Air Quality Permit Application Service

A  Sempra Energy™ company

Air quality permitting services from The Gas Company.[®]

By providing the accurate preparation of all information and calculations required by your air quality district, PermitWorks[™] helps to ensure timely and successful permit issuance for your company's equipment.

What the service delivers.

PermitWorks is a customized permitting service developed by The Gas Company to help you complete your application package with speed and ease. Services include calculation of criteria pollutant and air toxic emissions, preparation of a health risk assessment and rule compliance analysis, completion of district forms, provision of backup documentation, and follow-up with air quality district staff. Also, PermitWorks can explore a variety of "what if" operating scenarios to help you determine what impact certain equipment will have on your facility's emissions and how to best control your costs.

How it works.

To begin the process, you simply provide us with the information on the equipment you want permitted.* Our team of Certified Permitting Professionals (CPP) will complete all of the application forms and detailed calculations for you to submit. We'll work with you every step of the way – from the beginning of the application preparation through negotiations with district permit engineers – until final permit issuance.

What types of equipment benefit.

PermitWorks can be used to complete permit applications for many types of natural gas-fired equipment, including:

- ◆ Afterburners
- ◆ Absorption Chillers
- ◆ Boilers/Process Heaters
- ◆ Internal Combustion Engines
- ◆ Ceramic Kilns
- ◆ Gas Turbines
- ◆ Solution Tanks
- ◆ Ovens (curing, drying or baking)
- ◆ Furnaces

* Applications based on equipment and emissions data provided by customer. The Gas Company does not independently verify the accuracy of customer data.
