

**Southern California Gas Company and
San Diego Gas & Electric
2027 CAP**

**Chapter 8a Workpapers to the
Prepared Direct Testimony of Frank Seres
and Marjorie Schmidt-Pines**

**Embedded Costs Model
(SoCalGas)**

(Redlined dated June 9, 2026)

Tab	Description
FERC Accounts and Exclusions	This tab subtracts all base margin exclusions from FERC Accounts.
Cost Allocations Dist O&M	This tab calculates allocation methods used to allocation distribution O&M costs.
Cost Allocation Dist A&G	This tab calculates the breakdown between Customer-related and Distribution costs for the A&G FERC Account and Plant Factor allocation method. Shows High Pressure and Medium Pressure Footage.
LT & BBT	This tab uses Local & Backbone Transmission Pipeline NBV, Dep. Expense, Footage, and Percent BB to LT Split to calculate the O&M Percent Backbone Split and Backbone to Local Percent Depreciation allocation.
Rate Base	This tab shows the SoCalGas Calculation of Weighted Average Rate Base (WARB).
NBV	This tab shows the FERC accounts for Storage, Transmission, and Distribution Plant in service investment and Net Book Value & Depreciation.
Rate Base & Financial Metrics	This tab contains various inputs and calculations.
Embedded Costs	This tab allocates the embedded costs to each function using the respective allocation method.
Return	This tab calculates Return, Income Taxes, Ad Valorem taxes and Capital-Related Taxes by Function.
Testimony Tables	This tab contains tables shown in testimony.
Embedded Cost Summary	This tab is a summary of all embedded costs broken down by function.
BBT LT Margin	This tab shows the Capital Backbone Split Percent Calculation.
Trans Cost & Reallocation	This tab shows the total Transmission and Backbone Costs.
Appendix G, Table 1	This tab calculates the Storage Allocation by function in detail.
Capacity Storage Bal	This tab shows the breakdown of storage costs by functions and capacities.
Storage Cost	This tab shows the embedded storage costs.
Customer Cost Allocators	This tab calculates the allocation method that will be used to allocate the Customer Costs in the Rate Design model.
Allocation Methods	This tab lists all allocation methods.
Allocation Factors	This tab shows the calculation for all allocation methods.

Within Gas Distribution and Customer Service Field, FERC 870 is primarily charged, and then the settlement allocates a portion of these costs to Maintenance Supervision and Engineering (FERC 885). The same percentage splits for FERC 870 can be applied to FERC 885 within both the Gas Distribution and Customer Service Field, per Operational Planning - SCG

Formula

Percent of Power Plants in use on Local Transmission on a Peak Summer Day	A
The Percent of Total System Throughput that are Power Plants	B
$A \times B = C$ --> Backbone to Local Transmission Reallocation Factor	$C = A \times B$

One a peak day, about 70% of SoCal's total power-plant gas usage flows through LT pipes. Since power plants altogether make up about 30% of system demand, that implies that 70% of that 30%, or 20% of the entire system's throughput should be reallocated to LT instead of BB. This is because a percentage of BB assets provide the same function as an LT
