Project Address City State ZIP

Dwelling Units
Number of Dwelling Units Participating in the 2 PSIG Program

Community Facility Meters
Number of Community Facility Meters Participating in the 2 PSIG Program (Note: community facility meters are for recreation centers, pool heaters, spas, laundry rooms, etc.)

BUILDER INFORMATION

Builder Name Contact Person

Builder Address City State ZIP

PROGRAM QUALIFICATIONS

Builder Initials

Initials required. Builder must comply with all of the following qualifications:

- Individual dwelling unit utility meter is required.
Multiple pressure systems on the same manifold are not permitted.
House line stubs at meter manifold must be 1-inch solid pipe fittings secured properly to hold a minimum of 10 lbs. of weight.
A Continuous Service Agreement is required for rental projects.

Builder Initials

Initials required. Builder must comply with all of the listed qualifications. Acceptable locations for regulators, shut-off valves, manifolds, and pressure tap outlets are as follows:

- Builder shall install step-down regulator(s) in a safe and readily accessible location that has adequate room to work (two feet clearance front and sides) and must be reached safely between one and five feet above ground level. Examples of suitable locations provided the above guidelines are followed: garage, water heater closet, utility room and outside wall of the unit it is serving.
Regulators are not allowed above parking spaces, above lanes of traffic (underground parking structures) or in attics.
Builder shall install a shut-off valve, step-down regulator, union, tee (to be used as a pressure tap) and a second shut-off valve per the step-down regulator manifold diagram shown on page 2 of this request form.
Step-down regulators must be installed per manufacturer's instructions.

AGREEMENT SIGNATURE

My signature represents my understanding that failure to comply with all the qualifications and follow the step-down regulator and/or manifold installation specifications noted on this form will result in SoCalGas® not being able to initiate 2PSIG service as requested.
