#### **Business Purpose:**

New Construction Pipeline is needed to provide funding for new pipeline projects that arise each year. This work provides the transmission system with additional capacity, reliability and resiliency to serve customer needs. The only project currently identified under this workpaper is the Lakewood project.

#### **Physical Description:**

This project will construct 3.6 miles of new Transmission pipe.

#### **Project Justification:**

The new construction pipeline work forecasted is associated with one project, driven by the need to install a new pipeline at the request of an end user.

#### **Forecast Methodology:**

#### Labor - Zero-Based

The zero-based forecast for this workpaper was developed using a discrete project estimate. This method is most appropriate because estimated costs are based on historic pricing for projects of similar size and scope.

#### Non-Labor - Zero-Based

The zero-based forecast for this workpaper was developed using a discrete project estimate. This method is most appropriate because estimated costs are based on historic pricing for projects of similar size and scope.

FTE	5-YR Average	36.6	32.2	21.5	26.2	23.5	24.4	24.4	21.3

#### **Business Purpose:**

Natural gas transmission pipelines need to be replaced due to the condition of the pipeline or hazardous conditions affecting the existing pipeline location. Some pipeline sections need to be replaced due to erosion from agricultural activities or storm water runoff. Replacements are also required due to class location changes in the vicinity of the transmission pipeline. Pipelines with a history of leakage, poor coating, or that are difficult to cathodically protect are routinely evaluated and replacemented if necessary.

#### Physical Description:

Projects in this workpaper include the cost to plan, design, permit, acquire materials, construct, commission, and mitigate impacts for the replacement of pipelines, fittings, valves, and associated pressure regulating stations and service lines. Multiple projects are completed each year ranging in size and magnitude from a few feet to several miles of replacement. Projects can involve difficult and hazardous access with many logistical challenges caused by weather or physical terrain.

#### **Project Justification:**

The activities contained in Pipeline Replacements are necessary to provide a safe and reliable gas transmission system. These costs are being incurred in response to SoCalGas's obligation to serve customer needs.

Budget Code: 00302.0

Category: B. PIPELINE REPLACEMENTS
Category-Sub: 1. PIPELINE REPLACEMENTS

Workpaper Group: 003020 - GT PIPELINE REPLACEMENTS

#### Forecast Methodology:

#### Labor - 5-YR Average

The TY 2024 forecast was determined using the five-year average methodology and then adjusted to provide adequate funding for anticipated projects. The base year recorded, as well as the historical average forecast methodologies provide excess funding for the anticipated work during this GRC forecast period and are therefore not effective as choices for this cost category.

#### Non-Labor - 5-YR Average

The TY 2024 forecast was determined using the five-year average methodology and then adjusted to provide adequate funding for anticipated projects. The base year recorded, as well as the historical average forecast methodologies provide excess funding for the anticipated work during this GRC forecast period and are therefore not effective as choices for this cost category.

#### NSE - 5-YR Average

None.

#### RAMP Item #1

#### **RAMP Activity**

RAMP Chapter: SCG-Risk-1 Incident Related to the High Pressure System (Excluding Dig-in)

RAMP Line Item ID: C03 T1 & T2

RAMP Line Item Name: Leak Repair T1 & T2 (HCA and Non-HCA)

Tranche(s): Tranche1: Transmission - HCA; Tranche2: Transmission - Non-HCA

GRC Forecast Cost Estimates (\$000)							o 2024
	2021 Historical Embedded Costs	2022 Forecast	2023 Forecast	2024 Forecast	2022 to 2024 Forecast	`.	curred \$)
	(2021 \$)	(2021 \$)	(2021 \$)	(2021 \$)	(2021 \$)	Low	High
Tranche 1 Cost Estimate	242	3,534	3,300	3,465	10,299	10,949	13,253
Tranche 2 Cost Estimate	492	7,177	6,700	7,035	20,912	22,228	26,907

#### **Cost Estimate Changes from RAMP:**

The Warning Mesh mitigation (C30) from the SCG Risk 2 RAMP chapter is often included in Leak Repair projects.

Unit of	2021 Historical Embedded	2022 Forecast	2023 Forecast	2024 Forecast	2022 to 2024 Forecast		Range vities
Measure	Activities	Activities	Activities	Activities	Activities	Low	High
Tranche 1 # of Projects	14.00	9.00	12.00	13.00	34.00	31.00	40.00
Tranche 2 # of Projects	29.00	19.00	25.00	29.00	73.00	68.00	85.00

Risk Spend Efficiency (RSE)			
	GRC RSE	RAMP RSE	
Tranche 1	17.000	10.000	
Tranche 2	10.000	6.800	

#### **RSE Changes from RAMP:**

General changes to risks scores or RSE values are primarily due to changes in the MAVF and RSE methodology, as discussed in the RAMP to GRC Integration testimony of R. Scott Pearson and Gregory S. Flores (SCG-03).

#### **Business Purpose:**

This workpaper includes costs associated with pipeline and associated facility relocations necessitated by Caltrans construction projects. Work completed in budget codes 303, 313, 323, and 333 are included in this workpaper.

#### **Physical Description:**

The work required includes relocating and replacing pipelines and related facilities found to be in conflict with Caltrans construction projects. Individual projects will vary from less than \$10,000 to as high as multiple hundreds of thousands of dollars.

#### **Project Justification:**

Throughout the year, SoCalGas is frequently required to relocate pipelines during the same year such projects are submitted to SoCalGas. Costs are driven by safety and regulatory compliance as well as contractual requirements. This allows SCG to meet operating, right of way, and franchise agreement requirements.

#### Forecast Methodology:

#### Labor - 5-YR Average

The TY 2024 forecast was determined using the five-year average methodology. In 2021, front-end engineering and design started for two Caltrans projects. The cost estimates for these projects were considered when adjusting the five-year average up in 2022. The forecasted amount in 2023 and 2024 is designed to be used for project requests from Caltrans during the forecast period.

#### Non-Labor - 5-YR Average

The TY 2024 forecast was determined using the five-year average methodology. In 2021, front-end engineering and design started for two Caltrans projects. The cost estimates for these projects were considered when adjusting the five-year average up in 2022. The forecasted amount in 2023 and 2024 is designed to be used for project requests from Caltrans during the forecast period.

#### NSE - 5-YR Average

### **Business Purpose:**

Pipeline Relocation - Franchise/ Private/ ROW iincludes costs associated related to the modification and relocation of transmission pipelines to accommodate planned private property development, municipal public works, street improvements projects, and other work required due to right-of-way, contract and franchise agreements.

### **Physical Description:**

Relocating pipe and the associated work driven by franchise, private and right of way.

#### Project Justification:

Pipelines are relocated according to the requirements of municipal franchises and property developers. Some are collectible and others are not, usually depending on right of way language.

### Forecast Methodology:

#### Labor - Base YR Rec

The TY 2024 forecast was established using the base year recorded methodology. This was then adjusted down by \$1,000,000 in both 2023 and 2024, since at the time of this filing, there are no known projects in those years. Long term forecasting of franchisee work is challenging, given the changes in governmental project funding, the considerable number of governmental jurisdictions involved and limited long-term information on upcoming specific projects. It is anticipated that there will be projects throughout the forecast period. Base year recorded, with adjustments, provides the most effective way of determining the funding needed for this category during the forecast period.

#### Non-Labor - Base YR Rec

The TY 2024 forecast was established using the base year recorded methodology. This was then adjusted down by \$1,000,000 in both 2023 and 2024, since at the time of this filing, there are no known projects in those years. Long term forecasting of franchisee work is challenging, given the changes in governmental project funding, the considerable number of governmental jurisdictions involved and limited long-term information on upcoming specific projects. #### **Business Purpose:**

This workpaper includes costs associated with the installation and replacement of compressor station equipment used in operating the transmission system. The nature of compressor station operation requires consistent maintenance and replacement of key engine components and control equipment to sustain the reliability and safety of the facility. To keep operating costs down, reliance is made on automating data gathering systems to monitor performance such as flows, pressures, and temperatures. Upgrading and replacing controls is critical to enable the station to operate at its highest efficiency.

### **Physical Description:**

Individual project scopes may consist of the following installations: replacing the pneumatic and electro-mechanical control systems and related station auxiliary systems, installation of new engine control panels, new station control panel and replacement of sensors, wiring, industrial communications and local controllers, local control networks, operator interfaces, continuous emissions monitoring systems (CEMS), precombustion chambers, and new catalysts.

#### **Project Justification:**

Capital project work will be continuiously needed for compressor stations in the coming years as these critical facilities continue to age and to accumulate operating hours. This is routine work that will help sustain continued operations.

### Forecast Methodology:

#### Labor - 5-YR Average

The TY 2024 forecast was determined using the five-year average methodology, which was then adjusted in the forecast period to reflect anticipated needs. It is anticipated that the modernization of two Gas Transmission compressor stations will require fewer capital improvements, which supports the reduced forecast methodology. SoCalGas determined that the base year recorded methodology and the other historical averages would provide excess funding during the forecast period.

#### Non-Labor - 5-YR Average

The TY 2024 forecast was determined using the five-year average methodology, which was then adjusted in the forecast period to reflect anticipated needs. It is anticipated that the modernization of two Gas Transmission compressor stations will require fewer capital improvements, which supports the reduced forecast methodology. SoCalGas determined that the base year recorded methodology and the other historical averages would provide excess funding during the forecast period.

#### NSE - 5-YR Average

FTE	5-YR Average	5.0	4.3	5.7	6.0	7.0	4.9	4.9	4.3

### **Business Purpose:**

This workpaper includes costs associated with the installation of cathodic protection equipement used to preserve the integrity of transmission pipelines by protecting them from external corrosion. These projects are mandated by federal and state pipeline safety regulations, and enable the maintenance of adequate protection to company equipment.

### **Physical Description:**

Typical expenditures include the replacement of surface anode beds, deep well anodes and/or rectifier systems, installation of new cathodic protection stations, and applying cathodic protection to existing steel mains and service lines. Cathodic protection projects may also include the installation of new remote satellite communication technology which allows for more efficient operation and monitoring of the cathodic protection system.

### **Project Justification:**

Application of cathodic protection provides greater system protection against corrosion. This allows SoCalGas to meet safety compliance requirements that help to sustain reliability of gas transmission system.

### Forecast Methodology:

#### Labor - 5-YR Average

The TY 2024 forecast was determined using the five-year average methodology. Using this forecast method and then adjusting it down each year provided adequate funding to meet the needs of cathodic protection. SoCalGas determined that the base year recorded methodology and the other historical averages would provide excess funding during the forecast period.

#### Non-Labor - 5-YR Average

The TY 2024 forecast was determined using the five-year average methodology. Using this forecast method and then adjusting it down each year provided adequate funding to meet the needs of cathodic protection. SoCalGas determined that the base year recorded methodology and the other historical averages would provide excess funding during the forecast period.

### NSE - 5-YR Average

## **Business Purpose:**

This Budget Code includes costs of installing and rebuilding large meter set assemblies (MSAs) for transmission-served customers and pressure limiting stations on the gas transmission system. These assets require replacement three principal reasons: aging, change in use patterns and/or population encroachment, and enhancement of the transmission system to address gas quality and capacity issues. This capital work sustains reliable operation of critical transmission assets. This includes periodic replacement of local field measurement and control equipment directly linking with the Gas Operations SCADA system.

### Physical Description:

Typical expenditures include the instrumentation necessary for the metering or regulating of natural gas in connection with transmission operations and, in particular, costs associated with additions or replacements of station piping, valves, regulators, shelters, enclosures, controls and communication equipment. Projects include adding and/or replacing critical valves in large pressure regulating stations to comply with federal class location regulations. Also included are local projects to replace or upgrade customer metering sites and large pressure regulating equipment due to age and/or obselesence.

#### Project Justification:

Requested funding includes installation of new meter and regulation equipment associated with operation of the transmission pipeline system. It includes gas meters installed to help manage gas flows and quality on the transmission system, and to provide operating information to gas operations control personnel remotely managing the gas delivery system. Also included in this category are regulating stations used to control and limit gas pressure and the flow of gas within the gas transmission system, such as city gate stations. The installation of this equipment is associated with the safe and reliable local operation of SoCalGas pipelines in conformance with DOT and CPUC requirements for the limiting of pipeline and vessel operating pressures. All pipelines must be operated within their maximum allowable operating pressure parameters, and this equipment, whether for newly-installed pipelines or, where replacement is warranted, maintains this compliance and operating integrity.

### Forecast Methodology:

#### Labor - 5-YR Average

The TY 2024 forecast was determined using the five-year average forecast methodology and then adjusted to provide adequate funding for anticipated projects. The anticipated projects in the forecast period are smaller in scale than what was completed in the most recent years. In addition, there have been many improvements from PSEP projects at some of the Transmission M&R sites over the last few years, which has improved conditions and reduced the need to upgrade these sites. The base year recorded, and the other historical average forecast methodologies would provide excess funding for the anticipated work during the forecast period.

## Non-Labor - 5-YR Average

The TY 2024 forecast was determined using the five-year average forecast methodology and then adjusted to provide adequate funding for anticipated projects. The anticipated projects in the forecast period are smaller in scale than what was completed in the most recent years. In addition, there have been many improvements from PSEP projects at some of the Transmission M&R sites over the last few years, which has improved conditions and reduced the need to upgrade these sites. The base year recorded, and the other historical average forecast methodologies would provide excess funding for the anticipated work during the forecast period.

FTE	5-YR Average	4.7	6.5	6.3	4.5	5.6	3.4	2.5	2.5

### **Business Purpose:**

The Security and Auxiliary Equipment capital request captures the cost of equipment installation to address security for critical gas facilities owned and operated by SoCalGas. This category will further harden the security at critical sites to better protect them from security breaches.

## Physical Description:

Requested funding in this category includes new installations or upgrades of aging M&R station and pipeline system control and telemetry systems which link with and provide information to, but are not a direct part of SoCalGas centralized SCADA computer system. Also included are telemetry-related upgrades to remote site security systems and remote control systems for critical in-line valves. This work paper represents seven such projects whose individual funding is less than that typically appearing on separate work papers and is thus presented for consideration here as a "blanket" submission. This work paper includes recorded and estimated costs in budget codes 309, 319 and 339.

### **Project Justification:**

This capital work contributes to reliable operation of critical transmission assets and ensures they are not compromised by equipment deployed past its useful life or by physical sabotage that can occur in remote settings. Some assets require replacement due to aging, change in use patterns, or enhancement of the transmission system to contend with gas quality and capacity issues, and security needs in an increasingly complex environment where exposure to risk is being constantly evaluated.

### Forecast Methodology:

#### Labor - 5-YR Average

The TY 2024 forecast was determined using the five-year average forecast methodology and then adjusted to provide adequate funding for anticipated projects. The base year recorded, and the other historical average forecast methodologies provide funding in excess of the anticipated work during the forecast period. The anticipated forecasted stand-alone physical security projects are small in nature. In addition, costs have been reduced due to inter-departmental coordination of physical security hardening on projects. Details related to this can be found in the Direct Testimony of Derick R. Cooper (SCG – 23).

### Non-Labor - 5-YR Average

The TY 2024 forecast was determined using the five-year average forecast methodology and then adjusted to provide adequate funding for anticipated projects. The base year recorded, and the other historical average forecast methodologies provide funding in excess of the anticipated work during the forecast period. The anticipated forecasted stand-alone physical security projects are small in nature. In addition, costs have been reduced due to inter-departmental coordination of physical security hardening on projects. Details related to this can be found in the Direct Testimony of Derick R. Cooper (SCG – 23).

### **Business Purpose:**

Buildings and Improvements provides funding for construction, replacement or upgrades to structures used by Gas Transmission to contain, shelter and/or protect Transmission equipment such as meter stations, pressure regulating equipment, critical valves, or controls equipment. Such protection is required by Federal or local laws, but most often it is required to protect vulnerable and expensive equipment, often in remote locations.

### **Physical Description:**

Buildings and Improvements provides funding for construction, replacement or upgrades to structures used by Gas Transmission to contain, shelter and/or protect Transmission equipment such as meter stations, pressure regulating equipment, critical valves, or controls equipment. Such protection is required by Federal or local laws, but most often it is required to protect vulnerable and expensive equipment, often in remote locations.

### **Project Justification:**

The justification for this activity relates to the ongoing requirement for protective structures that shelter critical controls or SCADA-related equipment, for perimeter barriers and reinforced fencing, and for enhanced video monitoring and lock systems.

## Forecast Methodology:

#### Labor - 3-YR Average

The TY 2024 forecast was developed using the three-year historical average methodology and then adjusted each year to account for anticipated spending on Buildings and Improvements. The activity anticipated in this category is projected to be lower than both the base year recorded costs and the historical averages. The three-year historical average is the closest starting point to the anticipated forecast spending.

### Non-Labor - 3-YR Average

The TY 2024 forecast was developed using the three-year historical average methodology and then adjusted each year to account for anticipated spending on Buildings and Improvements. The activity anticipated in this category is projected to be lower than both the base year recorded costs and the historical averages. The three-year historical average is the closest starting point to the anticipated forecast spending.

### NSE - 3-YR Average

There are no NSE expenses in this work group.

FTE	3-YR Average	0.1	0.1	0.0	0.0	0.1	0.1	0.1	0.1

#### **Business Purpose:**

Requested funding in this category includes new tools for transmission capital. Often times these tools are needed to replace broken tools or items that have passed their useful life.

#### **Physical Description:**

Examples of such tools include volt/amp meters, Global Positioning System (GPS) receivers, leak detection equipment, gauges, wrenches, and tapping and stopping equipment. Purchases are typically to replace old, worn or damaged tools used in the field.

#### **Project Justification:**

These capital tools contribute to reliable operation of critical transmission assets. Some assets require replacement due to aging, change in use patterns, or enhancement of the transmission system to contend with gas quality and capacity issues, and security needs in an increasingly complex environment where exposure to risk is being constantly evaluated.

Workpaper Group: 007360 - GAS TRANSMISSION CAPITAL TOOLS

#### Forecast Methodology:

#### Labor - 3-YR Average

The TY 2024 forecast was established using the three-year average methodology. Routine tool purchase requirements are identified during each year as part of the regular course of maintenance and construction activities and are expected to continue during the forecast period. The three-year average provides funding for these anticipated purchases during the forecast period.

#### Non-Labor - 3-YR Average

The TY 2024 forecast was established using the three-year average methodology. Routine tool purchase requirements are identified during each year as part of the regular course of maintenance and construction activities and are expected to continue during the forecast period. The three-year average provides funding for these anticipated purchases during the forecast period.

#### NSE - 3-YR Average

None.

#### **Business Purpose:**

The main purpose of the Blythe Compressor Modernization (BCM) project is to replace and modernize aging compressors and associated auxiliary equipment and infrastructure to maintain reliability of Southern System (Southern System reliability is one of the top enterprise risks for SoCalGas), reduce exhaust emissions, and improve operational efficiency and resiliency.

#### **Physical Description:**

Intall a new compressor building with two (2) new Siemens/Dresser SGT-300 Turbo-Compressor/Driver units (7226 HP each) and associated inlet filters and Selective Catalytic Reduction (SCR) Emissions Packages. Install new auxiliary systems including Instrument Air, Fuel Gas Supply and Cooling Water to support the new units. Install a new gen-set building with five (5) new 715 kW Generators to replace existing generators and power new and existing infrastructure.

#### **Project Justification:**

The installation of these new compressors will allow SoCalGas to continue to meet the current design specification and capacity of 1.2 BCF per day. Upon completion, the Blythe Compressor Replacement project will provide the necessary operational reliability and resiliency to support SoCalGas' transmission system's operational needs while resulting in the reduction of criteria air pollutants such as oxides of nitrogen, greenhouse gases, particulate matter, and fugitive methane emissions through the installation of select catalytic reduction and other applied technologies.

#### Forecast Methodology:

#### Labor - Zero-Based

For BCM, the forecast method developed for this cost category is a zero-based methodology using estimates based on knowledge of experienced personnel of previously completed, similar sized project work.

#### Non-Labor - Zero-Based

For BCM, the forecast method developed for this cost category is a zero-based methodology using estimates based on knowledge of experienced personnel, major equipment and material vendor quotes of previously completed, similar sized project work. The underlying major cost drivers for this capital project relate to schedule, equipment and material pricing, craft availability, wage rates and productivity.

#### **Business Purpose:**

The purpose of the Control Center Modernization (CCM) project is to construct a new modernized Gas Control facility which will include advanced technology and be sized to accommodate the expanding workforce needed to monitor, maintain, and respond to data transmitted by the newly deployed field assets and incidents on a continuous 24/7 basis. The costs detailed in this section are related to the field assets that will be deployed on the SoCalGas transmission system, specifically the optical pipeline monitoring (OPM) stations and high consequence area (HCA) methane sensors. These assets will provide additional insight to Gas Control on the overall health of the gas transmission system. Once a pipeline right-of-way has been outfitted with a fiber line, OPM stations will help Gas Control identify a potential leak or when ground intrusion or movement has occurred. The HCA Methane Sensors will enhance the safety of the SoCalGas system by detecting methane leaks on gas transmission pipelines that are near high-occupancy areas and pose evacuation challenges.

#### **Physical Description:**

The CCM project will be responsible for installing three OPM stations and 140 HCA methane sensors on transmission pipelines through the TY 2024.

#### **Project Justification:**

SoCalGas has developed, tested, and will deploy HCA methane sensors and OPM stations that will help identify leaks, ground intrusion, and ground subsidence on transmission pipelines. These activities are a continuation of activities presented in the 2019 GRC Decision.

Area: GAS TRANSMISSION

Category: L. CONTROL CENTER MODERNIZATION
Category-Sub: 1. CONTROL CENTER MODERNIZATION

Workpaper Group: 004050 - GOCC (Gas Ops Control Center) Transmission Project

#### Forecast Methodology:

#### Labor - Zero-Based

The forecast method developed for this cost category is zero-based methodology. CCM project staffing commenced in 2020 and to date the CCM project continues to mobilize as project activities are being scoped, designed, built, tested, and deployed. The zero-based methodology is most appropriate because the CCM project does not have adequate historical costs to accurately reflect full deployment labor costs that will be seen in 2022, 2023, and 2024. For OPM stations, the forecast uses a per unit cost multiplied by the annual number of targeted OPM stations and includes annual project management labor. Labor numbers were analyzed from completed OPM pilot installations which gave insight into costs for deploying the stations. The labor forecast consists of costs for internal resources for project management, planning, configuration, and commissioning. For HCA Methane sensors, the forecast uses a per unit cost multiplied by the annual number of targeted HCA methane sensors and includes per site project management costs. Labor numbers were analyzed from recent pilot site installations which gave insight into deployment costs. The labor forecast consists of costs for internal resources for project management, planning, permitting, site acquisition, and configuration.

#### Non-Labor - Zero-Based

The forecast method developed for this cost category is zero-based methodology. CCM project staffing commenced in 2020 and to date the CCM project continues to mobilize as project activities are being scoped, designed, built, tested, and deployed. The zero-based methodology is most appropriate because the CCM project does not have adequate historical costs to accurately reflect full deployment non-labor costs that will be seen in 2022, 2023, and 2024. For OPM stations, the forecast uses a per unit cost multiplied by the annual number of targeted OPM stations. Non-labor numbers were analyzed from completed OPM pilot installations which gave insight into costs for deploying the stations. The non-labor forecast consists of costs for external resources and contractor services for commissioning support, engineering, mechanical and electrical construction, environmental, survey, monitoring equipment, and mounting racks. For HCA Methane Sensors, the forecast uses a per unit cost multiplied by the annual number of targeted HCA methane sensors and includes per site project management costs. Labor and non-labor numbers were analyzed from recent pilot site installations which gave insight into deployment costs. The non-labor forecast consists of costs for external resources and contractor services for installation, unit purchases, communication devices, and vendor development.

Beginning of Workpaper Sub Details for Workpaper Group 004050

Area: GAS TRANSMISSION

Witness: Rick H. Chiapa

Budget Code: 00405.0

Category: L. CONTROL CENTER MODERNIZATION
Category-Sub: 1. CONTROL CENTER MODERNIZATION

Workpaper Group: 004050 - GOCC (Gas Ops Control Center) Transmission Project

Workpaper Detail: 004050.001 - 00405.000 - CCM Transmission RAMP C37

In-Service Date: Not Applicable

Description:

These costs are associated with the Control Center Modernization (CCM) project's new field pipeline monitoring technologies which will be installed along existing high consequence area (HCA) and evacuation challenged areas as well as along new and replaced transmission pipelines. These field monitoring assets are more specifically the Optical Pipeline Monitoring (OPM) stations and the HCA methane sensors.

The CCM HCA Methane Sensor project was proposed as part of enhanced pipeline safety to enhance the monitoring and response along its high-pressure pipeline routes in high consequence areas.

The program is intended to leverage emerging technologies to monitor and manage information gathered from sensors placed along these routes. The project costs include the continual evaluation and testing of the latest point sensor technologies to support wide scale deployment throughout the system.

This information will allow Gas Control to complement existing pipeline safety efforts to identify abnormal operating conditions or emergency conditions more quickly for increased system integrity

and remediation response in support of enhanced public and employee safety.

The CCM HCA Methane Sensor project will not replace any existing activities intended for pipeline safety. This includes but is not limited to leak surveys, aerial monitoring, and vehicle monitoring,

Permits will be needed for all installation sites as they will be installed in public right of way (PROW). Does not include any electrical or lease agreement costs for co-locations.

Additional efforts will be needed for the hardware, software, and system customization and enhancement of the Advanced Meter (SCG) network to accommodate the additional field assets. Interim private LTE communication solutions will be leveraged for the initial deployment until the Advanced Meter (SCG) network is available.

Assumes methane sensors will be wood pole or steel post mounted. Does not include costs related to Jurisdiction requests for customization (Ex. Concrete poles/posts, color matching, etc.). Installation assumes direct bury poles/posts (instead of concrete foundations).

oes not include concrete excavation and repair
