**PUBLIC ADVOCATES DATA REQUEST**  
**DR-PA-01**  
**DATE RECEIVED: JUNE 11, 2019**  
**DATE RESPONDED: JUNE 28, 2019**

---

1. Please provide a copy of the bond indentures of all currently active bond indentures for the debt issuances of SoCalGas and for the debt issuances of Sempra.

**Response 1:**

SoCalGas objects to the question to the extent it seeks information regarding Sempra Energy that is not relevant and outside the scope of this proceeding, as Sempra Energy's debt financing activities are outside the scope of the utility's cost of capital proceeding, and Sempra Energy is not party to this proceeding. Subject to and without waiving this objection, SoCalGas responds as follows.

The prospectus/prospectus supplements which are filed with the Securities and Exchange Commission (SEC) provide detailed information with respect to SoCalGas's active debt issuances. All prospectus filings can be found at:

<https://www.sec.gov/cgi-bin/browse-edgar?company=southern+california+gas&owner=exclude&action=getcompany>

Note: With respect to each bond issuance listed on the website, there are three filings: 424B2, 424B5, and FWP. The relevant and informative document filing is the 424B2, which is the prospectus/prospectus supplement. The filing 424B5 is only a preliminary shell of the 424B2 filing and would not be useful. The FWP filing is a summary-level Final Term Sheet, which may also contain relevant information.

Bond indenture documents may be old and would not contain the detailed information contained in the prospectus/prospectus supplement filings. One document that pre-dates the Edgar's online system is attached separately.

2. Please provide a copy of all the major bond rating agency reports that cover SoCalGas, Sempra, and all other subsidiaries of Sempra, that were issued over the last five years.

**Response 2 (PROTECTED MATERIALS):**

SoCalGas objects to the question to the extent it seeks information regarding Sempra Energy and/or its other affiliates that is not relevant to SoCalGas’s cost of capital request and outside the scope of this proceeding. Further, neither Sempra Energy nor its non-regulated affiliates are parties to this proceeding. Moreover, the request is overbroad and unduly burdensome in asking for five years of reports from the rating agencies. Subject to and without waiving these objections, SoCalGas responds as follows.

The three credit rating agencies (Moody’s, S&P, and Fitch) publish materials that are available on a subscription basis, and subject to their respective copyright and other proprietary protections. In the interest of not inadvertently violating those protections, SoCalGas can provide reports that it consulted in the preparation of its cost of capital application from those rating agencies. In addition, SoCalGas has two Moody’s reports, one S&P report, and one Fitch report recently published (after the application was filed), that will be provided. Reports or publications from these rating agencies that are publicly available will bear the designation “(public)” in the filename. The rest of the files will be provided pursuant to PUC §583 and the confidentiality declaration.<sup>1</sup>

In addition, direct links to utility industry pages at each respective agency is provided below in which analysis, reports and commentary is available or a request for access can be made to view the materials.

3. According to Value Line, the capital structure of Sempra contained 38.4% common equity as of the end of 2018.

- a. Please explain why the capital structure of Sempra has been managed to contain a smaller percentage of common equity in its capital structure than is requested for SoCalGas.
- b. Please provide the capitalization of each of the subsidiaries of Sempra as of 12/31/18, both in terms of dollar amount by type of capitalization and in term of the percentage of each type.
- c. Please explain how it was decided what percentage of common and preferred equity should be used by each of the Sempra companies.
- d. Please compare the business risk of each of the subsidiaries of Sempra.
- e. Please provide a statement showing how the capital structure amounts from each Sempra subsidiary combine to form the consolidated Sempra capital structure.

**Response 3:**

SoCalGas objects to the question to the extent it seeks information regarding Sempra Energy and/or its other affiliates that is not relevant to SoCalGas's cost of capital request and outside the scope of this proceeding. Further, neither Sempra Energy nor its non-regulated affiliates are parties to this proceeding. Subject to and without waiving these objections, SoCalGas responds as follows.

- a. See objections above.
- b. The capitalization of SoCalGas as of 12/31/18 in millions of dollars:

Common Equity	\$4.237
Preferred Equity	0.021
Long-Term Debt	3.456
<b>Total Capitalization</b>	<b>\$7.714</b>

The total SoCalGas capitalization makes up approximately 17% of Sempra Energy's total capitalization.

- c. As explained in Exhibit SCG-02 (Gonzalez), SoCalGas actively manages its capital structure to maintain strong credit ratings, support access to the markets,

**2020 COST OF CAPITAL – SOCALGAS [A.19-04-018]

5. What does Dr. Morin believe is the beta of a long-term U.S. treasury bond?
- a. Please provide the basis for his answer.
  - b. Does Dr. Morin believe that the beta for a long-term U.S. treasury bond is higher than for a short-term U.S. treasury note? If not, please explain why not.

**Response 5:**

Dr. Morin believes that U.S. treasury bond betas are effectively zero regardless of maturity. This is based on a comprehensive study by Israel, Pahlhares, and Richardson published in the second quarter of 2018 edition of the Journal of Investment Management “*Common Factors in Corporate Bond Returns.*” As seen below from Figure 1 from that study, the average beta of Treasury bonds is effectively zero.

See separately attached file.

8. With reference to page 6, line 17, of Dr. Morin’s testimony: Dr. Morin discusses potential dilution if the company should issue new common stock when the market to book ratio is too low.

- a. Does Dr. Morin agree that if new common stock is issued at a price below the company’s pre-issue book value, then the issue results in a decline in the company’s book value?
- b. Does Dr. Morin agree that if the company sells new common stock at a price with a net proceeds in excess of the pre-issue book value, the new issue has the opposite effect from dilution (i.e. the result of the issuance would be to increase the book value per share)?
- c. What return on book equity does Dr. Morin believe the investors in SoCalGas would have to expect to be able to earn so that its common stock price would most likely sell at book value?

**Response 8:**

- a. Yes, all else remaining constant.
- b. Yes, all else remaining constant.
- c. Notwithstanding the fact that SoCalGas is not a publicly-traded stock, Dr. Morin is not privy to what investors would expect should the company’s stock price sell at book value.

11. With reference to page 23, lines 2 through 9 of Dr. Morin's testimony:

- a. Please state from what starting period to what ending period the earnings per share forecast to derive the 7.84% average from Value Line are made.
- b. Provide supporting data to show specifically what time period is used by each source.

**Response 11:**

As shown in the Value Line reports for each company in the peer group, Value Line growth rates are estimated to 1921-1923. To compute smoothed compound growth rates, base periods used by Value Line are 3-year averages in order to temper cyclicity and reduce sensitivity to end points. As seen from the Value Line Investment Guide available on its web site, base periods for the 5-year growth rate calculations through the end of are 2021-2023 versus 2015-2017.

15. With reference to Dr. Morin's discussion of the DCF method and proxy groups, beginning on page 23:

- a. If the unregulated operations of the group of dual-commodity gas and electric utilities have a higher risk than these utilities' regulated operations, would the resultant DCF analysis of this group produce a higher cost of equity than would be appropriate for the lower-risk segment of the business of these companies?
- b. If the answer to (a), above, is no, please explain why not.
- c. Has Dr. Morin conducted any analysis to determine how the risk of the unregulated operations of these companies compares to the risk of the regulated portion of these businesses?
- d. If yes, please provide a copy of all such studies.

**Response 15:**

- a. Yes, and the converse would be true as well.
- b. N/A.
- c. The risk analysis of the unregulated operations of each utility in the peer group is outside the scope of Dr. Morin's testimony, and is largely unnecessary given the vast preponderance of the revenues from regulated operations for these companies and given that these companies are perceived by investors as regulated utilities.
- d. N/A.

20. Please provide the current cost of short-term debt to SoCalGas and explain how this cost is determined (e.g., a certain percentage over the LIBOR rate).

**Response 20:**

SoCalGas objects on the basis that the question seeks information that is not relevant and out of scope of the proceeding (see response to Question 21). Subject to and without waiving these objections, SoCalGas responds as follows.

SoCalGas typically raises short-term debt in the commercial paper market. SoCalGas can currently access commercial paper at rates ranging from 2.43% for overnights to 2.50% for one-month maturities. During the first quarter of 2019, the weighted average commercial paper rate was 2.46%. The commercial paper rate is determined by supply and demand in the money markets and is influenced by several factors, including those impacting the global economy, U.S. monetary and fiscal policy, etc. While it is generally correlated with the LIBOR rate, it is not tied to it.

---

21. Please explain why SoCalGas has not recommended the inclusion of any short-term debt in its capital structure.

**Response 21:**

As explained in Exhibit-02 (Gonzalez), p. 20:

Long-term financing provides a static, dependable source of funds with known maturity dates. By contrast, the customer deposit balances can fluctuate and are not permanent in nature, thus lacking the same characteristics as long-term financing.

Financial principles provide that short-term assets should be financed with short-term liabilities and long-term assets should be financed with long-term liabilities. Customer deposits are short-term and refunded after 12 months. Therefore, customer deposits should not be included as part of Long-Term Debt in SoCalGas' capital structure which would be used to finance long-term assets, such as rate base assets.

It would be inappropriate to include Short-Term Debt as part of the Long-Term Debt ratio of the utility's capital structure because it is not meant to fund the company's long-term fixed assets.

Further, in D.12-12-034 (p. 5), the Commission stated, "Capital structure consists of long-term debt, preferred stock, and common equity," and noted (in FN 7), "Debt due within one year, short-term debt, is excluded."

**2020 COST OF CAPITAL – SOCALGAS [A.19-04-018]**  
**PUBLIC ADVOCATES DATA REQUEST**  
**DR-PA-01**  
**DATE RECEIVED: JUNE 11, 2019**  
**DATE RESPONDED: JUNE 28, 2019**

---

22. Please provide the average balances of:

- a. Short-term debt used by SoCalGas for 2017, 2018, and projected for the Test Year.
- b. CWIP earning AFUDC for SoCalGas for 2017, 2018, and projected for the Test Year.

**Response 22:**

SoCalGas objects on the basis that the question seeks information that is not relevant and out of scope of the proceeding (see response to Question 21). Subject to and without waiving these objections, SoCalGas responds as follows.

- a. The monthly average balance of Short-Term Debt used by SoCalGas for 2017 and 2018 were \$32 million and \$204 million, respectively.
- b. In general, allowance for funds used during construction (AFUDC) is applied monthly during construction work-in-progress (CWIP) to capital projects that will result in plant assets. However, there are some exceptions in which AFUDC is not applied. The amount of CWIP that receives AFUDC versus the amount that does not receive AFUDC is not readily available and would be unduly burdensome to calculate.

23. Please provide a schedule showing the percentage of Sempra’s revenues, net income available to common equity, interest expense, and cash flow were derived from SoCalGas, SDG&E, and each other subsidiary of Sempra for each of the five years ended 2018.

**Response 23:**

SoCalGas objects to the question to the extent it seeks information regarding Sempra Energy and/or its other affiliates that is not relevant to SoCalGas’s cost of capital request and outside the scope of this proceeding. Further, neither Sempra Energy nor its non-regulated affiliates are parties to this proceeding. Subject to and without waiving these objections, SoCalGas responds as follows.

Please see the table below for SoCalGas’s percentage of Sempra Energy’s revenues, net income available to common equity, interest expense, and cash flows as derived from SoCalGas’s and Sempra Energy’s annual 10-K Reports.

(\$ in Millions)	2018		2017		2016		2015		2014	
		% of Total SE		% of Total SE		% of Total SE		% of Total SE		% of Total SE
Revenues	\$3,962	34%	\$3,785	34%	\$3,471	34%	\$3,489	34%	\$3,855	35%
Net Income	\$ 400	43%	\$ 396	155%	\$ 349	25%	\$ 419	31%	\$ 332	29%
Interest Expense	\$ 115	12%	\$ 102	15%	\$ 97	18%	\$ 84	15%	\$ 69	12%
Cash Flow	\$ 18	7%	\$ 8	2%	\$ 12	3%	\$ 58	14%	\$ 85	15%
