

NEW CONSTRUCTION SERVICE IMPROVEMENT

MULTI-FAMILY THREE-TIER METER MANIFOLD SYSTEMS

SoCalGas® is now offering builders of new multi-family residential construction projects the option of specifying a three-tier meter configuration for their natural gas individually-metered manifold systems.

Stacking the natural gas meters three rows high can reduce construction costs by enclosing more meters in a smaller space than a two-tier or single-tier configuration.

The three-tier option is available immediately for both standard pressure and 2PSIG (two-pounds-per-square-inch gauge) pressure systems.

This service improvement from SoCalGas is the result of valuable feedback and input received from the residential new construction community as part of a review of our requirements to find ways to serve builders better.

FOR MORE INFORMATION
about this new meter
configuration option please
contact your project's
assigned SoCalGas field
planning associate.
