Palos Verdes Peninsula Natural Gas Service and Winter Preparedness Update

SoCalGas has completed all infrastructure repairs and upgrades on the Palos Verdes Peninsula where natural gas service has been restored. As winter approaches, the company continues to monitor land movement and system conditions across the peninsula.

Repairs Completed, Infrastructure and Monitoring Enhanced

In July 2024, accelerating land movement began significantly impacting SoCalGas infrastructure and homes located in the Rancho Palos Verdes communities of Portuguese Bend Community Association, Seaview, and Portuguese Bend Beach Club, and the City of Rolling Hills, requiring SoCalGas to shut off natural gas service to some homes to promote public safety. Land movement in the impacted communities slowed after October 2024.

With the slowing of land movement, SoCalGas began infrastructure repairs and restoring service in the Seaview neighborhood, Portuguese Bend Beach Club and City of Rolling Hills, where SoCalGas determined localized conditions allowed for safe resumption of service. This work is now complete.

The homeowners in these communities who requested service restoration and whose homes were ready to safely receive natural gas have had their service restored. Customers who opted not to restore service may request restoration at any time.

Natural gas service remains unavailable in the Portuguese Bend Community Association due to ongoing significant land movement. There is currently no timeline for potential service restoration in that area.

SoCalGas has also made infrastructure improvements across the Palos Verdes Peninsula, including inspecting and replacing natural gas mains and installing automatic shut-off valves, isolation valves, pipeline pressure monitors and additional survey markers. SoCalGas technical and operating personnel, together with third-party experts, continue to closely monitor land movement and system conditions.

Preparing for Winter Conditions

The National Oceanic and Atmospheric Administration is forecasting a strong to very strong El Niño through early 2027, increasing the potential for significant winter rainfall. Significant rainfall could contribute to renewed land movement on the Palos Verdes Peninsula, which SoCalGas continues to closely monitor.

SoCalGas has not observed any recent increases in land movement rates in the Palos Verdes Peninsula that would necessitate additional natural gas service shutoffs at this time. Continued natural gas service remains dependent upon land movement rates.

SoCalGas will communicate directly with customers and local officials and provide updates on this page.

SoCalGas will continue to provide relevant updates at **socalgas.com/pvlandmovement**.
