## SoCalGas Announces New Indoor Air Quality Online Resource

LOS ANGELES – April 6, 2016 – Southern California Gas Co. (SoCalGas) today announced it has launched an online resource, “Understanding Indoor Air Quality in Your Home,” for residents of Porter Ranch and the surrounding communities who have questions about indoor air quality.

This resource provides links to information about indoor air quality generally, common household products that may impact indoor air quality, and strategies to improve the air quality of homes, which includes the importance of keeping homes ventilated.

“We are hearing from some residents who have questions about indoor air quality,” said Gillian Wright, SoCalGas vice president of customer services. “Consistent with our ongoing commitment to support the community, we have established this new source of information on indoor air quality as a resource for residents.”

SoCalGas has been committed to doing what it can with respect to air quality in the community since the earliest days of the Aliso Canyon gas leak when the company began monitoring air quality on a daily basis. Community air quality monitoring efforts are ongoing. SoCalGas also recently completed indoor air quality screening in a sampling of homes in the area of the Porter Ranch community. For the homes that were screened, no levels of mercaptans were detected inside homes and levels of methane were well within acceptable background levels.

Providing dedicated customer service to residents impacted by the leaking well at Aliso Canyon is one of [five commitments](#) SoCalGas made to emphasize the company's dedication to restoring trust and continuing support for the community.
