Interview Notes

SoCalGas– Interview Notes (2025)

1) Underground Storage & Transmission (SoCalGas) – Interview 10/25 and subsequent notes

- **Account 350–Land Rights/Storage Rights**
  Perpetual easements, in some cases as long as assets on the easement. Government ROW is generally 25-30 year contract with the right of renewal. ROW should have at least the life of the underlying assets. Tie Land Rights and Storage Rights to Lines. Recoverably Oil – also link to storage rights. 50 years would be operationally reasonable.
- **Account 351-Structures and Improvements**
  Operationally, SMEs expect a long life for these assets. The account would consist of buildings, structures, site prep, electrical, roads, foundations, as well as shorter lived assets such as security and fencing. They have been remodeling their office building in 2025. Moving out a little from the approved 48 years seems reasonable operationally.
- **Account 352–Wells**
  In the last 10 years, they have an aggressive integrity program. Every 2 years or less, they have to inspect. There has been a material amount of remediation. When the well casing doesn't meet parameters, they can install an inner space screen or abandon. There were other requirements also. Storage gas has numerous pathways to surface. A 2002 well had an inner screen replaced but still had issues. Wells should exceed the 49 year life expectancy if not for the new regulations. They do have some old wells but some more recent ones have been shut in due to the regulations. They have been able to move to a 7 year assessment period. That may extend the life from what is currently observed at some point in the future. There are a number of wells they are monitoring. They have abandoned around 88 wells since 2018 and only drilled 10 replacement wells. This would be driving the analyzed life down. With the extending time to inspect, the life may move back toward the authorized. They have rehabbed over 350 wells in recent years.

Below are the costs to abandon wells over the last several years.

- **Account 353-Lines**

  Currently a 54-year life. Seeing a decline to the low 40 years in analytics. With 88 wells shut down, a number lines will have to be abandoned as well. Lateral piping will have to be abandoned with the well abandonment. The decrease in life seen in the analytics could be related to well abandonments, since surface facilities are removed. There would be a direct correlation between the abandonment of wells and lines. Lines are carbon steel and depending on the field, the pipe is wrapped, buried and catholically protected. If the lines are above ground, they do not need cathodic protection. They would expect a shorter life for buried pipe than above

ground. At one site (Honor Rancho), the coating was failing on underground pipe and has been addressed. Engineers believe a 50-year operational life for this account is reasonable.

- **Account 354-Compressor Station Equipment**
  They will be replacing compressors in the next 4-6 years – originally put in service in the 1940s but overhauled on a periodic basis. They see no operational changes that would materially affect the life of the assets.

  A program of compressor modernization is in place - $600M just at Honor Rancho ("HR") and a small one at Playa Del Ray. These are driven by aging equipment and air quality regulations AQMD – Air Quality Management District). These projects are happening now. They are being retrofitted. They are also adding emissions controls at some sites. HR is installing a new compressor stations in the next 4-6 years and will remove the old one once the new is in place. 4 major sites. HR site was converted to storage in 1975 – and have the original compressors. The life of reciprocating compressors and turbine driven compressors are similar. Aliso Canyon has been replaced in the same way as HR is going to be ($300M project). This project only replaced one portion of the original injection system. Turbine driver compressors require more capital replacements than reciprocating compressors where maintenance costs are higher. They overhaul the units periodically and in many cases, have to make their own parts since the OEM no longer supports. The current life of this account is 41 years. Although there are downward pressures on life, the current life is still operationally reasonable.

- **Account 355-M&R equipment**: There are some things that can affect the lifespan of this equipment – technology is a driver. Changing from older technology to digital equipment would shorten the life. Using dial up modems to collect data is being replaced. Flow elements – turbine meter and orifice plates, flow computers, and transmitters are "M". "R" is regulators, and they are robust. Unless there is change in process requirements, there is not often a need to change regulators. Flow meters can last longer than 22 years (closer to compressor equipment or Dehydrators). Equipment in fields are larger and more robust than seen generally in distribution. Although the analytics would continue to support the existing life, operationally, a 22 year live seems short. Moving out based on judgement (to maybe 30 years) am some limited analytics would be reasonable.

- **Account 356-Purification Equipment**
  Recently, there have been some changes in the Dehy equipment – changing vessels

and modifying internals of existing vessels. Technology is also changing (e.g., structured packing instead of bubble trays). In the past, they moved to hot oil heaters from steam. Current life is 39 years. Analytics show a slight increase of 5 or 6 years which engineers believe is operationally reasonable. There are environmental drivers that drive removal cost higher (new asbestos and concrete regulations). Regulations impact asbestos in concrete foundations which will increase removal cost.

- **Account 357-Other Storage Equipment**
  There is a significant amount of electrical assets, roads and non-DOT piping in this account. PLCs and pumps would be components with shorter lives. Other assets tend to have fairly long lives. Operationally, there is no trigger seen to change the life. Leaving at around the 37 years approved seems operationally reasonable.

- **Account 365–Transmission ROW**
  Government ROW is 25-30 year contract with the right of renewal. A loarge portion of the ROW is related to the Morongo Reservation. Recent negotiations have renewed the ROW for a 40 year term. 40 years would be operationally reasonable.
- **Account 366–Transmission Structures**
  Current life is 47 years. They have been doing a number of improvements that had been on hold. The analytics continue to support the current life. Operationally, leaving the existing life is reasonable for SoCal.

- **Account 367-Transmission Mains**: The approved life is 64 years. Maintenance has shifted. Typically, it is much more rectifier based – which would have a life from between 20 and 25 with anodes around 15 years or less. IMP forced the retirement of some valves. They have been adding more instrumentation and automation (remote control) in recent years. For the most part, the automation could be added to existing assets (such as valves) in the majority of instances but in maybe 40%, they would have to replace the full valve assembly. With the tools they now have, they can see defects in the pipe much better than in the past. They are focusing on placing more sections of pipe that have those defects. They are replacing some very old pipe. It's not a large percent of the total capital in pipe. Every 7 years, they have to look at pipe and if issues, the pipe will be replaced. The analytics would suggest a slightly longer life. 70 years would be on the high side of operational expectations but within an acceptable range.
- **Account 367.6–Transmission Hydro Test Costs**
  When they hydro test a pipeline (two different accounting approaches depending on the pipe). One, test if no documentation and capital (PHEMSA – 100% capital).

Other, state required mostly O&M – only added capital items are capitalized. Due to the testing validating the continued use of the pipe, seting the life of this to the remaining life of the underlying pipe would be operationally reasonable. This logic can be used for all categories of Hydro Tests accounts.

- **Account 368-Transmission Compressor station equipment**: The approved life is 50 years. Modernization program are somewhat driven by emissions compliance and decarbonization initiatives. Assets in this account are either turbine compressors jet engines (lower operating life) or reciprocating compressors which have been widely used at SoCal Gas. SoCal currently uses low speed reciprocating engines but is moving more to turbines in the future. Ventura replacements will have a reciprocating engine. Electric motor driven compressors are also being considered. Prime movers may have a shorter life span. Compressors are being cycled more- more wear and tear. From a technical standpoint, turbine compressors would have a shorter operating life than the reciprocating compressors at SoCal Gas. SoCal – high speed reciprocals have issues. There is a transition where the longer lived recips are being replaced with shorter lived turbines and electric motor driven compressors. Prime movers will have a shorter life span than in the past. Storage operations are requiring the cycling of compressors more than in the past – shortening the life of the compressors. SoCalGas has done a material amount of work on compressor stations (much more than was done in the last 25 years).
- **Account 369-Transmission Measuring & Regulating stations**: There has been a lot of investment related to IMP to retrofit for pigging. They have been adding more instrumentation and automation (remote control) in recent years (expecting around a 15 year life). For the most part, the automation could be added to existing assets (such as valves) in the majority of instances but in maybe 40%, they would have to replace the full valve assembly. There have been activities to change out actuating equipment that might release methane. As communities become more developed, class location can change as population density increases. There has been a lot of work to replace parts even though the stations would be older. Above ground facilities experience more atmospheric corrosion. The water table would also be higher – also creating more corrosion. There has been a focus on upgrading a number of pipeline limiting stations for SoCal Gas. There are no operational reasons that the life would move materially.
- **Account 370–Transmission Communication Equipment**
  The current life is 15 years. Technology may decrease the life of this equipment. Cyber threats also can cause reasons to replace them with stronger equipment.

Combination of all forms of communication (4-wire, radio, fiber, cell, satellite). Ongoing project to replace cell equipment. 15 years is still reasonable but may decrease further in future years. New control equipment installed as part of PSEP. Older equipment has not continued to be supported and equipment would have to be replaced. They have a new communication standard that will support the continued use of the 15 year life expectations.

- **Account 371–Transmission Other**
  Capital tool subaccount created a couple years ago here. Current 21 year life. There is a large amount of electronics in the account suggesting a fairly short life. Operationally, it is reasonable to move the life shorter.
- **Account 371.10–Transmission Temporary Assemblies and Test Heads** - Assets differ from 371.0 and SME's recommend a different life than the 20 years recommended for 371. These assets would be utilized during a period of at least 10-years. The 10-year life is reasonable due to the nature of how these assets are utilized and their service life after which they're sent to salvage. These assets are utilized to conduct post construction strength test on our pipelines and there's only so many test that can be performed with a test head before it could no longer be utilized. They are used on hydro tests and there is only a certain number of uses they can have before discarding. A 10 year life would be operationally expected. Typically, these items would have no net salvage.

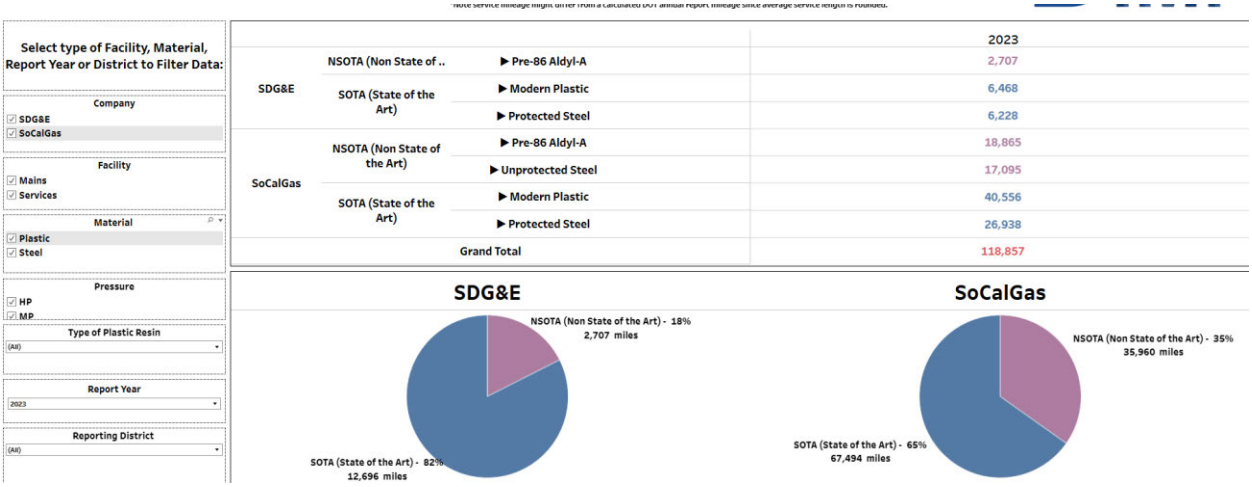

Interview attendees:

2) Gas Distribution (SoCalGas) – Interview 11/03/2025

- **Account 374–Distribution Right of Way (ROW)**
  Non-government easements are generally perpetual easements. Government ROW is 25-30 year contract with the right of renewal. Overall, ROW should have at least the life of the underlying assets. 70 years would be operationally reasonable.
- **Account 375–Structures and Improvements**
  Operationally, it is expected that transmission and distribution would have around the same life. Although the analytics would suggest a shorter life, setting equal to the life of transmission is reasonable.

- **Account 376–Mains**
  There are two regular activities to replace them – integrity management (replacing high risk mains) and BSRP (Bare steel)/(VIP)Vintage Plastic. The BSRP would replace old mains primarily. Routine activities include reactive main replacement for issues that are identified. Routine activities may be retiring older pipe. After 2010, state implemented program to deal with high pressure pipelines by either testing, providing documentation or retiring pipe. Aldyl-A (59421 total plastic 18865 Aldyl-A, Steel

  Integrity management program which is replacing ($280M per year) Bare steel and early vintage plastic (pre-1973 and 1973 -1985) for both mains and services. Over the last several years, the replacements have tripled. It's been around for a while and has escalated over the last few years. This is in addition to normal replacements. They would have expected the life to decrease with the level of retirements that are occurring.

- **Account 378–Measuring & Regulating (M&R) stations**
  Higher risk reg stations are being target for replacement. The regulations for Reg stations have changed more than the regulations for mains and services. They have been upgrading stations. They are also more aggressively targeting reg stations that they have in the past. The analytics continue to support the existing 47 year life. Operationally, there is no reason that the life should be increasing. There are drivers that would decrease the life. E.g., RAMP and Control Center Modernization programs. There are around 2000 stations. They may be upgrading 1%-2% per year.
- **Account 380–Services**: Services are main-to-meter. Operationally, service life is expected to be slightly shorter than mains;

Services – Services are from main to meter. If cut, they would generally repair the service. If a service has had a leak in the past, they would likely replace. If a steel main is replaced with plastic, the service would be replaced if steel. They would expect the life of services to have a slightly shorter live than mains – many factors that would retire a service earlier. Replacements often coincide with main replacement (e.g., steel service replaced when steel main is replaced with plastic). They have not changed their practices and there are no particular programs that would target services. Operationally, there is no material reason the life should change.

Interview attendees:

3) Engineering & System Integrity – Interview 11/03 and follow-up notes

- **Gas meters (Acct 381)**: Discussion highlighted a disconnect between actuarial/analytics indications (e.g., high-20s) and operational expectations (often cited ~35–40 years), influenced by control-group testing practices and episodic retirements (e.g., fire/water events).
- **Account 381.05-Gas Meters** There have not been any material changes in the meter program. When combining the average control groups (testing groups), they would see around a 25 year life. At 10 years, meters go into the control group. The oldest control group is 48 years (and have been trying to retire for a few years). 16k meters were retired due to fires. 30k meters were retired in another year due to water in the main. They replaced a number of meters in the mid 2010s that were not compatible with AMI technology and also replaced meters that were running fast. In 2017, they were allowed to give a credit to customers for fast running meters – negating the need to replace as soon as otherwise. The analytical life of 27 years for SoCal is shorter than reasonable. Historically, many meter change outs were due to fast running meters (used to change out 350k meters per year). That is no longer happening (only 56k meters replaced last year) – up to 40 years would be operationally expected.
- **Account 381.15-Module (MSA)** – battery life is 20 years based on manufacturer data and the module would be replaced when the battery fails. Vendors communicate a 20 year life. There are some failures now. Operationally, the existing 20 year life is reasonable for SoCal.
- **Account 382-Meter installations:** Setting installation life aligned to the meter life was discussed as not unreasonable. They survey mains/service every 5 years. Generally, they will repair meter loops under O&M. Setting the installation to the

same life as the meter is reasonable. The only time they will change out a regulator is when the regulator locks up.

- **Account 382.6 GEMS (Gas Energy Measurement System):** 15-year life was described as operationally reasonable for electronic gas measurement systems.
- **Account 383-House regulators**: Preliminary analytics around ~40 years were described as operationally reasonable by SMEs.
- **Account 387-NGV fueling stations**: Vessels expected longer-lived (~30–40 years), compressors around ~20 years, and electronics/dispensers shorter (~10–15 years) based on vendor support. Electronics – a lot is maintained under O&M and will have to be replaced when vendor/manufacture support ends. Last station was Ramona. $350K for compressor (2 at Ramona), $100K each for dispensers (2 at Ramona), Vessels - $150k (3 at Ramona). There is $10M of other assets in the accounts.
- **Account 392.3-Drones:** Average life for drones is 6-8 years. 7 years would be operationally reasonable as an average.
- **Large portable tools (Acct 394.19) and laboratory equipment (Acct 395)**: Mix-driven lives—electronics often ~5–7 years while some mechanical/large items can last ~25 years. See listing of large portable tools and laboratory equipment with operational lives at the end of the notes. Average for 394.19 would suggest around a 10 year life and for 395 of around 20 years.

  Interview attendees:

4) Facilities & Fleet (SoCalGas) – Interview 10/29/2025

- **Account 374 –Right of Way (ROW)**
  Perpetual easements. Government ROW is 25-30 year contract with the right of renewal. ROW should have at least the life of the underlying assets. 70 years would be operationally reasonable.

- **Account 375-Distribution structures**: This includes Branch offices and occasionally will close or relocate offices – latest was a couple years. Components of the buildings would have a shorter live than the building itself. HVAC, Roofs, remodeling, parking lots, etc. There has been more remodeling and replacements over the last 10 years than seen in the past.
- **Account 390-General plant structures:** Corporate offices. There is remodeling going on in this category as well. Larger assets like HVAC would be larger, perhaps more robust and more likely maintained than replaced. There would be fewer relocations in corporate offices than distribution branch offices. Operationally, they

would expect a fairly comparable life for these assets as compared to other structures accounts.

- **Account 392.2-Solar & fuel cell assets**:
  Rooftop solar and carport solar. 10 year would be a reasonable life. Around 1 MW

  Account 390.25-Battery storage:
  One battery is in the design phase. Going in with solar project. 10 years to match solar.

- **390.4 Leasehold improvement – Gas Tower**
  Lease is up in November 1, 2026 and they are moving to a new location (except for a few small teams). New leases (2 Cal Plaza) should use 15-16 years based on the lease period.

- **Office furniture & equipment (Acct 391.1)**: 20-year life is opoerationally reasonable per SME (aligned to remodel cycles for furniture). They have a 20 year remodel plan. 20 years would be a reasonable movement operationally since much of the furniture would be replaced in a remodel.
- **Account 392-Vehicles:** They will lease most vehicles. Future vehicles will be purchased starting in 2026 through 2031. Their strategy is to replace vehicles generally at 8 years but in many cases, they would keep them longer. The number of years of a lease varies depending on the type. EVs and autos are leased for 8 years. Light trucks and meter trucks are 9 years and heavy vehicles are 10 years. Equipment would be longer ((e.g. forklifts, trailers, etc.) – 12 years. Currently, there is primarily ATVs in the account.
- **Account 392.3-Drones:** Average life for drones is 6-8 years. 7 years would be operationally reasonable as an average.
- **Account 393–Stores Equipment**
  20 years is still operationally reasonable for shelving and containers.
- **Account 394-Major Tools**
  EV Charging Stations are a material portion of this account. There will be adding more EV charging stations in the next 3 years. EV chargers would only have a 10 year life. Moving to 10 based on the asset mix would be operationally reasonable.
- **Account 398-Miscellaneous Plant Equipment**
  10 years would be more reasonable operationally. Ice machines would have a very short life, etc.

- **Interview attendees:**

5) Cross-cutting technology topics (IT / AMI / Communications) – Notes dated 11/07/2025 and related

- **Capitalized software / SaaS**: IT SMEs "bucket" new capitalized software by expected life. SMEs reference CPUC approval (effective 1/1/2024) to capitalize certain prepaid cloud infrastructure/subscriptions when criteria are met (e.g., cost threshold, multi-year commitment, prepayment). A key principle discussed: amortize over the contractual term; any life changes are expected to be forward-looking. SAAS prepayments and subscriptions have been authorized by the CPUC to be capital. SAAS agreements are generally 2, 3 and 5 year agreements. Amortizing the cost over the actual term is the most reasonable option.
- **IT hardware refresh cycles**: Examples discussed included servers/NAS (~5 years), network hardware (~7 years), laptops (~5 years). Communications equipment may face downward life pressure due to technology change and cybersecurity.
- **AMI network / AMI 2.0 timing**: AMI 2.0 planned to go live around 2030 with replacement activity through the early 2030s. AMI 1.0 modules. 1.0 fully in service in 2018, will retire. The average module will be 17-18 year old at replacement. DCUs would also replaced with the retirement of the AMI 1.0 – the life to 20 years is still operationally reasonable.
- Working with Field Service team to replace MTUs at a faster rate. In 2028-2029, based on the failure rate, there was be a increase in failures which they will try to address. If replaced under the 15 year warranty, there would be no retirement/addition at the swap. All MTUS will replaced with AMI 2.0. DCUs are coming upon the 15 year life. They will replace DCUs as needed and replace as necessary or repair if possible. Effectively, extending the life to meet the roll out of AMI 2.0. Batteries for DCU only last 5 years – they will replace batteries in 2028. AMI 2.0 in service would be a reasonable operational target for modules, DCUs and MTUs.

381.05-Meters AMI	rolled up in 381 group acct
381.15-Modules AMI	separate single acct
382.05-Meter Installations AMI	rolled up in 382 group acct
382.15-Module Installs-AMI	separate single acct
383.05-Regulators AMI	rolled up in 383 group acct
391.25-Computer HW AMI	rolled up in 391.2 group acct
397.05-Telecom Equip AMI	rolled up in 397 group acct
397.55-Poles AMI	separate single acct

SCG AMI Plant Accounts	Current Avg Service Life	Confirmed Average Service Life
381.15-Modules AMI	20	20
382.15-Module Installs-AMI	20	20
397.05-Telecom Equip AMI	15	15
397.55-Poles AMI	40	40

- SoCal Gas - AMI Pole life of 40 years is still operationally reasonable. 60% of poles are wood with the balance being concrete and steel. They are going to inspect poles in future years so don't have a analyzed failure rate for the poles. DCUs (Data Collection Units) are on top of the poles. The MTUs (Meter Transmission Units) in the meters have a 20-year warranty. DCUs will have a shorter life than the MTUs. DCUs are in the elements. In the DCU (5 year battery life), the battery would have a shorter life than the MTU (20 year life) battery. DCU is recorded in 397.05. The current life of DCU is 15 years. Some of the MTU batteries will last 20 years, and the unit is under the 20 year warranty. The meter and module are two separate manufacturers. They are combined by the manufacturer but are bucked separately. DCUs cellphone cards were replaced in previous years.

Communications – Non-AMI

- **Account 397.10** – Everything is network electronic equipment. Operationally, they believe that a 5 year refresh cycle is still reasonable based on their target planning cycles.

- **Account 397.2 -** Some phone systems are not VoiP and would be in the 7 year range. VoiP would be more in the 5 year range. Most of the capital is in VoiP systems. Operationally, leaving at the approved 7 years is reasonable.
- **Account 397.30 Microwave Equip –** Some equipment had to be refreshed due to regulation in less than 10 years, but dishes would last 15 year or more. Radio equipment would target to replace every 5 years. An average of 10 years is still reasonable.
- **Account 397.40 –** Towers and shelters in this account. They would generally last longer than 15 years. They are occasionally inspected and remediate as necessary. Operationally, 25 years is reasonable.

90963.000	212,872.83	Fiber Optic

Per Kristin McFerran (Facilities)
All relate to audio visual equipment > video conferencing equipment, room controls and displays that are installed in conference rooms.

All 6 WOAs included audio visual - Without diving into the actual costs, this is the additional audiovisual scope for some of the WOAs:
85880 – also included video wall in lobby and network cabling throughout the facility
88888, 88811 – also included audio visual in private offices
88867 – also included audio visual in private offices, network cabling and a video wall in Innovation Center
70021 – also included audio visual in private offices and network cabling

Regarding these items in the bottom listing below.

GOCC - R/S 386IE AUTOMATION - PILOT	4,374,796.51	93359.006
GOCC - R/S 596T AUTOMATION - PILOT	4,120,037.64	93359.003
GOCC - R/S 6442P AUTOMATION - PILOT	3,960,640.91	93359.004
GOCC - R/S 1316IE AUOMATION - PILOT	3,503,794.49	93359.005

I received the following description of the assets capitalized from the associated PMO people:

One of the initial pilot projects under the Control Center Modernization program (formerly Gas operations Control Center - GOCC) to upgrade Distribution district regulator stations with remote monitoring and control.
Enhancements include mechanical, electrical, and civil site improvements, along with installation of industrial instrumentation, control systems, and SCADA communications.

For the CCM projects listed below....E.g., these.

CCM - R/ S 6394OC AUTOMATION. MIRAL	1,302,517.86	82244.001	Install SCADA/Communication panel, radio, antenna, utility power, conduit and concrete
CCM R/S 2656OC AUTOM. - HARVARD & W	1,262,015.80	82253.002	Install SCADA/Communication panel, radio, antenna, utility power, conduit and concrete
CCM ID6370OC AUTOM. REDHILL & DYER	1,255,853.68	82260.001	Install SCADA/Communication panel, radio, antenna, utility power, conduit and concrete

They further clarified:

What listed is good. However, the following is more descriptive.
A project under the Control Center Modernization program to upgrade Distribution district regulator stations with remote monitoring and control.
Enhancements include mechanical, electrical, and civil site improvements, along with installation of industrial instrumentation, control systems, and SCADA communications.

Interview attendees:
