Operational Demand				
Annual (Adjusted)	92,078	99,300	107,500	119,600
Design Hour	42	48	52	57
Operational Capacity				
Annual Service Volume	167,000	163,000	157,000	158,000
Weighted Hourly Capacity	83.7	81.6	77.9	78.4
Delay				
Per Operation (Min.)	0.41	0.50	0.65	0.81
Total Annual (Hrs.)	629	828	1,167	1,612

AIRCRAFT DELAY

As the number of annual aircraft operations approaches the airfield's capacity, increasing amounts of delay to aircraft operations begin to occur. Delays occur to arriving and departing aircraft in all weather conditions. Arriving aircraft delays result in aircraft holding outside the airport traffic area. Departing aircraft delays result in aircraft holding at the runway end until released by air traffic control.

Table 3E summarizes the aircraft delay analysis conducted for Oxnard Airport. Current annual delay is a minimal 629 hours. As an airport's operations increase toward its annual service volume, delay increases exponentially. Analysis of delay factors for the long range planning horizon indicate that annual delay can be expected to reach 1,612 hours. This should still be a very manageable level of delay.

CAPACITY ANALYSIS CONCLUSIONS

This section has examined the capability of the airfield to handle aircraft operations without excessive capacity and delay. **Exhibit 3B** compares annual service volume to existing and forecast operational levels at Oxnard Airport. The current operations level represents 55 percent of the airfield's annual service volume. By the end of the planning period, total annual operations are expected to represent 76 percent of annual service volume. Thus, the airfield has adequate operational capacity for the long range planning horizon.

CRITICAL AIRCRAFT

The selection of appropriate FAA design standards for the development and location of airport facilities is based primarily upon the characteristics of the aircraft which are currently using, or are expected to use, the airport. The critical design aircraft is defined as the most demanding category of aircraft, or family of aircraft, which conducts at least 500 operations per year at the airport. Planning for the type of aircraft use is of particular importance since design standards are used to plan separation distances between facilities. These standards must be considered to ensure the airport operates with maximum safety.

The FAA has established a coding system to relate airport design criteria to the operational and physical characteristics of aircraft expected to use the airport. This airport reference code (ARC) has two components: the first component, depicted by a letter, is the aircraft approach category and relates to aircraft approach speed (operational characteristic); the second component, depicted by a Roman numeral, is the airplane design group and relates to aircraft wingspan (physical characteristic). Generally, aircraft approach speed applies to runways and runway-related facilities, while airplane wingspan primarily relates to separation criteria involving taxiways, taxilanes, and landside facilities.

According to FAA Advisory Circular (AC) 150/5300-13, *Airport Design*, an aircraft's approach category is based upon 1.3 times its stall speed in landing configuration at that aircraft's maximum certificated weight. The five approach categories used in airport planning are as follows:

Category A: Speed less than 91 knots.

Category B: Speed 91 knots or more, but less than 121 knots.

Category C: Speed 121 knots or more, but less than 141 knots.

Category D: Speed 141 knots or more, but less than 166 knots.

Category E: Speed greater than 166 knots.

The airplane design group (ADG) is based upon the aircraft's wingspan. The six ADG's used in airport planning are as follows:

Exhibit 3B
AIRFIELD DEMAND VS. CAPACITY

Group I: Up to but not including 49 feet.

Group II: 49 feet up to but not including 79 feet.

Group III: 79 feet up to but not including 118 feet.

Group IV: 118 feet up to but not including 171 feet.

Group V: 171 feet up to but not including 214 feet.

Group VI: 214 feet or greater.

Exhibit 3C summarizes representative aircraft by ARC.

In order to determine several airfield design requirements, the critical aircraft and critical ARC should first be determined, then appropriate airport design criteria can be applied. This begins with a review of the type of aircraft using and expected to use Oxnard Airport. **Table 3F** provides a projected breakdown of planning horizon operations by airport reference code.

TABLE 3F
Airport Reference Code (ARC) Mix
Oxnard Airport

			ANNUAL OPERATIONS					
	2002		Short Term		Intermediate Term		Long Term	
Reference Code	Ops	%	Ops	%	Ops	%	Ops	%
A, B-I	83,247	90.41	88,022	88.64	93,461	86.94	101,776	85.10
A, B-II	7,903	8.58	9,219	9.28	10,261	9.55	12,002	10.04
A, B-III	220	0.47	977	0.98	2.278	2.12	3,642	3.05
C-I	333	0.36	489	0.49	700	0.65	1,000	0.84
C-II	189	0.21	316	0.32	400	0.37	600	0.50
C-III	6	0.01	12	0.01	30	0.03	50	0.04
D-I	74	0.08	116	0.12	160	0.15	200	0.17
D-II	53	0.06	94	0.09	140	0.13	230	0.19
D-III	53	0.06	60	0.06	70	0.07	100	0.08
Total	92,078	100.00	99,300	100.00	107,500	100.00	119,600	100.00

Note: Operations based upon adjusted ATCT count.

Aircraft in Approach Category C or higher comprise over 700 annual operations currently. C-I has the most with 333 while C-II has 189 operations. There are also operations by aircraft up to D-III, but they do not comprise at least 500 annual operations to be considered the critical ARC.

Consideration must also be given to aircraft at a slower approach speed but larger wingspans. Even at the slower

speeds, the size of the wingspan will determine ground taxiway design standards. The largest ADG utilizing the airport is ADG III. The aircraft in this group currently total an estimated 400 operations. The Dash 8 that was flown on regularly scheduled flights in 2001 is in ADG III. In fact, many short takeoff and landing aircraft (STOL) used for commuter airline purposes have wingspans in ADG III. As long as Oxnard Airport continues as a commuter service facility, the airport should maintain ADG III standards. **For planning purposes, Oxnard Airport should continue to plan based upon the combination of ARC D-II and B-III.**

AIRFIELD CAPABILITIES

The analyses of the operational capacity and the critical design aircraft are used to examine airfield capabilities. This includes runway configuration, runway length, pavement strength, safety design standards as well as navigational aids, lighting, and marking.

RUNWAY CONFIGURATION

The present single-runway configuration was evaluated based upon its operational capability and wind coverage. The earlier demand-capacity analysis indicated that the runway has adequate operational capacity for the activity that can reasonably be expected over the planning horizons.

The other consideration in the runway's capability involves the orientation for wind coverage. FAA Advisory Circular 150/5300-13, Change 1, **Airport Design**, considers an airport to have adequate wind coverage if aircraft can use it at least 95 percent of the time. The 95 percent wind coverage is computed on the basis of the crosswind component not exceeding 10.5 knots (12 mph) for ARC A-I and B-I; 13 knots (15 mph) for ARC A-II and B-II; and 16 knots (18 mph) for ARC A-III, B-III, and C-I through D-II.

The most recent 10 years of wind data specific to Oxnard Airport at the time of this analysis was 1993-2002. This data is graphically depicted on the wind rose in **Exhibit 3D**. The east-west orientation of Runway 7-25 provides 97.0 percent coverage for 10.5 knot crosswinds. Thus, the existing runway orientation has adequate wind coverage for all sizes and speeds of aircraft.

RUNWAY LENGTH

The evaluation of the operational capabilities of the available runway length is based upon four primary elements including the elevation of the airport, the air temperature, the gradient of the runway, and the operating weight of the aircraft. The airport elevation at Oxnard Airport is 43 feet above mean sea level (MSL). The temperature commonly used for design is the mean maximum daily temperature during the hottest month. According to the National Weather Service, that occurs in August and September and is 75.0 degrees Fahrenheit (F). The elevation varies by 11 feet from its high (43 feet) to its low

ALL WEATHER WIND ROSE

(32 feet) for a runway gradient of 0.18 percent.

The critical aircraft for runway length at Oxnard Airport are business jets. The turboprop aircraft used by the commuter airlines generally require less runway length than jets. The introduction of regional jets into many commuter airline fleets has changed at many airports. Regional jet service that would require either additional runway length or runway weight-bearing capacity at Oxnard Airport is not a consideration of this master plan.

The aircraft load is dependent upon the payload of passengers and/or cargo, plus the amount of fuel on board. For departures, the amount of fuel varies depending upon the length of a nonstop flight, or trip length. This can vary for commuter and general aviation aircraft. As a result, the runway requirements for each are evaluated to determine the critical length for Oxnard Airport.

Table 3G outlines the runway length requirements for various classifications of general aviation aircraft at Oxnard Airport. These were derived utilizing the FAA Airport Design Computer Program for **Runway Lengths Recommended for Airport Design.** These runway lengths are based upon groupings or "families" of aircraft. As discussed earlier, the runway design required should be based upon the most critical family with at least 500 annual operations.

TABLE 3G
Runway Length Requirements
Oxnard Airport

AIRPORT AND RUNWAY DATA	
Airport elevation	43 feet
Mean daily maximum temperature of the hottest month	75.0 F
Maximum difference in runway centerline elevation	11 feet
Wet runway	
RUNWAY LENGTHS RECOMMENDED FOR AIRPORT DESIGN	
Small airplanes with less than 10 passenger seats	
75 percent of these airplanes	2,400 feet
95 percent of these airplanes	2,900 feet
100 percent of these airplanes	3,500 feet
Small airplanes with 10 or more passenger seats	4,000 feet
Business jets of 60,000 pounds or less	
75 percent of these airplanes at 60 percent useful load	5,300 feet
75 percent of these airplanes at 90 percent useful load	6,600 feet
100 percent of these airplanes at 60 percent useful load	5,500 feet
100 percent of these airplanes at 90 percent useful load	7,300 feet

REFERENCE: Chapter 2 of AC 150/5325-4A, **Runway Length Requirements for Airport Design**, no Changes included.

Small aircraft are defined as aircraft weighing 12,500 pounds or less. Small airplanes make up the vast majority of general aviation activity at OXR as they do at most nonhub airports. While piston-powered aircraft make up the majority of the small airplane operations, there are several turboprops, and even some business jets, that can be characterized as small airplanes.

Runway 7-25 is 5,950 feet long. As is evident from the table, this is adequate to accommodate business jets for at least shorter haul flights (60 percent useful load). The length is not adequate to accommodate many business jets on longer haul flights (90 percent useful load). Most destinations for business jets departing from Oxnard Airport are in the western United States, although recent flight plan records indicate non-stop destinations as far east as Chicago.

PAVEMENT STRENGTH

An important feature of airfield pavement is the ability to withstand repeated use by aircraft of significant weight. Runway 7-25 is strength-rated at 50,000 pounds single wheel loading (SWL) and 70,000 pounds dual wheel loading (DWL).

The Embraer 120 turboprop aircraft currently utilized by United Express (SkyWest) Airlines has a maximum ramp weight of 26,500 pounds on dual wheel gear. Most of the business jets currently utilizing the airport weigh less than 70,000 pounds on dual wheel gear. The Gulfstream V and the Global Express are the largest business jets to visit, but use the airport on an infrequent basis. Infrequent use of an aircraft weighing slightly more than the rated pavement strength will not seriously impact the pavement. The Gulfstream V has a maximum weight of 91,400 pounds on dual wheel gear, while the Bombardier Global Express weighs a maximum of 95,000 pounds. They are not considered the critical aircraft for future planning, so the present pavement strength should be adequate.

RUNWAY SAFETY DESIGN STANDARDS

Runway safety design standards define the widths, and clearances required to optimize safe operations in the landing and takeoff area. These dimensional standards vary depending upon the ARC for each runway. **Table 3H** outlines key dimensional standards for the airport reference codes most applicable to Oxnard Airport. The runway at OXR should currently meet at least C/D-II and A/B-III standards, the airport's current critical ARCs. The following discusses the various standards as they relate to OXR.

Runway Width

The runway width is currently 100 feet, with paved shoulders of 10 feet or more. This meets the design standards for both B-III and D-II.

TABLE 3H
Airfield Design Standards

Category I			
Inner Width	1,000	1,000	1,000
Length	2,500	2,500	2,500
Outer Width	1,750	1,750	1,750

Note: Dimensions in bold indicate that design standard exceeds the current dimensions on the airport.

Runway Safety Area

The single-most critical design standard is the runway safety area. FAA Advisory Circular (AC) 150/5300-13 defines the runway safety area (RSA) as, "A defined surface surrounding the runway prepared or suitable for reducing the risk of damage to airplanes in the event of an undershoot, overshoot or excursion from the runway." According to the AC, the RSA shall be:

1) cleared and graded and have no potentially hazardous ruts, depressions, or other surface variations;
2) drained by grading or storm sewers to prevent water accumulation;
3) capable, under dry conditions, of supporting aircraft rescue and firefighting equipment, and the occasional passage of aircraft without causing structural damage to the aircraft; and
4) free of objects, except for objects that need to be located in the safety area because of their function.

Approach Categories C and D have the most extensive standards for the RSA. OXR meets the RSA width standard of 500 feet. The extended RSA to the west of the runway meets the full standard of 1,000 feet, but the extended RSA to the east of the runway does not. There is presently 720 feet of RSA beyond the east end of the runway. This is 280 feet short of the design standard.

Runway Object Free Area

A related standard to the RSA is the runway object free area (ROFA) which is defined as, "A two dimensional ground area surrounding runways, taxiways, and taxilanes which is clear of objects except for objects whose location is fixed by function." Except where precluded by other clearing standards, it is acceptable to place objects that need to be located in the ROFA for air navigation purposes or aircraft ground maneuvering purposes, and to taxi and hold aircraft in the ROFA. Objects nonessential for air navigation or aircraft ground maneuvering purposes are not to be placed in the ROFA.

As with the RSA, Approach Categories C and D standards are the most demanding with a width of 800 feet and an extended length of 1,000 feet beyond the runway end. The airport's north property line is located 300 feet north of the runway centerline, resulting in a 100-foot encroachment into the width of the ROFA. The west end of the runway meets the extended ROFA standard, but the east end has an extended ROFA of 720 feet.

Runway Centerline Separations

The dimensional standards for separations of aircraft on the ground from the runway centerline include the hold position and parallel taxiway separation. The holding positions at 250 feet are adequate for D-II. The parallel taxiway centerline is located 365 feet from the runway centerline. This does not meet the Approach Categories C and D standard of 400 feet.

Taxiway Standards

As indicated earlier, the Airplane Design Group (ADG) sets the taxiway standards. The current taxiway width of 75 feet exceeds the design standard for ADG III. Key taxiway separation requirements include the distance to fixed or movable objects. The minimum separation available is 135 feet. This exceeds the design standard of 93 feet for ADG III.

Runway Protection Zones

The runway protection zone (RPZ) is defined as an area off the runway end to enhance the protection of people and property on the ground. The RPZ is a trapezoidal shape varying in size depending upon approach minimums and the approach category of the design aircraft. For a runway with a precision instrument approach the RPZ is 1,000 feet x 2,500 feet x 1,750 feet. For runways with approach minimums of one mile visibility or more, the RPZ is 500 feet x 1,700 feet x 1,010 feet for Approach Categories C and D aircraft.

TAXIWAYS

Taxiways facilitate aircraft movements to and from the runway system. Some taxiways are necessary simply to provide access between the aprons and runways, whereas other taxiways become necessary as activity increases at an airport to provide safe and efficient use of the airfield.

As detailed in Chapter One, Runway 7-25 is served by a full length parallel taxiway, and five exit/entrance taxiways on the south side of the runway. With all the landside facilities currently being located on the south side of the airport, the parallel taxiway meets the circulation needs.

NAVIGATIONAL APPROACH AIDS

Navigational aids provide two primary services to airport operations, precision guidance to specific runway and/or non-precision guidance to a runway or the airport itself. The basic difference between a precision and non-precision navigational aid is that the former provides electronic descent, alignment (course), and position guidance, while the non-precision navigational aid provides only alignment and position location information. The necessity for such equipment is usually determined by design standards predicated on safety considerations and operational needs. The type, purpose, and volume of aviation activity expected at the airport are factors in the determination of the airport's eligibility for navigational aids.

The advancement of technology has been one of the most important factors in the growth of the aviation industry in the twentieth century. Many of the civil aviation improvements have been derived and enhanced from initial development for military purposes. The use of orbiting satellites to confirm an aircraft's location is one of the latest military developments to be made available to the civil aviation community.

Global positioning systems (GPS) use multiple satellites to derive an aircraft's location by a triangulation method. The accuracy of these systems has been remarkable, with initial degrees of error of only a few meters. As the technology improves, it is anticipated that GPS may be able to provide accurate enough position information to allow Category II and III precision instrument approaches, independent of any existing ground-based navigational facilities. In addition to the navigational benefits, it has been estimated that GPS equipment will be much less costly than existing precision instrument landing systems.

Currently, the best minimums to Oxnard Airport are provided by the ILS approach to Runway 25. This approach provides weather minimums down to 300-foot AGL cloud ceilings and one-mile visibility. The only published approach to Runway 7 is provided by a GPS approach with a 500-foot ceiling and one mile visibility for Approach Categories A and B aircraft, and 500 feet and 1-1/4-mile visibility for Category C. Category D minimums on Runway 7 are 500 feet and 1-1/2 miles.

While this is adequate for most current operations, improved minimums can enhance the safety of the airport and minimize flight cancellations. If opportunities to reduce minimums to 3/4- or ½-mile become available with GPS, they should be considered for Oxnard Airport.

Visual glide slope indicators provide visual descent guidance information during approach. There are two forms of these aids that have been regularly installed by the FAA at airports. They include precision approach path indicators (PAPI) and visual approach path indicators (VASI). Both are in use at OXR. Runway 25 is equipped with PAPI-2 while Runway 7 has VASI-4.

Two types of automated weather observing systems are currently deployed at airports around the country. ASOS (automated surface observing system) and AWOS (automated weather observing system) both measure and process surface weather observations 24 hours a day, with reporting varying from one minute to hourly. The systems provide near real-time measurements of atmospheric conditions.

ASOS is typically commissioned by the National Weather Service or the Department of Defense. AWOS is often commissioned by the Federal Aviation Administration for airports that meet criteria of either 8,250 annual itinerant operations or 75,500 annual local operations. Oxnard Airport currently has an ASOS operating on-site.

OXR is presently served by a federal control tower operated on a contract basis. While hours may change based upon activity, the tower should be adequate for the planning period.

AIRFIELD LIGHTING, MARKING, AND SIGNAGE

Runway approach lighting provides the pilot with a rapid and positive identification of the runway end for final approach. Runway 25 is presently equipped with a medium intensity

approach light system with runway alignment indicator lights (MALSR). The MALSR will also be needed for any improved minimums. A similar system would be needed to achieve lower minimums on Runway 7.

Medium intensity runway edge lighting (MIRL) is currently available along Runway 7-25 and will be adequate for the planning horizons. The taxiway system is lighted with medium intensity taxiway lighting (MITL), and will also be adequate for the planning period. Lighted airfield signage on the primary runway currently meets standards for certificated commercial service airports.

Precision runway marking should be maintained on Runway 25, and will be needed for any approach improvements. The non-precision markings on Runway 7 will be adequate for the current approach. Basic taxiway marking will continue to be adequate.

The airport also has a lighted wind cone and segmented circle which provide pilots with information about wind conditions and the airport traffic pattern. In addition, an airport beacon assists in identifying the airport from the air at night. Each of these facilities should be maintained in the future.

AIRLINE TERMINAL

Components of the terminal area complex include the terminal building, gate positions, and apron area. This section identifies the facilities required to meet the airport's needs through the planning period.

Review of the capacity and requirements for various terminal complex functional areas was performed with the guidance of the FAA Advisory Circular 150/5360-13, **Planning and Design Guidelines for Airport Terminal Facilities**. Facility requirements were updated to reflect the planning horizon milestones for enplanements. This included the current level (23,000) as well as milestone levels of 35,000, 45,000, and 60,000 annual enplaned passengers.

Airline terminal capacity and requirements were developed for the following functional areas:

- Airline Ticketing and Operations
- Security Screening
- Gates and Hold Areas
- Baggage Claim
- Terminal Services

The methodology utilized in the analysis involves the design hour passenger demands and comparison of those demands with the existing facilities. **Table 3J** presents the existing terminal building space and compares it to the space necessary to accommodate each of the planning horizon levels. In general, it was found that the current 12,250 square-foot terminal should be marginally adequate through the intermediate planning horizon of 45,000 enplanements.

Note: Figures in bold indicate that the requirement exceeds the space presently available.

GENERAL AVIATION (GA) FACILITIES

General aviation facilities are those used for handling general aviation aircraft, passengers, and cargo while on the ground. To identify GA capabilities, the following types of facilities normally associated with general aviation terminal areas are examined:

- Hangars
- Aircraft Parking Apron
- General Aviation Terminal Services

HANGARS

The demand for hangar facilities typically varies with the number and type of aircraft based at the airport. Hangar facilities are generally classified as T-hangars (including port-a-ports), executive/corporate hangars, and conventional hangars. Conventional hangars are typically larger, multi-use hangars that may also be utilized for fixed base operator (FBO) purposes. Conventional hangars can hold a varying number of aircraft depending upon size and parking arrangements. The different types of hangars offer varying levels of privacy, security, and protection from the elements.

While weather extremes in Oxnard are not considered severe, the airport's close proximity to the ocean can still have an effect on hangar decisions. Moist, salty air can be corrosive to aircraft with prolonged exposure. At Oxnard Airport, most of the based aircraft stored on the ramp are Aspen's helicopters.

It is anticipated that most based aircraft will continue to be stored in hangars over the planning horizons. The resulting facility demand for each planning horizon is shown on **Table 3K**. The new Hangar One is included in the available totals. It is estimated that 80 percent of the 20,000 square-foot hangar will be available for aircraft storage. A lease for 20 additional executive hangars has also been approved. Timing is less certain, so they are not included as currently available.

The next step in the process of determining hangar requirements involves estimating the area necessary to accommodate the required hangar space. The T-hangars and port-a-ports at OXR average 1,200 square feet per hangar space. The executive hangars at OXR average 2,500 square feet per aircraft. Planning figures for conventional hangars suggest an area of 1,200 square feet for piston and rotary aircraft, and 2,500 square feet for turbine aircraft. These figures were applied to the aircraft to be hangared. Requirements for maintenance and shop hangar area were estimated at 150 square feet per based aircraft.

Table 3K compares the existing hangar availability to the future hangar demand. The new Hangar One and the previously approved lease for 20 additional executive hangars will assist in meeting future hangar needs.

TABLE 3K
Hangar Storage Requirements
Oxnard Airport

* Indicates number of aircraft (stored or to be stored) in this type of hangar.

GA PARKING APRON

Parking apron should be provided for at least the number of locally-based aircraft that are not stored in hangars, as well as transient aircraft. Although most will prefer hangars, a small number of based aircraft owners may still prefer ramp storage over the long range. FAA planning criterion of 350 square yards per tie-down was used to estimate the ramp area that would be needed for based fixed-wing aircraft. Based helicopter spaces were estimated at 450 square yards per aircraft. The number of local tie-downs and ramp space for the planning period is presented in **Table 3L.**

FAA Advisory Circular 150/5300-13 suggests a methodology by which transient apron requirements can be determined as 17.5 percent of busy-day itinerant operations. Planning criterion of 600 square yards per aircraft was applied to the number of transient positions to determine transient apron area. The transient apron space ratio is higher than that of the local apron, because it serves a larger variety of aircraft and is typically designed for taxi-through parking spaces.

The results of this analysis are presented in **Table 3L**. While there are currently 48 marked tie-downs, there are approximately 58,000 square yards

of GA parking apron located around the airport. As shown in the table, the existing apron area should be adequate through the planning horizons.

GA TERMINAL SERVICES

The general aviation facilities are often the first impression of the community that corporate officials and vacationers will encounter. General aviation terminal facilities at an airport provide space for passenger waiting, pilots' lounge and flight planning, concessions, management, storage, and various other needs. This can be accommodated in a single facility or spread throughout several fixed base operators.

The methodology used in estimating general aviation terminal facility needs was based upon the number of airport users expected to utilize general aviation facilities during the design hour.

Space requirements for terminal facilities were based on providing 120 square feet per design hour itinerant passenger. Space within the offices of the fixed base operator is used for general aviation terminal facilities.

Table 3M outlines the space requirements for general aviation terminal services at Oxnard Airport through the long term planning horizon. The general aviation terminal facilities were undersized prior to the replacement of Hangar One. Now, it will be generally sufficient through the long term.

TABLE 3M

TERMINAL ACCESS AND PARKING

The airport's ground access and parking system begins with the off-airport access route, and extends to the on-airport access and circulation, as well as the interface at the terminal curb and vehicle storage in the parking lots.

AIRPORT ACCESS ROUTES

With all aviation-related facilities located on the south side of the airfield, Fifth Street is the primary access to the airport. The east-west roadway intersects with four-lane, arterial roadways that run north-south at either end of the airport. At the east signalized intersection with Ventura Road, Fifth Street is also four lanes divided with left turn lanes. As it extends to the west in front of the FBO facilities, Fifth Street reduces to two lanes plus a center turn lane. It remains in this configuration for approximately 1,500 feet before widening to a divided four-lane once more on the approach to the terminal entrance road. There are left turn lanes at the terminal entrance as well as at the signalized intersection with Patterson Road. West of Patterson Road, Fifth Street again narrows to two lanes before widening back to four lanes on the approach to the intersection with Victoria Boulevard at the west end of the airport.

Patterson Road is a secondary access option to the airport. Patterson Road is also a four-lane roadway that begins at the airport and extends south to Channel Islands Boulevard.

According to City of Oxnard traffic counts from July 2001, Fifth Street handles 16,800 vehicles per day east of Patterson Road and 9,200 vehicles per day west of Patterson Road. Patterson Road, south of Fifth Street, carries 9,000 vehicles per day. While the current road system will be adequate to meet the airport's needs, other development along Fifth Street will likely require that the rest of this roadway be developed to four lanes, divided with left turn lanes.

The terminal access road system consists of a two-lane, one-way road system extending from Fifth Street north to the terminal building, then west along the front of the terminal building and parking lot, before ending at an intersection with Patterson Road. Vehicles wishing to return to the terminal either from the access road or the parking lot, must turn onto Patterson Road, left onto Fifth Street, then left onto the terminal access road.

Ideally, a loop road system maintained entirely on airport property would be preferred. Given the airport's Mission Statement and the projected demand, the airport traffic levels are not anticipated to create significant problems for the existing system.

TERMINAL CURB FRONTAGE

The curb element is the interface between the terminal building and the ground transportation system. The length of curb required for the loading and unloading of passengers and baggage is determined by the type and volume of ground vehicles anticipated in the peak period on the design day.

A typical problem for terminal curb capacity is the length of dwell time for vehicles utilizing the curb. At airports where the curb front has not been strictly patrolled, vehicles have been known to be parked at the curb while the driver and/or riders are inside the terminal checking in, greeting arriving passengers, or awaiting baggage pick-up. With most curbs not designed for vehicles to remain curbside for more than two to three minutes, capacity problems can ensue. Since the events of September 11, 2001, commercial service airports police the curb-front much more strictly for security reasons. This alone, has reduced the curb-front capacity problems at most airports.

At OXR, the terminal roadway provides one lane for loading and unloading of passengers. The curb frontage is approximately 160 feet in length. **Table 3N** presents the curb frontage requirements for the planning horizons. The available curb length should be adequate through the long term planning horizon.

VEHICLE PARKING

Airline Passenger Terminal

Vehicle parking in the airline passenger terminal area of the airport includes those spaces utilized by passengers, visitors, and employees of the airline terminal facilities. Parking spaces are classified as public, employee, and rental car.

Public parking is located in a surface lot immediately south of the terminal building. This parking lot contains 256 spaces including 36 rental car ready/return spaces. The 220 public spaces include 26 short term spaces where parking is limited to two hours or less.

Table 3N presents the parking demand for the planning horizons. A standard ratio of 4.0 spaces per 1,000 annual enplanements was utilized for this analysis. Short term parking typically comprises 15 percent of the public

LANDSIDE FACILITY REQUIREMENTS

OXNARD AIRPORT

Chapter Four
ALTERNATIVES

CHAPTER FOUR

ALTERNATIVES

The previous chapter evaluated the ability of the airside and landside facilities to satisfy a demand potential reflective of the mission statements for both Oxnard Airport and the Ventura County Department of Airports. The next step in the planning process is to consider the ways that these limited needs can be provided.

The facility considerations for Oxnard Airport (OXR) can be categorized into two functional areas: The **airside** (airfield) and **landside** (terminal, hangars, apron, and auto parking). Within each of these areas, specific facilities are required for safety and security. Others are related to demand that is still likely to be generated within the constraints of the mission statements. Although each functional area is treated separately, planning must integrate the individual requirements so they complement one another.

As indicated in the introduction, this Master Plan has the specific objective of reexamining the recommended direction of the **1996 Draft Master Plan**. This will include incorporating changes where conditions and circumstances may have invalidated the previous recommendations. Still valid concepts may be retained while new concepts are developed for those concepts that are either no longer valid or considered to be unacceptable or unworkable. Thus, the discussions of this chapter lead off with a review of the **1996 Draft Master Plan**.

REVIEW OF 1996 DRAFT MASTER PLAN

The **1996 Draft Master Plan** was developed based upon a premise of serving reasonable growth in aviation demand in the Ventura County area. The study recognized the basic limitations of Oxnard Airport and examined means by which it could continue to operate as a safe, efficient facility that served its reasonable share of area aviation demand.

The draft plan was also demand-based and was designed to allow the airport to respond to aviation demand as it presented itself. **Exhibit 4A** is a drawing depicting the primary recommendations of the draft plan.

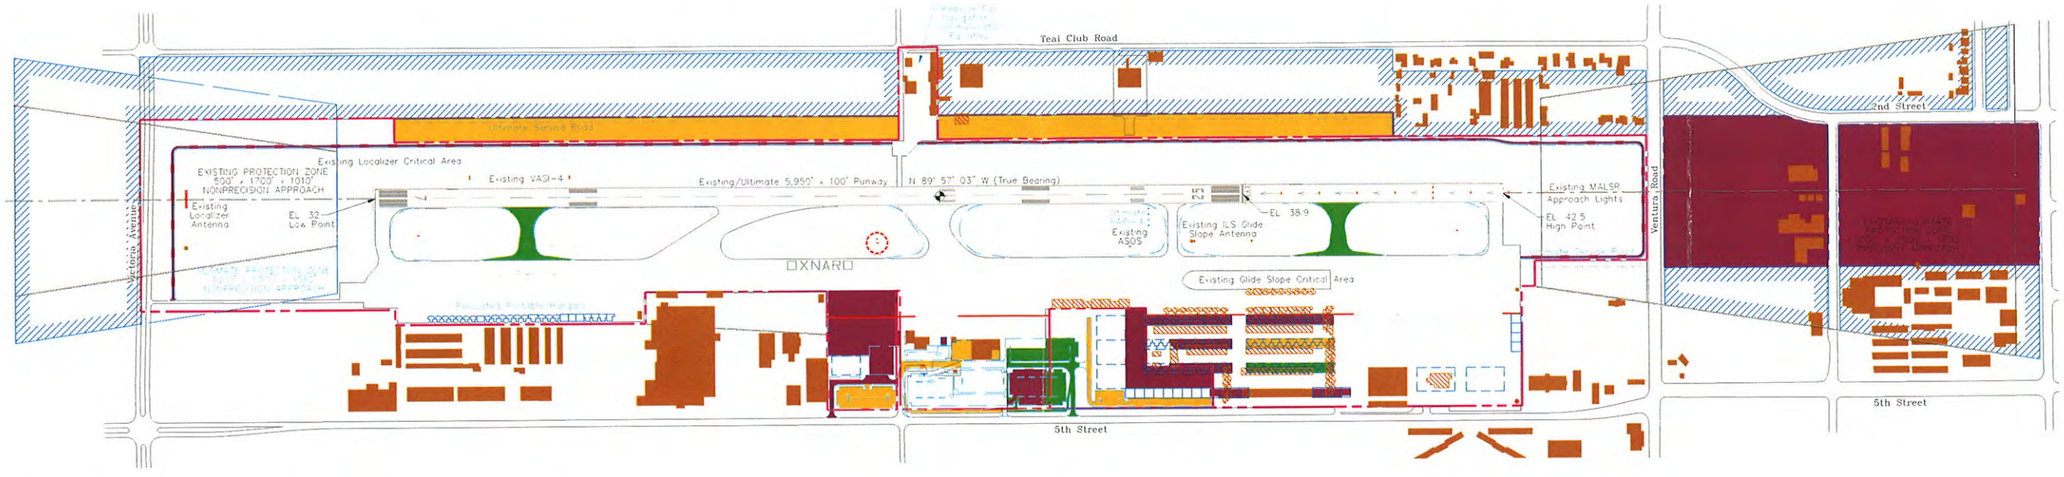
The plan did not call for any change in the runway pavement. Airfield recommendations focused on enhancing safety and approach minimums. This included recommendations to clear and control the runway object free area (OFA) to the extent practical, as well as to establish positive control over the areas within the runway protection zones (RPZs). Other airfield recommendations included improved minimums for both approaches, a perimeter service road, two additional taxiway exits, and pavement maintenance.

An alternative that was considered, but removed from the final recommendations involved relocating the Runway 25 displaced threshold further to the east. This would have provided an additional margin of safety for all landing aircraft as well as improve the landing length on the airport's instrument landing system (ILS) approach. The landing length would have been increased from 4,578 feet to 5,500 feet. This would have served to reduce the number of flight cancellations by the airlines as well as to reduce the number of diversions and delays to the business and corporate aircraft that use the airport.

On the landside, the draft plan included recommendations for passenger terminal and parking improvements that would allow the airport to serve a long-range planning horizon milestone of 130,000 enplanements. This included improvements to the existing terminal building, additional auto parking, and a redevelopment of the terminal access roadway to include an interior loop circulation system. This was designed to keep the terminal's recirculating traffic off of Fifth Street.

In the general aviation areas, the plan recommended a reconfiguration of the T-hangar area over time to provide more clearance from the runway, improve circulation, and increase hangar storage. The plan recommended acquisition of the parcel located between the terminal and the east general aviation area. It showed how the parcel could be developed for corporate aircraft storage and terminal parking and circulation. The plan included locations for a consolidated fuel farm and additional fixed base operator (FBO) development. As with the airfield, pavement maintenance and rehabilitation were also included for the terminal and general aviation aprons.

02MP10-4A-7/29/03



SHORT TERM IMPROVEMENTS (FY 1996-FY 2000)

- Prepare Consolidated Fuel Farm Site
- Construct Fuel Farm/FBO Access Road
- Construct ARFF Shelter
- Construct East Terminal Parking Lot (Phase I)
- Construct Perimeter Service Road
- East RPZ Acquisition Program
- Install PAPI-4 on Runway 7-25
- Hangar Area Taxiway Improvements (Phase I)
- Replace 12-unit with 20-unit T-hangar & relocate 29 port-a-ports and 8 executive hangars

INTERMEDIATE TERM HORIZON IMPROVEMENTS

- Construct Employee/Overflow Parking Lot
- Expand Terminal Building
- Straighten Terminal Access Road
- Construct Terminal Loop Return Lane
- Replace 12-unit with 20-unit T-hangar
- Extend Hangar Area Access Road
- North Property Acquisition Program

LONG RANGE HORIZON IMPROVEMENTS

- Move Terminal Entrance Road East
- Relocate Rental Car Lot
- Extend Parking Lot East

OXNARD AIRPORT

Exhibit 4A
1996 DRAFT AIRPORT
MASTER PLAN

The **1996 Draft Master Plan** and Airport Layout Plan (ALP) contained within never received environmental concurrence from the Ventura County Board of Supervisors, so it was never officially adopted by the County, and subsequently, was never submitted to the Federal Aviation Administration (FAA) for approval of the ALP.

NON-OXR ALTERNATIVES

Alternatives that do not involve improvements at Oxnard Airport include the "No Action" alternative, transferring services to another existing airport, or developing an airport at a different location. The mission statement for the Ventura County Department of Airports recognizes the need for providing "*safe, efficient, and accessible facilities for the provision of general aviation and limited commercial service needs of the citizens of Ventura County.*"

The mission statement also limits "*the development of Camarillo and Oxnard Airports to meet the forecasted needs of general aviation and commuter airline services in a manner that will complement each other.*" It also calls for optimizing "*the use of present airport land, maximize safety, assure financial feasibility, and minimize the negative environmental effects on the surrounding communities.*"

The Oxnard Airport Mission Statement also places "*a strong emphasis on safety, cooperation with neighbors, and responsible flight operations*" while maintaining "*a viable center for air commerce which enhances trade and business for the economic development and transportation needs of the City of Oxnard and Ventura County.*"

While development may be limited, the other aspects of the mission statements render a pure "No Action" alternative impractical. There are several improvements that need to be considered for safety and security, as well as to maintain a viable aviation facility. This leaves only service from another airport as an option to at least limited improvements at Oxnard Airport.

It is not uncommon for those living closest to an airport, such as OXR, to support relocating the facility elsewhere. This has been an issue in the past and will invariably be an issue in the future. Relocating an airport, however, is a complex and expensive task. In addition to a major financial investment, a replacement airport also can require a commitment of extensive land area. Even though the ideal location for a new airport may be undeveloped, the potential for impacts to wildlife habitat, wetlands, farmland, and cultural resources will typically be higher than at an existing airport site. In addition, a new site is also likely to be more distant and less convenient to its users.

The Department of Airport's Mission Statement recognizes that Camarillo and Oxnard Airports should provide services in a manner that complement each other. Transferring services from Oxnard Airport to Camarillo Airport is not considered to be consistent with either mission statement.

The transfer of civil aviation services to Naval Base Ventura County (Pt. Mugu) has been a much discussed issue in Ventura County over the past decade with the uncertainty surrounding base closures. A joint-use feasibility study was conducted in the mid-1990s as a means to show the impact Pt. Mugu could make as a joint-use commercial service/military facility. The study concluded that Pt. Mugu could facilitate scheduled commercial air carrier service.

Recommendations by the Base Realignment and Closure Commission (BRACC), however, spared Pt. Mugu from the closure list. With the events of 9-11 leading to the ongoing war on terrorism and heightened military alert, it does not appear that Pt. Mugu will be closing anytime soon. In addition, there presently appears to be little or no desire expressed on the part of the U.S. Department of Defense to consider Pt. Mugu as a joint-use facility.

As was indicated in Chapter Two, Ventura County generates 5.2 percent of the commercial service passengers in the Los Angeles Basin, but Oxnard Airport serves only 0.1 percent. The **Regional Aviation Plan for 2001** prepared by the Southern California Council of Governments (SCAG) calls for a more decentralized airport system including former miliary bases and joint-use facilities, rather than expanding existing urban airports.

The Oxnard Airport Mission Statement recognizes the fact that the airport is limited in expansion potential, as well as the need to accommodate the commercial service demands generated in Ventura County. As a result the mission statement calls for a continued *"search for a regional airport to serve the air carrier and commercial needs of the City of Oxnard and Ventura County."*

Thus, the relocation of commercial service to another airport remains an alternative to be considered by the County at some point in the future. Even if that movement was to begin immediately, it would likely be a minimum of eight years before the site evaluations, master plan environmental impact reports, property acquisition or release, environmental mitigation, design, and construction were completed and the first commercial service aircraft landed. In the interim, the Oxnard Airport's role is to continue to provide safe and efficient commercial air service to the area.

With or without air service in the future, the purpose and scope of this Master Plan also remains to fulfill the other aspects of the two mission statements. As a result, the remainder of this chapter will focus on the issues and considerations that are a part of maintaining Oxnard Airport as a limited, but viable commercial service aviation facility, at least until a suitable commercial alternative is found. At such time, the airport may continue to serve general aviation needs in the local community.

KEY PLANNING ISSUES

With no plan on the immediate horizon for a regional airport to serve the commercial service needs of Ventura County, the existing Oxnard Airport

must be maintained to accommodate not only local general aviation needs, but also limited commuter airline service in accordance with the mission statements. The previous chapter identified the facility improvements necessary to maintain a limited, but safe, secure, and efficient airport facility. **Exhibit 4B** outlines the key considerations that need to be addressed.

At the top of the list is airport operational safety. The airfield design standards review in the previous chapter indicated the runway does not meet FAA standards for runway safety area (RSA), object free area (OFA), and runway-taxiway separation. In addition, the runway protection zone (RPZ) encompasses several homes and other buildings. Alternatives need to be reviewed to ensure the airport meets the design standards to the extent practical.

Another consideration involves the installation of a blast pad off the east end of Runway 25. Approximately 80 percent of the departures from this airport use this runway. A blast pad would reduce the propensity to scour the turf beyond the runway end due to engine blast from aircraft beginning their takeoff roll. Improved approach minimums to both ends of the runway continue to be desirable.

In the passenger terminal area, security will be an ongoing issue as the airport continues to adapt to new security measures. The terminal building will be marginally adequate for the long-range planning horizon, but could become severely overextended if future changes in security require additional space. Efficiencies within the existing terminal should be considered, as well as a plan to add space if needed to meet future security mandates.

Another issue that is currently being addressed is the aircraft ramp that is currently being used to service and store rental cars. Since this ramp was built with FAA funds, the airport is required to relocate the rental cars elsewhere so the ramp can be used for aviation purposes as originally intended.

With leases for 20 new hangars at the west end of the airport approved, basic aircraft storage needs should be met in the short-to-intermediate term. Consideration should still be given to updating/redeveloping the east FBO and hangar areas. Many of these facilities are aging, thus providing an opportunity to develop a replacement plan that is more efficient.

AIRFIELD CONSIDERATIONS

With the airfield pavements to remain unchanged, the airfield considerations focus on safety, security, and navigational aids. The primary issue is safety. The runway-taxiway system currently does not fully meet FAA design standards for RSA and OFA as outlined in FAA Advisory Circular 150/5300-13, **Airport Design**, through Change 7.

The design standards can also affect any new instrument approach

procedures, such as a reduction in minima. According to Appendix 16 of the above-referenced advisory circular, FAA Order 8260.19, **Flight Procedures and Airspace**, reflects the design standards as the "minimum airport landing surface requirements that must be met prior to the establishment of (new) instrument approach procedures."

The most critical safety design standard is the RSA. A runway safety area analysis is provided below.

RUNWAY SAFETY AREA ANALYSIS

The runway safety area is defined in AC 150/5300-13 as: "A defined surface surrounding the runway prepared or suitable for reducing the risk of damage to airplanes in the event of an undershoot, overshoot, or excursion from the runway."

FAA Order 5300.1F, **Modification of Agency Airport Design, Construction, and Equipment Standards** indicates in Paragraph 6.d. the following:

". . . Runway safety areas at both certificated and non-certificated airports that do not meet dimensional standards are subject to FAA Order 5200.8, **Runway Safety Area Program**. Modifications of Standards are **not** issued for nonstandard runway safety areas."

FAA Order 5200.8 establishes the procedures that the FAA will follow in implementing the Runway Safety Area Program. Paragraph 5 of this Order states:

"The objective of the Runway Safety Area Program is that all RSAs at federally obligated airports . . . shall conform to the standards contained in AC 150/5300-13, **Airport Design**, to the extent practicable."

The Order goes on to indicate in Paragraph 8.b.:

"The Regional Airports Division Manager shall review all data collected for each RSA in Paragraph 7, along with the supporting documentation prepared by the region/ADO for that RSA, and make one of the following determinations:

(1) The existing RSA meets the current standards contained in AC 150/5300-13.

(2) The existing RSA does not meet the current standards, but it is practicable to improve the RSA so that it will meet current standards.

(3) The existing RSA can be improved to enhance safety, but the RSA will still not meet current standards.

(4) The existing RSA does not meet current standards, and it is not practicable to improve the RSA."

Appendix 2 of FAA Order 5200.8 provides the direction for an RSA determination. This includes the alternatives that must be evaluated. Paragraph 3 of Appendix 2 states:

GENERAL AVIATION CONSIDERATIONS

- Redevelop/Modernize FBO/Hangar Areas

OXNARD AIRPORT

Exhibit 4B
AIRPORT IMPROVEMENT CONSIDERATIONS

"The first alternative that must be considered in every case is constructing the traditional graded runway safety area surrounding the runway. **Where it is not practicable to obtain the entire safety area in this manner, as much as possible should be obtained.** Then, the following alternatives shall be addressed in the supporting documentation . . .:

a. Relocation, shifting, or realignment of the runway.

b. Reduction in runway length where the existing runway length exceeds that which is required for the existing or projected design aircraft.

c. A combination of runway relocation, shifting, grading realignment, or reduction.

d. Declared distances.

e. Engineered Materials Arresting Systems (EMAS)."

Exhibit 4C depicts the current extended runway safety areas and object free areas off the ends of Runway 7-25. The RSA extends for the full 1,000 feet off the west end, but the localizer is located just inside the RSA. Ideally, it should be relocated outside the RSA, but the minimal improvement to be gained in the RSA may not justify the cost to relocate the localizer, until such time it needs to be replaced or removed.

The east end has room for only 750 feet of extended RSA. Extending the RSA to the east by 250 feet would require the relocation of Ventura Road, a four-lane arterial roadway. Under the pretext of the mission statements for the airport and the Department of Airports, such an alternative was not considered as prudent or feasible.

The next option is to relocate, shift, or realign the runway. Relocating or shifting the runway would require additional room off the west end of the runway. This would involve relocating Victoria Avenue, which is also a four-lane arterial roadway. Realigning the runway would gain very little room for additional RSA without affecting the same two roadways, plus it has the added cost of rebuilding the entire runway. Subsequently, these alternatives were also considered as neither prudent nor feasible.

A reduction in runway length would leave the airport with less length than it presently has, making it even less suitable to serve the aircraft presently utilizing the airport.

This next option involves the application of declared distances. Declared distances are used by the FAA to define the effective runway length for landing and takeoff when either a displaced or relocated threshold is involved. Declared distances are defined as the amount of runway that is declared available for certain takeoff and landing operations. The four types of declared distances, as defined in FAA Advisory Circular 150/530-13, **Airport Design** are as follows:

Takeoff Run Available (TORA) - The runway length declared available and

suitable for the ground run of an airplane taking off.

Takeoff Distance Available (TODA) - The TORA plus the length of any remaining runway and/or clearway beyond the far end of the TORA.

Accelerate-Stop Distance Available (ASDA) - The runway plus stopway length declared available for the acceleration and deceleration of an aircraft aborting a takeoff.

Landing Distance Available (LDA) - The runway length declared available and suitable for landing.

The most critical distances to the aircraft pilot are the ASDA and the LDA. To accommodate the full RSA off the east end of the runway the threshold must be displaced at least 250 feet to the west. The current landing threshold displacement on Runway 25 is 1,372 feet. Since this is more than is needed to meet the RSA requirements, the LDA for Runway 25 would remain unchanged at 4,578 feet. Since RSA is not needed behind the start of takeoff roll, the ASDA for Runway 25 would remain the full 5,950 foot length.

The displacement for the RSA would affect LDA and ASDA for Runway 7. The minimum displacement would be 250 feet to allow room to maintain the perimeter service road along the fence line and outside the RSA. This would leave an LDA and ASDA of 5,700 feet for landing and departing from the west. Since Runway 7 is used less than 20 percent of the time, the shorter available runway length will have less of an impact on airport users than any further reduction of runway length in the Runway 25 direction.

The resulting recommendation is to continue to maintain the displaced landing threshold to Runway 25 at its present location, but to also mark and light a runway end threshold for Runway 7 at 250 feet from the east end of the runway. This would require distance-to-go markers for Runway 7 to be adjusted accordingly. In addition, the departure threshold lights would need to be moved 250 feet east and the departure threshold marked accordingly. Upon approval, the FAA would publish the declared distances for Runway 7-25 as depicted on **Table 4A**.

The segmented circle is also located within the RSA near midfield, between the runway and parallel taxiway. While the segmented circle and wind sock are on frangible mounts, they do not need to be located within the RSA, and should be relocated if possible. A location near midfield would be preferred. Potential relocation sites will be further examined later in the chapter.

TABLE 4A
Proposed Declared Distances
Oxnard Airport

	Runway 7	Runway 25
LDA	5,700'	4,578'
ASDA	5,700'	5,950'
TORA	5,950'	5,950'
TODA	5,950'	5,950'

The only other objects within the RSA are navigational aids such as the VASI and PAPI, runway lights, and the

02MP10-4C-7/25/03

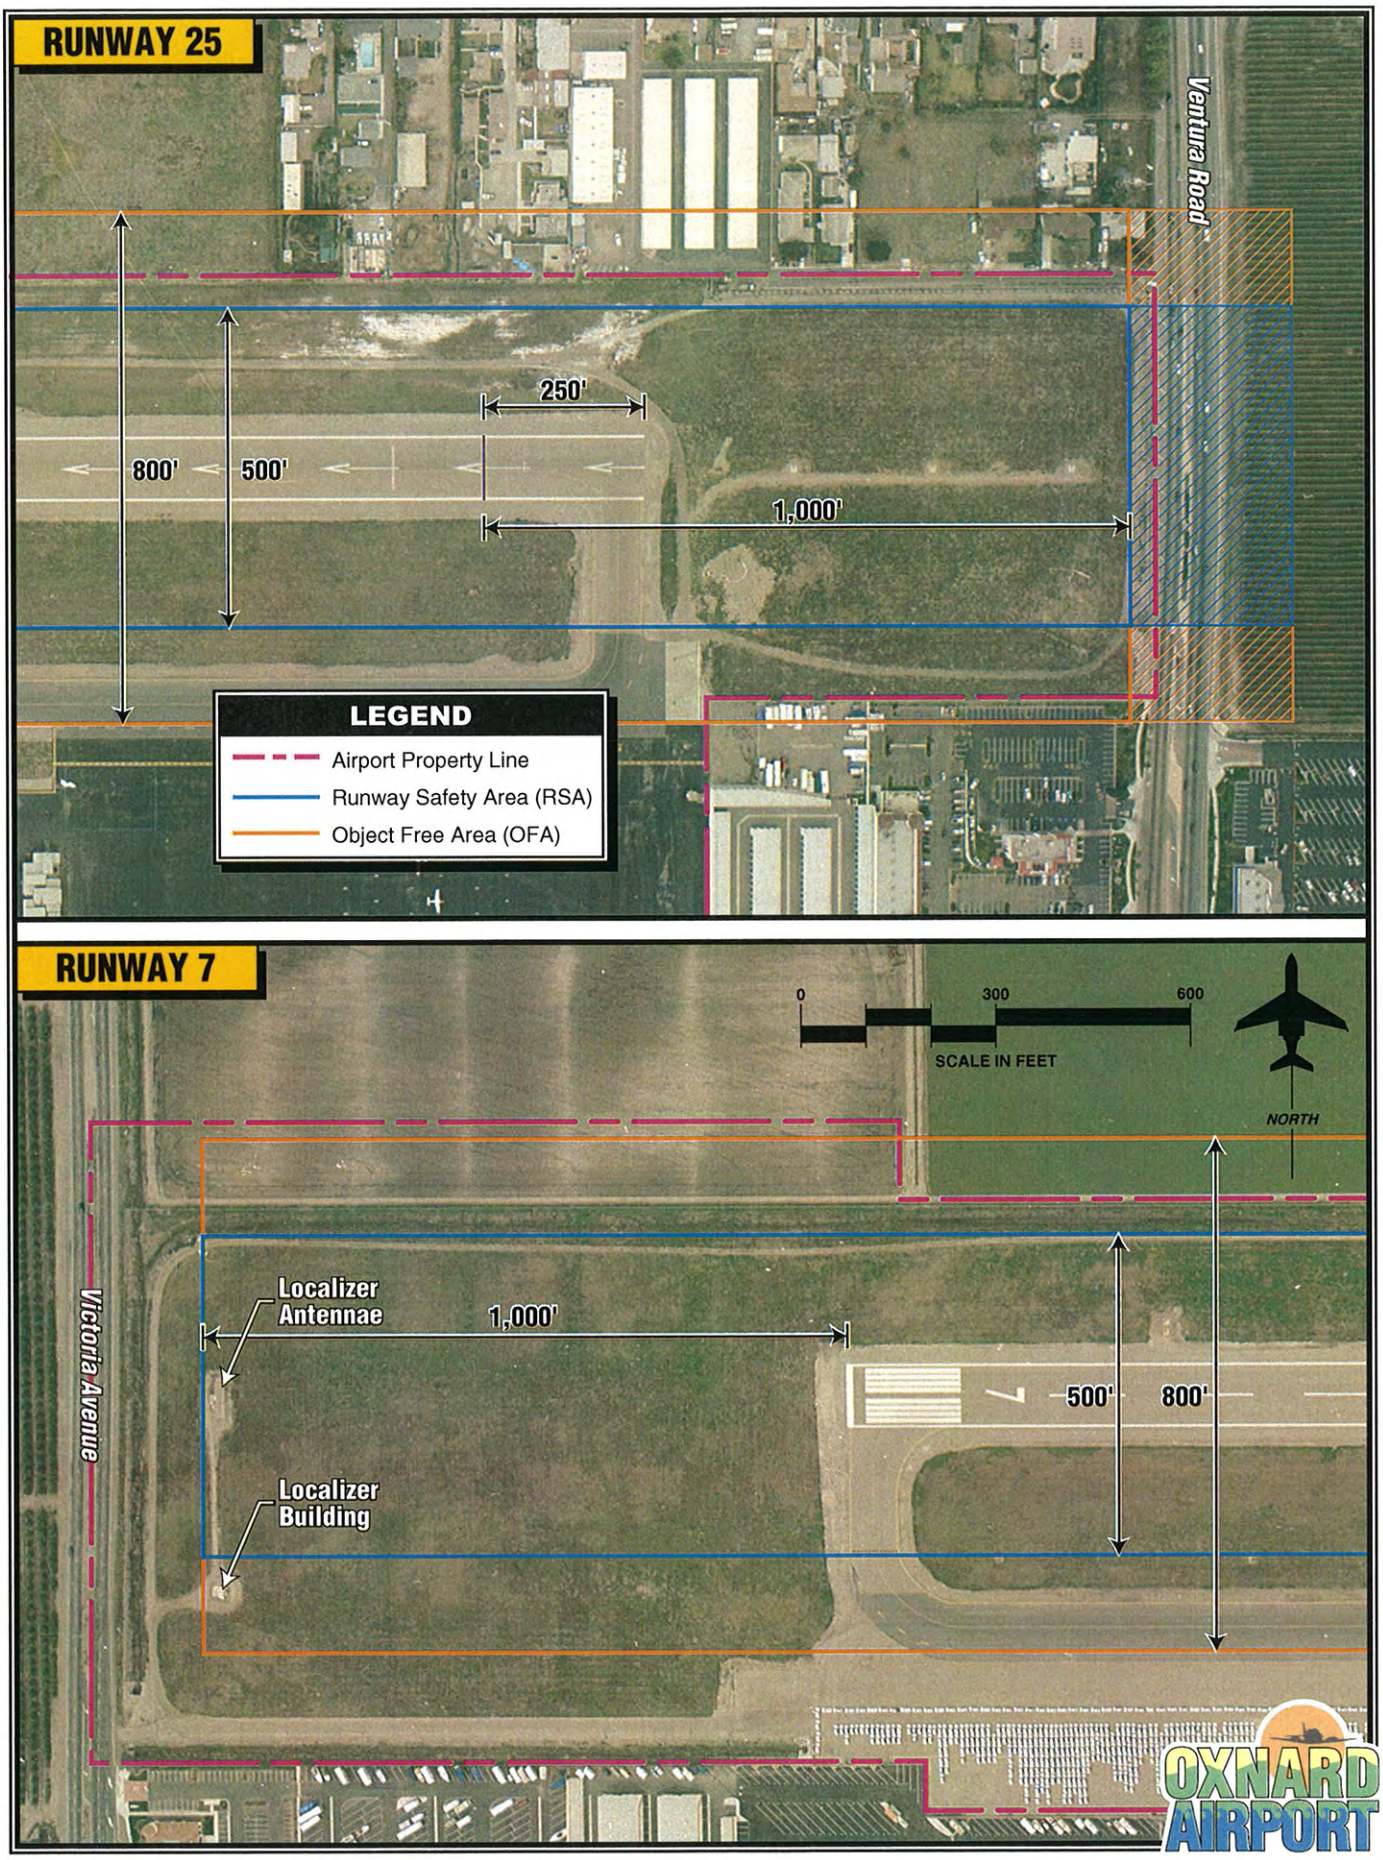

Exhibit 4C
EXTENDED RSA/OFA

MALSR. These are all fixed by their functional purpose, and are on frangible mountings, making them acceptable within the RSA.

RUNWAY OBJECT FREE AREA

Exhibit 4C also depicts the runway object free area (OFA) requirements off the end of each runway. While the OFA standard extends the same distance beyond the runway as the RSA, the OFA is 150 feet wider on each side, for a total width of 800 feet. The OFA must provide clearance of all ground-based objects protruding above the RSA edge elevation unless the object is fixed by purpose serving air or ground navigation.

The remedies for the extended RSA also apply to the extended OFA. The primary OFA concern is along the length of the runway. As shown on **Exhibit 4D**, the OFA along much of the north side and a section of the southeast side of the runway is not within the confines of the airport property. Several residences and off-airport industrial/commercial buildings are within the OFA on the northeast side of the runway. Other areas are in agricultural uses. Portions of the auto and truck parking lots are within the OFA on the southeast side.

Ideally, the Department of Airports should seek to acquire any property that is within the OFA, and remove all objects. In locations where the acquisition of property is not practical, however, the Department of Airports should request a "modification of design standards" from the FAA for the off-airport areas of the OFA that are currently developed. While the modification may be granted, it should be noted that failure to meet the design standard could still preclude obtaining improved approach minima.

The undeveloped agricultural property within the OFA should be acquired to maintain as much of the OFA within airport property as possible. This would comprise approximately 10 acres of property that is presently farmed or undeveloped. Avigation easements should also be considered for all other properties located between the airport and Teal Club Road.

RUNWAY PROTECTION ZONES

As indicated in the previous chapter, the runway protection zone (RPZ) is defined as an area off the runway end to enhance the protection of people and property on the ground. This is achieved through airport sponsor control of the RPZ. Control is preferably exercised through the acquisition of sufficient property interest in the RPZ.

The visibility minimums of the runway approach establish the dimensional standards of the RPZ. The present visibility minimums at Oxnard Airport are one mile or greater for each runway end, even though Runway 25 has an instrument landing system (ILS). Thus, the current RPZs have an inner width of 500 feet, an outer width of 1,010 feet, and are 1,700 feet long beginning two hundred feet behind the end of the runway or displaced threshold. The

RPZs at Oxnard Airport are depicted on **Exhibit 4D.**

Off the west end of the runway, the westernmost 750 feet of the RPZ is outside of the airport's boundaries. This area is presently in agricultural use, a land use that is typically compatible with the RPZ.

The displaced threshold results in the east approach having two RPZs. Both presently have the same dimensions, but the RPZ begins 200 feet behind the displaced threshold, while the departure RPZ begins 200 hundred feet beyond the physical end of the runway. Both RPZs extend beyond the existing airport boundaries, and encompass land uses considered as incompatible with the purpose of the RPZ.

For a Category I instrument approach with visibility minimums less than 3/4 mile, the approach RPZ dimensions are 1,000 feet inner width, 1,750 feet outer width, and 2,500 feet long. Off the west end, this is over compatible agricultural uses. Off the east end, however, are more incompatible uses.

If the airport is to obtain Category I instrument approach minimums, Runway 7 appears to have the best potential. Several obstructions combined with the incompatible uses within the RPZ, could make it difficult to achieve Category I minimums on Runway 25.

PARALLEL TAXIWAY SEPARATION

The present parallel Taxiway A centerline is located 365 feet from the runway centerline. With the present instrument minimums of one mile visibility, this separation exceeds the minimum standard separation of 350 feet. If the runway visibility minimums are improved to less than 3/4 mile, the design standard would increase to 400 feet.

Presently, the distance from the Taxiway A centerline to the closest fixed object is 135 feet. There is a row of tie-downs to the west of the terminal area and two helicopter parking spaces on Aspen Helicopter's ramp that would be closer. The design standard separation for ADG III aircraft is 93 feet. Moving the taxiway out 35 more feet to meet the standard would still leave the closest object 100 feet from the taxiway centerline. **Exhibit 4E** depicts this relocation.

There are other advantages to be gained with the relocation of the parallel taxiway. It would provide more space between the hold lines on the taxiway exits and the parallel taxiway. This would help improve ground circulation.

The primary drawback could be the development cost. While much of the pavement is in place, some of it may have to be rehabilitated to be put back

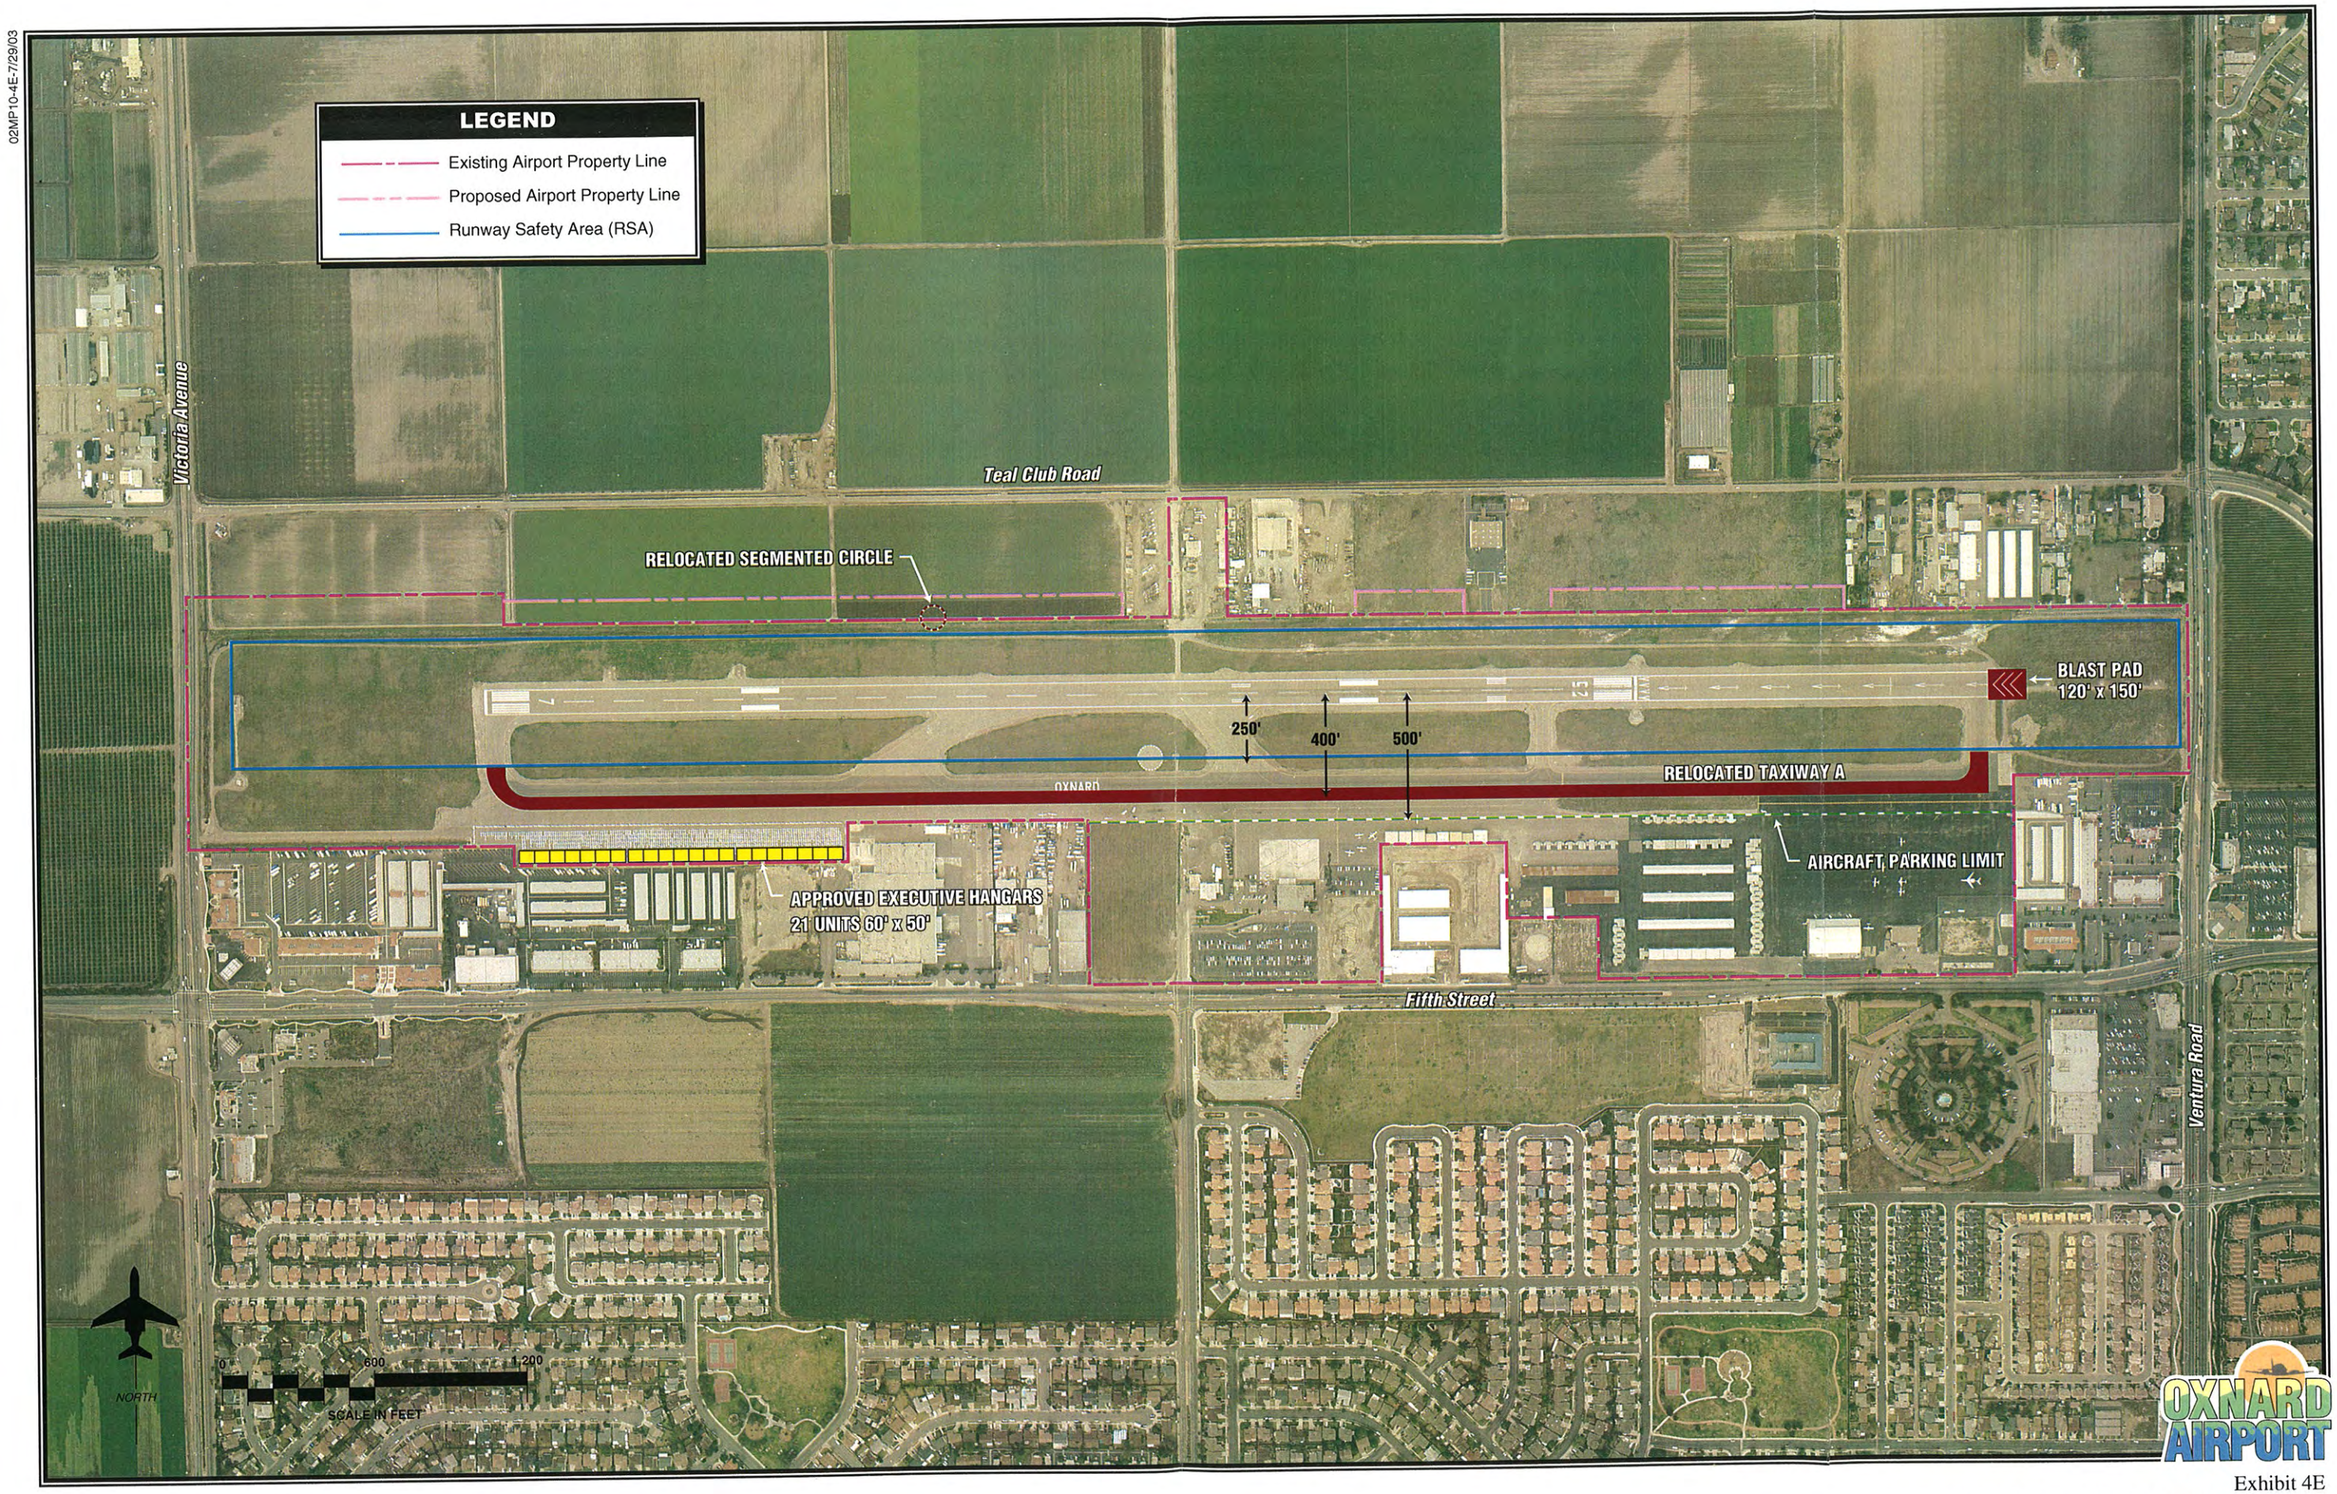

Exhibit 4E
OTHER AIRFIELD CONSIDERATIONS

into service. The drainage system may also need to be modified for the shift in pavement. Several tie-downs, including two of Aspen's helicopter spaces would need to be relocated. The other option would be to request a "modification to standards" from the FAA, if a Category I instrument approach is to be implemented.

OTHER AIRFIELD CONSIDERATIONS

Two other improvements that should be considered for the airfield are the relocation of the segmented circle and the installation of a blast pad beyond the east end of the runway.

The segmented circle presently encroaches upon the RSA and OFA. While it would be preferred to remove the segmented circle entirely outside both areas, there is no suitable location that would not require additional property acquisition. At a minimum, the segmented circle should be relocated from the RSA.

Exhibit 4E depicts a potential location on the north side of the airfield. This location is within the area recommended earlier for property acquisition. The site would be visible from the air, as well as from the control tower, and would still be near midfield. While located within the OFA, it is outside the RSA. The location in the OFA would still require a modification to design standards.

A blast pad 120 feet wide and 150 long, extending from the west end of the runway would keep the engine blast of departing business aircraft from scouring and damaging the turf in the proximity of the runway end. Since this runway end is used over 80 percent of departures, the blast pad would be most advantageous.

PASSENGER TERMINAL AREA

With the passenger terminal marginally adequate through the long-range planning horizon, internal modifications will be limited to requirements for security and efficient circulation. It is not the scope or purpose of this Master Plan to develop alternative internal floor plan layouts. That is reserved for terminal designers when the need for security or circulation adaptations present themselves. Rather, the Master Plan will focus on the exterior layout and needs of the terminal area.

If space should be needed in the future to meet security mandates, consideration should first be given to enclosing the space between the terminal building and the apron. If this is not practical for the need, space could be added to the west, as previously determined in the **1996 Draft Master Plan**. This direction would have the least impact on other terminal area uses and functions.

As with the terminal building, the facility requirements found the terminal parking and circulation to be at least marginally adequate through the long range horizon of 60,000 annual enplanements. A relocation of the rental car return and service area is

under design. Presently, the return and service area is located on pavement that was constructed with federal funds as aircraft parking apron. The grant agreement attached to the construction of the apron requires it to be used for that purpose. The FAA has directed that the ramp area be returned to aviation uses.

Exhbit 4F depicts how the rental car return and service lot can be relocated immediately south of the parking ramp. The size of the lot would also allow the provision of twelve parking spots for restaurant patrons. This would allow the existing restaurant in the terminal building to have dedicated and convenient public parking.

This relocation remains within existing airport property and room remains for the development of additional parking should demand require. Other on-airport alternatives would require either additional property or the transport of passengers to a remote lot well away from the terminal. Similarly, off-airport locations for rental cars would require transporting passengers elsewhere. This would increase the amount of shuttle bus traffic on Fifth Street and other streets. Remote locations could also increase rental car costs, as well as significantly reduce airport revenues from rental car fees.

GENERAL AVIATION CONSIDERATIONS

The general aviation (GA) considerations focus primarily on re-use and modernization of facilities, as well as ensuring that setbacks meet current design standards.

All new or relocated tie-downs and buildings will need to be planned at least 500 feet from the runway centerline, to allow for the parallel taxiway to ultimately be relocated in the future. Any building that would penetrate the imaginary surfaces as outlined in F.A.R. Part 77 will be subject to an aeronautical study by the FAA before approval.

For a structure reaching 20 feet above the runway elevation, the Part 77 setback would be 640 feet from the runway centerline for a Category I instrument approach. For a structure 35 feet above the runway elevation, the setback would be 745 feet.

Leases for 20 additional hangars have been previously approved for Oxnard Airport. These hangars are intended to be developed on the existing apron at the west end of the airport as shown on **Exhibit 4E.**

The relocation of the rental car facility will return a section of apron to aviation uses. The apron is highlighted on **Exhibit 4F.** This apron will provide aircraft parking spaces, wash rack, and self-maintenance area.

Much of the improvements in the east GA area should involve redevelopment and modernization of the facilities. The completion of a new replacement fixed base operator (FBO) hangar indicates how the area can be updated. As older facilities become impractical to maintain, they should be replaced by

02MP10-4F-7/28/03

Exhibit 4F
TERMINAL/GA CONSIDERATIONS

similar new facilities. This could eventually include several older T-hangars, as well as the remaining large World War II hangar.

Exhibit 4F also depicts an area where additional airport facilities can be developed if and when the need arises. This area is on the east side of the terminal area and would be reserved for development as needed to meet future demand or to replace facilities that need to be relocated for safety-related improvements. All the landside development options remain on the south side of the runway and within existing airport property.

SUMMARY

The process utilized in formulating and assessing airport improvement considerations involved an analysis of need based upon the mission statements of Oxnard Airport and the Ventura County Department of Airports. Operational safety was the highest priority, followed by maintaining and preserving the existing airport functions. Updating to current airport design standards was considered at every stage.

After further discussion with the Planning Advisory Committee, a concept will be recommended. The ultimate plan should represent an airport facility that fulfills safety design standards and carries out the goals and objectives of the mission statements.

The final two chapters will be dedicated to refining a basic concept into a final plan that can be approved and implemented by Ventura County with assistance from the FAA.

OXNARD AIRPORT

Chapter Five
DEVELOPMENT PLANNING PROGRAM

CHAPTER FIVE

DEVELOPMENT PLANNING PROGRAM

The airport master planning process for Oxnard Airport has evolved through the analytic efforts in the previous chapters, intended to establish potential aviation demand, establish airside and landside facility needs, and evaluate options for the improvement of airside and landside facilities. The planning process to this point, has included a presentation and review of phase reports (representing the first four chapters of the master plan) to the Planning Advisory Committee (PAC). A conceptual plan for Oxnard Airport has evolved, considering PAC input. The purpose of this chapter is to describe, in narrative and graphic form, the development plan and capital improvement program for the airport.

RECOMMENDED MASTER PLAN CONCEPT

The recommended master plan concept provides for anticipated facility needs, in concert with the airport's and Department of Aviation's mission statements. A review of how the master plan concept fits with the mission statements is included in the conclusions at the end of this chapter. The recommended concept is depicted on **Exhibit 5A**. The following section summarizes the airport design standards, as well as airside and landside recommendations.

DESIGN STANDARDS

Oxnard Airport (OXR) is identified as a primary commercial service airport in the FAA's **National Plan of Integrated Airport Systems** (NPIAS). As a commercial service airport certificated under Federal Aviation Regulation (FAR) Part 139, OXR must comply with FAA design and safety standards. Advisory Circular 150/5300-13, *Airport Design*, is the key reference used to ensure compliance with these standards. These design and safety standards are based primarily upon the characteristics of the aircraft that are expected to use the airport on a regular basis. As previously discussed in Chapter Three, the design airport reference code (ARC) is based upon the approach speed and wingspan of the "critical" aircraft. Frequently, as is the case at Oxnard Airport, more than one aircraft can make up the design aircraft.

The critical ARC for planning at OXR was determined to be a combination of D-II and B-III. This includes a range of general aviation aircraft up to the Gulfstream IV, as well as commuter turboprops such as the Dash 8.

Since a number of design standards are affected by these classifications, a summary of the runway and taxiway standards (as they will be applied to the airfield) has been provided in **Table 5A**. It is possible that some areas on the airfield (such as T-hangar storage areas) may be designed to a lesser Group I standard, requiring lower set-back requirements. This has been noted in the table, under the taxiway and taxilane design standards.

AIRFIELD RECOMMENDATIONS

The principal airfield recommendations focus upon safety, security, and compatibility. It is of key importance to ensure that airport design standards are upheld to the maximum extent feasible, particularly in relation to the runway safety area (RSA). Other recommendations are provided to improve the efficiency and circulation on the airfield. **Exhibit 5A** depicts the airfield recommendations. The following subsections discuss the recommendations as they pertain to the runway and taxiway system.

Runway 7-25 will remain the only runway at Oxnard Airport. The runway is 5,950 feet long and 100 feet wide, with a pavement strength of 70,000 pounds dual wheel loading. It is planned to remain at this pavement strength to continue to accommodate the design aircraft indicated earlier.

An analysis of the runway's safety area requirements indicated that the runway does not meet the FAA design standard for approach category C and D aircraft. The RSA beyond the east end of the runway extends for approximately 750 feet before reaching the airport's perimeter service road. Immediately east of the service road, the perimeter fence and Ventura Road also lie within the RSA. On the west end, the localizer is 970 feet from the end of Runway 7.

Source: FAA Airport Design Software Version 4.2D

The recommended plan for the east end involves relocating the departure end threshold for Runway 7, 250 feet to the west. Besides marking the departure threshold, the departure end threshold lights will be moved to the new threshold and the distance-to-go markers for Runway 7 will need to be relocated accordingly.

Off the west end of the runway, the localizer penetrates the west end of the RSA by just 30 feet, and the utility of the localizer will ultimately be replaced by GPS. With these circumstances, as long as the localizer is on fragile mountings, there is little margin of safety gained by relocating it 30 feet further west.

As a result of the runway safety area improvements, the takeoff and landing capabilities of Runway 25 remain the same. The landing length and accelerate-stop-distance-available for takeoff on Runway 7 are reduced by 250 feet, to 5,700 feet.

The segmented circle should be removed from the RSA and relocated on the north side of the airport. Relocation will be dependent upon the acquisition of property within the OFA that is discussed in the following paragraphs.

Exhibit 5A depicts the property acquisition recommendations. All property acquisitions are related to direct control of land use for the enhancement of safety. With the exception of relocation of the segmented circle and an approach-light lane for Runway 7, none of the property acquisitions proposed will be used for airport development. In fact, the ultimate intent is to clear the properties, or at least maintain current uses, with no new development.

The most critical property is that within the runway object free area (OFA). It is desirable to hold fee simple ownership of the entire object free area. The plan recommends acquisition of approximately ten (10.0) acres of undeveloped property within the OFA on the north side of the airport. Avigation easements are recommended for developed off-airport properties within the OFA. Still, the County should consider fee simple acquisition of properties from willing sellers within these areas when opportunities arise.

Another area where more positive control of property is necessary is in the approaches to the runway. The function of the runway protection zone (RPZ) is to enhance the protection of people and property on the ground. FAA Advisory Circular 150/5300-13, **Airport Design,** indicates that, "control is preferably exercised through the acquisition of sufficient property interest in the RPZ."

While fee simple acquisition is desirable, at a minimum, avigation easements should be obtained over all property within the RPZ. For Oxnard Airport, avigation easements should be obtained within the RPZs, both east and west of the airport. As with the OFA, however, the County should consider fee simple acquisition of properties from willing sellers within the RPZ. Because these areas are intended to be kept clear, no airport development is planned for these areas, other than the relocation of the segmented circle and the future installation of a medium intensity approach light system with runway alignment indicator lights (MALSR) on the Runway 7 approach.

Additional easements are recommended for approximately 57 acres on the north side between the airport and Teal Club Road. Like the easements currently

being acquired in the Runway 25 approach, these easements are designed to control development heights.

The MALSR is recommended to provide for Category I instrument approach minimums from the west. This approach provides 5,700 feet for landing, compared to just 4,578 feet on Runway 25. While Runway 25 will remain the primary direction of operations, an instrument approach to Runway 7 would allow it to be used more during wet runway conditions. Runways are more slippery during wet conditions, and the additional landing length would provide a higher margin of safety for operations.

The location of the future MALSR is depicted on **Exhibit 5A**. This approach light system would have light stations extending outward from the end of the runway for every 200 feet along the runway centerline, to a distance of 2,400 feet. This would include a series of light stations west of Victoria Avenue. Property acquisition of a 200-foot-wide path centered on the light lane is preferred, however, a right-of-way easement for the light stations and a service road would be the minimum requirement.

Exhibit 5A also depicts the proposed blast pad at the east end of the runway. This is recommended to protect the ground immediately behind the runway from being eroded by the blast of wind created as aircraft begin their takeoff roll. Since this end is used by 80 percent of the airport's takeoffs, the blast pad is warranted.

LANDSIDE RECOMMENDATIONS

Recommended landside improvements are primarily associated with maintenance, redevelopment, and modernization of existing facilities. The facility requirements indicated that, with the addition of previously approved executive hangars and the replacement of Hangar One, facilities' area should be adequate from a space standpoint. Older hangar facilities may require replacement during the planning period. In addition, future mandates in security could require alterations in the terminal area.

The terminal building footprint is not planned for any changes unless required for security. It may become necessary to modify the interior for security and/or circulation over the planning period. It should be remembered that the terminal building will be marginally adequate at 60,000 annual enplanements. If demand continues to grow beyond this level, the County will need to seriously consider its options for providing for air service in the region. If a new commercial service airport site is not in place by that time, it may become necessary to reconsider the facility needs for maintaining commercial service at Oxnard Airport.

The pending construction of a new rental car parking lot will allow the return to aviation use of the apron on the east side of the terminal building. This will be used to support general aviation activity. It will re-establish transient parking, as well as include a wash rack and self-maintenance area.

The recent completion of the new fixed base operator (FBO) hangar is an example of the modernization of facilities that can be expected in the future. This hangar was actually a replacement of Hangar One, which was lost to a fire in 1994. The new hangar is designed to better accommodate the modern aircraft and the services that an FBO provides today. The flexibility to work with the other FBOs and tenants to redevelop and modernize the airport's general aviation facilities is recommended. This will improve safety, energy efficiency, and functionality, as well as the architecture and aesthetics associated with the airport.

Exhibit 5B depicts the ongoing development and proposed plans for the landside facilities discussed above. Other improvements include the replacement of the existing ARFF shelter, located to the west of the tower. In addition, the Port-a-Ports closest to the taxiway will be relocated further south to improve runway safety and taxiway circulation.

THROUGH-THE-FENCE ACTIVITIES

There are instances when adjacent landowners may wish to gain direct airfield access to a publicly-owned landing area such as the Oxnard Airport. This type of an arrangement is commonly called a through-the-fence operation, whether the perimeter fence is imaginary or real. It is Federal Aviation Administration (FAA) policy to discourage through-the-fence activities.

The obligation to make an airport available for the use and benefit of the public does **not** impose any requirement to permit access by aircraft from adjacent property. On the contrary, the existence of such an arrangement has been recognized as an encumbrance upon the airport property itself. Airport obligations arising from federal grant agreements and conveyance instruments apply to dedicated airport land and facilities, and not to private property adjacent to the airport, even when the property owner is granted a through-the-fence privilege.

The owner of a public airport is entitled to seek recovery of the initial and continuing costs of providing a public use landing area. The owners of airports receiving federal funds have been required to establish a fee and rental structure designed to make the airports as self-sustaining as possible. Most public airports seek to recover a substantial part of airfield operating costs indirectly, through various arrangements affecting commercial activities **on** the airport. The development of aeronautical businesses on land uncontrolled by the airport owner may give the through-the-fence operation a competitive advantage that will be detrimental to the on-airport operators on whom the airport owner relies for revenue and service to the public. To avoid a potential imbalance, the airport owner **may refuse** to authorize a through-the-fence operation.

Allowing private property owners to gain a competitive advantage could

02MP10-5B-10/28/03

Exhibit 5B
RECOMMENDED TERMINAL AREA PLAN

jeopardize the economic vitality of the airport and impede its ability to remain self-sustaining. Additionally, any economic advantage gained by adjacent property owners will diminish the economic viability of the airport's own aeronautical commercial operators.

Arrangements that permit aircraft to gain access to a public landing area from off-site property introduce safety considerations, along with additional hazards that complicate the control of vehicular and aircraft traffic. Airport improvements designed to accommodate access to the airport and landing areas from an off-site location for the sole benefit and convenience of an off-airport neighbor, present a substantial and continuing burden to the airport owner. In addition, the airport must contend with legal, insurance, and management implications represented by increased costs, liability, and administrative and operational controls. For the airport owner, it may become an unexpected challenge to balance airport needs with the increasing demands on the airport by off-airport users.

It is FAA policy to strongly discourage any agreement that grants access to public landing areas by aircraft normally stored on adjacent property. Airport owners must guard against any through-the-fence operation that can become detrimental to the airport and threaten its economic viability. Any agreement for a through-the-fence operation must include provisions making such operations subject to the same federal obligations as tenants on airport property. Furthermore, the airport owner must ensure that the through-the-fence operators contribute a fair share toward the cost of the operation, maintenance, and improvement of the airport, so that they do not gain an unfair economic advantage over on-airport operators.

For all the above reasons, it is recommended that Ventura County adopt a general policy to discourage the consideration of through-the-fence activities at Oxnard Airport.

CAPITAL IMPROVEMENT PROGRAM

Once the specific needs and improvements for the airfield have been established, the next step is to determine a realistic schedule and costs for implementing the plan. This subsection examines the overall cost of development and a demand-based schedule for airport improvements.

The development schedule can be initially established by dividing the improvement needs into three planning horizons of short term, intermediate term, and long range. For the airfield, the key activity indicator is aircraft operations. For hangar development, based aircraft will be the indicator. **Table 5B** summarizes the operational milestones for each planning horizon.

It should be remembered that most of the activity levels in the planning horizons have been experienced by the airport in the past. Thus, there are actually minimal improvements needed, based upon the activity levels. Rather,

it is a matter of responding to rehabilitation and modernization, as well as safety and security enhancements.

TABLE 5B
Aviation Demand Planning Horizons
Oxnard Airport

	2002	Short Term	Intermediate Term	Long Term
ANNUAL OPERATIONS				
Commuter	3,650	4,500	5,600	6,500
Air Taxi	9,756	11,500	12,600	14,500
Military	1,541	1,500	1,500	1,500
General Aviation	73,803	78,200	83,900	92,700
Total Operations	88,750	95,700	103,600	115,200
ANNUAL PASSENGERS/BASED AIRCRAFT				
Enplanements	22,829	35,000	45,000	60,000
Based Aircraft	142	150	158	170

Table 5C summarizes capital needs for Oxnard Airport through the planning horizons of this master plan. An estimate has been included with each project of federal and state funding eligibility, although this amount is not guaranteed. For larger capital projects, it may be necessary for Ventura County to apply for discretionary funds (discussed in more detail in the following paragraphs).

Individual project cost estimates account for engineering and other contingencies that may be experienced during the implementation of the project, and are in current (2004) dollars. Due to the conceptual nature of a master plan, implementation of capital improvement projects should occur only after further refinement of their design and costs through engineering and/or architectural analyses. Capital costs in this chapter should be viewed only as estimates subject to further refinement during design.

The short term horizon covers items of highest priority, as well as items that should be developed as the airport approaches the short term activity milestones. Priority items should include improvements related to the runway safety areas and the approaches. Improvements to facilities that are inadequate for present demand should also be included in the short term. Because of their priority, these items will need to be incorporated into FAA and Department of Airports five-year programming. With improvements to the airfield in the short term, there are no airfield projects listed in the long term.

TABLE 5C
Capital Improvement Program
Oxnard Airport

No.	Project	Total Costs	FAA Eligible	Airport Share
FY 2003-04				
1	Apron Pavement/Drainage Rehabilitation	$336,000	$302,400	$33,600
2	North OFA Property Acquisition	715,000	643,500	71,500
3	Replace ARFF Vehicle	528,000	475,200	52,800
4	Gate/Access Control Security Improvements	35,000	31,500	3,500
5	Rehabilitate Runway and Exit Taxiways	485,000	436,500	48,500
6	Aircraft Wash Rack	30,000	27,000	3,000
7	Security Improvements	50,000	0	50,000
8	Torbit South Hangar Roof	75,000	0	75,000
9	Parking Lot Slurry Seal	40,000	0	40,000
10	Rehabilitate Terminal Loop Road	191,000	171,900	19,100
11	Hangar #3 Lower South Roof	24,000	0	24,000
Subtotal FY 2003-04		**$2,509,000**	**$2,088,000**	**$421,000**
FY 2004-05				
1	Apron Pave/Drainage Rehab/Blast Pad Design	$277,000	$263,150	$13,850
2	Obstruction Removal (Relocate Port-a-Ports)	25,000	22,500	2,500
3	Relocate Runway 7 Departure Threshold	35,000	33,250	1,750
4	Torbit North Hangar Roof	75,000	0	75,000
5	Aspen, Midfield West Hangar Roof	17,000	0	17,000
Subtotal FY 2004-05		**$429,000**	**$318,900**	**$110,100**
FY 2005-06				
1	Apron Pave/Drainage Rehab/Blast Pad	$1,350,000	$1,282,500	$67,500
2	Upgrade Security Fencing	370,000	351,500	18,500
3	Relocate Segmented Circle	20,000	19,000	1,000
4	Pavement Rehabilitation Design	41,000	38,950	2,050
5	Maintenance Facility Roof	34,000	0	34,000
Subtotal FY 2005-06		**$1,815,000**	**$1,691,950**	**$123,050**
FY 2006-07				
1	Pavement Rehabilitation	$960,000	$912,000	$48,000
2	Overlay Taxiways A and C Design	40,000	38,000	2,000
Subtotal FY 2006-07		**$1,000,000**	**$950,000**	**$50,000**
FY 2007-08				
1	Northside Avigation Easement Program	$674,000	$640,300	$33,700
2	West End Drainage Improvements Design	105,000	99,750	5,250
3	Overlay Taxiways A and C	220,000	209,000	11,000
4	ATCT Roof and Deck Repairs	5,000	0	5,000
Subtotal FY 2007-08		**$1,004,000**	**$949,050**	**$54,950**
SHORT TERM HORIZON TOTAL		**$6,757,000**	**$5,977,900**	**$759,100**

TABLE 5C (Continued)
Capital Improvement Program
Oxnard Airport

No.	Project	Total Costs	FAA Eligible	Airport Share
INTERMEDIATE HORIZON				
1	Runway 7 RPZ Avigation Easements	$718,000	$682,100	$35,900
2	West End Drainage Improvements	993,000	943,350	49,650
3	Install Runway 7 MALSR	650,000	617,500	32,500
4	Runway 7 Precision Marking	60,000	57,000	3,000
5	Rehabilitate Runway Lighting	150,000	142,500	7,500
6	Terminal Remodel	600,000	570,000	30,000
7	FBO Hangar Rehab/Modernization (By Lessee)	0	0	0
INTERMEDIATE HORIZON TOTAL		**$3,171,000**	**$3,012,450**	**$158,550**
LONG RANGE HORIZON				
1	FBO Hangar Rehab/Modernization (By Lessee)	$0	$0	$0
2	T-Hangar Improvements	2,000,000	1,900,000	100,000
3	ARFF Vehicle Replacement	600,000	570,000	30,000
4	Runway/Taxiway Rehabilitation	2,000,000	1,900,000	100,000
5	Apron Rehabilitation	1,500,000	1,425,000	75,000
6	Parking Lot Pavement Rehabilitation	400,000	0	400,000
LONG RANGE HORIZON TOTAL		**$6,500,000**	**$5,795,000**	**$705,000**
TOTAL PROGRAM COSTS		**$16,428,000**	**$14,805,350**	**$1,622,650**

When short term horizon activity milestones are reached, it will be time to program for the intermediate term based upon the next milestones. Maintenance and rehabilitation projects that are not likely to be necessary within the next five years, are also included in the intermediate term.

CAPITAL IMPROVEMENTS FUNDING

Financing for capital improvements comes from several sources. Contributors to the airport's development are its users, through a system of user taxes, lease rents, fees, and charges. These sources include not only the rates and charges for airport use imposed by the Ventura County Department of Airports, but also federal airport improvement programs and passenger facility charges. The following paragraphs outline the key sources for funding.

FEDERAL GRANTS

The United States Congress has long recognized the need to develop and maintain a system of aviation facilities across the nation for the purpose of national defense and promotion of interstate commerce. Various grants-in-aid programs to public airports have been established over the years for this purpose. The most recent legislation is the Airport Improvement Program (AIP) of 1982. The AIP has been reauthorized several times, with the

most recent reauthorization enacted in late 2003. It is entitled the *Vision 100 - Century of Aviation Reauthorization Act*. The new four-year program covers FAA fiscal years 2004 through 2007.

The source for AIP funds is the Aviation Trust Fund. The Trust Fund is the depository for all federal aviation taxes such as those on airline tickets, aviation fuel, lubricants, tires and tubes, aircraft registrations, and other aviation-related fees. The funds are distributed under appropriations set by Congress to airports in the United States which have certified eligibility. The distribution of grants is administered by the Federal Aviation Administration.

Under the AIP program, examples of eligible development projects include the airfield, aprons, and access roads. Passenger terminal building improvements (such as bag claim and public waiting lobbies) may also be eligible for a limited amount of FAA funding. However, improvements such as automobile parking, fueling facilities, utilities, hangar buildings, airline ticketing and airline operations areas, are not generally eligible for AIP funds. Under Vision 100, Oxnard Airport is eligible for 95 percent funding assistance, an increase from the previous 90 percent level.

AIP provides funding for eligible projects at airports through an entitlement program. Primary commercial service airports receive a guaranteed minimum of federal assistance each year, based on their enplaned passenger levels and Congressional appropriation levels. A primary airport is defined as any commercial service airport enplaning at least 10,000 passengers annually.

Under the formula, if AIP is appropriated at the authorized levels, airports enplaning at least 10,000 passengers annually are entitled to a minimum of $1,000,000 annually. (If AIP was funded below the authorized levels, the minimum is $650,000.)

In addition, airports that have over 100 million pounds of landed weight by all-cargo carriers, receive a cargo entitlement. This entitlement is based upon the airport's percentage of the total landed weight at all eligible airports.

Vision 100 also establishes special set-asides for noise programs, general aviation and non-primary airports, and other special programs.

In a number of cases, airports face major projects that will require funds in excess of the airport's annual entitlements. Thus, additional funds from discretionary apportionments under AIP become desirable. The primary feature about discretionary funds is that they are distributed on a priority basis. These priorities are established by the FAA, utilizing a priority code system. Under this system, projects are ranked by their purpose. Projects ensuring airport safety and security are ranked as the most important priorities, followed by maintaining current infrastructure development, mitigating noise and other environmental impacts, meeting standards, and increasing system capacity.

Other funds can come through the Facilities and Equipment (F&E) section of the FAA. As activity conditions warrant, the airport will be considered by F & E for various navigational aids to be installed, owned, and maintained by the FAA.

Whereas entitlement monies are guaranteed on an annual basis, discretionary funds are not assured. If the combination of entitlement and discretionary funding does not provide enough capital for planned development, projects would either be delayed, or require funding from the airport's revenues or other authorized sources such as those described in the following subsections.

PASSENGER FACILITY CHARGES

The **Aviation Safety and Capacity Expansion Act of 1990** contained a provision for airports to levy passenger facility charges (PFCs) for the purposes of enhancing airport safety, capacity, or security or to reduce noise or enhance competition.

14 CFR Part 158 of May 29, 1991, establishes the regulations that must be followed by airports choosing to levy PFCs. Passenger facility charges may be imposed by public agencies controlling a commercial service airport with at least 2,500 annual passengers with scheduled service. Authorized agencies were allowed to impose a charge of $1.00, $2.00, or $3.00 per enplaned passenger. Legislation (AIR 21) passed in early 2000, allowed the cap to increase to $4.50.

Prior approval is required from the Department of Transportation (DOT) before an airport is allowed to levy a PFC. The DOT must find that the projected revenues are needed for specific, approved projects. Any AIP-eligible project, whether development or planning related, is eligible for PFC funding. Gates and related areas for the movement of passengers and baggage are eligible, as are on-airport ground access projects. Any project approved must preserve or enhance safety, security, or capacity; reduce/ mitigate noise impacts; or enhance competition among carriers.

PFCs may be used only on approved projects. However, PFCs can be utilized to fund 100 percent of a project. They may also be used as matching funds for AIP grants or to augment AIP-funded projects. PFCs can be used for debt service and financing costs of bonds for eligible airport development. These funds may also be commingled with general revenue for bond debt service. Before submitting a PFC application, the airport must give notice and an opportunity for consultation with airlines operating at the airport.

PFCs are to be treated similar to other airport improvement grants, rather than as airport revenues, and will be administered by the FAA. Participating airlines are able to retain up to eight cents per passenger for administrative handling purposes.

The Ventura County Department of Airports imposes the maximum PFC of $4.50 per enplanement, to support improvements at Oxnard Airport. The

funds from the PFC are currently obligated to a total of $872,000 to fund several projects including this Master Plan. Also included are two projects within fiscal year (2003-04) of the Master Plan CIP; the runway and exit taxiway rehabilitation, and the terminal loop road rehabilitation. With this PFC, the Department of Airports should annually collect funds between $90,000 and $250,000 depending upon enplanements each year. The PFC authorization runs through 2010. If the passenger levels forecast in Chapter Two are achieved, the committed funds could be collected by as early as 2008.

STATE FUNDS

In support of the state airport system, the California Transportation Commission (CTC) also participates in state airport development projects. An aeronautics account has been established within the state transportation fund, from which all airport improvement monies are drawn. Tax revenues have been collected and deposited in the aeronautics account from the sale of general aviation jet fuel ($0.02 per gallon) and avgas ($0.18 per gallon). The CTC has established three grant programs to distribute funds deposited in the aeronautics account: annual grants, acquisition and development (A & D) grants, and AIP matching grants. Another funding source provided by the CTC is low-interest loans. Because Oxnard Airport is a commercial service airport, it is ineligible to receive annual and AIP matching grants from the State Aeronautics Account. However, the airport is eligible to receive A&D Grants and low-interest loans from the state. Each of these is discussed below.

Acquisition and Development (A & D) Grants

A & D grants are designed to provide funding to airports for the purpose of land acquisition and development. This grant has a minimum allocation level of $10,000 and provides up to $500,000 per fiscal year (maximum allowable funding to a single airport yearly). Grant requests are initiated through the CIP process and require a local match of 10 to 50 percent of the project's cost (the level has been 10 percent for the last 10+ years). Unlike annual and AIP matching grants, reliever and commercial service airports are eligible for the A & D grant. Oxnard Airport could utilize these grants as a means to acquire land listed in the CIP. Considering the current financial crisis facing the State of California, no assumption should be made that any funding will be available to Oxnard Airport through this program, at least in the short term.

California Airport Loan Program

The loan program provides funding for all airports within the State of California which are owned by an eligible public agency and open to the public without exception. These loans provide funding to eligible airports for construction and land acquisition projects which will benefit the airport and improve its self-sufficiency. The loans can be used for nearly any

airport-related project and the funding limits are not bound by law or regulation. The amount of the loan is determined in accordance with project feasibility and the sponsor's financial status. Terms of the loan provide eight to 15 years for its payback and the interest rate is based upon the most recent State of California bond sale.

FUNDING PLAN

The underlying strategy used to develop the financial plan of the capital improvement program involves first applying projected annual entitlement funding to eligible project costs. Potential state funding is then considered. The net balances of AIP eligible costs, local matching shares, and the costs of non-eligible projects result in the remaining costs to be funded.

Table 5D outlines the maximum potential FAA entitlement funding that could be attained during each planning horizon, based upon the activity levels forecast. Funding from the state is assumed to be zero. This analysis assumes that the short term horizon would be attained in five years, the intermediate horizon would be achieved in another seven years, and the long range horizon would be achieved in an additional 10 years.

TABLE 5D
CIP Financial Assumptions (2004 $)

	Short Term	Intermediate Term	Long Range
Total Project Costs	$6,757,000	$3,171,000	$6,500,000
Grant Eligible	$5,997,900	$3,012,450	$5,795,000
AIP Entitlements	$5,000,000	$7,000,000	$10,000,000
State Funding	$0	$0	$0
Remaining Grant Eligible Costs	$997,900	$0	$0
Matching Share Costs	$439,100	$158,550	$305,000
Remaining PFC-Eligible Costs	$1,437,000	$158,550	$305,000
Passenger Facility Charges (PFC)	$722,400	$1,227,650	$2,289,750
Remaining Matching Share	$714,600	$0	$0
Non-Eligible Costs	$320,000	$0	$400,000
Remaining Airport CIP Costs	$1,034,600	$0	$400,000

The airport's entitlement funding of $1.0 million annually will be more than sufficient to fund FAA-eligible projects for the intermediate and long term planning horizons. The short term projects, however, exceed the entitlement funding by $997,900. This combined with matching share costs of $439,100 will total $1,437,000 that would be eligible for funding by PFC's. With an estimated $722,400 in PFC's in the short term, this will leave approximately $714,600 to be funded. The County will still be able to seek discretionary funding from the FAA for up to 95 percent of this total.

If the PFCs are renewed beyond 2010 for use in funding other projects, it should provide more than adequate monies to fund the matching share through the remainder of the planning period. This leaves costs that are not eligible for funding. Most of these projects have to do with maintenance and modernization of hangar facilities. Since these projects are related to revenue-producing facilities, they would need to be funded through the rates and charges of the airport. Over the course of the intermediate and long range planning horizons, this is estimated to be approximately $720,000.

CONCLUSIONS

In conclusion, the Master Plan is reviewed with regard to the Department of Airports and Oxnard Airport Mission Statements.

DEPARTMENT OF AIRPORTS MISSION STATEMENT

- ***To provide safe, efficient, maintained, and accessible facilities for the provision of general aviation and limited commuter airline service needs of the citizens of Ventura County.***

The Master Plan concept preserves the current general aviation and commuter activities for which Oxnard Airport is used. It includes recommendations to enhance safety and efficiency, as well as to maintain existing facilities.

- ***To limit the development of Camarillo and Oxnard Airports to meet the forecasted needs of general aviation and commuter airline services in a manner that will complement each other.***

The Master Plan utilizes a forecast that takes into account the following development qualifiers:

- No increase in runway length.
- No significant increase in terminal space.
- Planning to maintain and serve based aircraft levels equal to its current market share of registered aircraft in the county.

- ***To optimize the use of present airport land, maximize safety, assure financial feasibility, and minimize the negative environmental effects on the surrounding communities.***

With the exception of an approach light system, segmented circle relocation, and perimeter fencing, all development in the Master Plan will occur on current airport property. The only property acquisitions recommended are those designed to enhance operational safety.

OXNARD AIRPORT
MISSION STATEMENT

Oxnard Airport shall:

- ***be a publicly owned, operated, and managed general aviation airport with a strong emphasis on safety, cooperation with its neighbors, and responsible flight operations.***

The Master Plan is based upon maintaining the Oxnard Airport as a County-owned and operated airport. It remains open to general aviation activity that can operate within the constraints of its facilities. The major improvement recommendations for the airfield are based upon meeting airport design standards to the extent feasible.

- ***maintain a viable center for air commerce, which enhances trade and business for the economic development and transportation needs of the City of Oxnard and Ventura County.***

The Master Plan continues to provide for maintenance and modernization of existing terminal area facilities to serve the needs of its users. The plan does consider growth in traffic beyond the current levels of activity in support of economic development and transportation needs of the City and County.

- ***make every reasonable effort to limit the hours of air operations through a curfew, and to reduce noise and air pollution nuisances caused by airport users and operations.***

Since the Master Plan is primarily a facility-related plan, the consideration of limited hours and/or curfews is beyond the purview of the Master Plan. The Master Plan is also limited in means to reduce noise and air pollution. The Master Plan, however, does not recommend any improvements that would increase the potential for noise and air pollution.

- ***provide the region with safe and efficient access to the national air transportation system and general aviation.***

Safety, maintenance, and modernization of the Oxnard Airport is the primary emphasis of the Master Plan. The plan will allow the airport to continue to be a regional access to the national air transportation system.

- ***continue to search for a regional airport to serve the air carrier and commercial needs of the City of Oxnard and Ventura County.***

The limited development recommendations of the Master Plan are based in large part on the continued search for a new airport. The Master Plan recognizes that the forecasts for Oxnard Airport fall well short of meeting the commercial service demand in Ventura County. As other commercial airports in the Los Angeles Basin reach their capacities, it will become more incumbent upon the County to have access to adequate airport facilities to serve the needs of its citizens, businesses, and economic well-being.

OXNARD AIRPORT

Appendix A
GLOSSARY AND ABBREVIATIONS

Appendix A
GLOSSARY OF TERMS

ACCELERATE-STOP DISTANCE AVAILABLE (ASDA): see declared distances.

AIR CARRIER: an operator which: (1) performs at least five round trips per week between two or more points and publishes flight schedules which specify the times, days of the week, and places between which such flights are performed; or (2) transport mail by air pursuant to a current contract with the U.S. Postal Service. Certified in accordance with Federal Aviation Regulation (FAR) Parts 121 and 127.

AIRPORT REFERENCE CODE (ARC): a coding system used to relate airport design criteria to the operational (Aircraft Approach Category) to the physical characteristics (Airplane Design Group) of the airplanes intended to operate at the airport.

AIRPORT REFERENCE POINT (ARP): The latitude and longitude of the approximate center of the airport.

AIRPORT ELEVATION: The highest point on an airport's usable runway expressed in feet above mean sea level (MSL).

AIRPORT LAYOUT DRAWING (ALD): The drawing of the airport showing the layout of existing and proposed airport facilities.

AIRCRAFT APPROACH CATEGORY: a grouping of aircraft based on 1.3 times the stall speed in their landing configuration at their maximum certificated landing weight. The categories are as follows:

- *Category A:* Speed less than 91 knots.
- *Category B:* Speed 91 knots or more, but less than 121 knots.
- *Category C:* Speed 121 knots or more, but less than 141 knots.
- *Category D:* Speed 141 knots or more, but less than 166 knots.
- *Category E:* Speed greater than 166 knots.

AIRPLANE DESIGN GROUP (ADG): a grouping of aircraft based upon wingspan. The groups are as follows:

- *Group I:* Up to but not including 49 feet.
- *Group II:* 49 feet up to but not including 79 feet.
- *Group III:* 79 feet up to but not including 118 feet.
- *Group IV:* 118 feet up to but not including 171 feet.
- *Group V:* 171 feet up to but not including 214 feet.
- *Group VI:* 214 feet or greater.

AIR TAXI: An air carrier certificated in accordance with FAR Part 135 and authorized to provide, on demand, public transportation of persons and property by aircraft. Generally operates small aircraft "for hire" for specific trips.

AIRPORT TRAFFIC CONTROL TOWER (ATCT): a central operations facility in the terminal air traffic control system, consisting of a tower, including an associated instrument flight rule (IFR) room if radar equipped, using air/ground communications and/or radar, visual signaling, and other devices to provide safe and expeditious movement of terminal air traffic.

AIR ROUTE TRAFFIC CONTROL CENTER (ARTCC): a facility established to provide air traffic control service to aircraft operating on an IFR flight plan within controlled airspace and principally during the enroute phase of flight.

ALERT AREA: see special-use airspace.

ANNUAL INSTRUMENT APPROACH (AIA): an approach to an airport with the intent to land by an aircraft in accordance with an IFR flight plan when visibility is less than three miles and/or when the ceiling is at or below the minimum initial approach altitude.

APPROACH LIGHTING SYSTEM (ALS): an airport lighting facility which provides visual guidance to landing aircraft by radiating light beams by which the pilot aligns the aircraft with the extended centerline of the runway on his final approach and landing.

APPROACH MINIMUMS: the altitude below which an aircraft may not descend while on an IFR approach unless the pilot has the runway in sight.

AUTOMATIC DIRECTION FINDER (ADF): an aircraft radio navigation system which senses and indicates the direction to a non-directional radio beacon (NDB) ground transmitter.

AUTOMATED WEATHER OBSERVATION STATION (AWOS): equipment used to automatically record weather conditions (i.e. cloud height, visibility, wind speed and direction, temperature, dewpoint, etc...)

AUTOMATED TERMINAL INFORMATION SERVICE (ATIS): the continuous broadcast of recorded non-control information at towered airports. Information typically includes wind speed, direction, and runway in use.

AZIMUTH: Horizontal direction expressed as the angular distance between true north and the direction of a fixed point (as the observer's heading).

BASE LEG: A flight path at right angles to the landing runway off its approach end. The base leg normally extends from the downwind leg to the intersection of the extended runway centerline. See "traffic pattern."

BEARING: the horizontal direction to or from any point, usually measured clockwise from true north or magnetic north.

BLAST FENCE: a barrier used to divert or dissipate jet blast or propeller wash.

BUILDING RESTRICTION LINE (BRL): A line which identifies suitable building area locations on the airport.

CIRCLING APPROACH: a maneuver initiated by the pilot to align the aircraft with the runway for landing when flying

a predetermined circling instrument approach under IFR.

CLASS A AIRSPACE: see Controlled Airspace.

CLASS B AIRSPACE: see Controlled Airspace.

CLASS C AIRSPACE: see Controlled Airspace.

CLASS D AIRSPACE: see Controlled Airspace.

CLASS E AIRSPACE: see Controlled Airspace.

CLASS G AIRSPACE: see Controlled Airspace.

CLEAR ZONE: see Runway Protection Zone.

CROSSWIND: wind flow that is not parallel to the runway of the flight path of an aircraft.

COMPASS LOCATOR (LOM): a low power, low/medium frequency radiobeacon installed in conjunction with the instrument landing system at one or two of the marker sites.

CONTROLLED AIRSPACE: airspace of defined dimensions within which air traffic control services are provided to instrument flight rules (IFR) and visual flight rules (VFR) flights in accordance with the airspace classification. Controlled airspace in the United States is designated as follows:

- *CLASS A:* generally, the airspace from 18,000 feet mean sea level (MSL) up to but not including flight level FL600. All persons must operate their aircraft under IFR.

- *CLASS B:* generally, the airspace from the surface to 10,000 feet MSL surrounding the nation's busiest airports. The configuration of Class B airspace is unique to each airport, but typically consists of two or more layers of air space and is designed to contain all published instrument approach procedures to the airport. An air traffic control clearance is required for all aircraft to operate in the area.

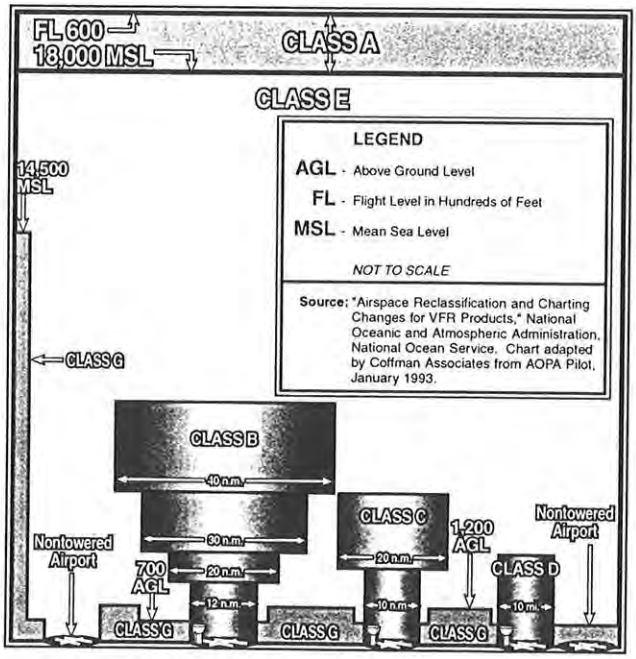
- *CLASS C:* generally, the airspace from the surface to 4,000 feet above the air port elevation (charted as MSL) surrounding those airports that have an operational control tower and radar approach control and are served by a qualifying number of IFR operations or passenger enplanements. Although individually tailored for each airport, Class C airspace typically consists of a surface area with a five nautical mile (nm) radius and an outer area with a 10 nautical mile radius that extends from 1,200 feet to 4,000 feet above the airport elevation. Two-way radio communication is required for all aircraft.

- *CLASS D:* generally, that airspace from the surface to 2,500 feet above the air port elevation (charted as MSL) surrounding those airport that have an operational control tower. Class D air space is individually tailored and configured to encompass published instrument approach procedures. Unless otherwise authorized, all

persons must establish two-way radio communication.

- *CLASS E:* generally, controlled airspace that is not classified as Class A, B, C, or D. Class E airspace extends upward from either the surface or a designated altitude to the overlying or adjacent controlled airspace. When designated as a surface area, the airspace will be configured to contain all instrument procedures. Class E airspace encompasses all Victor Airways. Only aircraft following instrument flight rules are required to establish two-way radio communication with air traffic control.

- *CLASS G:* generally, that airspace not classified as Class A, B, C, D, or E. Class G airspace is uncontrolled for all aircraft. Class G airspace extends from the surface to the overlying Class E airspace.



CONTROLLED FIRING AREA: see special-use airspace.

CROSSWIND LEG: A flight path at right angles to the landing runway off its upwind end. See "traffic pattern."

DECLARED DISTANCES: The distances declared available for the airplane's takeoff runway, takeoff distance, accelerate-stop distance, and landing distance requirements. The distances are:

- *TAKEOFF RUNWAY AVAILABLE (TORA):* The runway length declared available and suitable for the ground run of an airplane taking off;

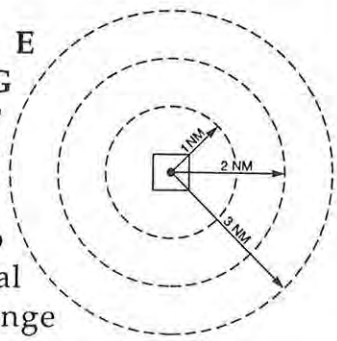
- *TAKEOFF DISTANCE AVAILABLE (TODA):* The TORA plus the length of any remaining runway and/or clear way beyond the far end of the TORA;

- *ACCELERATE-STOP DISTANCE AVAILABLE (ASDA):* The runway plus stopway length declared available for the acceleration and deceleration of an aircraft aborting a takeoff; and

- *LANDING DISTANCE AVAILABLE (LDA):* The runway length declared available and suitable for landing.

DISPLACED THRESHOLD: a threshold that is located at a point on the runway other than the designated beginning of the runway.

DISTANCE MEASURING EQUIPMENT (DME): Equipment (airborne and ground) used to measure, in nautical miles, the slant range



distance of an aircraft from the DME navigational aid.

DNL: The 24-hour average sound level, in A-weighted decibels, obtained after the addition of ten decibels to sound levels for the periods between 10 p.m. and 7 a.m. as averaged over a span of one year. It is the FAA standard metric for determining the cumulative exposure of individuals to noise.

DOWNWIND LEG: A flight path parallel to the landing runway in the direction opposite to landing. The downwind leg normally extends between the crosswind leg and the base leg. Also see "traffic pattern."

EASEMENT: The legal right of one party to use a portion of the total rights in real estate owned by another party. This may include the right of passage over, on, or below the property; certain air rights above the property, including view rights; and the rights to any specified form of development or activity, as well as any other legal rights in the property that may be specified in the easement document.

ENPLANED PASSENGERS: the total number of revenue passengers boarding aircraft, including originating, stop-over, and transfer passengers, in scheduled and non-scheduled services.

FINAL APPROACH: A flight path in the direction of landing along the extended runway centerline. The final approach normally extends from the base leg to the runway. See "traffic pattern."

FIXED BASE OPERATOR (FBO): A provider of services to users of an airport. Such services include, but are not limited to, hangaring, fueling, flight training, repair, and maintenance.

FRANGIBLE NAVAID: a navigational aid which retains its structural integrity and stiffness up to a designated maximum load, but on impact from a greater load, breaks, distorts, or yields in such a manner as to present the minimum hazard to aircraft.

GENERAL AVIATION: that portion of civil aviation which encompasses all facets of aviation except air carriers holding a certificate of convenience and necessity, and large aircraft commercial operators.

GLIDESLOPE (GS): Provides vertical guidance for aircraft during approach and landing. The glideslope consists of the following:

1. Electronic components emitting signals which provide vertical guidance by reference to airborne instruments during instrument approaches such as ILS; or

2. Visual ground aids, such as VASI, which provide vertical guidance for VFR approach or for the visual portion of an instrument approach and landing.

GLOBAL POSITIONING SYSTEM: See "GPS."

GPS - GLOBAL POSITIONING SYSTEM: A system of 24 satellites

used as reference points to enable navigators equipped with GPS receivers to determine their latitude, longitude, and altitude.

HELIPAD: a designated area for the takeoff, landing, and parking of helicopters.

HIGH-SPEED EXIT TAXIWAY: a long radius taxiway designed to expedite aircraft turning off the runway after landing (at speeds to 60 knots), thus reducing runway occupancy time.

INSTRUMENT APPROACH: A series of predetermined maneuvers for the orderly transfer of an aircraft under instrument flight conditions from the beginning of the initial approach to a landing, or to a point from which a landing may be made visually.

INSTRUMENT FLIGHT RULES (IFR): Rules governing the procedures for conducting instrument flight. Also a term used by pilots and controllers to indicate type of flight plan.

INSTRUMENT LANDING SYSTEM (ILS): A precision instrument approach system which normally consists of the following electronic components and visual aids:

1. Localizer.
2. Glide Slope.
3. Outer Marker.
4. Middle Marker.
5. Approach Lights.

LANDING DISTANCE AVAILABLE (LDA): see declared distances.

LOCAL TRAFFIC: aircraft operating in the traffic pattern or within sight of the tower, or aircraft known to be departing or arriving from the local practice areas, or aircraft executing practice instrument approach procedures. Typically, this includes touch-and-go training operations.

LOCALIZER: The component of an ILS which provides course guidance to the runway.

LOCALIZER TYPE DIRECTIONAL AID (LDA): a facility of comparable utility and accuracy to a localizer, but is not part of a complete ILS and is not aligned with the runway.

LORAN: long range navigation, an electronic navigational aid which determines aircraft position and speed by measuring the difference in the time of reception of synchronized pulse signals from two fixed transmitters. Loran is used for enroute navigation.

MICROWAVE LANDING SYSTEM (MLS): an instrument approach and landing system that provides precision guidance in azimuth, elevation, and distance measurement.

MILITARY OPERATIONS AREA (MOA): see special-use airspace.

MISSED APPROACH COURSE (MAC): The flight route to be followed if, after an instrument approach, a landing is not effected, and occurring normally:

1. When the aircraft has descended to the decision height and has not established visual contact; or

2. When directed by air traffic control to pull up or to go around again.

MOVEMENT AREA: the runways, taxiways, and other areas of an airport which are utilized for taxiing/hover taxiing, air taxiing, takeoff, and landing of aircraft, exclusive of loading ramps and parking areas. At those airports with a tower, air traffic control clearance is required for entry onto the movement area.

NAVAID: a term used to describe any electrical or visual air navigational aids, lights, signs, and associated supporting equipment (i.e. PAPI, VASI, ILS, etc..)

NOISE CONTOUR: A continuous line on a map of the airport vicinity connecting all points of the same noise exposure level.

NONDIRECTIONAL BEACON (NDB): A beacon transmitting nondirectional signals whereby the pilot of an aircraft equipped with direction finding equipment can determine his or her bearing to and from the radio beacon and home on, or track to, the station. When the radio beacon is installed in conjunction with the Instrument Landing System marker, it is normally called a Compass Locator.

NONPRECISION APPROACH PROCEDURE: a standard instrument approach procedure in which no electronic glide slope is provided, such as VOR, TACAN, NDB, or LOC.

OBJECT FREE AREA (OFA): an area on the ground centered on a runway, taxiway, or taxilane centerline provided to enhance the safety of aircraft operations by having the area free of objects, except for objects that need to be located in the OFA for air navigation or aircraft ground maneuvering purposes.

OBSTACLE FREE ZONE (OFZ): the airspace below 150 feet above the established airport elevation and along the runway and extended runway centerline that is required to be kept clear of all objects, except for frangible visual NAVAIDs that need to be located in the OFZ because of their function, in order to provide clearance for aircraft landing or taking off from the runway, and for missed approaches.

OPERATION: a take-off or a landing.

OUTER MARKER (OM): an ILS navigation facility in the terminal area navigation system located four to seven miles from the runway edge on the extended centerline indicating to the pilot, that he/she is passing over the facility and can begin final approach.

PRECISION APPROACH: a standard instrument approach procedure which provides runway alignment and glide slope (descent) information. It is categorized as follows:

- *CATEGORY I (CAT I):* a precision approach which provides for approaches with a decision height of not less than 200 feet and visibility not less than 1/2 mile or Runway Visual Range (RVR) 2400 (RVR 1800) with operative touchdown zone and runway centerline lights.

- *CATEGORY II (CAT II):* a precision approach which provides for approaches with a decision height of not less than 100 feet and visibility not less than 1200 feet RVR.

- *CATEGORY III (CAT III):* a precision approach which provides for approaches with minima less than Category II.

PRECISION APPROACH PATH INDICATOR (PAPI): A lighting system providing visual approach slope guidance to aircraft during a landing approach. It is similar to a VASI but provides a sharper transition between the colored indicator lights.

PRECISION OBJECT FREE AREA (POFA): an area centered on the extended runway centerline, beginning at the runway threshold and extending behind the runway threshold that is 200 feet long by 800 feet wide. The POFA is a clearing standard which requires the POFA to be kept clear of above ground objects protruding above the runway safety area edge elevation (except for frangible NAVAIDS). The POFA applies to all new authorized instrument approach procedures with less than 3/4 mile visibility.

PROHIBITED AREA: see special-use airspace.

REMOTE COMMUNICATIONS OUTLET (RCO): an unstaffed transmitter receiver/facility remotely controlled by air traffic personnel. RCOs serve flight service stations (FSSs). RCOs were established to provide ground-to-ground communications between air traffic control specialists and pilots at satellite airports for delivering enroute clearances, issuing departure authorizations, and acknowledging instrument flight rules cancellations or departure/landing times.

REMOTE TRANSMITTER/RECEIVER (RTR): see remote communications outlet. RTRs serve ARTCCs.

RELIEVER AIRPORT: an airport to serve general aviation aircraft which might otherwise use a congested air-carrier served airport.

RESTRICTED AREA: see special-use airspace.

RNAV: area navigation - airborne equipment which permits flights over determined tracks within prescribed accuracy tolerances without the need to overfly ground-based navigation facilities. Used enroute and for approaches to an airport.

RUNWAY: a defined rectangular area on an airport prepared for aircraft landing and takeoff. Runways are normally numbered in relation to their magnetic direction, rounded off to the nearest 10 degrees. For example, a runway with a magnetic heading of 180 would be designated Runway 18. The runway heading on the opposite end of the runway is 180 degrees from that runway end. For example, the opposite runway heading for Runway 18 would be Runway 36 (magnetic heading of 360). Aircraft can takeoff or land from either end of a runway, depending upon wind direction.

RUNWAY BLAST PAD: a surface adjacent to the ends of runways provided to reduce the erosive effect of jet blast and propeller wash.

RUNWAY END IDENTIFIER LIGHTS (REIL): Two synchronized flashing lights, one on each side of the runway threshold, which provide rapid and positive identification of the approach end of a particular runway.

RUNWAY GRADIENT: the average slope, measured in percent, between the two ends of a runway.

RUNWAY PROTECTION ZONE (RPZ): An area off the runway end to enhance the protection of people and property on the ground. The RPZ is trapezoidal in shape. Its dimensions are determined by the aircraft approach speed and runway approach type and minima.

RUNWAY SAFETY AREA (RSA): a defined surface surrounding the runway prepared or suitable for reducing the risk of damage to airplanes in the event of an undershoot, overshoot, or excursion from the runway.

RUNWAY VISUAL RANGE (RVR): an instrumentally derived value, in feet, representing the horizontal distance a pilot can see down the runway from the runway end.

RUNWAY VISIBILITY ZONE (RVZ): an area on the airport to be kept clear of permanent objects so that there is an unobstructed line-of-site from any point five feet above the runway centerline to any point five feet above an intersecting runway centerline.

SEGMENTED CIRCLE: a system of visual indicators designed to provide traffic pattern information at airports without operating control towers.

SHOULDER: an area adjacent to the edge of paved runways, taxiways or aprons providing a transition between the pavement and the adjacent surface; support for aircraft running off the pavement; enhanced drainage; and blast protection. The shoulder does not necessarily need to be paved.

SLANT-RANGE DISTANCE: The straight line distance between an aircraft and a point on the ground.

SPECIAL-USE AIRSPACE: airspace of defined dimensions identified by a surface area wherein activities must be confined because of their nature and/or wherein limitations may be imposed upon aircraft operations that are not a part of those activities. Special-use airspace classifications include:

- *ALERT AREA:* airspace which may contain a high volume of pilot training activities or an unusual type of aerial activity, neither of which is hazardous to aircraft.

- *CONTROLLED FIRING AREA:* airspace wherein activities are conducted under conditions so controlled as to eliminate hazards to nonparticipating aircraft and to ensure the safety of persons or property on the ground.

- *MILITARY OPERATIONS AREA (MOA):* designated airspace with defined vertical and lateral dimensions established outside Class A airspace to separate/segregate certain military activities from instrument flight rule (IFR) traffic and to identify for visual flight rule (VFR) traffic where these activities are conducted.

- *PROHIBITED AREA:* designated airspace within which the flight of aircraft is prohibited.

- *RESTRICTED AREA:* airspace designated under Federal Aviation Regulation (FAR) 73, within which the flight of aircraft, while not wholly prohibited, is subject to restriction. Most restricted areas are designated joint use. When not in use by the using agency, IFR/VFR operations can be authorized by the controlling air traffic control facility.

- *WARNING AREA:* airspace which may contain hazards to nonparticipating aircraft.

STANDARD INSTRUMENT DEPARTURE (SID): a pre-planned IFR departure procedure.

STANDARD TERMINAL ARRIVAL (STAR): a pre-planned IFR arrival procedure.

STOP-AND-GO: a procedure wherein an aircraft will land, make a complete stop on the runway, and then commence a takeoff from that point. A stop-and-go is recorded as two operations: one operation for the landing and one operation for the takeoff.

STRAIGHT-IN LANDING/APPROACH: a landing made on a runway aligned within 30 degrees of the final approach course following completion of an instrument approach.

TACTICAL AIR NAVIGATION (TACAN): An ultra-high frequency electronic air navigation system which provides suitably-equipped aircraft a continuous indication of bearing and distance to the TACAN station.

TAKEOFF RUNWAY AVAILABLE (TORA): see declared distances.

TAKEOFF DISTANCE AVAILABLE (TODA): see declared distances.

TAXILANE: the portion of the aircraft parking area used for access between taxiways and aircraft parking positions.

TAXIWAY: a defined path established for the taxiing of aircraft from one part of an airport to another.

TAXIWAY SAFETY AREA (TSA): a defined surface alongside the taxiway prepared or suitable for reducing the risk of damage to an airplane unintentionally departing the taxiway.

TETRAHEDRON: a device used as a landing direction indicator. The small end of the tetrahedron points in the direction of landing.

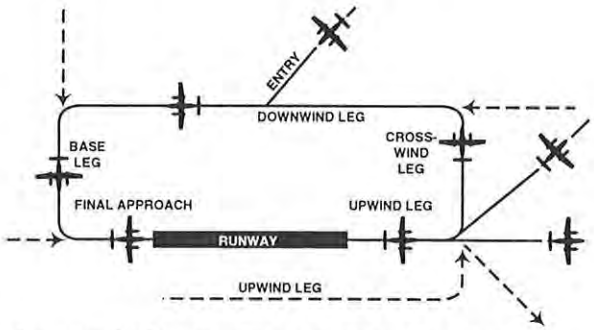
THRESHOLD: the beginning of that portion of the runway available for landing. In some instances the landing threshold may be displaced.

TOUCH-AND-GO: an operation by an aircraft that lands and departs on a runway without stopping or exiting the runway. A touch-and-go is recorded as two operations: one operation for the landing and one operation for the take-off.

TOUCHDOWN ZONE LIGHTING (TDZ): Two rows of transverse light bars located symmetrically about the runway centerline normally at 100-foot intervals. The basic system extends 3,000 feet along the runway.

TRAFFIC PATTERN: The traffic flow that is prescribed for aircraft landing at or taking off from an airport. The components of a typical traffic pattern are the upwind leg, crosswind leg, downwind leg, base leg, and final approach.

UNICOM: A nongovernment communication facility which may provide

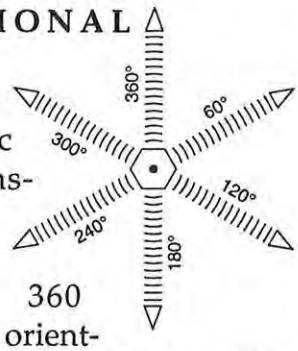


airport information at certain airports. Locations and frequencies of UNICOM's are shown on aeronautical charts and publications.

UPWIND LEG: A flight path parallel to the landing runway in the direction of landing. See "traffic pattern."

VECTOR: A heading issued to an aircraft to provide navigational guidance by radar.

VERY HIGH FREQUENCY/ OMNIDIRECTIONAL RANGE STATION (VOR): A ground-based electronic navigation aid transmitting very high frequency navigation signals, 360 degrees in azimuth, oriented from magnetic north. Used as the basis for navigation in the national airspace system. The VOR periodically identifies itself by Morse Code and may have an additional voice identification feature.



VERY HIGH FREQUENCY OMNIDIRECTIONAL RANGE STATION/TACTICAL AIR NAVIGATION (VORTAC): A navigation aid providing VOR azimuth, TACAN azimuth, and TACAN distance-measuring equipment (DME) at one site.

VICTOR AIRWAY: A control area or portion thereof established in the form of a corridor, the centerline of which is defined by radio navigational aids.

VISUAL APPROACH: An approach wherein an aircraft on an IFR flight plan, operating in VFR conditions under the control of an air traffic control facility and having an air traffic control authorization, may proceed to the airport of destination in VFR conditions.

VISUAL APPROACH SLOPE INDICATOR (VASI): An airport lighting facility providing vertical visual approach slope guidance to aircraft during approach to landing by radiating a directional pattern of

high intensity red and white focused light beams which indicate to the pilot that he is on path if he sees red/white, above path if white/white, and below path if red/red. Some airports serving large aircraft have three-bar VASI's which provide two visual guide paths to the same runway.

VISUAL FLIGHT RULES (VFR): Rules that govern the procedures for conducting flight under visual conditions. The term VFR is also used in the United States to indicate weather conditions that are equal to or greater than minimum VFR requirements. In addition, it is used by pilots and controllers to indicate type of flight plan.

VOR: See "Very High Frequency Omnidirectional Range Station."

VORTAC: See "Very High Frequency Omnidirectional Range Station/Tactical Air Navigation."

WARNING AREA: see special-use airspace.

ABBREVIATIONS

AC: advisory circular

ADF: automatic direction finder

ADG: airplane design group

AFSS: automated flight service station

AGL: above ground level

AIA: annual instrument approach

AIP: Airport Improvement Program

AIR-21: Wendell H. Ford Aviation Investment and Reform Act for the 21st Century

ALS: approach lighting system

ALSF-1: standard 2,400-foot high intensity approach lighting system with sequenced flashers (CAT I configuration)

ALSF-2: standard 2,400-foot high intensity approach light ing system with sequenced flashers (CAT II configuration)

APV: instrument approach procedure with vertical guidance

ARC: airport reference code

ARFF: aircraft rescue and fire-fighting

ARP: airport reference point

ARTCC: air route traffic control center

ASDA: accelerate-stop distance available

ASR: airport surveillance radar

ASOS: automated surface observation station

ATCT: airport traffic control tower

ATIS: automated terminal information service

AVGAS: aviation gasoline - typically 100 low lead (100LL)

AWOS: automated weather observation station

BRL: building restriction line

CFR: Code of Federal Regulations

CIP: capital improvement program

DME: distance measuring equipment

DNL: day-night noise level

DWL: runway weight bearing capacity for air

craft with dual-wheel type landing gear

DTWL: runway weight bearing capacity for aircraft with dual-tandem type landing gear

FAA: Federal Aviation Administration

FAR: Federal Aviation Regulation

FBO: fixed base operator

FY: fiscal year

GPS: global positioning system

GS: glide slope

HIRL: high intensity runway edge lighting

IFR: instrument flight rules (FAR Part 91)

ILS: instrument landing system

IM: inner marker

LDA: localizer type directional aid

LDA: landing distance available

LIRL: low intensity runway edge lighting

LMM: compass locator at middle marker

LOC: ILS localizer

LOM: compass locator at ILS outer marker

LORAN: long range navigation

MALS: medium intensity approach lighting system

MALSR: medium intensity approach lighting system with sequenced flashers

MALSR: medium intensity approach lighting system with runway alignment indicator lights

MIRL: medium intensity runway edge lighting

MITL: medium intensity taxiway edge lighting

MLS: microwave landing system

MM: middle marker

MOA: military operations area

MSL: mean sea level

NAVAID: navigational aid

NDB: nondirectional radio beacon

NM: nautical mile (6,076 .1 feet)

NPIAS: National Plan of Integrated Airport Systems

NPRM: notice of proposed rulemaking

ODALS: omnidirectional approach lighting system

OFA: object free area

OFZ: obstacle free zone

OM: outer marker

PAC: planning advisory committee

PAPI: precision approach path indicator

PFC: porous friction course

PFC: passenger facility charge

PCL: pilot-controlled lighting

PIW: public information workshop

PLASI: pulsating visual approach slope indicator

POFA: precision object free area

PVASI: pulsating/steady visual approach slope indicator

RCO: remote communications outlet

REIL: runway end identifier lighting

RNAV: area navigation

RPZ: runway protection zone

RTR: remote transmitter/receiver

RVR: runway visibility range

RVZ: runway visibility zone

SALS: short approach lighting system

SASP: state aviation system plan

SEL: sound exposure level

SID: standard instrument departure

SM: statute mile (5,280 feet)

SRE: snow removal equipment

SSALF: simplified short approach lighting system with sequenced flashers

SSALR: simplified short approach lighting system with runway alignment indicator lights

STAR: standard terminal arrival route

SWL: runway weight bearing capacity for aircraft with single-wheel type landing gear

STWL: runway weight bearing capacity for aircraft with single-wheel tandem type landing gear

TAF: Federal Aviation Administration (FAA) Terminal Area Forecast

TACAN:	tactical air navigational aid
TORA:	takeoff runway available
TODA:	takeoff distance available
TRACON:	terminal radar approach control
VASI:	visual approach slope indicator
VFR:	visual flight rules (FAR Part 91)
VHF:	very high frequency
VOR:	very high frequency omni-directional range
VORTAC:	VOR and TACAN collo-cated

Airport Master Plan
Planning Advisory Committee Members

May 15, 2003

Transmitted herewith is the Phase One Report for the Airport Master Plan. This draft document will be presented at the first PAC meeting on **Thursday, May 15, 2003 at 10:00 a.m.** As a reminder, it will be held at the City of Oxnard Main Library, 251 South A Street in Oxnard.

PHASE ONE REPORT
INTRODUCTION
CHAPTER ONE - INVENTORY
CHAPTER TWO - FORECASTS
CHAPTER THREE - FACILITY REQUIREMENTS
APPENDIX A - GLOSSARY OF TERMS

☐ *I have read the Phase One Report and have no comments.*

☒ *I have read the Phase One Report and have the following comments. (Please add extra sheets if necessary.)*

Somewhat dissappointed that the report appeared to be constrained and does not reflect in my opinion the many possibilities available and necessary in the near future.

Please send this response sheet by May 30, 2003 to:

Re: Oxnard Airport Master Plan
From: Tim Riley, Planning Advisory Committee Member from the Neighborhood Oxnard Shores

I have read the Phase One Report and have the following comments:

The Mission statements for Oxnard Airport and Ventura County Department of Airports make it clear that Oxnard Airport airside as well as landside facilities should not be further developed.

This conclusion is further supported by the fact that the forecasted activity levels are less than those which have already been accommodated by the existing airport facilitities in the past. This conclusion is supported and documented in the Airport Master Plan for Oxnard Airport, Phase One draft at p. 3-1.

"It is important to note that most of the activity levels forecast in the previous chapter have been exceeded in the past." It then soundly reasons, "Since most of the forecast activity has been accommodated at this airport before, the emphasis will be more on re-development to ensure a safe, secure, and efficient operation."

Accordingly, the Master Plan should provide for safe, secure, and efficient operation - without any airside or landside expansion or development.

Also, and most importantly, the Master Plan should include a detailed plan with timetables describing the plan that will be implemented in order to comply with the Oxnard Airport Mission Statement mandate, "Oxnard airport shall: continue to search for a regional airport to serve the air carrier and commercial needs of the City of Oxnard and Ventura County."

The Master Plan should also include detailed plans and timetables on how to scale down the Oxnard Airport facilities and phase-out Oxnard Airport activities once that Oxnard Airport Mission Statement goal has been achieved.

Sincerely,

Timothy Clifford Riley
TCR/mc

10. Pg. 2-8. Please explain the purpose of using a 12-month moving total. The last paragraph should state "...SkyWest's enplanements declined to an average of 586 per month." The new text is underlined.
11. Pg. 2-11. We support the qualifiers listed for examining passenger potential in the Master Plan.
12. Pg. 2-12. The selected growth forecast projects a "recapture scenario." We believe the constant share growth rate of 0.004% is more realistic than the selected recapture market scenario of escalating percentages to 0.005% over 20 years in light of the County Board of Supervisors' directions to the Department of Airports and the Oxnard Airport mission statement. Consequently, we recommend that the Master Plan projections be revised slightly downward to reflect the constant share growth rate of 0.004%.
13. Exhibit 2D should identify that the selected forecast is actually the "market share recapture projection."
14. Pg. 2-13. What does SkyWest say specifically about its planes serving Oxnard, do they intend to continue with turboprop planes? Where is the term "load factor" defined in the text?
15. Pg. 2-17. In the Based Aircraft Forecast, last paragraph, the text states Table 2H says the airport's share has continued to drop and was 12.9 percent in 2001. The Table 2H indicates the share was 12.6%. Which figure is correct?
16. Pg. 2-19. The text states a constant market share of 12.9% was used in Table 2H and Exhibit 2F. However, the previous comment No. 15 indicates the constant market share is not clear (it is either 12.6% in 2001 or 12.9% in 2001, but in 2002 it was 12.8%). Why is the 12.9% based aircraft market share forecast used if the latest data show a declining trend? Exhibit 2F and Table 2H demonstrate a 16-year decline. The text does not appear to support its use of the 12.9% market share. The evidence suggests the market share should be a constant of 12.8%.
17. Pg. 2-25 Revise Table 2P to reflect the City's suggested growth rates.
18. Pg. 3-13. In the Pavement Strength section, the text should explain to the public why airplanes weighing more than Runway 7-25's strength rating of 70,000 pounds per dual wheel loading are allowed to land and are considered a safe landing at the airport.
19. Pg. 3-14 Table 3H. Why are some numbers in bold and italic type? The table should have a legend explaining the importance of different typefaces.
20. Pg. 3-19 Table 3J. Same comment as No. 19 above for Table 3H.
21. Pg. 3-20. The Hangars section uses the term "rustic" incorrectly. We suggest using a clearer term to explain that the salt air causes airplanes to corrode.
22. Pg. 3-21, 3-22. Tables 3K and 3L and 3M have a column for "available" with a blank area next to the left-hand column. It is unclear what the difference is in the first row between "available" and "current," and why one square of the table is blank in each table.
23. Pg. 3-23. In the Airport Access Routes, correct the street name to say "Channel Islands Boulevard."

OXNARD AIRPORT

PHASE II PAC COMMENTS

oxnard neighborhood councils

Wilson Neighborhood Council

August 8, 2003

James M. Harris, P.E.
Coffman Associates
4835 E. Cactus Road, Suite 235
Scottsdale, Arizona 85254

RE: Oxnard Airport Master Plan

Dear Mr. Harris:

As Chairman of a neighborhood directly impacted by the Oxnard Airport, I would like to bring to your attention the inconvenience of the PAC mid morning meeting times. Wilson Neighborhood Council has several residents interested in participating in the Airport Master Plan Advisory Committee, however their daily work schedules, in and out of Ventura County, prevent their attendance. Wilson Neighborhood then has no representation.

Wilson Neighborhood Council would like to recommend that a more convenient evening meeting be scheduled to allow full participation and fair representation.

Steve Fleischer has resigned his position as the Wilson PAC representative due to scheduling conflicts. Steve Buratti will now represent the Wilson Neighborhood Council on the Planning Advisory Committee. Mr. Buratti's address is 234 South "F" Street, Oxnard, CA 93030, for all future correspondence.

In addition to scheduling difficulties, the reports to be reviewed should be provided in a more timely manner. Here it is the 8th of August, and neither Steve Fleischman or Tim Reily have received their report to review as promised.

I ask that these accommodations be made in the interest of fairness and a true desire to obtain valuable neighborhood input.

Sincerely,

Bill Winter

Bill Winter
Chairman, Wilson Neighborhood Council

Phase II Comments, continued:

Issue: Runway Protection Zones (RPZ)
Issue: Property Within the Object Free Area (OFA)

Recommendation:

First Option: Request "modification of design standards" from the FAA for the RPZ and the OFA;
Second Option: Reduce runway length to accommodate for the RPZ and OFA;
Third Option: Adjust declared distances to accommodate the RPZ and OFA

Discussion:

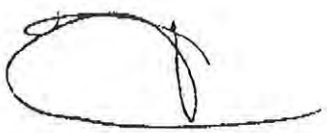
An issue relative to the sufficient control of property in the Runway Protection Zone (RPZ), and within the Object Free Area (OFA) has been raised in the Phase II report.

I am against the purchase of any property or procurement of any avigational easements over property for the purposes of the RPZ or the OFA

A purchase of property or easement is unnecessary and would be wasteful of public funds. Moreover, it would be contrary to the mission statements, which have limited expansion of the airport. If it were argued that said purchase would be required for safety reasons, then those proponents would have to publicly admit that thus far the Oxnard Airport has been operating in an unsafe and dangerous manner, which presents an embarrassing position for the Department of Airports to take.

The options stated above, would be less embarrassing for the Department of Airports, more practical to implement, more cost effective for the taxpayer, more consistent with the mission statements, less inflammatory to the community, and would resolve the issue readily.

Sincerely,



Timothy Clifford Riley

OXNARD AIRPORT

Appendix D

ENVIRONMENTAL EVALUATION

Appendix D
ENVIRONMENTAL EVALUATION

A review of the potential environmental impacts associated with proposed airport projects is an important consideration in the Airport Master Plan process. The primary purpose of this Appendix is to review the proposed program for the Oxnard Airport to determine whether the proposed actions could, individually or collectively, have the potential to significantly affect the quality of the environment.

A key component of this overview is coordination with appropriate federal, state, and local agencies to identify potential environmental concerns that should be considered prior to the design and construction of new facilities at the airport. Agency coordination consisted of a letter requesting comments and/or information regarding the proposed airport projects. Issues of concern that were identified as part of this process are presented in the following discussion. The letters received from various agencies are included at the end of this Appendix.

Once the airport begins receiving federal funding, improvements planned for Oxnard Airport, as depicted on the Airport Layout Plan (ALP), will require compliance with the *National Environmental Policy ACT (NEPA) of 1969,* as amended. For projects not categorically excluded under FAA Order 5050.4A, *Airport Environmental Handbook*, compliance with NEPA is generally satisfied with the preparation of an Environmental Assessment (EA). In cases where a categorical exclusion is issued, environmental issues such as wetlands, threatened or endangered species, and cultural resources are further evaluated during the federal, state, and/or local permitting processes. This master plan and any major improvements will also be subject to the requirements of

- Construct blast pad at the east end of the runway to protect the ground immediately behind the runway from being eroded by the blast wind created as aircraft begin their takeoff roll.

Landside Recommendations

Recommended landside improvements are primarily associated with maintenance, redevelopment, and modernization of existing facilities. The following outlines the proposed landside improvements at the airport.

- No change to the terminal building footprint, unless required for compliance with federal security mandates.
- Relocate port-a-ports closest to the taxiway to improve runway safety and taxi circulation.
- Construct a new rental car parking lot to allow the return of aviation use of the apron on the east side of the terminal building, which will be used to support general aviation activities.
- Redevelopment of older hangars as needed.

This Plan is based upon maintaining the Oxnard Airport as a County-owned and operated airport, open to general aviation and commuter airline activity that can operate within the constraints of the facility pursuant to both the Ventura County Department of Airports and Oxnard Airport Mission Statements. The draft Oxnard Airport Master Plan 2004 update continues to provide for maintenance and modernization of the existing terminal area facilities to serve the needs of the users with no plans for physical expansion.

ENVIRONMENTAL CONSEQUENCES - SPECIFIC IMPACTS

This environmental evaluation has been prepared using FAA Order 1050.1E, *Environmental Impacts: Policies and Procedures* and FAA Order 5050.4A, *Airport Environmental Handbook*, as guidelines. Several factors are considered in a formal NEPA environmental document, such as an EA or an Environmental Impact Statement (EIS), which are not included in an Environmental Evaluation. These factors include details regarding the project location, historical perspective, existing conditions at the airport, and the purpose and need for the project. This information is available within the Oxnard Airport Master Plan document. A formal environmental document also includes the resolution of issues/impacts identified as significant during the environmental process.

Consequently, this Environmental Evaluation only identifies potential environmental issues and ***does not*** address mitigation or the resolution of environmental impacts. Each of the specific impacts categories outlined in FAA Order 5050.4A are addressed. The following table includes a discussion of each environmental category.

02MP01-D1-7/15/04

OXNARD AIRPORT

Exhibit D1
TYPICAL SOUND LEVELS

ber of seconds in a 24-hour day. The multiplication factor applied to nighttime sound events is intended to account for the increased annoyance attributable to noise occurring at night when ambient (background) noise levels are low and people are trying to sleep.

- In California, the Community Noise Equivalent Level (CNEL) metric is used instead of the DNL metric. The two are actually very similar. DNL accumulates the total noise occurring during a 24-hour period, with a 10 decibel weight applied to noise occurring during the nighttime (2200 - 0700 hours), The CNEL metric is the same except it also adds a 4.8 decibel weight for noise occurring between 1900 and 2200 hours. There is little actual difference between the two metrics in practice. Calculations of CNEL and DNL from the same data generally yield values with less than a 0.7 decibels difference (Metropolitan Transportation Commission 1983, p. 37).

CNEL is the metric currently accepted by the Federal Aviation Administration (FAA), Environmental Protection Agency (EPA), and Department of Housing and Urban Development (HUD) as an appropriate measure of cumulative average noise exposure in the State of California. These three federal agencies have each identified the 65 DNL noise contour as the threshold of incompatibility.

Since noise decreases at a constant rate in all directions from a source, points of equal CNEL noise levels are routinely indicated by means of a contour line. The various contour lines are then superimposed on a map of the airport and its environs. It is important to recognize that a line drawn on a map does not imply that aircraft noise stops at that line. Nevertheless, CNEL contours can be used to: (1) highlight existing or potential incompatibilities between an airport and any surrounding development; (2) assess relative noise exposure levels; (3) assist in the preparation of airport environs land use plans; and (4) provide guidance in the development of land use control devices, such as zoning ordinances, subdivision regulations, and building codes.

The noise contours for Oxnard Airport have been developed using the Integrated Noise Model (INM), Version 6.1. The INM is a computer model which accounts for each aircraft along approach, departure, and touch-and-go flight tracks during an average 24-hour period. These flight tracks are coupled with separate tables contained in the database of the INM which relate to noise, distances, and engine thrust for each make and model of aircraft selected.

The input files contain operational data, runway utilization, aircraft flight tracks, and fleet mix as projected in the plan. **Table D1** summarizes the fleet mix percentages used in the noise contour development for Oxnard Airport. While the federal control tower (FCT) maintains records of aircraft operations (landing and departures), the FCT does not record operations by aircraft type (piston engine, turboprop, or jet). Therefore, the fleet mix percentages included in **Table D1** are estimates based upon the 1998 noise compatibility study. As shown in the table, single and multi-engine piston air-

SCALE IN FEET

OXNARD AIRPORT

Exhibit D4
2025 NOISE EXPOSURE CONTOURS

TABLE D3 CNEL Contour Coverage (in acres)			
	65 CNEL	70 CNEL	75 CNEL
2002	265.2	130.9	68.7
2010	235.7	116.3	58.5
2025	200.7	98.6	43.5

The intermediate 65 CNEL noise contour extends beyond the airport property boundary approximately 400 feet to the west. To the north, the noise contour extends off airport property slightly less than 400 feet. The noise contour to the south extends the same distance as in the existing contour. The ultimate noise contours are contained within the airport property boundary to the west and east. To the north and south, the 65 CNEL extend beyond airport property slightly less than they do in the intermediate contours.

As shown on the exhibits, the 65 CNEL noise contour extends beyond the existing airport boundaries into areas of existing residential development northeast of the airport. As mentioned previously, the 65 CNEL threshold is used to identify areas of incompatibility and noise exposure impacts.

FAA's threshold of significance has been determined to be a 1.5 CNEL increase in noise over any noise-sensitive area located in the 65 CNEL. As depicted on **Table D3**, the contours are reduced in size, therefore, indicating a reduction in overall noise. Less-than-significant impacts are anticipated as future noise exposure will not increase 1.5 CNEL over the residential (noise- sensitive) areas.

COMPATIBLE LAND USE

Federal Aviation Regulations (F.A.R.) Part 150 recommends guidelines for planning land use compatibility within various levels of aircraft noise exposure as summarized on **Exhibit D5**. These are guidelines only inasmuch as F.A.R. Part 150 explicitly states that determinations of noise compatibility regulation of land uses are purely local responsibilities.

North of the airport is an existing agricultural tract. This area is likely to file for a Specific Plan and be fully developed within ten years as a mix of residential and commercial uses. This area is known as the Proposed Teal Club Specific Plan. East of the airport is the former site of the Oxnard High School campus. The high school was relocated in 2002 and the city has purchased the property. Currently known as the Former Oxnard High School Site, the city is considering options including residential development. Based on FAA criteria, neither of these areas will be negatively impacted by the proposed safety improvements at the airport. Additionally, the acquisition of the pro-

02MP10-D5-7/15/04

The designations contained in this table do not constitute a federal determination that any use of land covered by the program is acceptable under federal, state, or local law. The responsibility for determining the acceptable and permissible land uses and the relationship between specific properties and specific noise contours rests with the local authorities. FAA determinations under Part 150 are not intended to substitute federally-determined land uses for those determined to be appropriate by local authorities in response to locally-determined needs and values in achieving noise compatible land uses.

See other side for notes and key to table.

OXNARD AIRPORT

Exhibit D5
LAND USE COMPATIBILITY GUIDELINES

Numerous avigation easements are proposed for areas surrounding the airport. Like the avigation easements currently being acquired, these easements are designed to control development heights. Height limits will remain unchanged from those currently in place.

The proposed improvements and associated land acquisition and avigation easements are not anticipated to divide or disrupt an established community, interfere with orderly planned development, or create a short-term, appreciable change in employment.

Less-than-significant impacts to the surrounding traffic network are anticipated. The proposed construction of a blast pad at the east end of the runway will not impact traffic on Ventura Road. The purpose of the blast pad is to reduce soil erosion. Forecast increases in annual operations and passengers are not expected to cause a noticeable increase in congestion or access time to community facilities, recreation areas, or places of residence or business or other disruption. A significant increase in traffic on nearby U.S. Highway 101 and State Highway 1 is not anticipated as the forecasts demonstrate a minimal amount of growth.

INDUCED SOCIOECONOMIC IMPACTS

These impacts address those secondary impacts to surrounding communities resulting from the proposed improvements, including shifts in patterns of population growth, public service demands, and changes in business and economic activity to the extent influenced by the airport improvements. Significant shifts in patterns of population movement or growth, or public service demands are not anticipated as a result of the proposed improvements.

The surrounding transportation network will experience an increase in use as the surrounding community continues to develop. As plans for residential development are carried through, traffic surrounding the airport will increase. It is not anticipated that traffic resulting from airport use will contribute significantly to the increase of the area transportation network.

AIR QUALITY

The U.S. Environmental Protection Agency (EPA) has adopted air quality standards that specify the maximum permissible short-term and long-term concentrations of various air contaminants. The National Ambient Air Quality Standards (NAAQS) consist of primary and secondary standards for six criteria pollutants which include: Ozone (O_3), Carbon Monoxide (CO), Sulfur Dioxide (SO_2), Nitrogen Oxide (NO), Particulate matter (PM10), and Lead (Pb). Various levels of review apply within both NEPA and permitting requirements. For example, an air quality analysis is typically required during the preparation of a NEPA document if enplanement levels exceed 3.2 million enplanements or general aviation operations exceed 180,000.

SECTION 4(f) LANDS

The Department of Transportation Act of 1966 states that, "the Secretary of Transportation will not approve any program or projects that requires the use of any publicly owned land from a public park, recreation area, or wildlife and waterfowl refuge of national, state, or local significance unless there is not feasible and prudent alternative." The proposed improvements will not require the use of Section 4(f) lands.

HISTORICAL AND CULTURAL RESOURCES

Proposed projects at the airport do not include the disturbance of previously undisturbed land. Therefore, impacts to cultural resources are not anticipated.

For safety reasons, aging hangar facilities may need to be replaced. Some of these buildings meet the age requirement criteria for listing within the National Register of Historic Places. However, other criteria, such as a significance in American history, have not been determined. Further coordination with the State Historic Preservation Office (SHPO) will need to be completed prior to any building replacement to determine the historical significance.

THREATENED OR ENDANGERED SPECIES AND BIOLOGICAL RESOURCES

The U.S. Fish and Wildlife Service (USFWS) database lists 13 threatened or endangered animal species in Ventura County. These species are comprised of birds, amphibians, reptiles, fish, and one mammal. Numerous plants which are known to occur in Ventura County are also listed as threatened or endangered.

No response was received from the California Department of Game and Fish or the USFWS regarding the potential likelihood of these species occurring on airport property or in the vicinity. However, previous correspondence received from the USFWS indicated that the Ventura marsh milkvetch has been located west of the airport, beneath the extended Runway 25 centerline. In previous correspondence, the USFWS did not indicate that this, or any other listed species, occurs on airport property. Further coordination and possibly a biological survey may need to be completed before acquisition or development on previously undeveloped land can occur.

WATERS OF THE U.S. INCLUDING WETLANDS

There are no wetlands or waters of the U.S. located in the project area; therefore, no impacts are anticipated.

including a farmland conversion impact rating, will need to be completed prior to any property acquisition or construction.

The proposed relocation of the Runway 7 departure threshold will not impact agricultural uses to the west. The Runway 7 departure end is located at the east end of the runway. The start of takeoff roll will remain the same. Lighting equipment proposed to be installed in the agricultural area to the west will not be impeded by surrounding crops. Crops such as strawberries and other low profile plants currently planted in this area will not pose a problem for airport lights.

ENERGY SUPPLY AND NATURAL RESOURCES

Energy requirements generally fall into two categories: (1) those which relate to changed demands for stationary facilities; and (2) those which involve the movement of air and ground vehicles. According to FAA Order 5050.4A, an impact arises where a project will have a measurable effect on local energy supplies or would require the use of an unusual material or one in short supply. Increased consumption of fuel by aircraft is examined where ground movement or run-up times increase substantially without offsetting efficiencies in operational procedures, or if the action would add appreciably to access time, or if there would be a substantial change in movement patterns for on-airport service or other vehicles. The proposed alternative will result in a less-than-significant impact to energy supply and natural resources. Impacts are a result of increased operations and upgraded facilities.

LIGHT EMISSIONS

The proposed improvements include the installation of the MASLR on the Runway 7 approach. This installation will slightly increase the amount of light generated by the airport over undeveloped areas.

Demand based hangars will introduce additional lighting to the south side of the landside facility area. This lighting would be similar to what already exists at the airport; therefore, a less-than- significant impact to light emissions are anticipated.

SOLID WASTE

As operations continue to increase at Oxnard Airport, so will the generation of solid waste.

However, these impacts are expected to be less-than significant.

4. The inclusion of all appropriate traffic volumes analysis should include traffic from the project, cumulative traffic generated from all specific approved developments in the area, and traffic growth other than from the project and developments. That is, include: existing + project + other projects + other growth.

5. The discussion of mitigation measures appropriate to alleviate the anticipated traffic impacts should include, but not be limited to, the following:

   - Description of Transportation Infrastructure Improvements
   - Financial Costs, Funding Sources and Financing
   - Sequence and Scheduling Considerations
   - Implementation Responsibilities, Controls, and Monitoring

Any mitigation involving transit, HOV, or Transportation Demand Management must be rigorously justified and its effects conservatively estimated. Improvements involving dedication of land or physical construction may be favorably considered.

6. With respect to the specification of the developer's percent share of the cost, as well as a plan of realistic mitigation measures under the control of the developer, the following ratio should be estimated: additional traffic volume due to project implementation is divided by the total increase in the traffic volume (see Appendix "B" of the Guidelines). That ratio would be the project equitable share responsibility.

   Items 7-13 list environmental/airport environmental land use planning issues:

7. The environmental evaluation will be a part of the Oxnard Airport Master Plan. In addition to this master planning effort, the Federal Aviation Administration and Ventura County will also prepare environmental documents to satisfy the requirements of the National Environmental Policy Act (NEPA) and the California Environmental Quality Act (CEQA), respectively.

8. The Federal Aviation Administration's Advisory Circular (AC) 150/5070-6A, Airport Master Plans, provides national guidance for the preparation of airport master plans, pursuant to the provisions of the Airport and Airway Improvement Act of 1982. In AC 150/5070-6A, Chapter 4, Topics 5 and 7 explain land use and environmental issues that should be discussed in an airport master plan.

9. The land use discussion in AC 150/5070-6A states that "the existence of any governmental programs designed to direct land use patterns in the area under review should be noted." Therefore, we recommend that you cross-reference the airport land use compatibility planning strategies of the Ventura County Airport Land Use Commission (ALUC) in your study. When complete, the Airport Master Plan should be submitted to the Ventura County

If you have any further questions, please feel free to call Rose Casey, Deputy District Director of Planning, at (213) 897-0970.

Sincerely,

DOUGLAS R FAILING
District Director

Subject: Request for Review of Oxnard Airport Master Plan Environmental Evaluation

Dear Ms. Steele:

The Ventura County Air Pollution Control District staff has reviewed your request for comments or concerns regarding potential air quality impacts associated with proposed improvements at the Oxnard Airport. The proposed update to the current Oxnard Airport Master Plan is intended to identify potential future facility demands and provide the airport with the means to address those demands. Oxnard Airport is located on approximately 216 acres of land in the northwestern portion of the City of Oxnard. The airport's terminal building is accessible from West Fifth Street. Patterson road provides a secondary access option.

The following comments are based on the 2003 *Ventura County Air Quality Assessment Guidelines* (2003 Guidelines), which describes what constitutes a significant air quality impact. The 2003 Guidelines is the advisory document for preparing air quality evaluations of environmental documents. A copy of the 2003 Guidelines can be accessed from the downloadable materials section of the APCD website at www.vcapcd.org. We recommend you use the Guidelines in your environmental evaluation of the potential air quality impacts associated with the Oxnard Airport's proposed improvements.

Based on the information provided to the District, the Oxnard Airport Master Plan Update would be expected to have a less than significant impact on regional air quality. The Draft Master Plan update does not anticipate additional growth of the airport above the originally forecasted growth contained in the 1983 Oxnard Airport Master Plan.

Cumulative Regional Air Quality Impacts

Based on data provided by the County Planning Department, the estimated population of the Oxnard Growth Area is 166,260 persons (December 31, 2003). The forecasted Oxnard Growth Area population for 2005 is 167,918 persons. This project is not expected to result in any increase in population. Therefore, this project would not result in population growth above that forecasted in the Ventura County Air Quality Management Plan (AQMP). For that reason, this project is consistent with the AQMP and therefore expected to have a less than significant impact on cumulative regional air quality.

Nuisance Condition

8) Facilities shall be constructed and operated in accordance with the Rules and Regulations of the Ventura County Air Pollution Control District, with emphasis on Rule 51, *Nuisance.*

"A person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance or annoyance to any considerable number of persons or to the public or which endangers the comfort, repose, health or safety of any such persons or the public or which cause or have a natural tendency to cause injury or damage to business or property."

Demolition Condition

9) The applicant shall notify the District prior to issuance of demolition permits for any onsite structures. Demolition and/or renovation activities shall be conducted in compliance with District Rule 62.7, *Asbestos – Demolition and Renovation.*

Rule 62.7 governs activities related to demolition of buildings with asbestos-containing materials. This rule establishes the notification and emission control requirements for demolition activities. Specifically, this rule requires that the owner or operator of a facility shall remove all asbestos-containing material from a facility being demolished. For additional information on asbestos, or to download a copy of Rule 62.7, please visit our website at www.vcapcd.org/asbestos.htm. You can also contact the District's Asbestos Coordinator, Jay Nicholas at (805) 645-1443 or by email at jay@vcapcd.org.

Construction Equipment Permit Requirements

Any combustion equipment onsite, which is rated at 50 horsepower (HP) or greater, must have either an APCD Permit to Operate (PTO), or be registered with the California Air Resources Board's (CARB) Portable Equipment Registration Program (PERP). Examples of such equipment include portable electrical generators, and portable air compressors.

For more information on obtaining an APCD PTO please contact the District's Permitting Engineering Division at (805) 645-1401 or (805) 645-1481. Additional information can also be accessed from the Permits section of the APCD website at www.vcapcd.org. For more information on CARB's PERP program, please visit the CARB website at http://www.arb.ca.gov/perp/perp.htm, or call (916) 324-5869.

Lee's Summit, MO 64063

Re: *Comments Regarding Environmental Resources and Issues Associated with the Proposed Improvements to the Oxnard Airport.*

Thank you for the opportunity to comment on the proposed improvements to the Oxnard Airport as outlined in your letter of April 26, 2004 to Planning and Environmental Services.

We have several comments and questions:

1. Please provide the approximate number of years associated with the three planning horizons: short, intermediate, and long term. It is our understanding that they are increments of roughly five years. As we are updating our General Plan, we should be able to match your planning horizon operations projections with our planning horizon year of 2025, which is probably your "long term."
2. Immediately north and abutting the airport is an agricultural tract bounded by Teal Club Road, Ventura Road, Patterson Road, and Doris Avenue. This area is likely to file for a Specific Plan and be fully developed within ten years as a mix of residential and commercial uses. This area is within the city's Sphere of Influence and designated for development under our General Plan. Please refer to this area as the "Proposed Teal Club Specific Plan" and document how the airport operations and improvements would impact this area, especially in terms of noise and safety.
3. Immediately east and abutting the airport is the former site of the Oxnard High School campus, bounded by K, H, 2nd and 5th Streets. The high school was relocated in 2002, the city has purchased the property, and we are now considering options including residential development. Please refer to this area as the "Former Oxnard High School Site" and document how the airport operations and improvements would impact this area, especially in terms of noise and safety.
4. How would the proposed relocation of the Runway 7 departure end threshold 250 feet westward impact ongoing agricultural use in that area? Are there agricultural activities that pose a problem for the airport lights and equipment?
5. Would the proposed purchase of 10 acres on the north side of the airport displace any residences or businesses? If so, please document.
6. Would the proposed height limits for approximately 57 acres on the north side of the airport south of Teal Club Road impact any existing buildings? If so, please document. What would be the recommended height limit in this area?

Guidelines for Energy Project Applications Requiring CEQA Compliance:

Pre-filing and Proponent's Environmental Assessments

November 2019

Version 1.0

Energy Division

Infrastructure Permitting and CEQA Unit

California Public Utilities Commission

Guidelines for Energy Project Applications Requiring CEQA Compliance:

Pre-filing and Proponent's Environmental Assessments

Contents

Foreword

November 12, 2019

To: Applicants Filing Proponent's Environmental Assessments for Energy Infrastructure Projects at the California Public Utilities Commission (CPUC or Commission)

From: Merideth Sterkel (Program Manager, Infrastructure Planning and Permitting) and Mary Jo Borak and Lonn Maier, Supervisors, Infrastructure Permitting and California Environmental Quality Act, Energy Division, CPUC

Subject: Introducing revisions to the Pre-filing Guidelines for Energy Infrastructure Projects and a Unified and Updated Electric and Gas PEA Checklist

We are pleased to release a 2019 revision to the California Environmental Quality Act (CEQA) Proponent's Environmental Assessments (PEA) Checklist. This substantially revised document is now entitled "Guidelines for Energy Project Applications Requiring CEQA Compliance: Pre-filing and Proponent's Environmental Assessments" (Guidelines). Future updates to this document will be made as determined necessary. The CPUC's Rules of Practice and Procedure Sections 2.4 provide that all applications to the CPUC for authority to undertake projects that are not statutorily or categorically exempt from CEQA requirements shall include an Applicant-prepared PEA.

Updates Overview

Prior versions of the Working Draft PEA Checklist were published in 2008 and 2012. For this 2019 update, extensive revisions were made to all sections based on our experience with the prior checklist versions. All electric and natural gas projects are now addressed in a single PEA Checklist, and the following updates were made:

- **CEQA Statute and Guidelines 2019 Updates:** The PEA Checklist is updated pursuant to the 2019 CEQA Statues and Guidelines, including new energy and wildfire resource areas.
- **Pre-filing Consultation Guidelines:** Pre-filing guidelines are now provided since the pre-filing and PEA development processes are intertwined.
- **Unified PEA Checklist for Energy Projects:** All electric and natural gas projects are now addressed in a single PEA Checklist.
- **Additional CEQA Impact Questions:** Questions are included for the following PEA Checklist sections: 5.4, Biological Resources; 5.6, Energy; 5.9, Hazards, Hazardous Materials, and Public Safety; 5.16, Recreation; 5.17, Transportation; and 5.19, Utilities and Service Systems.
- **CPUC Draft Environmental Measures:** Draft measures are provided in PEA Checklist Attachment 4 for Aesthetics, Air Quality, Cultural Resources, Greenhouse Gas Emissions, Utilities and Service Systems and Wildfire.

Purpose of the Guidelines Document

The purpose and objective of the PEA Checklist included within this Guidelines document has not changed, which is to provide project Proponents (Applicants) with detailed guidance about information our CEQA Unit Staff expect in sufficient PEAs. The document details the information Applicants must provide the CPUC to complete environmental reviews that satisfy CEQA requirements. Specifically, the Pre-filing Consultation Guidelines and PEA Checklist, together, are intended to achieve the following objectives:

1. Provide useful guidance to Applicants, CPUC staff, and outside consultants regarding the type and detail of information needed to quickly and efficiently deem an application complete;

2. Ensure PEAs provide reviewers with a detailed project description and associated information sufficient to deem an application complete, avoid lengthy review periods and numerous data requests for the purpose of augmenting a PEA, and avoid unnecessary PEA production costs;
3. Increase the level of consistency between PEAs submitted and provide for more consistent review by CPUC CEQA Unit Staff and outside consultants; and
4. Promote transparency and reduce the potential for conflicts between utility and CPUC Staff about the types, scope, and thoroughness of data expected for data adequacy purposes.

The Guidelines document provides detailed instructions to Applicants for use during the Pre-filing process and PEA development. The document is intended to fully inform Applicants and focus the role of outside consultants, thus, enabling Applicants to submit more complete, useful, and immediately data-adequate PEAs.

Benefits of High Quality and Complete PEAs

CPUC CEQA Unit Staff seek to complete the environmental review process required under CEQA as quickly and efficiently as possible. Table 1 shows the average duration in months of CPUC applications that require CEQA documents. While there are tensions between speed and quality in all project management, the achievement of expeditious environmental reviews can result in lower project costs to ratepayers. Our staff have reviewed the timelines for 108 past CPUC applications that required review pursuant to CEQA and determined that the average length of time from application filing to PEA deemed complete is four months, regardless of the type of CEQA document. The goal for our agency is to deem PEAs complete within 30 days. The faster PEAs are deemed complete, the sooner staff can prepare the CEQA document. With each delay to PEA completeness, the fundamental project purpose and need and baseline circumstances may shift, requiring refreshing of the data. The Guidelines document will improve the initial accuracy of PEAs and reduce the time required to deem PEAs complete. Once an application is formally filed, the Applicant will receive a notification letter from CPUC CEQA Unit Staff when the PEA is deemed complete.

Table 1. Average Duration in Months of CPUC Applications that Require CEQA Documents (1996–2019)

	I: Application Filed to PEA Deemed Complete	II: PEA Deemed Complete to Draft Environmental Document Circulated	III: Draft Environmental Document to Final Released	IV: Final Released to Proposed Decision	V: Proposed Decision to Final Decision (with Certification of CEQA Document)	I-V: Overall Duration (1)
Environmental Impact Report (EIR; n=49)	5	13	7	5	2	**29**
Initial Study/ Mitigated Negative Declaration (IS/MND; n=56)	4	8	3	4	1	**19**
All Document Types (n=108)	4	8	4	5	2	**23**
Range: All Document Types	*1-9*	*5-18*	*2-10*	*1-7*	*1-2*	***12-38***

Note:
(1) The overall duration is not a sum of the average durations for each step. The overall duration was calculated using "n," the number of applications with data available for the date of application filing and final decision date. Not all projects had data available for each step. The data include several instances where the CEQA document was developed in conjunction with a NEPA document, e.g., an EIR/Environmental Impact Statement or IS/MND/Environmental Assessment/Finding of No Significant Impact was prepared instead of an EIR or MND, respectively. The above data is not inclusive of projects that had averages and ranges that are statistically abnormal.

Lessons Learned about the PEA Process

In the past, Applicants have filed PEAs using the checklist to ensure the correct information was provided but have not followed the format and organization of the PEA checklist and sometimes chose not to engage in Pre-filing activities with our staff. To achieve the objectives and benefits listed above, Applicants will file all future PEAs in the same organizational format as the updated checklist and adhere to the Pre-filing Consultation Guidelines in coordination with CPUC CEQA Unit Staff.

The Guidelines document describes the level effort required for the assessments necessary to not only finalize a CEQA document but ensure its legal defensibility. While final design and survey information is preferred, the PEA may incorporate preliminary design and survey data as appropriate and in consultation with CEQA Unit Staff during Pre-filing. We recognize that projects are fact specific, and deviations from the Pre-filing Consultation Guidelines and PEA Checklist are inevitable but providing concise and accurate information as soon as possible is paramount. Any deviations from these Guidelines must include clear justification and should be discussed and submitted during the Pre-filing Consultation process to avoid subsequent delays.

The PEA Checklist is written with the assumption that an Environmental Impact Report will be prepared, however, a Mitigated Negative Declaration or other form of CEQA document (e.g., exemption) may be appropriate. This determination, however, must be made in consultation with CPUC CEQA Unit Staff during Pre-filing and prior to submittal of the Draft PEA.

Future Modifications and Improvements

Like the predecessor PEA checklists, this is a working document that will be modified over time based on experience and changes to the CEQA Statute and Guidelines. To meet the above stated objectives and maintain consistency with CEQA. We expect Applicants, their consultants, CPUC consultants, and the CPUC to engage in a regular and ongoing dialogue about specific improvements to the CEQA process overall, and these Guidelines in particular.

We look forward to working with Applicants during the Pre-filing Consultation process to ensure that the level of effort that goes into preparing PEAs can be effectively and efficiently transferred into the CEQA document prepared by CPUC Staff and consultants. Applicants are invited to debrief with our staff about the efficacy of these Guidelines.

Pre-Filing Consultation Guidelines

The following Pre-filing Consultation Guidelines apply to all PEAs filed with applications to the CPUC and outline a process for Applicants to engage with CPUC CEQA Unit Staff about upcoming projects that will require environmental review pursuant to CEQA. The CPUC is typically the Lead Agency for large projects by investor-owned gas and electric utilities. The CPUC's CEQA Unit Staff are experienced with developing robust CEQA documents for long, linear energy projects. The PEA Checklist, starting in the next section, is based upon that experience.

Pre-filing Consultation Process

During Pre-filing Consultation, Applicants and CPUC Staff meet to discuss the upcoming application. Successful projects will commence Pre-filing Consultation no less than six months prior to application filing at the CPUC. When the application is formally filed at the CPUC, the Application and the PEA are submitted to the CPUC Docket Office.

1. Meetings with CPUC Staff

To initiate Pre-filing Consultation, Applicants will request and attend a meeting with CPUC CEQA Unit Staff at least six months prior to application filing.

   a. Applicants can request a Pre-Filing Consultation meeting via email or letter. Initial contact via telephone may occur, but staff request written documentation of Pre-filing Consultation commencement.

   b. For the initial meeting, Applicants will provide staff with a summary of the proposed project including maps and basic GIS data at least one week prior to the meeting.

   c. Applicants will receive initial feedback on the scope of the proposed project and PEA. Staff will work with Applicants to establish a schedule for subsequent Pre-filing meetings and milestones.

2. Consultant Resources

CPUC CEQA Unit Staff will initiate the consultant contract immediately following the initial Pre-filing Consultation meeting. CPUC's consultant contract resources will be executed prior to Applicant filing of the Draft PEA. The consultant contract is critical to the Pre-filing Consultation process. Applicants are encouraged to request updates about the status of the contract. The CPUC may use its on-call consulting resources contract for these purposes. If CEQA Unit Staff determine that their on-call consulting resources are not appropriate due to the anticipated project scope, staff may initiate a request for proposals process to engage consulting resources, and the resulting contracting process will be completed and consultant contract in place prior to Draft PEA filing.

3. Draft PEA Provided Prior to PEA Filing

A complete Draft PEA will be filed at least three months prior to application filing. CPUC CEQA Unit Staff and the CPUC consultant team will review and provide comments on the Draft PEA to the Applicant early in the three-month period to allow time for Applicant revisions to the PEA.

4. Project Site Visits

One or more site visits will be scheduled with CPUC CEQA Unit Staff and their consultant at the time of Draft PEA filing (or prior). Appropriate federal, state, and local agencies will also be engaged at this time.

5. Consultation with Public Agencies

The Applicant and CPUC CEQA Unit Staff will jointly reach out and conduct consultation meetings with public agencies and other interested parties in the project area. CPUC CEQA Unit Staff may also choose to conduct separate consultation meetings if needed.

If a federal agency will be a co-lead pursuant to the National Environmental Policy Act and coordinating with the CPUC during the environmental review process, the Applicant and CPUC CEQA Unit Staff will ensure that the agency has the opportunity to comment on the Draft PEA and participate jointly with the CPUC throughout the application review process. Applicant and Commission CEQA Unit Staff coordination with the federal agency (if applicable) will likely need to occur more than six months in advance of application filing.

6. Alternatives Development

PEAs will be drafted with the assumption that an Environmental Impact Report (EIR) will be prepared. Applicants will include a reasonable range of alternatives in the PEA (even though a Mitigated Negative Declaration [MND] may ultimately be prepared), including sufficient information about each alternative. In some situations, CPUC CEQA Unit Staff and project Applicants may agree during Pre-filing Consultation that an MND is likely and a reasonable range of alternatives is not required for the PEA. This determination, however, must be made in consultation with CEQA Unit Staff during Pre-filing and is not final. The type of document to be prepared may change based on public scoping results and other findings during the environmental review process.

CEQA Unit Staff will provide feedback on the range of alternatives prior to Draft PEA filing (if possible) based on their review of the Draft PEA. It is critical that Applicants receive feedback from CEQA Unit Staff about the range of alternatives prior to filing the PEA. Applicants will ensure that each alternative is described and evaluated in the PEA with an equal level of detail as the proposed project unless otherwise instructed in writing by CEQA Unit Staff.

7. Format of PEA Submittal

Each PEA submittal will include the completed PEA Checklist tables. Each PEA submittal will be formatted and organized as shown in the Example PEA Table of Contents provided in the PEA Checklist unless otherwise directed by CPUC CEQA Unit Staff in writing prior to application filing. The example PEA Table of Contents is modeled after typical CPUC EIRs.

8. Transmission and Distribution System Information

A key component of CEQA projects analyzed during CPUC environmental reviews is the context of the project within the larger transmission and distribution system. Detailed descriptions of the regional transmission system, including GIS data, to which the proposed project would interconnect are required. The required level of detail about interconnecting systems is project specific and will be specified by CEQA Unit Staff in writing during Pre-filing Consultation. Detailed distribution system information may also be required.

9. Data and Technical Adequacy

Applicants will focus PEA development efforts on providing thorough, up-to-date data and technical reports required for CPUC CEQA Unit Staff to complete the environmental document and alternatives analysis.

The Applicant-drafted PEA Executive Summary, Introduction, Project Description, Description of Alternatives, and other chapters typically found in past CPUC EIRs and Initial Study/MNDs will be *thorough*—emulate the level of detail provided in typical CPUC EIRs. The setting sections provided for

PEA Chapter 5, Environmental Analysis, will also be thorough. Applicants will ensure that the PEA text, graphics, and file formats can be efficiently converted into CPUC's CEQA document with minimal revision, reformatting, and redevelopment by CPUC Staff and consultants.

The impact analyses and determinations provided for Chapter 5, Environmental Analysis, and Chapter 6, Comparison of Alternatives, need not be as thorough as those to be prepared by the CPUC for its CEQA document. These two sections are expected to be revised and redeveloped by CPUC Staff and consultants. Other sections of the CEQA document will only be revised and redeveloped by CPUC Staff and consultants if determined to be necessary after PEA filing.

10. Applicant Proposed Measures

The Pre-filing Consultation process can support the development Applicant Proposed Measures (APMs); measures that Applicants incorporate into the PEA project description to avoid or reduce what otherwise may be considered significant impacts. APMs that use phrases, such as, "as practicable," "as needed," or other conditional language will be superseded by Mitigation Measures if required to avoid or reduce a potentially significant impact. CPUC CEQA Unit Staff and their consultant team may review and provide comments on the Draft PEA APMs during Pre-filing Consultation.

Applicants will carefully consider each CPUC Draft Environmental Measure identified in Chapter 5 of this PEA Checklist. The measures may be applied to the proposed project if appropriate and may be subject to modification by the CPUC during its environmental review.[1]

11. PEA Checklist Deviations

CPUC CEQA Unit Staff understand that the PEA Checklist requires Applicants to develop a significant quantity of information. There are times when it is appropriate to deviate from the PEA Checklist. Deviations to the Pre-Filing Consultation Guidelines or the PEA Checklist contents may be approved by the CPUC's CEQA Unit Staff. Staff approval will be in writing and will occur prior to Applicant filing of the Draft PEA. Note that any deviations approved in writing by staff during the Pre-filing period may be reversed or modified after application and PEA filing and at any time throughout the environmental review period at the discretion of CPUC CEQA Unit Staff.

12. Submittal of Confidential Information

CPUC Staff are available during Pre-filing Consultation to discuss concerns that Applicants may have about confidentiality. However, the CEQA process requires public disclosure about projects, and such disclosure can often appear to conflict with Applicant requests for confidentiality. CPUC CEQA Unit Staff will rely on CPUC adopted confidentiality procedures to resolve confidentiality concerns. Applicants that expect aspects of a PEA filing to be confidential must follow CPUC confidentiality procedures. Applicants may mark information as confidential if allowed pursuant to General Order 66 or latest applicable Commission rule (e.g., see Public Records Act Proceeding Rulemaking (R.14-11-001).

13. Additional CEQA Impact Questions

Additional CEQA Impact Questions that are specific to the types of projects evaluated by the Commission's CEQA Unit are identified in the PEA Checklist to be considered in addition to the checklist items in CEQA Guidelines Appendix G.

The next section of this Guidelines document provides the PEA Checklist for all energy project applications that require CEQA compliance.

[1] At this time, the CPUC environmental measures are in draft format, see PEA Checklist Attachment 4. They may be formally incorporated into Chapter 5 of future versions of the PEA Checklist.

Proponent's Environmental Assessment (PEA) Checklist

The PEA Checklist provides project Applicants (e.g., projects involving electric transmission lines, electric substations or switching stations, natural gas transmission pipelines, and underground natural gas storage facilities) with detailed guidance regarding the level of detail CPUC CEQA Unit Staff expect to deem PEAs complete. Applicants will prepare their PEAs using the same section headers and numbering as provided in the PEA Checklist. Applicants will also provide supporting data that is specific to each item within the PEA Checklist. As noted in the Pre-Filing Consultation Guidelines, the PEA Checklist is written with the assumption that an EIR will be prepared. PEA contents may not need to support the development of an EIR, but this determination can only be made in consultation with CPUC CEQA Unit Staff as described in the Pre-Filing Consultation Guidelines.

Formatting and Basic PEA Data Needs, Including GIS Data

1. Provide **editable and fully functional source files** in electronic format for all PDF files, hardcopies, maps, images, and diagrams. Files will be provided in their original file format as well as the output file format. All Excel and other spreadsheet files or modeling files will include all underlying formulas/modeling details. All modeling files must be fully functional.
2. Details about the types of **GIS data and maps** to be submitted are provided in Attachment 1. GIS data not specified in this checklist may also be requested depending on the Proposed Project and alternatives.
3. The Applicant is responsible for ensuring that all project features, including project components and temporary and permanent work areas, are included within all **survey boundaries** (e.g., biological and cultural resources).
4. Excel spreadsheets with **emissions calculations** will be provided that are complete with all project assumptions, values, and formulas used to prepare emissions calculations in the PEA. Accompanying PDF files with the same information will be provided as Appendix B to the PEA (see List of Appendices below).
5. Applicants will provide in an Excel spreadsheet a comprehensive **mailing list** that includes the names and addresses of all affected landowners and residents, including unit numbers for multi-unit properties for both the proposed project and alternatives.
    a. An affected resident or landowner is defined as one whose place of residence or property is:
        i. Crossed by or abuts any component of the proposed project or an alternative including any permanent or temporary disturbance area (either above or below ground) and any extra work area (e.g., staging or parking area); or
        ii. Located within approximately 1,000 feet[2] of the edge of any construction work area.
    b. Include in the following information for each resident in a spreadsheet, at minimum: parcel APN number, owner name and mailing address, and parcel physical address. If individual occupant names, facility names, or business names are available, also provide these names and addresses in the spreadsheet. A sample mailing list format is provided in Table 2.

[2] Notice to all property owners within 300 feet of a Proposed Project is required at the time of application filing under GO 131-D. Commission notices of CEQA document preparation may be mailed to residents and property owners greater than 300 feet from a Proposed Project to ensure adequate notification (e.g., 1,000 feet) and the extent of notification will be determined on a project specific basis. Appropriate notice expectations will be discussed during Pre-filing (e.g., with respect to visual impact areas and other types of impacts specific to the Proposed Project and its study area).

Table 2. Sample Project Mailing List

Category	Company/ Agency	Name	Mailing Address	Phone Number	Email	APN	Source
State Agency	California Resources Agency	John Doe	1234 California Street City, CA 98765	(333) 456-7899	johndoe@email.com	123-456-789	County Assessor
Individual	n/a	Jane Doe	222 Main Street City, CA 97531	(909) 876-5432	janedoe@email.com	101-202-303	Public meeting on Month, Day 2019

6. **PEA Organization:** This PEA Checklist is organized to include each of the chapters and sections found in typical CPUC EIRs. The following sections will serve as the outline for all Draft PEAs submitted during Pre-filing and all PEAs filed with the CPUC Docket Office. PEAs will include each chapter and section identified (in matching numerical order) unless otherwise directed by CPUC CEQA Unit Staff in writing prior to filing.

Cover

A single sheet with the following information:	Applicant Notes, Comments
Title "Proponent's Environmental Assessment" and filing date	
Proponent Name (the Applicant)	
Name of the proposed project[3]	
Technical subheading summarizing the type of project and its major components, in one sentence or about 40 words, for example: A new 1,120 MVA, 500/115kV substation, 10 miles of new singled-circuit 500kV transmission lines, 25 miles of new and replaced double-circuit 115kV power lines, and upgrades at three existing substations are proposed.	
Location of the proposed project (all counties and municipalities or map figure for the cover that shows the areas crossed)	
Proceeding for which the PEA was prepared and CPUC Docket number (if known) or simply leave a blank where the Docket number would go	
Primary Contact's name, address, telephone number, and email address for both the project Applicant(s) and entities that prepared the PEA	
See example PEA cover in Figure 1.	

[3] If approved by the California Independent System Operator (CAISO), the project name listed will match the name specified in the CAISO approval. If multiple names apply, list all versions.

Figure 1. Example PEA Cover

Proponent's Environmental Assessment for California Utility Company's Evergreen Electric Substation and Transmission Line Project

May 1, 2019 (PEA filing date)

A new 230 kV substation, 10 miles of new single-circuit 230kV transmission lines, and upgrades at two existing substations are proposed.

The Proposed Project would be located primarily in __ County but would also cross __ and __ counties and areas within the City of __.

Required PEA Appendices and Supporting Materials

Order	Title	Applicant Notes, Comments
Appendix A	Detailed Maps and Design Drawings	
Appendix B	Emissions Calculations	
Appendix C	Biological Resources Technical Reports (see Attachment 2)	
Appendix D	Cultural Resources Studies (see Attachment 3)	
Appendix E	Detailed Tribal Consultation Report[5]	
Appendix F	Environmental Data Resources Report, Phase I Environmental Site Assessment, or similar hazardous materials report	
Appendix G	Agency Consultation and Public Outreach Report and Records of Correspondence	
Appendix H	Construction Fire Prevention Plan[6]	

Potentially Required[7] Appendices and Supporting Materials

Order	Title	Applicant Notes, Comments
Appendix I	Noise Technical Studies	
Appendix J	Traffic Studies	
Appendix K	Geotechnical Investigations (may preliminary at time of PEA filing)	
Appendix L	Hazardous Substance Control and Emergency Response Plan / Hazardous Waste and Spill Prevention Plan	

4 References will be organized by section but contained in a single chapter called, "References."

5 Include summary and timing of all correspondence to and from any Tribes and the State Historic Preservation Office/Native American Heritage Commission, including Sacred Lands File search results, and full description of any issues identified by Tribes in their interactions with the Applicant.

6 The Construction Fire Prevention Plan will be provided to federal, state, and local fire agencies for review and comment as applicable to where components of the proposed project would be located. CPUC will approve the final Construction Fire Prevention Plan. Record of the request for review and comment and any comments received from these agencies will be provided to CPUC CEQA Unit Staff.

7 Anticipated Appendix and study requirements should be discussed with CPUC CEQA Unit Staff during Pre-filing.

Appendix M	Erosion and Sedimentation Control Best Management Practice Plan / Draft Storm Water Pollution Prevention Plan (may be preliminary at time of PEA filing)	
Appendix N	FAA Notice and Criteria Tool Results	
Appendix O	Revegetation or Site Restoration Plan	
Appendix P	Health and Safety Plan	
Appendix Q	Existing Easements[8]	
Appendix R	Blasting Plan (may be preliminary at time of PEA filing)	
Appendix S	Traffic Control/Management Plan (may be preliminary at time of PEA filing)	
Appendix T	Worker Environmental Awareness Program (may preliminary at time of PEA filing)	
Appendix U	Helicopter Use and Safety Plan (may be preliminary at time of PEA filing)	
Appendix V	Electric and Magnetic Fields Management Plan (may be part of the Application rather than the PEA)	

[8] Easements should be provided military lands, conservation easements, or other lands where the real estate agreement specifies the range of activities that can be conducted

1 Executive Summary

This section will include, but is not limited to, the following:	PEA Section and Page Number[9]	Applicant Notes, Comments
1.1: Proposed Project Summary. Provide a summary of the proposed project and its underlying purpose and basic objectives.		
1.2: Land Ownership and Right-of-Way Requirements. Provide a summary of the existing and proposed land ownership and rights-of-way for the proposed project.		
1.3: Areas of Controversy. Identify areas of anticipated controversy and public concern regarding the project.		
1.4: Summary of Impacts a) Identify all impacts expected by the Applicant to be potentially significant. Identify and discuss Applicant Proposed Measures here and provide a reference to the full listing of Applicant Proposed Measures provided in the table described in Section 3.11 of this PEA Checklist. b) Identify any significant and unavoidable impacts that may occur.		
1.5: Summary of Alternatives. Summarize alternatives that were considered by the Applicant and the process and criteria that were used to select the proposed project.		
1.6: Pre-filing Consultation and Public Outreach Summary. Briefly summarize Pre-filing consultation and public outreach efforts that occurred and identify any significant outcomes that were incorporated into the proposed project.		
1.7: Conclusions. Provide a summary of the major PEA conclusions.		
1.8: Remaining Issues. Describe any major issues that must still be resolved.		

[9] The *PEA Section and Page Number* column and *Applicant Notes, Comments* column are intended to be filled out and provided with PEA submittals. The PEA Checklist is provided in Word to all Applicants to allow column resizing as appropriate to reduce PEA checklist length when completed for submittal. Landscape formatting may also be appropriate for completed PEA Checklist tables.

2 Introduction

2.1 Project Background

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
2.1.1: Purpose and Need a) Explain why the proposed project is needed. b) Describe localities the proposed project would serve and how the project would fit into the local and regional utility system. c) If the proposed project was identified by the California Independent System Operator (CAISO), thoroughly describe the CAISO's consideration of the proposed project and provide the following information: i. Include references to all CAISO Transmission Planning Processes that considered the proposed project. ii. Explain if the proposed project is considered an economic, reliability, or policy-driven project or a combination thereof. iii. Identify whether and how the Participating Transmission Owner recommended the project in response to a CAISO identified need, if applicable. iv. Identify if the CAISO approved the original scope of the project or an alternative and the rationale for their approval either for the original scope or an alternative. v. Identify how and whether the proposed project would exceed, combine, or modify in any way the CAISO identified project need. vi. If the Applicant was selected as part of a competitive bid process, identify the factors that contributed to the selection and CAISO's requirements for in-service date. d) If the project was not considered by the CAISO, explain why.		
(Natural Gas Storage Only) e) Provide storage capacity or storage capacity increase in billion cubic feet. If the project does not increase capacity, make this statement. f) Describe how existing storage facilities will work in conjunction with the proposed project. Describe the purchasing process (injection, etc.) and transportation arrangements this facility will have with its customers.		
2.1.2: Project Objectives a) Identify and describe the basic project objectives.[10] The objectives will include reasons for constructing the project based on its		

[10] Tangential project goals should not be included as basic project objectives, such as, minimizing environmental impacts, using existing ROWs and disturbed land to the maximum extent feasible, ensuring safety during construction and operation, building on property already controlled by the Applicant/existing site control. Goals of this type do not describe the underlying purpose or basic objectives but, rather, are good general practices for all projects.

purpose and need (i.e., address a specific reliability issue). The description of the project objectives will be sufficiently detailed to permit CPUC to independently evaluate the project need and benefits to accurately consider them in light of the potential environmental impacts. The basic project objectives will be used to guide the alternatives screening process, when applicable. b) Explain how implementing the project will achieve the basic project objectives and underlying purpose and need. c) Discuss the reasons why attainment of each basic objective is necessary or desirable.		
2.1.3: Project Applicant(s). Identify the project Applicant(s) and ownership of each component of the proposed project. Describe each Applicant's utility services and their local and regional service territories.		

2.2 Pre-filing Consultation and Public Outreach[11]

This section will include, but is not limited to, the following:	**PEA Section and Page Number**	**Applicant Notes, Comments**
2.2.1: Pre-filing Consultation and Public Outreach a) Describe all Pre-filing consultation and public outreach that occurred, such as, but not limited to: i. CAISO ii. Public agencies with jurisdiction over project areas or resources that may occur in the project area iii. Native American tribes affiliated with the project area iv. Private landowners and homeowner associations v. Developers for large housing or commercial projects near the project area vi. Other utility owners and operators vii. Federal, state, and local fire management agencies b) Provide meeting dates, attendees, and discussion summaries, including any preliminary concerns and how they were addressed and any project alternatives that were suggested. c) Clearly identify any significant outcomes of consultation that were incorporated into the proposed project. d) Clearly identify any developments that could coincide or conflict with project activities (i.e., developments within or adjacent to a proposed ROW).		
2.2.2: Records of Consultation and Public Outreach. Provide contact information, notification materials, meeting dates and materials, meeting notes, and records of communication organized by entity as an Appendix to the PEA (Appendix G).		

[11] CPUC CEQA Unit Staff request that consultation and public outreach that occurs during the Pre-filing period and throughout environmental review include the assigned CPUC Staff person and CPUC consultant.

2.3 Environmental Review Process

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
2.3.1: Environmental Review Process. Provide a summary of the anticipated environmental review process and schedule.		
2.3.2: CEQA Review a) Explain why CPUC is the appropriate CEQA Lead agency. b) Identify other state agencies and any federal agencies that may have discretionary permitting authority over any aspect of the proposed project. c) Identify all potential involvement by federal, state, and local agencies not expected to have discretionary permitting authority (i.e., ministerial actions). d) Summarize the results of any preliminary outreach with these agencies as well as future plans for outreach.		
2.3.3: NEPA Review (if applicable). If review according to the National Environmental Policy Act (NEPA) is expected, explain the portions of the project that will require the NEPA review process. Discuss which agency is anticipated to be the NEPA Lead agency if discretionary approval by more than one federal agency is required.		
2.3.4: Pre-filing CEQA and NEPA Coordination. Describe the results of Pre-filing coordination with CEQA and NEPA review agencies (refer to CPUC's Pre-Filing Consultation Guidelines). Identify major outcomes of the Pre-filing coordination process and how the information was incorporated into the PEA, including suggestions on the type of environmental documents and joint or separate processes based on discussions with agency staff.		

2.4 Document Organization

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
2.4: PEA Organization. Summarize the contents of the PEA and provide an annotated list of its sections.		

3 Proposed Project Description[12]

3.1 Project Overview

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
3.1: Project Overview a) Provide a concise summary of the proposed project and components in a few paragraphs. b) Described the geographical location of the proposed project (i.e., county, city, etc.). c) Provide an overview map of the proposed project location.		

3.2 Existing and Proposed System

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
3.2.1: Existing System a) Identify and describe the existing utility system that would be modified by the proposed project, including connected facilities to provide context. Include detailed information about substations, transmission lines, distribution lines, compressor stations, metering stations, valve stations, nearby renewable generation and energy storage facilities, telecommunications facilities, control systems, SCADA systems, etc. b) Provide information on users and the area served by the existing system features. c) Explain how the proposed project would fit into the existing local and regional systems. d) Provide a schematic diagram of the existing system features. e) Provide detailed maps and associated GIS data for existing facilities that would be modified by the proposed project.		
3.2.2: Proposed Project System a) Describe the whole of the proposed project by component, including all new facilities and any modifications, upgrades, or expansions to existing facilities and any interrelated activities that are part of the whole of the action. b) Clearly identify system features that would be added, modified, removed, disconnected and left in place, etc. c) Identify the expected capacities of the proposed facilities, highlighting any changes from the existing system. If the project would not change existing capacities, make this statement. For electrical projects, provide the anticipated capacity increase in amps or megawatts or in the typical units for the types of facilities proposed. For gas projects, provide the total volume of gas to be		

[12] Applicant review of the Administrative Draft Project Description or sections of the Administrative Draft Project Description prepared for the CEQA document may be requested by CPUC CEQA Unit Staff to ensure technical accuracy.

delivered by the proposed facilities, anticipated system capacity increase (typically in million cubic feet per day), expected customers, delivery points and corresponding volumes, and the anticipated maximum allowable operating pressure(s). d) Describe the initial buildout and eventual full buildout of the proposed project facilities. For example, if an electrical substation or gas compressor station would be installed to accommodate additional demand in the future, then include the designs for both the initial construction based on current demand and the design for all infrastructure that could ultimately be installed within the planned footprint of an electric substation or compressor station. e) Explain whether the electric line or gas pipeline will create a second system tie or loop for reliability. f) Provide information on users and the area served by the proposed system features, highlighting any differences from the existing system. g) Provide a schematic diagram of the proposed system features. h) Provide detailed maps and associated GIS data for proposed facilities that would be installed, modified, or relocated by the proposed project.		
3.2.3: System Reliability. Explain whether the electric line or gas pipeline will create a second system tie or loop for reliability. Clearly explain and show how the proposed project relates to and supports the existing utility systems.		
3.2.4: Planning Area. Describe the system planning area served or to be served by the project. Clearly define the Applicant's term for the planning area (e.g., Electrical Needs Area or Distribution Planning Area).		

3.3 Project Components

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
Required for all Project Types		
3.3.1: Preliminary Design and Engineering a) Provide preliminary design and engineering information for all above-ground and below-ground facilities for the proposed project. The approximately locations, maximum dimensions of facilities, and limits of areas that would be needed to construction and operate the facilities should be clearly defined.[13] b) Provide preliminary design drawings for project features and explain the level of completeness (i.e., percentage). c) Provide detailed project maps (approximately 1:3,000 scale) and associated GIS data of all facility locations and boundaries with attributes and spatial geometry that corresponds to information in the Project Description.		

[13] Refer to Attachment 1 for mapping and GIS data requirements for the project layout and design.

3.3.2: Segments, Components, and Phases a) Define all project segments, components, and phases for the proposed project. b) Provide the length/area of each segment or component, and the timing of each development phase. c) Provide an overview map showing each segment and provide associated GIS data (may be combined with other mapping efforts).		
3.3.3: Existing Facilities a) Identify the types of existing facilities that would be removed or modified by the proposed project (i.e., conductor/cable, poles/towers, substations, switching stations, gas storage facilities, gas pipelines, service buildings, communication systems, etc.). b) Describe the existing facilities by project segment and/or component, and provide information regarding existing dimensions, areas/footprints, quantities, locations, spans, etc. c) Distinguish between above-ground and below-ground facilities and provide both depth and height ranges for each type of facility. For poles/towers, provide the installation method (i.e., foundation type or direct bury), and maximum above-ground heights and below-ground depths. d) Explain what would happen to the existing facilities. Would they be replaced, completely removed, modified, or abandoned? Explain why. e) Identify the names, types, materials, and capacity/volumes ranges (i.e., minimum and maximum) of existing facilities that would be installed or modified by the proposed project. f) Provide diagrams with dimensions representing existing facilities to provide context on how the proposed facilities would be different. g) Briefly describe the surface colors, textures, light reflectivity, and any lighting of existing facilities.		
3.3.4: Proposed Facilities a) Identify the types of proposed facilities to be installed or modified by the proposed project (e.g., conductor/cable, poles/towers, substations, switching stations, gas storage facilities, gas pipelines, service buildings, communication systems). b) Describe the proposed facilities by project segment and/or component, and provide information regarding maximum dimensions, areas/footprints, quantities, locations, spans, etc. c) Distinguish between above-ground and below-ground facilities and provide both depth and height ranges for each type of facility. For poles/towers, provide the installation method (i.e., foundation type or direct bury), and maximum above-ground heights and below-ground depths.		

d) Identify where facilities would be different (e.g., where unique or larger poles would be located, large guy supports or snub poles). e) Provide details about civil engineering requirements (i.e., permanent roads, foundations, pads, drainage systems, detention basins, spill containment, etc.). f) Distinguish between permanent facilities and any temporary facilities (i.e., poles, shoo-fly lines, mobile substations, mobile compressors, transformers, capacitors, switch racks, compressors, valves, driveways, and lighting). g) Identify the names, types, materials, and capacity/volumes ranges (i.e., minimum and maximum) of proposed facilities that would be installed or modified by the proposed project. h) Provide diagrams with dimensions representing existing facilities. i) Briefly describe the surface colors, textures, light reflectivity, and any lighting of proposed facilities.		
3.3.5: Other Potentially Required Facilities a) Identify and describe in detail any other actions or facilities that may be required to complete the project. For example, consider the following questions: i. Could the project require the relocation (temporary or permanent), modification, or replacement of unconnected utilities or other types of infrastructure by the Applicant or any other entity? ii. Could the project require aviation lighting and/or marking? iii. Could the project require additional civil engineering requirements to address site conditions or slope stabilization issues, such as pads and retaining walls, etc.? b) Provide the location of each facility and a description of the facility.		
3.3.6: Future Expansions and Equipment Lifespans a) Provide detailed information about the current and reasonably foreseeable plans for expansion and future phases of development. b) Provide the expected usable life of all facilities. c) Describe all reasonably foreseeable consequences of the proposed project (e.g., future ability to upgrade gas compressor station to match added pipeline capacity).		
Required for Certain Project Types		
3.3.7: Below-ground Conductor/Cable Installations (as Applicable) a) Describe the type of line to be installed (e.g., single circuit cross-linked polyethylene-insulated solid-dielectric, copper-conductor cables). b) Describe the type of casing the cable would be installed in (e.g., concrete-encased duct bank system) and provide the dimensions of the casing.		

c) Describe the types of infrastructure would likely be installed within the duct bank (e.g., transmission, fiber optics, etc.).		
3.3.8: Electric Substations and Switching Stations (as Applicable) a) Provide the number of transformer banks that will be added at initial and full buildout of the substation. Identify the transformer voltage and number of each transformer type. b) Identify any gas insulated switchgear that will be installed within the substation. c) Describe any operation and maintenance facilities, telecommunications equipment, and SCADA equipment that would be installed within the substation.		
3.3.9: Gas Pipelines (as Applicable). For each segment: a) Identify pipe diameter, number and length of exposed sections, classes and types of pipe to be installed, pressure of pipe, and cathodic protection for each linear segment. b) Describe new and existing inspection facilities (e.g., pig launcher sites). c) Describe system cross ties and laterals/taps. d) Identify the spacing between each valve station. e) Describe the compressor station, if needed, for any new or existing pipeline. f) Describe all pipelines and interconnections with existing and proposed facilities: i. Number of interconnections and locations and sizes; ii. All below-ground and above-ground installations; and iii. All remote facility locations for metering, telemetry, control.		
3.3.10: Gas Storage Facilities – Background and Resource Information (as Applicable) a) Provide detailed background information on the natural gas formation contributing to the existing or proposed natural gas facility, including the following: i. Description of overlying stratigraphy, especially caps ii. Description of production, injection, and intervening strata iii. Types of rock iv. Description of types of rocks in formation, including permeability or fractures v. Thickness of strata b) Provide a graphic and/or table showing formation thicknesses. c) Identify and describe any potential gas migration pathways, such as faults, permeable contacts, abandoned wells, underground water or other pipelines. d) Provide a summary and detailed cross-section diagrams of the geologic formations and structures of the oil/gas field or area. e) Provide the first well drilling and production history, abandonment procedures, inspections, etc. f) Describe production zones, including depth, types of formations, and characteristics of field/area.		

g) Describe the existing and proposed storage capacity and limiting factors, such as injection or withdrawal capacities. h) Describe existing simulation studies that were used to predict the reservoir pressure response under gas injection and withdrawal operations, and simulation studies for how the system would change as proposed. Provide the studies as a PEA Appendix. i) Provide the history of the oil/gas field or area.		
3.3.11: Gas Storage Facilities – Well-Head Sites (as Applicable). Describe the location, depth, size and completion information for all existing, abandoned, proposed production and injection, monitoring, and test wells.		
3.3.12: Gas Storage Facilities – Production and Injection (as Applicable) a) Provide the proposed storage capacity of production and injection wells. b) Provide production and injection pressures, depths, and rates. c) Provide production and injection cycles by day, week, and year. d) Describe existing and proposed withdrawal/production wells (i.e., size, depth, formations, etc.). e) Describe existing and proposed cushion gas requirements. f) Describe any cushion gas injection—formation the well is completed in (cushion gas formation), and injection information.		
3.3.13: Gas Storage Facilities – Electrical Energy (as Applicable). Describe all existing and proposed electric lines, telecommunications facilities, and other utilities/facilities (e.g., administrative offices, service buildings, and non-hazardous storage), and chemical storage associated with the proposed project.		
3.3.14: Telecommunication Lines (as Applicable) a) Identify the type of cable that is proposed and length in linear miles by segment. b) Identify any antenna and node facilities that are part of the project. c) For below-ground telecommunication lines, provide the depth of cable and type of conduit. d) For above-ground telecommunication lines, provide: i. Types of poles that will be installed (if new poles are required) ii. Where existing poles will be used iii. Any additional infrastructure (e.g., guy wires) or pole changes required to support the additional cable on existing poles		

3.4 Land Ownership, Rights-of-Way, and Easements

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
3.4.1: Land Ownership. Describe existing land ownership where each project component would be located. State whether the proposed		

project would be located on property(ies) owned by the Applicant or if additional property would be required.		
3.4.2: Existing Rights-of-Way or Easements a) Identify and describe existing rights-of-way (ROWs) or easements where project components would be located. Provide the approximately lengths and widths in each project area. b) Clearly state if project facilities would be replaced, modified, or relocated within existing ROWs or easements.		
3.4.3: New or Modified Rights-of-Way or Easements a) Describe new permanent or modified ROWs or easements that would be required. Provide the approximately lengths and widths in each project area. b) Describe how any new permanent or modified ROWs or easements would be acquired. c) Provide site plans identifying all properties/parcels and partial properties/parcels that may require acquisition and the anticipated ROWs or easements. Provide associated GIS data. d) Describe any development restrictions within new ROWs or easements, e.g., building clearances and height restrictions, etc. e) Describe any relocation or demolition of commercial or residential property/structures that may be necessary.		
3.4.4: Temporary Rights-of-Way or Easements f) Describe temporary ROWs or easements that would be required to access project areas, including ROWs or easements for temporary construction areas (i.e., staging areas or landing zones). g) Explain where temporary construction areas would be located with existing ROWs or easements for the project or otherwise available to the Applicant without a temporary ROW or easement. h) Describe how any temporary ROWs or easements would be acquired.		

3.5 Construction

This section will include, but is not limited to, the following:	**PEA Section and Page Number**	**Applicant Notes, Comments**
3.5.1 Construction Access (All Projects)		
3.5.1.1: Existing Access Roads a) Provide the lengths, widths, ownership details (both public and private roads), and surface characteristics (i.e., paved, graveled, bare soil) of existing access roads that would be used during construction. Provide the area of existing roads that would be used (see example in Table 3 below). b) Describe any road modifications or stabilization that would be required prior to construction, including on the adjacent road		

shoulders or slopes. Identify any roads that would be expanded and provide the proposed width increases. c) Describe any procedures to address incidental road damage cause by project activities following construction. d) Provide detailed maps and associated GIS data for all existing access roads.		

Table 3. Access Roads

Type of Road	Description	Area Proposed Project
Existing Dirt Road	Typically double track. May have been graded previously. No other preparation required, although a few sections may need to be re-graded and crushed rock applied in very limited areas for traction.	_____ acres
New Permanent	Would be xx feet wide, bladed. No other preparation required although crushed rock may need to be applied in very limited areas for traction.	_____ acres
Overland Access	No preparation required. Typically grassy areas that are relatively flat. No restoration would be necessary.	_____ acres

3.5.1.2: New Access Roads a) Identify any new access roads that would be developed for project construction purposes, such as where any blading, grading, or gravel placement could occur to provide equipment access outside of a designated workspace.[14] b) Provide lengths, widths, and development methods for new access roads. c) Identify any temporary or permanent gates that would be installed. d) Clearly identify any roads that would be temporary and fully restored following construction. Otherwise it will be assumed the new access road is a permanent feature. e) Provide detailed maps and associated GIS data for all new access roads.		
3.5.1.3: Overland Access Routes a) Identify any overland access routes that would be used during construction, such as where vehicles and equipment would travel over existing vegetation and where blading, grading, or gravel placement would occur. b) Provide lengths and widths for new access roads. c) Provide detailed maps and associated GIS data for all overland access routes.		
3.5.1.4: Watercourse Crossings a) Identify all temporary watercourse crossings that would be required during construction. Provide specific methods and procedures for temporary watercourse crossings.		

[14] Temporary roads that would not require these activities should be considered an overland route.

b) Describe any bridges or culverts that replacement or installation of would be required for construction access. c) Provide details about the location, design and construction methods.		
3.5.1.5: Helicopter Access. If helicopters would be used during construction: a) Describe the types and quantities of helicopters that would be used during construction (e.g., light, medium, heavy, or sky crane), and a description of the activities that each helicopter would be used for. b) Identify areas for helicopter takeoff and landing. c) Describe helicopter refueling procedures and locations. d) Describe flight paths, payloads, and expected hours and durations of helicopter operation. e) Describe any safety procedures or requirements unique to helicopter operations, such as but not limited to obtaining a Congested Area Plan from the Federal Aviation Administration (FAA).		
3.5.2 Staging Areas (All Projects)		
3.5.2.1: Staging Area Locations a) Identify the locations of all staging area(s). Provide a map and GIS data for each.[15] b) Provide the size (in acres) for each staging area and the total staging area requirements for the project.		
3.5.2.2: Staging Area Preparation a) Describe any site preparation required, if known, or generally describe what might be required (i.e., vegetation removal, new access road, installation of rock base, etc.). b) Describe what the staging area would be used for (i.e., material and equipment storage, field office, reporting location for workers, parking area for vehicles and equipment, etc.). c) Describe how the staging area would be secured. Would a fence be installed? If so, describe the type and extent of the fencing. d) Describe how power to the site would be provided if required (i.e., tap into existing distribution, use of diesel generators, etc.). e) Describe any temporary lightning facilities for the site. f) Describe any grading activities and/or slope stabilization issues.		

[15] While not all potential local site staging areas will be known prior to selection of a contractor, it is expected that approximate area and likely locations of staging areas be disclosed. The identification of extra or optional staging areas should be considered to reduce the risk of changes after project approval that could necessitate further CEQA review.

3.5.3 Construction Work Areas (All Projects)		
3.5.3.1: Construction Work Areas a) Describe known work areas that may be required for specific construction activities (e.g., pole assembly, hillside construction)[16] b) Describe the types of activities that would be performed at each work area. Work areas may include but are not necessarily limited to: i. Helicopter landing zones and touchdown areas ii. Vehicle and equipment parking, passing, or turnaround areas iii. Railroad, bridge, or watercourse crossings iv. Temporary work pads for facility installation, modification, or removal v. Excavations and associated equipment work areas vi. Temporary guard structures vii. Pull-and-tension/stringing sites viii. Jack and bore pits, drilling areas and pull-back areas for horizontal directional drills ix. Retaining walls		
3.5.3.2 Work Area Disturbance a) Provide the dimensions of each work area including the maximum area that would be disturbed during construction (e.g., 100 feet by 200 feet) (see example in Table 4 below). b) Provide a table with temporary and permanent disturbance at each work area (in square feet or acres), and the total area of temporary and permanent disturbance for the entire project (in acres).		
3.5.3.3: Temporary Power. Identify how power would be provided at work area (i.e., tap into existing distribution, use of diesel generators, etc.). Provide the disturbance area for any temporary power lines.		
3.5.4 Site Preparation (All Projects)		
3.5.4.1: Surveying and Staking. Describe initial surveying and staking procedures for site preparation and access.		
3.5.4.2: Utilities a) Describe the process for identifying any underground utilities prior to construction (i.e., underground service alerts, etc.). b) Describe the process for relocating any existing overhead or underground utilities that aren't directly connected to the project system. c) Describe the process for installing any temporary power or other utility lines for construction.		

[16] Understanding that each specific work area may not be determined until the final work plan is submitted by the construction contractor, estimate total area likely to be disturbed.

Table 4. Work Areas

	Proposed Project (approximate metrics)
Pole Diameter:	
• Wood	_____ inches
• Self-Supporting Steel	_____inches
Lattice Tower Base Dimension:	
• Self-Supporting Lattice Structure	_____feet
Auger Hole Depth:	
• Wood	_____ to _____ feet
• Self-Supporting Steel	_____ to _____ feet
Permanent Footprint per Pole/Tower:	
• Wood	_____ sq. feet
• Self-Supporting Steel	_____ sq. feet
• Self-Supporting Steel Tower	_____ sq. feet
Number of Poles/Towers:	
• Wood	_____
• Self-Supporting Steel	_____
• Self-Supporting Steel Tower	_____
Average Work Area around Pole/Towers (e.g., for old pole removal and new pole installation):	
• Tangent structure work areas	_____ sq. feet
• Dead End / Angle structure work areas	_____ sq. feet
Total Permanent Footprint for Poles/Towers	Approximately _____ acres

3.5.4.3: Vegetation Clearing a) Describe what types of vegetation clearing may be required (e.g., tree removal, brush removal, flammable fuels removal) and why (e.g., to provide access, etc.). b) Provide calculations of temporary and permanent disturbance of each vegetation community and include all areas of vegetation removal in the GIS database. Distinguish between disturbance that would occur in previously developed areas (i.e., paved, graveled, or otherwise urbanized), and naturally vegetated areas. c) Describe how each type of vegetation removal would be accomplished. d) Describe the types of equipment that would be used for vegetation removal.		
3.5.4.4: Tree Trimming Removal a) For electrical projects, distinguish between tree trimming as required under CPUC General Order 95-D and tree removal. b) Identify the types, locations, approximate numbers, and sizes of trees that may need to be removed or trimmed substantially. c) Identify potentially protected trees that may be removed or substantially trimmed, such as but not limited to riparian trees, oaks trees, Joshua trees, or palm trees.		

d) Describe the types of equipment that would typically be used for tree removal.		
3.5.4.5: Work Area Stabilization. Describe the processes to stabilize temporary work areas and access roads including the materials that would be used (e.g., gravel).		
3.5.4.6: Grading a) Describe any earth moving or substantial grading activities (i.e., grading below a 6-inch depth) that would be required and identify locations where it would occur. b) Provide estimated volumes of grading (in cubic yards) including total cut, total fill, cut that would be reused, cut that would be hauled away, and clean fill that would be hauled to the site.		
3.5.5 Transmission Line Construction (Above Ground)		
3.5.5.1: Poles/Towers a) Describe the process and equipment for removing poles, towers, and associated foundations for the proposed project (where applicable). Describe how they would be disconnected, demolished, and removed from the site. Describe backfilling procedures and where the material would be obtained. b) Describe the process and equipment for installing or otherwise modifying poles and towers for the proposed project. Describe how they would be put into place and connected to the system. Identify any special construction methods (e.g., helicopter installation) at specific locations or specific types of poles/towers. c) Describe how foundations, if any, would be installed. Provide a description of the construction method(s), approximate average depth and diameter of excavation, approximate volume of soil to be excavated, approximate volume of concrete or other backfill required, etc. for foundations. Describe what would be done with soil removed from a hole/foundation site. d) Describe how the poles/towers and associated hardware would be delivered to the site and assembled. e) Describe any pole topping procedures that would occur, identify specific locations and reasons, and describe how each facility would be modified. Describe any special methods that would be required to top poles that may be difficult to access.		
3.5.5.2: Aboveground and Underground Conductor/Cable a) Provide a process-based description of how new conductor/cable would be installed and how old conductor/cable would be removed, if applicable. b) Identify where conductor/cable stringing/installation activities would occur. c) Provide a diagram of the general sequencing and equipment that would be used. d) Describe the conductor/cable splicing process.		

e) Provide the general or average distance between pull-and-tension sites. Describe the approximate dimensions and where pull-and-tension sites would generally be required (as indicated by the designated work areas), such as the approximate distance to pole/tower height ratio, at set distances, or at significant direction changes. Describe the equipment that would be required at these sites. f) For underground conductor/cable installations, describe all specialized construction methods that would be used for installing underground conductor or cable. If vaults are required, provide their dimensions and location/spacing along the alignment. Provide a detailed description for how the vaults would be delivered to the site and installed. g) Describe any safety precautions or areas where special methodology would be required (e.g., crossing roadways, stream crossing).		
3.5.5.3: Telecommunications. Identify the procedures for installation of proposed telecommunication cables and associated infrastructure.		
3.5.5.4: Guard Structures. Identify the types of guard structures that would be used at crossings of utility lines, roads, railroads, highways, etc. Describe the different types of guard structures or methods that may be used (i.e., buried poles and netting, poles secured to a weighted object, bucket trucks, etc.). Describe any pole installation and removal procedures associated with guard structures. Describe guard structure installation and removal process and duration that guard structures would remain in place.		
3.5.5.5: Blasting a) Describe any blasting that may be required to construct the project. b) If blasting may be required, provide a Blasting Plan that identifies the blasting locations; types and amounts of blasting agent to be used at each location; estimated impact radii; and, noise estimates. The Blasting Plan should be provided as an Appendix to the PEA. c) Provide a map identifying the locations where blasting may be required with estimated impact radii. Provide associated GIS data.		
3.5.6 Transmission Line Construction (Below Ground)		
3.5.6.1: Trenching a) Describe the approximate dimensions of the trench (e.g., depth, width). b) Provide the total approximate volume of material to be removed from the trench, the amount to be used as backfill, and any amount to subsequently be removed/disposed of offsite in cubic yards. c) Describe the methods used for making the trench (e.g., saw cutter to cut the pavement, backhoe to remove, etc.). d) Provide off-site disposal location, if known, or describe possible option(s). e) Describe if dewatering would be anticipated and if so, how the trench would be dewatered, the anticipated flows of the water,		

whether there would be treatment, and how the water would be disposed of. f) Describe the process for testing excavated soil or groundwater for the presence of pre-existing environmental contaminants that could be exposed from trenching operations. g) If a pre-existing hazardous waste were encountered, describe the process of removal and disposal. h) Describe the state of the ground surface after backfilling the trench. i) Describe standard Best Management Practices to be implemented.		
3.5.6.2: Trenchless Techniques (Microtunnel, Jack and Bore, Horizontal Directional Drilling) a) Identify any locations/features for which the Applicant expects to use a trenchless (i.e., microtunneling, jack and bore, horizontal directional drilling) crossing method and which method is planned for each crossing. b) Describe the methodology of the trenchless technique. c) Provide the approximate location and dimensions of the sending and receiving pits. d) Describe the methodology of excavating and shoring the pits. e) Provide the total volume of material to be removed from the pits, the amount to be used as backfill, and the amount subsequently to be removed/disposed of offsite in cubic yards. f) Describe process for safe handling of drilling mud and bore lubricants. g) Describe the process for detecting and avoiding "fracturing-out" during horizontal directional drilling operations. h) Describe the process for avoiding contact between drilling mud/lubricants and stream beds. i) If engineered fill would be used as backfill, indicate the type of engineered backfill and the amount that would be typically used (e.g., the top 2 feet would be filled with thermal-select backfill). j) Describe if dewatering is anticipated and, if so, how the pits would be dewatered, the anticipated flows of the water, whether there would there be treatment, and how the water would be disposed of. k) Describe the process for testing excavated soil or groundwater for the presence of pre-existing environmental contaminants. Describe the process of disposing of any pre-existing hazardous waste that is encountered during excavation. l) Describe any standard BMPs that would be implemented for trenchless construction.		
3.5.7 Substation, Switching Stations, Gas Compressor Stations		
3.5.7.1: Installation or Facility Modification. Describe the process and equipment for removing, installing, or modifying any substations, switching stations, or compressor stations including: a) Transformers/ electric components b) Gas components c) Control and operation buildings d) Driveways		

e) Fences f) Gates g) Communication systems (SCADA) h) Grounding systems		
3.5.7.2: Civil Works. Describe the process and equipment required to construct any slope stabilization, drainage, retention basins, and spill containment required for the facility.		
3.5.8 Gas Pipelines		
3.5.8.1: Gas Pipeline Construction. Describe the process for proposed pipeline construction including site development, trenching and trenchless techniques, pipe installation, and backfilling.		
3.5.8.2: Water Crossings. Describe water feature crossings that will occur during trenching, the method of trenching through stream crossings, and the process for avoiding impacts to the water features required for pipeline construction. Identify all locations where the pipeline will cross water features. Cite to any associated geotechnical or hydrological investigations completed and provide a full copy of each report as an Appendix to the PEA.[17]		
3.5.8.3: Gas Pipeline Other Requirements a) Describe hydrostatic testing process including pressures, timing, source of flushing water, discharge of water. b) Describe energy dissipation basin, and the size and length of segments to be tested. c) Describe pig launching locations and any inline inspection techniques used during or immediately post construction.		
3.5.9 Gas Storage Facilities		
3.5.9.1: Gas Storage Construction a) Describe the process for constructing the gas storage facility including constructing well pads and drilling wells. b) Describe the specific construction equipment that would be used, such as the type of drill rig (i.e., size, diesel, electric, etc.), depth of drilling, well-drilling schedule and equipment.		
3.5.9.2: Drilling Muds and Fluids. Describe the use of any drilling muds, fluids, and other drilling materials. Provided estimated types and quantities.		
3.5.10 Public Safety and Traffic Control (All Projects)		
3.5.10.1: Public Safety a) Describe specific public safety considerations during construction and best management practices to appropriately manage public safety. Clearly state when and where they each safety measure would be applied.		

[17] If a geotechnical study is not available at the time of PEA filing, provide the best information available.

b) Identify procedures for managing work sites in urban areas, covering open excavations securely, installing barriers, installing guard structures, etc. c) Identify specific project areas where public access may be restricted for safety purposes and provide the approximate durations and timing of restricted access at each location.		
3.5.10.2: Traffic Control a) Describe traffic control procedures that would be implemented during construction. b) Identify the locations, process, and timing for closing any sidewalks, lanes, roads, trails, paths, or driveways to manage public access. c) Identify temporary detour routes and locations. d) Provide a preliminary Traffic Control Plan(s) for the project.		
3.5.10.3: Security. Describe any security measures, such as fencing, lighting, alarms, etc. that may be required. State if security personnel will be stationed at project areas and anticipated duration of security.		
3.5.10.4: Livestock. Describe any livestock fencing or guards that may be necessary to prevent livestock from entering project areas. State if the fencing would be electrified and if so, how it would be powered.		
3.5.11 Dust, Erosion, and Runoff Controls (All Projects)		
3.5.11.1: Dust. Describe specific best management practices that would be implemented to manage fugitive dust.		
3.5.11.2: Erosion. Describe specific best management practices that would be implemented to manage erosion.		
3.5.11.3: Runoff. Describe specific best management practices that would be implemented to manage stormwater runoff and sediment.		
3.5.12 Water Use and Dewatering (All Projects)		
3.5.12.1: Water Use. Describe the estimated volumes of water that would be used by construction activity (e.g., dust control, compaction, etc.). State if recycled or reclaimed water would be used and provide estimated volumes. Identify the anticipated sources where the water would be acquired or purchased. Identify if the source of water is groundwater and the quantity of groundwater that could be used.		
3.5.12.2: Dewatering a) Describe dewatering procedures during construction, including pumping, storing, testing, permitted discharging, and disposal requirements that would be followed. b) Describe the types of equipment and workspace considerations to be used to dewater, store, transport, or discharge extracted water.		
3.5.13 Hazardous Materials and Management (All Projects)		
3.5.13.1: Hazardous Materials a) Describe the types, uses, and volumes of all hazardous materials that would be used during construction. b) State if herbicides or pesticides may be used during construction.		

c) If a pre-existing hazardous waste were encountered, describe the process of removal and disposal.		
3.5.13.2: Hazardous Materials Management a) Identify specific best management practices that would be followed for transporting, storing, and handling hazardous materials. b) Identify specific best management practices that would be followed in the event of an incidental leak or spill of hazardous materials. c) Provide a Hazardous Substance Control and Emergency Response Plan / Hazardous Waste and Spill Prevention Plan as an Appendix to the PEA, if appropriate.		
3.5.14 Waste Generation and Management (All Projects)		
3.5.14.1: Solid Waste a) Describe solid waste streams from existing and proposed facilities during construction. b) Identify procedures to be implemented to manage solid waste, including collection, containment, storage, treatment, and disposal. c) Provide estimated total volumes of solid waste by construction activity or project component. d) Describe the recycling potential of solid waste materials and provide estimated volumes of recyclable materials by construction activity or project component. e) Identify the locations of appropriate disposal and recycling facilities where solid wastes would be transported.		
3.5.14.2: Liquid Waste a) Describe liquid waste streams during construction (i.e., sanitary waste, drilling fluids, contaminated water, etc.) b) Describe procedures to be implemented to manage liquid waste, including collection, containment, storage, treatment, and disposal. c) Provide estimated volumes of liquid waste generated by construction activity or project component. d) Identify the locations of appropriate disposal facilities where liquid wastes would be transported.		
3.5.14.3: Hazardous Waste a) Describe potentially hazardous waste streams during construction and procedures to be implemented to manage hazardous wastes, including collection, containment, storage, treatment, and disposal. b) If large volumes of hazardous waste are anticipated, such as from a pre-existing contaminant in the soil that must be collected and disposed of, provide estimated volumes of hazardous waste that would be generated by construction activity or project component. c) Identify the locations of appropriate disposal facilities where hazardous wastes would be transported.		
3.5.15 Fire Prevention and Response (All Projects)		
3.5.15.1: Fire Prevention and Response Procedures. Describe fire prevention and response procedures that would be implemented during		

construction. Provide a Construction Fire Prevention Plan or specific procedures as an Appendix to the PEA.		
3.5.15.2: Fire Breaks. Identify any fire breaks (i.e., vegetation clearance) requirements around specific project activities (i.e., hot work). Ensure that such clearance buffers are included in the limits of the defined work areas, and the vegetation removal in that area is attributed to Fire Prevention and Response (refer to 3.5.4.3: Vegetation Clearing).		

3.6 Construction Workforce, Equipment, Traffic, and Schedule

This section will include, but is not limited to, the following:	**PEA Section and Page Number**	**Applicant Notes, Comments**
3.6.1: Construction Workforce a) Provide the estimated number of construction crew members. In the absence of project-specific data, provide estimates based on past projects of a similar size and type. b) Describe the crew deployment. Would crews work concurrently (i.e., multiple crews at different sites); would they be phased? How many crews could be working at the same time and where? c) Describe the different types of activities to be undertaken during construction, the number of crew members for each activity (i.e. trenching, grading, etc.), and number and types of equipment expected to be used for the activity. Include a written description of the activity. See example in Table 5.		
3.6.2: Construction Equipment. Provide a tabular list of the types of equipment expected to be used during construction of the proposed project including the horsepower. Define the equipment that would be used by each phase as shown in the example table below (Table 5).		

Table 5. Construction Equipment and Workforce

Work Activity				Activity Production				
Equipment Description	Estimated Horse-power	Probable Fuel Type	Equipment Quantity	Estimated Workforce	Estimated Start Date	Estimated End Date	Duration of Use (Hrs./Day)	Estimated Production
Survey				**4**	**January 2020**	**December 2020**		**358 Miles**
1-Ton Truck, 4x4	300	Diesel	2		January 2020	December 2020	10	1 Mile/Day
Staging Yards				**5**	**DOP**			
1-Ton Truck, 4x4	300	Diesel	1		Duration of Project		4	
R/T Forklift	350	Diesel	1				5	
Boom/Crane Truck	350	Diesel	1				5	
Water Truck	300	Diesel	2				10	
Jet A Fuel Truck	300	Diesel	1				4	
Truck, Semi-Tractor	500	Diesel	1				6	
Road Work				**6**	**January 2020**	**March 2020**		**426 Miles**
1-Ton Truck, 4x4	300	Diesel	2		January 2020	March 2020	5	
Backhoe/Front Loader	350	Diesel	1		January 2020	March 2020	7	
Track Type Dozer	350	Diesel	1		January 2020	March 2020	7	
Motor Grader	350	Diesel	1		January 2020	March 2020	5	
Water Truck	300	Diesel	2		January 2020	March 2020	10	
Drum Type Compactor	250	Diesel	1		January 2020	March 2020	5	
Excavator	300	Diesel	1		January 2020	February 2020	7	
Lowboy Truck/Trailer	500	Diesel	1		January 2020	February 2020	4	

3.6.3: Construction Traffic a) Describe how the construction crews and their equipment would be transported to and from the proposed project site. b) Provide vehicle type, number of vehicles, and estimated hours of operation per day, week, and month for each construction activity and phase. c) Provide estimated vehicle trips and vehicles miles traveled (VMT) for each construction activity and phase. Provide separate values for construction crews commuting, haul trips, and other types of construction traffic.		
3.6.4: Construction Schedule a) Provide the proposed construction schedule (e.g., month and year) for each segment or project component, and for each construction activity and phase. b) Provide and explain the sequencing of construction activities, and if they would or would not occur concurrently. c) Provide the total duration of each construction activity and phase in days or weeks. d) Identify seasonal considerations that may affect the construction schedule, such as weather or anticipated wildlife restrictions, etc. The proposed construction should account for such factors.		
3.6.5: Work Schedule a) Describe the anticipated work schedule, including the days of the week and hours of the day when work would occur. Clearly state if work would occur at night or on weekends and identify when and where this could occur. b) Provide the estimated number of days or weeks that construction activities would occur at each type of work area. For example, construction at a stationary facility or staging area may occur for the entire duration of construction, but construction at individual work areas along a linear project would be limited to a few hours, days or weeks, and only a fraction of the total construction period.		

3.7 Post-Construction

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
3.7.1: Configuring and Testing. Describe the process and duration for post-construction configuring and testing of facilities. Describe the number of personnel and types of equipment that would be involved.		
3.7.2: Landscaping. Describe any landscaping that would be installed. Provide a conceptual landscape plan that identifies the locations and types of plantings that will be used. Identify whether plantings will include container plants or seeds. Include any water required for landscaping in the description of water use above.		

3.7.3 Demobilization and Site Restoration		
3.7.3.1: Demobilization. Describe the process for demobilization after construction activities, but prior to leaving the work site. For example, describe final processes for removing stationary equipment and materials, etc.		
3.7.3.2: Site Restoration. Describe how cleanup and post-construction restoration would be performed (i.e., personnel, equipment, and methods) on all project ROWs, sites, and extra work areas. Things to consider include, but are not limited to, restoration of the following: a) Restoring natural drainage patterns b) Recontouring disturbed soil c) Removing construction debris d) Vegetation e) Permanent and semi-permanent erosion control measures f) Restoration of all disturbed areas and access roads, including restoration of any public trails that are used as access, as well as any damaged sidewalks, agricultural infrastructure, or landscaping, etc. g) Road repaving and striping, including proposed timing of road restoration for underground construction within public roadways		

3.8 Operation and Maintenance

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
3.8.1: Regulations and Standards a) Identify and describe all regulations and standards applicable to operation and maintenance of project facilities. b) Provide a copy of any applicable Wildfire Management Plan and describe any special procedures for wildfire management.		
3.8.2: System Controls and Operation Staff a) Describe the systems and methods that the Applicant would use for monitoring and control of project facilities (e.g., on-site control rooms, remote facilities, standard monitoring and protection equipment, pressure sensors, automatic shut-off valves, and site and equipment specific for monitoring and control such as at natural gas well pads). b) If new full-time staff would be required for operation and/or maintenance, provide the number of positions and purpose.		
3.8.3: Inspection Programs a) Describe the existing and proposed inspection programs for each project component, including the type, frequency, and timing of scheduled inspections (i.e., aerial inspection, ground inspection, pipeline inline inspections). b) Describe any enhanced inspections, such as within any High Fire Threat Districts consistent with applicable Wildfire Management Plan requirements.		

c) Describe the inspection processes, such as the methods, number of crew members, and how access would occur (i.e., walk, vehicle, all-terrain vehicle, helicopter, drone, etc.). If new access would be required, describe any restoration that would be provided for the access roads.		
3.8.4: Maintenance Programs a) Describe the existing and proposed maintenance programs for each project component. b) Describe scheduled maintenance or facility replacement after the designated lifespan of the equipment. c) Identify typical parts and materials that require regular maintenance and describe the repair procedures. d) Describe any access road maintenance that would occur. e) Describe maintenance for surface or color treatment. f) Describe cathodic protection maintenance that would occur. g) Describe ongoing landscaping maintenance that would occur.		
3.8.5: Vegetation Management Programs a) Describe vegetation management programs within and surrounding project facilities. Distinguish between any different types of vegetation management. b) Describe any enhanced vegetation management, such as within any High Fire Threat Districts consistent with any applicable Wildfire Management Plan requirements. Identify the areas where enhanced vegetation management would be conducted.		

3.9 Decommissioning

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
3.9.1: Decommissioning. Provide detailed information about the current and reasonably foreseeable plans for the disposal, recycling, or future abandonment of all project facilities.		

3.10 Anticipated Permits and Approvals

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
3.10.1: Anticipated Permits and Approvals. Identify all necessary federal, state, regional, and local permits that may be required for the project. For each permit, list the responsible agency and district/office representative with contact information, type of permit or approval, and status of each permit with date filed or planned to file. For example: a) Federal Permits and Approvals i. U.S. Fish and Wildlife Service ii. U.S. Army Corps of Engineers iii. Federal Aviation Administration iv. U.S. Forest Service		

v. U.S. Department of Transportation – Office of Pipeline Safety vi. U.S. Environmental Protection Agency (Resource Conservation and Recovery Act; Comprehensive Environmental Response, Compensation, and Liability Act) b) State and Regional Permits i. California Department of Fish and Wildlife ii. California Department of Transportation iii. California State Lands Commission iv. California Coastal Commission v. State Historic Preservation Office, Native American Heritage Commission vi. State Water Resources Control Board vii. California Division of Oil, Gas and Geothermal Resources viii. Regional Air Quality Management District ix. Regional Water Quality Control Board (National Pollutant Discharge Elimination System General Industrial Storm Water Discharge Permit) x. Habitat Conservation Plan Authority (if applicable) See also Table 6 of example permitting requirements and processes.		
3.10.2: Rights-of-Way or Easement Applications. Demonstrate that applications for ROWs or other proposed land use have been or soon will be filed with federal, state, or other land-managing agencies that have jurisdiction over land that would be affected by the project (if any). Discuss permitting plans and timeframes and provide the contact information at the federal agency(ies) approached.		

3.11 Applicant Proposed Measures

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
3.11 Applicant Proposed Measures a) Provide a table with the full text of any Applicant Proposed Measure. Where applicable, provide a copy of Applicant procedures, plans, and standards referenced in the Applicant Proposed Measures. b) Within Chapter 5, describe the basis for selecting a particular Applicant Proposed Measure and how the Applicant Proposed Measure would reduce the impacts of the project.[18] c) Carefully consider each CPUC Draft Environmental Measure identified in Chapter 5 of this PEA Checklist. The CPUC Draft Environmental Measures will be applied to the proposed project where applicable.		

[18] Applicant Proposed Measures that use phrases, such as, "as practicable" or other conditional language are not acceptable and will be superseded by Mitigation Measures if required to avoid or reduce a potentially significant impact.

Table 6. Example Permitting Requirements and Processes

Note: In addition to the CPCN or PTC, the applicant may also be required to secure resource agency permits for the project.

Disclaimer: Below is a general list of permits required for transmission projects. Permit requirements for individual projects may vary slightly depending on project conditions.

Agency	Permit	Regulation	Protected Resource	Trigger	Application Process	Timing
				Federal		
Army Corps of Engineers	404 Permit	Clean Water Act	Waters of the United States (including wetlands)	Placement of dredge or fill material into waters of the U.S., including wetlands. If project impacts less than 0.5 acres a **nationwide permit (NWP)** is typically issued	**NWP:** prepare a preconstruction notification (PCN) along with the draft Corps's application (Engineer Form 4345). Information in the PCN includes, but is not limited to: results of wetland delineation including areas of waters of the U.S.; temporary and permanent impacts to waters of the U.S. and discussion of avoidance; construction techniques, timeline, and equipment that would be used; special status species that potentially occur in the project area, and discussion of mitigation (if applicable) to replace wetlands	**NWP:** takes approximately nine months from the date of application submittal (depending on level of impacts and level of consultation required by other agencies). Initial review is 30 days after which application is deemed complete or additional information is requested.
				If project would impact more than 0.5 acres a **regional or individual permit** may be required.	**Regional or Individual Permit:** Same requirements as NWP as well as preparation and submittal of 404(b)(1) Alternatives analysis which identifies the Least Environmentally Damaging Practicable Alternative (LEDPA). Public notice also required	**Regional or Individual Permit:** An additional three to six months may be required on top of the nine months expected for an NWP. A 30 day public notice is also required to inform the public about the project before the Corps issues the permit.
USFWS	Section 7 Consultation	Federal Endangered Species Act	Federally Listed Species	Potential impact to a federally listed threatened or endangered species	Biological Assessment (BA) prepared and submitted to Corps. BA contains information on each species and describes potential for "take" of species and/or habitat.	The timeline for processing and receiving a formal **Biological Opinion (BO)** from USFWS can be six months to a year from when the Corps has initiated consultation and depending on the level of impact to listed species. The typical timeline for issuance of a BO is no less than 135 days after acceptance of the BA as complete.
US Department of Agriculture, Forest Service	Special Use Authorization	National Forest Management Act/NEPA	National Forest lands	Use of federal lands managed by the USDA Forest Service for a transmission line. Typically constitutes a Major Federal Action which in turn triggers NEPA analysis.	**Special Use Authorization Application:** prepare a special use application for consideration by the Forest Service. Prior to submitting a proposal, applicant is required to arrange a preapplicaiton meeting at the local Forest Service office. Application typically includes project plan, operating plans, liability insurance, licenses/registrations and other documents. If it is determined that NEPA is required either an EA or EIS would be prepared. The NEPA document may be prepared jointly with the CEQA document.	Revies of Special Use Authorization applications is often dependent upon what level of NEPA analysis is required. An EA is typically 9-12 months, and EIS is generally 18 months. NEPA process may occur concurrently with CEQA process.
US Department of the Interior, Bureau of Land Management	Right-of-Way Grant	Federal Land Policy and Management Act/NEPA	Federal Lands	Use of federal lands managed by the BLM for a transmission line. Typically constitutes a Major Federal Action which in turn triggers NEPA analysis.	**Right-of-Way Application**: Contact the BLM office with management responsibility. Obtain an application form "Application for Transportation and Utility Systems and Facilities on Federal Lands". Arrange a pre-application meeting with a BLM Realty Specialist or appropriate staff member. Submit completed application to the appropriate BLM office. If it is determined that NEPA is required either an EA or EIS would be prepared. The NEPA document may be prepared jointly with the CEQA document.	BLM attempts to review completed applications within 60 days of submittal. Full timing is often dependent upon what level of NEPA analysis is required. An EA is typically 9-12 months, and EIS is generally 18 months. NEPA process may occur concurrently with CEQA process.

Agency	Permit	Regulation	Protected Resource	Trigger	Application Process	Timing
			State (continued)			
State Historic Preservation Officer (SHPO)	Section 106 National Historic Preservation Act (NHPA)	National Historic Preservation Act	Cultural and/or historical resources	Required if there are potential impacts to cultural and/or historical resources that are listed or eligible for listing on the National Register of Historic Places.	Information on cultural and historical resources gathered during the draft CEQA document preparation is included in a 106 Technical Report and submitted to the Corps along with the Area of Potential Effect (APE) map. The information is then evaluated by the Corps' cultural resources evaluator for potential adverse effects within the APE. Depending upon the level of potential adverse effect, the Corps then forwards its finding to SHPO for concurrence or begins the process for a Memorandum of Agreement (MOA). Native American consultation is also mandatory for the 106 process but can begin during preparation of the environmental document. All letters and correspondence for the Native American consultation must be provided to the Corps.Consultation with federally-recongized tribes may require a more extensive consultation.	Once SHPO has received the Corps' determination, it has approximately 60 days to agree or request additional information. However, SHPO has recently become more involved in projects and this timeframe is only an estimate and if a potential adverse effect to cultural or historical resources could occur, the SHPO process can take up to a year or more. Depending on the level of impacts to cultural resources, the Corps may determine no effect and issue the permit before receiving concurrence from SHPO.
California State Lands Commission (CSLC)	Right of Way Lease Agreement	Division 6 of the California Public Resources Code	California Sovereign Lands	May be triggered if the transmission line crosses state lands under the jurisdiction of the CSLC, which includes the beds of 1) more than 120 rivers, streams and sloughs; 2) nearly 40 non-tidal navigable lakes, such as Lake Tahoe and Clear Lake; 3) the tidal navigable bays and lagoons; and 4) the tide and submerged lands adjacent to the entire coast and offshore islands of the State from the mean high tide line to three nautical miles offshore.	Leases or permits may be issued to qualified applicants and the Commission shall have broad discretion in all aspects of leasing including category of lease or permit and which use, method or amount of rental is most appropriate, whether competitive bidding should be used in awarding a lease, what term should apply, how rental should be adjusted during the term, whether bonding and insurance should be required and in what amounts, whether an applicant is qualified based on what it deems to be in the best interest of the State.	Most coordination should be done concurrently with the CEQA process to ensure that any CSLC-required issues are addressed under CEQA. Once a final route/alternative is selected, the lease process may take two to three months for final Commission approval.
			Local / Other			
Air Quality Management District or Air Pollution Control District	Permit to Construct	Federal Clean Air Act	Air Quality	Depends on the air disctrict involved; may not be required for most transmission projects. Some air districts have a trigger level based on disturbed acreage.	Application forms need to be prepared and submiited to the local AQMD or APCD	Typically 30 to 90 days after submittal of a complete application.

19

[19] Permitting is project specific. This table is provided for discussion purposes.

3.12 Project Description Graphics, Mapbook, and GIS Requirements

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
3.12.1: Graphics. Provide diagrams of the following as applicable: a) All pole, tower, pipe, vault, conduit, and retaining wall types b) For poles, provide typical drawings with approximate diameter at the base and tip; for towers, estimate the width at base and top. c) A typical detail for any proposed underground duct banks and vaults d) All substation, switchyard, building, and facility layouts e) Trenching, drilling, pole installation, pipe installation, vault installation, roadway construction, facility removal, helicopter uses, conductor installation, traffic control, and other construction activities where a diagram would assist the reader in visualizing the work area and construction approach f) Typical profile views of proposed aboveground facilities and existing facilities to be modified within the existing and proposed ROW (e.g., typical cross-section of existing and proposed facilities by project segment). g) Photos of representative existing and proposed structures		
3.12.2: Mapbook. Provide a detailed mapbook on an aerial imagery basemap at a scale between 1:3000 and 1:6000 (or as appropriate and legible) that show mileposts, roadways, and all project components and work areas including: a) All proposed above-ground and underground structure/facility locations (e.g., poles, conductor, substations, compressor stations, telecommunication lines, vaults, duct bank, lighting, markers, etc.) b) All existing structures/facilities that would be modified or removed c) Identify by milepost where existing ROW will be used and where new ROW or land acquisition will be required. d) All permanent work areas including permanent facility access e) All access roads including, existing, temporary, and new permanent access f) All temporary work areas including staging, material storage, field offices, material laydown, temporary work areas for above ground (e.g., pole installation) and underground facility construction (e.g., trenching and duct banks), helicopter landing zones, pull and tension sites, guard structures, shoo flys etc. g) Areas where special construction methods (e.g., jack and bore, HDD, blasting, retaining walls etc.) may need to be employed		

h) Areas where vegetation removal may occur i) Areas to be heavily graded and where slope stabilization measures would be employed including any retaining walls		
3.12.3: GIS Data. Provide GIS data for all features and ROW shown on the detailed mapbook.		
3.12.4: GIS Requirements. Provide the following information for each pole/tower that would be installed and for each pole/tower that would be removed: a) Unique ID number and type of pole (e.g., wood, steel, etc.) or tower (e.g., self-supporting lattice) both in a table and in the attributes of the GIS data provided b) Identify pole/tower heights and conductor sizes in the attributes of the GIS data provided.		
3.12.5: Natural Gas Facilities GIS Data. For natural gas facilities, provide GIS data for system cross ties and all laterals/taps, valve stations, and new and existing inspection facilities (e.g., pig launcher sites).		

4 Description of Alternatives

All Applicants will assume that alternatives will be required for the environmental analysis and that an EIR will be prepared unless otherwise instructed by CPUC CEQA Unit Staff in writing prior to application filing. See PEA Requirements at the beginning of this checklist document. The consideration and discussion of alternatives will adhere to CEQA Guidelines Section 15126.6. The description of alternatives will be provided in this chapter of the PEA, and the comparison of each alternative to the proposed project is provided in PEA Chapter 6. The amount of detail required for the description of various alternatives to the proposed project and what may be considered a reasonable range of alternatives will be discussed with CPUC during Pre-filing.

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
4.1 Alternatives Considered. Identify alternatives to the proposed project.[20] Include the following: a) All alternatives to the proposed project that were suggested, considered, or studied by the CAISO or by CAISO stakeholders b) Alternatives suggested by the public or agencies during public outreach efforts conducted by the Applicant c) Reduced footprint alternatives, including, e.g., smaller diameter pipelines and space for fewer electric transformers d) Project phasing options (e.g., evaluate the full build out for environmental clearance but consider an initial, smaller buildout that would only be expanded [in phases] if needed) e) Alternative facility and construction activity sites (e.g., substation, compressor station, drilling sites, well-head sites, staging areas) f) Renewable, energy conservation, energy efficiency, demand response, distributed energy resources, and energy storage alternatives g) Alternatives that would avoid or limit the construction of new transmission-voltage facilities or new gas transmission pipelines h) Other technological alternatives (e.g., conductor type) i) Route alternatives and route variations j) Alternative engineering or technological approaches (e.g., alternative types of facilities, or materials, or configurations) k) Assign an identification label and brief, descriptive title to each alternative described in this PEA chapter (e.g., Alternative A: No Project; Alterative B: Reduced Footprint 500/115-kV Substation; Alternative C: Ringo Hills 16-inch Pipeline Alignment; Alternative D1: Lincoln Street Route Variation; etc.). Each alternative will be easily identifiable by reading the brief title. Provide a description of each alternative. The description of each alternative will discuss to what extent it would be potentially feasible,		

[20] Reduced footprint alternatives; siting alternatives; renewable, energy conservation, energy efficiency, demand response, distributed energy resources, and energy storage alternatives; and non-wires alternatives (electric projects only) are typically required. For linear projects, route alternatives and route variations are typically required as well.

meet the project's underlying purpose, meet most of the basic project objectives, and avoid or reduce one or more potentially significant impacts. If the Applicant believes that an alternative is infeasible or the implementation is remote and speculative (CEQA Guidelines Section 15126.6(f)(3), clearly explain why. If significant environmental effects are possible without mitigation, alternatives will be provided in the PEA that are capable of avoiding or reducing any potentially significant environmental effects, even if the alternative(s) substantially impede the attainment of some project objectives or are costlier.[21]		
4.2 No Project Alternative. Include a thorough description of the No Project Alternative. The No Project Alternative needs to describe the range of actions that are reasonably foreseeable if the proposed project is not approved. The No Project Alternative will be described to meet the requirements of CEQA Guidelines Section15126.6(e).		
4.3 Rejected Alternatives. Provide a detailed discussion of all alternatives considered by the Applicant that were not selected by the Applicant for a full description in the PEA and analysis in PEA Chapter 5. The detailed discussion will include the following: a) Description of the alternative and its components b) Map of any alternative sites or routes c) Discussion about the extent to which the alternative would meet the underlying purpose of the project and its basic objectives d) Discussion about the feasibility of implementing the alternative e) Discussion of whether the alternative would reduce or avoid any significant environmental impacts of the proposed project f) Discussion of any new significant impacts that could occur from implementation of the alternative g) Description of why the alternative was rejected h) Any comments from the public or agencies about the alternative during PEA preparation		
For Natural Gas Storage Projects:		
4.4 Natural Gas Storage Alternatives. In addition to the requirements included above, alternatives to be considered for proposed natural gas storage projects include the following, where applicable: a) Alternative reservoir locations considered for gas storage including other field locations and other potential storage areas b) Alternative pipelines, road, and utility siting c) Alternative suction gas requirements, and injection/withdrawal options		

[21] CPUC CEQA Unit Staff will determine whether an alternative could *substantially* reduce one or more potentially significant impacts of the proposed project (CEQA Guidelines Section 15125.5). Applicants are strongly advised to provide more rather than less alternatives for CPUC's consideration or as determined during Pre-filing.

5 Environmental Analysis

Include a description of the environmental setting, regulatory setting, and impact analysis for each resource area. The resource areas addressed will include each environmental factor (resource area) identified in the most recent adopted version of the CEQA Guidelines Appendix G checklist and any additional relevant resource areas and impact questions that are defined in this PEA checklist.

1. Environmental Setting
    a. For each resource area, the PEA will include a detailed description of the natural and built environment in the vicinity of the proposed project area (e.g., topography, land use patterns, biological environment, etc.) as applicable to the resource area. Both regional and local environmental setting information will be provided.
    b. All setting information provided will relate in some way to the impacts of the proposed project discussed in the PEA's impacts analysis, however CPUC's impacts analysis may be more thorough, which may necessitate additional setting information than the Applicant might otherwise provide.
2. Regulatory Setting
    a. Organized by federal, State, regional, and local sections
    b. Describe the policy or regulation and briefly explain why it is applicable to the proposed project.
        i. Identify in the setting all laws, regulations, and policies that would be applicable for CPUC's exclusive jurisdiction over the siting and design of electric and gas facilities. Public utilities under CPUC's jurisdiction are expected to consult with local agencies regarding land use matters. Local laws, regulations, and policies will be considered for the consideration of potential impacts during CPUC's CEQA review (e.g., encroachment, grading, erosion control, scenic corridors, overhead line undergrounding, tree removal, fire protection, permanent and temporary noise limits, zoning requirements, general plan polices, and all local and regional laws, regulations, and policies).
3. Impact Questions
    a. Includes all impact questions in the current version of CEQA Guidelines, Appendix G.
    b. Additional impact questions that are frequently relevant to utility projects are provided in Attachment 4, CPUC Draft Environmental Measures.
4. Impact Analyses
    a. Discussion organized by CEQA Guidelines, Appendix G impact items and any Additional CEQA Impact Questions in the PEA Checklist. Assess all potential environmental impacts and make determinations, such as, No Impact, Less than Significant, Less than Significant with Mitigation, Significant and Unavoidable, or Beneficial Impact with respect to construction, operations, and maintenance activities.
    b. The impact analyses provided in PEA Chapter 5, Environmental Analysis, need not be as thorough as those to be prepared by CPUC for the CEQA environmental document. A preliminary determination will be provided but with only brief justification unless otherwise directed by CPUC Staff in writing during Pre-filing.
5. CPUC Draft Environmental Measures
    a. CPUC Draft Environmental Measures are provided for some of the resource areas in Attachment 4, CPUC Draft Environmental Measures. The measures may be applied to the proposed project as written or modified by the CPUC during its environmental review if the measure would avoid or reduce a potentially significant impact.

b. The CPUC Draft Environmental Measures should be discussed with the CPUC's CEQA Unit Staff during Pre-filing, especially with respect to the development of Applicant Proposed Measures.
c. In general, impact avoidance is preferred to the reduction of potentially significant impacts.

Additional requirements specific to each resource area are identified in the following sections.

5.1 Aesthetics

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
5.1.1 Environmental Setting		
5.1.1.1: Landscape Setting. Briefly described the regional and local landscape setting.		
5.1.1.2: Scenic Resources. Identify and describe any vistas, scenic highways, national scenic areas, or other scenic resources within and surrounding the project area (approximately 5-mile buffer but may be greater if necessary). Scenic resources may also include but are not limited to historic structures, trees, or other resources that contribute to the scenic values where the project would be located.		
5.1.1.3: Viewshed Analysis a) Conduct a viewshed analysis for the project area (approximately 5-mile buffer but may be greater if necessary). b) Describe the project viewshed, including important visibility characteristics for the project site, such as viewing distance, viewing angle, and intervening topography, vegetation, or structures. c) Provide a supporting map (or maps) showing project area, landscape units, topography (i.e., hillshade), and the results of the viewshed analysis. Provide associated GIS data.		
5.1.1.4: Landscape Units. Identify and describe landscape units (geographic zones) within and surrounding the project area (approximately 5-mile buffer but may be greater if necessary) that categorizes different landscape types and visual characteristics, with consideration to topography, vegetation, and existing land uses. Landscape units should be developed based on the existing landscape characteristics rather than the project's features or segments.		
5.1.1.5: Viewers and Viewer Sensitivity. Identify and described the types of viewers expected within the viewshed and landscape units. Describe visual sensitivity to general visual change based on viewing conditions, use of the area, feedback from the public about the project, and landscape characteristics.		

5.1.1.6: Representative Viewpoints a) Identify representative viewpoints from publicly accessible locations (up to approximately 5-mile buffer but may be greater if appropriate). The number and location of the viewpoints must represent a range of views of the project site from major roads, highways, trails, parks, vistas, landmarks, and other scenic resources near the project site. Multiple viewpoints should be included where the project site would be visible from sensitive scenic resources to provide context on different viewing distances, perspectives, and directions. b) Provide the following information for each viewpoint: i. Number, title, and brief description of the location ii. Types of viewers iii. Viewing direction(s) and distance(s) to the nearest proposed project features iv. Description of the existing visual conditions and visibility of the project site as seen from the viewpoint and shown in the representative photographs c) Provide a supporting map (or maps) showing project features and representative viewpoints with arrows indicating the viewing direction(s). Provide associated GIS data (may be combined with GIS data request below for representative photographs).		
5.1.1.7: Representative Photographs a) Provide high resolution photographs taken from the representative viewpoints in the directions of all proposed project features.[22] Multiple photographs should be provided where project features may be visible in different viewing directions from the same location. b) Provide the following information for each photograph: i. Capture time and date ii. Camera body and lens model iii. Lens focal length and camera height when taken c) Provide GIS data associated with each photograph location that includes coordinates (<1 meter resolution), elevations, and viewing directions, as well as the associated viewpoint.		
5.1.1.8: Visual Resource Management Areas a) Identify any visual resource management areas within and surrounding the project area (approximately 5-mile buffer). b) Describe any project areas within visual resource management areas.		

[22] All representative photographs should be taken using a digital single-lens reflex camera with standard 50-millimeter lens equivalent, which represents an approximately 40-degree horizontal view angle. The precise photograph coordinates and elevations should be collected using a high accuracy GPS unit.

c) Provide a supporting map (or maps) showing project features and visual resource management areas. Provide associated GIS data.		
5.1.2 Regulatory Setting		
5.1.2.1: Regulatory Setting. Identify applicable federal, state, and local laws, policies, and standards regarding aesthetics and visual resource management.		
5.1.3 Impact Questions		
5.1.3.1: Impact Questions. The impact questions include all aesthetic impact questions in the current version of CEQA Guidelines, Appendix G. **5.1.3.2:** Additional CEQA Impact Questions: None.		
5.1.4 Impact Analysis		
5.1.4.1: Visual Impact Analysis. Provide an impact analysis for each checklist item identified in CEQA Guidelines Appendix G for this resource area and any additional impact questions listed above.		
The following information will be included in the PEA or a technical Appendix to support the aesthetic impact analysis:		
5.1.4.2: Analysis of Selected Viewpoints. Identify the methodology and assumptions that were applied in selecting key observation points for visual simulation. It is recommended that viewpoints are selected where viewers may be sensitive to visual change (public views) and in areas that are visually sensitive, or heavily trafficked or visited.[23]		
5.1.4.3: Visual Simulation a) Identify methodology and assumptions for completing the visual simulations. The simulations should include photorealistic 3-D models of project features and any land changes within the KOP view. The visual simulations should depict conditions: i. Immediately following construction, and ii. After vegetation establishment in all areas of temporary impact to illustrate the visual impact from vegetation removal. b) Provide high resolution images for the visual simulations.		
5.1.4.4: Analysis of Visual Change a) Identify the methodology and assumptions for completing the visual change analysis.[24] The methodology should be consistent with applicable visual resource management criteria. b) Provide a description of the visual change for each selected viewpoint. Describe any conditions that would change over time, such as vegetation growth.		

[23] The KOP selection process should be discussed with CPUC during Pre-filing
[24] The visual impact assessment methodology should be discussed with CPUC during Pre-filing

c) Describe the effects of visual change that would result in the entire project area, as indicated by the selected viewpoints that were simulated and analyzed.		
5.1.4.5: Lighting and Marking. Identify all new sources of permanent lighting. Identify any proposed structures or lines that could require FAA notification. Identify any structures or line segments that could require lighting and marking based on flight patterns and FAA or military requirements. Provide supporting documentation in an Appendix (e.g., FAA notice and criteria tool results).		
5.1.5 CPUC Draft Environmental Measures		
Refer to Attachment 4, CPUC Draft Environmental Measures.		

5.2 Agriculture and Forestry Resources

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
5.2.1 Environmental Setting		
5.2.1.1: Agricultural Resources and GIS a) Identify all agricultural resources that occur within the project area including: i. Areas designated as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance ii. Areas under Williamson Act contracts and provide information on the status of the Williamson Act contract iii. Any areas zoned for agricultural use in local plans iv. Areas subject to active agricultural use b) Provide GIS data for agricultural resources within the proposed project area.		
5.2.1.2: Forestry Resources and GIS a) Identify all forestry resources within the project area including: i. Forest land as defined in Public Resources Code 12220(g)25 ii. Timberland as defined in Public Resource Code section 4526 iii. Timberland zoned Timberland Production as defined in Government Code section 51104(g) b) Provide GIS data for all forestry resources within the proposed project area.		
5.2.2 Regulatory Setting		
5.2.2: Agriculture and Forestry Regulations. Identify all federal, state, and local policies for protection of agricultural and forestry resources that apply to the proposed project.		

[25] Forest land is defined in Public Resources Code as, "land that can support 10 percent native tree cover of any species, including hardwoods, under natural conditions, and that allows for management of one or more forest resources, including timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation, and other public benefits."

5.2.3 Impact Questions		
5.2.3.1: Agriculture and Forestry Impact Questions. The impact questions include all agriculture and forestry impact questions in the current version of CEQA Guidelines, Appendix G. **5.2.3.2:** Additional CEQA Impact Questions: None.		
5.2.4 Impact Analyses		
5.2.4.1: Agriculture and Forestry Impacts. Provide an impact analysis for each checklist item identified in CEQA Guidelines Appendix G for this resource area and any additional impact questions listed above.		
Incorporate the following discussions into the analysis of impacts:		
5.2.4.2: Prime Farmland Soil Impacts. Calculate the acreage of Prime Farmland soils that would be affected by construction and operation and maintenance.		
5.2.4.3. Williamson Act Impacts. Describe the approach to resolve potential conflicts with Williamson Act contract (if applicable)		
5.2.5 CPUC Draft Environmental Measures		
Refer to Attachment 4, CPUC Draft Environmental Measures.		

5.3 Air Quality

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
5.3.1 Environmental Setting		
5.3.1.1: Air Quality Plans Identify and describe all applicable air quality plans and attainment areas. Identify the air basin(s) for the project area. If the project is located in more than one attainment area and/or air basin, provide the extent in each attainment area and air basin.		
5.3.1.2: Air Quality. Describe existing air quality in the project area. a) Identify existing air quality exceedance of National Ambient Air Quality Standards and California Ambient Air Quality Standards in the air basin. b) Provide the number of days that air quality in the area exceeds state and federal air standards for each criteria pollutant that where air quality standards are exceeded. c) Provide air quality data from the nearest representative air monitoring station(s).		
5.3.1.3: Sensitive Receptor Locations. Identify the location and types of each sensitive receptor locations[26] within 1,000 feet of the project area. Provide GIS data for sensitive receptor locations.		

[26] Sensitive Receptor locations may include hospitals, schools, and day care centers, and such other locations as the air district board or California Air Resources Board may determine (California Health and Safety Code § 42705.5(a)(5)).

5.3.2 Regulatory Setting		
5.3.2.1: Regulatory Setting. Identify applicable federal, state, and local laws, policies, and standards regarding aesthetics and visual resource management.		
5.3.2.2: Air Permits. Identify and list all necessary air permits.		
5.3.3 Impact Questions		
5.3.3.1: Impact Questions. The impact questions include all air quality impact questions in the current version of CEQA Guidelines, Appendix G. **5.3.3.2:** Additional CEQA Impact Questions: None.		
5.3.4 Impact Analysis		
5.3.4.1: Impact Analysis. Provide an impact analysis for each checklist item identified in CEQA Guidelines Appendix G for this resource area and any additional impact questions listed above.		
The following information will be presented in the PEA or a technical Appendix to support the air quality impact analysis:		
5.3.4.2: Air Quality Emissions Modeling. Model project emissions using the most recent version of CalEEMod and/or a current version of other applicable modeling program. Provide all model input and output data sheets in Microsoft Excel format to allow CPUC to evaluate whether project data was entered into the modeling program accurately. The assumptions used in the air quality modeling must be consistent with all PEA information about the project's schedule, workforce, and equipment. The following information will be addressed in the emissions modeling, Air Quality Appendix, and PEA: a) Quantify the expected emissions of criteria pollutants from all project-related sources. Quantify emissions for both construction and operation (e.g., compressor equipment). b) Identify manufacturer's specifications for all proposed new emission sources. For proposed new, additional, or modified compressor units, include the horsepower, type, and energy source. c) Describe any emission control systems that are included in the air quality analysis (e.g., installation of filters, use of EPA Tier II, III, or IV equipment, use of electric engines, etc.). d) When multiple air basins may be affected by the project, model air emissions within each air basin and provide a narrative (supported by calculations) that clearly describes the assumptions around the project activities considered for each air basin. Provide modeled emissions by attainment area or air basin (supported by calculations).		

5.3.4.3: Air Quality Emissions Summary. Provide a table summarizing the air quality emissions for the project and applicable thresholds for each applicable attainment area. Include a summary of uncontrolled emissions (prior to application of any APMs) and controlled emissions (after application of APMs). Clearly identify the assumptions that were applied in the controlled emissions estimates.		
5.3.4.4: Health Risk Assessment. Complete a Health Risk Assessment when air quality emissions have the potential to lead to human health impacts[27]. If health impacts are not anticipated from project emissions, the analysis should clearly describe why emissions would not lead to health impacts.		
5.3.5 CPUC Draft Environmental Measures		
Refer to Attachment 4, CPUC Draft Environmental Measures.		

5.4 Biological Resources

This section will include, but is not limited to, the following:	**PEA Section and Page Number**	**Applicant Notes, Comments**
5.4.1 Environmental Setting		
5.4.1.1: Biological Resources Technical Report. Provide a Biological Resources Technical Report as an Appendix to the PEA that includes all information specified in Attachment 2.		
The following biological resources information will be presented in the PEA:		
5.4.1.2: Survey Area (Local Setting). Identify and describe the biological resources survey area as documented in the Biological Resources Technical Report. All temporary and permanent project areas must be within the survey area.		
5.4.1.3: Vegetation Communities and Land Cover a) Identify, describe, and quantify vegetation communities and land cover types within the biological resources survey area. b) Clearly identify any sensitive natural vegetation communities that meet the definition of a biological resource under CEQA (i.e., rare, designated, or otherwise protected), such as, but not limited to, riparian habitat. c) Provide a supporting map (or maps) showing project features and vegetation communities and land cover type.		

[27] Refer to Office of Environmental Health Hazard Assessment (OEHHA) most recent guidance for preparation of Health Risk Assessments to determine whether a Health Risk Assessment is required for the project. The need for an HRA should also be discussed with CPUC during Pre-filing.

5.4.1.4: Aquatic Features a) Identify, describe, and quantify aquatic features within the biological resources survey area that may provide potentially suitable aquatic habitat for rare and special-status species. b) Identify and quantify potentially jurisdictional aquatic features and delineated wetlands, according to the Wetland Delineation Report and Biological Resources Technical Report. c) Provide a supporting map (or maps) showing project features and aquatic resources.		
5.4.1.5: Habitat Assessment. Identify rare and special-status species with potential to occur in the project region (approximately a 5-mile buffer but may be larger if necessary). For each species, provide the following information: a) Common and scientific name b) Status and/or rank c) Habitat characteristics (i.e., vegetation communities, elevations, seasonal changes, etc.) d) Blooming characteristics for plants e) Breeding and other dispersal (range) behavior for wildlife f) Potential to occur within the survey area (i.e., Present, High Potential, Moderate Potential, Low Potential, or Not Expected), with justification based on the results of the records search, survey findings, and presence of potentially suitable habitat g) Specific types and locations of potentially suitable habitat that correspond to the vegetation communities and land cover and aquatic features		
5.4.1.6: Critical Habitat a) Identify and describe any critical habitat for rare or special-status species within and surrounding the project area (approximately a 5-mile buffer). b) Provide a supporting map (or maps) showing project features and critical habitat.		
5.4.1.7: Native Wildlife Corridors and Nursery Sites a) Identify and describe regional and local wildlife corridors within and surrounding the project area (approximately a 5-mile buffer), including but not limited to, landscape and aquatic features that connect suitable habitat in regions otherwise fragmented by terrain, changes in vegetation, or human development. b) Identify and describe regional and local native wildlife nursery sites within and surrounding the project area (approximately a 5-mile buffer), as identified through the records search, surveys, and habitat assessment.		

c) Provide a supporting map (or maps) showing project features, native wildlife corridors, and native nursery sites.		
5.4.1.8: Biological Resource Management Areas a) Identify any biological resource management areas (i.e., conservation or mitigation areas, HCP or NCCP boundaries, etc.) within and surrounding the project area (approximately 5-mile buffer). b) Identify and quantify any project areas within biological resource management areas. c) Provide a supporting map (or maps) showing project features and biological resource management areas.		
5.4.2 Regulatory Setting		
5.4.2.1: Regulatory Setting. Identify applicable federal, state, and local laws, policies, and standards regarding biological resources.		
5.4.2.2: Habitat Conservation Plan. Provide a copy of any relevant Habitat Conservation Plan.		
5.4.3 Impact Questions		
5.4.3.1: Impact Questions. The impact questions include all biological resource impact questions in the current version of CEQA Guidelines, Appendix G. **5.4.3.2:** Additional CEQA Impact Question: Would the project create a substantial collision or electrocution risk for birds or bats?		
5.4.4 Impact Analysis		
5.4.4.1: Impact Analysis Provide an impact analysis for each checklist item identified in CEQA Guidelines, Appendix G for Biological Resources and any additional impact questions listed above.		
The following information will be included in the impact analysis:		
5.4.4.2: Quantify Habitat Impacts. Provide the area of impact in acres by each habitat type. Quantify temporary and permanent impacts. For all temporary impacts provide the following: a) Description of the restoration and revegetation approach b) Vegetation species that would be planted within the area of temporary disturbance c) Procedures to reduce invasive weed encroachment within areas of temporary disturbance d) Expected timeframe for restoration of the site		
5.4.4.3: Special-Status Species Impacts. Identify anticipated impacts on special-status species. Identify any take permits that are anticipated for the project. If an existing habitat conservation plan (HCP) or natural communities conservation plan (NCCP) would be used for the project, provide current accounting of take coverage included in the HCP/NCCP		

to demonstrate that there is sufficient habitat coverage remaining under the existing permit.		
5.4.4.4: Wetland Impacts. Quantify the area (in acres) of temporary and permanent impacts on wetlands. Include the following details: a) Provide a table identifying all wetlands, by milepost and length, crossed by the project and the total acreage of each wetland type that would be affected by construction. b) Discuss construction and restoration methods proposed for crossing wetlands. c) If wetlands would be filled or permanently lost, describe proposed measures to compensate for permanent wetland losses. d) If forested wetlands would be affected, describe proposed measures to restore forested wetlands following construction.		
5.4.4.5: Avian Impacts. Describe avian obstructions and risk of electrocution from the project. Describe any standards that will be implemented as part of the project to reduce the risk of collision and electrocution.		
5.4.5 CPUC Draft Environmental Measures		
Refer to Attachment 4, CPUC Draft Environmental Measures.		

5.5 Cultural Resources[28]

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
5.5.1 Environmental Setting		
5.5.1.1: Cultural Resource Reports. Provide a cultural resource inventory and evaluation report that addresses the technical requirement provided in Attachment 3.		
5.5.1.2: Cultural Resources Summary. Summarize cultural resource survey and inventory results and survey methods. Do not provide any confidential cultural resource information within the PEA chapter.		
5.5.1.3: Cultural Resource Survey Boundaries. Provide a map with mileposts showing the boundaries of all survey areas in the report. Provide the GIS data for the survey area. Provide confidential GIS data for the resource locations and boundaries separately under confidential cover.		
5.5.2 Regulatory Setting		
5.5.2.1: Regulatory Setting. Identify applicable federal and state regulations for protection of cultural resources.		

[28] For a description and evaluation of cultural resources specific to Tribes, see Section 5.18, Tribal Cultural Resources.

5.5.3 Impact Questions		
5.5.3.1: Impact Questions. The impact questions include all cultural resource impact questions in the current version of CEQA Guidelines, Appendix G. **5.5.3.2:** Additional CEQA Impact Questions: None.		
5.5.4 Impact Analysis		
5.5.4.1: Impact Analysis. Provide an impact analysis for each checklist item identified in CEQA Guidelines, Appendix G for this resource area and any additional impact questions listed above.		
Include the following information in the impact analysis		
5.5.4.2: Human Remains. Describe the potential for encountering human remains or grave goods during the trenching or any other phase of construction. Describe the procedures that would be used if human remains are encountered.		
5.5.4.3: Resource Avoidance. Describe avoidance procedures that would be implemented to avoid known resources.		
5.5.5 CPUC Draft Environmental Measures		
Refer to Attachment 4, CPUC Draft Environmental Measures.		

5.6 Energy

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
5.6.1 Environmental Setting		
5.6.1.1: Existing Energy Use. Identify energy use of existing infrastructure if the proposed project would replace or upgrade an existing facility.		
5.6.2 Regulatory Setting		
5.6.2.1: Regulatory Setting. Identify applicable federal, state, or local regulations or policies applicable to energy use for the proposed project.		
5.6.3 Impact Questions		
5.6.3.1: Impact Questions: The impact questions include all energy impact questions in the current version of CEQA Guidelines, Appendix G. **5.6.3.2:** Additional CEQA Impact Question: Would the project add capacity for the purpose of serving a non-renewable energy resource?		

5.6.4 Impact Analysis		
5.6.4.1: Impact Analysis. Provide an impact analysis for each checklist item identified in CEQA Guidelines Appendix G for this resource area and any additional impact questions listed above.		
Include the following information in the impact analysis:		
5.6.4.2: Nonrenewable Energy. Identify renewable and non-renewable energy projects that may interconnected to or be supplied by the proposed project.		
5.6.4.3: Fuels and Energy Use a) Provide an estimation of the amount of fuels (gasoline, diesel, helicopter fuel, etc.) that would be used during construction and operation and maintenance of the project. Fuel estimates should be consistent with Air Quality calculations supporting the PEA. b) Provide the following information on energy use: i. Total energy requirements of the project by fuel type and end use ii. Energy conservation equipment and design features iii. Identification of energy supplies that would serve the project		
5.6.5 CPUC Draft Environmental Measures		
Refer to Attachment 4, CPUC Draft Environmental Measures.		

5.7 Geology, Soils, and Paleontological Resources

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
5.7.1 Environmental Setting		
5.7.1.1: Regional and Local Geologic Setting. Briefly describe the regional and local physiography, topography, and geologic setting in the project area.		
5.7.1.2: Seismic Hazards a) Provide the following information on potential seismic hazards in the project area: i. Identify and describe regional and local seismic risk including any active faults within and surrounding the project area (will be a 10-mile buffer unless otherwise instructed in writing by CEQA Unit Staff during Pre-filing) ii. Identify any areas that are prone to seismic-induced landslides iii. Provide the liquefaction potential for the project area b) Provide a supporting map (or maps) showing project features and major faults, areas of landslide risk, and areas at high risk of liquefaction. Provide GIS data for all faults, landslides, and areas of high liquefaction potential.		

5.7.1.3: Geologic Units. Identify and describe the types of geologic units in the project area. Include the following information for each geologic unit: a) Summarize the geologic units within the project area. b) Identify any previous landslides in the area and any areas that are at risk of landslide. c) Identify any unstable geologic units. d) Provide a supporting map (or maps) showing project features and geologic units. Clearly identify any areas with potentially hazardous geologic conditions. Provide associated GIS data.		
5.7.1.4: Soils. Identify and describe the types of soils in the project area. a) Summarize the soils within the project area. b) Clearly identify any soils types that could be unstable (e.g., at risk of lateral spreading, subsidence, liquefaction, or collapse). c) Provide information on erosion susceptibility for each soil type that occurs in the project area. d) Provide a supporting map (or maps) showing project features and soils. Provide associated GIS data.		
5.7.1.5: Paleontological Report. Provide a paleontological report that includes the following: a) Information on any documented fossil collection localities within the project area and a 500-foot buffer. b) A paleontological resource sensitivity analysis based on published geological mapping and the resource sensitivity of each rock type. c) Supporting maps and GIS data.		
5.7.2 Regulatory Setting		
5.7.2.1: Regulatory Setting. Identify applicable federal, state, and local laws, policies, and standards regarding geology, soils, and paleontological resources.		
5.7.3 Impact Questions		
5.7.3.1: Impact Questions. The impact questions include all geology, soils, and paleontological resource impact questions in the current version of CEQA Guidelines, Appendix G. **5.7.3.2:** Additional CEQA Impact Questions: None.		
5.7.4 Impact Analysis		
5.7.4.1: Impact Analysis. Provide an impact analysis for each checklist item identified in CEQA Guidelines, Appendix G for this resource area and any additional impact questions listed above.		
Include the following information in the impact analysis:		

5.7.4.2: Geotechnical Requirements. Identify any geotechnical requirements that would be implemented to address effects from unstable geologic units or soils. Describe how the recommendation would be applied (i.e., when and where).		
5.7.4.3: Paleontological Resources. Identify the potential to disturb paleontological resources based on the depth of proposed excavation and paleontological sensitivity of geologic units within the project area.		
5.7.5 CPUC Draft Environmental Measures		
Refer to Attachment 4, CPUC Draft Environmental Measures.		

5.8 Greenhouse Gas Emissions

This section will include, but is not limited to, the following:	**PEA Section and Page Number**	**Applicant Notes, Comments**
5.8.1 Environmental Setting		
5.8.1.1: GHG Setting. Provide a description of the setting for greenhouse gases (GHGs). The setting should consider any GHG emissions from existing infrastructure that would be upgraded or replaced by the proposed project.		
5.8.2 Regulatory Setting		
5.8.2.1: Regulatory Setting. Identify applicable federal, state, and local laws, policies, and standards for greenhouse gases.		
5.8.3 Impact Questions		
5.8.3.1 Impact Questions. The impact questions include all greenhouse gas impact questions in the current version of CEQA Guidelines, Appendix G. **5.8.3.2:** Additional CEQA Impact Questions: None.		
5.8.4 Impact Analysis		
5.8.4.1: Impact Analysis. Provide an impact analysis for each checklist item identified in CEQA Guidelines, Appendix G for this resource area and any additional impact questions listed above.		
Include the following information in the impact analysis:		
5.8.4.2: GHG Emissions. Provide a quantitative assessment of GHG emissions for construction and operation and maintenance of the proposed project. Provide model results and all model files. Modeling will be conducted using the latest version of the emissions model at the time of application filing (e.g., most recent version of CalEEMod). GHG emissions will be provided for the following conditions: a) Uncontrolled emissions (before APMs are applied) b) Controlled emissions considering application of APMs i. Based on the modeled GHG emissions, quantify the project's contribution to and analyze the project's effect on		

climate change. Identify and provide justification for the timeframe considered in the analysis. ii. Discuss any programs already in place to reduce GHG emissions on a system-wide level. This includes the Applicant's voluntary compliance with the EPA SF6 reduction program, reductions from energy efficiency, demand response, LTPP, etc. iii. For any significant impacts, identify potential strategies that could be employed by the project to reduce GHGs during construction or operation and maintenance consistent with OPR Advisory on CEQA and Climate Change.		
Natural Gas Storage		
5.8.4.3: Natural Gas Storage Accident Conditions. In addition to the requirements above, identify the potential GHG emissions that could result in the event of a gas leak.		
5.8.4.4: Monitoring and Contingency Plan. Provide a comprehensive monitoring plan that would be implemented during project operation to monitor for gas leaks. The plan should identify a monitoring schedule, description of monitoring activities, and actions to be implemented if gas leaks are observed.		
5.8.5 CPUC Draft Environmental Measures		
Refer to Attachment 4, CPUC Draft Environmental Measures.		

5.9 Hazards, Hazardous Materials, and Public Safety[29]

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
5.9.1 Environmental Setting		
5.9.1.1: Hazardous Materials Report. Provide a Phase I Environmental Site Assessment or similar hazards report for the proposed project area. Describe any known hazardous materials locations within the project area and the status of the site.		
5.9.1.2: Airport Land Use Plan. Identify any airport land use plan(s) within the project area.		
5.9.1.3: Fire Hazard. Identify if the project occurs within federal, state, or local fire responsibility areas and identify the fire hazard severity rating for all project areas, including temporary work areas and access roads.		
5.9.1.4: Metallic Objects. For electrical projects, identify any metallic pipelines or cables within 25 feet of the project.		

[29] For fire risk specific to state responsibility areas or lands classified as very high fire hazard severity zones, see Section 5.20, Wildfire.

5.9.1.5: Pipeline History (for Natural Gas Projects). Provide a narrative describing the history of the pipeline system(s) to which the project would connect, list of previous owner and operators, and detailed summary of the pipeline systems' safety and inspection history.		
5.9.2 Regulatory Setting		
5.9.2.1: Regulatory Setting. Identify applicable federal, state, and local laws, policies, and standards for hazards, hazardous materials, and public safety.		
5.9.2.2: Touch Thresholds. Identify applicable standards for protection of workers and the public from shock hazards.		
5.9.3 Impact Questions		
5.9.3.1: Impact Questions. The impact questions include all hazards and hazardous materials impact questions in the current version of CEQA Guidelines, Appendix G. **5.9.3.2:** Additional CEQA Impact Questions: a) Would the project create a significant hazard to air traffic from the installation of new power lines and structures? b) Would the project create a significant hazard to the public or environment through the transport of heavy materials using helicopters? c) Would the project expose people to a significant risk of injury or death involving unexploded ordnance? d) Would the project expose workers or the public to excessive shock hazards?		
5.9.4 Impact Analysis		
5.9.4.1: Impact Analysis. Provide an impact analysis for each checklist item identified in CEQA Guidelines Appendix G for this resource area and any additional impact questions listed above.		
Include the following information in the impact analysis:		
5.9.4.2: Hazardous Materials. Identify the hazardous materials (i.e., chemicals, solvents, lubricants, and fuels) that would be used during construction and operation of the project. Estimate the quantity of each hazardous material that would be stored on site during construction and operation.		
5.9.4.3: Air Traffic Hazards. If the project involves construction of above-ground structures (including structure replacement) within the airport land use plan area, provide a discussion of how the project would or would not conflict with height restrictions identified in the airport land use plan and how the project would comply with any FAA or military requirements for the above ground facilities.		
5.9.4.4: Accident or Upset Conditions. Describe how the project facilities would be designed, constructed, operated, and maintained to		

minimize potential hazard to the public from the failure of project components as a result of accidents or natural catastrophes.		
5.9.4.5: Shock Hazard. For electricity projects, identify infrastructure that may be susceptible to induced current from the proposed project. Describe strategies (e.g., cathodic protection) that the project would employ to reduce shock hazards and avoid electrocution of workers or the public.		
For Natural Gas and Gas Storage:		
5.9.4.6: Health and Safety Plan. Include in the Health and Safety Plan, plans for addressing gas leaks, fires, etc. Identify sensitive receptors, methods of evacuation, and protection measures. The Plan will be provided as an Appendix to the PEA.		
5.9.4.7: Health Risk Assessment. Provide a Health Risk Assessment including risk from potential gas leaks, fires, etc. Identify sensitive receptors that would be affected and potential impacts on them if there is a gas release.[30]		
5.9.4.8: Gas Migration. Describe potential for and effects of gas migration through natural and manmade pathways. a) Provide Applicant Proposed Measures for avoiding gas emissions at the surface from gas migration pathways. b) Provide Applicant Proposed Measures for avoiding emissions of mercaptan and/or other odorizing agents.		
5.9.5 CPUC Draft Environmental Measures		
Refer to Attachment 4, CPUC Draft Environmental Measures.		

5.10 Hydrology and Water Quality

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
5.10.1 Environmental Setting		
5.10.1.1: Waterbodies. Identify by milepost all ephemeral, intermittent, and perennial surface waterbodies crossed by the project. For each, list its water quality classification, if applicable.		
5.10.1.2: Water Quality. Identify any downstream waters that are on the state 303(d) list and identify whether a total maximum daily load (TMDL) has been adopted or the date for adoption of a TMDL. Identify existing sources of impairment for downstream waters. Describe any management plans that are in place for downstream waters.		
5.10.1.3: Groundwater Basin. Identify all known EPA and state groundwater basins and aquifers crossed by the project.		

[30] Refer to the requirements for Health Risk Assessments in Section 5.3.4.4.

5.10.1.4: Groundwater Wells and Springs. Identify the locations of all known public and private groundwater supply wells and springs within 150 feet of the project area.		
5.10.1.5: Groundwater Management. Identify the groundwater management status of any groundwater resources in the project area and any groundwater resources that may be used by the project. Describe if groundwater resources in the basin have been adjudicated. Identify any sustainable groundwater management plan that has been adopted for groundwater resources in the project area or describe the status of groundwater management planning in the area.		
5.10.2 Regulatory Setting		
5.10.2.1: Regulatory Setting. Identify applicable federal, state, and local laws, policies, and standards regarding hydrologic and water quality.		
5.10.3 Impact Questions		
5.10.3.1: Impact Questions. The impact questions include all hydrology and water quality impact questions in the current version of CEQA Guidelines, Appendix G. **5.10.3.2:** Additional CEQA Impact Questions: None.		
5.10.4 Impact Analysis		
5.10.4.1: Impact Analysis. Provide an impact analysis for each checklist item identified in the current version of CEQA Guidelines, Appendix G for this resource area and any additional impact questions listed above.		
Include the following information in the impact analysis:		
5.10.4.2: Hydrostatic Testing. Identify all potential sources of hydrostatic test water, quantity of water required, withdrawal methods, treatment of discharge, and any waste products generated.		
5.10.4.3: Water Quality Impacts. Describe impacts to surface water quality, including the potential for accelerated soil erosion, downstream sedimentation, and reduced surface water quality.		
5.10.4.4: Impermeable Surfaces. Describe increased run-off and impacts on groundwater recharge due to construction of impermeable surfaces. Provide the acreage of new impermeable surfaces that will be created as a result of the project.		
5.10.4.5: Waterbody Crossings. Identify by milepost all waterbody crossings. Provide the following information for crossing: a) Identify whether the waterbody has contaminated waters or sediments. b) Describe the waterbody crossing method and any approaches to avoid the waterbody. c) Describe typical additional work area and staging area requirements at waterbody and wetland crossings.		

d) Describe any dewatering or water diversion that will be required during construction near the waterbody. Identify treatment methods for any dewatering. e) Describe any proposed restoration methods for work near or within the waterbody.		
5.10.4.6: Groundwater Impacts. If water would be obtained from groundwater supplies, evaluate the project's consistency with any applicable sustainable groundwater management plan.		
5.10.5 CPUC Draft Environmental Measures		
Refer to Attachment 4, CPUC Draft Environmental Measures.		

5.11 Land Use and Planning

This section will include, but is not limited to, the following:	**PEA Section and Page Number**	**Applicant Notes, Comments**
5.11.1 Environmental Setting		
5.11.1.1: Land Use. Provide a description of land uses within the area traversed by the project route as designated in the local General Plan (e.g., residential, commercial, agricultural, open space, etc.).		
5.11.1.2: Special Land Uses. Identify by milepost and segment all special land uses within the project area including: a) All land administered by federal, state, or local agencies, or private conservation organizations b) Any designated coastal zone management areas c) Any designated or proposed candidate National or State Wild and Scenic Rivers crossed by the project d) Any national landmarks		
5.11.1.3: Habitat Conservation Plan. Provide a copy of any Habitat Conservation Plan applicable to the project area or proposed project. Also required for Section 5.4, Biological Resources.		
5.11.2 Regulatory Setting		
5.11.2.1: Regulatory Setting. Identify applicable federal, state, and local laws, policies, and standards for land use and planning.		
5.11.3 Impact Questions		
5.11.3.1: Impact Questions. The impact questions include all land use questions in the current version of CEQA Guidelines, Appendix G. **5.11.3.2:** Additional CEQA Impact Questions: None.		
5.11.4 Impact Analysis		
5.11.4.1: Impact Analysis. Provide an impact analysis for each checklist item identified in CEQA Guidelines, Appendix G for this resource area and any additional impact questions listed above.		

5.11.5 CPUC Draft Environmental Measures		
Refer to Attachment 4, CPUC Draft Environmental Measures.		

5.12 Mineral Resources

This section will include, but is not limited to, the following:	**PEA Section and Page Number**	**Applicant Notes, Comments**
5.12.1 Environmental Setting		
5.12.1.1: Mineral Resources. Provide information on the following mineral resources within 0.5 mile of the proposed project area: a) Known mineral resources b) Active mining claims c) Active mines d) Resource recovery sites		
5.12.2 Regulatory Setting		
5.12.2.1: Regulatory Setting. Identify applicable federal, state, and local laws, policies, and standards for minerals.		
5.12.3 Impact Questions		
5.12.3.1: Impact Questions. The impact questions include all mineral resource impact questions in the current version of CEQA Guidelines, Appendix G. **5.12.3.2:** Additional CEQA Impact Questions: None.		
5.12.4 Impact Analysis		
5.12.4.1: Impact Analysis. Provide an impact analysis for each checklist item identified in CEQA Guidelines, Appendix G for this resource area and any additional impact questions listed above.		
5.12.5 CPUC Draft Environmental Measures		
Refer to Attachment 4, CPUC Draft Environmental Measures.		

5.13 Noise

This section will include, but is not limited to, the following:	**PEA Section and Page Number**	**Applicant Notes, Comments**
5.13.1 Environmental Setting		
5.13.1.1: Noise Sensitive Land Uses. Identify all noise sensitive land uses within 1,000 feet of the proposed project. Provide GIS data for sensitive receptors within 1,000 feet of the project.		
5.13.1.2: Noise Setting. Provide the existing noise levels (Lmax, Lmin, Leq, and Ldn sound level and other applicable noise parameters) at noise sensitive areas near the proposed project. All noise measurement data and the methodology for collecting the data will be provided in a noise study as an Appendix to the PEA.		

5.13.2 Regulatory Setting		
5.13.2.1: Regulatory Setting. Identify applicable state, and local laws, policies, and standards for noise.		
5.13.3 Impact Questions		
5.13.3.1 Impact Questions. The impact questions include all noise questions in the current version of CEQA Guidelines, Appendix G. **5.13.3.2:** Additional CEQA Impact Questions: None.		
5.13.4 Impact Analysis		
5.13.4.1: Impact Analysis. Provide an impact analysis for each checklist item identified in CEQA Guidelines, Appendix G for this resource area and any additional impact questions listed above.		
Include the following information in the impact analysis:		
5.13.4.2: Noise Levels a) Identify noise levels for each piece of equipment that could be used during construction. b) Provide a table that identifies each phase of construction, the equipment used in each construction phase, and the length of each phase at any single location (see example in Table 7 below). c) Estimate cumulative equipment noise levels for each phase of construction. d) Include phases of operation if noise levels during operation have the potential to frequently exceed pre-project existing conditions. e) Identify manufacturer's specifications for equipment and describe approaches to reduce impacts from noise.		

Table 7. Construction Noise Levels

Equipment Required	Equipment Noise Levels (Leq; 50 feet)	Phase Noise Level (Leq; 50 feet)	Phase Duration at Each Location	Receptor Nearest to Construction Phase	Noise Level at Nearest Receptor (Leq)	Exceeds Noise Standard at Nearest Receptor?	Distance to Not Exceed Standard
Site Preparation/Grading							
Dozer	78 dBA	82 dBA	5 days	Residence on Main Street; 100 feet from Substation Site	76 dBA	Yes	112 feet
Gradall	79 dBA						
Dump Truck	73 dBA						
Construct Tower Foundation							
Auger Rig	77 dBA	82 dBA	11 days	School on Education Avenue; 130 feet from Tower A12	73 dBA	No	N/A
Dump Truck	73 dBA						
Excavator	77 dBA						
Concrete Truck	75 dBA						

For Natural Gas:		
5.13.4.3: Compressor Station Noise. Provide site plans of compressor stations or other noisy, permanent equipment, showing the location of the nearest noise sensitive areas within 1 mile of the proposed ROW. If new compressor station sites are proposed, measure or estimate the existing ambient sound environment based on current land uses and		

activities. For existing compressor stations (operated at full load), include the results of a sound level survey at the site property line and nearby noise-sensitive areas. Include a plot plan that identifies the locations and duration of noise measurements.		
5.13.5 CPUC Draft Environmental Measures		
Refer to Attachment 4, CPUC Draft Environmental Measures.		

5.14 Population and Housing

This section will include, but is not limited to, the following:	**PEA Section and Page Number**	**Applicant Notes, Comments**
5.14.1 Environmental Setting		
5.14.1.1: Population Estimates. Identify population trends for the areas (county, city, town, census designated place) where the project would take place.		
5.14.1.2: Housing Estimates. Identify housing estimates and projections in areas where the project would take place.		
5.14.1.3: Approved Housing Developments a) Provide the following information for all housing development projects within 1 mile of the proposed project that have been recently approved or may be approved around the PEA and application filing date: i. Project name ii. Location iii. Number of units and estimated population increase iv. Approval date and construction status v. Contact information for developer (provided in the public outreach Appendix) b) Ensure that the project information provided above is consistent with the PEA analysis of cumulative project impacts.		
5.14.2 Regulatory Setting		
5.14.2.1: Regulatory Setting. Identify any applicable federal, state or local laws or regulations that apply to the project.		
5.14.3 Impact Questions		
5.14.3.1: Impact Questions. The impact questions include all population and housing impact questions in the current version of CEQA Guidelines, Appendix G. **5.14.3.2:** Additional CEQA Impact Questions: None.		
5.14.4 Impact Analysis		
5.14.4.1: Impact Analysis. Provide an impact analysis for each checklist item identified in CEQA Guidelines, Appendix G for this resource area and any additional impact questions listed above.		

Include the following information in the impact analysis:		
5.14.4.2: Impacts to Housing. Identify if any existing or proposed homes occur within the footprint of any proposed project elements or right-of-way. Describe housing impacts (e.g., demolition and relocation of residents) that may occur as a result of the proposed project.		
5.14.4.3: Workforce Impacts. Describe on-site manpower requirements, including the number of construction personnel who currently reside within the impact area, who would commute daily to the site from outside the impact area or would relocate temporarily within the impact area. Chapter 4 of this document can be referenced as applicable. Identify any permanent employment opportunities that would be create by the project and the workforce conditions in the area that the jobs would be created.		
5.14.4.4: Population Growth Inducing. Provide information on the project's growth inducing impacts, if any. The information will include, but is not necessarily limited to, the following: a) Any economic or population growth in the surrounding environment that will directly or indirectly result from the project b) Any obstacles to population growth that the project would remove c) Any other activities directly or indirectly encouraged or facilitated by the project that would cause population growth leading to a significant effect on the environment, either individually or cumulatively		
5.14.5 CPUC Draft Environmental Measures		
Refer to Attachment 4, CPUC Draft Environmental Measures.		

5.15 Public Services

This section will include, but is not limited to, the following:	**PEA Section and Page Number**	**Applicant Notes, Comments**
5.15.1 Environmental Setting		
5.15.1.1 Service Providers a) Identify the following service providers that serve the project area and provide a map showing the service facilities that could serve the project: i. Police ii. Fire (identify service providers within local and state responsibility areas) iii. Schools iv. Parks v. Hospitals		

b) Provide the documented performance objectives and data on existing emergency response times for service providers in the area (e.g., police or fire department response times).		
5.15.2 Regulatory Setting		
5.15.2.1 Regulatory Setting. Identify any applicable federal, state or local laws or regulations for public services that apply to the project.		
5.15.3 Impact Questions		
5.15.3.1: Impact Questions. The impact questions include all public services impact questions in the current version of CEQA Guidelines, Appendix G. **5.15.3.2:** Additional CEQA Impact Questions: None.		
5.15.4 Impact Analysis		
5.15.4.1 Impact Analysis. Provide an impact analysis for each checklist item identified in CEQA Guidelines, Appendix G for this resource area and any additional impact questions listed above.		
Include the following information in the impact analysis:		
5.15.4.2: Emergency Response Times a) Describe whether the project would impede ingress and egress of emergency vehicles during construction and operation. b) Include an analysis of impacts on emergency response times during project construction and operation, including impacts during any temporary road closures. Describe approaches to address impacts on emergency response times.		
5.15.4.3: Displaced Population. If the project would create permanent employment or displace people, evaluate the impact of the new employment or relocated people on governmental facilities and services and describe plans to reduce the impact on public services.		
5.15.5 CPUC Draft Environmental Measures		
Refer to Attachment 4, CPUC Draft Environmental Measures.		

5.16 Recreation

This section will include, but is not limited to, the following:	**PEA Section and Page Number**	**Applicant Notes, Comments**
5.16.1 Environmental Setting		
5.16.1.1: Recreational Setting a) Describe the regional and local recreation setting in the project area including: i. Any recreational facilities or areas within and surrounding the project area (approximately 0.5-mile buffer) including the recreational uses of each facility or area		

ii. Any available data on use of the recreational facilities including volume of use b) Provide a map (or maps) showing project features and recreational facilities and provide associated GIS data.		
5.16.2 Regulatory Setting		
5.16.2.1: Regulatory Setting. Identify applicable federal, state, and local laws, policies, and standards regarding recreation.		
5.16.3 Impact Questions		
5.16.3.1: Impact Questions. The impact questions include all recreation impact questions in the current version of CEQA Guidelines, Appendix G. **5.16.3.2:** Additional CEQA Impact Questions: a) Would the project reduce or prevent access to a designated recreation facility or area? b) Would the project substantially change the character of a recreational area by reducing the scenic, biological, cultural, geologic, or other important characteristics that contribute to the value of recreational facilities or areas? c) Would the project damage recreational trails or facilities?		
5.16.4 Impact Analysis		
5.16.4.1: Impact Analysis: Provide an impact analysis for each checklist item identified in CEQA Guidelines, Appendix G for this resource area and any additional impact questions listed above.		
5.16.4.2: Impact Details. Clearly identify the maximum extent of each impact, and when and where the impacts would or would not occur. Organize the impact assessment by project phase, project component, and/or geographic area, as necessary.		
5.16.5 CPUC Draft Environmental Measures		
Refer to Attachment 4, CPUC Draft Environmental Measures.		

5.17 Transportation

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
5.17.1 Environmental Setting		
5.17.1.1: Circulation System. Briefly describe the regional and local circulation system in the project area, including modes of transportation, types of roadways, and other facilities that contribute to the circulation system.		
5.17.1.2: Existing Roadways and Circulation a) Identify and describe existing roadways that may be used to access the project site and transport materials during		

construction or are otherwise adjacent to or crossed by linear project features. Provide the following information for each road: i. Name of the road ii. Jurisdiction or ownership (i.e., State, County, City, private, etc.) iii. Number of lanes in both directions of travel iv. Existing traffic volume (if publicly available data is unavailable or significantly outdated, then it may be necessary to collect existing traffic counts for road segments where large volumes of construction traffic would be routed or where lane or road closures would occur) v. Closest project feature name and distance b) Provide a supporting map (or maps) showing project features and the existing roadway network identifying each road described above. Provide associated GIS data. The GIS data should include all connected road segments within at least 5 miles of the project.		
5.17.1.3: Transit and Rail Services a) Identify and describe transit and rail service providers in the region. b) Identify any rail or transit lines within 1,000 feet of the project area. c) Identify specific transit stops, and stations within 0.5 mile of the project. Provide the frequency of transit service. d) Provide a supporting map (or maps) showing project features and transit and rail services within 0.5 mile of the project area. Provide associated GIS data.		
5.17.1.4: Bicycle Facilities a) Identify and describe any bicycle plans for the region. b) Identify specific bicycle facilities within 1,000 feet of the project area. c) Provide a supporting map (or maps) showing project features and bicycle facilities. Provide associated GIS data.		
5.17.1.5: Pedestrian Facilities a) Identify and describe important pedestrian facilities near the project area that contribute to the circulation system, such as important walkways. b) Identify specific pedestrian facilities that would be near the project, including on the road segments identified per 5.17.1.2. c) Provide a supporting map (or maps) showing project features and important pedestrian facilities. Provide associated GIS data.		

5.17.1.6: Vehicle Miles Traveled (VMT). Provide the average VMT for the county(s) where the project is located.		
5.17.2 Regulatory Setting		
5.17.2.1: Regulatory Setting. Identify applicable federal, state, and local laws, policies, and standards regarding transportation.		
5.17.3 Impact Questions		
5.17.3.1: Impact Questions. All impact questions for this resource area in the current version of CEQA Guidelines, Appendix G. **5.17.3.2:** Additional CEQA Impact Questions: a) Would the project create potentially hazardous conditions for people walking, bicycling, or driving or for public transit operations? b) Would the project interfere with walking or bicycling accessibility? c) Would the project substantially delay public transit?		
5.17.4 Impact Analysis		
5.17.4.1: Impact Analysis. Provide an impact analysis for each significance criteria identified in Appendix G of the CEQA Guidelines for transportation and any additional impact questions listed above[31].		
Include the following information in the impact analysis:		
5.17.4.2: Vehicle Miles Traveled (VMT) a) Identify whether the project is within 0.5 mile of a major transit stop or a high-quality transit corridor. b) Identify the number of vehicle daily trips that would be generated by the project during construction and operation by light duty (e.g., worker vehicles) and heavy-duty vehicles (e.g., trucks). Provide the frequency of trip generation during operation. c) Quantify VMT generation for both project construction and operation. d) Provide an excel file with the VMT assumptions and model calculations, including all formulas and values. e) Evaluate the project VMT relative to the average VMT for the area in which the project is located.		
5.17.4.3: Traffic Impact Analysis. Provide a traffic impact study. The traffic impact study should be prepared in accordance with guidance from the relevant local jurisdiction or Caltrans, where appropriate.		
5.17.4.4: Hazards. Identify any traffic hazards that could result from construction and operation of the project. Identify any lane closures and traffic management that would be required to construct the project.		

[31] Discuss with CPUC during Pre-filing whether a traffic study is needed.

5.17.4.5: Accessibility. Identify any closures of bicycle lanes, pedestrian walkways, or transit stops during construction or operation of the project.		
5.17.4.6: Transit Delay. Identify any transit lines that could be delayed by construction and operation of the project. Provide the maximum extent of the delay in minutes and the duration of the delay.		
5.17.5 CPUC Draft Environmental Measures		
Refer to Attachment 4, CPUC Draft Environmental Measures.		

5.18 Tribal Cultural Resources[32]

This section will include, but is not limited to, the following:	**PEA Section and Page Number**	**Applicant Notes, Comments**
5.18.1 Environmental Setting		
5.18.1.1: Outreach to Tribes. Provide a list of all tribes that are on the Native American Heritage Commission (NAHC) list of tribes that are affiliated with the project area. Provide a discussion of outreach to Native American tribes, including tribes notified, responses received from tribes, and information of potential tribal cultural resources provided by tribes. Any information of potential locations of tribal cultural resources should be submitted in an Appendix under clearly marked confidential cover. Provide copies of all correspondence with tribes in an Appendix.		
5.18.1.2: Tribal Cultural Resources. Describe tribal cultural resources (TCRs) that are within the project area. a) Summarize the results of attempts to identify possible TCRs using publicly available documentary resources. The identification of TCRs using documentary sources should include review of archaeological site records and should begin during the preparation of the records search report (see Attachment 3). During the inventory phase, a formal site record would be prepared for any resource identified unless tribes object. b) Summarize attempts to identify TCRs by speaking directly with tribal representatives.		
5.18.1.3: Ethnographic Study. The ethnographic study should document the history of Native American use of the area and oral history of the area.		
5.18.2 Regulatory Setting		
5.18.2.1: Regulatory Setting. Identify any applicable federal, state or local laws or regulations for tribal cultural resources that apply to the project.		

[32] For a description of historical resources and requirements for cultural resources that are not tribal cultural resources, refer to Section 5.5 Cultural Resources.

5.18.3 Impact Questions		
5.18.3.1: Impact Questions. The impact questions include all tribal cultural resources impact questions in the current version of CEQA Guidelines, Appendix G. **5.18.3.2:** Additional CEQA Impact Questions: None.		
5.18.4 Impact Analysis		
5.18.4.1: Impact Analysis. Provide an impact analysis for each checklist item identified in CEQA Guidelines, Appendix G for this resource area and any additional impact questions listed above.		
Include the following information in the impact analysis:		
5.18.4.2: Information Provided by Tribes. Include an analysis of any impacts that were identified by the tribes during the Applicant's outreach.		
5.18.5 CPUC Draft Environmental Measures		
Refer to Attachment 4, CPUC Draft Environmental Measures.		

5.19 Utilities and Service Systems

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
5.19.1 Environmental Setting		
5.19.1.1: Utility Providers. Identify existing utility providers and the associated infrastructure that serves the project area.		
5.19.1.2: Utility Lines. Describe existing utility infrastructure (e.g., water, gas, sewer, electrical, stormwater, telecommunications, etc.) that occurs in the project ROW. Provide GIS data and/or as-built engineering drawings to support the description of existing utilities and their locations.		
5.19.1.3: Approved Utility Projects. Identify utility projects that have been approved for construction within the project ROW but that have not yet been constructed.[33]		
5.19.1.4: Water Supplies. Identify water suppliers and the water source (e.g., aqueduct, well, recycled water, etc.). For each potential water supplier, provide data on the existing water capacity, supply, and demand.		
5.19.1.5: Landfills and Recycling. Identify local landfills that can accept construction waste and may service the project. Provide documentation of landfill capacity and estimated closure date. Identify any recycling centers in the area and opportunities for construction and demolition waste recycling.		

[33] Note that this project information should be consistent with the cumulative project description included in Chapter 7.

5.19.2 Regulatory Setting		
5.19.2.1: Regulatory Setting. Identify any applicable federal, state or local laws or regulations for utilities that apply to the project.		
5.19.3 Impact Questions		
5.19.3.1: Impact Questions. All impact questions for this resource area in the current version of CEQA Guidelines, Appendix G. **5.19.3.2:** Additional CEQA Impact Question: Would the project increase the rate of corrosion of adjacent utility lines as a result of alternating current impacts?		
5.19.4 Impact Analysis		
5.19.4.1: Impact Analysis. Provide an impact analysis for each checklist item identified in CEQA Guidelines, Appendix G for this resource area and any additional impact questions listed above.		
Include the following information in the impact analysis:		
5.19.4.2: Utility Relocation. Identify any project conflicts with existing utility lines. If the project may require relocation of existing utilities, identify potential relocation areas and analyze the impacts of relocating the utilities. Provide a map showing the relocated utility lines and GIS data for all relocations.		
5.19.4.3: Waste a) Identify the waste generated by construction, operation, and demolition of the project. b) Describe how treated wood poles would be disposed of after removal, if applicable. c) Provide estimates for the total amount of waste materials to be generated by waste type and how much of it would be disposed of, reused, or recycled.		
5.19.4.4: Water Supply a) Estimate the amount of water required for project construction and operation. Provide the potential water supply source(s). b) Evaluate the ability of the water supplier to meet the project demand under a multiple dry year scenario. c) Provide a discussion as to whether the proposed project meets the criteria for consideration as a project subject to Water Supply Assessment Requirements under Water Code Section 10912. d) If determined to be necessary under Water Code Section 10912, submit a Water Supply Assessment to support conclusions that the proposed water source can meet the project's anticipated water demand, even in multiple dry year scenarios. Water Supply Assessments should be approved by		

the water supplier and consider normal, single-dry, and multiple-dry year conditions.		
5.19.4.5: Cathodic Protection. Analyze the potential for existing utilities to experience corrosion due to proximity to the proposed project. Identify cathodic protection measures that could be implemented to reduce corrosion issues and where the measures may be applied.		
5.19.5 CPUC Draft Environmental Measures		
Refer to Attachment 4, CPUC Draft Environmental Measures.		

5.20 Wildfire

This section will include, but is not limited to, the following:	**PEA Section and Page Number**	**Applicant Notes, Comments**
5.20.1 Environmental Setting		
5.20.1.1: High Fire Risk Areas and State Responsibility Areas a) Identify areas of high fire risk or State Responsibility Areas (SRAs) within the project area. Provide GIS data for the Wildland Urban Interface (WUI) and Fire Hazard Severity Zones (FHSZ) mapping along the project alignment. Include areas mapped by CPUC as moderate and high fire threat districts as well as areas mapped by CalFire. b) Identify any areas the utility has independently identified as High FHSZ known to occur within the proposed project vicinity.		
5.20.1.2: Fire Occurrence. Identify all recent (within the last 10 years) large fires that have occurred within the project vicinity. For each fire, identify the following: a) Name of the fire b) Location of fire c) Ignition source and location of ignition d) Amount of land burned e) Boundary of fire area in GIS		
5.20.1.3: Fire Risk. Provide the following information for assessment of baseline fire risk in the area: a) Provide fuel modeling using Scott Burgan fuel models, or other model of similar quality. b) Provide values of wind direction and speed, relative humidity, and temperature for representative weather stations along the alignment for the previous 10 years, gathered hourly. c) Digital elevation models for the topography in the project region showing the relationship between terrain and wind patterns, as well as localized topography to show the effects of terrain on wind flow, and on a more local area to show effect of slope on fire spread.		

d) Describe vegetation fuels within the project vicinity and provide data in map format for the project vicinity. USDA Fire Effects Information System or similar data source should be consulted to determine high-risk vegetation types. Provide the mapped vegetation fuels data in GIS format.		
5.20.1.4: Values at Risk. Identify values at risk along the proposed alignment. Values at risk may include: Structures, improvements, rare habitat, other values at risk, (including utility-owned infrastructure) within 1000 feet of the project. Provide some indication as to its vulnerability (wood structures vs. all steel features). Communities and/or populations near the project should be identified with their proximity to the project defined.		
5.20.1.5: Evacuation Routes. Identify all evacuation routes that are adjacent to or within the project area. Identify any roads that lack a secondary point of access or exit (e.g., cul-de-sacs).		
5.20.2 Regulatory Setting		
5.20.2.1: Regulatory Setting. Identify applicable federal, state, and local laws, policies, and standards for wildfire.		
5.20.2.2: CPUC Standards. Identify any CPUC standards that apply to wildfire management of the new facilities.		
5.20.3 Impact Questions		
5.20.3.1: Impact Questions. All impact questions for this resource area in the current version of CEQA Guidelines, Appendix G. **5.20.3.2:** Additional CEQA Impact Questions: None.		
5.20.4 Impact Analysis		
5.20.4.1: Impact Analysis. Provide an impact analysis for each checklist item identified in CEQA Guidelines, Appendix G for this resource area and any additional impact questions listed above.		
Include the following information in the impact analysis:		
5.20.4.2: Fire Behavior Modeling. For any new electrical lines, provide modeling to support the analysis of wildfire risk.		
5.20.4.3: Wildfire Management. Describe approaches that would be implemented during operation and maintenance to manage wildfire risk in the area. Provide a copy of any Wildfire Management Plan.		
5.20.5 CPUC Draft Environmental Measures		
Refer to Attachment 4, CPUC Draft Environmental Measures.		

5.21 Mandatory Findings of Significance[34]

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
5.21.1: Impact Assessment for Mandatory Findings of Significance. Provide an impact analysis for each of the mandatory findings of significance provided in Appendix G of the CEQA Guidelines. The impact analysis can reference relevant information and conclusion from the biological resources, cultural resources, air quality, hazards, and cumulative sections of the PEA, where applicable.		

6 Comparison of Alternatives

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
6.1: Alternatives Comparison a) Compare the ability of each alternative described in Chapter 4 against the proposed project in terms of its ability to avoid or reduce a potentially significant impact. The alternatives addressed in this section will each be: i. Potentially feasible ii. Meet the underlying purpose of the proposed project iii. Meet most of the basic project objectives, and iv. Avoid or reduce one or more potentially significant impacts. b) The relative effect of the various potentially significant impacts may be compared using the following or similar descriptors and an accompanying analysis: i. Short-term versus long-term impacts ii. Localized versus widespread impacts iii. Ability to fully mitigate impacts c) Impacts that the Applicant believes would be less than significant with mitigation may also be included in the analysis, but only if the steps listed above fail to distinguish among the remaining few alternatives.		
6.2: Alternatives Ranking. Provide a detailed table that summarizes the Applicant's comparison results and ranks the alternatives in order of environmental superiority.[35]		

[34] PEAs need only include a Mandatory Findings of Significance section if CPUC CEQA Unit Staff determine that a Mitigated Negative Declaration may be the appropriate type of document to prepare for the project, as determined through Pre-filing consultation. If no such determination has been made, then a Mandatory Findings of Significance section and the requirements below are not required.

[35] If the proposed project does not rank #1 on the list, the Applicant should provide the rationale for selecting the proposed project.

7 Cumulative and Other CEQA Considerations

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
7.1 Cumulative Impacts		
7.1.1: List of Cumulative Projects a) Provide a detailed table listing past, present, and reasonably foreseeable future projects within and surrounding the project area (approximately 2-mile buffer)[36]. The following information should be provided for each project in the table: i. Project name and type ii. Brief description of the project location(s) and associated actions iii. Distance to and name of the nearest project component iv. Project status and anticipated construction schedule v. Source of the project information and date last checked (for each individual project), including links to any public websites where the information was obtained so it can be reviewed and updated (the project information should be current when the PEA is filed) b) Provide a supporting map (or maps) showing project features and cumulative project locations and/or linear features. Provide associated GIS data.		
7.1.2: Geographic Scope. Define the geographic scope of analysis for each resource topic. The geographic scope of analysis for each resource topic should consider the extent to which impacts can be cumulative. For example, the geographic scope for cumulative noise impacts would be more limited in scale than the geographic scope for biological resource impacts because noise attenuates rapidly with distance. Explain why the geographic scope is appropriate for each resource.		
7.1.3: Cumulative Impact Analysis. Provide an analysis of cumulative impacts for each resource topic included in Chapter 5. Evaluate whether the proposed project impacts are cumulatively considerable[37] for any significant cumulative impacts.		
7.2 Growth-Inducing Impacts		
7.2.1: Growth-Inducing Impacts. Provide an evaluation of the following potential growth-inducing impacts:		

[36] Information on cumulative projects may be obtained from federal, state, and local agencies with jurisdiction over planning, transportation, and/or resource management in the area. Other projects the Applicant is involved in or aware of in the area should be included.

[37] "Cumulatively considerable" means that the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.

a) Would the proposed project foster any economic or population growth, either directly or indirectly, in the surrounding environment? b) Would the proposed project cause any increase in population that could further tax existing community service facilities (i.e., schools, hospitals, fire, police, etc.)? c) Would the proposed project remove any obstacles to population growth? d) Would the proposed project encourage and facilitate other activities that would cause population growth that could significantly affect the environment, either individually or cumulatively?		

8 List of Preparers

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
8.1: List of Preparers. Provide a list of persons, their organizations, and their qualifications for all authors and reviewers of each section of the PEA.		

9 References

This section will include, but is not limited to, the following:	PEA Section and Page Number	Applicant Notes, Comments
9.1: Reference List a) Organize all references cited in the PEA by section within a single chapter called "References." b) Within the References chapter, organize all of the Chapter 5 references under subheadings for each resource area section.		
9.2: Electronic References a) Provide complete electronic copies of all references cited in the PEA that cannot be readily obtained for free on the Internet. This includes any company-specific documentation (e.g., standards, policies, and other documents). b) If the reference can be obtained on the Internet, the Internet address will be provided.		

PEA Checklist Attachments

Attachment 1: GIS Data Requirements

This Attachment includes specific requirements and format of GIS data that is intended to be applicable to all PEAs. The specific GIS data requirements may be updated on a project-specific basis during Pre-filing coordination with CPUC's CEQA Unit Staff.

1. GIS data will be provided in an appropriate format (i.e., point, line, polygon, raster) and scale to adequately verify assumptions in the PEA and supporting materials and determine the level of environmental impacts. At a minimum, all GIS data layers will include the following metadata properties:
    a. The source (e.g., report reference), date, title, and preparer (name or company)
    b. Description of the contents and any limitations of the data
    c. Reference scale and accuracy of the data
    d. Complete attributes that correspond to the detailed mapbook, project description, and figures presented in the PEA and/or supporting application materials, including unique IDs, labels, geometry, and other appropriate project details
2. Where precise boundaries of project features may change (e.g., staging areas and temporary construction work areas), the Applicant will provide GIS data layers with representative boundaries to evaluate potential environmental impacts as a worst-case scenario.
3. Provide GIS data for:
    a. All proposed and alternative project facilities including but not limited to existing and proposed/alternative ROWs; substations and switching stations; pole/tower locations; conduit; vaults, pipelines; valves; compressor stations; metering stations; valve stations, gas wellheads; other project buildings, facilities, and components (both temporary and permanent); telecommunication and distribution lines modifications or upgrades related to the project; marker ball and lighting locations; and mileposts, facility perimeters, and other demarcations or segments as applicable
    b. All proposed areas required for construction and construction planning, including all proposed and alternative disturbance areas (both permanent and temporary); access roads; geotechnical work areas; extra work areas (e.g., staging areas, parking areas, lay-down areas, work areas at and around specific pole/tower sites, pull and tension sites, helicopter landing areas); airport landing areas; underground installation areas (e.g. trenches, vaults, underground work areas); horizontal directional drilling, jack and bore, or tunnel areas; blasting areas; and any areas where special construction methods may need to be employed
    c. Within the PEA checklist there are also specific requirements for environmental resources within Chapter 5. All environmental resource GIS data must meet the minimum mapping standards specified in this Attachment.

Attachment 2: Biological Resource Technical Report Standards

Definitions

The following biological resources will be considered within the scope of the PEA and the Biological Resources Technical Report:

Sensitive Vegetation Communities and Habitats

a) Sensitive vegetation communities/habitats identified in local or regional plans, policies, or regulations, or designated by CDFW38 or USFWS
b) Areas that provide habitat for locally unique biotic species/communities (e.g., oak woodlands, grasslands, and forests)
c) Habitat that contains or supports rare, endangered, or threatened wildlife or plant species as defined by CDFW and USFWS
d) Habitat that supports CDFW Species of Special Concern
e) Areas that provide habitat for rare or endangered species and that meet the definition in CEQA Guidelines Section 15380
f) Existing game and wildlife refuges and reserves
g) Lakes, wetlands, estuaries, lagoons, streams, and rivers
h) Riparian corridors

Special-Status Species

a) Species listed or proposed for listing as threatened or endangered under the federal Endangered Species Act (ESA) (50 CFR § 17.12 [listed plants], 17.11 [listed animals] and various notices in the Federal Register [proposed species])
b) Species that are candidates for possible future listing as threatened or endangered under the federal ESA (61 FR § 40, February 28, 1996)
c) Species listed or proposed for listing by the State of California as threatened or endangered under the California ESA (14 CCR § 670.5)
d) Plants listed as rare or endangered under the California Native Plant Protection Act (California Fish and Game Code, Section 1900 et seq.)
e) Species that meet the definitions of rare and endangered under CEQA. CEQA Guidelines Section 15380 provides that a plant or animal species may be treated as "rare or endangered" even if not on one of the official lists.
f) Plants considered by the California Native Plant Society (CNPS) to be "rare, threatened or endangered in California" (California Rare Plant Rank 1A, 1B, 2A, and 2B) as well as California Rare Plant Rank 3 and 4 plant species
g) Species designated by CDFW as Fully Protected or as a Species of Special Concern
h) Species protected under the Federal Bald and Golden Eagle Protection Act
i) Birds of Conservation Concern or Watch List species
j) Bats considered by the Western Bat Working Group to be "high" or "medium" priority (Western Bat Working Group 2015)

[38] CDFW's Rarity Ranking follows NatureServe's Heritage Methodology (Faber-Langendoen, et al. 2016) in which communities are given a G (global) and S (state) rank based on their degree of imperilment (as measured by rarity, trends, and threats). Communities with a Rarity Ranking of S1 (critically imperiled), S2 (imperiled), or S3 (vulnerable) are considered sensitive by CDFW.

Biological Resource Technical Report Minimum Requirements

Report Contents

The Biological Resource Technical Report will include the following information at a minimum.

a) **Preliminary Agency Consultation.** Describe any pre-survey contact with agencies. Describe any agency approvals that were required for biologists or agency protocols that were applied to the survey effort. Provide copies of correspondence and meeting notes with the names and contact information for agency staff and the dates of consultation as an appendix to the Biological Resources Technical Report.
b) **Records Search.** Provide the results of all database and literature searches for biological resources within and surrounding the project area. Identify all sources reviewed (e.g., CNDDB, CNPS, USFWS, etc.).
c) **Biological Resource Survey Method.** Identify agency survey requirements and protocols applicable to each biological survey that was conducted. Identify the areas where each survey occurred. Identify any limitations for the surveys (e.g., survey timing or climatic conditions) that could affect the survey results.
d) **Vegetation Communities and Land Cover.** Identify all vegetation communities or land cover types (e.g., disturbed or developed) within the biological survey area. The biological survey area should include a 1,000-foot buffer from project facilities to support CPUC's evaluation of indirect effects.
e) **Aquatic Resources.** Identify any wetlands, streams, lakes, reservoirs, estuarine, or other aquatic resources within the biological survey area. Provide a wetland delineation and all data sheets including National Wetlands Inventory maps (or the appropriate state wetland maps, if National Wetlands Inventory maps are not available) that show all proposed facilities and include milepost locations for proposed pipeline routes. Provide a copy of agency verification of the wetland delineation if the delineation has been verified by the U.S. Army Corps of Engineers or CDFW. If the delineation has not been verified, describe the process and timing for obtaining agency verification.
f) **Habitat Assessments.** Evaluate the potential for suitable habitat in the biological survey area for each species identified in the database and literature search.
g) **Native Wildlife Corridors and Nursery Sites.** Identify any wildlife corridors or nursery sites that occur within the biological survey area.
h) **Survey Results.** Describe all survey results and include a copy of any focused (e.g., rare plant, protocol special-status wildlife) biological resources survey reports.

Mapping and GIS Data

Provide detailed maps (at approximately 1:3,000 scale or similar), and all associated GIS data for the Biological Resources Technical Report and any supporting biological survey reports, including:

a) Biological survey area for each survey that was conducted
b) Vegetation communities and land cover types
c) Aquatic resource delineation
d) Special-status plant locations
e) Special-status wildlife locations
f) Avian point count locations
g) Critical habitat
h) California Coastal Commission or Bay Conservation and Development Commission jurisdictional areas

Attachment 3: Cultural Resource Technical Report Standards

Cultural Resource Inventory Report

Provide a cultural resource inventory report that includes archaeological, unique archaeological, and built-environment resources within all areas that could be affected by the proposed project including areas of indirect effect. The inventory report will include the results of both a literature search and pedestrian survey. The contents will address the requirements in *Archaeological Resource Management Reports: Recommended Contents and Guidelines*. The methodology and results of the inventory should be sufficient to provide the reader with an understanding of the nature, character, and composition of newly discovered and previously identified cultural resources so that the required recommendations about the resource(s) CRHR eligibility are clearly understood. No information regarding the location of the cultural resources will be included in these descriptions. The required Department of Parks and Recreation (DPR) 523 forms, including location information and photographs of the resources, are to be included in a removable confidential appendix to the report.[39]

The inventory report will meet the following requirements:

a) The report should clearly discuss the methods used to identify unique archaeological resources (e.g., how the determination was made about the resources' eligibility).
b) The report should identify large resources such as districts and landscapes where resources indicate their presence, even if federal agencies disagree. It is understood that often only a few contributing elements may be in the project area, and that the boundaries of the large resource may need to be revisited as part of future projects. It is acknowledged that boundaries of districts and landscapes can be difficult to define and there is not always good recorded data on these resources.
c) In the case of archaeological resources, the report should discuss whether each one is also a unique archaeological resource and explain why or why not.
d) Descriptions of resources should include spatial relationships to other nearby resources, raw materials sources, and natural features such as water sources and mountains.
e) The evidence that indicates a particular function or age for a resource should be explicitly described with a clear explanation, not simply asserted.

Cultural Resource Evaluation Report

Provide a cultural resource evaluation report. The report contents required by the state of California are outlined in the *Archaeological Resource Management Reports: Recommended Contents and Guidelines*. The evaluation report should also include:

a) Resource descriptions and evaluations together, and not in separate volumes or report sections. This will facilitate understanding of each resource.
b) An evaluation of each potential or eligible California Register of Historical Resources (CRHR) resource within the public archaeology laboratory (PAL) for all seven aspects of integrity[40] using specific examples for each resource. This evaluation needs to be included in the evaluation

---

39 Any aspect of the PEA and associated data that Applicants believe to be confidential will be provided in full but may be marked confidential if allowed pursuant to General Order 66 or latest applicable Commission rule (e.g., see Public Records Act Proceeding R.14-11-001).

40 The seven aspects of integrity are location, design, setting, materials, workmanship, feeling, and association, as defined in "***Types of Historical Resources and Criteria for Listing in the California Register of Historical Resources***" [14 CCR 4852(c)]).

report for all resources that could be affected by the project even if the resources were not previously evaluated. Previous evaluations should be reviewed to address change over time.

c) An evaluation of each potential or eligible CRHR resource within the PAL under all four criteria using specific examples for each resource. This evaluation needs to be included in the evaluation report for all resources that could be affected by the project even if the resources were not previously evaluated. The cultural resources professional should make their own recommendation regarding eligibility, which does not need to agree with previous recommendations for CRHR or NRHP, as long as it is clearly explained.
d) For **prehistoric archaeological resources**, Criteria 1, 2 and 3[41] should be explicitly considered. Research efforts to search for important events and persons related to the resource must be described. This evaluation needs to be included in the evaluation report for all resources that could be affected by the project even if the resources were not previously evaluated. The cultural resources professional should make their own recommendation, which does not need to agree with previous recommendations for CRHR or NRHP eligibility, as long as it is clearly explained.
e) While **potential unique archaeological resources** could be identified in the records search report or inventory report, the justification for each individual resource to be considered a resource under CEQA should be presented in this report.
f) If surface information collected during survey is sufficient to make an eligibility recommendation, this reasoning should be outlined explicitly for each resource. This is particularly the case for resources that are believed to have buried subsurface components.
g) If archaeological testing or additional historical research was required in order to evaluate a resource, the evaluation report will be explicit about why the work was required, the results for each resource, and the subsequent eligibility recommendation.
h) For large projects with multiple similar resources where the eligibility justifications for similar resources are essentially identical, it is acceptable to discuss these resources as a group. However, eligibility justifications for each individual resource is preferred, so if the grouping strategy is used, the criteria used to group resources must be clearly justified.
i) Large resources such as districts and landscapes may be challenging to fully evaluate in the context of a single project. CPUC encourages the identification and evaluation of these resources with the understanding that often only a few contributing elements may be located within the project area, and that the boundaries of the large resource may need to be revisited as part of future projects. It is understood that a full evaluation of the resource may be beyond the scope of one project. Regardless, the potential for the project to affect any resources within a district or landscape must be defined.

[41] Criteria for Designation on the California Register are as follows (defined in http://ohp.parks.ca.gov/?page_id=21238):

- Criterion 1: Associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States.
- Criterion 2: Associated with the lives of persons important to local, California or national history.
- Criterion 3: Embodies the distinctive characteristics of a type, period, region or method of construction or represents the work of a master or possesses high artistic values.
- Criterion 4: Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California or the nation.

Attachment 4: CPUC Draft Environmental Measures

About this Attachment: The following CPUC Draft Environmental Measures are provided for consideration during PEA development. They should be discussed with the CPUC's CEQA Unit Staff during Pre-filing, especially with respect to the development of Applicant Proposed Measures. The CPUC Draft Environmental Measures may form the basis for mitigation measures in the CEQA document if appropriate to the analysis of potentially significant impacts. These and other CPUC Draft Environmental Measures may be formally incorporated into Chapter 5 of future versions of the PEA Checklist.

5.1 Aesthetics

Aesthetics Impact Reduction During Construction

All project sites will be maintained in a clean and orderly state. Construction staging areas will be sited away from public view where possible. Nighttime lighting will be directed away from residential areas and have shields to prevent light spillover effects. Upon completion of project construction, project staging and temporary work areas will be returned to pre-project conditions, including re-grading of the site and re-vegetation or re-paving of disturbed areas to match pre-existing contours and conditions.

5.3 Air Quality

Dust Control During Construction

The Applicant shall implement measures to control fugitive dust in compliance with all local air district(s) standards. Dust control measures shall include the following at a minimum:

- All exposed surfaces with the potential of dust-generating shall be watered or covered with coarse rock to reduce the potential for airborne dust from leaving the site.
- The simultaneous occurrence of more than two ground disturbing construction phases on the same area at any one time shall be limited. Activities shall be phased to reduce the amount of disturbed surfaces at any one time.
- Cover all haul trucks entering/leaving the site and trim their loads as necessary.
- Use wet power vacuum street sweepers to sweep all paved access road, parking areas, staging areas, and public roads adjacent to project sites on a daily basis (at minimum) during construction. The use of dry power sweeping is prohibited.
- All trucks and equipment, including their tires, shall be washed off prior to leaving project sites.
- Apply gravel or non-toxic soil stabilizers on all unpaved access roads, parking areas, and staging areas at project sites.
- Water and/or cover soil stockpiles daily.
- Vegetative ground cover shall be planted in disturbed areas as soon as possible and watered appropriately until vegetation is established.
- All vehicle speeds shall be limited to fifteen (15) miles per hour or less on unpaved areas.
- Implement dust monitoring in compliance with the standards of the local air district.
- Halt construction during any periods when wind speeds are in excess of 50 mph.

5.5 Cultural Resources

Human Remains (Construction and Maintenance)

Avoidance and protection of inadvertent discoveries that contain human remains shall be the preferred protection strategy with complete avoidance of such resources ensured by redesigning the project. If human remains are discovered during construction or maintenance activities, all work shall be diverted from the area of the discovery, and the CPUC shall be informed immediately. The Applicant shall contact the County Coroner to determine whether or not the remains are Native American. If the remains are determined to be Native American, the Coroner will contact the Native American Heritage Commission (NAHC). The NAHC will then identify the person or persons it believes to be the most likely descendant of the deceased Native American, who in turn would make recommendations for the appropriate means of treating the human remains and any associated funerary objects.

If the remains are on federal land, the remains shall be treated in accordance with the Native American Graves Protection and Repatriation Act (NAGPRA). If the remains are not on federal land, the remains shall be treated in accordance with Health and Safety Code Section 7050.5, CEQA Section 15064.5(e), and Public Resources Code Section 5097.98.

5.8 Greenhouse Gas Emissions

Greenhouse Gas Emissions Reduction During Construction

The following measures shall be implemented to minimize greenhouse gas emissions from all construction sites:

- If suitable park-and-ride facilities are available in the project vicinity, construction workers shall be encouraged to carpool to the job site.
- The Applicant shall develop a carpool program to the job site.
- On road and off-road vehicle tire pressures shall be maintained to manufacturer specifications. Tires shall be checked and re-inflated at regular intervals.
- Demolition debris shall be recycled for reuse to the extent feasible.
- The contractor shall use line power instead of diesel generators at all construction sites where line power is available.
- The contractor shall maintain construction equipment per manufacturing specifications.

5.19 Utilities and Service Systems

Notify Utilities with Facilities Above and Below Ground

The Applicant shall notify all utility companies with utilities located within or crossing the project ROW to locate and mark existing underground utilities along the entire length of the project at least 14 days prior to construction. No subsurface work shall be conducted that would conflict with (i.e., directly impact or compromise the integrity of) a buried utility. In the event of a conflict, areas of subsurface excavation or pole installation shall be realigned vertically and/or horizontally, as appropriate, to avoid other utilities and provide adequate operational and safety buffering. In instances where separation between third-party utilities and underground excavations is less than 5 feet, the Applicant shall submit the intended construction methodology to the owner of the third-party utility for review and approval at least 30 days prior to construction. Construction methods shall be adjusted as necessary to assure that the integrity of existing utility lines is not compromised.

5.20 Wildfire

Construction Fire Prevention Plan

A project-specific Construction Fire Prevention Plan for both construction and operation of the project shall be submitted for review prior to initiation of construction. A draft copy of the Plan shall be provided to the CPUC and state and local fire agencies at least 90 days before the start of any construction activities in areas designated as Very High or High Fire Hazard Severity Zones. Plan reviewers shall also include

federal, state, or local agencies with jurisdiction over areas where the project is located. The final Plan shall be approved by the CPUC at least 30 days prior to the initiation of construction activities. The Plan shall be fully implemented throughout the construction period and include the following at a minimum:

- The purpose and applicability of the Plan
- Responsibilities and duties
- Preparedness training and drills
- Procedures for fire reporting, response, and prevention that include:
    - Identification of daily site-specific risk conditions
    - The tools and equipment needed on vehicles and to be on hand at sites
    - Reiteration of fire prevention and safety considerations during tailboard meetings
    - Daily monitoring of the red-flag warning system with appropriate restrictions on types and levels of permissible activity
- Coordination procedures with federal and local fire officials
- Crew training, including fire safety practices and restrictions
- Method(s) for verifying that all Plan protocols and requirements are being followed

A project Fire Marshal or similar qualified position shall be established to enforce all provisions of the Construction Fire Prevention Plan as well as perform other duties related to fire detection, prevention, and suppression for the project. Construction activities shall be monitored to ensure implementation and effectiveness of the Plan.

Fire Prevention Practices (Construction and Maintenance)

The Applicant shall implement ongoing fire patrols during the fire season as defined each year by local, state, and federal fire agencies. These dates vary from year to year, generally occurring from late spring through dry winter periods. During Red Flag Warning events, as issued daily by the National Weather Service, all construction/maintenance activities shall cease, with an exception for transmission line testing, repairs, unfinished work, or other specific activities which may be allowed if the facility/equipment poses a greater fire risk if left in its current state.

All construction/maintenance crews and inspectors shall be provided with radio and cellular telephone access that is operational in all work areas and access routes to allow for immediate reporting of fires. Communication pathways and equipment shall be tested and confirmed operational each day prior to initiating construction/maintenance activities at each work site. All fires shall be reported to the fire agencies with jurisdiction in the area immediately upon discovery of the ignition.

All construction/maintenance personnel shall be trained in fire-safe actions, initial attack firefighting, and fire reporting. All construction/maintenance personnel shall be trained and equipped to extinguish small fires in order to prevent them from growing into more serious threats. All construction/maintenance personnel shall carry at all times a laminated card and be provided a hard hat sticker that list pertinent telephone numbers for reporting fires and defining immediate steps to take if a fire starts. Information on laminated contact cards and hard hat stickers shall be updated and redistributed to all construction/maintenance personnel and outdated cards and hard hat stickers shall be destroyed prior to the initiation of construction/maintenance activities on the day the information change goes into effect.

Construction/maintenance personnel shall have fire suppression equipment on all construction vehicles. Construction/maintenance personnel shall be required to park vehicles away from dry vegetation. Water tanks and/or water trucks shall be sited or available at active project sites for fire protection during construction. The Applicant shall coordinate with applicable local fire departments prior to construction/maintenance activities to determine the appropriate amounts of fire equipment to be carried on vehicles and, should a fire occur, to coordinate fire suppression activities.

GENERAL ORDER 177
ESTABLISHING RULES FOR APPLICATION, NOTIFICATION, AND REPORTING REQUIREMENTS FOR GAS INFRASTRUCTURE LOCATED IN CALIFORNIA

(Adopted December 1, 2022 by Decision 22-12-021)

SECTION I. GENERAL

Pursuant to the provisions of Sections 451, 454, 701, 702, 761, 762, 768, 770, and 1001 of the Public Utilities Code:

IT IS HEREBY ORDERED that no gas utility as defined in Public Utilities Code Section 891, now subject, or which hereafter may become subject, to the jurisdiction of this California Public Utilities Commission, shall begin construction in this state of any new plant, or modification, alteration, or addition to an existing plant, or facilities, without first complying with the provisions of this General Order.

SECTION II. PURPOSE OF THIS GENERAL ORDER

The Commission has adopted General Order 177 to be responsive to:

- the requirements of the California Environmental Quality Act (CEQA) (Public Resources (Pub. Res.) Code § 21000 et seq.);
- the need for public notice and the opportunity for affected parties and members of the public to be heard by the Commission;
- the obligation of the utilities to serve their customers in a timely and efficient manner; and
- the need to review significant investments in gas infrastructure for consistency with California's long-term greenhouse gas emission reduction, air quality, equity, safety, and reliability goals.

SECTION III. DEFINITIONS

Criteria pollutant – A pollutant for which there is an established National Ambient Air Quality Standard (40 C.F.R. Part 50). The criteria pollutants are carbon monoxide (CO), particulate matter, ozone (O3) sulfur dioxide (SO2), lead (Pb), and nitrogen dioxide (NO2).

Expansion of an existing gas storage field – This means the expansion of the property boundary of a Commission-authorized storage field to increase natural gas storage inventory capacity.

Negative Declaration – A written statement briefly describing the reasons that a proposed project will not have a significant effect on the environment and does not require the preparation of an environmental impact report.[1]

Non-attainment area – The term "non-attainment area" means, for any air pollutant, an area which is designated "non-attainment" with respect to that pollutant within the meaning of Section 7407(d) of the Clean Air Act (CAA). CAA Section 7501(2).

Project – construction or physical modification of any gas plant with independent utility in the gas system, including compressor or regulator stations, any pipeline or pipeline extension, and any expansion of an existing gas storage field.[2]

Proponent's Environmental Assessment (PEA) – A document prepared by an applicant which includes all information and studies required under the Commission's Information and Criteria List adopted pursuant to Chapter 1200 of the Statutes of 1977 (Government Code Sections 65940 through 65942), which is published on the Commission's website (Section 1701, Public Utilities Code).

---

[1] See Pub. Res. Code Sections 21064 and the guidelines for implementation of CEQA, California Code of Regulations, Title 14, Sections 15000 *et seq.*

[2] Does not include: (a) any installation of environmental monitoring equipment, or any soil or geological investigation, or work to determine feasibility of the use of a particular site for the proposed facilities that does not result in a serious or major disturbance to an environmental resource; (b) gas service pipelines connecting to customer facilities, service laterals, and/or service pipes, as used in utility Tariff Rule 16, or work on customer meters; (c) gas corporation office buildings; (d) replacement of an emergency diesel back-up generator with a lower-emission emergency back-up generator.

Sensitive Receptors – include but are not limited to any living quarters such as private homes, condominiums, apartments, retirement homes, prisons, dormitories, or other temporary or permanent housing; education institutions, including preschools and schools operating kindergarten or any of grades 1 to 12, inclusive; day care centers; and health care facilities, including hospitals, nursing homes, and long-term care and hospice facilities.

Serious, severe and extreme non-attainment areas – Non-attainment areas designated as "serious," "severe" or "extreme" by the US Environment Protection Agency in the "Green Book" of National Ambient Air Quality Standards (NAAQS) based on the area's design value for a specific criteria pollutant type.

Toxic air contaminant – an air pollutant which may cause or contribute to an increase in mortality or an increase in serious illness, or which may pose a present or potential hazard to human health, pursuant to Section 39655 of the California Health and Safety Code.

SECTION IV. NEED FOR COMMISSION AUTHORIZATION

A. Certificate of Public Convenience and Necessity (CPCN)

1. No gas corporation shall begin any gas project meeting the criteria below without first submitting an application for a CPCN:

   a. project cost exceeds $75 million;[3] or

   b. (1) the project is located within 1,000 feet of a sensitive receptor; and (2) operation of the completed project by the gas corporation requires a permit from the relevant

[3] Applicants shall determine project costs using a cost estimate consistent with Association for the Advancement of Cost Engineering methodologies appropriate to the project's stage of development and anticipated technical construction or scope change risk. Cost estimates shall include direct and indirect costs. Direct costs are costs for labor, material, services and other expenses incurred to design, engineer, plan, permit, execute and document a project. This includes the development costs, project management, material, construction, inspection, environmental and other project execution activities. Indirect costs are for Administrative & General, purchasing, warehousing, pension and benefits, payroll tax and other costs that are overhead in nature, as well as Allowance for Funds Used During Construction (AFUDC) and property taxes. Cost estimates shall take into consideration the design of the project, the expected duration of construction, an estimate of the effects of economic inflation, and any known engineering difficulties associated with the project.

local air quality district for: (a) an increase in levels of a toxic air contaminant;[4] or (b) an increase in levels of a criteria air pollutant, if the area is listed as a serious, severe, or extreme non-attainment area for that pollutant.

2. The Commission may, via decision, change the $75 million threshold in Section IV(A)(1) from time to time, as appropriate, based on changes to the Consumer Price Index, or for other reasons.

B. Compliance with Section IV(A)(1) is not required for any of the following exemptions:

   a. any plant, line, extension, repair, replacement, or modification of existing facilities or structures that is required pursuant to a California Geologic Energy Management Division (CalGEM) Emergency Order or regulation, the Pipeline and Hazardous Materials Safety Administration (PHMSA), this Commission, or any other regulatory agency for safety reasons; or

   b. projects that have a scheduled in-service date occurring before January 1, 2024 and projects for which an application for approval has been submitted to an air quality management district for compliance with an environmental rule prior to the effective date of this General Order; or,

   c. emergency projects (for example: repairs, upgrades, replacements, restorations) as defined by CEQA Guideline § 15269 and Pub. Res. Code §§ 21060.3 and 21080(b)(2) & (4) to ensure safe and reliable gas supplies.

SECTION V. NOTICE

A. Provision of Notice of a project requiring a CPCN

Notice of a project requiring a CPCN shall be provided as follows:[5]

[4] Increase in levels of a toxic air contaminant is defined as an increase exceeding (1) de minimis levels or (2), where relevant, allowable limits set by the local air quality district.

[5] To the extent possible, notices should be provided in a format accessible to the visually impaired.

1. By electronic service to the planning commission and the legislative body for each county or city or tribal land in which the proposed facility would be located, the California Energy Commission, the State Department of Transportation and its Division of Aeronautics, the Secretary of the California Natural Resources Agency, the Department of Fish and Wildlife, the Department of Health Services, the State Water Resources Control Board, the California Air Resources Board, and other interested parties having requested such notification. The utility shall also give notice to the following agencies and subdivisions in whose jurisdiction the proposed facility would be located: the Air Pollution Control District, the California Regional Water Quality Control Board, the State Department of Transportation's District Office, and any other State or Federal agency, including but not limited to PHMSA and CalGEM, which would have jurisdiction over the proposed construction;

2. By mail to all owners of land on which the proposed facility would be located and owners of property within 300 feet of the right-of-way as determined by the most recent local assessor's parcel roll available to the utility at the time notice is sent;

3. By advertisement, not less than once a week, two weeks successively, in a newspaper or newspapers of general circulation in the county or counties in which the proposed facilities will be located, the first publication to be not later than ten days after filing of the application; and

4. By posting a notice on-site and off-site where the project would be located. A copy of the notice shall be delivered to the Commission's Public Advisor and the Energy Division on the same day it is mailed. A declaration of mailing and posting as required by this subsection shall be filed with the Commission within five (5) days of completion;

5. By publishing the notice prominently on the website of the entity seeking a CPCN; and

6. By serving the notice to relevant service lists, including Rulemaking 20-01-007, or a successor proceeding, and the gas corporation's most recent general rate case application proceeding.

B. Contents of Notices

Each gas corporation shall consult with the Commission's Energy Division and Public Advisor to develop and approve a standard for the notice required by Section V(A) and Section V(C), which shall contain, at a minimum, the following information:[6]

1. The application number assigned by the Commission;

2. A concise description of the proposed project, its purpose and its location in terms clearly understandable to the average reader;

3. A summary of potential environmental impacts including criteria air pollutant, toxic air contaminant and greenhouse gas emissions from the proposed project and any measures taken or proposed by the utility to reduce potential environmental impacts;

4. Instructions on obtaining or reviewing a copy of the application, including the Proponent's Environmental Assessment (PEA) or available equivalent, from the utility;

5. The applicable procedure for protesting the application, including how to electronically file comments; and

6. A short summary of information provided to the Commission under Section VI below.

C. Notification Requirements for Claimed Exemptions

1. Gas corporations invoking exemptions (a) – (b) listed under Section IV(B) shall comply with the following notification requirements no later than 60 days prior to commencing the project. Gas corporations invoking exemption (c) shall comply with the following notification requirements no later than 60 days of initiating the project:

   a. notify the Commission through the submittal of an information-only Tier 1 advice letter pursuant to General Order 96-B, or its successor;

[6] Commission Staff shall post submitted notices to the Commission's webpage on Long Term Gas Planning within 30 days of receiving it.

b. inform relevant governmental entities, including the planning commission and the legislative body for each county or city in which the proposed facility would be located, or the work would occur, any other agency that would have jurisdiction over the proposed action, and any other entities that have requested such notifications by direct mail, or otherwise requested means; and

c. notify the general public by direct mail to all owners and occupants of land on which the proposed facility or action would be located, and the owner and occupants of property within 300 feet of the facilities or action as determined by the most recent local assessor's parcel roll available to the utility at the time notice is sent.

2. Notices of exemptions shall contain, at a minimum, the following information:

a. Any relevant Commission application or advice letter number, and information on how to contact the Commission's Consumer Affairs Branch;

b. A concise description of the proposed project, its purpose and its location;

c. A summary of potential environmental impacts including emissions from the proposed facilities and any measures taken or proposed by the utility to reduce potential environmental impacts;

d. An explanation of why the project is exempted under General Order 177; and

e. Information on ways to obtain more information from the utility about the proposed project.

SECTION VI. INFORMATION REQUIRED FOR CPCN APPLICATIONS

A. An application for a CPCN shall include or have attached to it the following:[7]

1. Statement of the reasons why and facts showing that the completion and operation of the proposed facility is necessary to promote the safety, health, comfort, and convenience of the public, including:

[7] CPCN applications for storage expansion projects are not required to include an analysis of non-pipeline alternatives, as outlined in Section VI(A)(4)(a), nor an analysis of alternative routes, as outlined in Sections VI(A)(4)(b), VI(A)(4)(d) and VI(A)(5)(c).

a. an explanation of why existing facilities are inadequate or need repair to meet applicable safety or reliability standards;

b. need for the project when accounting for projected declines in gas demand over the project's estimated useful life;

c. impact of the proposed project on expected future gas demand;

d. estimated useful life of the project;

e. consistency with applicable long-term gas infrastructure orders adopted by the Commission including in the Commission's Long-Term Gas Planning proceeding (Rulemaking 20-01-007) and successor proceedings;

2. Safety and reliability information, including planned provisions for emergency operations and shutdowns, and affected infrastructure locations;

3. Summary of the potential environmental impact of the proposed project, including in the context of the state's greenhouse gas emission reduction and carbon neutrality goals;

4. Analysis of alternatives, including non-pipeline alternatives, and a demonstration that no reasonable alternatives to the proposed project exist.

   a. Examination of non-pipeline alternatives shall consider:

      1. The customers to be served by the proposed project, and whether direct support for electrification, consumption reduction (energy efficiency, conservation and demand response), and/or alternative methods to provide necessary energy supplies for these customers could be accomplished at a lower cost and/or with lesser environmental impact than the proposed project;

      2. The potential environmental impacts of alternatives, including emissions; and

      3. An estimate of the costs of the environmental and health impacts of the project, as well as the direct and indirect costs of the project.

b. Reasons for adoption of the route or location selected, including comparison with alternative routes or locations, the advantages and disadvantages of each, the comparative availability of alternate routes or locations, and justification for the proposed route or location;

c. If the proposed project is located within an Environmental and Social (ESJ) Community as defined in the most recent version of the Commission's ESJ Action Plan, the discussion of alternatives shall discuss whether it is possible to relocate the project and, if so, steps taken to locate the project outside such areas;

d. A listing of the governmental agencies with which proposed route reviews have been undertaken, including a written agency response to the applicant's written request for a brief position statement by each agency.[8] In the absence of a written agency position statement, the utility may submit a statement of its understanding of the position of such agencies;

e. The discussion of alternatives shall include a cost analysis comparing the proposed project with any feasible alternatives, including non-pipeline alternatives, calculated over the lifetime of the project; and,

f. The discussion of alternatives shall consider pollution burden in the project location and shall discuss steps taken to minimize gas infrastructure density and/or ensure substantial economic benefits to local residents.

5. Basic project information, including:

   a. A schedule showing the program for right-of-way acquisition, design, material acquisition, construction, testing and operating dates;

   b. Available site information, including maps and description; present, proposed, and ultimate development; as appropriate, geological, aesthetic, ecological, tsunami, seismic, water supply, population, and load center data;

[8] Such listing shall include the Native American Heritage Commission, which shall constitute notice on California Indian Reservation Tribal governments.

c. A map of suitable scale of the proposed routing showing details of the right-of-way in the vicinity of settled areas, parks, recreational areas, scenic areas, and existing electrical transmission lines within one mile of the proposed route;

d. Preliminary engineering and design information on the project; and,

e. A project implementation plan showing how the project would be contracted for and constructed. This plan shall show how all major tasks would be integrated and shall include a proposed timetable identifying the design, construction, completion, and operation dates for each major component of the plant, line, or extension.

6. Cost information:

a. An estimate of "fully loaded" costs, including direct and indirect costs, taking into consideration the design of the project, the expected duration of construction, an estimate of the effects of economic inflation and any known engineering difficulties associated with the project, and including preliminary estimates of the costs of financing, construction, and operation, including fuel, maintenance, and dismantling or inactivation after the useful life of the plant, line, or extension;

b. A demonstration of the financial impact of the plant, line, or extension construction on the utility's ratepayers, stockholders, and on the cost of the utility's borrowed capital. The cost analyses shall be performed for the projected useful life of the plant, line, or extension, including dismantling or inactivation after the useful life of the plant, line, or extension;

c. A design and construction management and cost control plan which indicates, to the extent feasible, the contractual and working responsibilities and interrelationships between the utility's management and other major parties involved in the project. This plan shall also include a construction progress information system and specific cost controls; and

d. An estimate of the guaranteed cost of capital investment benefit to the utility from the project.

7. Equity information:

a. A detailed statement explaining how the project is consistent with the goals of the Commission's ESJ Action Plan; and,

b. A summary of outreach to, and engagement undertaken with, local communities (including relevant community-based organizations), likely to be impacted by the proposed project.

8. A PEA, prepared according to the most recent version of the Commission's *Guidelines for Energy Project Applications Requiring CEQA Compliance: Pre-filing and Proponent's Environmental Assessments* (PEA Guidelines).[9]

B. No later than 30 days after the filing of the application, the Commission staff shall review it and notify the utility of any deficiencies in the information and data submitted in the application. The utility shall correct any deficiencies within 60 days thereafter or explain in writing to the Commission staff why it is unable to do so. It shall include in any such written response an estimate of when it will be able to correct the deficiencies. Upon correction of any deficiencies in the application, the Commission staff shall determine whether CEQA applies, and if so, whether a Negative Declaration or an EIR has been or will be prepared. The process required by CEQA, and Commission Rule 17.1, will be followed in addition to the Commission's standard decision-making process for applications. The Commission shall issue a decision within the time limits prescribed by Government Code Section 65920 et seq. (the Permit Streamlining Act).

C. Pursuant to the most recent version of the Commission's PEA Guidelines, applicants shall initiate a prefiling meeting with Commission CEQA Staff no later than 60 days prior to filing of the application to assist with ensuring the completeness of the CPCN filing. With the exception of CPCN applications filed within 120 days from issuance of the decision adopting this General Order, applicants shall submit a draft PEA to Commission CEQA Staff at least three months prior to application filing.

[9] 2019 Version available as of September 13, 2022 at: https://www.cpuc.ca.gov/-/media/cpuc-website/files/legacyfiles/c/6442463239-ceqa-pre-filing-guidelines-pea-checklist-nov-2019.pdf. Applicants may provide Section VI required information elements within the PEA so long as a clear mapping to the location of the required information within the PEA is also provided.

SECTION VII. COMPLAINTS AND PREEMPTION OF LOCAL AUTHORITY

A. Complaints may be filed with the Commission for resolution of any alleged violations of this General Order pursuant to the Commission's Rules of Practice and Procedure. A complaint which does not allege that the matter has first been brought to Commission staff for informal resolution may be referred to staff to attempt to resolve the matter informally.

B. This General Order clarifies that local jurisdictions acting pursuant to local authority are preempted from regulating gas utility facilities constructed by public utilities subject to the Commission's jurisdiction. However, in locating such projects, the public utilities shall consult with local agencies regarding land use matters. In instances where the public utilities and local agencies are unable to resolve their differences, the local agency should promptly file a complaint with the Commission.

SECTION VIII. REVIEW OF GAS INFRASTRUCTURE PROJECTS BY OTHER STATE OR FEDERAL AGENCIES

Nothing in this General Order shall be construed to preempt or otherwise limit the jurisdiction of state agencies other than this Commission, or federal agencies, to exercise the full range of their jurisdiction under state or federal law over facilities subject to this General Order.

SECTION IX. CEQA COMPLIANCE

Construction of facilities for which a CPCN is required pursuant to this General Order shall not commence without either a finding that it can be seen with certainty that there is no possibility that the construction of those facilities may have a significant effect on the environment or that the project is otherwise exempt from CEQA, or the adoption of a final EIR or Negative Declaration.

SECTION X. REPORT OF PLANNED GAS INVESTMENTS

A. Subject to any new reporting requirements that may be established in Rulemaking 20-01-007, or a successor proceeding, every gas corporation is required to serve and file, in Rulemaking 20-01-007 or a successor proceeding, a Report of Planned Gas Investments for any project expected to exceed $50 million or meeting the criteria in Section IV(A)(1)(b), using a 10-year forecast for investments, on or before March 1 of each year,

starting March 1, 2023.[10] Gas corporations shall include in each annual report the planned investments meeting the criteria included in Section IV(A)(1) that they anticipate claiming as exempt under Section IV(B) above.

B. The report shall include the following:[11]

1. A list of projects, arranged in chronological order by planned service date, for which a CPCN has been received but which have not yet been placed in-service;
2. A list of planned projects, arranged in chronological order by the planned in-service date, on which proposed route or corridor reviews are being undertaken with governmental agencies or for which applications have already been filed; and
3. A list of planned projects or planning corridors, arranged in chronological order by the planned in-service date, on which planning corridor or route reviews have not started, which will be needed during the forecast periods.

C. For each project listed in the report under Section X(B), the report should include the following information:

1. relevant size parameters (e.g., length in miles);
2. planned service date;
3. cities and counties involved; including whether the planned project is located with an ESJ community as defined in the Commission's ESJ Action Plan;

---

[10] Cost estimates for purposes of this reporting threshold shall include direct and indirect costs. Direct costs are costs for labor, material, services and other expenses incurred to design, engineer, plan, permit, execute and document a project. This includes the development costs, project management, material, construction, inspection, environmental and other project execution activities. Indirect costs are for Administrative & General, purchasing, warehousing, pension and benefits, payroll tax and other costs that are overhead in nature, as well as AFUDC and property taxes. Cost estimates for reporting purposes shall take into consideration the design of the project, the expected duration of construction, an estimate of the effects of economic inflation, and any known engineering difficulties associated with the project.

[11] For planned investments meeting the criteria included in Section IV(A)(1) that they anticipate claiming as exempt under Section IV(B) above, gas corporations are not required to include in their annual reports information required under Section X(C)(6) and under Section X(D).

4. detailed description of the gas infrastructure project including information on what will be modified or constructed, what specific actions will be taken, and why the project will be conducted;
5. the projected capital expenditure;
6. cumulative environmental impact of successive projects of the same types, in the same place;
7. a description of the cost drivers; and
8. other relevant information.

D. For each project listed in the report under Section X(B) that is expected to be in-service within five years of the date the report is submitted, the report should include the following additional information:

1. high level analysis of non-pipeline alternatives considered;[12]
2. total projected quantified reliability cost savings over the expected life of the project;[13]
3. projected construction expenditures; and
4. projected operating costs over the expected life of the asset as of the year the report is filed (in both nominal and net-present value terms).

[12] Annual Reports of Planned Gas Investments served and filed by independent storage providers are not required to include the information required in Section X(D)(1).

[13] Based on inclusion of an appropriate number of 1 in 10 days. The definition of the gas demand on a 1-in-10 winter day shall reflect the approach used by the gas utility in its design standard, including adjustment based on changing weather patterns, adapted to extend over the life of the project. Methods and assumptions used to make the projection shall be included in the application.

Please note that new Connecticut county level geographies are not availabe within the map.

About datasets used in this table

Value Notes

⚠ Estimates are not comparable to other geographic levels due to methodology differences that may exist between different data sources.

Some estimates presented here come from sample data, and thus have sampling errors that may render some apparent differences between geographies statistically indistinguishable.] Click the Quick Info ⓘ icon to the left of each row in T learn about sampling error.

In Vintage 2022, as a result of the formal request from the state, Connecticut transitioned from eight counties to nine planning regions. For more details, please see the Vintage 2022 release notes available here: Release Notes.

The vintage year (e.g., V2022) refers to the final year of the series (2020 thru 2022). Different vintage years of estimates are not comparable.

Users should exercise caution when comparing 2017-2021 ACS 5-year estimates to other ACS estimates. For more information, please visit the 2021 5-year ACS Comparison Guidance page.

Fact Notes

- **(a)** Includes persons reporting only one race
- **(c)** Economic Census - Puerto Rico data are not comparable to U.S. Economic Census data
- **(b)** Hispanics may be of any race, so also are included in applicable race categories

Value Flags

- **-** Either no or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest or upper interval of an open ende
- **F** Fewer than 25 firms
- **D** Suppressed to avoid disclosure of confidential information
- **N** Data for this geographic area cannot be displayed because the number of sample cases is too small.
- **FN** Footnote on this item in place of data
- **X** Not applicable
- **S** Suppressed; does not meet publication standards
- **NA** Not available
- **Z** Value greater than zero but less than half unit of measure shown

QuickFacts data are derived from: Population Estimates, American Community Survey, Census of Population and Housing, Current Population Survey, Small Area Health Insurance Estimates, Small Area Income and Poverty Estimates, Sta Housing Unit Estimates, County Business Patterns, Nonemployer Statistics, Economic Census, Survey of Business Owners, Building Permits.
