

ASPIRE 2045

SoCalGas' Sustainability Strategy

Sustainability at SoCalGas means innovating our business to create lasting benefits for stakeholders by doing the right thing, championing people, and shaping the future. ASPIRE 2045 is our strategy to further integrate sustainability across our business.

ASPIRE 2045 is focused on creating a strong positive impact on communities and achieving greater business strength in the following five areas:

Accelerating the Transition to Clean Energy

SoCalGas currently delivers 5% renewable natural gas to customers, conducts clean energy RD&D projects, and has proposed developing Angeles Link as a clean renewable hydrogen energy infrastructure system to decarbonize hard-to-abate sectors in Southern and Central California.

Protecting the Climate and Air Quality in Our Communities

We have reduced gas system methane emissions by 37% since 2015, more than one-third of our fleet is comprised of alternative fuel vehicles, and we use fuel cells to reduce emissions from company facilities.

Increasing Clean Energy Access and Affordability

Our energy efficiency programs have saved customers nearly \$360 million and more than 240 million therms of natural gas in the last five years – that's enough natural gas to power over 600,000 homes for a year. SoCalGas' customer assistance programs also help make energy bills more affordable.

Advancing a Diverse, Equitable and Inclusive Culture for All

We invested more than \$6 million during 2022 in underserved and Black, Indigenous and People of Color (BIPOC) communities to achieve measurable social impact, nearly 43% of our 2022 purchases were with diverse suppliers, and our workforce includes 73% people of color.

Achieving World-Class Safety

SoCalGas' damage prevention program has helped decrease pipeline damage from customer and contractor digging by more than 19% since 2020. Our comprehensive approach to safety also includes pipeline system safety programs, emergency management and response, and leveraging innovations, such as fiber optic system monitoring sensors.

The Way Forward

For SoCalGas, sustainability is our path to a brighter future for our business and all of those we serve – our customers, our employees, and our state. The energy evolution is the next chapter in our story of service to Californians.
