

# Gas Scheduling Reduction Codes

**CRN** (Confirmation Response Not Received) - If there is no Supply Confirmation quantity, Envoy will reduce the nomination quantity to zero.

**CPR** (Confirming Party Reduction) - If the Supply Confirmation quantity is less than the Nomination Quantity, Envoy will reduce the Market Nomination quantity to equal the Supply Confirmation.

**ECM** (Exceeded Contract MDQ) - If the total nomination quantity for the firm RPAC exceeds its firm capacity, Envoy will reduce the nominations to equal the capacity.

**ECM** (Exceeded Contract MDQ) - If the total nomination quantity for the interruptible RPAC exceeds its interruptible capacity, Envoy will reduce the nominations to equal the capacity.

**EPM** (Exceeded Point MDQ) - If the supply confirmation quantity exceeds the MDQ for the CP agreement, Envoy will reduce confirmations.

**QER** (Quantity Exceeds MDQ of Associated Contract) - There is a special group of California Producers with a group MDV. If the group's confirmations exceed the group's MDV, then the confirmations for one specific CP Agreement are reduced.

**OFO-I** (Operational Flow Order-Interruptible injections) - If an OFO has been declared and there is insufficient Interruptible injection capacity, Envoy will reduce interruptible storage injections by price.

**SRP** (Storage Ratchet Provision) - If, during the winter balancing season, we are in the 70% or 90% balancing regime, Envoy will reduce interruptible storage withdrawals by price.

**OFO-F** (Operational Flow Order-Firm injections) - If specified conditions have been met on an OFO day, Envoy will reduce firm storage injections.

**CBL-R** (Contract Balancing-Receipt Point) - This reduction reason applies to reductions to the RPAC as a market contract when the RPAC is balanced.

**CBL-P** (Contract Balancing-Pool) - This reduction reason applies to reductions to the CGPL as a market contract when the CGPL is balanced.

**PBD** (Pipeline Balancing of Deliveries at a Location) - This reduction reason applies to reductions to the OSD as a market contract when the OSD is balanced.

**PCC-R** (Pipeline Capacity Constraint-Receipt Point) - This reduction reason applies to reductions to the RPAC as a market contract when the Receipt Point is balanced.

**PCC-S** (Pipeline Capacity Constraint-Sub Zone) - This reduction reason applies to reductions to the RPAC as a market contract when the sub-zone is balanced.

**PCC-Z** (Pipeline Capacity Constraint-Zone) - This reduction reason applies to reductions to the RPAC as a market contract when the zone is balanced.

**PCC-C** (Pipeline Capacity Constraint-System Capacity) - This reduction reason applies to reductions to the RPAC as a market contract when the system is balanced.

**IBQ** (Insufficient Backhaul Quantity) - This reduction reason applies to the reductions to the OSD as a Supply contract when the system is balanced.

**REI** (Reinstatement) - This code applies to reinstatements that occur to various contracts once all the confirmation rules have been satisfied.

**PRR** (Pipeline Reduction at Receipt) - The Upstream Operator scheduled less than what was confirmed.
